

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE NEW SYDENHAM SOCIETY'S
LEXICON
OF
MEDICINE AND THE ALLIED
SCIENCES.

(BASED ON MAYNE'S LEXICON.)

BY
HENRY POWER, M.B.,
AND
LEONARD W. SEDGWICK, M.D.

VOLUME I.

LONDON:
THE NEW SYDENHAM SOCIETY.

MDCCCLXXXI.

PREFATORY NOTE.

WE desire at the outset to declare the ends we have had in view in the changes that have been made in the Expository Lexicon of Dr. Mayne, which has been committed to us for correction and renewal ; changes which, beyond large additions, have made it necessary to rewrite almost the whole book.

We have thought it expedient to retain nearly all the original words ; for although many have become obsolete, and others have failed to obtain any general acceptance, we have felt that to those who consult the older authors, an explanation of unused terms would be of service. These have been carefully revised and verified.

As to the words at present in use, we have endeavoured to give complete and concise descriptions, not only of all purely medical terms, but also of those which are employed in the several ancillary sciences and subjects which form part of modern medical knowledge.

In regard to Medicine, Surgery, Midwifery, and Pathology, without writing encyclopædic accounts, we have attempted such an explanation of the several words and phrases in use in each of these subjects that the work shall be found to be of frequent service, and, in some degree, to supply the place of other and less accessible books.

In Therapeutics we have tried to afford accurate information concerning the drugs and preparations of the Indian and of the several European pharmacopœias, with the doses and mode of administration, when the requisite data could be obtained ; we have also given some account of the remedies in popular use in many countries. In this matter we desire to express our thanks to Dr. Waring for the loan of a very valuable manuscript upon drugs employed in India and South America.

In Biology we believe that all words will be found that are commonly employed, together with many that have fallen into disuse. The distinguishing characteristics of classes and orders are related, and the generic and specific descriptions of such animals and plants as appeared to possess some medical interest.

PREFATORY NOTE.

In Chemistry, in like manner, the philosophical terms are explained, and the great groups of substances described, as well as those individual compounds which have any bearing on Medical Science.

Considerable care has been bestowed by us upon the etymology and the synonymy of the several words; a work involving the expenditure of more time and labour than may perhaps at first sight appear proportionate to the result.

We are fully conscious that, in a work of this variety and magnitude, errors will escape observation; we shall be grateful to any reader who, when he meets with what appears to be a mistake, will bring it to our notice.

Finally, we should like to say that we are jointly responsible for each article; that we are faithfully striving to make the book as true and as full as we are able; and that we will do the best that as busy men we can do to effect the regular and speedy issue of the parts.

HENRY POWER,
LEONARD W. SEDGWICK.

LONDON;
July, 1879.

AN

EXPOSITORY LEXICON

OF

MEDICINE AND THE ALLIED SCIENCES.

A.

A. (Gr.) An inseparable prefix used before a consonant and giving to the root an opposite sense; sometimes an intensive.

AA. Abbreviation of *Aus* (Gr.); signifying, of each, an equal quantity.

AAA. Abbreviation of *Amalgama*.

Aa'bach, Bavaria, near Ratisbon. A cold alkaline spring; recommended in cases of dyspepsia, gout, and rheumatism.

Aabam. (Ar.) Plumbum, or lead. (R.)

Aa'chen. *Aix-la-Chapelle*.

Aa'ez, Portugal. A spring containing sodium sulphide. Temp. 25° C. (77° F.); recommended in chronic pulmonary diseases.

Aa'ndø. Breath. (D.)

Aarghees. The Greek name assigned in the Ulfar Udwyeh to the root of the Barberry bush. *Berberis*. (Waring.)

Aaron. *Arum maculatum*.

Aarzlhe, Switzerland, Canton of Berne. A warm spring containing sodium sulphide. Temp. 25° C. (77° F.); recommended in pulmonary and cutaneous diseases.

Aas'mus. ('*Aas'mus*, a breathing out.) Term for Asthma.

A.B. *Balneum arenosum*, sand ba'h.

Ab. (L. *ab*, from.) Of this *ab* is a fuller, and a shorter, form. An inseparable prefix used before a vowel and giving the root an opposite sense.

Ababil. (Persian.) Term for Variola.

Abactinal. (*Ab*, away from, *axis*, a ray.) That surface of an Echinoderm which is free from spines.

Abac'tio. (*Ab*, from; *ago*, to remove. F. *avortement*; G. *Abtreibung*.) An abortion produced by art.

Abactus venter. (Belly emptied by force.) Abortion induced by art, according to Chambers and James.

Abacus. (L., from '*Abax*, a mathematical table on which lines and figures were drawn.) A table used for preparations.

Abad'ees. Cantharides.

Abairu'cu. The fruit of a species of *Cynometra*, Nat. Ord. *Leguminosae*; Suborder. *Cesalpinea*. (L. and R.)

Abai'sir. See *Spodium Abaisir*.

Abajoue. See *Buccal pouch*.

Abalienated. Applied to a part so destroyed as to require its extirpation (Scribonius Largus); also, to the decay of the internal and external senses; also, used by Celsus for corrupted.

Abalienation. (*Ab*, from; *alieno*, to cut off.) Decay either of the whole or part of the

body; also the loss or failing of the senses, or of the mental faculties. (Scribonius Largus.)

Abanet. (Heb. *Abanet*, the girdle worn by Jewish priests.) A form of bandage. (T.)

Abanga. See *Ady*.

Abano, Italy, Venetia. A hot spring containing sodium chloride and sodium bromide and iodide. Temp. 82°–84° C. (179–183° F.). Chiefly used as mud baths. Serviceable in gout and rheumatism, in certain forms of paralysis, white swellings, and scrofulous diseases.

Abaptiston. ('*Abaptiston*, not immersed.) The crown of the old trepan, which was conical, or had some contrivance to prevent it from penetrating the cranium too suddenly, and so injuring the brain (Galen). Trepan which had a ring or knob a little above their point, as a similar protection, were, according to Paulus Aegineta (Adams' Transl. v. ii, p. 435), called Abaptista.

Abaptistum. The Latin form of Abaptiston.

Abarthrosis. Same as *Diarthrosis*.

Abaremo-tomo. A Brazilian tree, supposed to be a Mimosa; the decoction of its bark is applied, as an astringent, to ill-conditioned ulcers.

Abarnahas. (Ar.) The full moon; also magnesia. Used in the transmutation of metals.

Abartamen. (Ar.) Plumbum, or lead.

Abarticulation. (L., *ab*, from; *articulatio*, joint; Gr. *ἀρτρώσις*.) This last is used by Galen, and by Foësius, for a kind of articulation admitting of free motion.

Abas. (Supposed Ar.) *Porrigio favosa*, or scaldhead (Sorbait). *Tænia*, or tape-worm (Turton).

Abas Tuman. Caucasus. A town situated at an altitude of 4170 feet, in a beautiful district. Sulphuretted mineral waters. Temp. 40° C. (105·8° F.) to 49° C. (120·2° F.). Used in rheumatism, articular and skin diseases, and in mercurial dyscrasia.

Abattoir. (F.; G. *Schlachthaus*; I. *ammazatoio*; S. *matadero*.) A slaughter-house.

Abaxile. (*Ab*, from; *axis*, an axle.) A term applied to the embryo of a plant, when, as in Rumex, it has not the same direction as the axis of the seed.

Abbecourt, France, Seine-et-Oise, near Versailles. A cold carbonated spring containing magnesian and ferric sulphate. When taken internally, it is slightly purgative; used in cases of scrofula.

Abbeville, France, department of the Somme. A disused chalybeate spring.

ABBREVIATIONS.

Abbreviations.

ã or ã	ana	of each.
Ab:om.	abdomen	the belly.
Ab. feb.	absente febre	during the absence of fever.
Ad.	adde	add.
Ad def. an.	ad deficientem animam	to fainting.
Ad deliq.	ad deliquium	to fainting.
Ad gr. acid.	ad gratam aciditatem	to an agreeable acidity.
Adj.	adice	add.
Ad lib.	ad libitum	at will—to the desired amount.
Ad 2 vic.	{ ad secundam vicem	to the second time.
	ad duas vices	for two times.
Admov.	admoveatur	let it be applied.
Alt. dieb.	alternis diebus	every other day.
Alt. hor.	alternis horis	every second hour.
Alv. adstrict.	alvo adstricta	the bowels being confined.
Alv. deject.	alvi dejectiones	the evacuations.
Aq.	aqua	water.
Aq. astrict.	aqua astricta	frozen water.
Aq. bull.	aqua bulliens	boiling water.
Aq. comm.	aqua communis	common water.
Aq. ferv.	aqua fervens	hot or boiling water.
Aq. flu.	aqua fluviatilis	river water.
Aq. font.	aqua fontis	spring water.
Aq. mar.	aqua marina	salt or sea water.
Aq. niv.	aqua nivalis	snow water.
Aq. pluv.	aqua pluvialis	rain water.
B. a. or B. s.	balneum arenae	sand bath.
Bals.	balsamum	balsam.
BB. or Bbda.	Barbadensis	Barbadoes.
Bib.	bibe	drink.
Bis ind.	bis indies	twice a day.
Bis in 7 d.	bis in septem dies	twice a week.
B. m.	balneum maris; b. marinum	a water-bath; a salt-water bath.
Bol.	bolus	a large pill mass.
Bull.	bulliat	let it boil.
But.	butyrum	butter.
B. v.	balneum vaporis	vapour bath.
C.	congius; centigrade	a gallon; a scale of temperature.
Cal.	calomel.	subchloride of mercury.
Cup.	capiat	let him take.
Cels.	celsius	a scale of temperature.
C. c.	cornu cervi	hartshorn.
C. m.	cras mane	to-morrow morning.
C. m. s.	cras mane sumendus	to be taken to-morrow morning.
C. n.	cras nocte	to-morrow night.
Cochl.	cochleare	spoonful.
Cochl. ampl.	cochleare amplum	a tablespoonful.
Coch. infant.	cochleare infantis	a teaspoonful.
Coch. mag.	cochleare magnum	a tablespoonful.
Cochl. med. or mod.	cochleare medium, seu modicum	a dessertspoonful.
Cochl. parv.	cochleare parvum	a small or tea spoonful.
Cochleat.	cochleatim	by spoonfuls.
Col.	cola	strain.
Colat.	colatus	strained.
Color.	coloretur	let it be coloured.
Comp.	compositus	compound.
Conf.	confectio	confection.
Cong.	congius	a gallon.
Cona.	conserva	conserve.
Cont.	contunde	break into small pieces.
Contin.	continuat	let it be continued.
Cont. rem.	continuetur remedium	let the medicine be continued.
Coq.	coque	boil.
Coq. ad med. consump.	coque ad medietatis consumptionem	boil down to one half.
Cort.	cortex	bark.
Craet.	crastinus	for to-morrow.
Cuj.	cujus	of which.
O. v.	cras vespere	to-morrow evening.
Cyath.	cyathus	a glassful.
Cyath. vin.	cyathus vini	a glass of wine.
Cyath. vinos.	cyathus vinosus	a wineglassful.
D.	dosis	a dose.

ABBREVIATIONS.

Abbreviations—Continued.

Dearg. pil.	deargentetur pilula	let the pill be silvered.
Deaur. pil.	deauratur pilula	let the pill be gilded.
Deb. spas.	debita spasmotudo	to a due constance.
Dec.	decant	decant.
Decub.	decubitus	lying down.
De d. in d.	de die in diem	from day to day.
Deint.	deglutitur	let it be swallowed.
Dej. alv.	dejectiones alvi	stools.
Dep.	depuratus	purified.
Destill.	destilla	distil.
Det.	detur	let it be given.
D. et s.	detur et signatur	let it be given and directed.
Det. in 2 plo.	detur in duplo	give in double the quantity.
Dieb. alt.	diebus alternis	on alternate days.
Dieb. tert.	diebus tertiis	every third day.
Dig.	digeratur	let it be digested.
Dil.	dilue	let it be dissolved.
Dilue.	diluendo	at break of day.
Dilat.	dilutus	dilute.
Dim.	dimidius	one half.
Dist.	distilla	distil.
Div.	divide	divide.
D. in p. eq.	divide in partes equales	divide into equal parts.
Donec alv. sol. fuerit	donec alvus soluta fuerit	until the bowels be open.
D. p.	directione propria	with a proper direction.
Dr. or Drach.	drachma	a drachm.
Eburn.	eburneus	made of ivory.
Ed.	eduleora	sweeten.
Ejad.	equadem	of the same.
Elect.	electuarius	electuary.
Enem.	enema	enema.
Exhib.	exhibetur	let it be given.
Ext. sup. alut.	extende super alutam	spread upon leather.
F. or Fahr.	Fahrenheit	a scale of temperature.
Fasc.	fasciculus	a bundle.
Feb. dur.	febre durante	the fever continuing.
Fem. intern.	femoribus internis	to the inside of the thighs.
F. or Ft.	fac; fiat	make; let it be made.
F. h.	fiat haustus	make a draught.
Fict.	ficulus	made of pottery.
Filt.	filtra	filter.
Fist. arm.	fistula armata	a pipe with bag for use as an enema.
Fl.	floris	fluid or flowers.
F. m.	fiat mistura	make a mixture.
Fol.	folia	leaves.
F. p.	fiat potio	make a potion.
F. pil.	fiat pilula	make a pill.
Fract. dos.	fractis dosibus	in divided doses.
Fruct.	fructus	fruits.
Frust.	frustulatum	in small pieces.
F. s. a.	fiat secundum artem	let it be done skilfully.
F. VS. or Ft. venens.	fiat veneseccio	bleed.
Gel. quav.	gelatina quavis	in any kind of jelly.
G. g. g.	gummi guttæ gambæ	gamboge.
Gr.	granum	grain.
Gum.	gummi	gum.
Gutt. or Gtt.	gutta or guttæ	drop or drops.
Guttat.	guttatim	by drops.
Hab.	habitor	a native of.
Har.	harum	of them.
Haust. purg.	haustus purgans	a purging draught.
H. p.	haustus purgans	a purgative draught.
Hor. decub.	horâ decubitus	at bedtime.
Hor. intermed.	horis intermediis	at intermediate hours.
Hor. un. spat.	horâ unâ spatio	in an hour's time.
H. a.	horâ somni	at bedtime.
Ind.	indies	daily.
Inf.	infunde	to infuse.
Inj.	injectio	an injection.
Inj. enem.	iniciatur enema	let a clyster be given.
In pulm.	in pulmento	in gruel.
Jul.	julepum	julep.
Lat. dol.	lateri dolenti	to the painful side.

ABBREVIATIONS.

Abbreviations—Continued.

Lib. ; l.b.	libra ; liber	a pound ; a book.
Lin.	linimentum	liniment.
Liq.	liquor	liquor.
M.	misce	mix.
Mac.	macera	macerate.
Man.	manipulus	a handful.
Man. prim.	mane primo	early in the morning.
Mio. pan.	micæ panis	crumb of bread.
M. p.	massa pilularum	pill mass.
Mass. pil.	massa pilularum	pill mass.
Min.	minimum	a minim, one sixtieth of a drachm.
Mit.	mitte	send.
Mitt. sang.	mittatur sanguis	let blood be drawn.
Mod. præscript.	modo præscripto	in the manner directed.
Mor. dict.	more dicto	in the manner directed.
Mor. sol.	more solito	in the usual way.
Muc.	mucilago	mucilage.
N. m.	nux moschata	a nutmeg.
No.	numero	number.
Noct.	nocte	by night.
O.	octarius	a pint.
Ol.	oleum	oil.
Ol. lin. s. i.	oleum lini sine igne	cold drawn linseed oil.
Ol. oliv.	oleum olivæ	olive oil.
O. m.	omni mane	every morning.
Om. man.	omni mane	every morning.
Omn. bid.	omni biduo	every two days.
Omn. bih.	omni bihora	every two hours.
Omn. hor.	omni hora	every hour.
Omn. noct.	omni nocte	every night.
O. n.	omni nocte	every night.
O. quad. hor.	omni quadrante hora	every quarter of an hour.
Ov.	ovum	egg.
Ox.	oxymel	honey and vinegar.
Oz.	uncia	an ounce.
P. or pt.	perstetur	continue.
Part. æq.	partes æquales	equal parts.
P. æ.	partes æquales	equal parts.
Part. vic.	partitis vicibus	in divided doses.
Past.	pastilla	pastille.
P. Bor.	Pharmacopœia Borussica	Prussian Pharmacopœia.
P. B.	Pharmacopœia Britannica	British Pharmacopœia.
P. D.	Pharmacopœia Dublinensis	Dublin Pharmacopœia.
P. E.	Pharmacopœia Edinensis	Edinburgh Pharmacopœia.
P. e.	pars equalis	an equal part. [finished.
Peract. op. emet.	peracta operatione emetici	the action of the emetic having
P. G.	Pharmacopœia Germanica	German Pharmacopœia.
Pil.	pilula	pill.
P. L.	Pharmacopœia Londinensis	London Pharmacopœia.
Pocill.	pocillum	a small cup.
Pocul.	poculum	a cup.
P. or Pond.	pondere	by weight.
Post sing. sed. liq.	post singulas sedes liquidas	after each fluid evacuation.
Pot.	potio ; potassa	potion ; potassa.
Ppt.	præparata	prepared.
P. rat. æt.	pro rata ætatis	in proportion to the age.
P. r. n.	pro re nata	when required.
Pugil.	pugillus	a large pinch.
Pulv.	pulvis	powder.
P. U. S.		United States Pharmacopœia.
Q. l.	quantum libet	as much as is requisite.
Q. p.	quantum placet	at will.
Q. p.	quantum placeat	as much as may please.
Q. s.	quantum satis ; quantum sufficit	a sufficient quantity.
Quor.	quorum	of which.
Q. v.	quantum volueris	at will.
R. or R.	recipe	take.
Rad.	radix	root.
Ras.	rasura	shavings.
Ré.	Réaumur	degree of Réaumur's thermometer
Rect.	rectificatus	rectified.
Red. in pulv.	reductus in pulverem	reduced to powder.
Redig. in pulv.	redigatur in pulverem	let it be powdered.

ABBREVIATIONS.

Abbreviations—Continued.

Reg. umbil.	regio umbilici	the umbilical region.
Rep.	repetatur	let it be repeated.
S.	signa	give directions; label.
S. a.	secundum artem	skilfully.
Scat.	scatula	a box.
Sem.	semen	seed.
Semi-dr.	semidrachma	half a drachm.
Semi-hor.	semihora	half an hour.
Serv.	serva	preserve.
Sesuna.	sesuncia	an ounce and a half.
Sesquihor.	sesquihora	an hour and a half.
Sig.	signetur	let it be labelled.
Sig. n. pr.	signa nomine proprio	label with its common name.
Sing.	singulorum	of each.
Si non val.	si non valeat	if it do not answer.
Si op. sit.	si opus sit	if requisite.
Solv.	solve	dissolve.
Sp. or Spir. or Spt.	spiritus	spirit.
S. q.	satis quantum	sufficient.
Sa.	semi; semisis	one half.
S. a. s.	stratum super stratum	layer upon layer.
St.	stet	let it stand.
Sum.	sumat or sumendum	{ let him take. { let it be taken.
Summ.	summitates	the tops.
Sum. tal.	sumat talem	let a similar one be taken.
S. v. r.	spiritus vini rectificatus	rectified spirit of wine.
S. v. t.	spiritus vini tenuior	proof spirits.
Syr.	syrupus	syrup.
T.	transcribe	transcribe.
Tab.	tabellæ	tablets.
T. d.	ter in die	three times a day.
Temp. dext.	tempori dextro	to the right temple.
Temp. sinist.	tempori sinistro	to the left temple.
Ter.	tere	triturate.
T. O.	tinctura opii	tincture of opium.
T. o. c.	tinctura opii camphorata	camphorated tincture of opium.
Trit.	tritura	triturate.
Tr., Tra., and Tinct.	tinctura	tincture.
U. ad deliq.	usque ad deliquium	to fainting.
Ult. præscript.	ultimum præscriptum	last prescribed.
Unc.	uncia	an ounce.
Ung.	unguentum	ointment.
Vea.	vesica	the bladder.
Vesic.	vesicatorium	a blister.
Vit. ov.	vitellum ovi	yolk of egg.
Vom. urg.	vomitum urgente	the vomiting being severe.
V. o. s.	vitello ovi solutus	dissolved in the yolk of an egg.
VS.	venæsectio	venæsection.
V. a. b.	venæsectio brachii	bleeding from the arm.

Abbreviations—Continued.

Botanical, Zoological, and other Symbols—

- ☉ *Monocarp.* A plant which produces seed only once during its life. The symbol representing the sun.
- A, ① *Annual.* A monocarp which dies in the same year that it germinated, e. g. *Mustard*.
- B, ② *Biennial.* A monocarp which produces leaves only the first year and perfects its seed the next, e. g. *Mullein*.
- P *Perennial.* A plant which produces seed for an indefinite number of years, e. g. *Apple*.
- ⌞ *Rhizocarp.* A perennial the stems of which die down to the ground every year, e. g. *Rhubarb*, *Mint*. The symbol representing Jupiter, which has a period of revolution round the sun of 12 years.
- ♄ *Caulocarp.* A perennial, the stems of which are persistent throughout the whole of its life, e. g. *Apple*. The symbol representing Saturn, the period of revolution of which round the sun is 30 years.
- H *Herb.* A plant, the stems of which remain soft or succulent, e. g. *Mint* or *Rhubarb*.
- S, ♀ *Shrub.* A plant in which the stems are woody, and which usually divide near the ground into numerous branches and twigs, e. g. *Lilac*.
- ♀ *Under shrub.* A small shrub; one that does not grow more than 3 feet in height, e. g. *Gooseberry*.
- T, ♀ *Tree.* A plant which grows to 20 feet or more in height, having a woody stem forming a distinct trunk, e. g. *Oak*.
- ☾ A climbing plant which follows the sun, e. g. *Hop*.
- ☾ A climbing plant which moves against the sun, e. g. *Scarlet-runner*.
- ♂ Flowers having stamens only (unisexual, stamiferous, or male), e. g. male flowers of *Box*. The symbol representing Mars, the period of revolution of which is 2 years.
- ♀ Flowers having pistils only (unisexual, pistillate, or female), e. g. female flowers of *Box*. The symbol representing Venus.
- ♂ Flowers having both stamens and pistils (bisexual or hermaphrodite), e. g. *Buttercup*.
- ♂ Abortive stamiferous flowers (neuter).
- ♀ Abortive pistillate flowers (neuter), e. g. the florets of the ray in *Daisy*.
- ♂ - ♀ Monoecious plants, producing male and female flowers upon the same individual, e. g. *Box*.

- ♂ : ♀ Dioecious plants, producing male and female flowers, but upon separate individuals, e. g. *Willow*.
- ♂ ♂ ♀ Polygamous plants, which produce hermaphrodite and unisexual flowers upon the same or different individuals, e. g. *Atriplex*.
- ∞ Indefinite in number; applied to stamens and other parts of flowers.
- = Cotyledons accumbent, radicle lateral.
- || „ incumbent, „ dorsal.
- ≫ „ conduplicate, „ „
- ||| „ twice folded „ „
- |||| „ thrice folded, „ „
- ♂ ✓ Trimerous, applied to flowers when the whorls of the flower are multiples of three, as in most endogens.
- ♂ ✓ Pentamerous, applied to flowers when the whorls of the flower are multiples of five, as in exogens generally.

Abcedaria herba. See *Abecedaria*.

Abdelavi. (Ar.) A kind of melon growing in Egypt, the seeds of which are reputed refrigerant.

Abdomen. (L. *Abdere*, to conceal. Gr. *γαστήρ*; F. *ventre*; G. *Unterleib*; I. *addomine*; S. *abdomen*; *bajo ventre*.)

The belly, venter, or lower cavity of the trunk, containing the greater part of the organs of digestion and of the urino-genital system. It is bounded above by the diaphragm; below by the floor of the perineum in front; and at the sides

ABDOMINAL.

by the external and internal oblique, the rectus and transversalis muscles, and in part also by the ribs and intercostal muscles; behind by the vertebral column and the muscles connected with it. It is divisible into an upper part, or abdomen proper, and a lower part, the pelvis, which last is enclosed by the sacrum and osseous innominate. Its average vertical height is from seventeen to eighteen inches, and its transverse diameter about fourteen or fifteen inches. Its capacity is about ten or twelve pints. It is lined throughout by a serous membrane termed the peritoneum. It is commonly subdivided for the purposes of clinical research into nine regions; the limits of these are formed by two vertical lines drawn from the junction of the seventh rib with its cartilage to the middle of Poupart's ligament on each side, and by two horizontal lines, the upper one of which is drawn through the ninth costal cartilages, and the lower one through the spines of the ilia. The following objects are found in each region. —

Right Hypochondriac region.—Right lobe of liver, gall bladder, first part of duodenum, hepatic flexure of colon, right suprarenal capsule, part of right kidney.

Right lumbar region.—Ascending colon, small intestine, second part of duodenum, head of pancreas, right kidney.

Right iliac region.—Cæcum coli, ureter, spermatic vessels.

Epigastric region.—Stomach (central and pyloric portions), small part of right and greater part of left lobe of liver, third portion of duodenum and body of the pancreas, cardiac axis, abdominal aorta, vena cava, semilunar ganglia, receptaculum chyl, vena azygos.

Umbilical region. Great omentum, transverse colon, upper part of small intestine, aorta, vena cava, and the mesenteric arteries and veins.

Hypogastric region.—Lower part of small intestine, apex of bladder in distension and in children, pregnant uterus, bifurcation of the aorta, and commencement of vena cava inferior.

Left Hypochondriac region.—Stomach (cardiac portion), spleen, tail of pancreas, splenic flexure of colon, left suprarenal capsule, part of left kidney.

Left lumbar region.—Descending colon, small intestine, left kidney.

Left iliac region.—Sigmoid flexure of colon, ureter, spermatic vessels.

A. pendulous. A condition frequent in advanced age, especially in women who have borne many children, consisting in great increase of the subcutaneous fat, which is naturally abundant in this situation, with relaxation of the skin and abdominal muscles, sometimes troublesome by causing intertrigo.

Abdominal. Of, or pertaining to, the abdomen.

A. aorta. See *Aorta*.

A. aponeurosis. The conjoined tendons of the oblique internus and transversalis muscles of the abdomen.

A. artery. The superior epigastric branch of the internal mammary artery.

A. belt. See *Belt*.

A. cavity. See *Abdomen*.

A. drop sy. See *Ascites*.

A. ganglia. Semilunar ganglia.

A. gestation. See *Pregnancy, extra-uterine*.

A. muscles. These muscles are six in number on each side, namely, the oblique

externus, obliquus internus, transversalis, rectus, pyramidalis, and quadratus lumborum. The three first are thin planes of muscular fibre covering the sides of the abdomen, with broad tendinous expansions meeting in the middle line after forming a sheath for the rectus, their line of junction being termed the *linea alba*. The recti muscles extend from the ribs and sternum to the pelvis on either side of the median line in front, and the quadratus lumborum occupies a similar position behind. The pyramidalis is a small and not quite constant muscle situated in front of the lower part of the rectus.

The abdominal muscles support and compress the viscera, especially when the diaphragm is fixed in inspiration, bend and rotate the spine on the pelvis, and powerfully assist in the act of expiration, the force exerted having been shown by Dr. Hutchinson to be sufficient under ordinary circumstances to raise a column of mercury two inches and a half in height per square inch.

A. parietes. The walls of the abdomen.

A. phthisis. Tubercular disease of mesenteric glands.

A. pore. A single or symmetrical opening in front of the anus existing in many fishes, through which, in some, the generative products escape after having been discharged into the peritoneal cavity; whilst in amphioxus it allows of the escape of the water which has passed through the branchial sac.

A. reservoir of birds. See *Air sacs*.

A. respiration. A physiological difference exists between the man and the woman in regard to the mode in which the respiratory acts are performed. In the infant and adult man the action of the diaphragm predominates, and it is the vertical diameter of the chest which is chiefly increased; as a result of this the pressure exerted upon the viscera causes the walls of the abdomen to become prominent. In the woman the transverse diameter of the chest is increased in inspiration to a much greater extent than in man by the elevation of the ribs. In man the respiration is said to be abdominal, in woman, thoracic. The difference is associated with the reproductive functions of the female, since the costo-inferior and abdominal types of respiration would be interfered with by pregnancy.

A. rings. The two extremities of the inguinal canal.

A. ring, external. (*F. anneau inguinal externe*, G. *außere Leisten-ring*.) The external abdominal ring is a triangular opening in the aponeurosis of the external oblique muscle of the abdomen. The base corresponds to the crest of the pubes, the apex points upwards and outwards. It is about one inch in length and half an inch wide. It is bounded by two pillars, the external, thicker and lower one is formed by the lower part of Poupart's ligament, and is attached to the pubic spine, the internal and upper is thinner and straighter, and is attached to the front of the symphysis pubis. The intercolumnar fascia is given off from the margins of the opening. It transmits the spermatic cord and its coverings in the male, and the round ligament in the female.

A. ring, internal. (*F. anneau inguinal interne*, G. *innere Leisten-ring*.) The internal abdominal ring is an opening in the transversalis fascia situated midway between the symphysis pubis and the anterior superior spinous process of the ilium, and half an inch above Poupart's ligament. From the margins of

ABDOMINALIA—ABELLANA.

the opening a thin fascia is given off. Arching over the aperture is the lower border of the transversalis muscle, which is fleshy in the outer, but tendinous in the inner half. Below it is bounded by Poupart's ligament. The epigastric vessels lie on the inner side. The space between the internal and external abdominal rings is termed the inguinal canal, and through it the intestine in oblique inguinal hernia descends.

A. section. See *Cæsarean Section*.

A. typhus. Enteric fever.

Abdominalia. An order of the class *Cirripedia*. Carapace flask-shaped; body formed of one cephalic, seven thoracic, and three abdominal segments; the latter bearing three pairs of cirri, but the thoracic segments being without limbs. Mouth with the labrum greatly produced and movable. Larva, at first oval, without external limbs or an eye; afterwards binocular and resembling adult form.

A group of the suborder *Malacopecteri*; Ord. *Telostei*; Cl. *Pisces*. They have ventral fins, which are abdominal in position.

Abdominoscopy. (*Abdomen*; *σκοπεῖν*, to observe.) The examination of the abdomen by percussion, mediate or immediate, by inspection, measurement, and palpation.

Abdominous. (*Abdomen*.) Big-bellied. **Abdu'ons.** (*Ab*, from; *duco*, to draw.) Term applied to muscles or to nerves innervating muscles that draw the parts into which they are inserted from the median line of the body or of a limb.

A. oculi, mus'culus. See *Rectus externus*.

A. oculi, ner'vus. (*F. moteur oculaire externe*.) The sixth pair of nerves, supplying the external recti muscles of the eye. Each arises, in common with the seventh, from a ganglion situated beneath the floor of the fourth ventricle above but in the same line with the hypoglossal, and also from the grey matter of the fasciculus teres; the fibres, which are about 2500 in number, form almost a loop with those of the portio dura, the loop enclosing the ganglion common to both. When paralysed a convergent squint with homonymous diplopia results.

A. oris. The levator anguli oris.

Abducent. See *Abducens*.

Abducent' oculi. See *Abducens oculi*.

Abduction. (*L. Abduco*; *ab*, from, and *duco*, to draw. *F. Idem*. *It. abduzione*; *Sp. abduccion*; *G. Abziehung*.) That movement by which one part of the body, or a limb, is drawn away from another, or from the mesial line.

Applied to a fracture in which the bone is so divided transversely that its extremities recede from each other. *Gr. anal. καυλήδον κατάγμα*, according to Galen (*Meth. med. vi*), so called from resemblance to a broken stem.

Applied also to a strain, and stated as one of the causes of sciatic and pesadid pains by Celsus Aurelianus, *Morb. Chron. v. c. 1*.

Abduction is, in philosophy, according to Aristotle, a syllogism of which the major premise is certain and the minor only probable. Hence the conclusion, without being so certain as the major, is rendered as probable as the minor. Aristotle gives this as an example: Major proposition certain—Science can be taught; minor proposition, more probable than the conclusion—Justice is a science; conclusion, more uncertain in itself than the minor, but becoming by the syllogism as probable as it—Justice, therefore, can be taught. (*Frank*.)

Abductor. (*Ab*, from; *duco*, to lead or draw. *F. abducteur*; *G. Abziehmuskel*; *It. abduttore*; *Sp. Idem*.) Term applied to various muscles which either draw the limbs from the median line of the body, or, as in the case of the dorsal interossei, draw the digits from the median line of the limb.

A. an'ris. See *Retrahens aurem*.

A. bre'vis al'ter. See *A. pollicis*.

A. bre'vis pollicis. See *A. pollicis*.

A. dig'iti quinq'ti. See *A. minimi digiti*.

A. ind'icis. (*Fr. abducteur du doigt indicateur*.) The first dorsal interosseus muscle. It arises from the upper half of the ulnar border of the first metacarpal bone and nearly the whole of the metacarpal bone of the index finger, and is inserted into the radial side of the first phalanx of the fore finger. The radial artery passes forwards between the two heads. It is supplied by the ulnar nerve.

A. long'us pollicis. See *Extensor ossis metacarpi pollicis*.

A. min'imi dig'iti (hand). (*Fr. A. du petit doigt*.) Arises from the pisiform bone and the tendon of the flexor carpi ulnaris, and is inserted into the ulnar side of the base of the first phalanx of the little finger. Supplied by the ulnar nerve.

A. min'imi dig'iti (foot). (*Fr. A. du petit orteil*.) Arises from the external or lesser tuberosity of the os calcis, from the fore part of the greater tubercle, and from the plantar fascia and intermuscular septum. It is inserted into the outer side of the base of the first phalanx of the little toe. It is supplied by a branch from the trunk of the external plantar nerve.

A. oc'uli. See *Rectus externus*.

A. os'sis metatar'si min'imi dig'iti. An occasional muscle arising from the external tubercle of the os calcis, and inserted into the spine-like process of the fifth metatarsal bone beneath the outer margin of the plantar fascia.

A. pollicis (hand). (*Fr. A. court du pouce*.) Arises from the ridge of the os trapezium and annular ligament. Insertion, radial side of the base of the first phalanx of the thumb. It is supplied by the median nerve.

A. pollicis (foot). (*Fr. A. du gros orteil*.) Arises from the inner tubercle of the os calcis, the internal lateral ligament, plantar fascia and intermuscular septum between it and the flexor brevis digitorum. It is inserted with the innermost tendon of the flexor brevis pollicis into the inner side of the base of the first phalanx of the great toe. It receives its nervous supply from the internal plantar nerve.

Abdu'men. See *Abdomen*. (*D.*)

Abbe'os. (*ā*, neg.; *βίβαιος*, firm.) Infirm; weak; unsteady.

Abecedaria. A circle, or ring, of letters, called an *abecedary circle*; one of the vulgar errors impugned by Dr. Browne was the notion that through the sympathy of two needles touched with the loadstone, and placed in the centre of two *abecedary rings*, friends at a distance could correspond with one another.

A. herba. also spelt *abcedary*. Spilanthis scemella, so called because the Ethiopians were believed to give it to their children to chew, in order to enable them to pronounce their letters.

Abelo. The *Populus alba*.

Abelicea. (*A*, neg.; *βελος*, a dart.) Hematoxylon Campechianum, or logwood.

Abellana. See *Avellana*.

2. Ducts of liver. Fine biliary ducts are found in the lamellae of the triangular ligament, and extending from thence to the under surface of the diaphragm; others are found in the connective tissue bridging over the sulcus for the inferior vena cava.

Aberratio. (L *ab*, from, *erro*, to wander)
a deviation from what is ordinary or natural.

A. lac tis. Excretion of milk from other parts than the mammary gland.

A. lo cl. An error in the position of parts.

A. men'suum. Vicarious menstruation.

A. tem poris. An error in the time of the
rejection or action of parts.

Aberration. (Fr. *Idem*: It. *aberrazione*; G. *Abweichung, Abirrung*.) A malformation of fetal parts; a derangement of the mental faculties; a migration or diaporesis of leucocytes from their natural channels; a compensatory escape of blood; vicarious hemorrhage.

A. chromatic. That dispersion of the rays of light which happens after their passage through a lens: the violet rays, being more refrangible than the red, are brought sooner to a focus, and hence a halo of colours is seen surrounding the image.

A. distant. Spherical aberration.

A. of light. A small, apparent displacement of the fixed stars, due in part to the circumstance that light takes time to travel through space, and in part to the motion of the earth.

A. Newtonian. See *A. chromatic*.

A. of refrangibility. Chromatic aberration.

A. spherical. Designates the fact that when rays of light traverse a convex lens those rays that pass through it near its periphery are brought to a focus sooner than those which traverse it near its axis; hence the rays, instead of being collected into a single point, are extended over a small space, so that the image of the object is not sharply defined.

A. of sphericity. Spherical aberration.

Aberystwith. Wales: Ceredigionshire. A summer sea-bathing place, protected by lofty hills. There is a chalybeate spring.

Abe samum. The oxide which forms on the iron of which it formerly employed in medicine. R and J.

Abos si. (Ar. *Abos*, *Abos*) Abos si (Ar. *Abos*, *Abos*)

Abestus. *Syn. A. sinensis.*

Abesum,

Abevacuation. (a) from *ab*, hence to empty. Partial or complete evacuation, whether naturally or artificially produced. Evacuation which is effected by the passage of matter from one organ into another.

Abhal. (Ar.) The fruit of a species of
CYPRESS, said to be used with the following effect.

Abbel. 411a

Abie cula (from Abie, the first of the

Abiesna. An ally liquid that, according to Pissé, comes from a species of *Corymbus* in the Brazils. (Waring.)

Abies. A genus applied by the Romans to the Pine of the Alps. (Piny. Hist. Nat. lib. 12. cap. 63.)

[illegible]

ABIETATE—ABIRRITATION.

seeds, as in *Pinus*; when ripe falling from the axes; leaves solitary in each sheath.

A. alba. See *A. picea*.

A. balsamifera. (Fr. *Baumier de Canada*.) Balm of Gilead fir. An elegant tree, rising to 40 feet in height, with tapering trunk and numerous branches; leaves solitary, flat, emarginate, or entire, six or eight lines long, glaucous beneath, somewhat pectinate, suberect above, recurved, spreading, inserted in rows on the sides and tops of the branches; cones large, cylindrical, erect, purplish; bracts abbreviate, obovate, conspicuously mucronate, subserulate. An inhabitant of Canada, Nova Scotia, and Maine. Yields Canada balsam.

A. balsamifera. See *A. balsamea*.

A. canadensis. The hemlock spruce of the United States and Canada. It rises to a height of 70—80 feet. Branches slender, and dependent at their extremities; the leaves numerous, six or eight lines long, flat, denticulate, and irregularly arranged in two rows; the strobiles ovate, little longer than the leaves, terminal, and pendulous. Yields Canada pitch and essence of spruce.

A. communis. See *A. excelsa*.

A. dammara. See *Dammara orientalis*.

A. excelsa. (Fr. *epicea, peuce*; Germ. *Fichte, Rothtanne*.) The Norway spruce. A lofty tree, rising 160 feet in height. The leaves, which stand thickly upon the branches, are short, obscurely four-cornered, often curved, of a dusky green colour, and shining upon the upper surface. The male aments are purple and axillary, the female of the same colour and terminal. The fruit is in pendant, purple, nearly cylindrical strobiles, the scales of which are oval pointed and ragged at the edges.

A. gallica. See *A. picea*.

A. larix. See *Larix Europaea*.

A. nigra. See *Pinus nigra*.

A. pectinata. See *A. picea*.

A. picea. (Fr. *sapin argenté*; Germ. *Weisstanne, Edeltanne*.) The European silver fir; grows in the mountainous regions of Switzerland, Germany, and Siberia. Yields common turpentine, and a finer kind called Strassburgh turpentine. The leaf buds are made into beer, and are used in scurvy and rheumatism.

A. rubra. See *A. excelsa*.

A. taxifolia. See *A. picea*.

A. virginiana. See *A. canadensis*.

Abietate. A salt of abietic acid.

Abietes. A suborder of the Nat. Ord. *Coniferae*. Ovules inverted, micropyle next the base of the carpel; pollen oval.

Abietic acid. $C_{20}H_{30}O_2$. The essential constituent of common resin. A monobasic acid, crystallising from alcohol in oval pointed plates, insoluble in water, soluble in alcohol, ether, and chloroform.

Abietine (L. *Abies*, a fir). An indifferent resinous substance, extracted by alcohol from the residue of the distillation of Strassburgh turpentine or Canada balsam with water. It possesses neither taste nor smell, is insoluble in water, but is soluble in alcohol and ether. It crystallises in needles or in elongated pyramids.

Abietinic Acid. $C_{20}H_{30}O_2$. One of several closely analogous resinous acids obtained from the fir and larch. It forms colourless crystals soluble in alcohol, wood spirit, chloroform, and carbon bisulphide. It is bibasic.

Abietis resina. See *Resina*.

Abietite. $C_8H_8O_8$. An indifferent substance obtained from the needles of *Abies picea*. It closely resembles mannite, to which it bears the same relation that ether does to alcohol.

Abiga. (*Abigo*, to expel.) *Teucrium chamaepitys*, the ground-pine; so called from its supposed power of inducing abortion.

Abiogenesis. (A, neg.; *bios*, life; *γίγνομαι*, to generate.) *Generatio æquivoca*, *Generatio primaria*, *Archigenesis*, *Archeiosis*. The doctrine that living matter may be produced by not living matter. This subject has attracted much attention of late years. Pouchet in France, Hæckel in Germany, and Bastian in this country, have been its most prominent supporters. The arguments in favour of it are, first, that there is no inherent improbability in the view that the lowest forms of animal life included under the head of Protista by Hæckel should be formed by the combination of their chemical elements without the intervention of antecedent life; secondly, that if the doctrine of special creation be put aside, the first animals must have arisen in this way; and, thirdly, that whatever precautions may be taken to prevent the entrance of spores, low organisms make their appearance in infusions of dead matter, provided the conditions are otherwise favourable. On the other hand, the opponents of the doctrine of abiogenesis, who are also termed panspermists, argue that there is no reason for believing the mode of production of the lower and less known organisms to be entirely different from that of all the higher forms, and they also maintain that the atmosphere teems with particles that are either seeds or spores, or are capable of acting as seeds, and that the development of life in infusions of dead matter is due to the fact that such infusions afford conditions favourable to their growth. The most ingenious apparatus and modifications of experiments have been suggested by both sides to exclude the outer air, or, if admitted, to completely kill the germs supposed to exist in it. Unfortunately the evidence that one side regards as irrefutable is either entirely ignored or met with a direct denial by the other. The positive results of one experimenter are the negative ones of his opponent. If a heterogenist declare that living organisms have appeared in an infusion to which no germs can possibly have had access, the panspermists reply that the apparatus was not air-tight, or that the spores had not been killed by the treatment adopted. Whilst, when the panspermist declares that his infusions are barren, the heterogenist maintains that the conditions present are just those which render the appearance and maintenance of life impossible, or that if the fluid had been preserved a little longer life would have been developed. On the whole it may be said that no conclusive proof has been obtained of the occurrence of Abiogenesis.

Abionarce. (A, neg.; *bios*, life; *νάρκη*, torpor.) Paralytic torpor.

Abiosis. (A, neg.; *bios*, life. F. *abiose*; G. *Leblosigkeit*.) Unfit for life; incapable of living.

Abiotos. (A*βιωτος*, without life.) The hemlock plant, from its deadly qualities.

Abirritant. (*Ab*, from; *irrito*, to excite.) Soothing or calmative agents which cause diminution of irritation.

Abirritation. (*Ab*, neg.; *irrito*, to irritate.) Depressed condition of the vital phenomena in the various tissues, and, therefore, slightly

ABIRRITATIVE—ABORTION.

distinct from Asthenia, which implies a more complete reduction of their powers.

Abirritative. (Same.) A term applied by Browniss to diseases caused by a lack of irritation.

Abit. (Ar) Cerussa, or lead carbonate. (R.)

Ab kudoo-telkh. The juice of the bitter gourd, ranked by the Arabian physicians amongst emetics. (Waring.)

Ablactation. (*Ab*, priv.; *lacto*, to give suck. Fr. *Idem*; It. *ablattamento*, Germ. *Entwöhnung*.) In the 'Dictionnaire des Termes de Méd. Chr. &c.' this word is confined to cessation of suckling so far as regards the mother, for, as to the child (or weaning), it is called *Sevrage*. The more ordinary sense, though this is to some extent technical, is connected with the grafting of trees, by which the juice of the parent tree is made to feed the graft till it unites.

Ablastous. (*A*, neg.; *βλαστός*, a germ or bud. Fr. *Idem*; Germ. *ohne Keim*, *unfruchtbar*.) Without germ or bud, unfruitful.

Ablation. (*Aufero*, to take away. Fr. *Idem*; It. *ablazione*; Sp. *ablacion*; Germ. *Abnahme*.) The removing, or taking away, of any part of the body by mechanical means.

Abiopharous. (*A*, neg.; *βλεφαρος*, the eyelid. Fr. *abiopharo*; Germ. *ohne Augenhleder*.) Without eyelids.

Abiopsia. (*A*, neg.; *βλεπω*, to see.) Blindness, *amblyopia*.

Abluent. (*Abluo*, to wash away. Fr. *abluant*, Germ. *abfahrend*, *reinsigend*.) Washing away, that which washes away, or carries off impurities. Gr. anal. *ῥέπτουρα*, applied by Galen, de Simpl. fac., ii, 12, to abstergent medicines.

Abluentia. See *Abluent* and *Abstergent*.

Ablution. (*Abluo*, to wash away. Fr. *Idem*; It. *abluzione*, Sp. *ablucion*, Germ. *Abwaschung*.) The washing of the body, whole or in part. Applied in chemistry to the separation of extraneous matters by washing. A translation of the Greek *ἀποθήβια*, a term applied to an internal washing, which was accomplished by administering profuse libations of milk-whey, as mentioned by Galen, de sal. diet., t. 18.

Abmortal. (*Ab*, from; *mortuus*, dead.) One of the terms employed by Hermann ('Pflüger's Archiv,' xvi, p. 193, 1878) to denote the various electric currents which may be observed in muscles. An ab-mortal current signifies the direction of a current in a muscular fibre passing from a portion of the fibre which is dying to a portion which is living and at rest. *Ad-mortal* similarly signifies a current passing from a portion of the fibre which is living and at rest to a portion which is dying. *Ad-terminal* signifies a current passing similarly in the fibre from some portion of the fibre to the natural tendinous termination of the fibre, and *ab-terminal*, one passing from the natural tendinous termination to some part of the fibre, the former might be called *termino-petal*, the latter *termino-fugal*. *Ad-nerval* is similarly a current passing from a portion of the muscular fibre to the entrance of a nerve fibre into the muscular fibre, and *ab-nerval* similarly a current passing from the entrance of the nerve fibre to some other portion of the muscular fibre.

Abnelecten. (Ar) Alumen, or alum. (R.)

Abnerval. See *Ab-mortal*.

Abnormal. (*Ab*, priv., *norma*, law.)

Contrary to the rule of nature, not in the natural condition, irregular.

Abnormality. (*Abnormalis*; *ab*, from; *norma*, rule.) Something exceptional, unusual, or anomalous; such as the transposition of the viscera, or the presence of six fingers on the hand.

Abnormity. (*Ab*, neg.; *norma*, a rule. Fr. *abnormité*, Germ. *Regelswidrigkeit*.) An anomaly or deviation from the common rule.

Abnormous. See *Abnormal*.

Abobra do Mato. A species of Bryony, Nat. Ord. *Cucurbitaceæ*, growing in Chili, the resin of which in drachm doses is purgative.

Abolt. The same as *Abol*.

Abolition. (*L. Abolitus*, *ab*, priv., and *oleo*, to grow.) The destruction or utter removal of any useless substance, or part.

Abolitio Pulsus. Cessation of the pulse. Asphyxia.

Abomasum. (*Ab*, away from; *omasum*, the paunch. Fr. *castlette*, G. *Labmagen*.) The fourth or true stomach of the ruminant, called also the reed or rennet. In capacity it stands next to the rumen or paunch. It is pear-shaped, and is situated behind the omasum, above the right sac of the rumen. Its base is connected with the omasum by a thick neck. Its apex is continuous with the duodenum. The mucous membrane is produced into lamellar folds, is soft, spongy, smooth, vascular, covered by a thin epithelium, and provided with numerous glands for the secretion of gastric juice. In this stomach the essential process of digestion takes place. The rennet is used for coagulating the milk in the manufacture of cheese.

Abomination. (*L. ab*, or *about*, let it be away, and *omen*, sign.) Loathing for food. (De Caldera.)

Aboriginal. (*Ab*, from; *origo*, the beginning. Fr. *aborigène*; Germ. *ursprünglich*.) Applied to plants, and to man and animals, which are supposed to be natives of the country they inhabit.

Aboral. (*Ab*, away from; *os*, the mouth.) That face or pole of a Coelenterate or Echinoderm which is opposite to the face or pole in the centre of which the mouth is placed.

Aborsus. (*Ab*, priv., and *ordior*, to begin.) An abortion; miscarriage in the first or early months.

Aborticide. (*Abortus*, an abortion; *cado*, to kill. Fr. *aborticide*.) The destruction of the fetus in utero to effect delivery.

Abortifacient. (*Abortus*, a miscarriage; *facio*, to make. Germ. *abtreibende Mittel*.) Term applied to medicines, or other agents, which cause the pregnant uterus to contract and expel its contents. The chief drugs to which abortifacient properties have been attributed are cantharides, ergot, savine, and rue, in this country; the juice of bamboo, various euphorbias, catapropis, and plumbago, in India, extract of cotton root (*gossypium*), *actæa racemosa*, and digitalis in America. Mechanical means are often employed, and the introduction of styles, sounds, &c., has often been resorted to.

Abortion. (*Abortio*, a miscarriage. Fr. *avortement*, It. and Sp. *aborto*, G. *Fruhgeburt*, *Fehlgeburt*.) The term abortion is applied to the expulsion of a fetus before it is viable.

Most writers adopt the end of the fifth or the beginning of the sixth month of pregnancy as the period separating an abortion from a premature

ABORTION—ABRACADABRA.

labour; some restrict the term abortion to an expulsion occurring in the first sixteen weeks, and use miscarriage to designate one occurring in the following thirteen or fourteen weeks, after which it is called premature labour.

The causes which may lead to abortion are very various. It may result from violent blows or falls on the abdomen, or other forms of external injury, from rupture of the membranes, from the action of powerful emmenagogues, from constitutional states of the mother, as from anæmia, plethora, variola, syphilis, from violent mental emotions, persistent vomiting, cough, constipation, or diarrhœa; from death of the fœtus, or degeneration of the parts belonging to it; from tumours in the pelvis, or adhesions consequent on inflammation; from separation of the placenta. Finally, it may result from hereditary predisposition, and occasionally seems to be an acquired habit.

In abortion occurring within the first three or four weeks, the symptoms are usually little more than an exaggeration of the ordinary sensations of a menstrual period; somewhat more pain, something substantial in the discharge. When occurring later on, there is usually a premonitory rigor, some little feverishness and nervous irritability, a feeling of coldness or weight in the hypogastrium, pain in the loins, and irritation of the bladder; by and by the pain increases, spreads to the uterine region and down the thighs, and becomes recurrent; hæmorrhage to a greater or less extent occurs; and in the end the uterus empties itself. If the pregnancy be only of a few weeks' duration, the ovum is often expelled entire; when more advanced, the membranes usually rupture first, the fœtus soon escapes, but a greater or less period may elapse before the placenta is separated. Inordinate hæmorrhage and retention of the placenta are the chief sources of danger. The treatment may have for its object the averting of a threatened abortion, the hastening of its progress, or the cure or relief of the conditions favouring its occurrence. For the first object, absolute rest, coolness but not coldness, and opium, are sometimes sufficient. For the second object, ergot may be needed; if there be much hæmorrhage, internal astringents are not to be relied on; ice should be applied, and the uterus emptied as soon as possible; if the os be dilated this may be done by the finger, or by special forceps; sometimes it is sufficient to break down the ovular structures, but it is well, if possible, to leave nothing behind; if the os be undilated, it may be plugged by a sea-tangle tent until the fingers can be introduced; it has been recommended that a large sponge soaked in vinegar, or some coagulating agent, be introduced into the vagina until expulsive pains come on. If hæmorrhage continue after the expulsion of the uterine contents, perchloride of iron in solution or water at a temperature of 50° C. (122° F.) may be injected into the uterine cavity. Sometimes the placenta is adherent and requires removal by the finger. The third object is to be fulfilled by a careful consideration of the cause of the abortion, and the treatment is to be directed towards its removal.

A. criminal. The administration of any poison or other noxious thing, or the use of any instrument or other means, with intent to procure the miscarriage of any woman, and also the use of any such means for that purpose by the woman herself, is a felony under the English law, whether the woman be or be not really pregnant. The

supplying or procuring materials with the knowledge that they are to be used in the production of a miscarriage is a misdemeanour. Among the means which have been used are hot baths, violent exercise, mechanical compression of the abdomen, and even trampling on it, abortifacient medicines, instruments introduced into the uterus, as skewers, sticks, wires, elastic tubes, and injections.

A. embryonic. Abortion occurring between the twentieth and the ninetieth day.

A. fœtal. Abortion occurring between the third and the sixth month.

A. induced. See *Premature labour, induction of*.

A. ovular. Abortion occurring before the twentieth day of pregnancy.

A. provoked. See *Premature labour, induction of*.

Abortion. In Botany, the suppression or non-development of some part or organ, as in the axis, of the stem; in the leaf, of the petiole or lamina; in the flower, of the calyx, corolla, andrœcium, or gynoœcium, or of some segment of one of these whorls.

Abortive. Fr. *abortif*; G. *abtreibend*; It. *abortivo*. Applied to treatment of disease adopted with the view of preventing its further or complete development.

Abortive smallpox, also called Varicelloid, is smallpox in which the eruption is limited to the vesicular stage.

For the use of this word in botany, see *Abortion*.

Abortives. See *Abortifacients*.

Abortment. *Abortion*.

Abortus. An abortion. See *Aborsus*.

Aboukir, Mineral Waters of. Algeria. A spring containing sodic chloride, near Mostaganœur; recommended in scrofula.

Aboulaza. A tree of Madagascar, in use for diseases of the heart. (D.)

Abrahax. See *Abrazas*.

Abacadabra. A cabalistic or magic word, recommended by Serenus, in his 'Medicina Metrica,' c. 53, v. 944, as a cure for semiteridian fever, &c., according to Castellus. See *Abacalan*.

It was to be written on a piece of paper folded in the form of a cross, suspended by a strip of linen sufficiently long to allow it to rest on the pit of the stomach; to be worn for nine days, and then to be thrown over the shoulder into an eastward running stream. The letters of the word were to be written in the form of a triangle in one of these two ways—

Abrosia. ('A. neg.; βρώσις, food.) Absti-

..... (D.)

Abrotanum. See *Abrotonum*.

A. cathsum. *Artemisia abrotonum*. (D.)

A. mas. *Artemisia abrotonum*.

Abrotonites. (Gr. ἀβροτονίτης, abrotonum wine.) Wine in which abrotonum has been soaked.

Abrotonum. ('Αβρότονον; F. *aurone*.) This term was applied to two plants by the ancients, one of which was said to be male, the other female. The former has been identified with *Artemisia abrotonum*, or Southernwood, and the latter with *Santolina chama cyparissus*. Abrotonum was employed as a tonic, vermifuge, emmenagogue, alexipharmic, and antiperiodic; also as a cure for the bite of the scorpion. (Waring.)

Abrupt. (*Abrumpo*, to break off). Præmorse, or truncated, applied to roots that appear as though bitten off.

Abruption. (*ab*, and *rumpo*, to break.) A term formerly used for the act of breaking, or state of being broken, or snapped asunder; applied to fractures synonymously with Abduction, which see.

Abruptly pinnate. (Fr. *pari-inné*; G. *paarige gehedert*.) Pinnate leaves are so-called when there is no central or terminal pinna, the leaf ending with a pair of leaflets.

Abrus precatorius. ('Αβρός, soft, from the tenderness of the leaves; *precis*, a prayer. F. *Liane à reglisse*; Sans. *Ganja kishada*; Arab. *Ghounchee*; Hind. *Ghangchi Gunj*; Dak. *Gunchi*; Gunda-mani, Kurri-mani; Tam. Tel. *Guri-gunga, Gura-renda, Guirivadi*, Mal. *Kunni-Kuru*; Beng. *Kunch Gunj*. Nat. Ord. *Leguminosæ*. Wild or country, or Jamaica Liquorice. Hab. Java, Mysore, Hindoستان, Assam. Root and leaves yield an extract like liquorice, but bitterish; leaves mixed with honey applied to swellings, and used to alleviate cough. In Jamaica used instead of tea; in Java, as a demulcent. Their juice thought useful in aphtha. The seeds employed externally to allay heat in ophthalmia. There are five varieties of the *A. precatorius*, with scarlet, black, white, yellow, and blue seeds. The scarlet seeds have a black spot, and are used as weights, each weighing almost exactly one grain (Betti weights). Other names for the seeds are Lovepea, Angola seeds, and Purple beads, and they are often strung as rosaries. In Egypt they are used as food (*Abus* = *abrus*). (Waring.) Barham, H. M. Amer. p. 80, has used a pluin of the leaves with success in cholera.

Absac. France: Arrondissement of Cantons near Charante. A cold town, spring containing sodic chloride. It is given with advantage as a drink in intermittent fever.

Abscedent. (*Abscedo*, to go away, with depart). Applied formerly to those parts which, when the body is in its natural position, are either united or contiguous to other parts, but when diseased no longer maintain their connection with the body, and which are separated.

Abscess. (*Abscessus*, to go away, with depart; Fr. *abcès*; It. *ascesso*; Sp. *absceso*; L. *abscessus*; G. *abscess*). A circumscribed collection of pus. The formation of an abscess is one of the terminations of inflammation, and in the ordinary course of disease has been named an abscess, although it is not a true abscess, as the word implies. It is a collection of pus, and is not a true abscess, as the word implies. It is a collection of pus, and is not a true abscess, as the word implies.

Abrazas. See *Abrazas*.

Abrasion. (*Ab*, priv., and *rado*, to rub.) To take off the *Abrazas*, *abachalen*. Act, or result, of rubbing, filing, shaving, chafing, fretting, or rubbing of any surface so as to expose the underlying parts, chiefly applied to the excoriation of the cutaneous and mucous tissues.

Abrasum. (*Abrasio*, to scrape off.) Abrasion.

Abrethan. A corruption of Abrotonum. (Linton.)

Abrazas. (The Greek letters α, β, γ, δ, ε, ζ, η, θ, which, as numerals, express 365.) A cabalistic term, and by some to be a name of the supreme deity of the Basilidians; by others to be that of the sun; and supposed to possess great protecting virtues; it was applied to small figures or plates of metal, or stone, representing Egyptian deities, with Magian and Rabbinical symbols, and Coptic, Greek, Hebrew, Phœnician, and Latin characters, which are believed to have been used as amulets.

Abreshain. (Nerey-sum of the U'ar) An Arabian remedy, consisting of white silk cut up very fine, used as an aphrodisiac. (Waring.)

Abrest. France. An alkaline spring near Vichy and having the same properties.

Abrette. The seeds of *Abelmoschus moschatus*.

Abrie. (A.) Salubus. (S and J.)

Abrodinatus. (Athen. *Abrodinatus*, *Abrodinatus*, having delicately applied to get it more delicate.)

Abroma angustum. Nat. Ord. *Scrophulariæ*. Hab. Tropical Asia. The bark is used as a tonic.

Abromotoun. Another name of an Abromotoun, the bark of the leaves are used as a tonic in India. (Waring.)

Abrong. A small green, spotted with black and white, bitter, astringent, and vomitiferous, used to have been brought from China. (Waring.)

Abroslaza. A kind of Moringa, the leaves of which are used as a tonic in India. (Waring.)

ABSCESS.

white corpuscles of the blood, whilst others are derived from the proliferation of the connective tissue. The pressure of these cells, the requirements of their nutrition, and the nervous and vascular disturbance of the parts, lead to the atrophy and breaking up of the adipose and connective tissue. The tissues surrounding the central collection of pus become condensed by the exudation of plastic material, and subsequently form the sac of the abscess, which possesses but feeble powers of absorption; loops of vessels develop on this border by the coalescence of leucocytes, and the whole inner surface of the cavity of the abscess, in so far as regards the arrangement of its vessels, resembles a granulating surface folded up in the form of a sac. By degrees contraction takes place, and ultimately the only remains of the original mischief is a hard knot or cicatrix. Where no limiting membrane is present, as in the abscesses that form in erysipelas, the term purulent infiltration is generally applied to the collection of matter.

The proximate cause of the suppuration of an inflammatory exudation is due in many instances to an excessive supply of pabulum. The entrance of septic ferments into a part, as in dissection wounds, or the existence of a septicæmic condition of the blood generally are conditions especially adapted to cause inflammation to pass into suppuration; certain diatheses appear to be exceptionally prone to the formation of abscesses.

The symptoms of an abscess are that after a period of variable duration, in the course of which the patient has experienced the usual signs of inflammation, sometimes with and sometimes without a rigor, a soft swelling appears, with or without discoloration of the surface, in which a more or less distinct sense of fluctuation can be perceived on palpation. Abscesses are found most commonly in the subcutaneous connective tissue, but are also frequently seen beneath the periosteum, and in many other parts, as the brain, lungs, liver, prostate, uterus, and lymphatic glands. Cold abscesses are seen in many syphilitic and tuberculous affections, and in inflammations of the glands and joints in lymphatic and scrofulous diatheses.

Abscesses, if left to themselves, generally make their way in the direction of least resistance, and burst through the skin or some mucous membrane, or their contents may, owing to the corpuscles undergoing fatty degeneration, be reabsorbed. In old-standing cases the cheesy matter entering the blood-vessels in a particulate form may give rise to miliary tuberculosis.

In the treatment of impending abscess an attempt may in the first instance be made to arrest its formation, and with this object in view inflammation should be reduced by rest and cold. The blood-vessels should be relieved by position or removal of blood, and by pressure carefully applied; the infiltration of mercurial ointment may also be tried; when, however, the formation of matter is inevitable or has actually taken place, warm fomentations and poultices may be applied and the pus evacuated, either by making a free incision under the *antisepptic method*, or by the use of an aspirator. This proceeding is especially important when the abscess is situated in regions like the ischio-rectal fossa or the mamma, where it is likely to burrow, or where it is sub-jacent to dense fasciæ and aponeuroses.

When there is reason to believe the pus of an abscess has undergone decomposition, as, for ex-

ample, when a tympanitic sound is elicited on percussion, the opening should be free and the sac may be washed out with carbolic-acid lotion or chlorine water. In opening deep-seated abscesses in the neighbourhood of important parts, as in the neck, great circumspection and thorough knowledge of anatomy are required. Formerly caustics, as potash or Vienna paste, or even the actual cautery, were used, and are even now occasionally employed. In some instances, as in buboes, a cure may be effected by stabbing the abscess at several points with a needle, and good results have been obtained by passing a filiform seton through the sac. Where abscesses are very large a drainage tube may be inserted, and the interior may be distended with warm water.

A. alveolar. Abscess forming in the gum or in the socket of a tooth.

A. bursal. Inflammation and suppuration in a bursa mucosa.

A. chron'ic. (Fr. *A. ganglionnaire.*) An abscess developing slowly and without acute inflammatory symptoms in the connective tissue after simple periostitis, or in or around an inflamed gland, or beneath scrofulous or syphilitic gum-mata.

A. cold. (Fr. *Abscès froid.*) An abscess developing slowly and without acute inflammatory symptoms, usually in scrofulous subjects, difficult to diagnose, often being mistaken for tumour.

A. congestive. An abscess appearing at a distance from the place where the pus is formed; it usually results from disease of bone, the matter making its way along the sheaths of muscles.

A. constitutional. Abscess resulting from some general disorder of the blood, either of a specific or non-specific character; such are the boils that are so frequent in those living in bad hygienic conditions; scrofulous abscesses, and abscesses occurring in patients affected with venereal disease.

A. critical. Abscesses appearing in the course of an acute disease, and either leading to the remission of the symptoms, or increasing their gravity, as in the abscess of the parotids occurring in typhoid fever, and the abscesses seen in convalescence from smallpox.

A. diffuse. An abscess without well-defined wall or sac.

A. dorsal. An abscess occurring in the dorsal region.

A. embolic. An abscess forming in the clot of an embolism, or in adjoining connective tissue.

A. emphysematous. See *A. tympanitic*.

A. fœcal. (Fr. *Abscès stercoral*; It. *abscesso fecale*; G. *Kothabscess.*) An abscess developed in the connective tissue surrounding the large intestine or rectum, and communicating with its interior. The pus often possesses a peculiarly penetrating odour.

A. gangrenous. A form of abscess attended with death of the adjoining parts.

A. idiopathic. An abscess originating without known cause, and appearing at the seat of the primary inflammation.

A. iliac. Abscess presenting in the iliac region. It is sometimes due to disease of the vertebrae, at others, to disease of the kidney or to perityphlitis.

A. infecting m'f'ral. Abscesses resulting from emboli produced by the detachment of

ABSCESS.

particles of lymph deposited on the valves of the aorta, in endocarditis.

A. ischio-rectal. An abscess occurring in the ischio-rectal fossa. It usually involves the whole of the fossa, laying bare the wall of the rectum, with the cavity of which it may communicate. It should be opened freely without cutting the wall of the gut, or enlarging any intestinal opening that may be present, and the cavity of the wound should be dressed with perchloride of iron or other antiseptic.

A. lacunar. Inflammation and suppuration is one of the lacunae of the urethra; a complication of gonorrhoea.

A. lumbar. See *A. psoas*.

A. lymphatic. See *A. chronic*.

A. mammary. (Fr. *Abcès de la mamelle*.) An abscess forming in the breast, often caused by injury or by inflammation of a galactophorous duct, especially in nursing women. It sometimes occurs in the child shortly after birth. The inflammatory symptoms are generally of great intensity. The abscess may be limited to the areola, or it may be subcutaneous or intramammary or submammary. In opening an intramammary abscess care should be taken to make the incision early, and in a radiating direction from the nipple, to avoid division of the milk ducts. Nursing should be interdicted.

A. metastatic. A term, now disused, for abscesses resulting from embolism of arteries or capillaries by particles derived from distant sources. See *A. pyæmic*.

A. military. Term applied to abscesses existing in considerable numbers, and of small size, in any organ, generally resulting from embolism of the smaller vessels. See *A. pyæmic*.

A. milk. Abscess occurring in the breast of a woman during lactation.

A. multiple. These occur chiefly under the influence of three constitutional conditions—the scrofulous, the syphilitic, and the puerperal.

A. pelvic. An abscess occurring in the connective tissue of the pelvis.

A. perforating. An abscess in the cornea, bursting both externally and internally into the anterior chamber of the eye. Also, applied to an empyema when it penetrates the lung, the pus escaping through the bronchi. Also, generally applied to abscesses discharging themselves through the walls of adjoining cavities.

A. pericecal. An abscess forming in the connective tissue around the cæcum.

A. peri-laryngeal. An abscess forming in the connective tissue around the larynx.

A. perineal. An abscess forming in the perineal region, usually resulting from escape of urine, after rupture of the urethra.

A. peri-nephritic. An abscess occurring in the connective tissue around the kidney. After a rigor, febrile symptoms occur, with nausea, vomiting, constipation, pain in the region of the kidney, increased on straightening the body, and the appearance of a swelling near the centre of the crest of the ilium. It is liable to be confounded with caries of the vertebra and hip disease. The contents of the sac may be removed with an aspirator.

A. periosteal. See *Periostitis*.

A. peri-pharyngeal. An abscess in the connective tissue surrounding the pharynx.

A. peri-rectal. An abscess in the connective tissue around the rectum. There is usually a communication with the bowel, and the pus is

extremely fetid. It is often the cause of *Fistula in ano*. It should be opened early.

A. peri-typhlitic. Abscess in the connective tissue surrounding the cæcum. There is pain in the right iliac region, increased on pressure, and swelling with febrile symptoms. A grooved needle should be introduced through the abdominal parietes over the seat of the disease, and if the presence of pus be ascertained, the abscess should be opened by the *antiseptic method*, or the fluid may be removed with an aspirator.

A. peri-uterine. Abscess in the connective tissue surrounding the uterus.

A. phlegmonous. An abscess supervening in the course of a few days after a chill or rigor, with acute inflammatory symptoms, as pain, redness, heat, and swelling.

A. post-pharyngeal. See *A. retro-pharyngeal*.

A. prostatic. Abscess occurring in or around the prostate gland.

A. psoas. A chronic collection of matter forming in the connective tissue of the loins behind the psoas muscle, and descending in the course of the psoas muscle. The matter sometimes points above, sometimes below, Poupert's ligament, or, rarely, at the sacro-sciatic foramen. It is of the result of disease of the vertebra. It is accompanied by pain, especially felt on straightening the leg on the body, and is most common in scrofulous subjects. It must be diagnosed from rheumatic affections, disease of the kidney, glandular swellings, and hernia. The matter may be withdrawn by an aspirator.

A. puerperal. A form of abscess has been described under this name in infants, in which nodules develop under the skin, which then reddens and becomes tender and painful. The nodules, at first hard, rapidly soften, present fluctuation, and finally burst. Suppuration takes place quickly.

A. pyæmic. Abscesses forming in patients suffering from pyæmia. A good example is afforded by the pulmonary abscesses sometimes occurring after injuries or operations on bones. In such instances the capillaries are plugged with coagula, which, becoming detached, traverse the right heart, and pass along the pulmonary artery and its branches till they are arrested in the smaller vessels of the lung, where they occasion suppurative tubular pneumonia or metastatic military abscesses of the lung, similar conditions may occur in the liver, as a result of ulceration or suppuration, in or near to the intestine. Such abscesses usually run their course with rapidity.

A. residual. A collection of matter forming in or around the remains of hyaline inflammation.

A. retro-pharyngeal. An abscess forming in the connective tissue behind the pharynx. It is commonly due to inflammation of the post-pharyngeal lymphatic glands, which are constantly present up to the third year of life. The abscess often forms a soft swelling below the jaw and under the sterno-mastoid muscle. The respiration is laboured and stertorous. Inspection is difficult, but palpation is readily effected. An opening may be made in the pharynx, or occasionally through the skin. At the moment when the knife enters the abscess the tip of the left forefinger is used to depress the epiglottis and close the larynx, lest the pus should enter it and cause suffocation.

ABSCESION—ABSINTHISM.

A. scrofulous. Suppuration in the lymphatic glands of children, or a chronic abscess in a scrofulous person, is often thus named.

A. septicæmiae. A synonym of pyæmic abscess; also employed to denote an abscess following the direct introduction of some putrid matter into the system.

A. shirt-stud. (*F. abces en bouton de chemise.*) An abscess presenting two cavities, of which one is subepidermic, and the other subcutaneous; a communication usually exists between these, which may be enlarged when the superficial abscess is opened.

A. stercora'ceus. A synonym of fecal abscess.

A. submam'mary. See *A. mammary.*

A. subpectoral. An abscess forming beneath the pectoral muscles.

A. subperiosteal. An abscess forming between the periosteum and the bone.

A. supra-mam'mary. See *A. mammary.*

A. symptomatic. An abscess indicating the presence of some other affection, as when an abscess forms around necrosed bone, or as a result of extravasation of urine from rupture of the urethra.

A. the'cal. (*F. abces des gaines tendineuses*; *I. ascesso della vagine dei tendini*; *G. Sehnen- or Scheide-abscess.*) Inflammation and suppuration in the sheaths of tendons, commonly associated with whitlow. It requires to be opened early.

A. tympanitic. An abscess which, in consequence of admission of air to, and putrefaction of, its contents, contains gas, which renders the sac resonant upon percussion.

A. urethral. A collection of pus forming in or around the urethra; in the former case usually resulting from inflammation in one of the lacunæ of the urethra.

A. urinary. (*F. A. urinae*; *I. ascesso orinario*; *G. Urinabcess.*) A collection of matter resulting from the irritation excited by the escape of urine from some part of the urinary tract; accurate diagnosis and early opening are here of great importance.

Abscess'ion. A synonym of *Abscess.* The Greek anal. ἀπόστασις is applied by Hippocrates to a solution of continuity, or contiguity; also to the transition of one fever into another, or to evacuations of any kind supervening on acute diseases, as where Galen, in Comm. writes ἀπόστασις κατ' ἔκρουσιν, a defection by flowing out.

Abscess'sus. An abscess.

A. articuli. Suppurative arthritis.

A. capitis sanguineus neonatorum. Caput succedaneum. See *Cephalæmatoma.*

A. gangrenæ'ous. Carbuncle.

A. gangrenæ'sus. Carbuncle.

A. gingivæ'rum. See *Parulis.*

A. lacteus. Abscess of the breast.

A. nucleat'us. A boil.

A. oculi. Hypopyon.

A. pectoris. Empyema.

A. spiritus'sus. Aneurism.

A. stercora'sus. Fecal abscess.

A. thorac'is. Empyema.

Abscis'sa, Vox. See *Vox Abscessa.*

Abscis'sæ. (*F. abscissæ*; *I. accissa*; *G. Abcissæ.*) The transverse lines cutting vertical ones at right angles in diagrams in which the mutual connection of two series of facts is shown, as when the number of pulse beats, or the variations of temperature, are expressed in their relation to successive and equal periods of time.

Abscis'sio infiniti. The cutting off of the infinite part. A process of exclusion whereby the position of an object in a system of classification is determined by successively comparing it with different classes of that system, and by the exclusion of those to which it does not belong.

Abscission. (*Abcindo*; *ab*, from, and *scindo*, to cut off.) The Gr. syn. ἀποκοπή, is used for the termination of a disease by death, before the occurrence of its decline (Galen); also for the loss or suppression of the voice (Dioscorides; Scribonius Largus).

Applied to a fractured bone when a part of it is cut off and removed, or to the cutting off of any soft part, as of a nerve, or the prepuce (Hipp.).

Also employed for a surgical operation by which a decayed part, or other degenerated substance, is removed by a cutting instrument. (Hildanus.)

A. of cornea. An operation performed for the purpose of reducing the size of the eye when staphylomatous, and thus enabling an artificial eye to be worn. The patient being rendered anæsthetic, a speculum is introduced to separate the lids. Three or four curved needles, armed with carbolised silk or catgut ligatures, are made to transfix, without being carried through, the base of the staphyloma, the points entering and emerging through healthy sclerotic; the staphyloma is then pricked with a knife near one of the needles, the point of a sharp pair of scissors inserted, and an elliptical piece removed. The needles are then drawn through, and the edges are brought accurately together by the sutures. Healing sometimes takes place rapidly and well, but at others, severe inflammation follows, with suppuration in the globe. There is some risk of sympathetic ophthalmia, but this appears to be slight. The after-treatment merely consists in the application of cold compresses. Some operators clear out the vitreous humour, retina, and choroid, leaving only the sclerotic. If no inflammation occur after the operation, an artificial eye may be inserted for a short period each day after the lapse of a month or six weeks.

Abscis'sus. (Same etymon.) Cut off. Applied to the loss of voice. (Celsus.)

Abscon'sio. (*Abcondo*, from *abs*, and *condo*, to conceal.) A cavity of bone which receives and hence conceals the head of another bone.

Also a cavern, or sinus, or that which burrows or winds under the skin, and dilates under it.

Absinthe. (*F. absinthe*; *G. Wermuth-geist.*) The name of a liqueur, largely consumed in France, composed of an alcoholic tincture distilled from the *Artemisia absinthium* (wormwood) and *Artemisia pontica*, to which are added the roots of angelica and sweet flag, the seeds of star-anise and cummin, the leaves of the Dictamnus of Crete, organum, fennel, mint, and balm, with a little essence of cummin. For its injurious effects see *Absinthium.*

Absinthic Acid. See *Succinic Acid*, with which it is believed to be identical.

Absinthin. (*F. absinthin*; *G. Wermuth-bitter.*) $C_{12}H_{20}O_4 + H_2O$ (Luck); or $C_{20}H_{32}O_8 + H_2O$ (Kromeyer.) A bitter principle in the leaves of *Artemisia absinthium*. It is a white imperfectly crystallising substance of intensely bitter taste; scarcely soluble in cold water, but dissolving readily in alcohol and ethers. It melts at $120^{\circ}C.$ ($248^{\circ}Fahr.$).

Absin'thism. An acute or chronic disease of the mental and bodily powers resembling alco-

ABSINTHITES—ABSORPTION.

holism, due to the abuse of absinthe, and attributed to the essential oil of that plant. It is characterized by restlessness at night, with disturbing dreams, snoring, nausea and vomiting, trembling, and general muscular debility, followed by epileptiform convulsions, and ultimately by acute delirium or mania, with general softening of the brain, or general paralysis.

Absinthites. Wine in which absinthium has been soaked.

Absinthium. (*A.*, neg., and *ψιδος*, pleasure, doubtful derivation.) Nat. Ord. *Compositae*. Used by the classical writers to denote strong bitters generally. The specific name of the common wormwood. There were several recognised varieties: the *A. santonicum*, the *A. ponticum*, which was the best of all, and the *A. maritimum* or *Scirpium* (from the island Scirphos). See *Artemisia*.

A. maritimum. *Artemisia maritima*.

A. maritimum. *Artemisia maritima*.

A. ponticum. *Artemisia pontica*.

A. romana. *Artemisia pontica*.

A. santonicum. *Artemisia santonica*.

A. vulgare. *Artemisia absinthium*.

Absin thole. $C_{10}H_{16}O$. A liquid camphor obtained from the oil of wormwood. It boils at 195° C. (383° F.).

Absolute. (*Ab* and *solo*, to loose.) Free from bond, positive.

A. alcohol. Alcohol as free from water as it can be obtained. Sp. gr. at 15° C. (59° F.), 0.7938, and that of its vapour, referred to air, 1.613. It boils at 78.4° C. (173° F.). See *Alcohol*.

A. expansion. The apparent expansion of a heated liquid corrected for the simultaneous expansion of the vessel in which it is heated.

A. muscular force. (*G.* *Absolutkraft*.) A term employed to indicate the maximum power of shortening that a muscle can display when the strongest stimulus is applied to it. The magnitude of the absolute muscular force, expressed in units of weight is dependent upon the area of its cross section, and is, therefore, expressed in relation to the unit area of the section. The transverse area of a muscle is obtained by dividing its length by its volume, and the volume is equal to the weight of the muscle divided by the specific weight of muscular tissue, which is 1058. The absolute force of a square centimeter of frog muscle lies between 2800 and 3000 grammes (42232—46,300 grains); and of a square centimeter of human muscle between 6000 and 8000 grammes (86464—123,620 grains).

A. temperature. Term applied in physics to a scale, the zero of which is that purely imaginary temperature at which it is presumed that a gas would shrink to a mathematical point. The zero would be 273° C. below the freezing point, because gases contract 1-273rd of their volume with each degree of reduction. Temperatures reckoned on this scale are called absolute temperatures, and are 273° above the degrees of the centigrade scale. The boiling point of water would consequently be marked 373° on this scale.

A. term. A term or name of a thing which has no evident and necessary relation to anything else, as contradistinguished from relative term. The word plant is an example of an absolute term, for nothing is essentially and invariably associated with it, whilst the word shepherd is an example of a relative term, inasmuch as sheep are necessarily connected with it.

A. zero. The zero of absolute temperature, which see.

Absorbent. (*L.* *absorbeo*; *ab* and *sorbeo*, to suck.) That which absorbs.

In botany, applied to vessels, formerly supposed to exist in the roots of plants, by which nutriment was taken up.

In therapeutics, applied to medicines employed with the view of causing the absorption of any abnormal amount of secretion, whether in the intestinal canal or externally on the surface of ulcers or excoriations. For the most part they consist of alkaline earths, or substances of which chalk may be taken as a type. The crab's eyes, snail and oyster shells, and other inert calcareous substances, so much used in former times, acted only as absorbents. See also *Antacids*.

Absorbents. See *Lactals* and *Lymphatics*.

Absorption. (*Absorbeo*, to consume by swallowing. *F.* *absorption*; *L.* *assorptio*; *S.* *absorcion*; *G.* *Aufsaugung*, *Einsaugung*.) The entrance, imbibition, or permeation of one body by another in such a way that whilst the absorbing body is not greatly altered, the absorbed body appears to vanish. The absorption of light and heat waves means their partial or complete extinction as such, the force expended reappearing in other forms. The absorption of gases by fluids may either be of a chemical or physical nature, or both combined. In the former case direct combination takes place, according to the law of equivalent proportions; but in the latter the amount varies with the temperature and pressure. When a fluid has absorbed the maximum amount it can take up in the given conditions, it is said to be saturated. The absorption-coefficient by weight is the number of parts of a gas by weight that a given weight of the fluid can absorb. The absorption-coefficient by volume is the volume of a gas that a certain volume of the fluid can take up at 0° C. (32° Fahr.), and a constant pressure of 30 inches of mercury (760 mm.). With few exceptions a larger amount of gas is absorbed at a low than at a high temperature. Henry's law of absorption of gases by fluids is that the quantity of gas which a fluid can absorb at a given temperature is proportional to the pressure under which the gas exists. Dalton's law is that in a mixture of elastic fluid bodies each constituent is absorbed as if it were the only one in contact with the fluid under pressure equal to its partial pressure in the mixture.

Absorption of gases by solids. All solids condense gases and vapours on their surface in quantities peculiar to each body and gas, and always with evolution of heat. One of the most remarkable instances is that of palladium, which, when in the form of spongy metal at 200° C. (392° Fahr.) absorbs 686 times its volume. Hydrogen passes through solid platinum at a white heat like a sieve, as does carbonic oxide through glowing iron. Carbon in the form of charcoal has remarkable absorptive power for gases. Boxwood charcoal takes up 90 vol. of ammonia, 85 of hydrochloric acid gas, 55 of hydrogen sulphide, 35 of carbonic acid gas, 9.3 of oxygen, 7.5 of nitrogen, and 1.75 of hydrogen.

Absorption in physiology is the process by which food and other matters are taken up into the lymphatic or venous channels, either when introduced from without, as in ordinary digestion, or when produced by the disintegration of the tissues.

ABSTEMIOUS—ABUTA

In pathology absorption is the process by which structures are interstitially removed.

In medicine absorption is the process by which deposits in the tissues are removed, either from natural causes or under the influence of drugs.

In ophthalmic surgery the term absorption is employed to indicate the process of solution and removal which occurs in the lens when it has been broken up in the needle operation.

A. bands. Certain dark lines, first observed by Wollaston, and subsequently carefully described by Fraunhofer and others, in the spectrum of the sun and stars. They indicate the presence of various gases. Physical research has shown that every gas and every vapour absorbs exactly those kinds of rays which it emits when in the glowing or incandescent condition, whilst it permits all other kinds of rays to traverse it with undiminished intensity. The sun, as Kirchhoff maintains, may be regarded as an extremely hot mass, the photosphere, the glowing white-hot surface of which emits white light, and in and by itself would give a continuous spectrum. Outside of the photosphere and surrounding the sun is an atmosphere of glowing gases and vapours, which is called the chromosphere; and this, though of lower temperature than the photosphere, is still sufficiently hot to maintain many metals in the state of vapour. As the light of the photosphere before it reaches the earth must traverse the chromosphere, it is subjected to the absorptive action of the gases and vapours existing in it. It is to this absorption that the bands or lines of Fraunhofer owe their origin. The different colours of transparent solid and fluid bodies result from their peculiar capabilities of absorption. Thus, if the spectrum of solar light be allowed to pass through blood diluted with water, not only will Fraunhofer's lines be visible, but two dark broad lines make their appearance near the yellow part of the spectrum, and the whole of the violet end vanishes; so that the red colour of the blood is not a simple colour, but a mixture of those colours which still remain in its spectrum.

A. of disassimilation. The normal process by which used-up tissue is removed.

A. disjunctive. The absorptive process which accomplishes the detachment of a dead part.

A. lines. See *A. bands*.

A. progressive. The morbid process by which structures are removed as a result of inflammation or an effect of pressure.

Abstemious. (*L. abstemius*; *abs*, from, *temetum*, wine; *F. abstème*; *I. astemo*; *G. Enthaltensam.*) Strictly, this word means abstinence from wine; but, as generally applied, it also means moderation or temperance in diet.

Abstention. (*L. abstentio*; *absteneo*, from *abs* and *teneo*, to hold.) Applied by Cælius Aurelianus to retention, or suppression of the feces, as a symptom usual in the disease Satyriasis.

Abstergent. (*L. abstergens*; *abstergeo*, *abs*, and *tergeo*, to wipe. *F. abstergent*; *I. astergente*, *asterveo*; *G. reinigend.*) Cleansing; applied to medicines which cleanse, or clear from foulness, or sordes, and especially from sordes on the surface, and such medicines were properly termed Abstergentia, and Abluentia, as distinct from those which removed sordes impacted or embedded in the substance, which were more correctly called Detergentia.

Absterive. Detergent; purifying.

Abstinence. *F. abstinencia*; *I. astinenza*; *G. Enthaltensamkeit.* The habit of self-denial exercised in reference to those things in which the inclination would lead to indulgence, more especially applied to the refraining from, or the sparing use of, food and liquors. For the effects of constrained and total abstinence see *Hunger*, *Thirst*, *Inanition*, *Starvation*.

Abstract term. (*L. abstraho*, to draw away from; *F. terme abstrait*; *I. termine astratto*; *G. allgemeine Begriff.*) A term or word which is the expression of a property or condition of a thing or person, as lameness, which is the abstract word denoting the condition of the concrete, a lame man.

Abstraction. (*L. abstraho*; *abs* and *traho*, to draw; *F. abstraction*; *I. astrazione*; *G. zerstreung.*) In logic and psychology applied in a general sense to that mental process by which attention is fixed upon one particular idea to the exclusion of others.

In another point of view it is the correlative term to attention, for as attention is the concentration of the mental faculties upon a definite object, it involves withdrawal of consciousness from all other objects. This withdrawal is logically and etymologically abstraction, which is thus the negative side of attention, or, as Hamilton expresses it, the two processes form the positive and negative poles of the same mental act. Abstraction, again, is closely connected with the process of classification, for to abstract is to separate the qualities common to all individuals of a group from the peculiarities of each individual.

In surgery the term is applied to bloodletting; the abstraction of blood from a blood-vessel.

Abstractitious. Old term applied to spirit obtained from plants by distillation, as opposed to that produced by fermentation, according to Dan. Ludovicus, *Pharmac.*, dissert. i. p. 457.

Abstractive. See *Abstractitious*.

Ab'sus. A small Egyptian lotus; also, a species of Cassia.

Abterminal. See *Abmortal*.

Abulia. (*A. priv.*; *βουλή*, will. *F. aboulie*; *G. Willenlosigkeit.*) A form of insanity in which the power of exerting the will is defective.

Abuse. (*L. ab*, and *utor*, to use.) See *Rape*.

Abuta. *Nat. Ord. Menispermaceæ.* Flowers apetalous; sepals 6—12, in 2 or 4 series, the outermost small, innermost petaloid; stamens 6, sterile in the female flowers; carpels 3, with cylindrical styles; fruit consists of ovoid drupes, each having a thin vertical septum; seed with ruminant albumen.

A. amara. A climbing plant of Guiana, called abouta or abuta by the natives. Aublet names it *Paireira brava jaune*, or yellow *Paireira brava*, and describes the root and twigs as being very bitter.

A. can'dicans. *Hab. Cayenne*, where it is called *Liane amère*, from its bitter taste.

A. indica. *Hab. Cochinchina*, where it is named *Cây-sot* and *Cây-gam*. The roots and leaves are febrifuge in decoction and powder. (Waring.)

A. rufescens. *Cocculus rufescens.* A climbing plant of Cayenne and French Guiana. The root, according to Aublet, constitutes the white *Paireira brava*. An infusion (3j ad Oj aque) is employed by the natives in some affections of the liver. The same authority states that the red *Paireira brava* is procured from a variety of which

ABUTILON—ACACIA.

the shoots and under surface of the leaves are covered with a rufous down Martius (Mat. Med. Boruss., p. 42) states that in Brazil the root and bark are used as bitters to debility of the stomach, dyspepsia, intermittent fever, and asthenia.

Abutilon. (Ar. meaning yellow; G. *Samoligoppel*.) A genus of the Nat. Ord. *Malvaceae*.

A. esculentum. The Beucaço de Deus of the Brazilians, by whom the boiled flowers are used as an article of diet.

A. indicum. Country mallow. (Hind. *Kanghi*, *Dak Kangoi*. Tam. *Tutti-Prun-tutti*. Tel. *Tuttura-benda*, *Nugu-benda*, *Tutturi-chettu*. Mal. *Pettaka-putti*, *Tutta*, *Uram*.) These two plants are shrubs common throughout India, only differing in the size of the calyx, which is largest in the *A. indicum*. The leaves contain much mucilage, hence employed as an emollient fomentation; an infusion of the roots is given as a cooling drink in fever.

Abvacuation. See *Aberacuation*.

Acacalia. (*Akakali*, according to Gortius.) A shrub growing in Egypt, believed to be a species of *Tamarisk*, the seeds of which, soaked in water, were said to be good for the eyes. (*Dioscorides*.)

Also, the flowers of the narcissus. (*Heyachius*.)

Acacia. (Either from *ἀκάζω*, to sharpen or point, or from *ἀκασία*, harmless, by antiphrasis, on account of its spines, or from the innocent nature of the gum. F. *acacia*; G. *Akazie*; L. *acacia*.) A genus of plants belonging to the sub-class *Mimosa*, Nat. Ord. *Leguminosae*. Hemaphrodite flowers, calyx 5-toothed, corolla 5-cleft; stamens 4—100; pistil 1, legume bivalved. M.a.e. calyx 5-toothed; corolla, 5-cleft, or formed of five petals; stamens 4—100.

A. Adansonii. Hab. Senegambia, believed to yield Gouakie gum, a red and very bitter variety.

A. adstringens. The *Styphnodendron Barbatum*.

A. albicans. A species growing in Brazil, and supplying the variety called Ku sache gum.

A. alba. A species yielding the variety termed little gum; an inhabitant of Senegambia.

A. alba trifoliata. The *Spartium spinosum* of Linnaeus.

A. amara. Willd. A native of the Coromandel coast and other parts of India; bark astringent and tonic.

A. angico. Martius. Brazil, native name Angico. Supposed to yield one of the varieties of the astringent bark termed Barbatimão. The wood known in commerce as Angica and Inzica.

A. arabica. Willd. (Hind. *Babool*. Tam. *Kuru-vaylam*. Tel. *Nallatamma*. Mal. *Karutalakam*. Beng. *Babul*.) Hab. Egypt, Arabia, and India. A tree varying from a few feet to forty; spines in pairs, branches and petioles downy; pinnae in 4—6 pairs, leaflets 10—20 pairs, minute, smooth, oblong linear, a gland between the lowest pair of pinnae. Pods more or less. Furnishes the red variety of gum arabic. The bark, *Babul bark*, is astringent and tonic. The bruised leaves are applied to ulcers. The pods, *Bablah*, are used in coughs.

A. asiaticum. Hind. *Coongoonie*. Arab *Khebatie*. Beng. *Petarca*. Burm. *Tharmakhyok*. Cing. *Anoda*. C. China *Cuy-koi-vay*.) Used as an emollient.

A. capensis. A synonym of *A. horrida*.

A. catechu. Willd. (Sans. *Khadira*, Hind. *Khaer* or *Khayer*. Beng. *Khaeragach*. Can. *Kheiric*, Cing. *Khehures*. Coorg *Cugali*. Tam. *Wathalay*. Tel. *Podeelamma*. Burm. *Sha*.) A tree inhabiting Assam, Bengal, Behar, Coromandel, and other parts of India, also Burmah and Ceylon. Stipules thorny; leaves bipinnate; leaflets serrated at base; petioles angular; calyx downy; corolla monopetalous 5-fid, yields *Catechu*.

A. concinna. (Beng. *Resta*. Tel. *Restichika*. Burm. *Ken-Owon*. Co. Ch. *Cay-cher-bien*.) A climbing shrub, widely distributed in India. The legume (Tam. and Tel. *Sheekar*) is in common use as a detergent for cleansing the hair. It is an expectorant, and acts as an emetic in doses of 30 grs.

A. cochilocarpa. (Don., Dict. ii, p. 422.) A tree of Brazil (Barbatimão), the bark of which is imported into Europe under the name of *Cortex Brazilianis* (Gaubourt, *Drogues* iii, p. 306). It is astringent and bitter, and has been employed in hemorrhage, diarrhoea, and leucorrhoea. The powdered bark has been applied to foul and cancerous ulcers, and is used in Portugal as a substitute for quinine. It is doubtful whether it is identical with *Cortex astringens Brazilianis*, as this is referred by Martius to *Styphnodendron Jurema*, also a Brazilian species.

A. dealbata. The silver wattle. Furnishes part of Australian gum arabic.

A. decurrens. Willd., Sp. Pl. A native of New Holland, about Port Jackson, from the bark of which is obtained an astringent extract similar in properties to catechu. It affords a gum.

A. Ehrenbergii. An Arabian species, producing a kind of gum arabic collected by the Bedouins of the desert.

A. falcata. Willd. A tree of New South Wales, called Wee-tjellan by the natives, and *Lignum vitae* by the colonists. The bark contains tannin, and is used by the natives to poison fish.

A. farnesiana. Willd. (Beng. *Gooyababul*. Sans. *Urmada*, Sam. Hind. *Rambabul*. Burm. *Khetoori-chettur*. Coch. Chin. *Hoa-sien-gai*.) Hab. parts of India, Bengal, Siam, Sikkim, Assam, Nepal; cult. in S. Europe, Cochinchina. The bark is astringent, and produces a gum resembling gum arabic; the flowers on distillation yield a delicious perfume, and to possess stimulant properties. The leaves employ the leaves in bladder diseases. See *Balebabul*.

A. ferruginea. D.C., Prodr. (Tam. *Veloayiam*. Tel. *Wondue*, *Tella Toomma*.) Hab. mountainous regions of India. Bark powerfully astringent, used in decoction as a wash for the teeth, the natives prepare an interesting liquor from it.

A. fistula. A variety of *A. argel*.

A. floribunda. Willd. A native of New Holland, yielding a gum resembling gum arabic.

A. germanica. The concrete gum exuding from several species of *Prunus*. Used as a substitute for gum arabic.

A. giraffa. Willd. A native of Central and Southern Africa, the favourite food of the giraffe. It yields a superior kind of gum arabic, which is eaten by the natives, by whom it is named *Kameri-doern*.

A. graveolens. A native of India and Bengal, used as a bitter and diaphoretic.

A. gummifera. Willd. Hab. Africa, near Mogador, yields a part of the Barbary gum, and perhaps some of the Sassa gum.

ACACLE GUMMI—ACAJOU.

A. gyrocarpa. A synonym of *A. albid.*
A. homolophylla. An Australian tree yielding gum arabic.

A. herida. Willd. Hab. C. of Good Hope; the Doornboom of the colonists; yields Cape gum. The wood is yellow and very hard, a substitute for box-wood. The bark is highly astringent, and is applied to the same uses as that of the *A. cochliocarpa*.

A. indica. See *Tamarindus indica*.

A. jurema. See *Styphnodendron Jurema*.

A. karroo. Hayne. A Cape of Good Hope species, said to yield Cape gum.

A. lebbek. Willd. Hab. Upper Egypt; cult. in E. and W. Indies for its scent and the beauty of its flowers; it is the Labach of the Arabians. The wood is the "bois noir" of the Mauritius; the leaves, in the form of fomentation and baths, are used to relieve rheumatic pains; the boiled seeds are said to be poisonous; it yields a kind of gum arabic.

A. leucophloea. De C. (Hind. *Kikar*. Tam. *Velayalum*. Tel. *Tellatamma*. Can. *Corijali*.) Hab. Coromandel, S. Mahratta, and other parts of India. Bark highly astringent. The natives distil from it a strong spirituous liquor.

A. melanoxylon. R. Brown. Hab. S. Australia and Tasmania. Bark astringent, yields an extract resembling catechu.

A. mollissima. Willd. Hab. Tasmania. Bark yields an astringent extract.

A. myriophylla. Graham. Hab. Silhet, where a kind of beer is prepared from the bark.

A. nebowed. The Red Gum tree of Adanson, found in the same localities as *A. verec*; yields a gum which makes a very thick mucilage.

A. nilotica. Delille. See *A. arabica*.

A. nifops. H. B. K., Nov. Gen. Amer. Hab. S. America. The pods, joined with the flour of cassava and lime from the shell of a *Helix*, constitute a powerfully stimulant snuff, by means of which the Indians throw themselves into a peculiar state of intoxication approaching to frenzy. It is a powerful sternutatory.

A. nostras. A synonym of *A. germanica*.

A. odoratissima. Willd. (Tam. *Curruvaga*; Tel. *Shinduga*; Mal. *Kaninthakara*.) Hab. India, Assam, and Burmah, on the Malabar coast; the juice of the bark with lime juice and turmeric, boiled in cocoa-nut oil, is employed externally in leprosy and chronic ulcers.

A. orfota. Lindley. Hab. Arabia. The leaves prevent fresh camel's milk becoming acid for several days; fumigation with the wood and resin is employed by the Arabs in epilepsy.

A. pyramantha. An Australian tree producing gum arabic.

A. senegal. A small tree found in tropical Africa, which furnishes part of the Senegal gum.

A. soyal. A species growing in Libya and Nubia, and affording a variety of gum arabic.

A. speciosa. Willd. (Hind. *Seriss*, *Serees*; Beng. *Sireesha*; Tam. *Kalu-vaghy-marum*; Tel. *Dirisana*.) Sirima tree. Hab. Coromandel, Bombay, Chittakong, Bengal, Silhet, &c. The flowers are fragrant and beautiful; a decoction of the leaves is taken internally and dropped into the eyes in ophthalmia and in nebulous cornea; the bark dried and pounded is applied to foul ulcers; the oil extracted by heat from the seeds, and applied to the white spots of leprosy, is said to effect a cure; the leaves are also used in beri-beri.

A. stenocarpa. Hab. Southern Nubia. Yields Suakin gum arabic.

A. suma. Yields a kind of catechu.

A. sun-dra. (Tam. *Karungali*. Tel. *Sun-dra*.) A species resembling the *A. catechu*, and yielding a similar astringent extract.

A. tortuosa. Willd. Hab. W. Indies. The wood, when fresh, smells like assafoetida, but when old like rosewood; in the coats of the pod is a syrupy, bitter, and astringent fluid.

A. tortilis. Hab. Arabia, Nubia. A gum-producing species.

A. vera. Willd. Hab. Upper Egypt and Senegal. A tree twenty feet high, with a reddish-brown bark; leaves alternate, smooth, bipinnate; pinnae in two pairs; leaflets 8—10 pairs, small, oblong linear; spines in pairs at the insertion of each leaf; pods moniliform. Bark and pods astringent. Yields gum arabic and part of gum senegal.

A. veravel. A synonym of *A. vera*.

A. verec. Hab. Senegal. From the bark exudes the hard variety of Senegal gum. (W.)

A. zeylonica. The *Hematoxylon Campechianum*.

Acaciae gummi. (F. *gomme arabicus*; G. *arabisches Gummi*; I. *gomma arabica*; S. *goma arabica*.) The concrete juice of *Acacia vera*, *A. arabica*, and of other species of *Acacia*. The most common varieties are the Turkey, Barbary, Senegal, India, Cape, and Australian gum. It is found in rounded or amorphous yellowish or reddish pieces, more or less transparent, hard, brittle, and pulverisable. It is inodorous and has a slightly sweetish taste. Its sp. gr. is 1.31—1.48. It contains about 17 per cent. of water. It is soluble in its own weight of water, both hot and cold, but insoluble in alcohol, ether, and oils. It is precipitated from its watery solution by alcohol, borax, mercuric nitrate, ferric perchloride, and plumbic subacetate. Strong sulphuric acid carbonises it; strong nitric acid converts it into mucic acid, with formation of oxalic and malic acids. Between 148° C. (300° F.) and 204° C. (400° F.) it softens, and may be drawn into threads. At a red heat it is decomposed. It is chiefly composed of arbate or gummate of lime. When burnt it leaves 3 per cent. of ashes, consisting of calcium and potassium carbonate, calcium phosphate, potassium chloride, iron, alumina, magnesia, and silica. It is used in medicine as a demulcent, but is consumed as an article of diet in the countries producing it. It has been recommended internally in coughs, in strangury and calculous affections, in diarrhoea and dysentery, and in chronic bowel affections in children; and externally in hæmorrhages, as in epistaxis, in burns and scalds, and in sore nipples. Used to make emulsions and pills.

A. verae succus. An extract obtained from the immature pods of *A. arabica* and *A. vera*. Little used. It is a solid reddish-brown substance, of a sweetish-acidulous, styptic taste, and soluble in water. It is a mild astringent.

Acaciae. Pure gum arabic.

Acacus. (A. neg.; *kakos*, evil.) Harmless; applied to diseases which do not endanger life. (Pechlinus, Obs. Phys. Med. i, 71, p. 188.)

Acacia sanguisorba. A genus of the Nat. Ord. *Sanguisorbeae*. Hab. Tasmania. Leaves used as a substitute for tea.

Acali. (Ar.) An aqueous solution of alum.

Acacid. (Ar.) Term for Acetum, or vinegar.

Acajou. Two plants belonging to different

ACAJUBA—ACANTHINEÆ.

natural orders yield medicinal substances thus named.

1. The *Sweetenia mahogoni*, or mahogany. Nat. Ord. *Meliaceæ*. (F. *acajou à bois*; G. *weih-ruschendes Cdrele Gumm.*)

2. The Cashew nut. The *Anacardium occidentale*. Nat. Ord. *Anacardiaceæ* or *Terebintha*. (F. *acajou des pommis*; G. *Kaschnussbaum*)

Acajuba. The cashew-nut.

A. officinalis. The *Anacardium occidentale*.

Acalai. (Ar.) Salt. (E. and J.)

Acaloum. S'annoum, tin. (Mullerus)

Acalophæ. (Ακαλίφη, a nettle.) A group of animals under which Cuvier included many of the forms now embraced in the Hydrozoa, Actinozoa and Ctenophora. They are all characterised by the possession of thread cells, trichocytes, or nematocytes, by the stinging action of which they are capable of paralyzing small animals and powerfully irritating the skin of man.

Acaliculate. (A, neg; caliculus, dim. of calyx.) Having no caliculus or accessory calyx.

Acalycal (A, neg; calyx, a cup.) Applied to stamens which are inserted into the receptacle without adhesion to the calyx.

Acalyone. (Same etymon.) Having no calyx.

Acalypha. (Ακάλυφον, without shell.) A genus of plants of the Nat. Ord. *Euphorbiaceæ*.

A. amontacæ. A synonym of *A. frutescens*.

A. carpinifolia. Hab. St. Domingo. The leaves are employed as an antispasmodic.

A. ciliata. Hab. Arabia, Asia, Trop. Africa. In Ashantee known as *Crowera*, and when ground up with the lesser cardamom seeds is applied locally to the chest to relieve pain: (Waring.)

A. cupaneni. A synonym of *Acalypha indica*.

A. frutescens. (Tam *Sinnie*; Duk. *Chinnie*; Tel. *Tinnie*.) Birch-leaved acalypha. An Indian shrub, the leaves of which are prescribed by the native doctors in dyspeptic affections and cholera. They are also regarded as attenuant and alterative.

A. indica. (Sansk. *Arithum-jayris*; Mal. *Koopa-mani*; Tam. *Cupa-mani*, Beng. *Muk-tajuri*.) An Indian annual. The root bruised and infused is used as a cathartic, the infusion of the leaves as a laxative, and their expressed juice as an emetic and expectorant, and when mixed with salt as a cure for scabies; a decoction of the whole plant mixed with oil is antihæmorrhagic, and mixed with lime is useful applied externally in various cutaneous diseases. The leaves are also applied to syphilitic ulcers, and to relieve the pain of venomous bites.

A. virginica. Three-seeded mercury. An indigenous American plant, flowering in August, said to have expectorant and diuretic properties. It has been successfully employed in humid asthma, ascites, and anasarca.

A. betulinæ. A synonym of *A. frutescens*.

A. hispidæ. Hab. E. Indies. The decoction is tonic and is used in diarrhæa and dysentery.

Acalyphæ. (A, neg; kalos, beautiful, αψη, touch, unpleasant to the touch.) A Sub-order of the Nat. Ord. *Euphorbiaceæ* or *Spurge-worts*. Orule solitary, flowers apetalous, in clustered spikes or racemes.

Acalyp'tera. (A neg; καλύπτειν, a veil.) A family of the Group *Muscarida*, Sub-Ord.

Brachycera, Ord. *Diptera*, Class *Insecta*. The first posterior marginal vein runs straight to the margin, the wing scales for the most part atrophied; the halteres free. The larvæ seldom parasitic, for the most living on excrements or on vegetables.

Acamatos. (A, priv; κάμνω, to be weary. Lat. *Acamatus*.) Without sense of toil, untiring. A state of perfect rest of muscle, when there is no action either of the extensors or flexors (Galen, de Mot. musc; Hippocrates, de Fract. c. i. t. 16).

Acama'sia. (A, priv; κάμνω, to be weary; Fr. *acamase*; G. *Unermüdlichkeit*.) A state of rest, or freedom from exertion.

Alumach. (Ar.) An alchemical term for the dross of silver.

Acamelit. A synonym of the *Agave Americana*.

Acampa'sia. (A, neg; κάμνω, to bend.) Inflexibility of a joint.

Acanor. (Ar.) A kind of furnace.

Acanos. A thorny plant, used by the ancients as a styptic. It was probably a species of *Onopordon*.

Acantha. (Ακανθα, a spine.) A plant used by the ancients as an astringent in hæmorrhages, especially in hæmoptysis, also in gastric disease. The seeds were given in convulsions (Paulus Ægineta, lib. vii). Dioscorides mentions four kinds of acantha, which have been thus identified by Sibthorpe—1. *Ακανθα* (lib. iii, cap. 19) with *Acanthus spinosus*. 2. *Ακανθα αγρια* (lib. iii, cap. 20) with *Cnicus Syriacus*. 3. *Ακανθα απαριστη* (lib. iii, cap. 16) with *Onopordon Arabicum*; and 4. *Ακανθα λευκη* (lib. iii, cap. 14) with *Cnicus acarnius*, Linn., or with *Echinops lanuginosus*. (Waring.)

Acantha. (Gr.) The spine generally, and also the spine of an individual vertebra.

In Botany, a thorn, spine, or prickle.

Acanthabulus. (Ακανθα, a thorn; βάλλω, to put over.) Forceps for extracting any foreign body as a thorn or prickle from a wound, or fish-bone from the œsophagus (Paulus Ægineta, vi. 32), supposed to have been similar to the *Volsella*, mentioned by Celsus, vii. 30, and delineated in Scultetus, Armam. Chir. tab. iv. f. 1.

Acantha'ceæ. (Ακανθα, a thorn.) An order of dicotyledonous, monopetalous, and hypogynous plants, chiefly inhabiting the tropics. Herbs or shrubs. Leaves opposite, simple, exstipulate; flowers irregular, bracteated; calyx 4—5 parted, or consisting of 4 or 5 sepals, persistent, much imbricated, sometimes obsolete; corolla more or less bilabiate; stamens 2 or 4, in the latter case didynamous, placentæ parietal, though extended to the axis; style 1, fruit capsular, 2-celled, with 1—2 or many seeds in each cell, seeds hanging by hard cup-shaped or hooked projections of the placentæ, without wings; albumen none; cotyledons large and fleshy, radicle inferior.

Acantha'ceous. (Same etymon. F. *acanthacæ*.) Having spines or prickles.

Acan'thads. (Of Lindley.) A synonym of *Acanthaceæ*.

Acanthalru'ca. The *Echinops sphaerocephalus*, or globe-thistle (Huoper); Quiney spells it *Acanthalzura*.

Acanthav'ola. Same as *Acanthabulus*.

Acanthem. (Ακανθα, a thorn.) A tribe of the Nat. Ord. *Acanthaceæ*, characterised by the calyx having four divisions, of which the anterior and posterior are the largest. Corolla unilabiate, cartilaginous at the base; andræcium almost didynamous; capsule containing 2—4 seeds.

ACANTHIA—ACANTHOSPERMUM HIRUTUM.

Acantha. (Same etymon.) A synonym of *Clinas*.

A. ciliata. A synonym of *Clinas ciliata*.

A. testudinaria. A synonym of *Clinas testudinaria*.

A. rotundata. A synonym of *Clinas rotundata*.

Acanthiostictus. ('*Acantha*, a thorn; *stictus*, a fish. *F. acanthiostictus*; *G. Dorsalstictus*.) Spinous ichthyoid.

Acanthistis. Lindley. ('*Acantha*, a thorn.) A Tribe of the Sub-order *Archimanthus*, Nat. Ord. *Acanthaceae*. See *Acanthus*.

Acanthiodontus. (Same, and *dōntō*, a tooth. *F. acanthiodontus*.) Name under which cyclostomata describe the fossil teeth supposed to belong to *Isotriaena acanthia*.

Acanthium. ('*Acantha*.) The specific name of the cotton-thistle (*Oxyperdon acanthium*).

Acanthiurus. ('*Acantha*; *ourōs*, a tail. *F. acanthiurus*; *G. dorsocanthiurus*.) Having a tail supplied with spines.

Acanthobdellus. ('*Acantha*, a thorn; *bδδελλ*, a leech.) A Family of the *Desmophora* or *Hirudinea*, Class *Annelida*. Hab. Sicily. Body fusiform, flat, anterior extremity acuminate, with a fasciculus of hooked setae on each side, at the posterior extremity is a sucker, on the floor of which the anus opens, the genital organs are neutral, and situated one behind the other. Some are found amongst the evis of the lobster.

Acanthobolus. See *Acanthobdellus*.

Acanthocarpus. ('*Acantha*; *carpus*, fruit. *F. acanthocarpus*; *G. dorsifragilis*.) Having fruit clothed with spines.

Acanthocephala. ('*Acantha*, a spine; *κεφαλή*, the head.) An Order of the Class *Scelerozoa*, Sub-kingdom *Amphipoda* or *Formica*. They are parasitic, cylindrical, and more or less elongated, having a firm, elastic integument, a retractile proboscis, armed with hooklets, which is continued backwards into a ligament to which the reproductive organs are attached, they have no digestive canal, but live by absorption, under the integument is a series of reticulated canals, probably a ventro-vascular system, at the base of the proboscis is a nerve-ganglion with radiating filaments, the sexes are distinct, and they are developed within a hooked embryo. This order includes only one genus, the *Echinorhynchus*.

Acanthocephalus. (Same etymon.) Having a spiny or thorny head.

Acanthocephalus. ('*Acantha*, a thorn; *κεφαλή*, to make the Greek letter χ .) A Sub-family of the Fam. *Acanthommatidae*, Ord. *Radulacea* (*Cytophora*, Haeckel), Class *Radulacea*. The radial spines traverse the capsule, but do not unite in the centre.

Acanthocladus. (Same; *κλάδος*, a branch, *F. Acanthocladus*, *G. dorsifragilis*.) Having branches charged with spines.

Acanthocyrtus. ('*Acantha*, a thorn; *κύρτος*, a chest.) A family of Sub-order *Helconacea*, Order *Radulacea*, living in fresh water and having small siliceous spines.

Acanthodes. (Same; terminal *dōdes*; *F. acanthodes*.) *Acanthodes*. Spiny.

Acanthodermis. ('*Acantha*, a thorn; *δέρμα*, a bundle.) A Family of the Order *Radulacea* of Müller (or *Cytophora* of Haeckel), of the Class *Radulacea*. The solid framework of the body consists of irregularly arranged rods. Central capsule spheroidal, not traversed by the apicules.

Acanthodermis. ('*Acantha*; *dermis*, a term.) A Sub-order of the Order *Tramula*, Sub-class *Paleozoichthyes*, Class *Pisces*. Body covered with shagreen; lateral line between, not on the bony plates; cephalic plates not ossified; no operculum, gills naked, heterocercal.

Acanthoides. (*F. acanthoides*; *G. dorsocanthoides*.) Resembling a spine or thorn.

Acanthommatra. ('*Acantha*, a thorn; *μάτρη*, a mother.) A Family of the Order *Cytophora*, of the Class *Radulacea*, according to Haeckel. In Müller's classification it is a group of *Radulacea*. The skeleton consists of several radial spicules, which perforate the central capsule and unite in its interior, without forming a perforated tent; frequently the ramifications of the rays form an external trilled framework.

Acanthometridae. (Same etymon.) A Family of the Sub-order *Acanthometra*, Class *Radulacea*, having no trilled external framework and no extra-capsular yellow cellulose.

Acanthopagrus. ('*Acantha*; *πάγρος*, to eat.) Term applied to larva or other animals which feed on the spines of plants.

Acanthopha Brevati. ('*Acantha*, a spine; *φάς*, a snake.) A Genus of the Family *Haplophaga*, Sub-order *Proteroglypha*, Order *Ophiura*. Posterior part of the hand covered with scaly plates. Tail terminating in a recurved point. Submandibular scales in a single row. The "black snake" of N. S. Wales, extremely venomous.

A. palpestris. Another snake of N. S. Wales, poisonous.

Acanthoporus. ('*Acantha*; *πόρος*, to bear. *F. acanthoporus*; *G. dorsifragilis*.) Root with spines or thick coarse hairs.

Acanthopoda. ('*Acantha*, a spine; *πούς*, a foot.) A section of the Family *Mustelidae*, Order *Carnivora*, Class *Mammalia*. It includes the marten and otter, skunk, and ermine. The digits are short, more or less united by membrane, the last phalanx bent upwards; claws short, compressed, sharp, retractile.

Acanthopodum. ('*Acantha*; *πούς*, a foot. *F. acanthopodum*; *G. dorsifragilis*.) Having the legs very spinous.

Acanthopomatina. ('*Acantha*, a spine; *μάτρη*, a lid. *F. acanthopoma*.) Having the operculum furnished with serratures or spines.

Acanthopomus. The same as preceding.

Acanthoporus. Same as *Acanthopodum*.

Acanthops. ('*Acantha*; *ὤψ*, the eye. *F. acanthops*, *G. dorsifragilis*.) Having the circumference of the eye set with prickles.

Acanthopteri. ('*Acantha*; *πτερόν*, a wing.) A Sub-order of the Order *Teleostei*, Class *Pisces*, comprising 4000 species, defined by ν . Carac as having an integument covered with ctenoid scales, and as a rule possessing paired hypopharyngeal bones. The dorsal, ventral, and abdominal fins have unsegmented spine-like anterior rays. The abdominal fins are usually in front of the pectoral fins. Swim-bladder, if present, without air-duct or trachea. The Order is represented by the perch.

Acanthopterygii. (Idem, *πτερόν*, the extremity of any object which hangs loosely; or, *πτερόν*, a wing.) An Order, according to Cuvier, of the class *Pisces*, having spinous rays in the paired fins, including blennies, gobies, mackerel, perch.

Acanthospermum hirsutum. ('*Acantha*, a spine; *σπίρμα*, a seed.) Nat. Ord.

ACANTHOSTAUBIDA—ACARIDEA.

Compositæ. Hab. Brazil. Said to be only a variety of the *A. Braziliæ* of Schraub. Bitter, aromatic, tonic, diuretic, and diaphoretic, and given in infusion in diarrhœa.

A. xanthioides. Also a variety of *A. Braziliæ*.

Acanthostaurida. (*Acavda*, *stav-dov*, a cross.) A Sub-family of the Family *Acanthothomtrida*, of the Order *Radiolaria* (Müller) or *Cytophara* (Haeckel), of the Class *Rhizopoda*. The members have twenty spines peculiarly arranged, and centrally applied to each other with wedge-shaped extremities.

Acanthotheca. (*Acavda*; *θήκη*, a case.) Animals that are now under the name *Langvatulina* or *Pentastomida*, ranged as a Family of the Order *Acaridea*, Class *Arachnida*. Davaine defines them as solitary animals having a complete digestive tube, the mouth on the inferior surface of the fore part of the body, and armed with two pairs of retractile hooklets, the anus terminal, nervous system well defined, consisting of a large subœsophageal ganglion, from which two filaments run backwards. Sexes separate, the female oviparous. The body, which may reach the length of three inches with the diameter of a goose quill, is elongated, cylindrical or compressed, and transversely striated. The head is obtuse, the tail pointed. The muscles are striated. There is a tolerably well defined dorsal vessel. The *Acanthotheca* present many analogies to the *Crustacea*, and the embryos resemble those of the *Lernæula*. Members of the group have been found in the frontal sinuses, larynx, trachea, lungs, and in cysts on the surface of various organs, both in man and animals. See *Pentastoma*.

Acanthous. (*Acavda*, a spine. *F. acanthous*; *G. dornig*.) Spinous or thorny.

Acanthulus. (L., dim. of *Acanthus*.) An instrument with which thorns, or spiculae of wood, bone, or other substance, may be extracted from wounds.

Acanthus. (*Acavda*, a spine.) A plant in use amongst the ancients as a diuretic and astringent, and locally applied to sprains, bruises, gout, &c. The Romans recognised two kinds, one thorny (*A. spinosus*), and the other smooth (*A. mollis*). The latter was called *Pæderos* and *Melampylos* (Pliny).

Acanthus. (*Acavda*, a spine.) A Genus of Nat. Ord. *Acanthaceæ*. Cal. 4-partite; cor. split posteriorly, stamen didynamous, with unilocular, introrse anthers, ovary bicellular and bivalvate; style with 2 lobes, ovules ascending, anatropal. The fruit is a loculicidal capsule, each cell containing two seeds. The beautifully lobed and serrated leaves of the plants belonging to this genus are believed to have suggested the noble ornamentation of the Corinthian column.

A. mollis. (*F. branc-urine*, *L. acante*; *G. gemeine Burenkraut*, *Burenkrautkraut*.) Bear's breech. A species having a viscid juice. It is emollient, and is employed in the form of injection, cataplasm, and fomentation.

A. spinosus. A species of *Acanthus* having properties similar to the *A. mollis*.

Acanticomite. (*Acavda*, a goldfinch, *corvus*, dust. So called because the powder is like a goldfinch in colour.) A synonym of *Pistacite*.

Acasus. (*Acavos*.) A kind of thistle, also the prickly head of some fruits, as the pineapple, also, the same as *Acantha*.

Acapatli. The Piper longum, long pepper.

Acapnos. (*A. neg.*; *καπνός*, smoke; supposed because it gives out little smoke when burned.) Without smoke. Gr. anal. *ἀκαπνός*, formerly applied to the plant marjoram.

Also, *ἀκαπνός* was used for honey obtained without smoking the bees, according to Pliny.

Again, *ἀκαπνός* was applied by the Greeks to all kinds of dry wood.

Acapnus. The same as *Acopnos*.

Acap'sular. (*A. priv.*, *capsula*, a little chest. *F. acap'sulaire*, *G. ohne Kapsel*.) Having no capsule.

Acardia. (*A. neg.*; *καρδία*, heart. *F. Acardie*, *G. Herz-mangel*.) In Teratology, absence of a heart; as opposed to the extreme *acardiac* form of monstrosity, where not only the heart but the whole thorax is wanting. It is a remarkable form of arrest of foetal evolution, the heart only being absent. Most of these cases are twins, and of these one is perfect.

Acardiac. (Same etymon.) Applied to animals destitute of a heart.

Acardinate. (*A. priv.*, *cardo*, a hinge. *F. acarde*.) Applied to a shell, or valve of a shell, without trace of a hinge.

Acardiœmia. (*A. neg.*; *καρδία*, heart. *aqua*, blood.) Want of blood in the heart.

Acardionervia. (Same, *νέρον*, a nerve. *F. acardionervie*.) Want of nervous energy in the heart. Defective nerve supply to the heart.

Acardiotrophia. (*A. neg.*, *καρδία*, heart, *τροφή*, nourishment.) Atrophy of the heart. Defective nourishment of the heart.

Acariasis. (*Acarus*. *F. acariss*; *G. Milben-Hautschabe*.) Term by Fuchs for a species of skin-disease, the *Phthiriasis interna* of Plenck.

Acaricide. (*Acarus*, a mite, and *cædo*, to kill.) Remedies that destroy Acari.

Acaricocha. The Brazilian name of *Hydnocotyle umbellatum*, used by the Indians as an aromatic, alexipharmic, and emetic.

Acarida. (*F. acarides*; *G. Milben*.) A Family of the Order *Acarina*, of the Class *Arachnoidea*. A synonym of *Acaridea*.

Acaridea. (*Acari*, a mite.) An Order of the Class *Arachnida*, Sub-kingdom *Arthropoda*. Low forms of spider-like animals, commonly called *mites*, and found on or under the ground, in water, in cheese, feathers, dried fruit, and the like. Some are parasites. The acari have soft bodies of oval or elongated form, and are of small size. The cephalothorax and abdomen are consolidated into one piece. The legs are eight in number in the adult animal. The parts of the mouth consist of two movable pieces (*palpi*), in front of which is another piece (*labium*), on each side of the labium is a strong piece (*maxilla*), and from the outer side of each maxilla springs a palpus of four or five joints. In some instances the palpi, maxillæ, and labium, form by their union a sort of tube or proboscis, fitted for piercing, adhering to, and sucking the juices of their prey, when not so united, the palpi are terminated variously by a dactyle claw or by a movable fang, or they consist of two long stylets which by moving backwards and forwards alternately perforate the substance of their prey. The palpi of acaridea are also variously formed, and like the legs, have been described by Luce, who recognises seven kinds. The eyes are frequently absent, but are generally two, four, or six in number. In some cases there is but one, composed of a varying number of small facets. The alimentary canal is short, with

lateral caeca in the gastric region, and an anus opening near the posterior extremity of the body. Respiration is generally effected by means of tracheae opening by stigmata, but in the parasitic forms no special organs for breathing exist, and the aeration of the fluids is accomplished through the skin. The nervous system in the families Trombididae and Acaridae, and probably in the rest also, consists of one large globular ganglion, from which nervous filaments are given off before and behind. No evidence of the existence of a heart or circulatory system has been obtained. The reproductive organs open on the ventral surface of the body, generally between the hinder pair of legs. The ova in Trombididae are developed in a tubular double-branched ovarium, but in other instances in the substance of the general tissue of the body. Acarids are both oviparous and ovo-viviparous. Some, like the Pentastomidae, are hermaphrodite; in others the sexes are believed to be separate. Parthenogenesis certainly exists in some species. Some spin webs. (Cambridge in Encyclop. Brit.) The families of the order are—Pentastomidae; Tenuiridae; Tardigradidae; Acaridae; Oribatidae; Gamasidae; Isodidae; Hydrachnidae; Trombididae; and Bdellidae.

Acaridae. (Same etymon.) A Family of the Order Acarida. The acarids have a long-oval, soft, thin-skinned body, with the thoracic junction often visible, flat below, convex above; the palps are scissor-like; maxillae obsolete; the legs of the first two pairs often widely distant from those of the hinder ones; in some low forms, or perhaps only in the immature state, four legs are found, each having four joints, and ending in a long-stalked sucker.

Acarididae. A synonym of *Acaridae*.

Acarina. A synonym of *Acaridae*.

Acarina. Old name for the Carline thistle.

A. gummiifera. See *Atractylis*.

Acarodidum. Term for acaroid resin.

Acaroid. (*Acarus*; *F. acaroides*.) Resembling the acarus.

A. resina. (*G. Acaroidharz*.) A gum resin flowing from the *Xanthorrhoea hastilis*, yellowish red, very friable, with balsamic odour and astringent taste; it melts at a low temperature; burns with a smoky flame; when distilled yields benzene, cinnamine, phenol, benzoic and cinnamic acids. It is insoluble in water, soluble in alcohol and alkalies.

Acaroides resinifera. A synonym of *Xanthorrhoea hastilis*.

Acaron. (*Ἀκαρίς*, short, small.) The wild myrtle, *Myrica gale*.

Acaropsis. A synonym of *Tyroglyphus*.

A. Mericourtii. See *Tyroglyphus Mericourtii*.

Acarotoxice. (*Ἀκαρι, τοξικόν*, a poison.) Term applied to remedies that destroy Acari.

Acarpus. (*A. neg.*; *καρπός*, fruit.) Cutaneous affections in which no "fruit," in the form of tubercles, vesicles, or pustules, appears on the skin. Lentigo, Chloasma, Argyria, and Pityriasis, belong to it. (*D.*)

A. maculose. Fruitless spots; term for spots on the skin without elevation.

Acarpellous. (*A. neg.*, and *carpel*.) Having no carpels.

Acarpous. (*A. priv.*; *καρπός*, fruit. *F. acarpus*; *G. unfructibar.*) Having no fruit; sterile.

Acartum. Alchemical name for minium, triplumbic tetroxide, or red lead. (*Ruland.*)

Ac'arum. See *Acaron*.

Ac'arus. (*A. neg.*, *κίσιον*, to cut; because, from its small size, it cannot be divided. *F. acare, ciron*; *It. acaros*; *G. Milbe.*) A genus of *Acaridae*. The mite; several species of which are parasitic on man and animals. This genus possesses four pairs of legs, and the mouth is provided with distinct mandibles.

A. autumnalis. The harvest bug, a species of spheroidal form, with the abdomen bristly behind. Its bite produces swelling, inflammation, and much itching.

A. ca'sel. See *Acarus domesticus*.

A. cell'aris. A species once found by Louth in the pituitary body of a lunatic.

A. ci'ro. A synonym of *Acarus domesticus*.

A. come'donum. A synonym of *Demodex folliculorum*.

A. domes'ticus. (*G. Kia. milbe.*) The cheese mite. The eggs of this arachnid are hatched in about eight days.

A. dysentericus. An acarus said to have been found in the dejections of dysenteric patients.

A. far'ise. The flour mite; it is said by some to be more frequently met with in the flour of the Leguminosae than in that of the Gramineae.

A. folliculo'rum. A synonym of *Demodex folliculorum*.

A. margina'tus. A species found by Brador in the corpus callosum of a soldier who had died from fracture of the skull.

A. ric'inus. The dog tick; a parasite infesting the dog and sheep. A synonym of *Ixodes*.

A. sac'chari. The sugar mite; found in most specimens of brown sugar.

A. scabi'e. A synonym of *Sarcoptes scabiei*.

A. si'ro. A synonym of *Acarus domesticus*.

A. si'ron. A synonym of *Acarus domesticus*.

A. Stockholmii. A supposed variety of *Sarcoptes scabiei*.

A. syron. A synonym of *Acarus domesticus*.

Acatalepsy. (*A. neg.*; *καταλαμβάνω*, to apprehend.) A term for uncertainty in the diagnosis or prognosis of disease.

Acatalis. (*A. neg.*; *χαρίς*, to want.) A name of the Juniper tree from the abundance of its seeds.

Acatapos'is. (*A. neg.*; *καταπίνω*, to swallow.) Difficulty in swallowing; dysphagia.

Acatas'tas. (*A. neg.*; *καθίστημι*, to establish.) Inconstant; applied by Hippocrates to fevers which maintain no uniformity either in their paroxysms or in the state of the urine, but are always changing.

Acatastat'ic. (*A. neg.*; *καθίστημι*, to regulate.) Term applied to diseases that are irregular in their course.

Acate'ra. The *Juniperus communis*.

Acatergastus. (*A. neg.*; *κατεργάζομαι*, to digest.) Rough; undigested.

Acatharsia. (*A. neg.*; *καθαίρω*, to cleanse.) Used by Hippocrates for impurity of the blood and humours; also for the omission of purgation.

Acatajavalii. A plant growing at Malabar, used as an astringent and aromatic.

Acau'date. (*A. neg.*; *cauda*, a tail.) Tailless; absence of the coccyx.

Acaules. (*A. neg.*; *caulis*, a stem.) A term in Botany applied to plants in which the stem is inconspicuous.

Acaules'cence. (*A. neg.*; *caulis*, a stem.)

ACAULESCENT—ACCESSORY.

Stemlessness. A term applied to many herbaceous plants, and to some arborescent monocotyledons in which the internodes of the stem never become much lengthened, and the leaves in consequence appear closely packed and more or less overlapping. The stem is absent in all Thallogens.

Acaulescent. (Same etymon.) Term applied to plants in which the stem is very short or inconspicuous. See *Acaulescence*.

Acauline. (*A. neg.*, *caulis*, a stem. *F. acula*; *G. achsenlos*.) Term applied to plants having little or no stem.

Acaulosia. Synonymous with *Acaulescence*.

Acaweria. The Cingalese name of the *Ophryotum serpentinum*.

Acadiz. (*Ar.*) Stannum, or tin. (*R.*)

Accatam. A compound metal nearly resembling brass. (*R. and J.*)

Accatum. A synonym of *Accatam*.

Accelerated. (*F. acceleré*; *G. beschleunigt*.) Hastened.

Accelerating nerves. (*Accelerato*, to quicken.) The nerves by which the cardiac and respiratory movements are quickened. Those which accelerate the heart proceed from the medulla oblongata, or some higher segment of the cerebro-spinal nervous system, descend for some distance in the spinal cord, enter the rami communicantes that join the sympathetic nerve, and coursing through the first thoracic ganglion pass to the heart in the sympathetic fibres that proceed from that ganglion. The nerves by which the respiratory movements are accelerated run in the vagus to a circumscribed spot in the medulla oblongata at the point of origin of the vagus and spinal accessory nerves.

Acceleration. (*Accelerato*, *ad* and *celero*, to hasten.) Quickened, increased motion. Used to indicate a greater rapidity of the functions of organs, especially those of the circulation and respiration.

Accelerator urinae. (*F. accelerator de urine*; *G. Mus bulbo-cavernosus*.) A perineal muscle covering the bulb of the urethra, composed of two symmetrical halves, united in the median raphe, from which, commencing at the central tendinous point of the perineum, the fibres pass obliquely outwards and forwards for three or more inches, the most posterior to be inserted into the triangular ligament, the middle to surround the bulb and adjacent part of the corpus spongiosum, and to join with those of the opposite side on the upper surface of the corpus spongiosum, and the anterior fibres to enclose the corpus cavernosum and to meet over the dorsal veins of the penis. In the female these muscles are represented by the sphincter vaginae. Supplied by the superficial perineal branch of internal pudic artery and muscular branches of perineal nerve. It assists in expelling the last drops of urine and in effecting erection.

Accentorides. A Family of the Group *Dentirostris* Order *Passeres*, Class *Aves*. Beak strong, coracal, subulate. toes short, with strong claws. Example, *A. modularis*, hedge-sparrow.

Accentuation. (*Ad* to, and *cantus*, a song.) A term applied to a sound when marked with special loudness or clearness.

Accentuation of the second sound of the heart indicates simple pulmonary congestion.

Access. Same as *Accession*.

Accession. (*Accessio*; *ad*, and *cedo*, to draw near. *F. accers*; *G. Anfall*.) The beginning

or onset of diseases, or of fits, paroxysms or exacerbations in fevers.

Accessorii orbicularis oris. A few muscular fibres, arising from the alveolar border of the superior maxilla opposite the incisor teeth on each side, and continuous at the angles of the mouth with the other muscles of this part.

Accessorius. (*Ad*, to; *cedo*, to approach.) The eighth pair of cerebral nerves.

A. ad sacro-lumbalem. One of the fourth layer of the muscles of the back, arising by separate flattened tendons from the angles of the six lower ribs, internal to the tendons of insertion of the sacro-lumbalis; the fibres are inserted by separate tendons into the angles of the six upper ribs and into the posterior transverse process of the seventh cervical vertebral nerves. Supplied by external posterior branches of dorsal arteries, and by external posterior branches of intercostal nerves.

A. ad ilio-costalem. A synonym of *Accessorius ad sacro-lumbalem*.

A. pedis. See *Accessory flexor muscle of foot*.

Accessory. (Same etymon.) Joined to, additional, accompanying.

A. buds. Buds that appear in the axil of a leaf in addition to the primary bud.

A. fissure (ear). (*G. Hülfs-spalte*.) A term applied by Rudinger to the fissure connected with the semi-cylindrical space beneath the cartilaginous hook of the Eustachian tube.

A. flexor muscle of the foot. A muscle of the sole of the foot, which arises by two heads from the inferior and inner surface of the os calcis; the outer head is tendinous, the inner fleshy, between the two is seen the long plantar ligament. The muscle is covered by the flexor brevis digitorum and the external plantar nerve and artery; anteriorly it is inserted into the tendon of the flexor longus digitorum near the centre of the foot, and it contributes elips to the portions of that tendon going to the second, third, and fourth digits. It is supplied by the external plantar artery and nerve, and its action is to aid in flexing the toes into which the flexor longus digitorum is inserted.

A. glands of the pancreas. Brunner's glands.

A. gland of the parotid. Socioparotidis; or that portion of the parotid gland which surrounds the duct of Stenson.

A. nerve of Willis. A synonym of the *Spinal accessory nerve*.

A. obturator nerve. An inconstant nerve derived from the trunk of the obturator near the lumbar plexus, or from the third and fourth lumbar nerves, passing over the brim of the pelvis, it lies beneath the pectineus, which it supplies, at the same time giving off a branch to the hip-joint, and generally a branch which communicates with the anterior branch of the obturator nerve, and is continued as a cutaneous branch to the leg.

A. palatine canals. One or two small openings in the outer and posterior part of the horizontal plate of the palate bone, transmitting small posterior palatine nerves or arteries.

A. process of lumbar vertebrae. A small downward pointing process of a lumbar vertebra behind the base of the transverse process. The *anapophysis* of Owen.

A. pudic artery. An artery that occasionally arises from the internal iliac artery, runs forward along the side of the bladder and prostate

gland and, perforating the triangular ligament, supplies the penis and urethra.

Accib. (Ar.) Plumbum, or lead. (R. and J.)

Accident. (*Accido*, to happen; *ad*, to, and *cado*, to fall.) Used by the French as synonymous with symptom; such having been the case with the Greeks, who sometimes employed *συμπτωμα* in the same sense, and also with certain of the older English writers; things out of the usual course, happening to the healthy, were termed *accidentia*. (Galen, *Meth. med.* i. 9.)

Accidental. (Same etymon.) Applied by French writers to textures resulting from morbid action, as the adhesions that are seen in pleurisy and pericarditis, and similarly adopted by some English authors.

A. hæmorrhage. A form of hæmorrhage in the last months of pregnancy, depending upon accidental separation of the placenta. although the latter occupies its usual site, as contradistinguished from placenta prævia. See *Uterine hæmorrhage*.

A. symptoms. Symptoms which supervene in the course of a disease without having any necessary connection with it.

Accidentalism. A system of medicine in which disease is regarded as an external and accidental modification of health without any primary or original root in the body, which can be guarded against by foreseeing and destroying external causes and their occasions.

Accidentalist. Term applied to those who study and treat disease in accordance with the doctrine of accidentalism.

Accidentia. A chance or occurrence happening unexpectedly; an accident.

Accipenser. See *Acipenser*.

Accipiter. (L. *Accipiter*, a hawk. *F. épervier*.) A bandage applied over the nose resembling a claw of a hawk.

Accipitres. (*Accipiter*, a hawk.) A group of the Order *Raptores*, Class *Aves*. Carnate birds. The head and neck always clothed with feathers, eyes more or less sunk in head and provided with a supraciliary ridge; claws much recurved.

Accipitrina. The *Hawkweed*.

Accipitrines. A Sub-family of the Family *Accipitres*. Bill short, strong, with a blunt tooth; claws pointed; wings rarely reaching the middle of the tail.

Acci'mate. See *Acclimatise*.

Acclima'tion. See *Acclimatisation*.

Acclimatisation. (*Ad* and *cima*; *κλίμα*, a slope, a region of the earth. *F. acclimatisation*; *G. Akklimatisirung*.) The process by which plants and animals become adapted to, and so retain health in, countries having different conditions of the air, soil, and water, to those of which they are indigenous. The term may be applied to an individual and to a race, or, in other words, it may be effected in part by changes occurring in the individual and in part by inherited modifications of constitution. Altitude, temperature, moisture, and the nature of the soil and of its productions, are the chief conditions which vary, and to which the constitution must be accommodated. The disturbances caused by difference of altitude seem to be rapidly surmounted, but the effects of great variations of temperature in producing disorder of the system are more permanent and serious. The English race does not thrive in Calcutta, and the Ethiop dies out in the North. In some localities the prevalence of endemic diseases, intermittent and remittent fevers, will probably prevent them from ever being inhabited by the

white man. Amongst animals a good example of acclimatisation is afforded by the history of the Egyptian goose, which, according to M. Quatrefages, was introduced into France in 1801 by Geoffroy St. Hilaire, and at first laid its eggs, as in its native country, in December, and therefore at a most unfavorable season for hatching them. With care, however, several generations were reared. In 1844 the period of incubation was postponed to February; in 1845 to March; and in 1846 to April, which is the same time as the domestic goose. M. Quatrefages gives an equally marked instance of acclimatisation in plants in the case of the *Chrysanthemum sinense*, which, originally a native of China, was introduced into France in 1790, but proved incapable of ripening its seeds in 1852; however, some specimens flowered earlier than others; the seeds matured, and now the plant can be propagated to any extent by seed.

Acci'matise. (Same etymon.) To effect the changes by which a plant or animal is adapted to conditions of life different from those to which it has been accustomed.

Acci'vis. (*Ad*, to; *clivus*, the side of a hill.) Ascending. A synonym of the obliquus internus, from the direction of its fibres.

Acco'cay. A bark much employed by the natives of Sennegal as a febrifuge. It does not contain either quinine or cinchonine. (W.)

Accommodation of the Eye.

(L. *accommodo*, to adjust.) The act by which the eye is adjusted to see objects distinctly at different distances. The normal or emmetropic eye of an adult when at rest is adapted to see infinitely distant objects, or in other words to bring parallel rays of light to a focus on the retina. By an effort of the will, generally exerted automatically, the divergent rays proceeding from an object in close proximity to the eye can also be focussed on the retina. To effect this, either the distance between the lens and the retina must be increased, or there must be increased refraction of the rays of light. In the human eye, the latter plan is adopted. That a distinct effort is required may easily be shown by a simple experiment; if a remote object be looked at through a piece of coarse muslin the observer can either see the distant object with tolerable clearness, when the meshes of the fabric become indistinct, or he can fix his attention upon the meshes of the muslin when the distant object becomes indistinct. In either case he alters the adaptation, adjustment, or accommodation of the eye. In looking at the distant object he relaxes his accommodation, in looking at the near one he exerts his accommodation. The extent or range of accommodation is the distance between the furthest point of distinct vision and the nearest. It varies with the strength and efficiency of the ciliary muscle, the elasticity of the lens, and the age of the patient. It undergoes steady decrease from childhood to old age. It is ascertained practically by determining the distance between the nearest and the most remote point at which an object can be distinctly seen. In childhood the near point is between two and three inches distant from the eye; at 20 it is between three and four inches, at 30 about five inches, at 40 about eight inches, at 50 twelve to sixteen inches, at 60 two feet. The phenomena observed when a healthy or emmetropic eye, at rest, exerts its accommodation in looking at a near object, are that the pupil slightly contracts, the pupillary margin of the iris being moved

ACCORD—ACEPHALOCHEIRIA.

forwards and the periphery backwards; and that the lens becomes thicker, both of its surfaces becoming more convex, but the anterior to a much greater degree than the posterior. The exact mechanism or cause of this increased convexity of the lens is not certainly known. Young thought that it was due to the contraction of the fibres of the lens itself; others have attributed it to a direct compression of the lens by the ciliary muscle, whilst others, with greater probability, regard it as an indirect result of the contraction of the ciliary muscle, which, drawing forward the anterior part of the choroid, relaxes the suspensory ligament of the lens and thus allows its own elasticity to come into play, in consequence of which it increases in thickness. If the lens be absent, as in aphakia, the power of accommodation is entirely lost. The best instruments for testing the range of accommodation are Snellen's test types and Gräfe's wire optometer. See *Ametropia*, *Aphakia*, *Emmetropia*, *Hypermetropia*, *Myopia*, and *Refraction*.

A. absolute. The range of accommodation possessed by each eye separately. The near point is rather more distant when the two eyes are used together than when one alone is employed.

A. anomalies of. Under this term are included those conditions of the accommodation caused by impaired, abolished or spasmodic action of the ciliary muscle (paresis, paralysis, or spasm of this muscle).

A. range of. (Fr. *espace de l'accommodation*, G. *Accommodationsbreite*.) This term signifies the length of a line the successive points of which from the most distant to the nearest can be accurately focussed on the retina, in other words, the distance between the nearest (punctum proximum) and the most distant point (punctum remotissimum) that can be distinctly seen.

A. relative. The relation existing between the accommodation of the eyes and the degree of their convergence. From constant habit and exercise a connection becomes established between the degree of contraction of the recti interni muscles, which control the convergence of the eyes, and that of the ciliary muscle. It is not, however, so intimate but that some change in the accommodation can still be effected with a definite amount of convergence. A certain range of accommodation remains, and this is made up of two parts, one of which is associated with relaxation of the apparatus of accommodation, and may be called negative, whilst the other is due to a still further contraction of the ciliary muscle, and may be termed positive accommodation; the sum of the two is called the relative range of accommodation. The extent of this range may be determined by ascertaining the strongest concave and convex glasses with which the convergence of the eyes remaining the same, a given object may be distinctly seen.

A. accord. The simultaneous emission of more than two sounds. See *Consonance* and *Dissonance*.

Accouchement. (Fr. from *ad* and *couché*, bed.) The act of being delivered in childbed. See *Labour*.

A. forcé. A term applied to the delivery of the child in severe hæmorrhage occurring during pregnancy, when the hand was forced through the cervix, the child seized and extracted, and the membranes and placenta removed as quickly as possible.

Accoucheur. (F.) A man-midwife; an obstetrician.

Accoucheuse. (F.) A midwife.

Accrementit'ial. Growing by internal increase or accrementition.

Accrementit'ion. Term applied to a form of growth in which increase of anatomical elements similar to those already existing, takes place, both by interstitial development from a blastema, and by fusion of the original cells.

Accrescent. (*Ad*, to; *creasco*, to increase.) A term in botany applied to parts of the flower exclusive of the ovary, which grow after fecundation, as the persistent calyx of *Physalis*.

Accrete. (*Ad*; *creasco*, to grow.) In Botany, grown together.

Accretion. (*Ad*, to; *creasco*, to increase.) The process by which fresh particles are added to a growing crystal. The term has also been applied to similar modes of increase in organic forms.

Applied to the adhering together of parts that are naturally separate, as the fingers.

Accubation. (L. *ad*; *cubo*, to lie down.) A lying down, the being in childbed.

Accubitus. (*Accubo*, to lie near.) The lying together of an old and a young person or of a healthy with a sick one. (Dunghison.)

Accumbent. (F. *accumbant*.) Lying against another body. A term in botany applied to siliques, with the margins of which the radicle is in contact, as in *Pleurorhiza Cucifera*.

Acconitic acid. $C_6H_5O_6$. Obtained by the distillation *in vacuo*, at about 200 (392° F.), of the brown viscid mass resulting from the action of sodium on bromacetic ether. It crystallises in mamelons, is soluble in ether, and is, perhaps, identical with carballylic acid, or acconitic acid.

Acedia. (*Ἀκείδια*, *á*, neg. *κείδω*, care. F. *acedie*; G. *Sorglosigkeit*.) Carelessness, listlessness, or want of interest, want of care; neglect, fatigue. This condition is well known in monasteries. It is produced by the ennui of solitude, and by too assiduous reading and fasting; it chiefly affects the younger monks. It is characterised by sadness, mental confusion and disturbance, bitterness of spirit, loss of all liveliness, and utter despair.

Acella. See *Axilla*.

Accognos'ia. (*Ἀκίγνωσις*, to cure; *γνώσις*, knowledge.) A knowledge of therapeutics.

Accology. (*Ἀκίγνωσις*; *λόγος*, a discourse.) A treatise on materia medica.

Acephala. (*Á*, neg.; *κεφαλή*, the head.) One of the three great divisions of Mollusca, represented by the oyster, defined by v. Linné as having no head, mouth without mastatory apparatus, surrounded by two lobulated processes of the mantle, foot compressed, occasionally flat or rudimentary, the mantle covers the back of the animal and forms two lateral lobes, either quite free or more or less completely united on the ventral surface, invested by two lateral, carinate valves or shells. Now called *Lamellibranchiata*.

Acephale'nia. Former name of the *Acephala* or *Lamellibranchiata*.

Acephal'ia. (*Á*, neg.; *κεφαλή*, the head.) In Teratology, the absence of the head, headless.

Acephalobrach'ia. (Same, *βραχίον*, arm.) In Teratology, a monstrosity without head or arms.

Acephalocar'dia. (Same; *καρτία*, the heart.) In Teratology, a monstrosity without head or heart.

Acephalochel'ria. (Same; *χείρ*, the

ACEPHALOCYST—ACERIC ACID.

hand.) In Teratology, the absence of head and hands in a fetus.

Accephalocyst. ('A, neg.; κεφαλή, a head; κύστις, a box.) A sterile hydatid. An hydatid in which the cyst naturally formed at one stage of development of a tænioid worm becomes reduced to a cell-wall, which contains no echinococci but is capable of producing from its internal or external surface or in its substance a series of vesicles encased within one another.

Accephalocystis endogena. Formerly used to denote an accephalocyst with laminated walls; and also a hydatid cyst with enclosed cysts and its contained echinococci.

A. eremita. A single accephalocyst.

A. exogena. A name given to the echinococcus cyst of ruminant animals when smaller cysts bud from the outer surface.

A. granulosa. A form of hydatid supposed, but erroneously, to be a species of *Accephalocyst*.

A. multiformis. A name given to compound echinococcus cysts found in the brain.

A. ovoides. A form of accephalocyst supposed, but erroneously, to be a species.

A. prolifera. A term by which compound echinococcus cysts were formerly known.

A. racemosa. The vesicles of the chorion, which, when enlarged and diseased, were erroneously regarded by Cloquet as a form of hydatid.

A. ramosa. Term applied to the hydatiform mole of the uterus.

A. socialis. A synonym of *A. prolifera*.

A. sterilis. A single simple accephalocyst.

A. surculigera. A form of hydatid supposed, but erroneously, to be a species of the ordinary hydatid.

Accephalogas'tria. (Same; γαστήρ, the belly.) In Teratology, a monstrosity without head or belly.

Accephalophorous. (Same; φέρω, to bear. *F. accephalophore*.) Applied to Mollusca, which have not the head distinct from the rest of the body.

Accephalopodia. (Same; πούς, a foot.) In Teratology, a monstrosity without head or feet.

Accephalora'chia. (Same; ράχις, the spine.) In Teratology, a monstrosity without head or vertebral column.

Accephalostomia. (Same; στόμα, a mouth.) In Teratology, a monstrosity without head, but with a superior aperture or mouth.

Accephalothorac'ica. (Same; θώραξ, the chest.) In Teratology, a monstrosity without head or chest.

Accephalous. ('A, neg.; κεφαλή, the head.) Headless; applied to monsters without heads, and to the conchiferous or lamellibranchiate mollusks.

Acer. (*F. erable*; *G. Ahorn*.) A genus of the Nat. Ord. *Aceracea*.

A. campestre. (*F. erable*; *G. Massholder*.) The native maple.

A. dasycarpum. A species yielding sugar.

A. eriocarpum. (*F. erable blanc*.) A sugar producing species.

A. negundo. A sugar-yielding species.

A. nigrum. (*F. erable noire*.) A variety of *A. saccharinum*.

A. palmifolium. A synonym of the *A. saccharinum*.

A. pennsylvanicum. The striped maple. A decoction of its bark has been used internally and externally in cutaneous affections and of the leaves and twigs to relieve vomiting. (D.)

A. platanoides. (*F. erable plane*; *G. Milchahorn*.) A synonym of *A. pseudoplatanus*.

A. pseudo-platanus. (*F. erable sycomore*; *G. falsche Platane*.) The sycamore.

A. rubrum. (*F. erable rouge*, or *erable de Virginie*.) Red maple. A sugar producing species. The inner bark is a mild astringent, used by the American Indians in diseases of the eye.

A. saccharinum. (*F. erable d sucre*; *G. Zuckerahorn*.) The sugar maple. The sugar is obtained in America by perforating the tree and boiling down the sap. The bark has been used in the manufacture of a blue dye and in making ink.

A. cera. A synonym of the *Arachnida*.

A. cera. (*G. Ahorne*.) An Order of *Thalamiflorae Exogens*, according to some, which includes *Sapindaceae*, *Erythroxyleae*, *Acerineae*, *Hippocastaneae*, and *Tropaeoleae*.

Aceres. A Family of the Section *Pleurobranchia*, Order *Opisthobranchia*, Class *Mollusca*. Tentacles and labial appendices united into one large cutaneous fold; some possess an internal shell, others an external spiral shell; foot divided into two lateral lobes.

Aceraceae. (*G. Ahornengewächse*.) The maples: a Natural Order, or a Suborder of *Sapindaceae*. Trees or shrubs with opposite exstipulate leaves; regular or unsymmetrical, polygamous, or dioecious, sometimes apetalous flowers. Stamens usually 8, on a fleshy disk; ovary 2lobed, 2-celled, with 2 ovules in each cell, style 1, stigma 2; fruit a double samara, with 1 seed in each cell. Seeds without perisperm; cotyledons folded, radicle inferior.

Aceras. (Ἀκείρας, a spur.) The man orchis.

A. anthropophora. (*F. homme pendus*.) Nat. Ord. *Orchidaceae*. The root supplies one of the varieties of saleg. The leaves are reputed sudorific, and yield a perfume.

Acerate. A salt of aceric or malic acid. Also in Botany, needle-shaped.

Acerates decumbens. Nat. Ord. *As Lepidaceae*. This plant, which grows in New Mexico, is stated by Dr. William Wilson to be used by the Mexicans as a specific in snake bite.

A. longifolia. Long-leaved green milkweed; indigenous in the U.S. Diaphoretic.

Aceratia. ('A, neg.; κίρας, a horn.) The condition of a ruminant destitute of horns.

Aceratos. (Ἀκράτος, from ἀ, priv.; κίρας, to mix.) Pure; unmixed; uncorrupted. The humours of the body. (Hippocrates.)

Aceratosis. ('A, neg.; κίρας, a horn.) The condition of a ruminant destitute of horns.

Aceratosis. (Same etymon.; *F. acratose*.) A defect of horn-formation.

Aceratothorion. ('A, neg.; κίρας, horn; θύριον, a wild beast.) In Teratology, an animal which is monstrous in consequence of the absence of horns.

Acerbity. (*L. acerbitas*; *F. acerbité*; *L. acerbezza*; *G. Herbigkeit*.) Astringency, combined with acidity, as in the flavour of unripe fruit, or of a mixture of tannic and gallic acids.

Acerbous. (*F. acerbe*; *G. herbe*; *L. and S. acerbo*.) Having the quality of acerbity.

Acerdese. Hydrated sesquioxide of manganese. A very common mineral, used in the preparation of chlorine.

Acerellatus. (Ἀκεί, a point. *F. acrellé*.) Terminating in a sharp point.

Aceric acid. An acid obtained from the

ACERIDES—ACETAS.

maple (*Acer saccharinus*.) It is identical with malic acid.

Ace'rides. ('A, neg.; κηρός, wax.) Plasters which have no wax in their composition (Galen.)

Acerinæ. A synonym of *Aceraceæ*.

Aceritous. ('A, priv.; κηρός, wax. F. *Acroté*, G. *ohne Wachs*.) Having no wax.

Acerodes. A synonym of *Acerides*.

Acerosæ. (G. *Nadtholzer*.) A Class of plants including the *Coniferae* and the *Gnetaceæ*, according to Thoiné.

Acerose. (Acή, a point.) In Botany, needle-shaped and rigid, like the leaves of the pine. Also applied to a leaf having brawny scales at its base.

Acerosus. (Αχυρον, chaff.) Brown bread.

Acerous. ('A, priv.; κίρας, a horn. F. *acere*; G. *ohne Horn*.) Applied to apterous insects without antennæ; and to *Gastropoda*, and *Chtopoda*, without tentacula.

Acer'va. Ital.; near Capua. Cold sulphur waters, containing calcium chloride and sulphate, with carbonic acid and sulphuretted hydrogen gas. Little used.

Acerulus oer'ebri. (Dum. *Acerus*, a heap F. *acervate*; G. *Gehäusand*.) The sandy matter contained in a cavity of the pineal gland, composed of calcium phosphate and carbonate, magnesium and ammonium phosphate, amyloid bodies and some other organic matters.

Aces'cence. (F. *nerveence*; I. *accescenza*; G. *Sauerlichkeit*.) The quality of becoming sour or being ascescent.

Acescent. Becoming sour, or being slightly acid.

Ace'sia. (Ακεσις, cure.) The treatment and cure of disease.

Acesis. (Ακεσις, from ἀκταμαι, to cure or heal.) A cure. The act of healing.

Acesmus. (Ακεσμα, cure.) A remedy conducive to the cure of disease.

Acesodyne. (Ακεσις, cure; ὀδύνη, pain.) Anodyne.

Acesodynus. (Ακεσις, cure; ὀδύνη, pain. F. *acesodyne*, G. *Schmerzheilend*.) Allaying pain.

Acesphor'ia. (Same; φέρω, to bring. F. *acesphorie*; G. *Heslung, Herbringen*.) A healing or bringing of health.

Acesphorous. (Same; F. *acesphore*; G. *herbringend*.) Bringing health.

Aces'ia. The same as *Acesis*.

Aces'toris. (Feminine of ἀκιστωρ, a physician.) A medicatrix, or female physician, and, the latter especially, a midwife.

Aces'tos. (Gr.) Curable.

Aces'tra. (Gr.) A needle, also a Genus of the *Siluridae*, Order *Physostomi*, Class *Pisces*.

Aces'tria. Same as *Aces'toris*.

Aces'tris. Same as *Aces'toris*.

Ac'eta. Pharmaceutical preparations in which vinegar or acetic acid is used as the menstruum.

Acetab'ula. (L. *Acetabulum*, a little cup.) The suckers with which the cephalic processes of many *Cephalopoda* are provided.

A.uterina. The depressions in the mucous membrane of the uterus in Herbivora receiving the cotyledons.

Acetabular coxalgia. A form of hip-joint disease in which the acetabulum is primarily or principally affected.

Acetabula'ria. (*Acetabulum*, a vinegar saucer.) One of the *Chlorosporæ* or marine algae,

green, umbrella shaped. In the cell-walls finely divided lime is deposited.

Acetabulifera (*Acetabulum*, a vinegar saucer, *fero*, to bear.) A synonym of the *Dibranchiata Cephalopoda*.

Acetabuliform. (*Acetabulum*, form, likeness F. *acetabuliforme*; G. *becherformig*; *schalenformig*.) Hollowed in form of a cup, goblet, or jug.

Acetabulose. (Same etymon. F. *acetabuleux*.) Having, or full of, cups; formed like a cup, as the fructification of many lichens, or the pileus of certain mushrooms; or like a vase, as the calyx of the *Marrubium acetabulosum*.

Acetabulum. (L., a kind of cup to hold vinegar, from *acetum*, vinegar, and *κατύλη*, a measure containing 0.27 of a litre. F. *acetabule*; G. *Gelenkpfanne*, I. *acetabolo*.) A cup-shaped, hemispherical cavity, for the reception of the head of the femur, situated on the outer surface of the os innominatum, in man the os pubis forms one fifth, the ischium a little more than two fifths, the ilium a little less than two fifths of the whole. The union of the three pieces takes place by means of a Y-shaped piece of cartilage, which ossifies and clamps them together about the fourteenth year. Its diameter is about 2½ inches. It is directed downwards, forwards, and outwards, and is lined with cartilage, except at its lower third, which presents a large rough depression, to which the ligamentum teres is attached. The border is interrupted below by a notch (the cotyloid notch), which, however, is in life converted into a foramen by a fibro-cartilaginous structure, beneath which, the vessels and nerves of the joint of the ligamentum teres and of the fatty gland of Havers enter. Vascular supply, from obturator and sciatic arteries; nervous, from branch of sacral plexus to gemellus inferior and quadratus femoris, or from upper part of great sciatic nerve. In man, monkeys and birds the acetabulum is perforated, and in crocodiles the os pubis forms no part of it.

A.alterum. The *Sedum telephium*.

A.cotyle. A synonym of the acetabulum.

A.humeri. A synonym of the glenoid cavity of the scapula.

A.marinum. The *Umbilicus marinus*.

Ac'etal. (G. *äthylidenäthylat* or *äthylidenäthyläther* $C_6H_{14}O = CH_2 - CH(OC_2H_5)_2$. Ethidene diethylate, monomeric with ethene diethylate, is formed by oxidation of ethyl alcohol, and is found among the first portions of the distillate obtained in the preparation of ordinary spirit. It is a colourless liquid smelling like alcohol. Sp. gr. 0.821 at 22° C (71.6° F), boils at 104° C (219.2° F). With chlorine it yields mono-, di-, and trichloroacetal.

Acetaldehyde. A synonym of *Aldehyde*.

Aceta'ria. (*Acetum*, vinegar.) Salads made of roots or herbs mixed with oil, salt, and vinegar.

Aceta'rious. Term applied to salad herbs.

Aceta'rium scorbuticum. A pickle for scorbutic patients, made of *Cochlearia Anglica*, a salt obtained from it, and sugar.

Ac'etas. An acetate.

A.ammoniacæ solutus. A synonym of the *Ammonium acetum solutum*, Aust. Ph.

A.lixivæ. A synonym of the *Kalium acetatum solutum*, Aust. Ph.

A.natricæ c.aqua. A synonym of the *Natrium acetum* of the Aust. Ph.

ACETATE.

A. plum'bi acid'ulus. A synonym of the *Plumbum aceticum* of the Aust. Ph.

A. potas'se. A synonym of the *Kalium aceticum* solution of the Aust. Ph.

A. so'dae. A synonym of the *Natrium aceticum* of the Aust. Ph.

A. zin'ci. A synonym of the *Zinci aceticum* of the Aust. Ph.

A. zin'ci'cus. A synonym of the *Zincum aceticum* of the Aust. Ph.

A. c'etate. (*Acetum*, wine vinegar.) A combination of acetic acid with a base.

A. of alu'mina. (*Acetas aluminicus*. F. *Acetite d'argile*; G. *Neutrales essigsäures aluminium*.) $Al_2(C_2H_3O_2)_3$. Is obtained by combining directly alumina hydrate with acetic acid, or by the double decomposition of plumbic acetate and aluminium sulphate. Colourless, crystallising with difficulty, and always acid. It has been employed in cases of chronic gonorrhoea and of hæmoptysis.

A. ammon'ia, acid. $C_2H_3O_2, NH_3, C_2H_3O_2$. Obtained as a white crystalline sublimate when dry powdered chloride of ammonium is heated with an equal weight of acetate of potassium or calcium, ammonia being simultaneously given off. A warm saturated solution of this salt kept in a closed bottle deposits long needle-shaped crystals. The crystals redden litmus and rapidly deliquesce. They melt at $76^\circ C.$ ($168.8^\circ F.$), and sublime undecomposed at $121^\circ C.$ ($250^\circ F.$).

A. of ammo'nia, neutral. $NH_4C_2H_3O_2$. A white odourless salt, obtained by saturating glacial acetic acid with dry ammonia. Crystallises with difficulty, the aqueous solution losing ammonia on evaporation, and being converted into the acid salt. It is readily soluble in water and alcohol. See *Liq. ammon. acetatis*.

A. of ammo'nia and cop'per. (F. *Acetate cuprico-ammonique*.) Obtained by dissolving 250 parts of neutral acetate of copper in 1500 parts of water and 50 parts of acetic acid, filtering, and then adding ammonia till the precipitate at first thrown down is just redissolved. The fluid is evaporated till a pellicle forms, when it is set aside to crystallise. It enters into the composition of some collyria.

A. of a'myl. See *Amyl acetate*.

A. of amyl'ic ether. A synonym of *Amyl acetate*.

A. of bis'muth. Obtained by decomposing a hot concentrated solution of acetate of potash by a solution of nitrate of bismuth. An insoluble salt not now in use in medicine.

A. of cop'per, neutral. (F. *acetate neutre de cuivre, cristaux de Venus, verdet cristallisé*; G. *Essigsäures kupferoxyd*; Dut. *azynsur, koperoxyde*; I. *verde eterno*.) Ph. G. $Cu(C_2H_3O_2)_2 + Aq$. Prepared by dissolving verdigris in dilute acetic acid and crystallising; also by dissolving copper sulphate in solution of ammonia to saturation and boiling with an excess of vinegar, when crystals of acetate of copper rapidly appear. It consists of deep-green rhomboidal crystals, efflorescent, soluble in water and alcohol, styptic to the taste, and very poisonous. It was formerly used in fevers, but chiefly as an escharotic in fungoid granulations, and in solution as a collyrium. Dose, 0.01 to 0.06 grm. in pill.

A. of cop'per, basic. (*Verdigris, cuprum subaceticum, viride aëre, subacetes cupricus*; F. *acetate basique de cuivre verdetgris*; *vert-de-gris*; G. *Grünspan*; I. *verde rame*; Sp. *cardenillo*; Dut. *kopergroen*.) Ob-

tained by exposing plates of copper to the air in contact with acetic acid. There are two varieties of this salt, the blue, $2Cu(C_2H_3O_2)_2, CuO + 6Aq.$, and the green, $Cu(C_2H_3O_2)_2, 2CuO + 3Aq.$

A. of cop'per, tribasic. $Cu_2C_2H_3O_2Cu_2O + H_2O$. The most stable of all the acetates of copper. It is obtained by boiling the aqueous solution of the neutral salt, or by heating it with alcohol; it forms green or bluish needles or scales.

A. of iron and ammo'nia. Obtained by mixing 7 parts of ammonium acetate and 1 part of ferric acetate. Dose, 30 to 120 grains.

A. of iron perox'ide. (F. *extrait de Mars; vinaigre martial ou chalybe*.) $Fe_2(C_2H_3O_2)_4$. *Ferric acetate*. Obtained by saturating, with the aid of a gentle heat, acetic acid (10°) with well-washed hydrated ferric oxide. Ferric acetate is a deep-brown liquid with styptic taste; when evaporated beyond a certain point it decomposes, acetic acid being given off, and iron oxide left behind. It is but little employed in medicine, though it is used instead of the peroxide as an antidote in poisoning by arsenic. See *Tinct. ferri acetatis*.

A. of iron protoxide. (G. *Ferro diacetat*.) $Fe(C_2H_3O_2)_3$. *Ferrous acetate*. Obtained by dissolving iron sulphide in concentrated acetic acid, or better, by the double decomposition of plumbic acetate and ferrous sulphate. It is filtered and evaporated without access of air; when sufficiently concentrated it becomes converted into a green mass of silky crystals. It is very soluble in water, and attracts oxygen from the air with great avidity. It is not commonly found prepared in shops.

A. of lead. Sugar of lead. *Plumbi acetas*. F. *acétate de plomb cristallisé, sel de Saturne*; Germ. *Bleisücher*; Dutch, *Zoutsuiker*; I. *Zucchero di saturno*. $Pb(C_2H_3O_2)_2, 3H_2O$. Appears in the form of acicular crystals, with acetous odour and sweet taste. One part dissolves in 2.5 parts of water. Sedative and astringent. Used in chronic diarrhoea and dysentery, in internal hæmorrhages, to subdue sweating in phthisis; applied as a wash or lotion in ulcers, in ophthalmia, and gonorrhoea. Dose, 1-8 grains, usually prescribed with excess of acid. A non-official collyrium in use at ophthalmic hospitals, contains two grains of acetate of lead to one ounce of water, but should not be used in cases of ulcer of the cornea.

A. of lime. (F. *terre foliée calcaire, acetate calcique*; G. *Calcium acetat; essigsäures Calcium*.) $Ca(C_2H_3O_2)_2$. Prepared by acting on lime or chalk with acetic acid. It is a salt crystallising in silky needles, very soluble in water and alcohol, insoluble in ether. A mixture of 3 parts of calcic acetate, 19 parts of water, and 78 of alcohol, forms a thick and solid coagulum. It is prescribed in 1 to 4 gr. in scrofula.

A. of magne'sia. $Mg(C_2H_3O_2)_2$. Obtained by saturating pyroligneous acid with magnesia or its carbonate; it is filtered and evaporated to dryness, or to the consistence of a thick syrup, as its deliquescent properties prevent its being kept in the crystalline form. It has been recommended as a purgative, being tasteless and very soluble in water and alcohol.

A. of morph'ia. $C_7H_7NO_2C_2H_3O_2$. Crystallises in needles. Soluble in 6 parts of water and in 100 of spirit. Dose $\frac{1}{4}$ to $\frac{1}{2}$ of a grain. See *Morphia*.

A. of quini'ne. *Acetas quini'cus*. Obtained by heating quinine with double its weight of water,

ACETATED--ACETIC ACID.

adding acetic acid in slight excess, filtering, and setting aside to crystallise. Its action is analogous to citrate of quinine.

A. of potash. (*Arceum Tartari*, *Kali Acetatum*, *F. Terre foliée de tartare ou végétale*; *acetate de potassium*; *G. essigsaurer Kalium*; Dutch, *azynuur potasch*) $K_2H_3O_2$. Prepared by adding acetic acid to carbonate of potash (B. P.), or to bicarbonate of potash (U. S. P.), and evaporating to acidification. A white, foliated, neutral, deliquescent salt, unctuous to the touch, and warm and pungent in taste. Dissolves in half its weight of water, and twice its weight of alcohol. Diuretic and purgative, it causes the urine to be alkaline. Used in dropsies, in uric acid deposits, in rheumatism, and some skin diseases. Dose, as a diuretic, 15 to 60 grains; as a purgative, 60 to 180 grains.

A. of silver. $Ag(C_2H_3O_2)$. Obtained by acting on carbonate of silver with diluted acetic acid, and evaporating the fluid till small colourless crystals form, one part dissolves in 100 of water. Not in use in medicine.

A. of soda. (*Terra foliata tartari*, *F. acetate de soude*, *G. Essigsaurer Natron*; *I. acetate di soda*) $NaC_2H_3O_2 + 3aq$. Prepared in the process for obtaining vinegar, by first adding lime to the crude pyroligneous acid, then sodium sulphate to the solution of acetate of lime thus formed, and crystallising the acetate of soda from the liquid after the calcium sulphate has been deposited. It forms transparent, colourless, striated prisms, of a cooling, sharp, bitterish taste, soluble in 3 parts of water, and 24 of alcohol. It is a diuretic and purgative, like acetate of potash, and is used in similar cases. Dose, as a diuretic, 20 to 120 grains, as a purgative, 120 to 240 grains.

A. of zinc. $ZnC_2H_3O_2$. Two ounces of carbonate of zinc is added to three fluid ounces of acetic acid diluted with six ounces of distilled water, boiled, filtered while hot, and set aside to crystallise (B. P.). Eight ounces and a half of acetic acid are mixed with five ounces of water and two ounces of commercial oxide of zinc is digested in it for half an hour and treated as above (U. S. P.). Thin, translucent, colourless, efflorescent, hexagonal plates or white micaceous crystals, of astringent, metallic taste; soluble in water. Used as an astringent collyrium, and as an injection in gonorrhoea, also in chorea and convulsive diseases. Dose, 1 to 5 grains, locally, 1 to 2 grains in an ounce of water.

Acetated. Combined or impregnated with acetic acid or vinegar.

Acetates. (*F. acetates*; *I. acetati*; *S. acetato*, *G. essigsaurer*). The salts of acetic acid are represented by the formula $M(C_2H_3O_2)$, $M''(C_2H_3O_2)_2$, and $M'''(C_2H_3O_2)_3$, according to the equivalent value of the contained metal. Normal acetates of the alkali-metals can form on the one hand, diacetates by taking up a molecule of acetic acid, and on the other, basic acetates by taking up a molecule of metallic oxide of hydrate. They are nearly all soluble in water, and are decomposed at a high temperature and by strong acids. In consequence of their solubility they are often satisfactory therapeutic agents. When treated with strong sulphuric acid they give up acetic acid, which may be recognised by its smell, heated with lime they yield acetone, distilled with potassic hydrate they give off methane, cold solutions give with mercurous nitrate, a precipitate of mercurous oxide, and with peroxide of iron they form a reddish-brown liquid.

Acetone. A synonym of ethylene and of olefant gas.

Acetico. Medicated vinegars.

Acetic Acid. (*F. acide acétique*, *esprit de Venus*, *vinagre radical*, *vinagre de bois*, *G. Essigsäure*, *Holzasig*, Dutch, *Azynuur*, *houtazynuur*, *I. acido acetico*, *acido acetico del ligno*, Turkish, *Sirke rouhou*; Arabic, *Roh le Kal*) $C_2H_3O_2$. Purified pyroigneous acid. It is formed during the fermentation of many organic substances, and in the dry distillation of wood, sugar, starch, tartaric acid, and other matters. It is produced by the slow oxidation of alcohol, whether resulting from oxidising agents or from fermentation. It is manufactured in Germany by mixing diluted alcohol with yeast or other decomposable nitrogenous matter, and allowing it to flow over wood shavings steeped in vinegar and placed in a vessel through which a current of air is passing. It is generally procured from the destructive distillation of wood, the product, after purification, containing 28 per cent. of anhydrous acid or 33.3 per cent. of glacial acid. Formerly obtained by heating the acetate of copper and receiving the product in a retort, but the distillate contains acetone. Also obtained by distilling acetate of soda with sulphuric acid, the product crystallises in laminae. The crystalline acid melts at $120^\circ C$ ($248^\circ F$). Diluted alcohol dropped upon platinum black is changed by the action of the oxygen in the pores of the platinum into acetic acid. A colourless acid liquid, of a penetrating but pleasant odour. Its vapour is inflammable and burns with a blue flame. It dissolves resins, albumen, and fibrin. It is found in small quantities in vegetable and animal fluids. The British Pharmacopoeia orders three strengths. See *Acidum aceticum*, *Pyroigneous acid* and *Vinegar*.

Strong acetic acid is an escharotic and a vesicant when applied locally. It is used as an application to warts, in herpes circinatus, tinea tonsurans, to destroy the surface and the epiphyte when present; in epithelioma it has been injected into the diseased structure, or applied to its surface. It is also sometimes applied to sloughing ulcers of the throat, or diluted as a gargle. When mixed with water it forms a cooling lotion in heat of head and local inflammations, and has been used as an emollient inasarides. Internally it is a refrigerant, and has been recommended in scarlet fever, but it is not much used.

A. acid, poisoning by. Usually the symptoms are whitening of mucous membrane of mouth, with great pain, sometimes redness and inflammation of larynx, salivation, vomiting, and convulsions. The mucous membrane of the stomach has been found blackened, but not corroded. The remedies recommended are alkalies and milk.

A. acid, tests for. Acetic acid is to be recognised by its smell, by the fragrant smell of acetic ether when heated with sulphuric acid and alcohol, by the white precipitate on the addition of nitrate of silver, which is soluble in hot water, dilute nitric acid, and ammonia, and by the production of a deep red colour on the addition of perchloride of iron to a neutralised solution.

A. aldehyde. A synonym of *Aldehyde*.

A. anhydride. Anhydrous acetic acid.

A. ether. See *Ether*.

A. oxide. A synonym of anhydrous acetic acid.

ACETIFICATION—ACETOUS.

Acetification. (*Acetum*, vinegar; *facio*, to make.) See *Acetous fermentation*.

Acetina. Propenyl or glyceryl acetates. Ethers derived from propenyl alcohol (glycerine) by substitution of 1, 2, or 3 equiv. of acetyl for hydrogen. They are oily liquids, produced by heating glycerin and acetic acid together in various proportions in sealed tubes.

Aceti'te. A term formerly applied to the salts of a supposed acetic acid.

Acetobutyric acid. A synonym of propionic acid.

Acetola'ta. (*G. Essigaufgüsse.*) Term applied to acetous infusions of roots, herbs.

Acetolated. (*F. acétolè; G. Essigauflosung.*) Term applied to remedies composed of distilled vinegar, in which various substances are dissolved.

Acetolates. (*F. acétolats.*) In French pharmacy, medicated vinegars obtained by distillation.

Acetolature. (*G. Essigauszug.*) A liquid in which various remedial agents are dissolved by the aid of vinegar. By evaporation particular kinds of extracts are obtained.

Acetolea. (*G. Essigauflosungen.*) Solutions of vinegar and oil.

Acetolica. (*G. Essigverbindungen.*) Compounds of vinegar.

Acetoliti'va. (*G. Essiglösungen.*) Preparations of vinegar by solution, maceration, or distillation.

Acetomellia. (*Acetum*; *mel*, honey. *G. Essighonige.*) Preparations of drugs in vinegar and honey, otherwise called Oxymella.

Acetom'eter. (*Acetum*, vinegar; *μέτρον*, a measure.) A hydrometer, graduated for determining the strength of commercial acetic acid according to its density.

Acetom'etry. (Same etymen.) A mode of determining the amount of acetic acid in vinegar. This may be done by observing the saturating power of the acid for potassium or sodium or calcium bicarbonate; by noting, by means of the acetometer, the sp. gr. of the liquid when saturated with hydrate of lime; or by means of tables which have been drawn up, showing the average percentage of acetic acid according to the specific gravity.

Acetone'mia. (*Acetone*, *ἄμα*, blood.) A diseased condition in which acetone is found in the organism. It may result from improper diet and the abuse of alcohol; from obstinate constipation, leading to peculiar forms of decomposition in the retained fecal matters; from changes occurring in certain febrile diseases as variola, scarlet fever, and typhoid fever; from diabetes and organic diseases of the stomach, such as cancer; from inanition. Post-mortem examinations have revealed no constant changes of importance, but the blood, muscles, and viscera exhale a strong odour of acetone, and the presence of this peculiar fluid has been demonstrated in the blood after death. Its source and mode of formation during life are unknown, some attributing it to the abnormal gastric digestion of starch, the acetone formed being absorbed, while others think that it is generated in the blood. The disease appears typically in the course of chronic diabetes, the characteristic symptoms being respiratory, circulatory, and nervous disturbances. Dyspnea of a remarkably sudden and intense character supervenes, with increased frequency of respiration, severe pain at

the hypochondrium and cough, without corresponding auscultatory signs. The pulse is retarded, the temperature below the normal standard. The cutaneous sensibility becomes so far diminished that even vesicants act but feebly and slowly. There is aphonia, almost complete suspension of all the secretions, and a strong and penetrating odour is emitted by the skin and lungs. In the later stages, owing to paralysis of the vasomotor system, the pulse and temperature rise. Ultimately the patient falls into a state of coma. The disease may last either several days or only a few hours. The treatment consists in preventing organic fermentation by making the secretions more active and by removing the causes of the disease. Acetone can be demonstrated in the blood, and recovered from the urine by distillation.

Aceton'amines. Three bases resulting from the action of ammonia and heat on acetone. They are—Diacetonamine = $C_6H_{13}NO$. Triacetoneamine = $C_9H_{17}NO$. Dehydrotriacetonamine = $C_7H_{15}N$.

Acetone. (*Aceto*, to become sour. *F. esprit* or *ether pyroacétique* or *pyroigneux*; *G. Essiggeist.*) $C_2H_5O = CH_3CO.CH_3$. Dimethyl ketone, methyl acetyl. Acetone is best prepared by the dry distillation of acetates; it is also obtained by passing the vapour of acetic acid through a red-hot tube. It is a colourless, limpid liquid of peculiar odour; density, 0.792; and boils at 55-56° C. (131-7° F.) the density of its vapour, referred to air, is 2.022. It is very inflammable, and burns with a bright flame; it is miscible in all proportions with water, alcohol, and ether. It dissolves camphor, caoutchouc, and fats. It is developed in the body by the fermentation of organic matters, and especially of grape sugar. It is given off in the breath of drunkards, and is said to be formed in the stomach in certain cases of gastric catarrh when there is an abundant secretion of mucus. It has been given in gout and rheumatism, and has been used as an antiepileptic. Dose, 16-30 drops, three or four times a day. See *Acetonemia*.

Acetones. A synonym of *Ketones*.

Acetonu'ria. (*Acetone*; *ούρον*, urine.) The presence of acetone in the urine.

Aceto'sa. (*Aceto*, to be sour.) Specific name for the *Rumex acetosa*, common sorrel.

A. alp'ina. The *Rumex alpinus*.
A. nos'tras. The *Rumex acetosa*.
A. prat'en'sis. The *Rumex acetosa*.
A. roma'na. The *Rumex scutatus*, or Roman sorrel.

A. rotundifolia. Same as *A. Romana*.
A. scuta'ta. The *Rumex scutatus*.
A. vulga'ris. The *Rumex acetosa*.

Acetosella. Wood-sorrel. See *Oxalis acetosella*.

Acet'ous. Of or belonging to vinegar. The acetous and acetic acids, formerly supposed distinct, are now known to be the same in all respects.

A. ferment. See *Saccharomyces mycoderma*.

A. fermenta'tion. The conversion of the alcohol in beer or wine into acetic acid. The change that takes place consists in the oxidation, or in the substitution of oxygen for the hydrogen of the hydroxyl group, of the alcohol contained in dilute alcoholic liquids, and this is associated with the development of a microscopic fungus, the *Saccharomyces mycoderma* or *Mycoderma aceti*, ordinarily known as mother of vinegar, or vinegar

ACETUM.

mould, which forms a coating on the surface of the liquid undergoing acetous fermentation. A very small quantity of this fungus placed on the surface of a dilute alcoholic liquid will in a short time convert the alcohol into acetic acid, especially if albuminous substances and alkaline phosphates be present. The conversion of the alcohol into acetic acid always takes place at the surface of the liquid, and continues only as long as the fungoid growth floats upon the liquid; when it sinks below the surface, out of contact with the air, the action ceases. It is doubted by some whether the action is physical or physiological, but the balance of opinion is in favour of the latter theory. The amount of alcohol present must not exceed 11 per cent., and the action goes on slowly when there is less than 2 or 3 per cent. The temperature must be kept above 20° C. (68° F.), but it should not exceed 40° C. (104° F.).

Acetum. (*Acet.*, to become sour. *F. vinaigre*; *L. aceto*; *S. rinayre*; *G. Essig*.) Vinegar. An acid liquid of a brown colour, pleasant acid taste, and peculiar odour, prepared from malt and unmalting grain by acetous fermentation; containing 4.6 per cent. of anhydrous acetic acid. Sp. gr. 1.017 to 1.019. Ten minims of solution of chloride of barium (1 in 8) will precipitate all the sulphuric acid allowed by law to be added to one ounce of vinegar. It is used as a discutient in sprains and bruises; when diluted, to sponge the surface in the sweating of hectic, and with astringent infusions as a gargle. It is a refrigerant and diuretic, in fevers; it has been used as an emema, and as an injection into the bladder to break up blood clots. It is a popular but useless disinfectant. It is a ready and safe antidote in cases of poisoning by the alkalies. It is used in making emplastrum cerati saponis.

The term acetum was applied by the Romans to all h.ney which flows of itself like must or oil. (*W.*)

A. antisepticum. The *Acetum aromaticum*.

A. aromaticum. (*F. cinsigne antiseptique*.) This vinegar, formerly known as the vinegar of four thieves, contains:—*Artemisia vulgaris* 40, *Artemisia pontica* 40, rosemary 40, sage 40, mint 40, rue 40, lavender 40, sweet flag 5, canella 5, wallflower 5, nutmegs 5, garlic 5, camphor 10, crystallised acetic acid 40, white or French vinegar 2500 parts. Macerate the substances for ten days in the vinegar, strain with pressure; add the camphor dissolved in the acetic acid; filter. Used as a disinfectant in infectious diseases, and as an external stimulant. (*Fr. Codex*.)

A. aromaticum. Ph. A. (*A. antisepticum*; *G. Aromatischer Essig*.) Leaves of peppermint, rosemary, sage, of each 25 parts; roots of angelica and zedair, of each 5 parts; oil of cloves, 5 parts; and vinegar, 1000 parts. Macerate for three days.

A. aromaticum. Ph. G. (*G. Geruchessig, aromatischer Essig*.) Oils of rosemary, juniper, and lemon, 1 part; oil of thyme, 2; oil of cloves, 5; digested with aromatic tincture, 50 parts; tincture of cinnamon, 100; diluted acetic acid, 200; water, 1000 parts; and filter. Used as a perfume in sick chambers and as an embrocation.

A. Britan'nicum. A term applied by the French to the English aromatic vinegar. It contains:—Crystallised acetic acid 600, camphor 60, volatile oil of lavender 0.5, volatile oil of wallflower 2, volatile oil of canella 1 part.

A. canthar'idæe. B.P. Cantharides, pow-

dered, 2 oz.; glacial acetic acid 2 fl. oz.; acetic acid 18 fl. oz. Digest the cantharides in the acid mixed with 13 fl. oz. of the acetic acid, for two hours at 200° F.; when cold, percolate, press, and add acetic acid to make 20 fl. oz. A strong rubefacient; when mixed with soap liniment; a vesicant when painted on the skin.

A. card'i'acum. The *Acetum aromaticum*.

A. carov'is'm. Vinegar.

A. col'chic'. Ph. G. (*G. Zeilboesssig*.) Colchicum seeds 1, alcohol 1, vinegar 9 parts. Digest for eight days. Dose, 1—4 grm.

A. com'mu'm. Vinegar.

A. com'centra'tum. Ph. G. A synonym of the *Acidum aceticum dilutum*.

A. cru'dum. Ph. G. A synonym of *Acetum*.

A. destilla'tum. The *Acetum purum* of the P.G. Distilled vinegar. A limpid, colourless liquid, wholly volatilised by heat.

A. digita'lis. Ph. G. (*G. Fingerhutessig*.) Digitalis 1, alcohol 1, vinegar 9 parts; macerated for eight days. Dose, 10—30 drops on sugar once or twice daily.

A. gar'licum. Vinegar made from wine. It is about one sixth stronger than pure malt vinegar, and is of two kinds, white wine and red wine vinegar.

A. glacia'le. See *Acidum aceticum glaciæ*.

A. ligno'sum. A synonym of *Acetic acid* when obtained from the destructive distillation of wood.

A. lobe'lie. U.S.P. Lobelia, 4 troy oz., is moistened in dilute acetic acid 2 fl. oz., packed in a percolator, and sufficient dilute acetic acid passed through to make up two pints. Dose, as an expectorant, 30 to 60 minims; in asthma, 60 to 120 minims; as an emetic, half a fluid ounce.

A. mal'sum dulce. A synonym of *Oxyglucæ*.

A. op'ii. An imitation of Black drop. Opium 5 oz., nutmeg 1 oz., saffron 150 grains, macerated in dilute acetic acid 1 pint for 24 hours, percolated, and dilute acetic acid added until the filtered product measures 26 fl. oz.; sugar, 8 oz., is dissolved in it and sufficient dilute acid added to make 2 pints. Six and a half minims is equal to a grain of opium. Dose, 7—10 minims.

A. philosoph'icum. An alchemical preparation, used as a solvent of metals; its composition is unknown.

A. plum'bicum. A synonym of the *Liquor plumbi subacetatis*.

A. prophylac'ticum. The *Vinaigre des quatre voleurs*, or vinegar of the four thieves, who, during the plague, plundered the sick, but escaped the disease themselves. This was attributed to a medicated vinegar, for which the *Acetum aromaticum* is a substitute; also called *Marseilles vinegar* and *Thieves' vinegar*.

A. pu'rum. The official name in the Ph.G. of distilled vinegar.

A. pyroligno'sum cru'dum. Ph. G. (*G. roher Holzessig*.) Impure acetic acid obtained from destructive distillation of wood. It is of brownish colour and empyreumatic odour. See *Pyroligneous acid*.

A. pyroligno'sum rectifica'tum. Ph. G. (*G. rectificirter Holzessig*.) Crude pyroligneous acid distilled in a glass retort till eight tenths have passed over. A clear, colourless or yellowish liquid, of empyreumatic smell and taste. Used only externally.

A. quatuor sa'rum. The *Acetum aromaticum*.

ACETYLENE—ACHILLEA.

A. quatuor latrosum. The *Acetum* *quatuor latrosum*.

A. radialis. (G. *concentricis* *Eschsch.*) A synonym of the *Acetum* *concentricum* of the *Austrian Pharm.*; 100 parts contain 90 parts of hydrated acetic acid.

A. roseum. (F. *vinigre* *rose.*) This vinegar is made of red roses 100, white vinegar 1200 parts; macerate for ten days; express and filter. An astringent, applied as an injection and as a cosmetic.

A. rubidum. P.G. (G. *Himbeeressig.*) Raspberry vinegar. Syrupus rubidi 1, vinegar 2 parts. A coloring and flavouring agent.

A. sanguinalis. U.S.P. Blood-root, 4 oz., macerated with dilute acetic acid, packed in a percolator, and sufficient acid passed through to make two pints. Dose, as an alternative and expectorant, 15–30 minims; as an anesthetic, 3–4 drachms.

A. saturatum. A synonym of the *Liquor plumbi subacutus*. D.P. Also a synonym of the *Liquor plumbi subacutus*. P.G.

A. scillium. B.P. Squilla, 2½ ounces; diluted acetic acid, 1 pint; macerate for seven days, and add proof spirit, 1½ ounces. Dose, 15–40 minims.

A. scillium. A.P. (G. *Meerzwiebackessig.*) Squilla, 5 parts to 50 by weight of *Acetum crudum*. A. scillium. P.G. Squilla, 1 part; spirit, 1 part; vinegar, 9 parts. Dose, 1–5 gm.

A. scillitium. P.G. A synonym of the *Acetum scilla*.

A. tharsus. A synonym of the *A. acetum*.

A. vitæ. Vinegar made from wine. *Acetum gallicum*.

Acetylene. C₂H₂. One of the constituents of coal-gas. It may be obtained by synthesis from its elements; by passing the vapour of chloroform over ignited copper, by the incomplete combustion of bismuth containing carbon and hydrogen, and in other ways. It is a colourless gas, sp. gr. 0.97, with peculiar and unpleasant odour. It burns with a bright and smoky flame. Mixed with chlorine it detonates almost instantly with separation of carbon.

Acetylene-hæmoglobin. A combination of hæmoglobin with acetylene, of bluish-red colour, but little known.

Acyto de Sal. A remedy for bronchitis, used in South America; it contains iodine.

Achæna. Nat. Ord. *Cistaceæ*. A Eurasian plant, possessing a fleshy edible root. (Dunhuca.)

Achæna. (A. *achæna*.) A leafless plant to which the ancients ascribed magical properties. It was called Hippophobæ, being supposed to be a terror to mares (Pliny). For regards it as a variety of *Euphorbia antignorum*, or else as a Solanaceous plant. (Waring.)

Achæna. Same as *Achæna*.

Achæna. (A. *neg.*; *χαινα*, to split or crack. F. *achène*, *achine*; G. *Schlüsfrucht*; *Schlüsfrucht*.) A dry one-celled, one-seeded indehiscent fruit, the pericarp of which is closely applied to the seed, but separable from it. It may be solitary, forming a single fruit as in the dock and in the cashew, where it is supported on a fleshy peduncle; or aggregate, as in Ranunculus, where several achænae are placed on a common elevated receptacle. In the strawberry the achænae are aggregated on a convex sessile receptacle. The *Cyano-*

rhodon (Rose), *Oxycole* (Compositæ), *Urtica* (Amarantaceæ), *Sesuvium* (Ash), *Caryopsis* (Graminaceæ), *Cucurbit* (Mallow), and *Croceus* (Umbellifera), are fruits composed of one or more achænae.

Achahi. Arabic for alum-water. (J.)

Achæna. See *Achæna*.

Achalybhamia. (A. *neg.*; *χάληψ*, steel, *aima*, blood.) A synonym of *Anæmia*.

Achamella. See *Achamella*.

Achana on. An African plant used in the kingdom of Mely, as antisyphilitic and sudorific.

Achaouan. An Egyptian plant producing flowers like the chamomile, used in decoction as deobstruent.

A. ab'at. An Egyptian plant, highly esteemed as emollient and resolvent; supposed to be the *Citrullus maritima*.

Achar. Same as *Achar*.

Acharistum. (A. *priv.*; *χάρης*, thanks.) A confection against catarrh and difficult respiration, because given gratuitously.

Achas'ophyte. (A. *neg.*; *χάσος*, to gape, *φύειν*, a plant; F. *achasophyte*.) A plant having its fruit indehiscent. (Necker.)

Acha'um. (A. *neg.*; *χάσος*.) The agate stone, found by the Achætes, a river of Sicily, it contains 98 per cent. of silica, and presents a great variety of colours and images, chiefly due to oxide of iron; formerly supposed to possess many virtues, as of removing the poison of serpents, allaying thirst, improving the sight, making eloquent.

Ache. (A. *neg.*; *χάσος*, affliction; L. *dolor*; F. *mal*; G. *Uebel*.) Any continued throbbing pain.

Also the old name of paralysis.

Achellary. (A. *neg.*; *χάσος*, a lip.) Applied to the lower of an *Orcula* when the labellum is absent.

Achella. (Same etymon.) A malformation in which one or both lips are absent.

Achellous. (Same etymon.) Having no lip.

Achellia. (A. *neg.*; *χάσος*, the hand. F. *achellia*; G. *Handlosigkeit*.) An organic deviation, characterised by the want of hands.

Achellous. (Same etymon.) Handless.

Achella. A synonym of *Achellia*.

Achenna. Same as *Achennium*.

Achennium. Properly *Achennium*.

Achennidium. (F. *achénide*; G. *Schlüsfrucht*.) A fruit composed of many achænae disposed on the same level.

Achero'is. (From *Ἀχέρως*, the river Acheron, so-called because from its pale colour it was supposed to have been brought from the shades by Hercules.) The white poplar.

Achetidæ. (H. *neg.*; *χάσος*, the clear-sounding. F. *achetides*.) A family of Orthoptera having the Acheta or cricket for their type.

Achiar. Same as *Achiar*.

Achicolum. The sudatorium, or sweating-bath of the ancients. (Cael. Aurelianus.)

Achido-peirastice. Same as *Acido-peirastice*.

Achie-patchie-alley, or Pachie-illy. Patchouly. The Tamil name of certain dry fragrant sub-astringent leaves; esteemed as stomachic and sedative. Origin unknown.

Achille'a. (A. *neg.*; *χάσος*, from Achilles, said to have discovered this plant, or used it for curing Telephus. F. *achille*; G. *Achillekraut*.) Mulsell. A Gen. of the Sub-ord. *Tubulifera*, Nat. Ord. *Compositæ*. Pappus 0; florets of the ray short; ♀; of the disk ♂, with a flattened winged tube; bracts forming an ovate or oblong imbricated

ACHILLEAS—ACHOLICUS

flower-head, receptacle scaly, sub-convex, achæmia compressed; leaves woolly, those of the stem lanceolate or nearly linear, bipinnatifid, with deeply divided pinnæ, the rachis scarcely at all toothed. The milfoils are strong scented, bitter, stimulating, and tonic.

A. ageratum. (F. *Eupatoire de Ménud*; L. *erba bucina*, *erba giulia*.) Maudlin, or maudlin tansy. Formerly employed as a vermifuge.

A. atra ta. (F. *milfoeuilles noire*.) Used in the Alps against pneumonia and diarrhoea.

A. falca'ta. Employed in the form of tincture as a remedy for hypochondriasis.

A. foliis pinna'tis. Name for *Genipa verum*.

A. herba ro'ta. A reputed vulnerary. Enters into the composition of the drunk Fal-trank.

A. millefolium. (F. *Millefeuille*, *herbe aux charpentiers*; G. *Schafgarbe*; L. *millefolium*; Sp. *milcrama*, *erba de San Juan*.) Common yarrow or milfoi. Leaves double pinnate, downy, minutely divided, with linear, dentate, mucronate divisions. Official in U.S.P. and in P.G. Flowers and leaves have an aromatic odour and a bitterish, pungent taste. It contains achillein, achillic acid, a blue aromatic oil, and tannin. It is a mild aromatic tonic and astringent and anti-spasmodic. It has been used as a vulnerary. It is employed in hæmorrhage and mucous discharges; in flatulency, dysmenorrhœa, and amenorrhœa, in intermittents and low forms of fever. It is given in extract and infusion. The oil has been administered in doses of 20—30 drops. According to Linneus it was employed in his time in Sweden to increase the intoxicating powers of beer.

A. moscha'ta. (F. *genipi blanc*; G. *Wildfraulein kraut*.) Known in Switzerland as forest lady's herb, and has been used there for centuries as a stomachic tonic. From it the liqueur d'Iva is made.

A. na'na. (F. *Genipi batârde*.) A domestic remedy in the Alps.

A. nob'ilis. (F. *millefeuille noble*.) This plant is used as a febrifuge.

A. ptarmica. (F. *ptarmique*; *herbe d'éternuer*, L. *erba da sternutare*; G. *scilde Bertramkraut*; *Nieswurz*.) Sneezewort, or bastard pellitory. Leaves lanceolate-linear, finely dentate; heads globular, scales of the involucre scarious, black. The leaves have an agreeable slightly aromatic odour and taste, and have been used as a sternutatory.

A. seta'cea. Slightly stimulant and tonic.

Achilleas. Name for a superior kind of barley mentioned by Theophrastus, much esteemed as a decoction in fevers.

Achillic Acid. An acid obtained from the milfoil, in which it is combined with lime and potash. It forms colourless prisms soluble in two parts of water at 12° C. (53° F.), is without smell and not volatile. Gmelin considers it to be impure malic acid, Hlasiwetz that it is acetic acid.

Achille'in. $C_{20}H_{32}N_2O_{13}$. A brownish-red amorphous, vitreous, gritty, and intensely bitter substance obtained from milfoil. According to v. Platta, it is a basic glucoside. It is soluble in alcohol and in water, but not in ether. It has been given with some success in intermittent fever in doses of 0.25 to 1.0 gram.

Achille'on. A kind of sponge used by the Greeks to line helmets; also for making tents.

Achilleia. See *Achillea*.

Achille'us. Term for the Tendo Achillis. (Quincy).

Achill'etin. $C_{11}H_7NO_4$. An aromatic substance of brownish colour, not bitter, obtained by the action of sulphuric acid on achillein. It is insoluble in water and soluble with difficulty in alcohol.

Achill'eum. (Ἀχίλλειον. G. *Hautgeschwür*; *Haut-Krebs*.) An intractable ulcer, or carcinoma of the skin.

Achill'is Ten'do. (*Achilles*, invulnerable except at his heel. F. *tendon d'Achille*; G. *Achillessehne*.) Tendon of Achilles. The strong tendon of the gastrocnemii, or gastrocnemius and scævus muscles.

Achil'ous. (A. priv.; χιλος, the lip; F. *achyle*.) Without lips. Erroneously used for *Acherious*.

Achima'dium. See *Achman*.

Achiman. See *Achman*.

Achiot. Name for the red grains of *Achiot*, made into lozenges for purposes of dyeing, or mixing with chocolate. (Quincy.)

Achiotl. The *Bixa orellana*, or Annatto.

Ach'ra. The *Canna achira*. Anescent root.

Ach'rous. (A. priv.; χηρ, the hand.) Without hands, erroneously used for *Acherous*.

Achit'olum. See *Achivolum*.

Achlamyd'eous. (A. priv.; χλαμς, a short cloak, or cape. F. *nud*; G. *nackt*.) Applied to plants, the flowers of which have neither calyx nor corolla, the sexual organs being naked.

Achly'a. (Ἀχλος, mist.) A genus of the Family *Saprolegniaceæ*, Class *Oosporea*, Group *Thallophytes*. Filamentous, aquatic, colourless, rigid, or, according to some botanists, fungi, growing on decomposing organic matter, generally dead flies, presenting rounded motile zoospores, furnished with hair and with sporangia, containing spherical oögonia. It is by some supposed to be an aquatic form of a *Botrytis* or an *Empusa*.

Achly'a. (Ἀχλς, darkness, or blindness. F. *achlys*; G. *Nebel*.) Cloudiness; darkness of the air. Gr. anal. applied by Galen and Aëtius to dimness of the eyes, or of sight, also to an ulcer, or cicatrix of an ulcer on the cornea, by which dimness is caused, also applied by Hippocrates to an opacity of the cornea, or the faded lustre in the eyes of the sick, which he terms ἀχλυνες τῶν ὀφθαλμῶν. (Castellus.)

Achma'dium. See *Achman*.

Achman. (Arab.) A word denoting antimony.

Ach'me. (Ἀχμη, anything shaved off.) The thinnest and least part of anything; froth or foam of the sea.

A shred of lint; any small soft thing.

The sordes of the eye, according to Hippocrates.

Achmella. See *Acnella*.

Achnan'thes. A Sub-family of the Family *Diatomaceæ*, Ord. *Conjugatæ*. Frustules bent, stalked at one angle or free; valves with a median nodule, asymmetrical; lower valve with a stauron.

Acholia. (A. priv.; χολή, bile. F. *acholie*; G. *Gallenmangel*; *Gallenlongbrut*.) Want or deficiency of bile.

Term formerly in use to describe cases of epidemic cholera, in which the secretion of bile appears to be suspended. At present it is used to express any condition in which no bile is excreted or secreted.

Acholl'ous. Same as *Acholous*.

ACHOLOUS—ACHROMATOPSIA.

Acholous. (A, neg.; *χολή*, bile.) Wanting, or deficient, in bile.

Achor. (Achor, from *ἄχυρον*, a heap of chaff. *F. achore, teigne mugueuse*; G. *Ansprung, Kopfgrind*; I. *acori latiss.*) A small acuminated pustule, containing a straw-coloured fluid like strained honey, succeeded by a thin brown scab, and appearing generally about the heads of young children.

Achorea. Synonym of *Achor*.

Achoreia. (A, priv.; *χῆμα*, to withdraw. *F. achoreia*.) Want of space or of due capacity in the hollow organs for retaining fluid.

Achoria. Same as *Achoreia*.

Achorion Schönleini. (*F. achorion de la teigne, mycodermis de la teigne; porrigophyte* and *Cryptogame de la teigne favus* (Gruby), *Champignon de la teigne favus*.) This fungus is probably a modified form of *Penicillium glaucum*, and is found constantly in *Tinea favosa*. It commences its growth in the follicles of the hairs especially affecting those of the head, and first appears in the form of spores. These germinate, distend the upper part of the follicle, cause thinning of the dermis and unite with other masses surrounding neighbouring hair. They now form the favus-crust, or cup, and this having attained a certain size, the dry epidermis over it desquamates, and the fungus is exposed to the air. The favus appears as a solid hemispherical crust of pale yellowish colour, convex below at first, concave and then flat on its upper surface. Its diameter varies from 1-25th to $\frac{1}{4}$ of an inch, and its thickness from 1-25th to $\frac{1}{2}$ of an inch. It is hard, dry, friable, formed of an amorphous granular layer enveloping a central more spongy and friable mass. This contains undulating tubes, ramified without dissepiments and nearly empty, constituting the mycelium; straight or curved tubes, not wavy, filled with elongated cells placed end to end, constituting the receptacles, and enclosing spores, which are either free or connected together like a necklace; these have a diameter varying from 1-8000th to 1-4000th of an inch; they are very refractile, and are not affected by water or acetic acid. The fungus is always accompanied by micrococci and bacteria.

Achoris-tus. (A, priv.; *χωρίζω*, to separate.) Inseparable. Gr. anal. *ἀχώριστος*, applied by Galen to a symptom which always accompanies a disease, as pain in the side in pleuritis.

Achou'rou. Carib name for a species of myrtle, a decoction of the leaves of which is used in nervous affections and for dropsy, by the natives.

Achras. A genus of the Nat. Ord. *Sapotaceae*.

A. australis. A synonym of *A. sapota*.

A. bala'ta. A synonym of *A. Mulleri*.

A. mammo'sa. (*F. Lucuma marmalade*.) The marmalade tree. Fruit esculent. Furnishes *Lucuma balata*.

A. Muller'i. A native of Guiana and Central America. Yields a substance similar to gutta-percha called *Balata*. Dr. Mally has had urethral bougies made of it.

A. nigra. A synonym of *Bumelia nigra*.

A. salicifolia. (*F. Diphloia a feuilles de saule*.) Hab. the Antilles. Furnishes Galimata or White balata.

A. sapota. (*F. sapotillier*; G. *Breiaßfel*.) Oval-fruited Sapota, or sapodilla plum, the seeds of which are given in emulsion for calculous com-

plaints; it grows in the W. Indies; its fruit like an apple, tasting, when ripe, like the marmalade of quinces; its bark used as astringent and febrifuge, under the name of *Cortex Jamaicensis*. The wood is called bully-tree wood or black bully.

A. sideroxylon. Hab. Jamaica. Furnishes Neesberry balata.

A. zapota. A synonym of *A. sapota*.

Achroi. (A, neg.; *χρῶς*, the surface, as of the body or stem, and so its colour.) The term *ἀχροί* was applied by Hippocrates to persons having great pallor of the countenance and skin generally, whether natural from birth, or from deficiency or loss of blood, or the effect of disease.

Achro'ma. (A, priv.; *χρῶμα*, colour.) Partial loss of colour of the skin. See *Leucoderma*.

Achroma'sia. (A, neg.; *χρῶμα*, colour. *L. coloris defectus*; *F. achromasie*; G. *Farblosigkeit*.) Absence of colour in the body or cachectic pallor.

Also used as a synonym of *Achromatism*.

Achromatic. (A, neg.; *χρῶμα*, colour. *L. achromaticus. F. achromatique*; G. *farblos, unfarbig*.) Having or producing no colour. A term applied to prisms or lenses which cause no dispersion of colour.

A. lens. A single prism or lens can never be free from dispersion of colour, since the colours of the solar spectrum have different degrees of refrangibility; the violet rays, for example, coming to a focus much sooner than the red rays. In order to remove this action of a single lens, a second lens of opposite action is placed immediately behind it, which possesses the same dispersion of colour, but causes a different amount of refraction; that is to say, has another focal distance. Thus to a convex crown glass lens is added a concave flint glass lens, and in order that both should effect equal but opposite dispersion of colour, the virtual focal distance of the latter must be about twice as great as the real focal distance of the former. Their combination then gives an achromatic lens, which nearly unites all the rays emitted from a white point unto a white image point again. See *Aberration chromatic*.

Achromatisation. (Same etymon.) The act or process of making a lens or prism achromatic.

Achromatism. (A, neg.; *χρῶμα*, colour.) The absence of a fringe of colours around the image of an object in the focus of a lens.

Achromatis'tous. (Same etymon. *F. achromatisé*; G. *farblos*; *missfarbig*.) Without or wanting colour; discoloured; achromatic.

Achromatop'sia. (A, neg.; *χρῶμα*, colour; *ὄψις*, eyesight. G. *Farbenblindheit*.) Daltonism. Inability to distinguish colours. When complete, the different colours of the spectrum are only distinguished as shades between black and white: but this is rare; more commonly the affection is partial; the power of discriminating certain colours, as red, green, or blue, being defective. Violet is confused by the red-blind with blue, by the green-blind with green, and by the blue-blind with red. The affection is sometimes hereditary and usually congenital, but occasionally appears in the course of pathological processes. It may affect the whole, or more rarely, only part of the retina. Even in healthy retinæ the peripheral parts are not sensitive to red light. It is generally binocular, but may be monocular. Its

ACHROMATOPSY—ACIDIFYING.

discovery is of great importance in those who have to attend to coloured signals. Probably from 2 to 5 per cent. of the total population are colour blind to a marked extent. See *Dyschromatopsia*.

Achromatop'sy. Same as *Achromatopsia*.

Achro'matous. Same as *Achromatistous*.

Achro'mia. (A, neg; χρώμα, colour. F. *achromie*, *achromatie*.) Absence of colour. A synonym which has been used sometimes for *Lepra aliphoides*, and sometimes for *leucoderma*.

Achromous. Same as *Achromatistous*.

Achroniz'o. (A, neg; χρονίζω, to last.) Term applied to medicines which undergo no change when kept.

Achro'nychous. (ἄκρος, highest, οὖν, the nail. F. *acronyque*.) Having nails, claws, hoofs.

Achroodex'trine. (Ἀχρῶος, colourless; and *dextrine*.) Colourless dextrine.

Achroomy'cea. (Ἀχρῶος, colourless; μύκης, a mushroom.) A Genus of Hyphomycetous Fungi. Fam. *Tubercularineæ*.

Achro'oa. (Ἀχρῶος, colourless.) A term entering into the formation of various words derived from the Greek, and signifying colourless or uncoloured.

Achro'ous. Same as *Achromatistous*.

Achy. (Arab.) An Arabian species of Cassia, also called *Daphnatis*.

Achyla. A different spelling of *Achlya*.

Achylia. (A, priv.; χυλός, juice. F. *achylie*, G. *Saftmangel*.) Defect of chyle.

Achyl'osis. (Same etymon. F. *Achyl'ose*.) Deficient chylification.

Achyl'ous. (Same etymon. F. *Achyle*; G. *saftlos*; *ohne Chylus*.) Without chyle.

Achym'osis. (Apriv.; χυμός, juice. F. *achymose*.) Deficient chymification.

Achym'ous. (Same etymon. F. *achyme*; G. *ohne Chymus*.) Without chyme or juice.

Achyran'thes. In Richards' System a Tribe of *Amarantaceæ*, having a uniovular ovary and bilocular anthers.

Achyran'thes. (Ἀχρῶον, chaff; ἄνθος, a flower.) A genus of the Nat. Ord. *Amarantaceæ*.

A. as'pera. (Hind. *Churchira*; Duk *Adpara*; Tam. *Na-yuvri*; Tel. *Uta-reni*, Mal. *Katalati*; Beng. *Spany*.) An Indian shrub. The seeds are given in hydrophobia, snake-bites, ophthalmia, and various cutaneous diseases. The leaves reduced to a pulp are applied to relieve the pain of the bite of the scorpion. It is regarded as astringent and diuretic.

A. frutic'osa. Hab. India. Used in dropsy.

A. globulifera. Hab. Madagascar. Used in syphilis.

A. repens. Indigenous in America, a decoction of the plant is used as a diuretic in dropsy and ischuria (Dunghison.)

A. viridis. The bruised leaves are used as an emollient.

Achyro'des. (Ἀχρῶος, bran; ἴδιος, likeness.) Applied to a scaly eruption.

Achyroph'yte. (Ἀχρῶος, chaff, φυτόν, a plant. F. *achyrophyte*.) Name by Necker for a plant the downy of which is composed of glumes or chaffy seeds.

Achyrum. (Ἀχρῶος.) Paley, or chaff.

Achselmann'stein. Bavaria, altitude 1400'. Same, aromatic, and slightly chalybeate waters. Climate mild and agreeable. Season, May to September. Baths and vapour baths, recommended for incipient tuberculous, cutaneous dis-

eases, and derangements of the uterine system. See *Edisquille*.

A'cia. (*Acus*, a needle.) A word variously supposed to denote the thread of, or the needle with which, a suture is made to join the lips of a wound, also applied to indicate the kind of suture.

Acic'olus. (*Acus*, a needle; *colo*, to inhabit. F. *acicola*.) Applied to a fungus (*Desmazierella acicola*) that grows on the decayed leaves of the wild pine.

Acic'ular. (Same etymon. F. *aculaire*; G. *Nadelähnlich*; *Nadelförmig*.) Needle-like; shaped like a needle or spike; spicular.

Acic'ulate. (Same etymon.) Needle-shaped.

Acicu'le. (L. *acicula*; dim. *acus*. F. *acicule*.) A little needle, a little spike; a spikelet.

Acicu'lides. (Same etymon.) A Family of the Division *Operculata*, Section *Pulmonifera*, Class *Trasteropoda*. Shell elongated, cylindrical; operculum thin, subspirally (Woodward.)

Acicu'liform. (*Acicula*; *forma*, likeness. F. *aciculiforme*; G. *Nadelförmig*.) Formed like a needle.

Acic'ys. (A, priv.; *akye*, strength.) Gr. anal. *akysis*, applied by Hippocrates to those who were infirm, or had not strength to move.

Acid. (*Acro*, to be sour.) Sour, sharp to the taste, applied to substances characterized, generally, by a quality of sourness. Many bodies, however, without this, agree in the other distinctive properties of acids, as turning the vegetable dyes to red, combining with alkalis, metallic oxides.

A. albumin. A white, flocculent deposit, obtained on the addition of dilute hydrochloric or acetic acid to serum- or egg-albumin, heating to 70° C. (158° F.), and neutralising when cool. It is insoluble in water and in solution of sodium chloride, soluble in acids, alkalies, and alkaline carbonates. Its solution has a strong left-sided polarisation. This artificial production cannot be distinguished from the natural acid-albumin of muscle called *Syntomin*.

A. oxides. One of the three varieties of oxides, or combinations of oxygen with other bodies. They possess the property of uniting with basic oxides, and are represented by oxides of sulphur and phosphorus, when united with water they form acids.

A. radicles. A term applied to oxygenated hydrocarbon radicles.

Acidifi'able. (*Acidus*; *fit*, to become. L. *acidifabius*; F. *acidifiable*; G. *Sauerungsfähig*.) Capable of becoming or of being converted into an acid.

Acidifi'ant. (*Acidus*, acid; *facio*, to make.) That which is capable of producing acidity. The term was originally applied to oxygen because all acids known at that time contained oxygen, and because it was observed that all combustible bodies in undergoing oxidation terminated in becoming acid. The term was subsequently applied to hydrogen and to tellurium, but it has fallen into disuse in consequence of its being perceived that when two bodies unite to form an acid both play an equal part in the process.

Acidification. (*Acidus*; *facio*, to make. F. *acidification*.) The act or process of forming or impregnating with an acid.

Acidify'ing. (*Acidus*, *fit*, to become. F. *acidifiant*; G. *Sauerreichend*.) Making acid; changing or converting into acid.

ACIDIMETRY—ACIDS.

A. principle. A term for that which, combining with an acidifiable substance, forms an acid.

Acidimetry. (*Acidus*; *μετρον*, to measure. L. *acidimetria*. F. *acidimetrie*.) The process for determining the amount of free acid in any liquid. This may be accomplished by exactly neutralising the acid by an alkali, noting the amount of the latter used and calculating the quantity of acid according to its saturating power; or an alkaline carbonate in solution may be used and the quantity of acid calculated on the basis of the amount of carbonic acid which it has displaced; or a rough estimate may be made by noting the specific gravity of the liquid and comparing it with tables which have been compiled to show the amount of acid at different weights.

Acidity. (L. *aciditas*. F. *acidité*. G. *Säure*.) The impression given to the organs of taste by sour substances; sourness.

Aciditatio. Excess of acid in the digestive canal.

Acido-basigenous. See *Amphigenous*.

Acidology. (*Acis*, a point; *λογία*, a description.) An account of surgical instruments.

Acidometer. (*Acidus*; *μετρον*, a measure.) A hydrometer for determining the density of acids. Also a tubular measure, holding usually 1000 grains of water at 60° F., and graduated into 100 divisions; employed to measure the alkaline standard solution used in *Acidimetry*.

Acido-peirastica. (*Acis*, a point; *πειραω*, to explore.) A method of diagnosing and treating disease by the introduction of needles or fine trocars.

Acidos'teophyte. (*Acis*, a point; *δοριον*, a bone; *φυτον*, a plant. F. *acidostéophyton*; G. *Akidosteophyt*.) Pointed fungous exostosis of Sir Astley Cooper.

Acido'tous. (*Acidōros*, pointed; F. *acidote*.) Terminating in a point.

Acids. (*Acidus*, sour. F. *acide*; L. and S. *acidus*; G. *Säure*; D. *Säure*; Russ. *Kislota*; Turk. *Eski*.) Bodies in which hydrogen is united to a simple or compound organic or inorganic electro-negative radical, either containing or not containing oxygen. Those acids which do not contain oxygen are very few in number, and are called hydrogen acids, the others are oxygen acids. The hydrogen is the essential element of an acid, but the chemical energy depends less on it than on the elective attraction of the radical of the acid for a base. This substitution of the hydrogen for a base produces a salt. Acids have a sour taste, and the power of reddening certain blue vegetable colours. They are soluble in water, and contain the elements of an acid oxide and water. Therapeutically, acids are used in the diluted state as refrigerants, anhydrotics, and astringents; and concentrated, form escharotics and corrosives.

In Pathology this term has been used to indicate certain supposed irritants which were generated in the fluids of the body and produced disease.

A. acrylic. A series of monatomic acids represented by the formula $C_nH_{n-2}O_2$.

A. adipic. A synonym of fatty acids.

A. aldehydic. Acids containing the group CHO , as well as CO , OH , in place of hydrogen, and exhibiting an aldehydic as well as an acid character. Synonymous with ketonic acids.

A. aromatic. Acids which bear the same relations to the hydrocarbons homologous with benzene that the fatty acids bear to the paraffins. They are produced by oxidation of the corre-

sponding alcohols and aldehydes; by the action of water on the corresponding acid chlorides; by the action of acids or alkalies at boiling point on the aromatic nitriles; by the action of sodium and carbon dioxide on the monobrominated derivatives of benzene and its homologues; by oxidation of the hydrocarbons homologous with benzene by dilute nitric acid; and by fusing the sulpho-acids of the aromatic hydrocarbons with potassium formate. They occur free or combined in many resins and balsams, and in the animal body.

A. arsenic. Unsymmetrical ethers formed from arsenious acid.

A. basicity of. The capacity of an acid for a base, depending on the number of its atoms of hydrogen replaceable by one of a metal, and thus constituting monobasic, bibasic, tribasic, and other forms.

A. carbon. A synonym of organic acids.

A. diatomic. Acids formed from alcohols containing two hydroxyl groups; they are monobasic or bibasic, according as one or both of the hydroxyls belong to a carboxyl group $COOH$.

A. fatty. Formula $C_nH_{2n}O_2$. So called because some are solid fats and the rest of an oily consistence. They are found free or combined in the structures of plants or animals. They are formed by oxidation of the primary alcohols of the methyl series; by the oxidation of aldehydes; by the action of carbon dioxide on the sodium compound of an alcohol radicle of the methyl series; by heating the ethylate of an alkali-metal in alcoholic solution with carbon monoxide under pressure; by the action of alkalies or acids on the cyanides of the alcohol radicles; by the action of water on the corresponding acid chlorides; by the action of phosgene on the zinc compounds of the alcohol radicles; by dissolving sodium in ethylic acetate, adding the iodide of an alcohol radicle, heating the mixture to 100° C. (212° F.), and distilling. Acetic, butyric, and stearic acids are examples of the group.

A. hexatomic. Acids formed from alcohols having six hydroxyl atoms, of which each H_2 may be replaced by an atom of oxygen.

A. hydrogen. Acids which contain no oxygen, only hydrogen and a radical.

A. inorganic. A synonym of mineral acids.

A. ketonic. Acids which contain the groups CO_2H and also the group CO , and which consequently possess the characters of ketones as well as acids. Synonymous with aldehydic acids.

A. mineral. Acids derived from inorganic or mineral substances; as sulphuric and nitric acids.

A. monatomic. Acids formed from alcohols having one hydroxyl atom, in which the H_2 is replaced by an atom of oxygen.

A. organic. Acids derived from the class of substances called organic, as acetic and citric acids. Also called carbon acids. They are derived from hydrocarbons, saturated or unsaturated, by the substitution of one or more of the univalent groups CO_2H , carboxyl, for an equal number of hydrogen atoms.

A. oxygen. Acids which contain oxygen as well as hydrogen and a radical.

A. pentatomic. Acids formed from alcohols, having five hydroxyl atoms, of which each H_2 is replaced by O.

A. polythionic. (*Πολύς*, many; *θείον*, sulphur.) A series of acids, in which the same quantities of oxygen and hydrogen are united

ACIDULATED--ACIDUM.

with sulphur in the proportions of 2, 3, 4, and 5.

A. saturated. Acids in which the whole of the hydroxyl atoms of the corresponding alcohols have had their H_2 replaced by an atom of oxygen.

A. tetratom'ic. Acids formed from alcohols having four hydroxyl atoms, of which each H_2 may be replaced by an atom of oxygen.

A. triatom'ic. Acids formed from alcohols having three hydroxyl atoms, of which each H_2 may be replaced by an atom of oxygen.

A. unsaturated. Acids in which only some of the hydroxyl atoms of the corresponding alcohols have had their H_2 replaced by an atom of oxygen.

Acidulated. (L. *acidulus*, dim. *acidus*. F. *acidulé*; G. *sauerig*.) Tinctured, or blended with some acid substance.

Acidulous. (Same etymon F. *acidule*; G. *sauerlich*.) Applied to salts in which the acid is slightly in excess; subacid.

Acidum. (Acro, to be sour. F. *acide*; G. *Säure*.) An acid, a noun used for neuter of *Acidus*, which it ought alone to be considered.

A. aceticum aromaticum. P.G. (*Geruchessäure*.) Oil of cloves, 9 parts; oils of lavender and lemon, of each 6 parts; oils of bergamot and thyme, of each 3 parts; oil of cinnamon, 1 part, dissolved in 25 parts of acetic acid.

A. aceticum camphoratum. Ph. Ed. and D. Camphor one oz., rectified spirit one fluid drachm, strong acetic acid ten fluid ounces. Dissolve. An aromatic, pungent perfume, used in fainting and nervous debility.

A. aceticum concentratissimum. A synonym of *Acidum aceticum glaciale* in the Aust. and Russ. Ph.

A. aceticum concentratum. F. Ph. (*Acide acétique concentré*; *esprit* or *alcool de vinaigre*; *vinaigre glacé*, *acétate normal*.) Density between 1.075 and 1.083 (10—13° Bé).

Aust. Ph. (G. *concentrirte Essigsäure*.) Contains 96 per cent. of hydrated acetic acid. One gramme neutralises 16 grammes of the *Volumetric solution*.

A. aceticum dilutum. Br. Ph. Sp. gr. 1.006. Contains 3.63 per cent. of anhydrous acid. Three fluid ounces (1320 grain measures) neutralise 939 grain measures of *Volumetric solution* of soda. Dose, ʒj—ʒj with water.

Aust. Ph. Sp. gr. 1.028. Contains 20.4 per cent. of hydrate of acetic acid. Ten grammes neutralises 84 grammes of the *Volumetric solution*.

Belg. Ph. Contains 5.5 per cent. of anhydrous acid.

Ger. Ph. Contains 30 per cent. of anhydrous acid.

Russ. Ph. Contains 4 per cent. of anhydrous acid.

U. S. Ph. Diluted acetic acid. Sp. gr. 1.006. An imperial fluid ounce (440 grains by weight) requires for neutralisation 313 grain measures of the *Volumetric solution* of soda, corresponding to 3.63 per cent. of anhydrous acetic acid.

A. aceticum elix'no venale. A synonym of *Pyroligneous acid*.

A. aceticum empyreumaticum. A synonym of *Pyroligneous acid*.

A. aceticum forte. Strong acetic acid.

A. aceticum fortius. The strongest acetic acid.

A. aceticum glaciale. B.P. Glacial

acetic acid. $C_2H_4O_2$. Contains 84 per cent. of anhydrous acid. Sp. gr. 1.065. It is monohydrated. One fluid drachm (60 grains by weight) in one ounce of water is neutralized by 990 grain measures of the *Volumetric solution* of soda. It is a colourless, pungent liquid, which is converted into a mass of crystals when cooled at 1° C. (33.8° F.), and remains crystallised at 9° C. (48.2° F.) An escharotic, employed for removing corns and warts. It speedily vesicates.

A. aceticum scillit'icum. A synonym of *Acetum scilla*.

A. acetosell'ice. A synonym of *Oxalic acid*.

A. aceto'sum. A synonym of *Vinegar*.

A. aceto'sum camphoratum. A synonym of *A. aceticum camphoratum*.

A. aceto'sum debill'ius. Dilute acetic acid, or distilled vinegar.

A. aceto'sum destilla'tum. Distilled vinegar.

A. aceto'sum forte. Strong acetic acid.

A. aceto'sum tenue. Distilled vinegar, or dilute acetic acid.

A. aconit'icum. See *Aconitic acid*.

A. antisept'icum. A synonym of *Sulphuric acid*.

A. alumin'o'sum. A synonym of *Sulphuric acid*.

A. antimon'icum. See *Antimonio acid*.

A. antimonio'sum. See *Antimonious acid*.

A. arsenico'sum. A synonym of *Arsenous acid*.

A. arsen'icum. See *Arsenic acid*.

A. arsenio'sum. See *Arsenious acid*.

A. azot'icum. A synonym of *Nitric acid*.

A. benzo'icum. See *Benzonic acid*.

A. borac'icum. A synonym of *Boric acid*.

A. bo'r'icum. See *Boric acid*.

A. Borac'icum. Prussic or *Hydrocyanic acid*.

A. carbol'icum. See *Carbolic acid*.

A. carbol'icum impu'rum. U. S. A liquid obtained from coal-tar, by heating it first with an alkali, then with an acid, and then distilling. It has a brownish colour, the smell and taste of the pure acid with a somewhat empyreumatic odour of tar. It consists of carbolic acid with some coal-tar impurities. It is used only for purposes of disinfection.

A. carbon'icum. See *Carbonic acid gas*.

A. cathol'icon. A synonym of *Sulphuric acid*.

A. chlor-hy'dricum. A synonym of *Hydrochloric acid*.

A. chloro-nitro'sum. Ph. G. and R. (G. *Königswasser*.) Contains 1 part of nitric acid, and 3 parts of concentrated hydrochloric acid. Used as a footbath when diluted with about two hundred times its volume of water.

A. chrom'icum. G.P. (G. *Chromsäure*.) See *Chromic acid*.

A. cit'ri. A synonym in Austrian Ph. of *Citric acid*.

A. cit'ricum. See *Citric acid*.

A. cyanhy'dricum. A synonym of *Hydrocyanic acid*.

A. dephlogistica'tum liq'uidum. Chlorine water.

A. fluorhy'dricum. A synonym of *Hydrofluoric acid*.

ACIDUM

A. fluor'tann. See *Fluoric acid*.
A. formic'con. A synonym of *Formic acid*.
A. formic'tann. A synonym of *Formic acid*.
A. tar'minnum. See *Formic acid*.
A. gal'ic-tan'minnum. A synonym of *Tannic acid*.
A. gal'licum. See *Gallie acid*.
A. hy'dric'tann albu'tann. Formerly in U. S. Ph. Dilute hy'dric acid. A colourless fluid of acid taste. Sp. gr. 1.112. It contains 10 grains of iodine in each fluid drachm. Dose, 3 minims.
A. hydrocarbon'tann. A synonym of *Oxalic acid*.
A. hydrochlor'tann. A synonym of *Acidum hydrochloricum*.
A. hydrochlor'tann cru'dum. A synonym of *A. hydrochloricum crudum*.
A. hydrochlor'tann. See *Hydrochloric acid*.
A. hydrochlor'tann cru'dum. G. Ph. (*G. rubs Salsacra*.) A clear, yellowish, fuming fluid. Sp. gr. 1.160—1.170, containing from 30—33 per cent. of anhydrous hydrochloric acid. It contains traces of sulphuric and sulphurous acids, alumina and iron, and sometimes of arsenic.
A. hydrochlor'tann albu'tann. B. Ph. Dilute hydrochloric acid. Acid 8 parts; distilled water sufficient to make the mixture, when cooled to 60°, measure 264 parts. Contains 10 per cent. of acid gas. Sp. gr. 1.042. Dose 10—30 minims.
 Pharm. Germ. Equal parts of acid and water. Sp. gr. 1.060.
A. hydrocyan'tann. A synonym of *Hydrocyanic acid*.
A. hydrocyan'tann. See *Hydrocyanic acid*.
A. hydrocyan'tann albu'tann. B. Ph. Take of yellow prussiate of potash 24 oz., sulphuric acid 1 lb. oz., distilled water 30 lb. oz., or a sufficiency. Dissolve the prussiate of potash in 10 oz. of the water, then add the acid, previously diluted with 4 oz. of water and cooled. Put the solution into a flask to which are attached a condenser and a receiver, and having put 8 oz. of distilled water into the receiver, apply heat to the flask till the liquid in the receiver, kept cool, is increased to 17 lb. oz. Add to this 3 oz. of distilled water or sufficient to bring the acid to the required strength, so that 100 grains (or 110 minims) of it, precipitated with a solution of nitrate of silver, shall yield 10 gra. of dry cyanide of silver. Colourless. Sp. gr. 0.997. Dose, 3—8 minims.
A. hydrocyan'tann albu'tann. U. S. Ph. The directions given for this preparation are—Take of ferrocyanide of potassium, two troy ounces; sulphuric acid, a troy ounce and a half; distilled water, a sufficient quantity. The acid and four ounces of water are mixed, and, when cool, added to the salt dissolved in ten fluid ounces of distilled water, the whole being placed in a retort. Distillation is now effected into a receiver containing some water, and water is added to the distillate till 12-7 grains of nitrate of silver dissolved in distilled water is accurately saturated by 100 grains of the acid. Or, a more expeditious way—Take of cyanide of silver 50 grains and one half, muriatic acid 41 grains, distilled water a fluid ounce. Mix the acid with the water and add the cyanide. Agitate, place a

root, and decant. Keep in the dark in a well stoppered vessel. Dose 2—6 drops.

A. hydrosulphuricum solutum. A synonym of the *A. sulphohydricum liquidum*. Belg. Ph.

A. hydrothioricum. A synonym of *Hydrogen monosulphide*.

A. hydrothioricum liquidum. A synonym of *Hydrogen monosulphide dissolved in water*.

A. hyposulphuricum. A synonym of *Aromatic disulphide*.

A. iodhydricum. A synonym of *Hydroiodic acid gas*.

A. iodatum. See *Iodic acid*.

A. lacticum. See *Lactic acid*.

A. lignum. A synonym of *Pyrolygineous acid*.

A. ligni pyro-calcium. A synonym of *Pyrolygineous acid*.

A. lignum empyreumaticum. A synonym of *Pyrolygineous acid*.

A. limonicum. A synonym of *Citric acid*.

A. limonic. A synonym of *Citric acid*.

A. limonum. A synonym of *Citric acid*.

A. malicum. See *Malic acid*.

A. marianum concentratum. A synonym of *Hydrochloric acid*.

A. meconicum. See *Meconic acid*.

A. morbum. Acidity of the stomach.

A. muraticum. U. S. Ph. An aqueous solution of hydrochloric acid gas, of the sp. gr. 1.16. See *Hydrochloric acid*.

A. muraticum crassum. U. S. Ph. A synonym of *A. hydrochloricum crassum*.

A. muraticum dilutum. U. S. Ph. Take of muriatic acid four troy ounces, distilled water a sufficient quantity to make together one pint. The sp. gr. is 1.036. Dose, 20 to 60 drops or minims.

A. muraticum nitro-oxygenatum. A synonym of *Nitro-hydrochloric acid*.

A. muraticum oxygenatum. A synonym of *Aque chlori*.

A. muraticum purum. A synonym in Ed., Dub., and U. S. Ph., of *Hydrochloric acid*.

A. nitri. A synonym of *Nitric acid*.

A. nitric-hydrochloricum. A synonym of *A. nitro-hydrochloricum*.

A. nitricum. See *Nitric acid*.

A. nitricum crassum. U. S. Ph. (*Scheidwasser*.) Colourless or yellowish, leaving no residue on evaporation. Sp. gr. 1.323—1.331, which corresponds to 50—52 per cent. of pure acid (HNO_3).

A. nitricum dilutum. Br. Ph. contains 15 per cent. of anhydrous acid. Sp. gr. 1.101. Dose, 10—30 minims.

Aust. Ph. contains 21 per cent. of anhydrous acid.

Belg. Ph. contains 17.5 per cent. of anhydrous acid.

Ger. Ph. (*verdünnte Salpetersäure*). Equal parts of nitric acid and water. Clear, colourless. Sp. gr. from 1.066 to 1.069.

Rus. Pharm. has a sp. gr. 1.064.

U. S. Ph. Nitric acid (sp. gr. 1.42) three troy ounces, distilled water one pint. Sp. gr. 1.066. Dose, 20 to 40 drops or minims.

A. nitri dulcificatum. A synonym of *Spiritus ætheris nitrici*.

A. nitricum fœculentum. U. S. Ph. (*Rauchende Salpetersäure*.) A clear brown-red fluid

ACIDUM

giving off brownish-red fumes. Sp. 1:520—1:525. See *Nitric acid*.

A. nitricum venale. Belg. Ph. The nitric acid of commerce.

A. nitrochlorhydricum. The official name in the Belg. Ph. of the *A. nitrohydrochloricum*.

A. nitro-hydrochloricum dilutum. B. Ph. Dilute nitro-hydrochloric acid. Nitric acid, 3; hydrochloric acid, 4; water, 25 parts. Mix the acids twenty-four hours before adding the water, to develop the chlorine. Colourless. Sp. gr. 1:074. Sixteen minims contain 1 minim of nitric acid and 2 minims of hydrochloric acid. Dose, 10 to 20 minims.

A. nitro-muriaticum. U. S. Ph. Nitro-muriatic acid. A golden-yellow fluid, resulting from the mixture of five parts of muriatic acid and 3 parts of nitric acid. Sp. gr. 1:068. It has the odour of chlorine, and dissolves gold and platinum. This acid, introduced by Dr Scott, of Bombay, as an external remedy in hepatitis, produces, when thus employed, a tingling sensation of the skin, thirst, a peculiar taste in the mouth, occasional soreness of the gums, and pytalum; and at the same time stimulates the liver. When used as a footbath, or for sponging, three gallons of water may be acidulated with six fluid ounces of the acid. It is also used internally, in doses of 3 or 4 drops, largely diluted, in chronic hepatic and syphilitic affections, and in oxaluria.

A. nitro-muriaticum dilutum. Diluted nitro-muriatic acid. U. S. Ph. An acid of the same strength as the *A. nitro-hydrochloricum*. B. P. Dose, 10–20 minims.

A. nitroso-nitricum. A synonym of *Acidum nitricum fumans*. G. Ph.

A. nitrosum. A synonym of *Nitric acid*.

A. opianicum. See *Opianic acid*.

A. osium. A synonym of *Phosphoric acid*.

A. oxalicum. See *Oxalic acid*.

A. oxallinum. A synonym of *Oxalic acid*.

A. phanolicum. A synonym of *Carbolic acid*.

A. phenicum. A synonym of *Carbolic acid*.

A. phenylicum. G. Ph. A synonym of *Acidum carbolicum crystallisatum*.

A. phosphoricum. See *Phosphoric acid*.

A. phosphoricum dilutum. B. Ph. Diluted phosphoric acid. Colourless. Contains 10 per cent. of anhydrous acid (P_2O_5). Sp. gr. 1:080. Dose 10–30 minims. See *Phosphoric acid*.

Aust. Ph. contains 16 per cent. of strong acid. Sp. gr. 1:117.

Belg. Ph. contains 40 per cent. of strong acid. Sp. gr. 1:350.

French Ph. contains 52 per cent. of strong acid. Sp. gr. 1:454.

Germ. Ph. contains 20 per cent. of strong acid.

Russ. Ph. has a sp. gr. of 1:062.

U. S. Ph. contains 8 per cent. of strong acid.

Sp. gr. 1:066.

A. phosphoricum glaciale. See *Phosphoric acid*.

A. phosphoricum alcum. *Phosphoric oxide*. A white powder, very deliquescent, obtained by burning phosphorus in oxygen. Dose, 1 grain.

A. picroicum. See *Picric acid*.

A. pingue. An acid which was supposed to exist in, and to explain the causticity of, lime.

A. primum visum. Acidity in the stomach.

A. primigenium. A synonym of *Sulphuric acid*.

A. prussicum Scheele's. A solution of hydrocyanic acid containing about 6 per cent. of the anhydrous acid.

A. pyroacetum. A synonym of *Pyroligneous acid*.

A. pyrogallicum. See *Pyrogallic acid*.

A. pyroligneum. A synonym of *Pyroligneous acid*.

A. pyroligneum. See *Pyroligneous acid*.

A. pyroxylicum. A synonym of *Pyroligneous acid*.

A. quercitanicum. A synonym of *Tannic acid*.

A. quinoicum. A synonym of *Quinic acid*.

A. sacchari. A synonym of *Oxalic acid*.

A. saccharinum. A synonym of *Oxalic acid*.

A. salicylicum. See *Salicylic acid*.

A. salis. A synonym of *Hydrochloric acid*.

A. salis culinaris. A synonym of *Hydrochloric acid*.

A. salis marini. A synonym of *Hydrochloric acid*.

A. santonicum. A synonym of *Santonine*.

A. scytodephicum. A synonym of *Tannic acid*.

A. septicum. A synonym of *Nitric acid*.

A. stibicum. A synonym of *Antimonious acid*.

A. succinicum. See *Succinic acid*.

A. succinicum impurum. See *Succinic acid*.

A. sulfuricum. The *A. sulphuricum*.

A. sulfuratum. The *A. sulphuratum*.

A. sulpho-arsenicum. A synonym of *Arsenic trisulphide*.

A. sulphohydricum liquidum. Belg. Ph. Antimony trisulphide 1, nitrohydrochloric acid 5 parts. The sulphuretted hydrogen gas is distilled off and water saturated with it.

A. sulphostibicum. A synonym of *Antimony trisulphide*.

A. sulphostibicum. A synonym of the *Antimony trisulphide*.

A. sulphuratum. A synonym of *Sulphuric acid*.

A. sulphuricum. See *Sulphuric acid*.

A. sulphuricum alcoholicum. G. Ph. A synonym of the *Mistura sulfurica acida*.

Belg. Ph. Concentrated distilled sulphuric acid, 250, alcohol, 750 parts.

A. sulphuricum aromaticum. B. Ph. Elixir of vitriol. Contains sulphuric acid, 3; rectified spirit, 40; cinnamon, in powder, 2; ginger, in powder, 1½ parts. Sp. gr. 0:927. Six fluid drachms, 304·2 grains by weight, require for neutralisation 8·30 grain measures of the volumetric solution of soda, containing, therefore, 33·2 grains of anhydrous acid. Dose 6–30 minims.

A. sulphuricum aromaticum. U. S. Ph. Elixir of vitriol. Prepared by mixing six troy ounces of sulphuric acid with a pint of alcohol, and allowing the mixture to cool. Then one troy ounce of ginger and a troy ounce and a half of cinnamon are placed in a percolator, and sufficient alcohol added to make a pint of tincture. Lastly, the diluted acid and the tincture are mixed.

ACIDURGIA—ACINIFORM.

Brown in colour, aromatic in odour, acid in taste. Dose, 10 to 30 drops in a little water thrice daily.

A. sulphuricum crudum. G. Ph. (*rohe Schwefelsäure, Englische Schwefelsäure*.) A clear, colourless fluid, of oily consistence. Sp. gr. 1·830—1·833, indicating a percentage proportion of pure sulphuric acid (SH_2O_4) of 91·8 to 93·1.

A. sulphuricum destillatum. Belg. Ph. Commercial sulphuric acid distilled in a glass vessel. Sp. gr. 1·847.

A. sulphuricum dilutum. Diluted sulphuric acid.

Brit. Ph. contains 11·14 per cent. of anhydrous acid. Sp. gr. 1·094. Twelve minims contain 1 minim of strong sulphuric acid. Dose, 5—20 minims.

Aust. Ph. contains 16·6 per cent. of strong acid. Sp. gr. 1·117.

Belg. Ph. contains 13·5 per cent. of strong acid.

French Ph. contains 10 per cent. of strong acid.

Germ. Ph. contains 20 per cent. of strong acid. Sp. gr. 1·113—1·117.

Russian Ph. contains 20 per cent. of strong acid.

U. S. Ph. contains 2 parts of strong acid in one pint. Sp. gr. 1·082.

A. sulphuricum fumans. G. P. (*rauchende Schwefelsäure, Nordhäuser Vitriolöl*.) A brownish fluid of oily consistence, giving off whitish vapours. Sp. gr. 1·860—1·900.

A. sulphuricum purum. A synonym of *A. sulphuricum destillatum*. Belg. Ph.

A. sulphuricum rectificatum. A synonym of the *A. sulphuricum destillatum*. Belg. Ph.

A. sulphuris volatile. A synonym of *Sulphurous acid*.

A. sulphureolum. A synonym of *Sulphurous acid*.

A. sulphureum. See *Sulphurous acid*.

A. sulphydricum. A synonym of *Hydrogen sulphide*.

A. tannicum. See *Tannic acid*.

A. tartaricum. See *Tartaric acid*.

A. tartari essentialis. A synonym of *Tartaric acid*.

A. tartarosum. A synonym of *Tartaric acid*.

A. tartricum. A synonym of *Tartaric acid*.

A. thionhydricum. A synonym of *Acidum thionhydricum liquidum* of the Belg. Ph.

A. thionicum. A synonym of *Sulphuric acid*.

A. urolithicum. A synonym of *Uric acid*.

A. valerianicum. See *Valerianic acid*.

A. valerium. A synonym of *Valerianic acid*.

A. vitrioli vinosum. A synonym of *Ether*.

A. vitriolicum. A synonym of *Sulphuric acid*.

A. vitriolicum alcoho-li aromat-

icum. A synonym of the *A. sulphuricum aromaticum* as formerly made with alcohol.

A. vitriolicum aromaticum. A synonym of *A. sulphuricum aromaticum*.

A. vitriolicum vinosum. G. Ph. A synonym of the *Mistura sulfurica acida*.

A. xoticum. A synonym of *Hydrocyanic acid*.

A. xoticum. A synonym of *Hydrocyanic acid*.

Acidurgia. (*Ἀκίς*, a point; also a sur-

gical bandage; *ἵππον*, work. *F. acidurgia*; *G. Akidurgia*.) Operative surgery, especially such as involves the escape of blood.

Acies. (*F. epine*; *G. Grat.*) An intumescence of the tenia semicircularis at the side of the foramen of Monro, and at the distance of about one line from it.

Acies. (*Ἀκίς*, a sharp point. *F. acir.*) The point of a spear; also a battle array. Applied as a name for iron or steel; and also to the rows of the phalanges of the fingers.

In Botany (*F. arête*, *angle saillant*) a ridge or projecting angle.

A. diurna. (*Acies*, keen eyesight) *Hemeralopia*. (Dunglison.)

Aciosis. Sterility in women.

Aciform. Same as *Aciciform*.

Acinacifolious. (*Ἀκινάκης*, a scimitar; *folium*, a leaf. *F. acinacifolius*; *G. Schwerblättrig*.) Having acinaciform leaves.

Acinaciform. (*Ἀκινάκης*, *forma*, resemblance. *F. acinaciformis*; *G. Säbelförmig*.) Like a scimitar or sabre in shape.

Acinalis. (*Acinus*, a berry. *F. acinal*.) Pertaining to a grape.

Acinarius. (*Acinus*.) Having small, spherical, pediculated vesicles on the stem and branches, like the grains of the grape, as the *Fucus acinarius*.

Acineses. (*Ἀ*, neg.; *κίνησις*, to move.) Neuroses which are characterised by loss of the power of moving.

Acinesic. (*Ἀ*, neg.; *κίνησις*, to move.) That which is opposed to movement. Acinesic remedies are those which are opposed to motion.

Acinesia. (*Ἀ*, priv.; *κίνησις*, motion. *F. acinesie*; *G. Unbeweglichkeit*.) Loss of motion in the whole or in any part of the body.

The interval between two beats of the heart; the period of diastole.

Acinesiatrophia. Same as *Acinetatrophia*.

Acinesis. Same as *Acinesia*.

Acinetatrophia. (*Ἀκίνητος*, motionless; *atrophia*. *F. acinetatrophie*.) Atrophy from want of motion.

Acinetes. A synonym of *Acinetidae*.

Acinetic. (*Ἀ*, neg.; *κίνησις*, to move.) That which relates to the arrest of movement; applied to medicines which inhibit motion.

Acinetidae. (*Ἀ*, neg.; *κίνησις*, to move.) The only Family of the Order *Suctorii*, Class *Infusoria*, Sub-kingdom *Protozoa*. These organisms are found parasitic upon hydroid polypes. Bodies spherical and non-ciliated, from which stand out a number of radiating, retractile, rarely ramified filamentous tubes, of which one is shorter than the rest and serves to fix the animal whilst the rest are free, and end in a trumpet-shaped sucker.

Acinetina. A synonym of *Acinetidae*.

Acini. Plural of *Acinus*.

A. glandulosi. Conglomerate glands.

A. He'nis. The Malpighian corpuscles of the spleen.

A. Malpighiani. The Malpighian corpuscles of the spleen.

A. renales. The Malpighian corpuscles of the kidney.

Aciniform. (*Acinus*, a grape; *forma*, resemblance. *F. aciniformis*; *G. Beerensförmig*.) Having the form or colour of a grape; grape-like.

ACNEMIA—ACOGNOSIA.

nennusschlag; I. *Pinna acne*; Arab. *Abdsamen*, *Badsheman*.) Retention of the secretion of the sebaceous glands of the skin, with secondary inflammation and deposit in them and in the hair-follicles. It appears in the form of red conical or hemispherical elevations or nodules, varying in size from hemp seeds to beans; some solid, others filled with pus; mostly distinct, but occasionally arranged in groups or in lines; found everywhere except upon the palms and soles, but chiefly affecting the skin of the face, chest, and back, and in the majority of cases occurring in young persons. The disease appears to be due to the occlusion of the orifice of the hair-follicles or of the ducts of the sebaceous glands opening into them. The retained secretion then becomes a source of irritation and inflammation, and supuration in and around the hair sac and its appendages follows. The treatment consists in the use of baths and friction with various kinds of soap, the application of weak aqueous or alcoholic solutions of corrosive sublimate, alkaline lotions, or weak sulphur ointment, and appropriate general and hygienic treatment.

A. artificia'lis. Acne produced by artificial irritants, such as iodides and bromides, when taken internally, and by tar applied externally.

A. atroph'ica. A form in which the pustules are succeeded by atrophy of the structures affected.

A. cachectic'o'rum. A form occurring in cachectic and scrofulous persons. It occurs on the limbs, as well as in other parts, each papule being surrounded by a livid border.

A. cilia'ris. Acne occurring at the edges of the eyelids.

A. dissemina'ta. A term for the ordinary form of acne.

A. fronta'lis. A synonym of *Acne varioliformis*, from its occurrence on the forehead.

A. herde'olans. A form of ordinary acne in which the papules, being ranged so close to each other, lose their rounded form and assume the shape of a grain of barley.

A. hypertroph'ica. A form in which the pustules are succeeded by an hypertrophied condition of the parts affected. It is a sequel of *Acne rosacea*. The skin becomes reddish or purple, uneven, and oily; the hypertrophy of connective tissue and corium sometimes produces small sessile or pedunculated growths.

A. indura'ta. A form of ordinary acne in which the papules obtain a large size, and are hard and non-pustular in appearance.

A. menta'gra. A synonym of *Sycosis*.

A. mollusco'ida. A synonym of *Molluscum*.

A. of the throat. A synonym of *Follicular pharyngitis*.

A. puncta'ta. That form of simple acne in which small red papules surmount a comedo, and rise slightly above the level of the skin.

A. pustulo'sa. A condition of the ordinary form of acne in which there is more or less pus.

A. rosa'cea. (*Gutta rosea*, *bacchia*; F. *couperose*; G. *das kupfrige Gesicht*, *Kupferhandel*, *Kupferrose*.) Attacks the face and scalp alone, and is characterized by an intense reddening of the skin, due to an injection of the blood-vessels without much swelling or tension. The serpentine vascular lines, the blood in which may be momentarily driven out by pressure, are most abundant and evident on the sides and

bridge of the nose. This condition forms a ground on which develop protuberances of variable size and firm consistence, but without any purulent contents. An obstinate affection occurring chiefly in youth and in advanced age, and owing to the great hypertrophy of the skin of the nose occasioning great disfigurement. *Acne rosacea* never leads to ulceration, nor does the disease extend deeper than the skin. The treatment in the slighter cases consists in the application of sulphur in soap, ointment, or solution; iodo-chloride of mercury; solution of corrosive sublimate; in severer cases, incisions, and subsequent brushing over with perchloride of iron, touching the apices with acid nitrate of mercury; and, in the worst form, removal has even been advised.

A. seba'cea. A synonym of *Seborrhœa*.

A. simp'lex. A term for the ordinary form of acne.

A. strophulo'sa. Also called *Strophulus albus*. It consists of small white pimples on the face and neck, which are distended sebaceous glands.

A. syphilit'ica. Occurs on the face and trunk in spots of the size of a lentil, having a hard base and dark scabs, and leaving foveolated cicatrices.

A. tuberculo'sa. A synonym of *Acne hypertrophica*.

A. umbilica'tus. A synonym of *Acne varioliformis*.

A. varioliform'is. One of Bazin's varieties, so called from its likeness to a small-pox pustule. It usually occurs on the forehead and leaves deep scars.

A. vulg'a'ris. A name of the ordinary form of acne.

Acne'mia. (A, neg.; *κνήμη*, the leg.) In teratology, defective development of the legs.

Acne'stis. (A, priv.; *κνέω*, to scratch; because quadrupeds, to which it was originally applied, cannot reach this part.) Used by Pollux for the spine of the back, or rather that portion of it between the loins. (Castellus.)

Acocan'thera. A genus of the Nat. Ord. *Solanaceæ*.

A. venena'ta. Hab. Cape of Good Hope. A large bush with fragrant flowers. A decoction of the bark is very poisonous, and is used by the Hottentots to envenom their weapons.

Ac'oe. (*Ἀκοή*, hearing.) The faculty of hearing.

Acce'lia. Same as *Acclious*.

Accl'ious. (A, priv.; *κοιλία*, the belly.) Having no belly; applied to persons who become wasted to such a degree that they seem to have no belly.

Acce'lo'mic. (A, neg.; *κοίλος*, a hollow.) A form of animal in which, as in the Protozoa, a second cavity or coelom containing hemolymph, is absent; or if present, as in the Coelenterata, it is not entirely shut off from the enteron.

Acce'meter. (*Ἀκοή*, hearing; *μέτρον*, measure.) An acoumeter.

Acce'na argente'a. A species of the Sub-ord. *Sanguisorbeæ*, Nat. Ord. *Rosaceæ*. A creeping plant inhabiting the bogs and corn-fields of Chili and Peru, where it is known under the name of Proquin. It is an excellent vulnerary when applied as a cataplasm. (Waring.)

Accono'si. (*Ἀκοή*, hearing; *νόσος*, a disease.) Diseases of the ear, or of hearing. (D.)

Acogno'sia. (*Ἀκος*, a cure; *γνώσις*,

ACONITES—ACONITI EXTRACTUM

knowledge. *F. aconitidis*.) Knowledge of remedies.

Aconitum. An old term for honey.

Aconitis. A small-pointed forceps for taking up blind vessels.

Aconitella. (*A. priv.*; *ἀκόνιττα*, a pruning. *F. aconitum*; *G. Ausstechzifung*; *Waidst.*) Intemperance of heat.

Aconistic. (*F. aconiticus*.) Belonging to *aconitis*; applied to atrophy, the effect of *ibidismos* indulgence.

Aconitum. Similar to *Aconitella*.

Aconology. (*Acon*, a remedy; *λόγος*, a discourse. *F. aconologic*; *G. Heilmittellehre*.) The doctrine of remedies; by some restricted to operative surgery.

Aconyltin. An organic base obtained from the *Aconitum Lychnitum*. A white powder soluble in water, alcohol, and chloroform. Insoluble in ether; it tastes bitter and has an alkaline reaction. Probably a decomposition product of aconitine, and identical with aconine.

Aconmas. Trees of S. America. One is the *Racoma Guianensis*. Another is a species of *Achras*, and the root, which is astringent, is employed in the cure of gonorrhoea. (Waring.)

Aconmat. The same as *Aconmas*.

Aconmia. (*Ἀκονμία*, bald. *F. aconia*; *G. Haarlosigkeit*.) Want or deficiency of hair; baldness. See *Calvitia*.

Aconmis. (*F. bois-cambole*.) The common name in the Antilles of the *Myrtus Greggii*, a species of the Genus *Eugenia*, the fruits of which are aromatic, stimulant, and stomachic.

Aconodylous. (*A. priv.*; *ἀκόνδυλος*, a joint. *F. aconodyle*.) Without joints; jointless.

Acone. (*Ἀκων*, a whetstone.) A hard stone on which to levigate.

Aconella. Same as *Aconellin*.

Aconellin. An organic base obtained from the root of *Aconitum napellus*. Closely analogous to, or identical with, narcotin. It is bitter. Five grains administered to a cat produced no effect.

Aconine. ($C_{21}H_{33}NO_{11}$.) A substance obtained, together with benzoic acid, as a product of the action of water on aconitine, when heated for 10 or 12 hours in a sealed tube. It is readily soluble in alcohol and chloroform, but almost insoluble in ether. Is bitter, but produces no tingling of the lips. It seems to be identical with the Acolyctin or Napellin of Hübemann.

Aconion. (*Ἀκόνιον*, a little grinding stone.) A former medicine for the eyes, consisting of very finely levigated powder.

Aconite. The official parts of the *Aconite*, *Aconitum napellus*, are the leaves, tops, and root (see *Aconiti folia* and *A. radix*). The active principle is aconitine, but there is also present pseudoaconitine in *Aconitum ferox*, *aconella*, and *aconitic acid*, as well as resin, wax, gum, albumen, mannite in the root, extractive, lignin, calcium malate and citrate, with other saline substances.

In very small medicinal doses tingling of the lips and tongue, with slight warmth at the epigastrium, is produced; the pulse is diminished in frequency and strength, the temperature is decreased, and the skin becomes moist. In larger doses the tingling is more violent and extensive, the pulse and respiration are lowered, any pain that may be present disappears, and the urine is increased in quantity. In still larger and poisonous doses, alarming de-

pression is experienced without narcotic symptoms or loss of mental power, the numbness and tingling, first experienced in the mouth, extend to the throat and skin generally, vomiting, purging, deafness, and impairment of vigour occur, and there is great muscular debility. The pulse is slow, feeble, and irregular, respiration infrequent and laborious, urine suppressed, pupil variable, death sudden, preceded by clammy sweats.

Its action on the circulation is the most manifest; the blood pressure is diminished, the heart's action being slow and irregular; it is uncertain whether this action depends on paralysis of the vagi, or on excitation of the inhibitory nerve centres in the medulla oblongata, or on depression of the cardiac ganglia, or even on direct action on the muscular heart-structure itself. Its action on the vaso-motor system appears slight. The breathing is disturbed by its influence on the vagus, or on the respiratory centres. Its action on the nervous system is very imperfectly known; it diminishes sensibility and depresses muscular action, but whether it acts on motor nerves or motor centres, or on sensory nerves or sensory centres, is as yet uncertain. Externally, aconite is used to relieve neuralgia. Internally, it is administered for the purpose of controlling inflammation and reducing fever. It is very useful in inflammations of the throat, especially in children; indeed, at the commencement of all acute febrile attacks, whether specific or symptomatic, especially when the skin is hot and dry. It has been given in asthma, acute rheumatism, palpitation and nervous restlessness. In acute diseases it is given in small doses every half hour or hour until some effect is produced.

A. leaves. See *Aconiti radix*.

A. poisoning. The symptoms are described under *Aconite*. Death has taken place almost immediately by cardiac syncope; it occurs at periods varying from twenty minutes to as many hours; when death is at all delayed signs of asphyxia are added to those of syncope. One ounce of the tincture, one drachm of the root, and four grains of the extract, have each proved fatal. After death the veins are found engorged, as also the brain, lungs, and liver; the right heart is full of dark fluid blood, and there is some gastro-intestinal irritation.

The treatment consists in giving an emetic or using the stomach-pump, after administering some finely powdered animal charcoal, the administration of stimulants, as ammonia, brandy, coffee, and tea, friction to body, galvanic shocks to heart, artificial respiration long maintained. Digitalis has been recommended as an antidote.

A. root. See *A. radix*.

A. tests for. The chief test is the physiological one of the production of tingling and numbness by placing some of the concentrated alcoholic extract of the suspected substance on the lips and tongue. The salts of aconitia give a white precipitate with caustic alkalis; a yellow amorphous precipitate with salts of gold; a similar one, insoluble in ammonia, with carbazotic acid; and an iodosulphate recognisable under the microscope on the addition of tincture of iodine, with a little sulphuric acid.

A. winter. The *Eranthis hyemalis*.

Aconiti extractum. Br. Ph. The fresh leaves and tops of *Aconitum napellus* are bruised, and the juice expressed and strained; the liquor is heated to 200° F., and evaporated to the consistence of a thin syrup; the green colouring

ACONITIA.

matter which has been strained off is then added, and evaporation continued at 140° F. until the extract is of a proper consistence. Dose, 1—2 grains.

U.S. Ph. The dried leaves of *Aconitum napellus* are percolated with alcohol, and the produce evaporated to a proper consistence. Dose, half a grain, gradually increased.

Helvet. Ph. Obtained by digesting one part of recently dried and bruised aconite leaves with four parts of spirit for two days at 30° C. (86° F.) to 40° C. (104° F.), expressing, digesting the residue for two days more with two parts of spirit, and expressing. The liquid is filtered and evaporated to a proper consistence. Dose, 0.2 gramme.

Germ. Ph. (Eisenhuttestrakt.) An alcoholic extract of aconite tops evaporated to a proper consistence. Dose, 0.005—0.025 gramme daily, in pills or solution.

Aust. (Sturmhuttestrakt.) A similar alcoholic extract.

Fr. Codex. (Extrait d'aconit.) Also an alcoholic extract of the leaves.

A. extractum alcoholicum. **U.S. Ph.** See *Extractum aconiti*.

A. extractum siccum. **Helvet. Ph.** One part of extract of aconite is mixed with two parts of sugar of milk and dried thoroughly at 40° C. (104° F.) to 50° C. (122° F.); then powdered and mixed with a sufficient further quantity of sugar of milk to bring it to a total weight of three parts. Max. dose, 0.6 gramme.

A. folia. *Folia aconiti; herba aconiti.* (*F. foliis d'aconit; G. Eisenhutkraut, Sturmhutkraut.*) The fresh leaves and flowering tops of *Aconitum napellus*, gathered when about one third of the flowers are expanded, from plants cultivated in Great Britain. The aconite leaves of commerce are obtained from *A. napellus*. The stiff, upright, herbaceous, simple stem of this plant, which is from 3—4 feet high, is clothed in its upper half with spreading dark-green leaves, which are paler on their under side. The leaves are from 3—5 in. in length, nearly half consisting of the channelled petiole. The blade, which has a roundish outline, is divided down to the petiole into three principal segments, of which the lateral are subdivided into two, or even three, the lowest being smaller and less regular than the others. The segments, which are trifid, are finally cut into 2—5 strap-shaped pointed lobes. The leaves are usually glabrous and are deeply impressed on their upper side by veins which seldom branch. The uppermost leaves are more simple than the lower. When bruised they have a herby smell. Their taste is at first mawkish, but afterwards persistently burning. The flowers are numerous, irregular, deep blue, and in dense racemes.

A. linimentum. **Br. Ph.** Root of *Aconitum napellus* 20 oz., camphor 1 oz., rectified spirit a sufficiency; the aconite is macerated for three days and percolated into a receiver containing the camphor until a pint is produced. Applied with a camel's hair pencil, or diluted as an embrocation.

U.S. Ph. Aconite root 8 oz., glycerine 1 oz., alcohol a sufficient quantity; macerate the aconite in 4 oz. of the alcohol for 24 hours; percolate to two pints; distil off a pint and a half of alcohol, evaporate the remainder to 7 fl. oz., and add the glycerine. Used as above.

A. radix. **B.P. Radix aconiti, tuber aconiti.** (*F. Racine d'aconite; G. Eisenhutknollen, Sturmhutknollen.*) The dried root of *Aconitum napellus*;

imported from Germany, or cultivated in Great Britain, and collected in the winter or early spring before the leaves have appeared.

It is an elongated tuberous root, 2—4 inches in length, and sometimes an inch in thickness. It tapers off into a long tail, whilst numerous branching rootlets spring from the sides. If dug up in summer, a second and younger root, and occasionally a third, is attached to it near its summit. This second root has a bud at the top, which is destined to produce the stem of the next season. The dried root is dark brown outside, breaks with a short fracture, exhibiting a white and farinaceous, or brownish, or grey, inner substance, sometimes hollow in the centre. A transverse section of a sound root shows a pure white central portion (pith), which is many-sided, and has at each of its projecting angles a thin fibro-vascular bundle.

Indian aconite root, or Nepal aconite, known in India under the names of *Bish*, *Bis*, or *Bikh*, is chiefly derived from *A. ferox*, but is also obtained from *A. uncinatum*, *A. luridum*, *A. napellus*, and *A. palmatum*. The ancient Sanskrit names of this potent poison were *Visha* and *Ativisha*. The roots sold under this name are simple tuberous roots of an elongated conical form, 3—4 inches long, and $\frac{1}{2}$ —1 $\frac{1}{2}$ inches in diameter; aerial stem cut away; blackish-brown in colour, with interior horny and translucent. In the Indian bazaars, *Bish* is found in another form, the roots having been steeped in cow's urine, to preserve them from insects. These roots are plump and cylindrical when fresh, with offensive odour. Externally dark and black, and horny within.

Poisoning has occasionally occurred in consequence of the root of aconite having been mistaken for that of horseradish. The tapering root of aconite, its darker colour, its cut surface becoming red, and its tingling taste, distinguish it from the cylindrical, bright-coloured, bitter and hot tasting root of horseradish, the section of which remains white on exposure to air.

A. tinctura. **Br. Ph.** The root of *Aconitum napellus* in coarse powder 2 $\frac{1}{2}$ oz., rectified spirit 1 pint; macerate for 48 hours in 15 oz. of the spirit, percolate and pass the remainder of the spirit through, press, filter, and make up with spirit to a pint. Dose, 5—15 minims.

Aust. Ph. (Sturmhutttinctur.) Aconite tops 1, rectified spirit 5 parts.

Fr. Codex. Aconite leaves 1, rectified spirit 5 parts.

Germ. Ph. (Eisenhutttinctur.) Aconite tops 1 part, rectified spirit 10 parts; digest. Dose, 5—10 drops. Max. dose, 1 gramme; per diem, 4 grammes.

Helvet. Ph. Aconite leaves 1, rectified spirit 5 parts. Max. dose, 1 gramme.

U.S. Ph. Aconite root 12 oz., alcohol a sufficient quantity; percolate 2 pints. Dose, 3—5 drops.

A. tuber. A synonym of *Aconiti radix*.

A. unguentum. **Br. Ph.** Aconitia 8 grains; rectified spirit 30 minims; dissolve and mix with lard 1 oz. Used in neuralgia.

Aconitia. An organic base found in all parts of the *Aconitum napellus*, and in various plants of the Genus *Aconitum*. $C_{20}H_{27}NO_7$ (*v. Planta*) or $C_{23}H_{29}NO_7$ (Duquesnel), or $C_{22}H_{23}NO_7$ (Wright). A light, white powder, without smell, with a bitter taste, and soon causing a peculiar heat and tingling sensation in the mouth; extremely poisonous. It dissolves in 150 parts of cold and 50 parts of hot water, in 4.2 parts

ACONITIC ACID—ACONITUM.

of alcohol, 2-6 of chloroform, and 2 of ether. The solution polarizes to the left. It melts at 248° Fahr. Its solution in sulphuric acid is first yellow, then red; heated in a water bath with phosphoric acid to 212° it assumes a violet colour. It has an alkaline reaction; is precipitated from acid solutions by caustic alkalis, but not by carbonates. The only salt that crystallises readily is the nitrate. It is used to subdue pain, especially that of facial neuralgia, of acute articular rheumatism, and of rheumatic ophthalmia. M.M. Gréhan and Duquesnel conclude from their experiments on frogs that Aconitine resembles Curara in impairing the conducting power of motor nerves. It also slows the circulation by enfeebling the action of the heart. Typically it produces the effects of an acrid substance, the symptoms when swallowed in poisonous doses being those of acute stomato-gastritis. Taken internally it produces a sensation of tingling in the skin, vertigo, cerebral excitation, insomnia, generally dilatation of the pupil, with or without amblyopia; disturbance of the cardiac and respiratory movements, anxiety, nausea, diuresis, diminution of temperature, and pallor of the surface.

Aconitic acid. Equisetic acid, Citridic acid, Citridinic acid. A basic triatomic acid. Form. $C_6H_6O_6$, or $C_6H_4O_6H_2$, found in *Aconitum napellus*, *Delphinium consolida*, *Equisetum fluviatile*, *hyemale* and *lanioenum*. It also results from heating Citronic acid. It is polymeric with Maleinic and Fumaric acids.

Aconitifolia. (*L. aconitum*; *folium*, a leaf.) A term for the *Podophyllum peltatum*.

Aconitina. Same as *Aconitia*.

Aconitine. Same as *Aconitina*.

Aconitium. Same as *Aconitia*.

Aconiton. (*A*, neg.; *kovia*, plaster.) Unplastered; applied to unlined vessels.

Aconitum. (Either from *ἀκόνι*, a whetstone, because it grows on sharp, steep rocks; or *a*, neg.; *kovia*, dust, because it requires but little earth; or *ἀκων*, a javelin, as darts were dipped in its poisonous juice; or *Ἀκόνα*, a place where it grew. *F. aconit*, *tueoup*; *G. Eisenhut*, *Sturmhut*; *L.*, *S.*, and Portug. *aconito*.) Monkshood, wolfsbane. Nat. Ord. *Ranunculaceae*. Erect perennial herbs; leaves alternate, palmately-lobed or cut; flowers in panicles or racemes. Sepals 5, the upper falcate. Petals 2-5, small; 2 upper, with long claws hooded at the tip, covered with the sepaline hood, 3 lower, small or absent, hammer-headed; follicles 3-5; seeds many; testa spongy, rugose.

A. altigaleatum. A synonym of *A. cammarum*.

A. anthora. (*F. aconit anthore*; *G. Gift-heil*, *Heilgift*, *Herzwurz*.) Yellow helmet flower. Formerly believed to be an antidote to a ranunculaceous plant named *Thora*.

A. bernardinum. The *A. anthora*.

A. bernardianum. A synonym of *A. cammarum*.

A. cammarum. (*F. aconit à grandes fleurs*.) Flowers white and blue, in straggling panicles; young carpels incurved. Hab. Switzerland and Germany.

A. Candollei. The *A. anthora*.

A. casiosotum. A variety believed to be not poisonous.

A. eulophum. The *A. anthora*.

A. ferrox. Flowers purple, in rather loose panicles; helmet, semi-circular; young carpels

very downy; lobes of the leaves much acuminate and divaricating. Hab. Nepal, Himalaya.

A. heterophyllum. (*Hind. Atis*; *Duk. Ateika*; *Tam. Atiradyam*; *Tel. Atireasa*.) An Indian shrub. Flowers large, of a dull yellow veined with purple, or altogether blue, and reniform or cordate, obscurely 5-lobed radical leaves. Hab. Temperate regions of West Himalaya. The root of this plant, known as *atara*, is a tonic and valuable febrifuge. It is sold in the form of a white powder, which is intensely bitter and slightly astringent. Dose, 5 to 20 grains.

A. intermedium. A synonym of *A. neomontanum*.

A. Jaquini. The *A. anthora*.

A. japonicum. A species used as a local anæsthetic in China, and also for poisoning arrows.

A. kusnezovii. The *A. cammarum*.

A. lauridum. A poisonous species found in the temperate and subalpine regions of the Himalaya mountains.

A. lycoctonum. (*F. aconit tueoup*.) Wolfsbane. Flowers yellow; petals with a filiform circinate spur. Hab. Switzerland.

A. macranthum. The *A. cammarum*.

A. multifidum. Dr. Hooker states that the roots of this species are edible.

A. napellus. Roots clustered, fusiform, black. Stem 1-2 feet, erect, slightly pubescent. Leaves palmately 5-7, partite; petiole dilated at the base; upper often sessile. Flowers bracteate and bracteolate, 1-1½ in. diam., dark blue, horizontal pedicels, erect, pubescent. Upper sepal at first concealing the others, then thrown back. Spurs of upper petals conical, deflexed. Filaments dilated below. Anthers greenish-black. Follicles 3-5, subcylindric, beaked. Hab. Europe, Siberia, North America, Himalaya. The official preparations of aconite are made from the roots and leaves of the *Aconitum napellus*.

A. nemorosum. The *A. anthora*.

A. neomontanum. A species possessing only moderate activity.

A. Neubergerse. A synonym of *A. napellus*.

A. nitidum. A species believed to be not poisonous.

A. ochroleucum. A species believed to be not poisonous.

A. palma'tum. A poisonous species found in the temperate and subalpine regions of the Himalaya mountains.

A. paniculatum. A variety of *A. cammarum*, with blue flowers. Less active than *A. napellus*.

A. pyrenaicum. A species believed to be not poisonous.

A. racemosum. The *Actæa spicata*.

A. reclinatum. A species indigenous to North America.

A. rotundifolium. Dr. Hooker states that the roots of this species are edible.

A. salutiferum. A synonym of *A. anthora*.

A. septentrionale. A variety of *A. lycoctonum*. The leaves are eaten as a potherb, but the root is poisonous.

A. sinense. A species found by Dr. Christison to possess intense acrimony.

A. Stoeckesnum. A variety of *A. cammarum*.

A. tau'ricum. A species found by Dr. Christison to possess intense acrimony.

A. uncinatum. A poisonous species found in the temperate and subalpine regions of the Himalaya mountains, and also indigenous to North America.

A. variegatum. A blue-flowered species less active than *A. napellus*. Probably the same as *A. cammarum*.

A. vulgaris. A species that is believed to be not poisonous.

Aconus. Diseases of the ear. (D.)

Aconus. (*Ἀκούω*, to hear; *νόσος*, a disease. Diseases of the ear. (D.)

Aconus. (*Ἀκούω*, hearing; *νόσος*, for *νόσος*, disease. *G. Gehörkrankheiten*.) Diseases of the ears and of hearing.

Acops. (*Ἀ, neg.*; *κόπος*, toil and trouble.) A term for medicines which relieve the pain and stiffness of weariness.

Also applied to medicines which from their softness are easily prepared.

Acopia. (*Ἀ, priv.*; *κόπος*, weariness.) A stone anciently supposed to be good against weariness.

Acopomyron. Same as *Myracopon*.

Acopos. (Gr.) A plant formerly supposed to drive off or prevent weariness, believed to be the *Mentha trifoliata*.

Acopria. Same as *Acoprosis*.

Acoprosis. (*Ἀ, priv.*; *κόπος*, excrement. *F. acopros.*) Defective secretion of feces.

Acopus. Gr. anal. *ἄκρον*, applied to any medicine against weariness. (Galen.)

Acor. (*Acor*, a sour taste. *F. acidité*; *G. Säure*.) Sourness, acidity, or acrimony, as in the stomach from indigestion. Also applied to various acids.

A. aceticus. A synonym of *Glacial acetic acid*.

A. boracicus. Boracic acid.

A. succinus. A synonym of *Succinic acid*.

A. sulphuricus. Sulphuric acid.

A. tartaricus. Tartaric acid.

Acordina. Indian tutty; an impure oxide of zinc.

Acorea. (*Ἀ, neg.*; *κόρη*, the pupil.) Absence of the pupil.

Acorea. A synonym of *Achor*.

Acori radix. A root having this name is said to be that of a variety of the *Maranta galangal*.

Acoria. (*Ἀ, priv.*; *κορία*, to satiate. *F. acorie*; *G. Unerättlichkeit*.) A synonym of *Bulimia*. Castellus contends that the term was used by Hippocrates to signify that eating, short of satiety, and diligence, and alacrity in labour, are, or show the sound exercise of health.

Acorin. A nitrogenous glucoside obtained from the root of the *Acorus calamus*. It is a white resinous substance, which has the bitter aromatic flavour of the root. It dissolves readily in ether and alcohol, but not in water.

Acorina. (*F. acorines*.) Name by Link for the *Aroida*.

Acorites. (*Acorus*.) A wine impregnated with the qualities of the sweet flag and liquorice.

Acormous. (*Ἀ, priv.*; *κόρμος*, the trunk of a tree. *F. acorme*; *G. ohne Stamm*.) Having no stem.

Also in Teratology, a monstrosity devoid of a trunk.

Acorn Coffee. Acorns roasted like coffee; used in the form of infusion with lemon and orange peel, in the diarrhoea of children.

A. Jupiter's. The fruit of *Fagus Castanea*. The Beech mast. (D.)

A. oily. Fruit of the *Guilandina Moringa*.

A. Sardinian. The chestnut.

Acorus. (*Ἀ, neg.*; *κόρη*, the pupil; because used in ophthalmic disease.) A genus of the Sub-ord. *Orontiacae*, Nat. Ord. *Acoraceae*. Spathe replaced by a two-edged leaf-blade; scales 6, permanent, herbaceous; stamens with filiform filaments.

A. aduiterinus. The *Iris pseudacorus*.

A. asiaticus. The *Acorus calamus*.

A. braxillensis. The *A. calamus*.

A. calamus. (*F. Acor vras*; *G. Kalmus*.) The sweet flag. The leaves are alternate, distichous, ensiform, equitant, with undulating margins. The flowers are hermaphrodite. The perianth six-partite, stamens 6, with filiform filaments; the ovary trilocular, polyspermous; the spathe is ensiform. The plant grows in marshy districts throughout Europe, and has a spongy, somewhat flattened rhizome, which presents irregular rings corresponding to the attachment of the leaves and punctations below which are the marks of the rootlets. It contains *Acorin*, and is an aromatic stimulant used in asthma, fevers, ague, chronic catarrh, dyspepsia, and in perfumery.

A. gramineus. The rhizome is used in India and China instead of that of *A. Calamus*.

A. odoratus. A synonym of *A. calamus*.

A. palustris. The *Iris pseudacorus*, or *I. palustris*.

A. verus. The *Acorus calamus*.

A. vulgaris. The *Iris pseudacorus*.

Acos. (*Ἄκος*, from *ἀκίωαι*, to cure.) Term for a medicine, cure, or healing. See *Accis*.

Acosmia. (*Ἀ, priv.*; *κοσμίω*, to order.) A disturbed state of things. Applied by Galen to irregularity in the critical days of fever, as *κόσμος* signified their regularity; also applied to baldness, because it destroys the ornament of the hair, *κόσμος* signifying adornment, as well as order or regularity. (Castellus.)

Acotyledoness. A synonym of *Cryptogamia*.

Acotyledonous. (*Acotyledonus*, from *Ἄ, neg.*; *κοτύληδών*, a cup-shaped hollow. *F. acotyledone*; *G. saamenlappenlos*.) Term applied to plants having no true embryo, and therefore destitute of cotyledons.

Acotyledons. (*Ἀ, neg.*; *κοτύληδών*, a cup-shaped hollow. *F. idem*; *G. saamenlappenlos*.) Flowerless or cryptogamous plants having no true embryo, and therefore no cotyledons. They produce spores instead of seeds, which in most instances consist of one cell, composed of two or more membranes enclosing a granular matter. Germination takes place from any part of the surface of the spore, the resulting filaments either reproducing the plant directly or giving rise to an intermediate body of varying form called the prothallium, prothallus, or pro-embryo, from which the fructiferous frond or stem ultimately springs. The stems are acrogenous. The leaves are either purely cellular or present fibrovascular bundles arranged in a pinnate or palmate manner at first, and afterwards dividing dichotomously. There are no true flowers. The roots are heterorhizal, and aerial roots are of common occurrence. They are usually divided into *Acrogens* and *Thallogens*.

Acoucroba. A plant growing in Guinea,

ACOUETER-ACQUA.

which boiled in wine is held in esteem by the natives as a remedy in measles. (Waring.)

Acoumeter. (Ἀκούω, to hear, μέτρον, a measure. F. *acoumètre*.) An instrument devised by Itard for measuring the amount of hearing in man.

Acoumetry. (Same etymon.) The method of estimating the power or extent of the sense of hearing.

Acoumometer. Same as *Acoumeter*.

Acouophonia. (Ἀκούω, to hear, and φωνή, voice.) A mode of auscultation, in which the sounds produced by percussion are analyzed by the application of the ear to the chest of the patient.

Acouoxylon. (Ἀκούω, to hear, ξύλον, wood. G. *Hörholz*.) A form of stethoscope recommended by Niemeyer, formed of a solid and massive piece of wood.

Acousma. (Ἀκουσμα, the thing heard; from ἀκούω, to hear.) A species of depraved hearing, in which sounds are imagined as if they were really heard.

Acousmate. (Ἀκουσμα) An imaginary sound.

Acousmetric. (Ἀκουσμα; μέτρον, measure.) Term applied to the power of the perception of the relative distance of sounds, the second of the sixteen senses admitted by Bacon.

Acousmometric. A synonym of *Acousmetric*.

Acoustic. (Ἀκούω, to hear. F. *acoustique*; G. *Akustisch*.) Belonging to the ear, as the organ of hearing, or to sound, or the sense of hearing. Anciently applied to remedies for deafness.

A. duct. The meatus auditorius.

A. focus. The point at which sonorous vibrations reflected from a concave surface meet.

A. nerve. The auditory nerve, or portio mollis of the seventh pair.

Acoustica. (Same etymon.) Medicines used in deafness.

Acoustico-malleus. The external muscle of the malleus.

Acoustics. (Ἀκούω. F. *acoustique*; G. *Akustik*.) The doctrine of the theory and principles of sonorous undulations.

Aqua aceto-sa. Italy; not far from Rome. Alkaline chalybeate waters containing sodium chloride and sulphate, calcium sulphate and carbonate, iron oxide, and a large amount of carbonic acid. Used as an aperient tonic in enfeebled conditions of stomach, and in mucous diarrhoea.

A. aceto-sa. Italy. A second spring of this name is found near Baccano, not far from the Lago Bracciano. It contains free carbonic acid, and is an alkaline chalybeate containing some alum. Used in anemia.

A. aceto-sa. Italy. A third spring of this name is found near Capronica. Also a carbonated alkaline saline water, and used as the others.

A. acidula. Italy; near the baths of Montelice. An alkaline chalybeate water of 22° C (71.6° F), containing calcium, magnesium, and iron carbonate, carbonic acid gas, and traces of sulphuretted hydrogen.

A. acidula. Italy. A chalybeate and carbonated spring, of temp 14° C. (57° F), near Viterbo. Recommended in chlorosis, anemia, and dyspepsia.

A. alle gambe. (It.) The grease in the horse.

A. allumino-sa di Falloppio. (It.) Alum and corrosive sublimate, of each 7 parts, rose water and plantain water, of each 360 parts. A lotion formerly in use for foul and for venereal ulcers.

A. anodina di Fra'ga. (It.) A mixture of 180 grammes of ammoniated alcohol, 30 grammes of essence of saffron, and 2 grammes of oil of lavender. It is used as a liniment in rheumatic affections.

A. antiepileptica de Langio. See *Aqua ant. d. Langio*.

A. antiothalmica di Leche. See *Aqua a. d. Leche*.

A. antipediculare di Ca'det. A remedy employed to kill lice. It contains rose water 70 grammes, aqua mercuriale 10 grammes.

A. antipestilenziale della scuola. (It.) A remedy in repute for languor of the stomach and flatulence, and as a preservative against infective diseases. It contains rosemary, spikenard, rue, mint, absinth, horseradish, of each three handfuls; angelica root, 60 grammes, zedoary, 120 grammes; alcohol, 3200 grammes; distil, and add to the distillate red sandal wood, 160 grammes, camphor, 40, and hard Peruvian balsam, 32 grammes. A limpid, reddish fluid, with pleasant smell and an acid and bitter taste.

A. antipsorica di Ranque. This remedy consists of a decoction of staphisagria, in which is dissolved some extract of opium. It is used as a cold lotion.

A. antisterica di Poterio. Contains Valerian root, 107 grammes; absinth, artemisia, mint, marjoram, of each three handfuls, white wine, 6500 grammes, galanga, ginger, long pepper, opium, camphor, of each 27 grammes; alcohol, 2000 grammes. A milky, aromatic, and bitter fluid, employed in hysteria hypochondriasis.

A. antisterica di S. Maria Novella. See *Aqua di melissa*.

A. argenta. A literal translation of ὕδαρρυπος. A name given to mercury from its metallic lustre and liquid form.

A. argentina. A solution of silver in nitric acid, and of potassium cyanide in water, are mixed with powdered chalk. A remedy employed to obtain the rapid action of silver.

A. aromatica spirito-sa. Contains flowers of lavender, leaves of salvia-balm (melissa), and of mint, 100 parts, nutmeg, cloves, mace, cancella, ginger, fennel, 50 parts, bruise and infuse in a mixture of 100 of spirit of wine with 800 of water, macerate for 12 hours. An excellent calnative.

A. arsente. Spanish name for spirit of wine.

A. benedetta della carità. A solution of 30 centigrammes of tartar emetic in 276 grammes of water. It is taken in two doses for the relief of lead colic.

A. Benedetta di Ru'land. See *Aqua Bened. d. Ru'*

A. bianca. See *Aqua vegeto-mineralis*.

A. Bol'io. Italy; on the Lario in Tuscany. A carbonated alkaline chalybeate water springing from the limestone rock. Temp. 15° C. (59° F) Used in urinary concretions.

A. celeste. (It.) A name applied to many remedies now wholly disused. In Italian

ACQUA.

pharmacy the name is still preserved for a solution of 20 centigrammes of sulphate of copper in 128 grammes of water, with the addition of 32 drops of ammonia. It is used as an astringent collyrium.

A. Chino'se. Same as *Aqua ethiopica*.

A. d'Anhalt. (It.) A preparation obtained by distilling an alcoholic infusion of turpentine, incense, aloes, mastic, cloves, cubeba, canella, saffron, fennel, and laurel berries. Employed externally as a liniment in cases of paralysis, and internally against vomiting and diarrhoea.

A. d'Armagnac. The *Tincture aromatique*.

A. d'Égip'te. Same as *Aqua africana*.

A. del Carmelitani. A synonym of the *Aqua di melissa*.

A. del Cardinale di Luynes. (It.) Contains rose water 250 grammes, corrosive sublimate 6, white lead 15, alum-sulphate 12 grammes, and the white of one egg. A remedy in great repute as a local application in herpetic affections.

A. di archibugiato. See *Aqua vulneraria*.

A. di Bino'li. An hæmostatic liquid, probably a solution of creosote.

A. di Bon'ferme. The *Tincture aromatique*.

A. di Catram'e. (It.) Tar water, made by agitating one part of tar with 10 of water.

A. di Claudio. See *Aqua di fuligine composita*.

A. di Dar'del. An imitation of the *Aqua di melissa*.

A. di Faleone'ri. (It.) A solution of potassium carbonate, believed to be anticalculous.

A. di Fra' Martine. (It.) See *Aqua vulneraria*.

A. di fulig'gine compos'ta. (It.) A remedy containing of soot, 15 grammes; potash carbonate, 45 grammes; sal ammoniac, 5 grammes; distilled elder water, 270 grammes. In repute in cases of gout.

A. di Giambattista la Por'ta. (It.) A remedy containing many substances, of reddish colour, pleasant aromatic odour, and bitter taste. It was reputed useful as a tonic.

A. di Giovin'esca. (It.) A remedy supposed to restore youth to old age.

A. di magnanimit'a. (It.) An alcoholic infusion of the red ant. Used formerly as an aphrodisiac.

A. di melissa. (It.) A remedy in high repute in Italy as a stomachic, tonic, and vulnerary, especially that made in the pharmacy of S. Maria Novella. It contains 750 parts of fresh melissa (balm), in flower, and 120 grammes of the rind of fresh lemons. These are bruised with 60 grammes of canella, of cloves and of nutmegs, 30 grammes of dry coriander, and 30 of angelica. These ingredients are macerated for four days in 4 kilogrammes of alcohol at 85°, and distillation effected in a sand bath.

A. di Nap'oli. (It.) Liquor arsenicalis.

A. di Paglia'ri. (It.) An hæmostatic fluid, obtained by boiling 8 parts of benzoin and 16 of alum in 160 of water for six hours.

A. di Per'ugia. A synonym of the *Aqua Toffana*.

A. di Fra'ga. An alcoholate, prepared with galbanum, myrrh, asafoetida, valerian, zedoary, angelica, mint, camomile, coriander, and cas-

tozeum. It is in repute in Germany as a remedy for hysteria.

A. di San Giovan'ni. (It.) A watery solution of sulphate of copper and of zinc, to which are added camphorated alcohol and alcoholic tincture of saffron.

A. di San Nicola alla Dogana. A remedy containing mint water 500 grammes, and a sufficient quantity of pure nitric acid to give it a pleasant flavour. Employed as an anthelmintic.

A. epatica. (It.) A solution of hydrogen sulphide in water.

A. fageden'ica. (It.) This remedy is prepared with a solution of 40 centigrammes of mercury chloride (corrosive sublimate) in 120 grammes of lime water. Three forms are described, as *A. f. bianca, gialla, e nera*, or white, yellow, and black, in accordance with their colour.

A. fondon'te di Treves. (It.) A solution containing crystallised sodium sulphate, 30 grammes; potassium acetate, 1-20 grammes; potassium nitrate, 90 centigrammes; water, 1 kilogramme.

A. nanna. (It.) A synonym of the *Aqua Toffana*.

A. Nanta. (It.) A corruption of *Aqua di fiori d' Arancio*, orange flower water.

A. oftalmica di Y'vel. Zinc sulphate 8 parts, copper sulphate 3 parts, saffron and camphor of each 9 parts, water 1000 parts. Used as a collyrium.

A. pana'ta. (It.) Toast and water.

A. per la boc'ca. (It.) This contains 4 grammes of canella, vanilla, coriander, and of cloves, 90 centigrammes of mace, cochineal, saffron, and of hydrochlorate of ammonia, all of which are infused for 15 days in a litre of tincture of pyrethrum. To the fluid are then added 16 grammes of orange flower water, 90 centigrammes of essential oils of anise and of cedar, and 40 centigrammes of essential oils of lavender, thyme, and of tincture of ambergris. The fluid is filtered.

A. prima. A name applied by Albertus Magnus to nitric acid.

A. putril'ica. (It.) A mixture of basic acetate of lead with water, in the proportion of 1 to 50 parts.

A. Puzzolen'te. Italy; near Livorno. A saline sulphurous water springing from the foot of an alluvial hill. Temperature varies from 12° C. (53-6° F.) to 15° C. (59° F.) Used in scabies, herpes, psoriasis, and rheumatism.

A. Raineriana. Italy; in Venetia, near the lake of Arqua. A sulphur water springing from the calcareous tufa. Temp. 20° C. (68° F.) Used in skin diseases, scrofula, and indolence of digestion and intestinal action.

A. roma'na. See *Aqua vulneraria*.

A. san'ta. Italy. A mineral spring containing sodium sulphide, near Ascoli. Used internally and in the form of baths in scrofulous enlargement of the glands and articulations.

A. san'ta. Sardinian States, Piedmont; Prov. of Genoa; about two miles from Voltri. Here are mineral waters, containing sulphur and lime. Temp. 20°-25° C. (68°-77° F.) The baths have been long frequented, and are in the midst of pretty scenery. They are reputed useful in herpetic eruptions, and in scrofulous affections.

A. san'ta di Bayhu'to. Sicily; in the

ACQUETTA—ACRATISMUS.

neighbourhood of Palermo. A cold carbonated bitter water springing from the limestone. Used as a purgative.

A. saturni'na. (It.) A mixture of basic acetate of lead with water, in the proportion of 1 to 50 parts.

A. stagnot'ica di Monterosi. A water distilled from various aromatic and astringent plants with pitch and the white agaric. It is an hæmostatic, and is both used externally and taken internally.

A. Toff'na. (It.) A transparent, extremely poisonous liquid, invented towards the close of the 17th century by a woman named Toffana, who resided first at Palermo, and then at Naples. It proved fatal to many persons, to whom it was given in doses of 4 to 6 drops. It is believed to have been composed of arsenic dissolved in the saliva of the pig.

A. Tur'ca. (It.) Contains sulphuric ether 10 grammes, distilled water 100 grammes. An antispasmodic.

A. virginale. (It.) This fluid, employed as a vaginal injection, contains acetate of lead and sulphate of zinc, of each 5 grammes, distilled water 125 grammes, eau de Cologne 60 grammes.

A. zaffer'ina. (It.) Lime water 300 grammes, sal ammoniac 1 gramme, verdigris 30 centigrammes. Used as a resolvent and desiccative collyrium.

Acquet'ta. A synonym of *Acqua Toffana*.

A. di Nap'oli. A term applied to the celebrated *Acqua Toffana*, which was a solution of arsenic.

Acqui. Italy; in Piedmont, a small town on the river Bormida. The climate is pleasant, but somewhat moist. The waters were known to the Romans as *Aque stiatellæ*. Mild sulphur waters, of 48° C. (118.4° F.) to 97° C. (207.6° F.), springing by several sources, some from the limestone, and some from the clay slate. There is also a cold sulphur spring near the Ravanesio. The waters deposit a considerable quantity of mud, which is the curative agent chiefly employed; either as a general bath, the head of the patient only being uncovered with the mud, or as a local application to one or more joints. Rheumatic arthritis, and rheumatic or gouty contractions and thickenings, are much benefited; the baths are also used in skin diseases, scrofula, chronic metallic poisoning, atonic ulcers, and syphilis.

Acqui'ed. (L. *acquirō*, from *ad* and *quæro*, to seek. L. *acquisitus*; F. *acquis*; I. *acquisito*.) A term used to indicate defects or diseases resulting from habits or conditions of life proper to the individual, as opposed to those which are congenital or inherited.

A. hab'its. Acts which result from constant repetition and practice. The movements required for locomotion, for musical performances, speech, and many other acts, become so thoroughly engrained or co-ordinated in the nervous system that they can be performed without thought, or whilst the mind is fully engaged on other subjects; guiding perceptions are, however, probably still required. No one would continue to walk if suddenly deprived of light. Parrots and many other animals afford remarkable examples of acquired habits. They are most easily implanted in early life, and are either transmissible from parent to child, or a strong tendency to them is inherited; of this, handwriting is a good example.

A. intuit'ion. of common sense. The immediate or instinctive response that is given by

the automatic action of the mind, or, speaking physiologically, by the reflex action of the brain, to any question which can be answered by such a direct appeal.

A. percep'tions. The faculty acquired by the several senses, whereby the inference which has been originally drawn from the sensation produced by some impression becomes, by force of habit, so blended with the sensation itself that the judgment is exercised unconsciously; as when something is seen or heard afar off, and the impression of the thing seen or heard is inseparably blended with the inference of the distance at which it is.

Acqui'sitive'ness. (*Acquirō*, to obtain.) A faculty common to man and the lower animals, producing the tendency to acquire property, and the desire to possess in general, without reference to the uses to which the objects may be applied; its organ is placed by phrenologists at the anterior inferior angle of the parietal bone.

Acracon'itine. A synonym of *Pseudaconitine*.

Acrae'idæ. A family of the Sub-order *Rhopalocera*, Ord. *Lepidoptera*, Class *Insecta*. It contains 1 Genus, and 90 species; especially abundant in the Ethiopian region.

Acraep'alum. (Same as *Acrapalus*.)

Acraep'alus. (*Ἀκραίπαλος*, from *ἀ* priv., *κραίπαλν*, drunken or gluttonous excess.) Having power to correct the effects of excess in eating or drinking. (Dioscorides.)

Acral. (Arab.) A certain degree of irritation of the genital system of either sex; held to be a species of *Satyriasis*. (Avicenna and Castellus.)

Acralea. Same as *Acraea*.

Acramphibry'a. (*Ἄκρος*, summit; *ἀμφί*, around; *βρύω*, to bud forth.) A section in Endlicher's System of Botany of his Legion of *Cormophytes*. In the plants belonging to it the stem grows at both the apex and circumference. It includes the Dicotyledonous or Exogenous plants of other botanists.

Acra'nia. (A. neg.; *κράνιον*, the skull.) A term employed by Hæckel to designate the *Leptocardii*, represented by the *Amphioxus*, or lowest type of fish.

Also that species of defective development consisting in the partial or total absence of the cranium.

Acra'sia. (A. priv.; *κράσις*, a mixture. F. *acrasie*.) Used by Hippocrates for incontinence, or intemperance in food, drink, or any other thing.

Also used synonymously with *Acratia*.

Acras'peda. (A. neg.; *κράσπειδον*, a hem or margin.) A term employed by Gegenbaur to indicate the naked-eyed Medusæ, corresponding to the *Steganophthalmata* of Forbes, the *Medusæ phanocarpæ* of Eschscholtz, and the *Lucernariadæ* of Huxley.

Acrat'e'ia. Same as *Acratia*.

Acrat'ia. (A. priv.; *κράτος*, strength. F. *acratie*; G. *Kraftlosigkeit*; *Ohnmacht*.) Used by Hippocrates for debility, impotence, or inefficiency. (Castellus.)

Acratis'ma. Same as *Acratismus*.

Acratis'mus. (*Ἀκρατίω*, to breakfast, from *ἀκρως*, pure; because the breakfast of the ancient Greeks consisted of bread soaked in pure or unmixed wine.) Term for the breakfast as taken by the ancient Greeks.

Acratomeli. (*Ἀκρατον*, pure wine; *μέλι*, honey.) Wine mixed with honey.

Acratopogon. (*Ἀ*, neg.; *κράτος*, strength; *πῶγῃ*, a spring.) Mineral waters having no marked chemical qualities.

Acratoposia. (*Ἀκρατος*; *πίνω*, to drink. *F. acratoposie*.) Pure drink, as of unmixed wines.

Acratous. (*Ἀκρατος*, from *ἀ*, neg.; *κράω*, to mix.) Without mixture; unmixed; formerly applied to secretions and excretions.

Acraturesia. (*Ἀκρασία*, want of strength; *οὐρησις*, micturition.) Inability to discharge the urine from atony of the bladder.

Acro. (*ἄκρον*, the top; for *ἀκρα*, the summit of anything.) The end or extremity of the nose. (Quincy.)

Acra. (Same etymon.) Formerly used for the extreme parts and points of the body, as the arms, legs, ears, nose.

Acribometer. (*Ἀκρίβης*, exact; *μέτρον*, a measure.) An instrument adapted for measuring extremely minute objects.

Acrid. (*Αcer*, sharp. *F. acris*; *G. beissend*; *scharf*.) Applied to any substance which tastes hot, sharp, or tart.

A. lettuce. The *Lactuca virosa*.

A. principle of plants. A peculiar proximate principle formerly believed to exist in some plants, to which their irritating properties were due.

Acridiidae. (*Ἀκρίς*, a locust. *Fr. Grillons sauterelles*; *I. Grilli locuste*; *G. Feldheuschreckem*.) A Family of the Group *Saltatoria*; Suborder *Orthoptera*; Class *Insecta*. The crickets. Body long, laterally compressed; head vertical; antennae short, inserted in front; labrum very large, with a median division; maxillary palpi in five joints; tongue fleshy; posterior wings when in repose folded fan-wise and covered by the elytra; the chitinous cuticle of the metathorax presents on each side above the articulation of the last pair of legs a thin tympaniform membrane, having a raised rim, which is probably the organ of hearing. Stridulation is produced by rubbing the inner dentate border of the tibia of the hind leg against serratures on the elytra.

Acridophagous. (*Ἀκρίς*, a locust; *φάγω*, to eat. *F. acridophage*; *G. heuschreck-fressend*.) Locust-eating; an epithet applied by the Greeks as of the Ethiopian.

Acrida. (*Ἰ. acer*, sharp.) A term applied to various substances which stimulate, irritate, or inflame the living parts with which they are placed in contact. To distinguish them from chemical irritants, they are sometimes called dynamical irritants. The most important vegetable acrids are mustard, horse-radish, elaterium, pellitory of Spain, poison oak, capsicum, mesereon, arum, bryony, anemone, stavesacre, euphorbium resin, croton oil, pepper, turpentine, manchineel tree, savine, gamboge, ginger, onions, and garlic. Cantharides is a representative of an animal acrid, and potassio-tartrate of antimony of an inorganic acrid. Acrids are used as condiments and stimulants; as rubefacients and vesicants; and to maintain suppuration. They are also employed to stimulate chronic and torpid ulcers. In cases of poisoning by the vegetable acrids, vomiting should be encouraged by mucilaginous draughts, irritation allayed by opiates, external derivatives, and emollient and anodyne enemata. The active principle of cantharides is soluble in oil, which should not therefore be given in cases of poisoning with that substance. See *Irritants*.

Acrifolium. (*Acris*, acid; *folium*, a leaf.) A plant, so called from the acrimony of its leaves; supposed to be the *Lotus*.

Also applied to any plant with a prickly leaf.

Acrimony. (Same etymon. *F. acreté*; *G. Schärfe*.) A sharp, acrid, corrosive quality, biting to the tongue.

Formerly used to denote certain unnatural conditions of the humours of the body which produced disease as they were thrown out from the system, and chiefly by the skin. Such was supposed to be the cause of most skin diseases, of cancer, tubercle, gout, and similar affections.

Acrinia. (*Ἀ*, neg.; *κρίνω*, to separate.) Absence or diminution of secretion.

Acrinyl sulphocyanate. A synonym of *Acrinyl thiocyanate*.

A. thiocyanate. C_5H_7NSO . One of the products of the decomposition of the sinabin of white mustard by its myrosin when mixed with water. It is an acrid volatile oil, insoluble in water, soluble in alcohol and ether; it is decomposed by caustic potash, with the production of potassium thiocyanate.

Acris. (*Ἀκρίς*.) A sharp bony prominence; also the point of a fractured bone.

Also a species of locust or grasshopper, probably the *Oedipoda migratoria*, the wingless variety mentioned by some authors being the insect in its transition state. It was employed in fumigations to relieve dysuria, and when macerated in wine as an antidote to the bite of the scorpion.

Acrisia. (*Ἀ*, priv.; *κρίσις*, a judgment. *F. acrisie*.) Applied to a state of disease in which either there is no crisis, and no judgment or opinion can be formed, or in which there is a bad crisis. (Galen and Castellsus.)

Acrisis. A synonym of *Acrisia*.

Acrita. (*Ἀκρίτος*, confused.) A synonym of the *Protozoa*.

Acritical. (*Ἀκρίτος*.) Applied to a disease having no regular crisis, or to a symptom which does not indicate a crisis. (Castellsus.)

Acrtochromasy. (*Ἀκρίτος*, confused; *χρῶμα*, colour.) Same as *Achromatopsia*.

Acrutus. Same as *Acrisia*.

Acriviola. (*Αcer*, sharp; *viola*, a violet.) The *Tropaeolum majus*.

Acroamatic. (*Ἀκροάσθαι*, to hear.) Term applied to certain doctrines transmitted orally and not written, because thought to be unattainable or inadvisable to be known by the many. It corresponds in a sense to esoteric, and is opposed in meaning to the term exoteric.

Acroasia. (Same etymon. *F. audition*; *G. Gehör*.) Gr. *ἀκροάσις*, applied to the act of hearing by Hippocrates; also, a discourse or recitation.

Acrobaptus. (*Ἀκρος*, the summit; *βαπτός*, dyed.) The *Asilus acrobaptus* has a brown spot at the end of its wings.

Acrobothrium. A sexually mature cestoid entozoon found in the pyloric appendix of the *Lota vulgaris*.

Acrobrya. (*Ἀκρος*, summit; *βρύω*, to bud forth.) A section in Endlicher's System of Botany, of his Legion of *Cormophyta*. The stem grows at the point only, the lower part being unchanged, and only used for conveying fluids. The section is divided into three cohorts, viz :

A. anophyta. Having no spiral vessels; both sexes perfect; spores free in spore cases. Examples, *Hepaticæ* and *Musci*.

A. hysterothyta. Having perfect sexual

ACROBYSTIA—ACRODYNIA.

organs. Seeds without an embryo, polysperous, parasitic. Example, *Rhizantheca*.

A. protophyta. Having vascular bundles, more or less perfect, male sex absent; spores free in one or many-celled spore cases. Examples, *Filices* and *Equisetaceae*.

Acrobystia. (Ἀκρος; βύω, to stop up; because it covers the glans penis; or perhaps a corruption of ἀκροβυστία.) The prepuce.

Acrobystiolith. (Ἀκροβυστία, the prepuce, λίθος, a stone.) A preputial calculus.

Acrobystitis. (Ἀκροβυστία) Inflammation of the prepuce.

Acrocarpi. (Ἀκρος; καρπός, fruit. F. *acrocarpe*, G. *gipselfruchtig*; *hochfruchtig*.) A Class of *Musci* having the fructification terminal.

Acrocarpidium. A genus of the Nat. Ord. *Piperaceae*.

A. hispidulum. Hab. West Indies. Used as a bitter stomachic.

Acrocarpeus. (Ἀκρος, summit; καρπός, fruit.) A term applied to those mosses in which the sexual organs mixed with paraphyses, the so-called "flower," terminates the growth of a primary axis.

Acrocarpus crinalis. An alga which forms one of the species producing *Cornucan Moss*.

Acrocephalic. Of or belonging to a pointed head. That which relates to *Acrocephaly*.

Acrocephaly. (Ἀκρος, pointed, κεφαλή, the head. F. *Acrocephalie*, *crane elevée*, *oxycephalie*, *hypoccephalie*, *pyrocephalie*.) A condition of the skull in which the vault is lofty. Considered by Topinard to result from the sagittal and coronal sutures being early ossified, whilst the lambdoid and inferior lateral sutures remain free.

Acroceridæ. (Ἀκρος; κέρα, a horn.) A synonym of *Hemipidæ*.

Acrocheir. (Ἀκρος; χεῖρ, the hand) Used by Hippocrates and Galen, it appears to mean specially *Manus*, the hand, or extreme hand or that part of the arm from the forearm, or *Radius* and *Ulna*, to the points of the fingers, and so, is distinct from *χεῖρ* which has a double acceptation—1. All that proceeds from the *Scapula*, divided into *Brachium* or *Humerus*, *Cubitus*, or *Ulna* and *Radius*, and extreme hand. 2. The extreme hand itself.

Acrocheiresis. Same as *Achrocheiresis*.

Acrocheirismus. (Same etymon.) A kind of exercise mentioned by Hippocrates, engaged in by the ancients, in which the hands alone, without help from the rest of the body, were employed. A wrestling by means of the hands.

Acrochor'didæ. (Ἀκρόχορδών, a wart with a thin neck.) A Family of the Suborder *Colubriformes*, Order *Ophidia*. Head and body covered with small warty protuberances instead of scales; nostrils approximated; no grooved teeth.

Acrochor'don. (Ἀκρος; χορδή, a string of gut. F. *achrochor'don*, G. *Hangerwurze*.) A small wart, having a narrow base or pedicle.

Acrochoris mus. (Ἀκρος, χορεύω, to dance.) A kind of festive dance celebrated by the Greeks, and referred to among the proper exercises of the body, the legs, hands, and arms.

Acrocolia. (Ἀκρον, κολών, a member, or limb.) A term for the end of a limb, the extremities of members of animals, and the food

prepared from certain of them, as the snout, ears, or feet; also applied to the internal parts of animals, familiarly called *giblets*.

Acrocolium. The acromion.

Acrocopia. A Genus of the Tribe *Coccolinae*, Nat. Ord. *Palmaceae*. Hab. Warm regions of North and South America.

A. sclerocarpa. The pericarp and almond are used in Brazil to make an emulsion; employed in catarrhal affections.

Acrocordon. See *Acrochordon*.

Acrodactylous. (Ἀκρος, topmost, δάκτυλος, a finger. F. *acrodactyle*; G. *Zehenrücken*.) Applied by Illiger to the upper surface of the toes.

Acrodiclidium Camara. Nat. Ord. *Lauraceae*. Indigenous in the forests of Guiana, yielding the nuts termed *Camara*, *Camacou*, *Achawai*, *Waccawai*, or American nutmeg. These brown aromatic nuts are used in diarrhoea and dysentery. (Waring.)

Acrodont. (Ἀκρος, the summit; δόντις, tooth. F. *acrodont*.) Applied by Owen to scaly or loricated Saurians, having teeth ankylosed to the summit of the alveolar ridge.

A. teeth. Teeth which are ankylosed to the summit of the jaw, and have no alveolus on either side.

Acrodrya. (Ἀκρόδρυα, from ἄκρος, a point, δρῦς, a tree.) Fruits such as nuts and apples. A so fruit trees themselves.

Acrodynia. (Ἀκρος, the extremities; δύνειν, pain.) An epidemic disease, rarely sporadic, characterised by disorder of the digestive organs and of the nervous system, with impaired nutrition of the skin and mucous membranes. The disorder of the digestive system, though occasionally absent, manifests itself generally by want of appetite without redness of the tongue, nausea, vomiting, colic, and diarrhoea, sometimes becoming dysenteric. The disorder of the nervous system expresses itself in pain and hyperæsthesia of the palms and soles, and sometimes of the calves of the leg, inner side of the knee, and thigh. In some cases analgesia or anæsthesia has been observed, the patient losing his shoes or wearing them in bed without knowing it. Cramps and spasms of the muscles occur, followed often by contractions and by great debility. Associated with the pathological condition of the nervous system are various disorders of the skin and mucous membranes. The skin of the hands and feet is attacked by a kind of erythema, the redness and swelling resembling chilblains or patches of urticaria, and resulting in thickening of the epidermis, which either grows out in the form of horny excrescences, or is thrown off to be replaced by a delicate and excessively tender epidermic tissue. The secretion of pigment is increased. The subcutaneous tissue is brawny and anasarctous, and even the face is puffy and hard. The conjunctivæ are red and painful, and catarrh with urethral discharge have been commonly observed. It is essentially a disease of adults. Its cause is unknown. It presents certain points of analogy with pellagra, ergotism, and the disease called in Spain the *Phlema salada* or *Mal del nigado*, and has been attributed to unwholesome food, and especially to diseased grain. Its subjects and its observers have been almost exclusively Frenchmen.

Also used to denote pain in the extremities of the limbs.

Ac'roe. A plant of Guinea, the vinous decoction of which is given as a tonic. (Waring.)

Acro'gens. (*ἄκρος*, a point; *γενέω*, to generate. *F. acrogens*.) Acrogens constitute one of the two divisions of *Cryptogamia*, the other being *Thallogens*; they are characterised by presenting a distinct stem and leaves; and grow only at the extremity of the axis.

All the species have stomata or breathing pores. There is no trace of flowers. The fructification differs in different families; in the *Filices* and *Equisetacea*, consisting of sporangia or capsules, containing spores, with no differentiation of sex; in *Lycopodiaceae* the sporangia being differentiated into oosporangia and pollen sporangia; whilst in the *Musci* and *Hepaticaceae*, antheridia and archegonia appear, in which sexual differences are well marked. True spiral vessels are principally confined to the Ferns, Clubmosses and Horsetails. In general they are plants of small stature, but ferns may acquire the size of trees, always growing with a simple or simply forked stem.

The group includes *Filices*, *Equisetacea*, *Marsileaceae*, *Lycopodiaceae*, *Musci*, *Hepaticae*, and *Characeae*.

Acro'genous. (*ἄκρος*; *γενέω*, to generate. *L. Acrogenus*; *F. acrogens*.) Growing from the top or highest point; applied to plants the growth of which progresses from their apical points, and whose increase is mainly in length.

A. fungi. Those fungi which are attached to the ends of threads.

A. stem. In the simplest form, as Mosses, the acrogenous stem is composed of ordinary parenchyma, with sometimes a central axis of liber cells, but no true vessels. In *Lycopodiaceae* the *simultaneous vascular bundles* make their appearance. In Ferns this form of stem attains its highest development; externally there are wood cells covered by parenchyma; internally is a thin-walled parenchyma; between the two is the woody structure formed of the simultaneous vascular bundles. The stem is terminated by, and grows by the division of, an apical cell.

A'rogena. See *Acrogena*.

Acrogy'ræ. (*ἄκρος*; *γῦρος*, a circle.) Bernhardt's term for the *Osmundæ*.

Acro'lein. (*ἄκρ*, sharp; *oleum*, oil.) Acrylic aldehyde. Form C_3H_4O . A thin, colourless, volatile fluid, lighter than water, and boiling at $52^{\circ}2$ C. (126° F.). In the allyl series it corresponds to the aldehydes. It gives off a pungent vapour, which causes profuse lachrymation when in contact with the conjunctiva or Schneiderian membrane. It results from the destructive distillation of the neutral fats containing glycerine, and gives the offensive odour to the smoke arising from the glowing wick of an extinguished candle. Inhalation of acrolein has been known to produce serious results; and it is its presence in over-roasted fat which probably causes so much disturbance in digestion when eaten.

Acro'len'ion. (*ἄκρος*, the summit; *ἄλινη*, the elbow.) The olecranon.

Acroma'nia. (*ἄκρος*; *μανία*, madness. *F. acromanic*.) Confirmed, or incurable madness.

Acromas'thium. Same as *Acromastium*.

Acromas'tium. (*ἄκρος*, summit; *μαστός* or *μαστὶς*, the breast.) The mamilla, or nipple.

Acrom'ia. The acromion.

Acrom'ial. (*F. acromial*.) Belonging to the acromion.

A. artery, super'ior. A branch of the suprascapular artery; it anastomoses on the acromion with the inferior acromial, a branch of the acromio-thoracic artery.

A. artery, infe'rior. A branch of the acromio-thoracic artery; it is distributed partly to the deltoid muscle and partly to the acromion, and anastomoses with the infrascapular and posterior circumflex arteries.

A. nerves. One or two branches that, arising from the anterior branch of the fourth cervical nerve, are distributed to the skin of the acromial region.

A. veins. These accompany their respective arteries, and open into the axillary vein.

Acromio-clavicular articula'tion. Is formed between the oval concave articular surface on the internal margin of the acromion process, which is directed inwards, forwards, and upwards, and the convex, or sometimes concave, surface at the extremity of the clavicle. The surfaces are separated more or less completely by an interarticular fibro-cartilage; if perfectly, there are two synovial membranes; if imperfectly, and, as usual, only at the upper part, there is one. The joint is surrounded by a capsular membrane, the fibres of which are thicker above and below, forming the *superior* and *inferior acromio-clavicular ligaments*.

Acromio-coracoid ligament. A ligament extending transversely from the acromion to the coracoid process. It arches over the head of the humerus, and materially aids in preventing dislocation of that bone upwards.

Acromio-coracoides us. The coraco-acromial or acromio-coracoid ligament.

Acromio-thoracic artery. (*Artère troisième des thoraciques*, Chaus.) A short trunk which arises from the front of the first part of the axillary artery just above the upper border of the pectoralis minor muscle, and divides into three sets of branches. The *inner* or thoracic supply the pectorales and anastomose with the intercostals and other thoracic arteries. The *outer* terminate in the deltoid and anastomose with the superior acromial, one branch descends with the cephalic vein. The *ascending* supply the subclavian and deltoid. The *veins* correspond to the arteries.

Acrom'ion. (*ἄκρος*; *ὤμος*, the shoulder. *L. Acromium*; *summus humerus*; *F. acromion*; *G. Akromion*, *Schulterhöhe*.) A projecting process constituting the extremity of the spine of the scapula. It is large and somewhat triangular, flattened from before backwards, directed at first a little outwards, and then curving forwards and upwards, so as to overhang the glenoid cavity. The upper surface, directed upwards, backwards, and outwards, is convex, rough, and gives attachment to some fibres of the deltoid. The under surface is smooth and concave. The outer border, which is thick and irregular, gives attachment to the deltoid muscle. The inner margin, shorter than the outer, is concave, gives attachment to a portion of the trapezius muscle, and presents about its centre a small oval surface for articulation with the acromial end of the clavicle. The apex, which corresponds to the point of meeting of these two borders in front, is thin, and has attached to it the coraco-acromial ligament.

The acromion is wanting in some mammalia, as the giraffe; in others, as the hare and elephant, it is large and gives off a process, the *metacromion*; in the sloth and in birds it joins the

ACROMIORRHEUMA—ACROSPORE.

coracoid process, and forms a bony arch; in the dolphin it exists, although there is no clavicle; in the armadillo it has an articulating surface for the humerus.

In man a small nucleus of ossification is present in the cartilaginous acromion at birth, about the 15th year two distinct nuclei exist; at about the 25th year ossification is complete and the process is united to the spine of the scapula.

A. fracture of. The most frequent cause is a fall, but it may proceed from a direct blow. The direction of the fracture is generally vertical, more rarely oblique, its site, about one inch from the extremity. The pain is severe, whether the arm or neck be moved, which is explained by the attachments of the trapezius and deltoid muscles. There may be only slight displacement, but the separated part is generally drawn down and the shoulder is flattened. Crepitation is perceived on grasping the shoulder, raising the arm, and rotating it. The prognosis is favorable, though fibrous union is not infrequent from the difficulty of maintaining coaptation of the fragments. In the treatment the arm should be well raised, and a figure-of-eight bandage may be applied. Union takes place in about six weeks.

Acromiorrhœuma. (Ακρωμία; ῥέυμα.) *P. acromio-rhume*, G. *Schulter-Rheumatismus*. Rheumatism of the acromion.

Acromis. The acromion.

Acromphalum. Same as *Acromphalus*.

Acromphalum. Same as *Acromphalus*.

Acromphalus. (Ἄκρος, ὀμφαλός, the umbilicus, or navel. F. *acromphale*.) The centre of the umbilicus, to which the cord is attached in the fetus.

Also incipient umbilical hernia.

Acromyle. (Ἄκρος, apex; μύλη, the knee-pan.) The patella.

Acron. (Ἄκρον, an extremity of a body or member.) The extreme part of a limb.

Also an old botanical term for the top or flower of thistles.

Acro-narcot'ic. (Acro, sharp, irritating; νάρκωσις, a benumbing.) A term applied to certain poisons possessing both an irritating and a narcotic action. Amongst the most important of these are the empyreumatic oils, fool's parsley (*Ethusa cynapium*); various fungi (amongst which the *Amanita muscaria* stands pre-eminent), henlock; dropwort (*Enanthe crocata*); diseased grain; laburnum; some leguminous seeds, as those of *Lathyrus cicera* and darnel grass (*Lolium temulentum*), and the yew (*Taxus baccata*). Most or all of these, taken internally, produce gastro-intestinal irritation, headache, delirium, convulsions, and death.

Acronia. (Ἀκρωία, mutilation.) Amputation of the extreme part of a body or limb, as an ear, the nose, a finger, or toe.

Acronuridae. A Family of the Suborder *Acanthopterygii*, Order *Telostei*, Class *Pisces*. Marine herbivorous fishes found in all tropical seas, but most abundant in the Malay region. Body long, compressed, with minute scales, buccal aperture narrow, dorsal an long, teeth pointed, in a single row.

Acronych'ious. (Same; ὄνυχ, the nail; F. *acronyque*.) Bent like the nails.

Acronyctidae. A Family of the Group *Noctue*, Order *Lepidoptera*. Eyes naked, generally non-ornate; thorax rounded in front, shaggy, feet hairy; tibiae without bristles.

Acronyx. (Ἄκρος, the summit, ὄνυξ a nail.) Growing in or of the nail. (D.)

Acroparalysis. (Ἄκρος, apex; παράλυσις, paralysis.) Paralysis of the extremities.

Acropathous. (Ἄκρος, πάθος, disease. F. *acropathe*.) Applied to disease which affects some high or extreme part of the body, or of an organ. Gr. *ἀκροπαθός*, applied by Hippocrates to disease of the orifice of the uterus.

Acropetalous. (Ἄκρος, πτεῖλον, a leaf.) A term applied to the inflorescence of a plant, when an axial structure produces similar and equivalent lateral members in such order that the younger a member is, the nearer it is to the apex, that is to say, counting from below upwards, the members occur in the order of their age.

Acrophalli. (Ἄκρος, extremity, φαλλός, the penis.) A group of Nematode worms, including the *Trichina* and *Strongylus*, in which the male genital opening is at the posterior extremity of the body.

Acrophytum. (Ἄκρος; φυτόν, a plant.) Another name for *Thesilago farfara*.

Acropis. (Ἀκρωσις, disabled.) A doubtful reading in Hippocrates, signifying imperfection of the voice from a disordered condition of the end of the tongue.

Acropodium. (Ἄκρος; ποῦς, a foot. F. *acrope*; G. *Fussrücken*.) Name by Illiger for the upper side of the entire foot.

Acroposthia. (Ἄκρος; πόσθη, the prepuce.) Gr. *ἀκροποσθία*, or *ἀκροποσθήη*, the extremity of the prepuce, or that portion removed in the operation of circumcision. (Hippocrates and Castellus.)

Acroposthitis. (Same, πόσθη, the prepuce.) Inflammation of the prepuce.

Acropsillon. Same as *Acropsilus*.

Acropsilus. (Ἄκρος, ψιλός, naked.) Gr. *ἀκρόφιλον*, given to the extremity of the glans penis by Hippocrates, when uncovered by the prepuce. (Castellus.)

Acrosia. (Ἀκρόρεια, a mountain-ridge.) A term for the vertex.

Acrorrhœuma. (Ἄκρος; ῥέυμα, a humour.) Rheumatism of the extremities.

Acrosalenice. A Sub-family of the Family *Cidaridae* of the Order *Regularia*, Class *Echinodermata*. Fossils of the oolitic system having perforated tubercles.

Acrosapes. (Ἄκρος; σάπρω, to make putrid.) Applied to food, meaning that it is easily digestible, Gr. *ἀκροσαπής*, used by Hippocrates for that which had become putrescent on the surface, and was therefore supposed to be more easily assimilable. (Castellus.)

Acrosar'cum. (Ἄκρος, σάρξ, flesh. F. *acrosar'que*.) Name by Desvux for a spherical fruit, fleshy, and united with the calyx, as that of the *Ribes rubrum*.

Acroscopic. (Ἄκρος, the topmost, σκοπεῖν, to look at.) A term applied to the end cell of a growing plant-stem or root, signifying the extreme growing cell of the extreme point.

Acropselos. (Ἄκρος; πέλος, for πάλος, dark-coloured, from the dark colour of its ears, or tops.) A Greek name for *Bromus Diocorydis*, or wild oat-grass. (Gortius.)

Acropsire. (Ἄκρος, σπείρα, anything wound round.) The *plumula*, or first sprout, of corn.

Acrospore. (Ἄκρος.) A spore borne on the top of a filament or thread.

ACROSPOROUS—ACTÆÆ.

Acrosporeus. A synonym of *Racidiosporus*.

Acrostichæes. A Sub-family of *Polygones* having naked cori.

Acrostichum. (*Acrostichum*, summit; *στρίχτος*, a row.) A Genus of the Nat. Ord. *Filices*.

A. acrostichum. *Lonchitis palustris*. Common in the marshes of Jamaica. A decoction of the root is given with advantage in dysentery and splenic affection. A salt prepared from the leaves is recommended as a local application to ulcers.

A. dichotomum. Hab. Arabia, where it is named Medjabese. The fresh leaves bruised are employed as a local application in burns.

A. sinuatum. Hab. New Granada, where it is employed as a laxative.

A. furescens. Tree ferns of N. Holland and N. Zealand. The large tuberous roots are used as food.

A. huacuasare. Hab. Hills of Peru. It is the middling Calaguala or Cordoncillo of the Spanish settlers. The rhizome yields a red astringent decoction, said to have solvent, deobstruent, sudorific and antirheumatic, as well as antivenereal and febrifuge properties. See *Calaguala*.

A. punctatum. An official drug in the Chinese Pharmacopoeia, but its uses are unknown.

A. serotinum. Hab. Jamaica. The juice, mixed with oil, ginger, and pepper, is said to cure sick headache when locally applied. (Waring.)

Acrotarium. (*Acrotarium*, summit; *ἀκρότης*, a broad flat surface, the tarsus. F. *acrotarium*.) Name by Illiger for the anterior surface of the tarso-metatarsus of birds.

Acrotaria. (*Acrotaria*, the highest point.) Applied to the extremities of the body, as the head, hands, and feet. (Hippocrates.)

Acrotariasmus. (*Acrotariasmos*, to mutilate by cutting off the hands and feet.) Amputation of extreme parts of the body, or of an extremity, as the hand, or foot. (Aquapendente and Hildanus.)

Acrotarionis. (*Acrotarionis*, an extremity.) A term applied to senile gangrene of the limbs, and to their amputation; and in Teratology to their absence.

Acrothymium. (*Acrothymium*, summit; *θύμος*, thyme. F. *acrothymion*.) A kind of wart, resembling a bunch of the flower of thyme, which easily splits and bleeds.

Acrotic. (*Acrotic*.) Belonging to, or affecting the external surface; applied to an Ord. of the Class *Eccritica*, in Good's classification.

Acrotism. (*Acrotism*, priv.; *ἀκρότης*, a striking. Fr. *acrotique*, adj.) A defect of the pulse.

Acrus. (*Acrus*, summit.) A word properly signifying at the head or top, but used also by Hippocrates for the state of the body when at the height of its well being.

Acrydium. (*Acrydium*, a locust.) The locust. See *Edipoda migratoria*.

Acrylic acid. Form. $C_2H_2O_2$. The lowest member of the acrylic series of monatomic acids, obtained by the oxidation of its aldehyde, *acrolein*, with moist silver oxide: a colourless, pungent, slightly aromatic fluid. It melts at $7^\circ C.$ ($45^\circ F.$) and boils at $139^\circ C.$ ($282.2^\circ F.$)— $140^\circ C.$ ($284^\circ F.$).

Actæa. (*Actæa*, the elder tree.) Nat. Ord. *Coprosiphaceæ*. A name given by the Greeks

to the elder tree; also called *ἄκτις*. See *Sambucus nigra*.

Actæa. (*Actæa*, the elder tree, the leaves of which some of the species resemble.) A Genus of the Tribe *Actæe*; according to some, of the Tribe *Phonice*; to others, of the Tribe *Helleboræ*, Nat. Ord. *Ranunculaceæ*. Sepals 4, deciduous; petals 4, carpel single, baccate, one or more seeded.

A. alba. White Cohosh. Hab. Michigan. The rhizome is said to be violently purgative. It is thought by some to be a distinct species, by others only a variety of *A. americana*.

A. americana. A species presenting two varieties, sometimes regarded as distinct species, *A. alba* and *A. rubra*. White and red cohosh. Hab. The rich deep mould of rocky woods, from Canada to Virginia. Properties probably similar to those of *A. spicata*.

A. brachypetala. Hab. North America. The root is used in coughs, rheumatism, chorea, and anasarca.

A. christophoria. A synonym of *A. spicata*.

A. monogyna. A synonym of *A. racemosa*.

A. racemosa longistylis. Linnaeus's name for *A. racemosa*.

A. racemosa. (F. *actæa à grappes*, *Herbe aux pousseurs*; G. *traubenformige Schierkraut*.) *Cimicifuga racemosa*, *Serpentaria phylla*. Black snake root or Richweed. A perennial herb 3—8 feet high. Hab. North America and Canada. The rhizome is short, knotty, and branching, half an inch or more thick, having in one direction the remains of several stout, aerial stems, and in the other, numerous brittle, wiry roots, $\frac{1}{4}$ — $\frac{1}{2}$ of an inch in diameter, giving off still smaller rootlets. The rhizome is of somewhat flattened, cylindrical form, distinctly marked at intervals with scars of fallen leaves. A transverse section exhibits a horny, whitish pith, with coarse, irregular, woody rays, and a hard, thick bark. The larger roots, when broken, display a thick cortical layer, and a central woody column, traversed by a star or cross of wide medullary rays, and often enclosing a pith. The drug is of a dark-brown colour. It has a bitter, rather acid, and astringent taste, and a heavy narcotic smell. Gum, sugar, starch, resin, tannic acid, cinchifugin, and an acid neutral crystalline substance have been obtained from it.

In full doses it produces nausea and vomiting, vertigo, tremors, and headache. It has been used in catarrh, bronchitis, hysteria, chorea, and rheumatism. Formerly thought to cure snake bites and to drive away fleas, whence two of its names. The black berries are poisonous.

A. rubra. A variety of *A. americana*, or perhaps a distinct species.

A. spicata. (F. *herbe de Saint Christophe*, *actæa en épi*, *faux allebore noir*; G. *ahriges Christophskraut*; L. *Barba di cupra*.) Baneberry. An herbaceous perennial plant; height, 2 feet or more; leaves ternate, twice pinnate; racemes ovate. Hab. Mountains of Europe. Root poisonous, antispasmodic, astringent, cathartic. The powder and decoction kill lice, and are said to cure scabies.

Actæeæ. A tribe of the Nat. Ord. *Ranunculaceæ*. Calyx coloured, imbricated; fruit succulent, indehiscent, one- or many-seeded.

ACTE—ACTINOZOA.

Ac'to. ('Ακτῆ.) A name of the elder tree, *Sambucus nigra*.

Act'ine. ('Ακτίς, a ray; from its radiated ramifications.) Name for *Bunium bulbocastanum*.

Actinenchy'ma. ('Ακτίς, a ray; ἵγχυμα, an infusion. F. *actinenchyme*; G. *strahlzellige Gewebe*.) Name applied to the stellate cells of plants, well seen in the pith of the rush.

Actin'ia. ('Ακτίς, a ray.) The sea anemone. A genus of the Sub-family *Actinæ*. Tentacles retractile, acuminate, body naked; the calycine border furnished with pigment tubercles.

Actin'ia. A Sub-family of the Family *Actinida*. Tentacles ample, base discoidal.

Actin'aria. A Sub-order of the Order *Zoantharia*, Class *Actinozoa*. Body soft, with no kind of skeleton.

Actin'ic. ('Ακτίς.) Belonging or related to *Actinium*.

A. rays. The invisible and more refrangible rays of light at and beyond the violet end of the spectrum, on which the chemical action of light chiefly depends.

Actin'iform. ('Ακτίς, a ray; *forma*, likeness.) Star-shaped, radiate.

Actin'idæ. A Family of the Sub-order *Actinaria*. Tentacles in alternating rows, and each corresponding to a perigastric cell.

Actin'iochrome. ('Ακτίς, a ray; χρώμα, colour.) The red colouring matter of certain *Actinias*, which gives a single absorption band.

Actin'isces. A Sub-family of the Family *Bacillariaceæ* or *Diatomaceæ*, having cells beset with stellate bristles. Marine forms and also fossil in the chalk.

Actinism. ('Ακτίς, a ray.) That property of the solar rays by which they produce chemical effects, as in photography. The actinic force is greatest in the blue and violet rays of the spectrum, and beyond them.

Also that branch of physics which treats of the radiation of heat or light.

Actinob'olism. ('Ακτίς; βάλλω, to throw out.) Anciently applied to the instantaneous flow of animal spirits by which volition is communicated to the different organs, according to Willis.

Also applied to certain phenomena in birds and animals analogous to *Hypnotism*.

Actinocarp'ous. ('Ακτίς; καρπός, fruit. F. *actinocarpe*; G. *strahlenfruchtig*.) Applied by Allmann to plants with trophosperms or wings of trophosperms, disposed like the rays of fruit.

Actin'odes. ('Ακτίς. Fr. *actinoux*; G. *strahlend*.) Having or full of rays, radiant actinous.

Actin'ograph. ('Ακτίς; γράφω, to grave, to write.) An instrument by which the actinism of solar light is measured.

Actinography. (Same etymon. F. *actinographie*.) Term for a description of the rays of light.

Actinoid. ('Ακτίς; είδος, form. F. *actinoide*; G. *strahlenähnlich*.) Resembling a ray. *actinoides*.

Actinology. ('Ακτίς; λόγος, a discourse. F. *actinologie*; G. *Strahlenlehre*.) The doctrine of rays of light.

Actinome're. ('Ακτίς; μέρος, a part.) The lobes of the median part of the body of the Ctenophora, divided off by the ctenophores.

Actinomorph'ous. ('Ακτίς; μορφή, shape. F. *actinomorphe*; G. *strahlenförmig*.)

Having a circular and radiated form, nearly like the flowers of vegetables.

Actinophry'idæ. ('Ακτίς, a ray; ὄφρυς, the brow. G. *Sonnenkierchen*.) A Family of the Sub-order *Heliosozaria*, Order *Radiolaria* (*Monocyttaria*, Haeckel), Class *Rhizopoda*. Or otherwise, a Family of the Class *Amœboidea*, Sub-kingdom *Protozoa*. Vessels pulsatile, central capsule or mass enclosing a number of nuclei; no siliceous skeleton.

Actinophry'ina. A synonym of *Actinophry'dæ*.

Actino'phrys sol. ('Ακτίς, a ray; ὄφρυς eyebrow, sol, sun.) Fam. *Actinophry'dæ*; a species with a single central capsule, the outer layer condensed to form a cortex, the inner or contained sarcode throwing out pointed contractile processes. If Mr. Carter's observations be correct, it is the product of the development of the gonidia of the Characeæ; these are formed in the interior of gonidial cells, each of which results from the aggregation and modification of the chlorophyll granules lining the interior of the internodes of the plant, separate masses of which become invested by a cell wall. The colour of the granules changes from green to brown, and a bluish semitransparent mucus appears in different parts of the mass. This mucus separates into gonidia, and the cell bursting allows them to issue in the form of ovate or fusiform bodies of a light blue colour, having one or two cilia, by means of which they execute lively movements, but after a short period the cilia disappear and the gonidia perform smobiform movements, and finally assume the form of the *Actinophrys sol* of Ehrenberg.

Actinophthal'mic. ('Ακτίς, a ray; ὀφθαλμος, eye. L. *oculus radians*, *oculus lucens*.) Term applied to animals possessing a tapetum reflecting rays of light strongly.

Actinoso'ma. ('Ακτίς; σῶμα, a body.) A term for the entire organism of the *Actinozoa*.

Actinos'teophyte. ('Ακτίς, osteophytum, an osseous tumour. F. *actinostéophyte*; G. *Aktinostephyt*.) Term for a radiated osteophyte.

Actinosto'matous. ('Ακτίς; στόμα, the mouth. F. *actinostome*; G. *strahlenmundig*.) Having a radiated mouth.

Actinosto'mous. Same as *Actinostomatous*.

Actino'te. ('Ακτινωτός, radiated.) A synonym of *Actinophyte*.

Actin'otroch. ('Ακτίς, a ray; τροχός, a wheel.) That firm of Gephyrean larva in which the post-oral band of cilia is produced into numerous tentaculiform lobes, and fringes the free edge of a broad concave robe of the dorsal side of the body, which arches over the mouth.

Actinozo'a. ('Ακτίς, a ray; ζῶον, a living being. G. *Blumenthiere*.) One of the two great divisions of the Coelenterata, the other being the *Hydrozoa*. The sea anemones, stony corals, and berce, are representatives of the group. The *Actinozoa* agree with the *Hydrozoa* in the primitive and fundamental constitution of their body, which is composed of two membranes—an ectoderm and an endoderm—between which a middle layer or mesoderm may subsequently arise, in the absence of a completely differentiated alimentary canal, and in possessing thread cells or nematocytes, but they present a somewhat greater complexity of structure. They are cylindrical radiate animals of tetramerous and hexamerous

ACTINOZOARIUS—ACTUAL CAUTERY.

type. The alimentary canal, commencing at the mouth, which is surrounded by tentacles, forms first a kind of stomach, and then opens into the general cavity of the body, and there is neither intestine nor anus. The reproductive elements are constantly situated in the lateral walls of the chambers into which the body cavity is divided, and hence the ova are detached into the interior of the body instead of being thrown off externally, as in Hydrosoma. The group is subdivided into Coralligena or sea anemones, stone corals, and sea pens; and Ctenophora. The members of both groups appear to possess a rudimentary nervous system, and in the Ctenophora canals are given off from the visceral cavity which traverse the body. There is no alternation of generations, but dimorphism has been observed by Kölliker to occur amongst the Pennatulidæ.

Actinozoa are by some called *Anthozoa*, a Class of the Sub-kingdom *Cœlenterata*.

Actinozoarius. (*Actis*; *Εκον*, an animal. *F. actinozoaire*; *G. Strahlenthierig*.) Applied by Blainville to a type the regular body of which constantly presents a radiated arrangement either in itself or in the organs of a different nature with which it may be provided.

Actinula. The larval condition of an *Hydrophora*, following the gastrula stage, when tentacles begin to bud out round the mouth.

Action. (*Ago*, to do.) The exercise of an active power; a faculty, or function of the body.

A. currents. A term employed by Hermann to denote those electric currents which are set up in a muscle as the result of direct excitation; a negative condition of the part excited is produced, and this tract of negativity travels along the muscular fibre. By some this condition is held to be a diminution of a pre-existing current, by Hermann as a manifestation of electro-motive force. Action-currents are *phasic* and *tetanic*.

Action and reaction, Law of. Action and reaction are equal and opposite; in other words, the mutual actions of two bodies on each other are equal in quantity and are exerted in opposite directions.

Actions. The functions of the body, which were formerly divided into several classes.

A. animal. The actions of parts specially distinguishing an animal body, as those of the eye, ear, and brain.

A. natural. Those that serve for refreshment and repair of loss, as the taking and the digestion of food.

A. private. Those which concern the well-being of individual organs merely.

A. public. Those which concern the whole body.

A. reflex. (*F. Acto reflexe*; *G. Reflexbewegungen*.) A movement, act of secretion, or trophic change, taking place as the result of an impression on a sensory nerve. The impression is believed to travel along an afferent nerve till it reaches a sensory nerve cell or group of cells, when it excites a change that itself becomes or constitutes an impulse, which is either transmitted directly to an efferent motor nerve proceeding from this cell, or, as is more probable, is conducted by a communicating branch to a motor nerve cell or group of cells, from which the efferent branch or branches arise. Reflex actions are best seen in the spinal cord, especially when this is separated from the brain, which seems to exert an inhibitory influence over such acts, and

in the ganglia of the sympathetic nervous system.

Some reflex acts are performed without any consciousness on the part of the individual, whilst others are attended with consciousness. Amongst the former may be included the movements of the intestinal canal and of the blood-vessels, which are dominated by the sympathetic ganglia, whilst amongst the latter are such movements as the start that occurs when a sudden and loud sound is heard, and the winking of the eye on the approach of a foreign body or on the unexpected appearance of a bright light. Reflex acts are more manifest at an early period of life than at a later. They are exalted by strychnia, and during sleep lowered by cold, and abolished by woorara and by anaesthetics. In general several muscles are called into play in reflex acts, and their action is then co-ordinated or purposive.

Pflüger has established certain laws of reflex action, which are: firstly, that if the stimulus is only capable of exciting a reflex action on one side, it is always on the same side as that to which the stimulus is applied; secondly, that if the stimulus be sufficiently strong to excite movements on both sides of the body, only those muscles will be caused to contract on the second side which have already contracted on the first; thirdly, that if the movements are of different strength on the two sides, the strongest will be on the side to which the stimulus is applied; fourthly, if any sensory nerve be irritated, those muscles first contract which are supplied by motor nerves arising at about the same height as the stimulated sensory nerves arise, and if the stimulus be sufficiently strong to cause other muscles to contract, they will always be found to be supplied by nerves arising nearer the medulla oblongata, and never by those arising from a lower plane of the spinal cord.

Reflex actions are inhibited by the brain, by irritation of the lower cut surface of a divided cord, by simultaneous strong irritation of a sensory nerve, during apnoea, and by the action of morphia, chloroform, digitalis, and chloral hydrate. The time occupied in the transference of a sensory impression to a motor fibre is estimated by Helmholtz at 1-30th to 1-10th sec. Less time is occupied in a unilateral than in a bilateral reflex act, but with increasing strength of stimulus both periods are greatly reduced and become almost inappreciable, whilst they are prolonged after exhaustion. See *Reflex centres*.

A. respective. Those peculiar to the organ concerned, as contradistinguished from those of other organs.

A. sexual. The operations of the organs of generation.

A. vital. The actions of parts necessary to life, as those of the heart and lungs.

Active. (*Ago*, to do. *F. actif*; *G. wirksam, thätig, hülfsig, kraftig*.) Acting with energy; applied to treatment of the sick, coming under this character. Applied similarly to medicines and surgical remedies.

A. electricity. Electricity, either positive or negative, made manifest by friction or other method.

Action. England; four miles west of London. Saline waters containing magnesium and some calcium sulphate. Formerly in great repute as a purgative.

Actual Cautery. (*F. cautère actuel*; *G. das glühendes Eisen*; *Brenneisen*.) A red-

hot iron, or other substance, or fire, used as a cautery, because having an immediate power inherent in it, in distinction from caustic substances which are termed potential cauteries; also called *Ignis actualis*.

The instrument should be at a white heat and drawn quickly and lightly over the skin, so as to form a superficial eschar. A method of treatment of great value in chronic joint affections, neuralgia, and myalgia. See *Moxa*.

Actuarius. A title of dignity originally given to the Byzantine physicians, corresponding to the present title of physician-in-ordinary. (Dunglison.)

Actuation. (*Ago*, to do, or perform.) A psychological term intended to designate the department of mental function that intervenes between the impulse of will to do a particular act and the actual muscular performance of it—in other words, to denote the play of the conception of the purpose of the definite movement, or the motor intuition of it, through which the will is enabled to put in action the proper muscles to execute it.

Formerly this term was used to denote the change supposed to be produced by the vital heat in a medicine when taken into the body, without which no effect would be obtained.

Actus. Parturition. (D.)

Actynolite. (*Actis*, a ray; *λίθος*, a stone.) A dark-green mineral allied to hornblende, consisting of radiating crystals. It contains silica, magnesia, lime, protoxide of iron, with traces of magnesia and fluoric acid.

Acuductor. (*Acus*, a point; *duco*, to lead.) A grooved director.

Acution. (L. *acuo*, to sharpen.) An old term intended to describe the action of medicines which are added to others of like but weaker nature, in order to increase their power.

Acuity. (*Acuo*, to sharpen. F. *acuité*; G. *Schärfe*.) Term for acrimony.

Aculeata. A term employed to designate the *Hystericida* or Family of porcupines.

Also a Group of *Hymenoptera* including ants, bees, and wasps.

Aculeate. (*Aculeus*, a prickle. F. *aiguillé*; *epineux*; G. *dornig*.) Having prickles, or sharp points; prickly.

Aculeiform. (*Aculeus*; *forma*, likeness. F. *aculeiforme*; G. *stachelformig*.) Formed like a prickle or thorn. Applied to scales of fishes formed like curved points, as of *Diodon atinga*; to tubercles on shells; and to shells themselves which are small and pointed at the spine.

Acules'cent. (L. *aculeus*, a spine.) Applied to an acute and rigid hair on other organs, and ending in a sharp point.

Aculeous. (*Acus*, a needle. F. *aiguillon*; *épine*; G. *Dorn*, *Stachel*.) A prickle or sharp body arising from the bark or epidermis of any part of a plant, and which may be peeled off with the bark.

Also the ovipositor of the Hymenoptera.

Acumeter. See *Acuometer*.

Acuminate. (*Acumen*, a point. F. *acuminé*; G. *zu- or langgespitzt*.) Pointed; ending in a point; tapered; tapering; applied to leaves, and leaf stalks.

Acuminiferous. (*Acumen*, a point; *fero*, to bear. F. *acuminifère*; G. *spitztragend*.) Bearing points; applied to an animal whose body has small pointed tubercles, as *Caprilla acuminifera*.

Acuminifolious. (*Acumen*; *folium*, a leaf. F. *acuminifolié*; G. *spitzblättrig*.) Having acuminate leaves.

Acuminulate. Diminutive of *Acuminate*. Having a shortly tapered point.

Acuophony. (*Ἀκουόω*, to hear; *φωνή*, voice.) An irregular spelling of *Acouophony*. See *Acouophonia*.

Acupressure. (*Acus*, a needle; *premo*, to press.) A method of arresting hæmorrhage, suggested by Professor Simpson, by means of the pressure of a needle. The needle, which should be long, sharp-pointed and headed, as well as rendered unoxidisable, is passed through the tissues on one side of the vessel, in aneurism is made to cross over the vessel and at right angles to it, and then plunged into the tissues on the opposite side of it. The compression thus exerted stops the flow of blood, and as soon as coagulation has taken place, or at the close of the second day, the needle can be withdrawn, and the wound being freed from the presence of any foreign body, is placed under favourable conditions for healing. The advantages claimed for this method are that it is easy, simple, and expeditious, that the needles set up very little irritation, and hence lessen the chances of suppuration, gangrene, phlebitis, and pyæmia.

Acupuncture. (*Acus*, a needle; *pungo*, to prick. F. *acupuncture*; G. *Nadelstich*; I. *agopuntura*; S. *acupuntura*.) A method of treating disease in which, the skin being made tense by stretching, one or more long steel needles are slowly passed through it with a rotatory motion to a variable depth in the neighbourhood of the affected parts. It has been long practised by the Chinese and Japanese, and was introduced into European practice in 1683 by Dr. Rhyn, but fell into disuse, till Berlioz published his *Memoirs* in 1816, and has been recently employed in rheumatic and neuralgic affections, paralyses, rebellious hiccough, odontalgia, gastralgia, sciatica, lumbago, and other forms of myalgia, epilepsy proceeding from a fixed point, trismus, neuralgia of the testis, meteorism of the stomach and intestines; in ununited fractures, aneurism, varicose veins, hydrocele, œdema, and anasarca; in visceral enlargements, as in those of spleen, and in amaurosis. Any of the tissues, muscles, nerves, vessels, heart, or intestines, may be simply perforated in this way by a fine needle without injury. It has, however, been used for the purpose of infanticide by penetrating the brain through the fontanelles. The mobility or immobility of the free portion of a long and slender needle introduced through the parietes of the chest into the substance of the heart affords a very certain means of establishing the persistence of life or the occurrence of death in case of trance, catalepsy, and the like. It has been used with some success, in combination with electricity, as a means of coagulating the blood in aneurisms, varicose enlargement of veins, and erectile tumours.

Acureb. (Arab.) Vitrum, or glass.

Acurgia. Same as *Acidurgia*.

Acus. (*Acus*, a needle; from its sharp points; F. *paille*; *paillette*; G. *Spreublättchen*.) The refuse after winnowing corn; chaff.

Acus. (*Axis*, a point. F. *aiguille*; G. *Nadel*; *Nähnadel*.) A needle, bodkin, or pin.

A. cannulata. A trochar; a cannulated needle.

A. interpunctoria. A couching needle.

A. moschata. The *Geranium moschatum*.

A. ophthalmica. A couching needle; an ophthalmic needle.

A. pastoris. A synonym of the *Scandix pecten*.

A. triquetra. A name for a trochar; a three-cornered needle.

Acusia. The faculty of hearing.

Acusimeter. The *Acoumeter*.

Acusma. The same as *Acousma*.

Acustions. ('*Acousis*, to hear.) A name of the auditory nerve.

Acusto. Old term for Nitrum.

Acutangular. (*Acutus*, sharp; *angulus*, a corner. *F. acutangulè*; *G. spitzwinkelig*; *scharfeckig*; *scharfkantig*.) Having sharp angles, corners, or edges; sharp-cornered.

Acutangulate. Same as *Acutangular*.

Acute. (*Acuo*, to point. *L. acutus*; *F. aigu*; *G. heftig*; *hitzig*; *scharf*; *spitzig*.) In Botany, ending in a point.

In Pathology, sharp and pungent; applied to diseases which have violent symptoms, are attended with danger, and terminate quickly.

Acutenaculum. (*Acus*, a needle; *tenaculum*, a holder. *F. porte-aiguille*.) A needle with a handle to make it pass through more quickly when stitching a wound.

Acute-pointed. Applied to a leaf when its apex is sharp, so that the two margins make an acute angle with each other.

Acutospinous. (*Acutus*, sharp; *spinosa*, spinous. *F. acuto-spinosus*; *G. scharfdornig*.) Applied to caterpillars having many rows of sharp and ramous spines.

Acyanicum. ('*A*, neg.; *κύανος*, blue.) Term applied by Pouchet to animals in which the blue colour is deficient.

Acyanoblepsia. ('*A*, neg.; *κύανος* blue; *βλέπω*, to look upon.) Term for a defect of the vision, by which the colour of blue cannot be distinguished; in such patients it is often confounded with green.

Acyelia. ('*A*, priv.; *κύκλος*, a circle.) Acylie flowers include those Dicotyledons having a spiral arrangement of their parts, but in which the transition from one foliar structure to another, as from calyx to corolla, or from corolla to stamens, does not coincide with a definite number of turns of the spiral.

Acyesis. ('*A*, priv.; *κύησις*, pregnancy.) Sterility in women.

Acyisia. The same as *Acyesis*.

Acyrus. The *Arnica montana*.

Acystia. ('*A*, neg.; *κύστις*, a bag. *F. acystia*.) In Teratology, absence of the urinary bladder.

Acystoneria. ('*A*, neg.; *κύστις*, a bag; *νέρω*, a nerve.) Paralysis of the bladder. (D.)

Acysturoneria. ('*A*; *κύστις*; *ούρον*, urine; *νέρω*, a nerve.) Paralysis of the bladder. (D.)

Acysturotrophia. ('*A*; *κύστις*; *ούρον*; *τροφή*, nourishment.) Atrophy of the bladder. (D.)

Acyterium. ('*A*, priv.; *κυνητήριον*, aiding delivery.) Term by Hesiychius for a drug to produce abortion.

Acyttaria. ('*A*, neg.; *κύτταρος*, a cell.) A synonym of *Foraminifera*.

Ad. A prefix introduced into various compound terms, and used as a distinct word in expressions of frequent occurrence; it has numerous significations, but the most generally used are *to*, and *ad*.

A. deliquium. To fainting; an expression used in directions for venesection when the blood is to be allowed to flow till syncope is induced.

A. libitum. At will, at pleasure, according to discretion; a phrase used in prescriptions.

A. pondus omnium. To the weight of the whole; as much as the whole; a term used in prescriptions to indicate the proportion of some particular ingredient.

Ada. Ginger.

Adabadani. A tree of British Guiana, botanical name unknown, the fresh bark of which quickly vesicates. (Hooker and Waring.)

Adaca. The *Sphæranthus indicus*.

Adacrva. ('*A*, neg.; *δάκρνω*, to weep.) Defective secretion of tears.

Adactylous. ('*A*, priv.; *δάκτυλος*, a finger. *L. adactylus*; *F. adactyle*; *G. ohne Fingers*.) Without fingers. Applied to a crustaceous animal the arms of which are without claws.

Ademonia. Same as *Ademonia*.

Adaggregated. (*L. ad*, to; *aggrego*, to attach to. *F. adagrégés*.) A term used to describe one of the divisions into which aggregated organisms have been divided, where the individuals are united to each other by some part of their body, as the *Salpa*.

Adal. Abyssinian name of the *Salvadora persica*, the wood of which is used to clean and polish the teeth.

Ada Kodien. An Apocynaceous plant used as an astringent, and for the cure of ophthalmia.

Adal. A Paracelsian term for that part of plants on which their medicinal virtues depend; mentioned in *Fragment. de re herbar. l. i. § Incarnatio*.

Adalli. Name for a Malabar plant, used as an antidote to the bite of the *Cobra di capello*.

Adaly. Indian name of the *Verbena nodiflora*. The expressed juice is employed in the treatment of catarrhal affections of the respiratory organs and in indigestion.

Adamant. ('*Adamas*, from *ad*, neg.; *δαμάω*, to overpower.) An old term which included several minerals, especially the diamond, which were characterized by very great hardness.

Adamantine. ('*Adamas*, the unconquerable, the diamond. *F. adamantin*; *le diamant*.) Very hard. Applied to bodies of extreme hardness, polish, brilliancy, or transparency.

A. layer. Term applied to the enamel of the teeth.

A. substance. The enamel of the teeth.

Adamas. ('*Adamas*. *F. diamant*; *G. Diamant*.) The diamond, so-called from its hardness and durability; also an old name for steel.

Also the Apuleian name of *Hyoscyamus*, because it triumphs over man and compels him to sleep. (Waring.)

Adamenon. ('*Adamnos*, insuperable.) Apuleian name of *Hyoscyamus*, because its narcotic action cannot be resisted. (Waring.)

Adamio. (*Adam*, the first man.) A term applied to a supposed primitive race of men in Abyssinia.

Adamica terra. A name applied to several kinds of bole, or clay of a red colour; from an Eastern tradition that Adam was formed of red earth.

Adamita. ('*Adamas*, the diamond.) Term

ADAMITUM--ADDISON'S DISEASE.

employed by Paracelsus for a very hard white calculus, properly, a vesical calculus.

Adamitum. (Adeus.) A term used by Paracelsus for the calculeous diathesis.

Adam's apple. (F. pomme d'Adam; G. Adams Apfel.) A term applied to the upper and median portion of the thyroid cartilage. See *Pomum Adam*.

A. nes'le. Common name for the plant *Yucca gloriosa*.

Adanson, Michel. French botanist, b. 1727 at Aix, d. 1806 at Paris. His chief work was his 'Familles naturelles des Plantes.'

Adansonia. A Genus of the Tribe Bombaceae of the Nat. Ord. Sterculiaceae.

A. digitata. (F. Baobab; G. Affenbrotbaum.) The Baobab tree, the Monkey-bread tree. One of the largest trees in the world, the trunk being sometimes 30 feet in diameter, but the height is not in proportion. It is emollient and mucilaginous in all its parts. The leaves dried and reduced to powder constitute Dalo, a favourite condiment with the Africans, who mix it with their food to diminish perspiration. The fruit is sub-acid, and forms a cooling drink in fevers, the rind and the central farinaceous pulp are used in diarrhoea and dysentery. The bruised leaves are used as an application to ulcers and rheumatic pains. The bark has been used instead of quinine. It contains *Adansonins*.

A. Gregorii. Sour gourd. Hab. N. Australia. Its properties are similar to those of *A. digitata*.

Adansonine. A white, bitter alkaloid, forming needle-like crystals with acids, soluble in alcohol, obtained from the *Adansonia digitata*; a febrifuge.

Adaptation. (Ad, to; apto, to fit.) The adjustment of the body to climate and soil, *acclimatisation*.

The accurate fitting together of the edges of wounds, and of the extremities of fractured bones, *coaptation*.

The adjustment of the eye to the perception of objects at different distances, *accommodation*.

Adapter. (Ad, to; apto, to fit.) A tube employed to lengthen or enlarge the neck of a retort, so that it may fit the receiver.

Adarcea. (Aδάρκη, from a, neg.; δάρκη, to see, because it hides the substance of the plant on which it grows.) A lax and porous saline formation, like bastard sponge, found incrusting the reeds and grass in marshy grounds of Galatia, formerly esteemed for cleaning the skin in leprosy and tetter. (Quincy.)

Adarce. Same as *Adarcea*.

Adarces. Same as *Adarcea*.

Adarcion. Same as *Adarcea*.

Adarcos. Same as *Adarcea*.

Adarigo. (Arabic.) Orpiment.

Adarnech. (Arabic.) Orpiment.

Adarticulation. (Ad, to; articulus, a joint.) The form of articulation called *Arthrodis*.

Adatina palay. Tamil name of the *Aratobchia bracteata*. The root is regarded by the Indians as a powerful alexipharmic, it is also extensively used in infusion as a vermifuge, and when mixed with castor oil as an external application in scabies.

Adclivity. (L. *adclivitas*, for *acclivitas*, a rise. F. *adclivité*.) A projection.

A. of tib'la. The spine of the tibia which separates the two condylar articulating surfaces.

Add. Abbreviation for *addo*, *add*, or *addatur*, let there be added.

Addad. A plant of *Nitmidia*, so poisonous that forty drops of its distilled water is said to be fatal.

Addepha'gia. (Aδένν, enough, one's fill; *payiv*, to eat. F. *addephagie*; G. *gefrazungest*.) Term for a voracious appetite, or the disease *Bulimia*.

Adder. (Anglo-Saxon *Næddre*, a serpent, not improbably the 'Eyes of Aristotle, and the *Vipera* of Virgil. F. *ciperre*; G. *Natter*, 1. *Maras*; Swed. *Hugg-orm*.) The Adder or Viper, *Vipera communis*, of the Family *Viperidae*, Ord. *Ophidia*, Class *Reptilia*, Sub-kingdom *Vertebrata*. Hab. Europe generally, Ireland excepted. It is found in coppes and dry heaths. Head depressed, oval, no teeth in the upper maxillary bones, excepting the poison fangs, a row of small teeth in the palatine bone on each side. Body covered with scales, colour variable, but usually brown or olive, with markings of much darker tint. The common snake is harmless, but the adder's bite is poisonous. The adder is known by its smaller size, the numerous and small cranial plates, and the zigzag, continuous dark-coloured line running the whole length; the common snake is known by its larger size, the large and few cranial plates, the non-continuous dark spots, and its more depressed and prolonged head. The flesh was formerly thought to be invigorating and useful in ulcers and elephantiasis. The bite is very painful, but rarely, if ever, terminates fatally. Viper-catchers rub oil into the part bitten over a chafing dish of charcoal. See *Snake-bite*.

A's tongue. (F. *ophioglossae vulgare*; G. *Natterzunge*.) The *Ophioglossum vulgatum*.

A. wort. The *Polygonum bistorta*.

Addison, Thomas. English Physician, b. 1793 at Long Benton, near Newcastle, d. 1860.

Addison's disease. (F. *Maladie bronze*, *maladie d'Addison*; I. *malattia dell' Addison*, G. *Addison'sche Krankheit*.) *Melasma supra-renal*. Tubercular infiltration of the supra-renal bodies, usually characterised by discoloration or bronzing of the skin and progressive asthenia, which is ultimately fatal, first described by Dr. Addison. The symptoms are great debility, without much loss of flesh, shallow, easily hurried respiration, irritability of stomach leading to nausea and vomiting, pain in the epigastrium and loins, feebleness of the heart's action, palpitation, and vertigo. As the disease progresses, abnormal deposits of colouring matter take place in the skin, and in some of the mucous membranes, producing a dusky brown, smoky, or olive tint of the parts affected. The discoloration begins as a rule on the face, neck, hands, and forearms, and the shade is usually deeper here than on the general surface of the body. The axillae, groins, nipples, penis, and scrotum, are commonly very dark. The lips, gums, and tongue are sometimes affected, but the conjunctivae escape, remaining pearly white. The skin is cool, the tongue clean and moist, bowels regular, urine scanty and deficient in urea. Towards the close of life the patient lies in a dreamy, semi-comatose state, there is seldom delirium, the body gives off a cadaveric odour, the skin is often scaly, and death ultimately takes place from exhaustion. The bronzing has occasionally been observed without disease of the supra-renal bodies, and, *vice-versa*, disease of the supra-renal bodies has been noticed without the bronzing. After death the adrenals are usually

ADDITAMENTUM—ADDUCTOR.

found enlarged and noduleated; they are changed into a dense, greyish, translucent, fibroid material, enclosing opaque, yellow cheesy masses; sometimes there is calcareous degeneration, sometimes tubercular abscesses. The degeneration is manifestly tubercular; miliary tubercles are in many cases found in the lungs and other structures; in a few cases caries of the vertebra is a concomitant. The nerves distributed to the capsules have been noticed to be enlarged. The connection between the dimmer of the adrenals and the discoloration of the skin and the fatal anthrax is as yet unknown. The cause of the cutaneous discoloration is an excessive deposit of pigment in the rete mucosum, and pigment has been observed in the blood. The disease is most common in males, the proportion in 129 cases being 92 males and 36 females; and it is rare in youth or old age. The disease is always fatal in the end, sometimes rapidly so; it may prove fatal in a few weeks or it may last several years. The treatment is directed to the diminution of the distressing symptoms.

A. addit. A synonym of *Salvadora*.

Additamentum. (*Addo*, through the obsolete verb *addito*, to add to.) An addition. A small suture sometimes found added to the lambdoid and squamous sutures.

Also a synonym of *Epiphysa*.

A. ad antrum-lumbale. The *Accesorius ad antrum-lumbale*.

A. add. The *Appendix acri vermiformis*.

A. additum. The adducan.

A. additum-lumbale. See *Additamentum*.

A. additum. The radius.

A. additum additum. The adducan.

Adductio. (*Adduco*, to bring to, or lead to. *F. adductor*; *G. anziehen*.) Leading, or bringing together; adducant.

A. oculi. A synonym of the *Rectus internus* muscle of the eye.

Adduction. (*Adduco*, to lead, or bring to. *F. adductor*; *L. adducere*; *G. adducen*; *G. Anziehen, Annehmung*.) The movement by which one part of the body, as a limb, or finger, is led or brought to another, or to the median line.

Adductor. (*Adduco*, to lead, or bring to. *F. adductor*; *L. adducere*; *G. adductor*; *G. Anzieher*.) A term applied to certain muscles that draw a part towards the middle line either of a limb or of the body.

A. additum digitorum. A synonym of the *A. pollicis manus*.

A. additum. A very small muscle arising from the fascia on the ventral surface of the sterno-hyoid in Amphibia. The fibres are directed upwards and outwards to be inserted into the last branchial arch.

A. brevis. (*F. Adductor court, a. adductus de la cuisse, adducto-pubio-femoral*, Ch.; *G. kurzer Anzieher des Schenkels*.) A muscle of the thigh arising from the front of the descending ramus of the pubis on the outer side of the granulis and the inner side of the obturator externus. It is inserted into the line leading from the small trochanter to the linea aspera, behind the pectineus and adductor longus. The profunda artery and anterior branch of the obturator nerve are in front of it, the adductor magnus, posterior branch of the obturator nerve, and a branch of the circumflex artery behind it. The internal circumflex artery passes between its upper border and the obturator externus. It is an adductor of

the thigh and a flexor of the hip-joint, and is supplied by the internal circumflex and first perforating of the profunda, arteries, and by a branch of the posterior and occasionally by one from the anterior division of the obturator nerve.

A. digiti quart. A muscle found in the chameleon, corresponding to an interosseous muscle, and attached to the fourth digit.

A. digiti tertii. A muscle found in the chameleon, corresponding to an interosseous muscle.

A. digiti tertii pedis. The second plantar interosseous muscle.

A. femoris perimus. A synonym of the *A. longus femoris*.

A. femoris quartus. A term applied to a part of the *A. magnus*.

A. femoris secum'dus. A synonym of the *A. brevis* of the thigh.

A. femoris tertius. A term applied to a part of the *A. magnus*.

A. gracilis. A synonym of the *Gracilis* muscle.

A. longus. (*F. adductor moyen de la cuisse, a. premier, pubio-femoral*, Ch.; *G. langer Anzieher des Schenkels*.) A muscle of the thigh arising by a round tendon from the fore part of the angle of the pubis, and inserted into the middle third of the middle lip of the linea aspera, between the vastus internus in front and the adductor magnus behind. It is in relation in front with the articular, from which it is separated by the femoral vessels; behind are the adductores magnus and brevis, with the superficial branch of the obturator nerve and the profunda vessels. It is a flexor and adductor of the hip joint; and is supplied by the internal circumflex and muscular branches of the femoral artery and by the anterior division of the obturator nerve.

A. magnus. (*F. adductor long de la cuisse, a. trochantin, a. grand, ischio-femoral*, Ch.; *G. grosser Anzieher des Schenkels*.) A muscle of the thigh arising from the pubic arch of the innominate bone, the attachment extending from the symphysis to the lower part of the ischial tuberosity. It is inserted into the lower part of the linea quadrata, the line leading down to the linea aspera from the great trochanter, the linea aspera, and the continuation of that line to the inner condyle. The fibres arising from the ischial tuberosity have a special tendon of insertion into the inner condyle of the femur. The two divisions of the muscle diverge below, leaving an aperture, which is fleshy behind and aponeurotic in front, and through which pass, from before backwards, the femoral artery and vein to become the popliteal. On the anterior surface are the other two adductors and the pectineus, with the obturator nerve and the profunda artery. The posterior surface touches the hamstring muscles and the great sciatic nerve. In contact with the upper border are the obturator externus and the quadratus femoris, with the internal circumflex vessels, and along the inner or lower border lie the gracilis and sartorius. It is an adductor of the thigh, and assists in rotating it outwards, it is supplied by the internal circumflex and the perforating branches of the femoral artery, and by the posterior division of the obturator nerve, and a branch of the great sciatic nerve.

A. musculus digiti pedis. A synonym of the first plantar interosseous muscle.

ADDUCTORES--ADELOMORPHOUS.

A. metacarpi minimi digiti. A synonym of the *A. minimi digiti*.

A. minimi digiti. (F. *adducteur du petit doigt, opposant du petit doigt, carpo-metacarpal du petit doigt*, Ch.; G. *Anzieher des kleinen Fingers*.) A muscle of the inner side of the hand. It arises from the annular ligament and the process of the ulnar bone, and is inserted into the whole length of the anterior surface of the fifth metacarpal bone. It is covered by the flexor brevis and abductor minimi digiti. It lies on the last interosseous space and metacarpal bone, and on the deep branches of the ulnar artery and nerve, which pass beneath its upper part. Along the radial border lie the long tendons of the little finger, and its ulnar border has a branch of the dorsal cutaneous nerve and of the metacarpal artery running along it. It is supplied by the ulnar nerve and deep branch of the ulnar artery.

A. minimus. A term applied to the upper transverse fibres of the *Adductor magnus* separated from the rest by the superior profunda artery.

A. muscles of foot. The three plantar interossei and the adductor pollicis.

A. muscles of hand. The three palmar interossei, the adductor pollicis, and the adductor minimi digiti.

A. muscles of thigh. The gracilis, pectineus, adductor longus, adductor brevis, and adductor magnus.

A. oculi. (F. *adducteur de l'œil*.) A synonym of the *Rectus internus* of the eye.

A. pollicis. The *A. pollicis manus*.

A. pollicis manus. (F. *adducteur du pouce; metacarpo-phalangien du pouce*, Ch.; G. *Anzieher des Daumens*.) It arises from the whole length of the palmar surface of the metacarpal bone of the middle finger, it is inserted with the inner tendon of the flexor brevis pollicis into the ulnar side of the base of the first phalanx of the thumb, and into the internal sesamoid bone. The cutaneous surface is in contact with the tendons of the flexor profundus and lumbricales muscles, the deep surface lies on the first dorsal interosseous muscle, and the second and third metacarpal bone with the intervening muscles. It is supplied by the ulnar nerve and by the superficialis volæ artery.

A. pollicis pedis. (F. *adducteur du gros orteil, metatarsophalangien du gros orteil*, Ch.; G. *Anzieher der grossen Zehe*.) It arises from the tarsal extremities of the second, third, and fourth metatarsal bones and from the sheath of the tendon of the peroneus longus, and is inserted with the outer portion of the flexor brevis pollicis into the outer side of the base of the first phalanx of the great toe. To the inner side is the flexor brevis, and beneath the outer border the external plantar vessels and nerve are directed inwards. It is supplied by the external plantar nerve and by the branches of the plantar arch.

A. tri-ceps femoris. A term applied to the three adductors of the thigh, magnus, longus, and brevis.

Adductores. (Same etymon.) A term applied by Hedwig to the early stage of the *eporanga* of monemes.

A. branchia rum. Muscles found in the tadpoles of Batrachia; the first runs from the dorsal end of the second branchial arch to the first gill-tuft, the second similarly from the third branchial arch to the second gill-tuft; the third,

long and delicate, extends from the angle between the preopercoid and scapular cartilages forward to the root of the third gill tuft and dorsal part of the last branchial arch.

Adec. Arabic for *Lac acetosum*, or sour milk.

Adech. (Arab.) A Paracelsian term for the vital spirit of man, and internal author of the intrinsic operations and functions.

Adeciduous. Term applied to placental mammals having no *Decidua*.

Adec'tos. (Ἀδύκτος, from ἀ, neg.; δύνω, bite.) An old name for a remedy which can remove the uneasy sensation caused by the action of more energetic medicines.

Adel-Adagam. Common name of the *Adhatoda vasica*.

Adelaide. Australia; the capital of South Australia, situated on rising ground on the River Torrens, seven miles from the sea. It has an average temperature in the winter of 13.5° C (56.3° F.), and in the summer of 27.7° C. (81.9° F.) See *Australia, South*.

Adelarthrosomata. (Ἀδάρθρος, not seen; ἄρθρον, a joint, σῶμα, the body.) An Order, according to some, of the Division *Taracharia*, Class *Arachnida*. Abdomen present, more or less distinctly segmented, undistinguishable from the cephalothorax, mouth with masticatory appendages. It comprises harvest-spiders and chelifers.

Adelheidsquelle. In Heilbrunn, a healthy town in the lower Alps of Bavaria, altitude, 2400 feet. Mineral waters saline, containing iodine and bromine. Temperature, 10° C (50° F.) Season, May to September. Alterative and tonic, the iodine is very small in quantity, and its influence in treatment is doubtful. Used in scrofulous complaints, strumous affections of the skin, rheumatism, and gout, and for complaints peculiar to females.

Adelholz'en. Bavaria, near Traunstein. A bicarbonated calcareous water, recommended in gout.

Adelide. (Ἀδής, concealed.) A French term used by some authors for insensible, as *transpiration adelide*, insensible perspiration.

Adeliparia. (ἄδην, enough, abundant, λίπας, fat.) Name by Alibert for *Polyneurea*.

Adelobranchiata. (Ἀδής, not visible, βράγχια, the gills. F. *adelobranchiate, adelobranché*.) An Order of the *Gastropoda*, according to some authors, in which the branchia are not externally visible.

Adelocodonie. (Ἀδής, concealed; κώδων, a bell.) A term applied to the sessile closed sacs, sporocysts, in the Hydrozoa, consisting of a process of the ectoderm and endoderm, with a pouch of the somatic cavity contained (Macalister).

Adelodagam. A bitter; hant, *Adhatoda vasica*, used in Malabar against asthma, catarrh, and gout.

Adeloderma. (Ἀδής, hidden; δέρμα, the skin. F. *adeloderme*.) A Sub-order of the *Gastropoda*, in which the branchia are not seen externally. (Férussac.)

Adelomorphous. (Ἀδής, concealed; μορφή, shape, form.) A term applied by Rollett to inconspicuous cells of rounded form which line the glands of the stomach to a greater or less extent. In some instances, as in the so-called mucous glands, the cylindrical epithelium of the general surface of the mucous membrane occupies the mouth of the gland, and is replaced in its

ADELOPHNEUMONA—ADENOCYCLE.

neck and fundus by the adeliomorphous or chief cells (Hauptzellen of Heidenhain). In the peptic glands of the pylorus the adeliomorphous cells enclose the cylindrical cells of the orifice and line the neck of the gland, but are themselves separated from the wall of the gland, and ultimately altogether replaced near the fundus by the deliomorphous cells of Ballett (Belegzellen of Heidenhain). In the process of digestion these cells at first swell up strongly, and then return to their former size.

Adelopneumona. (Ἀδύλον, hidden; πνεύμα, the lungs. *P. adelopneumona*.) Applied by Gray to an Order of the *Gastropoda* that breathe by branchia hidden in the interior of the body.

Adelopyodous. (Ἀδύλον, hidden; ποῦς, foot. *G. Adelopyodous*.) A term applied to animals whose limbs are concealed.

Adelopheous. (Ἀδελφός, a brother, or relation.) Related, cognate, formerly applied to diseases which have an affinity to each other.

Adelphia. (Ἀδελφός, a brother, *P. adelphia*.) In Terminology, a form of monstrosity which is double.

Also a term used to express similarity between diseases.

Adelphiria. (Ἀδελφία, brotherhood.) Term applied to parts having relationship to each other in disease.

Adelphiria. (Same etymon.) Sympathy.

Adelphous. (Ἀδελφός, a brother. *P. adelphous*; *G. adelphous*.) Term applied to the union of stamens by their filaments, the number joined being indicated by the prefix, as, monadelphous, di-, tri-, and polyadelphous.

Ademonia. (Ἀδemonia, trouble, distress. *P. ademonia*; *G. Angst*.) Restless thought; mental distress or anxiety.

Ademonysia. (Ἀδemonysia, rare form for *Ademonia*.) Depression of spirits, nostalgia.

Aden. (Ἄδην, a gland.) A gland, a bubo.

Adenalgia. (Ἄδην, a gland; ἄλγος, pain. *P. adenalgia*; *G. Drüsenleider*.) Pain in a gland.

Adenanthera. (Ἄδην, a gland; άνθή, a man.) A Genus of the Suborder *Dioscorea*, Nat. Ord. *Rutaceae*, chiefly found in Southern Africa. The flowers have a cupuliform receptacle. Petals naked and subconnate. Stamens 10, 5 epipetalous and sterile, and 5 fertile and surmounted with a stipitate gland. Gynacium composed of 2-5 carpels with stipitate gland, style fused into a 2-5 lobed column, with dissected extremity. Fruit formed of 2-5 cocon. Leaves alternate. They are aromatic, and are employed as stimulants, expectorants, and diuretics.

A. uniflora. The leaves of this species, mingled with those of some *Dioscorea*, *Barosma*, *Agathosma*, &c., constitute *Bucku*.

Adenanthura. (Ἄδην, a gland; άνθή, a man.) A Genus of plants of the Suborder *Rutaceae*, Nat. Ord. *Leguminosae*.

A. pavonia. (Tam. *Anai-kundamune*; Hind. *Kashan-dona*.) Hab. India. A large tree, with bipinnate leaves and small, fragrant, yellow flowers. The seeds are of a shining scarlet colour, with a circular streak in the centre, and are used as weights by the jewellers, each being equal to four grains. They are said to be poisonous.

Adenostegia. (Ἄδην, a gland; στεγία, away from a place. *P. adenostegia*; *G. Adenostegia*.)

A condition in which a gland does not occupy its natural situation.

Adenomphrasia. (Ἄδην; ὑπέρφρασις, to obstruct. *P. adenomphrasia*; *Drüsenverstopfung*.) Term for glandular obstruction.

Ademia. (*P. ademia*.) A term applied to a form of disease frequent in scrofula, and occasionally seen in syphilis, in which many of the lymphatic glands of a particular region are affected with chronic adenitis. See *Adenoma lymphaticum*.

Also used to describe certain of the conditions of *Leucocythæmia*.

Adenia venenata. A doubtful name of a strongly poisonous plant of Arabia.

Also the name of a Passion flower growing in Central Africa, and used as a venenat.

Adeniform. (Ἄδην, a gland; forma, resemblance.) Formed like a gland; glandiform; of the shape of a gland.

Adenisation. (Ἄδην, a gland. *P. adenisation*.) The state of a part in which adenoid degeneration has taken place; or the pathological process in which it consists.

Adenitis. (Ἄδην, a gland. *P. adenitis*; *G. Drüsenentzündung*.) Inflammation of a gland.

A. nasalis. This may be either preceded by an inflammation of the ducts, *angiolacria*, or the inflammation may commence in the interior of a gland by the absorption of some deleterious agent from a simple, a syphilitic, or a malignant cause. General phenomena of inflammation are observed. The afferent and efferent vessels become constricted by the exudation of inflammatory products, and pus is formed. Such cases of phlegmonous adenitis are common in the groin, where care must be taken to avoid confounding them with strangulated hernia, and in the axilla. Adenitis may terminate in resolution, in induration, or in suppuration. The treatment should be directed to the constitutional disturbance causing the formation of the tumour. In the early stages leeches may be needed, with fomentations or poultices, or spirit lotions may be sedulously applied. If an abscess form, several punctures may be made into it through the skin with a needle, or it may be opened, or aspirated, or poulticed and allowed to burst, or a seton may be passed through it.

A. chronic. This condition constitutes the greater number of the so-called *cold abscesses* and scrofulous swellings. They are very common in the neck. Iodide of potassium in spirit lotion, or iodine ointment is generally recommended; tonics and cod-liver oil, and good diet will be needed. The sore, after the opening of the abscess, may need stimulating applications.

A. methobialis. A term used to describe inflammation of the Meibomian glands.

Also a synonym of *Chalazion*.

A. subcutis. A condition which often follows injuries or strains, especially in weakly or scrofulous persons. Spirit lotions containing iodide of potassium, good diet, tonics, and rest are advised.

Adenitis lymphatica. Inflammation of the lymphatic glands.

A. mesenterica. Inflammation of the mesenteric glands.

A. palpebrarum contagiosa. A synonym of purulent ophthalmia.

Adeno- (Ἄδην, a gland.) This word occurring as a prefix in many compound terms denotes relation to, or connection with, the glands or adrena.

Adenocycle. Same as *Adenoma*.

ADENOCHIRAPSOLOGIA—ADENOMENINGEUS.

Adenochirapsologia. ('Αδὲν, χειρὰ, a touching with the hands; λόγος, a discourse. F. and G. *adenochirapsologie*.) The doctrine of the reputed faculty possessed by the kings of England of curing scrofulous disease by touching the patient.

Adenochoradologia. The same as *Adenochirapsologia*.

Adenochoradologia. ('Αδὲν, χοιρᾶδον, scrofulous swellings; λόγος, a discourse.) The doctrine of glandular and strumous swellings, a book under this title was published by Dr. John Browne, of Norwich, in 1684.

Adenochondrious. ('Αδὲν, a gland; χόνδρος, cartilage.) Applied to tumours affecting gland and cartilage.

Adenodes. Same as *Adenose*.

Adenodias'tasis. ('Αδὲν, διάστασις, a separation. F. *adenodiasé*.) Division of a gland, the abnormal separation of the lobes of conglomerate glands from each other.

Adenodyn'ia. ('Αδὲν, a gland; ὀδύνη, pain.) Pain in a gland.

Adenogenesis. ('Αδὲν, γένεσις, generation. F. *adenogenése*, G. *Drusenbildung*.) The formation of glands.

Adenography. ('Αδὲν, a gland, γράφω, to write. L. *adenographia*; F. *ad-nographie*, G. *die Beschreibung der Drusen*.) Term for a treatise or dissertation on the glandular system.

Adenoid. ('Αδὲν, a gland. L. *adenoides*, F. *adenoidé*, G. *drusenförmig*.) Resembling a gland, adeniform, gland-like, glandular.

A. body. A synonym of the *Prostate gland*.

A. cancer. See *Cancer, adenoid*.

A. muscle. A small fasciculus of muscular fibres occasionally found on each side of the thyroid gland, it forms part of the inferior constrictor of the pharynx. (Winslow.)

A. tissue. A variety of connective tissue occurring in the lymphatic glands, Peyer's patches, mucous membrane of the alimentary canal, and other structures. It consists of delicately reticulated, sometimes nucleated, fibres, in the meshes of which are numerous lymphoid corpuscles.

A. tumour. A tumour presenting the structure of a gland. See *Adenoma*.

A. vegetations. Term applied to small polypoid growths of mucous membranes.

Adenol'da corpora. ('Αδὲν, a gland; corpus, a body.) A term proposed instead of melanosa for those tumours in which the glandular structure is more important than the pigment deposit.

A. plas'mata. (Πλάσμα, a thing formed.) A synonym of *A. corpora*.

Adenoides. An old epithet of the prostate gland.

Adenologadit'is. ('Αδὲν, λογάδιν, the white of the eye.) Inflammation of the Meibomian glands and of the conjunctival membrane of the eye.

Adenology. ('Αδὲν, a gland, λόγος, a discourse. L. *adenologia*; F. *adenologie*, G. *Drusenlehre*.) The doctrine which treats of the glandular system.

Adenolymphat'oceles. The same as *Adenolymphocèle*.

Adenolymph'ocèle. ('Αδὲν, a gland; lymph, water, ὥλη, a tumour.) Dilatation of the afferent or efferent vessels of lymphatic glands.

Adenolympho'ma. A synonym of *Lymphadenoma*.

Adenoma. ('Αδὲν, a gland; and the ter-

mination *oma* adopted to indicate a tumour. F. *adenome*, *tumeur glandulaire hypertrophique*; I. *tumore glandulare*; G. *Lymphome*, *Drusengeschwulst*.) Adenomata are tumours originating from pre-existing gland structure and presenting the general characters of racemose or of tubular glands. Robin considers that they differ, according to whether all the constituent parts of a gland are equally or nearly equally hypertrophied, or whether only the vesicles or closed sacs, with their contained epithelium, have augmented in number and in volume, without the intermediate elements of the gland being altered in quantity or disposition; or whether the walls alone of the vesicles have become thickened and enlarged with or without fibroid degeneration, or lastly, whether, as is most usual, the epithelium alone of the gland vesicles has increased in quantity and altered in character. In this last case, by the distension of the vesicles and the compression of the intermediate tissue, the tumour may assume the characters of an epithelioma, or the organ may actually, as a whole, diminish in size, as is sometimes seen in the case of the mamma and liver. Adenoid tumours are lobulated, hard, non-adherent to the skin or surrounding tissues, not painful, and develop slowly. The mammary, parotid, thyroid, prostate, and sudoriparous glands, are those that are most frequently affected. They may remain in direct connection with the gland from which they sprang, or they may become separated and encapsulated.

Adenomata are usually divided into two forms, the *racemose* and *tubular*.

A. ac'inous. A synonym of *Racemose adenoma*.

A. cylin'drical. A synonym of *Tubular adenoma*.

A. rac'omose. This form occurs in the breast gland and the cutaneous glands, less frequently in the salivary and mucous glands. It seldom exceeds the size of an egg, is firm, elastic, smooth, and lobulated. It consists of small acini, limited by a fine hyaline membrane, and enclosing two or more layers of small epithelial cells. The acini communicate with each other, and are surrounded by a greater or less quantity of connective tissue, which carries the blood-vessels, and sometimes contains spindle-cells. Racemose adenomata approach the characters of cancer when the cell element predominates, those of fibroma when the connective tissue is in excess. Fatty degeneration and cystic and mucoid changes are not uncommon.

A. tu'bular. This form occurs in the glands of mucous membranes, and constitutes one form of mucous polypus. It is soft, greyish, slightly vascular, somewhat gelatinous, and semitranslucent, and occasionally pedunculated. A longitudinal section displays long, sacculated gland tubes, often with lateral outgrowths, enclosing cylindrical epithelial cells of larger size than natural, in transverse section the same tubes appear as circles lined with epithelium, and containing a refractile colloid material. Tubular adenoma is very liable to cystic degeneration, in which is a colloid or mucoid substance; it is very subject to cancerous infiltration.

Adenomala'cia. ('Αδὲν, μαλακία, softness. F. *adenomalacia*, G. *Drusenverweichung*.) Softness or softening of the glands.

Adenomeninge'us. ('Αδὲν, μὲνινξ, a membrane. F. *adenomeningée*.) A name given

ADENOMESENTERITIS—ADEPS.

by Pinel to the mucous or pituitous fever (*Febbris adenomeningea*), because the membranes and follicular glands of the intestines were held to be the chief seat of the complaint. Probably typhoid fever.

Adenomesenteritis. (Ἀδὴν; *mesenteritis*. F. *adénomésenterite*.) Inflammation of the mesenteric glands.

Adenomyxoma. (Ἀδὴν, and μύξα, mucus.) A composite growth, presenting the characters both of adenoma and of myxoma.

Adenoncosis. (Ἀδὴν; *όγκωσις*, to increase in bulk. F. *adenoncosis*; G. *Drüsengeschwulst*.) The swelling of a gland.

Adenonervosus. See *Adenoneurosus*.

Adenoneurosus. (Ἀδὴν; *νέυρον*, a nerve. F. *adenoneuruse*.) A term applied by Pinel to the plague (*Febbris adenoneurosa*), because the disease attacks the nerves and lymphatic glands of the axilla and groin.

Adenopathy. (Ἀδὴν; *πάθος*, disease.) Affections or diseases of glands, and especially of the lymphatic glands.

Adenopetaly. (F. *adenopetalie*.) A term employed by Morren to indicate the metamorphosis of the nectary into petals.

Adenopharyngeal. (Ἀδὴν, a gland; *φάρυγξ*, the throat.) That which belongs to, or relates to, the pharynx and the thyroid gland.

A. muscle. A part of the inferior constrictor muscle of the pharynx, consisting of a small muscular fasciculus found on each side of the thyroid gland. Also called *Adenoid muscle*.

Adenopharyngitis. (Ἀδὴν; *φάρυγξ*, the throat. F. *adenopharyngite*.) Inflammation of the tonsils and pharynx.

Adenophorous. (Ἀδὴν; *φέρω*, to bear. F. *adenophore*; G. *Drüsentragend*.) Applied to a plant or an organ having glands on some one of its parts.

Adenophthalmia. (Ἀδὴν; *ὀφθαλμός*, the eye. F. *adenophthalmie*; G. *Augendrüsenentzündung*.) Inflammation of the Meibomian glands.

Adenophthalmitis. Same as *Adenophthalmia*.

Adenophyllous. (Ἀδὴν; *φύλλον*, a leaf. F. *adenophylle*; G. *drüsenblättrig*.) Applied to a plant with leaves possessing glands.

Adenophyma. (Ἀδὴν; *φύμα*, a tumour. F. *adenophymie*; G. *Drüsengeschwulst*.) A glandular tumour.

Adenopodus. (Ἀδὴν; *πούς*, a foot. F. *adenopode*; G. *drüsenfüssig*.) Having glands on the petioles, as the *Passiflora adenopoda*.

Adenos. The ancient name of cotton.

Adenosarcoma. (Ἀδὴν; *σάρξ*, flesh.) A tumour, presenting the characters of a sarcoma mixed with adenoid growth.

Adenoscirrhous. (Ἀδὴν; *σκίρως*, or *σκίρρος*, an induration. F. *adenoscirrhe*, *adenosquirrhe*; G. *Drüsenkirrhue*.) Glandular scirrhus.

Adenosclerosis. (Ἀδὴν; *σκληρώσις*, to harden. F. *adenosclérose*; G. *Verhärtung der Drüsen*.) A term applied to a hard indolent swelling of a gland, not of a scirrhus character.

Adenose. (Ἀδὴν, a gland. F. *plein des glandes*.) Having many glands; full of glands; glandulous.

Adenoses. (Ἀδὴν.) Chronic diseases of the glandular system. (Alibert.)

Adenosis. Same as *Adenogenesis*.

A. scrofulosa. Scrofula.

Adenostemon. (Ἀδὴν; *στήμων*, a thread. F. *adénostémone*; G. *drüsenstaubfädig*.) Having glands on the filaments of the stamens, as *Macairea adenostemon*.

Adenostyles. (Ἀδὴν; *στυλος*, a pillar. F. *adenostylé*.) Applied by Cassini to a tribe of the Compositae having the *Adenostyles* for their type.

Adenosynchitonitis. (Ἀδὴν; *synchiton*, the conjunctiva, from *syn*, together, *χίτων*, a tunic.) Same as *Adenologaditis*.

Adenotomy. (Ἀδὴν; *τέμνω*, to cut. F. *adenotomie*.) Term for dissection of the glands.

Aden ulcer. An ulceration of the leg which follows on a condition of body very similar to *Beriberi*.

Adephaga. (Ἀδεφάγος, voracious.) A Sub-group of the Group *Pentamera*, Order *Coloptera*. Two palpi to each maxilla; antennae filiform.

Adepha'gia. (Ἀδην, one's fill; *φαγεῖν*, to eat.) Voracity, or the disease *Bulimia*.

Ad'eps. (L. *adeps*, the soft fat of animals; perhaps from *ἀλειφα*, anointing oil. F. *lard*, *graisse*; I. *grasso*, *adips*; S. *grasso*, *manteca*; G. *Fett*, *Schmalz*; Dutch, *vet*, *talk*.) The official name, U.S. Ph., of the fat of the hog. Lard contains 62 per cent. of olein and 38 per cent. of palmitin and stearin. It has been adulterated with potato flour, water, and also with salt, alum, potassium and sodium carbonates, and lime. The starch grains may be detected by the microscope, the saline matters by incineration.

A. anserinus. (F. *graisse d'oie*; G. *Gansesfett*.) The fat of the goose.

A. an'seris. (L. *anser*, a goose.) The fat of the goose.

A. benzoatus. Br. Ph. Benzoated lard. Prepared lard, 16 oz.; benzoin in powder, 169 gr.; heat together in a water bath for two hours, stirring occasionally, and strain; lastly, stir till cold. Out of the 160 grs. of Siam benzoin in tears 60 grs. remain undissolved. Proportion 1—64. The benzoin is intended to prevent the occurrence of rancidity. It is used as a basis for ointment and suppositories.

A. cantharidibus medicatus. The *Pommade épispastique verte*. Fr. Codex.

A. cortice daphnes gnifitii medicatus. The *Pommade épispastique au garou*. Fr. Codex.

A. ex hydrargyro mitius dictum cinereum. The *Unguentum oxidii hydrargyri cinerei*.

A. humanus. Human fat.

A. hydrargyri muria'te oxygenato medicatus. The *Pommade de Cirillo*. Fr. Codex.

A. hydrargyri nitra'te medicatus. The *Unguentum hydrargyri nitratis*.

A. hydrargyri oxid'o rubro et plum'bi aceta'te medicatus. The *Pommade ophthalmique de Regent*. Fr. Codex.

A. hydrargyro medicatus. The *Unguentum hydrargyri*.

A. lauro medicatus. The *Pommade de laurier*. Fr. Codex.

A. medullae bo'vis. (G. *Rindmarkfett*.) The fat contained in the spinal canal of the ox.

A. myristiceae. (F. *beurre de muscade*; G. *Oleum myristicae*; Aust. and Belg. *ol. nucis moschatae*.) Concrete oil of nutmegs, or oil of mace; *Oleum myristicae expressum* of the B. Ph. A

ADEPTA PHILOPHIA—ADHERENCE.

concrete oil of firm consistence and orange colour, obtained from nutmegs by expression and heat. It is contained in the *Emplastrum calcifacens* and in the *Emplastrum piceum*.

A. adustiferus. Aromatic lard. Made by mixing lard and magnolia pomade in equal weights.

A. ovillus. (*L. ovum*; *F. suif*; *I. ovo*; *S. obo*; *G. Hammeltalg*, *Dan. Færcialg*; *Dut. eesvet*.) The fat of the sheep, mutton suet; tallow.

A. ex'ide sin'et medicat'us. The *Unguentum erodi sinet impurum*.

A. oxygenu'sus. Oxygenated lard. A non-official preparation made by heating 8 parts of lard with 1 of nitric acid, sp. gr. 1.5, added by degrees, and stirring till nitrous acid is given off, when it is removed from the fire and stirred till cool. Used, when mixed with half its weight of almond oil, to dilute citrine ointment.

G. Ph. Nitric acid 1, lard 16 parts.

A. papav'ere, hyoscy'amo et belladonna'ne medicat'us. The *Pommade papaverum*. *Fr. Codex*.

A. pedum tauri. (*G. Rindstauhfett*.) Neat's foot oil, or fat.

A. preparat'us. *Br. Ph.* Prepared lard, as above. The fresh internal fat of the abdomen of the hog, *Sus scrofa*, washed in cold water, then liquefied at a heat not exceeding 100° C. (212° F.), strained through flannel, put into a pan, heated by steam to a slightly higher temperature until it becomes clear and free from water, and again strained. A soft white substance, melting at about 38° C. (100.4° F.), and soluble in ether. Used as a base for ointments.

A. suillus. (*F. assuige, greisse, saindoux*; *L. suum de capra, grasso di porco lardo*; *S. manica de porco*; *G. Schweinschmalz, Schwinnefett*; *Dut. Kruiet*; *Dan. Svinfedt*; *Swed. Svinvetur*, *Arab. Sunkumbansir*.) The fat of swine; lard; hog's lard, seim. See *Adipo preparat'us*.

A. suillus cura'tus. A synonym of *A. preparat'us*.

A. suillus preparat'us. A synonym of *A. preparat'us*.

A. sulfur'e et ammoni'aco marin'is medicat'us. The *Pommade antiporique*. *Fr. Codex*.

A. sulfur'e et carbona'to potas'sum medicat'us. The *Pommade antiporique d'Hellmerich*. *Fr. Codex*.

A. tartaro stib'i medicat'us. The *Unguentum antimonii tartarati*, *Br. Ph.*, and similar ointments.

Adepta philosophia. See *Adeptus*.

A. medicina. See *Adeptus*.

Adept'us. (*Adiposus*, to obtain or come by a thing.) Having gotten, or obtained; applied by Paracelsus, and van Helmont, to that kind of philosophy which aimed at the transmutation of metals, and the discovery of a universal remedy, styled *Adepta philosophia*, its professors being called adepts.

Formerly applied to a branch of medicine which professed to treat diseases caused by the influence of the stars and planets, and was called *Adepta medicina*.

Ademia. (*A. priv*; *Græc.* the skin *F. adema*; *G. Hautmangel*.) Absence or defect of the skin.

Adermomer'ia. (*A. neg*; *Græc.* the skin *F. adema*; *G. Hautmangel*.) Paralysis or loss of sensibility of the skin. (*D.*)

Adermotroph'ia. (*A. Græc.* *τροφή*, nourishment.) Atrophy or imperfect nutrition of the skin.

Ades'mia. (*A. neg*; *Græc.* a bond.) Defective union. M. Morren, who suggested the use of this term in Botany, distinguishes homologous from heterologous ades'mia, the former signifying defective coherence, the latter defective adherence.

Ades'my. Same as *Ades'mia*.

A deux temps. (*F.*) An operation performed *a deux temps* signifies that a preliminary proceeding is undertaken with a view of facilitating the performance of the chief operation, as when an iridectomy is performed previously to the extraction of a cataract. It is also applied to the operation of lithotomy when the calculus, being encysted in a pouch of the bladder or retained by its contraction, cannot be immediately extracted, and is therefore let alone for some days in the hope that during the suppurating stage it will have become disengaged, and may then be extracted.

Adia'tus. See *Affatus*.

Adhæ'rens. (*Adhæ'reo*, to stick to. *G. anhangend*.) Applied to some part of an animal or vegetable united more or less intimately with surrounding parts. See *Adherent*.

Adhæ'sivus. (Same etymon.) See *Adhæ'rens*.

Adhatoda. A Genus of the Nat. Ord. *Asclepiaceæ*. Herbaceous plants with opposite entire leaves. Flowers axillary, with large bracts, calyx gamosepalous, 5-partite; corolla gamopetalous, irregular, bilabiate; anthers bilocular and spurred, ovary superior, with 2 cavities, each with 2 ovules. Fruit a depressed capsule with 4 lenticular seeds.

A Cingalese term for the expelling of a dead fetus, according to Turton.

A. tranquebariensis. (*Tam. Terakam-macrunge*, *Poonakoo-poodoo*; *Tel. Pindi-konda*.) Hab. India. The juice of the leaves is considered cooling and aperient, and is given to children in smallpox. The bruised leaves are applied to contusions.

A. vatica. (*F. Noyer des Indes*; *Hind. and Duk Adala*, *Arusa, Adara*; *Tam. Adatadai*; *Tel. Adasaram*, *Mal. Atabatam*.) Malabar nut. A shrub inhabiting India. The juice of the leaves, in doses of one or two drachms, with one drachm of fresh ginger juice, is used as an expectorant in coughs, asthma, and phthisis. The leaves, flowers, and root are considered antispasmodic, and are given in cases of asthma, intermittent fever, and rheumatism. The fresh flowers are bound over the eyes in cases of ophthalmia. The decoction of the leaves is employed as an anthelmintic.

Adhæ'rence. (*L. adharrentia*, from *adhæ'reo*, to stick to. *F. adharrence*; *I. adharrence*; *S. adhæ'rencia*, *G. Ferkachung*.) The fusion, more or less extensive, of adjoining tissues or organs.

In Botany, in gamopetalous flowers, the filaments of the stamens habitually adhere to the petals, and the petioles of leaves frequently contract adhesions to the stem.

In Medicine, adherence often occurs between inflamed contiguous internal surfaces, as the pleura, and also between opposed or neighbouring parts after burns, as in the case of the fingers, and of the chin and throat.

In Teratog. the fingers and toes, and the margins of the eyelids are sometimes adherent.

ADHERENT—ADIANTUM.

Adherent. (Same etymon.) Attached to; connected with; fused together or coalesced.

A. attraction. Capillary attraction.

A. calyx. In Botany, applied to the calyx when it is more or less united to the ovary, as in the iris, myrtle, and gooseberry.

A. ovary. In Botany, applied to the ovary when the calyx is more or less united to it.

A. placenta. See *Placental adhesion*.

A. stipules. In Botany, applied to stipules which are more or less united to each side of the base of the petiole.

Adhesion. (*Adhaereo*, to stick to. F. *adhésion*; G. *Anhängung*; *Anklebung*.) The act of two bodies sticking to each other.

In Physics, the term is used to denote the form of molecular attraction which is exerted between bodies in closest contact, by which they are enabled to stick to each other. Adhesion may take place between solids, between solids and liquids, and between solids and gases. The force is independent of atmospheric pressure, inasmuch as it is manifested in vacuo.

In Surgery, the term expresses the union of two cut, or raw, or inflamed surfaces, and is of two kinds, *primary* and *secondary*.

In Pathology, the term is applied to unnatural union of two surfaces after inflammation, as when the costal and pulmonary pleurae become adherent after pleurisy; the two pericardial surfaces after pericarditis; or two synovial surfaces after inflammation of a joint.

A. figures. A term applied to the changing form presented by a drop of crude carbolic acid, or of essential oil, when brought into contact with water or other fluid.

A. primary. One of the modes of healing of wounds; in which healthy lymph is poured out when two cut surfaces are brought into close proximity, and vascularisation and cicatrization take place without suppuration. See *Healing of wounds*, *Lymph*.

A. secondary. That mode of healing of wounds in which primary adhesion not having taken place, granulations spring up, and, being brought together, unite. See *Healing of wounds*.

Adhesive. (*Adhaereo*, to stick to. F. *adhésif*; G. *adhäsive*; *verwachsend*.) Having the property of adhesion; capable of sticking to.

A. inflammation. (F. *inflammation adhésive*; G. *verwachsende Entzündung*.) Term for the process by which incised wounds sometimes heal; their sides being brought into exact contact, are united without any suppuration, constituting what is termed, union by the first intention.

A synonym of *Primary adhesion*.

Also a term used to express that form of inflammation in which lymph or plasma is poured out, which, becoming organised, produces adhesions between naturally free parts, or deposits in, and indurations of, the substance of organs.

A. iritis. See *Iritis*.

A. of soft palate. A condition occasionally resulting from the healing of syphilitic ulcerations, whereby the soft palate becomes united to the pharynx, and the aperture between the posterior nares and the mouth is much obstructed.

A. phlebitis. See *Phlebitis*.

A. plaster. (F. *emplâtre adhésif*; G. *harziges Bleipflaster*.) The *Emplastrum resinae*, or *Emplastrum lithargyri cum resina*; made from resin in powder 2 parts, litharge plaster 16, hard soap 1 part; melt the plaster with a gentle heat, add the resin and soap, first liquefied, and mix.

Used, spread on muslin, for bringing the edges of wounds together, and for giving support to ulcers.

Adhesiveness. (*Adhaereo*, to stick to. F. *adhésivité*.) The power or quality of sticking or adhering to. A faculty common to man and the lower animals, producing the instinctive tendency to attach one's self to surrounding objects, animate and inanimate, and also, the love of society. Its organ, according to the phrenologists, is on each side of Concentrativeness, higher up than Philoprogenitiveness, and just above the lambdoid suture.

Adhoda. Same as *Adhatoda*.

Adiabatic. (*Ἀδιάβατος*, from *ἀ*, neg.; *διαβάλλω*, to pass over.) In physics, absence of interchange of heat with surrounding bodies. Applied to the compression or expansion of gases.

Adiantaceae. A synonym of *Adiantum*.

Adiantum. A Subtribe of the Tribe *Polypodiaceae*, Order *Filices*. Sori linear, marginal, placed at the apices of the veins; indusium spurious, formed by the revolute margin.

Adiantum. (*Ἀδίαυρον*, the maidenhair fern, from *ἀ*, neg.; *διαυρόω*, capable of being wetted. F. *capillaire*; G. *Frauenhaar*.) A Genus of the Suborder *Polypodiaceae*, Nat. Ord. *Filices*; or of the Order *Filices*, Class *Filicinae*; Subkingdom *Pteridophyta*. Petioles slender, bi- or tripinnate, pinnules triangular, cuneiform; sori oblong, situated on the apices of all the lobes; indusium marginal, formed by the reflexed portion of the apex of the lobe, veiny, dehiscing on its inner side; sporothecae divided into compartments by septa, which contain the sporangia.

A. Ethiopianum. A species of maidenhair, found at the Cape of Good Hope, and used as an astringent and aromatic, and to relieve cough.

A. album. A synonym of *Asplenium ruta muraria*.

A. aureum. The *Polytrichum commune*.

A. canadense. The *A. pedatum*.

A. capillus veneris. (F. *Capillaire de Montpellier*; G. *Frauenhaarkrautfarn*, *Venushaar*; Dut. *Venushaar*; S. *culantrillo de pozo*; I. *Capilvenere*; Arab. *barsallan*, *cobar-el-bir*; Turk. *baldiri kara*.) The maidenhair fern. Hab. Europe. Leaves doubly compound; leaflets alternate, wedge-shaped, on capillary stalks; indusia oblong; nervures divergent, dichotomous. Grows on moist walls and rocks. It is mucilaginous and aromatic. Used as a pectoral in infusion or syrup. See *Capillaire*.

A. coriandrifolium. A synonym of *A. capillus veneris*.

A. melanocaulon. (Μέλας, black; καυλός, the stalk of a plant.) An Indian species, the leaves of which are believed to be tonic.

A. nigrum. A synonym of *A. capillus veneris*.

A. patens. A synonym of *A. pedatum*.

A. pedatum. (F. *Capillaire du Canada*; G. *fussförmiges Frauenhaar*.) Leaves pedate, divisions pinnate; leaflets oblong, lunate, incised at the upper edge, representing half a leaf. Hab. North America. Used as the *A. capillus veneris*.

A. rubrum. A synonym of the *Asplenium trichomanes*.

A. tenerum. (F. *Capillaire du Mexique*.) Petiole smooth, black, much branched; leaflets trapeziform, alternate, incised at the upper border, dark green. Hab. South America. Used as the *A. capillus veneris*.

A. trapeziforme. A synonym of *A. tenerum*.

ADIAPHORESIS—ADIPOSE.

A. verum. The *Adiantum capillus Veneris*.
A. vulgare. Same as *A. verum*.
Adiaphoresis. (A, priv., *diaphoresis*, to throw off by perspiration. F. *adiaphoresis*.) A term for deficient cutaneous perspiration.
Adiaphoresis. Same as *Adiaphoresis*.
Adiaphorous. (A, priv., *diaphoresis*, to be indifferent.) Indifferent; inert. A term applied synonymously with neutral, to medicines which do neither good nor harm, also to neutral salts.
Adiaphoretic. (A, neg., *diaphoresis*, to perspire. F. *adiaphoretique*, G. *unterbrochene Hautausdünstung*.) Suppression of perspiration; held by the ancients to be the cause of fevers.
Adiaptotos. (A, priv., *diaptotos*, not liable to err.) An electuary composed of stone parsley, henbane, &c., according to Galen, *de C. M. sec. loc.* ix. 4, and which was supposed efficacious against all inflammations. (Gorræus.)
Adiarrhœa. (A, priv., *diarrhœa*, to flow through.) Gr. *adiarrhœa*, used by Erotianus for a suppression or retention of any of the natural secretions.
Adiathesia. (A, neg.; *diathesis*, diathesis. F. *adiathésique*; I. *adiatesico*.) Applied to diseases which are not due to congenital diathesis.
Adib. Arabic for wolf, the liver of which was recommended in all cases of weakness of that organ by Avicenna, in *fen.* 14, *tr.* 1. c. 18, *fin.*
Adibat. (Arab. *Adib*.) A former name for mercury.
Adice. Same as *Adike*.
Adike. (A, priv., *diakinein*, to injure.) Greek name for the nettle.
Adipate. A salt of *Adipic acid*.
Adipatus. (A, priv., *diakinein*, to injure.) Adipose, fatty.
Adipic acid. (A, priv., *diakinein*, to injure.) F. *acide adipique*; G. *Adipinsäure*) Formula $C_6H_{10}O_4$. A dibasic, dicarboxylic acid, obtained as one of the oxidation products of the fatty acids by means of nitric acid, it is also produced by the action of nascent hydrogen on hydromuonic acid. It crystallises in white hemispherical masses or in flat needles, which dissolve in thirteen parts of cold water, sublimes when heated, and melts at $148^{\circ}C$ ($298.4^{\circ}F$).
Adipocera. *Adipocera*.
A. ceto'sa. (L. *cetus*, a sea-monster, a kind of whale.) A synonym of *Spermaceti*.
Adipocere. (L. *adeps*, fat; *cera*, wax. F. *adipocire*, *gras des cadavres*; I. *adipocera*, *grasso dei cadaveri*; S. *adipocera*; G. *Fettwachs*, *Leichenwachs*.) This term, as originally employed by Fourcroy, included cholesterol and spermaceti, as well as the substance now known by the name, which is a whitish soapy material, produced by the exposure of animal structures to moisture when air is excluded. It consists chiefly of ammonium, with some potassium and calcium, in combination with stearic, palmitic and oleic acids; and so is a soap. Its melting point varies from $94^{\circ}C$ ($201.2^{\circ}F$) to somewhat higher. The time required to convert the human body into adipocere varies according to several circumstances, among others according to the fatness, for muscles and viscera require a longer time for the change than fat. In water the conversion has taken place in some degree in five or six weeks, in the earth a much longer period is necessary.
This power of conversion of flesh into fat has been supposed to account for the fatness of geological strata in which animal remains are abundant.

Adipoceriform. Having the appearance of *Adipocere*.
A. tumour. A synonym of *Cholesteatoma*.
Adipocerite. A fatty substance found in peat bogs, along with the ironstone of the coal-measure and with sandstone strata.
Adipoma. A synonym of *Lipoma*.
Adipose. (L. *adeps*, fat; Gr. *λιπαρός*; F. *adipeux*; I. and S. *adiposo*; G. *fettartig*.) Of, or belonging to, or of the nature of, fat.
A. arteries. A name given to branches of the phrenic, capsular, and renal arteries, which supply the fat around the kidneys.
A. cushion of ear. A cushion of fat found in horses and ruminants, and never absent even in the most emaciated animals. It envelopes the base of the concha in front, inwardly and posteriorly. It facilitates the movements of that organ.
A. ligament. (F. *ligament adipeux*; G. *fettartige synovialfalt der Knie-gelenk*.) Term applied to a fold of the synovial membrane lining the knee-joint, it extends from the patella to the space between the condyles of the femur.
A. membrane. The *Adipose tissue*.
A. sarcoma. A term given to a firm fatty tumour, and also to a sarcoma which contains much fatty tissue.
A. tissue. (L. *adeps*, fat; F. *tissu adipeux*; I. *teanito adiposo*; S. *tejido adiposo*; G. *Fettgewebe*.) Fat cells united by connective tissue into lobules which are freely supplied with blood-vessels. Adipose tissue is especially found in man beneath the skin, where it is termed the *panniculus adiposus*, and is accumulated in large masses on the buttocks, palm of the hand and sole of the foot, and female breast, as well as generally over the belly, in the abdomen forming large masses around the kidney; in the mesentery, and omentum, in the thorax, around the heart, in the orbit, in the central medullary cavity of bones, and, in fat persons, abundantly deposited around the vessels and joints, and between the muscles. In many animals adipose tissue is collected in the form of humps and separate masses. It is absent beneath the skin of the eyelids, penis, scrotum and nymphae, the cavity of the cranium, and in such organs as the liver, lung, and kidney. It is pale in colour in the infant, yellower in the adult. Fat or adipose cells are round, or polygonal from pressure, and vary in diameter from 1-500 to 1-50 of an inch. They have a well-defined cell-wall, beneath which is a layer of granular protoplasm, presenting at one point a thickening which surrounds the nucleus and one or more large drops of oil. The oil is liquid during life, but after death presents in some instances a crystalline stroma resulting from the solidification of its less fusible constituents. These constituents vary in different animals, but in man fat is a mixture of a fluid oleaginous substance, triolein $C_{57}H_{104}O_6$, and two solid substances, tripalmitine $C_{51}H_{98}O_6$, and tristearine $C_{57}H_{110}O_6$. The sp. gr. of fat is about 0.924. The blood-vessels form a fine network surrounding and supporting the vesicles and forming lobules. The lymphatics follow the course of the blood-vessels. The nerves found in adipose tissue are those which are traversing it only, and do not furnish any supply to it. The development of adipose tissue results from changes taking place in the ordinary cells of connective tissue; these

ADIPOsis—ADNATE

become enlarged, their protoplasm studded with minute oil globules, which, fusing together, form a single large one, occupying the centre of the cell and pressing the protoplasm and nucleus towards the periphery. The uses of adipose tissue are to distribute pressure, as on the buttocks and mamma; to fill up inequalities, as around joints, to facilitate motion, as in the case of the eye and heart; to retain heat, as in the panniculus adiposus, a striking example of which occurs in the whale, to confer lightness and elasticity; and, lastly, to constitute a store of nutriment, which by its oxidation may maintain the temperature of the body. It is always present where active metamorphosis of tissue is taking place. In prolonged fasting and in wasting diseases it is almost entirely absorbed, the fat cells losing their oil and becoming partially filled with a serous fluid. Its accumulation is favoured by abundant food, whether nitrogenous or non-nitrogenous, by rest of mind and body, by sleep, and perhaps by some medicaments, as arsenic. Adipose tissue may become a morbid growth, either as a diffused mass interfering with the action of an organ, or as a distinct tumour, *Lipoma*.

A. tumour. See *Cholesteatoma* and *Lipoma*.

Adiposis. (*Adipo*, fat.) Fatness; obesity.

A. hepatic. (*Hepatic*, liver. *F. degenerationes graecorum de fove.*) Fatty liver. An undue accumulation of fat in the liver.

Adiposuria. (*Adipo*, fat; *urine*, urine.) Fatty urine.

Adipous. (*L. adipo*.) Fatty.

Adipsia. (*A. neg.*; *διψα*, thirst. *F. adipsa*, *Durstlosigkeit*, *Durstmangel*.) Want or absence of thirst.

Adipson. (Same etymon.) A Greek term, for a drink or juice which allayed thirst, described by Galen, viii., *de C. M. sec. loc. 3*.

Adipson. (*Adipson*, from *A. neg.*; *διψα*, thirst.) *Oleocorymbus glabra*, liquorice.

Also the fruit of the Egyptian palm-tree.

Adiposus. (Same etymon.) Allaying or quenching thirst. Applied to medicines and fruits which act in this way.

Adipus. Same as *Adiposus*.

Adir. Arabic name of a plant growing in the sandy plains near Bues. A decoction of the fresh leaves is used as a purgative. (Waring.)

Adiscal. (*A. neg.*; *discus*, a round plate.) Term applied by Lestiboudois to stamens inserted directly into the floral axis without the intervention of a disc.

Aditus. (*Ad*, to; *eo*, to go.) An approach or entrance to a canal or duct.

A. ad aqueductum Fallopii. The opening of the *Aqueduct of Fallopius*.

A. ad infundibulum. The vulva.

A. laryngis. The superior aperture of the larynx.

Adulsi'tes. (*Adulsi'tes*, from *A. neg.*; *ἀδύσει*, to strain.) Unstrained wine for pharmaceutical purposes.

Adjour Djebel. A species of *Cucumis*, indigenous in the mountains of Persia, possessing purgative properties. (W.)

Adjuster. (*L. ad*, to; *justus*, just, exact.) See *Jervis's adjuster*.

Adjutorium. (*Adjutor*, to assist.) An old term for the humerus or brachium, the whole arm being raised and moved by its means, according to Joh. Angliens, *Ros. Angl. p. 1080, s. de dislocatione adjutorii*.

Also applied to a medicament used externally, in aid of internal remedies, to the part affected.

Adjutor minister. (*L. adjuvo*, to assist.) An aid, or assistant.

A. partus. (*L. partus*, birth.) An accoucheur.

Adjuvant. (*Adjuvo*, *F. adjuvant*; *I. adjuvante*; *S. adjuvante*; *G. Hilfsmittel*.) A medicine added to a prescription for the purpose of assisting other and more energetic remedies.

Adligans. (*L. ad*, to; *ligo*, to bind.) Term applied by Aug. de Saint-Hilaire to roots that fix vegetable parasites to the bodies on which they grow.

Adligatus. (Same etymon.) Term applied to a plant fixed by means of tendrils or aerial roots.

Admaston. Shropshire. A salt spring very little used.

Adminicle. (*Adminiculus*, to support; from *ad*, to; *minor*, to put forth. *F. adminicula*.) Applied by Scopoli to all the vegetable organs ranked by Linnaeus under *Pteryum*.

Kirby's term for a half-circle of small teeth on the abdomen of the subterranean pupae of the *Lepidoptera*, by which they cause themselves to issue from the earth.

A term applied to whatever aids the good effect of a remedy.

Admiratio. (*Admiror*, to wonder. *F. admiratio*, *I. ammirazione*; *G. Bewunderung*.)

Admiration apparently consists of surprise, associated with some pleasure and a sense of approval. When vividly felt, the eyes are opened, and the eyebrows raised; the eyes become bright, instead of remaining blank, as under simple astonishment; and the mouth, instead of gaping open, expands into a smile. (Darwin.)

Admisurab. Arabic for *Terra*, or earth.

Admixture. (*Admiscere*, to blend together.) The mixing, or blending together of one substance with another.

Ad-mortal. (*Ad*, to; *mortuus*, dead.) See *Ad-mortal*.

Admotive germination. (*Admovere*, to move to. *F. germination admotiva*.) That in which the epispem containing the end of the cotyledon more or less tumefied remains fixed laterally near the base of the cotyledon.

Adnas'cence. (*Ad*, to; *nascor*, to grow.) Adhesion of parts to each other, as of the lids to each other, or to the globe of the eye.

Adnas'cent. (*Ad*, to; *nascor*, to grow.) Name applied by Tournefort to bulbous which appear in the axilla of the peripheric scales of the bulb.

Adnata tunica. The conjunctiva of the eye.

Adnate. (*L. adnatus*, for *agnatus*; from *agnascor*, to grow to or upon a thing. *F. adnat*, *adnat*; *G. angewachsen*, *angewachsen*.) Closely connected, grown together.

In Botany, applied to a part grown to another by its whole surface.

A. an'ther. An anther, the back of which is attached by its whole length to the filament or the connective, as in the water lily.

A. cal'yx. A calyx is adnate to the ovary when the ovary is inferior.

A. lamell'is. The lamellae of Agarice are said to be adnate when they extend to the stipe, and are attached to it.

A. sta'mens. Stamens are said to be adnate when, as in many gamopetalous flowers, the

ADNATION—ADRENALS.

filaments are attached, to a greater or less extent, to the corolla.

A. stipules. Stipules which adhere to each side of the base of the petiole, as in the rose.

Adnation. (Same etymon.) In Botany, this term is used to express those deviations from a theoretically symmetrical flower which depend upon adhesion of the different whorls to each other, as, for instance, when the calyx is united to the androecium, or the stamens to the corolla.

Adnatum. (Same etymon.) Term applied by Richard to designate a bulb which appears in the axil of the perianth scales of the parent bulb.

Adnerval. (*Ad*, to; *nervus*, a nerve.) See *Ab-mortal*.

Adnexed. (*L. ad*, to; *necesse*, to bind.) In Botany, applied to the gills of Agarics when they just reach the stem.

Adnexus. (*L.*) In Botany, attached; fixed.

Adoc. (*Arab.*) An old term for milk.

Adolescence. (*L. Adolescentia*, from *adoleo*, to grow. *F. adolescence*; *I. adolescenza*; *S. adoleszenza*; *G. Junglingsalter*.) Term for the period between puberty and full development. It is reckoned from the age of 14 to 25 in males, and from 12 to 21 in females, and is distinguished by the completion of the development of the osseous system.

Adolfsberg. Sweden; Prefecture of Oerebro, and about one mile from this town. An alkaline saline mineral water, of a temperature of 9° C. (48-2° F.), containing some iron, and also carbonic acid and nitrogen gases. Used in gout, rheumatism, anæmia, and chronic diarrhœa.

Adolla. A Malabar plant, the leaves of which, boiled in oil of sesamum, assist in forming a lumbric used by the natives with the purpose of facilitating parturition.

Adonis. (*Adonis*, the son of Cinyras, king of Cyprus, beloved by Venus, and changed by her, at his death, into a flower named after him *Adonium*. *G. Teufelsauge*.) The pheasant's eye. A Genus of the Tribe *Anemone*, *Nat. Ord. Ranunculaceæ*.

A. castivalis. A species growing in France having vesicating properties.

A. anomala. A species having vesicating properties.

A. apennina. The roots of this species were held to possess emmenagogue powers.

A. autumnalis. (*F. Gouttes de Sang*.) An irritant and vesicant species.

A. capensis. Hab. South Africa. The leaves are used as a vesicating agent.

A. gracilis. Hab. South Africa. The leaves are used for blistering purposes.

A. verna. A synonym of *A. vernalis*.

A. vernalis. (*G. Fruktinquadonis*.) The root was formerly regarded as emmenagogue, and has been used to adulterate black hellebore. The dried leaves, if gathered at the time of flowering, contain 10 per cent. of acetic acid, and are employed on the Continent as a drastic purgative.

Adopter. (*G. Foratoss*.) Name for a vessel placed between a retort and a receiver.

Ador. (From *edu*, to eat.) A kind of wheat anciently used in sacrifice; also, a coarse kind of corn or spelt, and maize or Indian wheat.

Adorf. Saxony. Three springs rise here—the Augustbrunn, the Augewquelle, and the

Neubrunn—the principal salts of which are sodium chloride and sulphate, but which also contain traces of bromine, lithium, strontium, and calcium fluoride.

Adorion. The carrot, *Daucus carota*.

Ados. (*Ados*, satiety.) Water in which red-hot iron has been cooled, quenched, or satiated.

Adosculatio. (*Ad*, towards or near; *oscular*, to kiss.) A term for the external contact only of the genital organs of the opposite sexes, which occurs in the act of impregnation in many birds and fishes, instead of the insertion of that of the male.

Adoxa. A Genus of plants variously referred to *Araliaceæ*, *D.C.*, *Saxifragaceæ*, *Juss.*, and *Sambucaceæ*, *Bailon*.

A. moschatellina. (*F. muscatellina*.) The only known species of the genus, a lowly plant growing in spring in woods. Stem with two or three radical, deeply cut leaves, and higher up two opposed and tripartite leaves, terminating in a spike of five flowers, of which the apical one is tetramerous, the others pentamerous, ovary inferior, with five styles, five loculi, and five ovules; fruit, a drupe, embryo surrounded by albumen. Formerly used as an antispasmodic.

Adplicitus. (*L.*) A term indicating that two organs are in contact with each other.

Adpressed. (*Ad*, to, *premo*, to press.) Same as *Appressed*.

Adrachne. Same as *Andrachne*.

Adraganthin. A gummy substance found in tragacanth, and deriving this name from the French *Adragante*, tragacanth. A synonym of *Babaroin*.

Adram. (*Arab.*) An old term for *Sel gemma*, or rock salt.

Adrariha. (*Adraha*, thick; *ῥίζα*, a root.) The root of the plant *Aristolochia*.

Adrenals. (*Ad*, to, *ren*, the kidney. *F. glandes or capsules surrenales*; *G. Nebennieren*.) Also called the supra-renal capsules. Two in number, placed symmetrically on the upper and fore part of each kidney, flattened and triangular in form, the base concave and inferior; about 1½ in. in vertical height and 1½ in transverse diameter. Weight from 1-2 drachma. Each rests on the diaphragm, with the liver above it on the right and the spleen on the left side. On the inner side of the right capsule is the vena cava and part of the solar plexus, and of the left capsule the aorta and solar plexus. The arteries come from the aorta and from the renal and diaphragmatic arteries. The right supra-renal vein opens into the vena cava, the left into the left renal vein. The nerves are numerous and large, originate in the solar plexus and the renal plexus, and accompany the arteries. The lymphatics are divided into the superficial and deep. The organ is divisible into a connective tissue framework and a cellular parenchyma. On section, a firm radially streaked yellowish cortical substance and a soft central medullary brownish parenchymatous portion are seen, the two being separated in man by a brown strin, the zona reticularis. The whole organ is invested by fibrous tissue, from which trabeculae pass into the interior. In the outer layer of the gland, the zona glomerulosa of Arnold, the parenchyma cells are arranged in rounded groups of various sizes, separated by septa. The cells themselves are either destitute of an investing membrane, large, polyhedral, and containing numerous fine granules and fat, or smaller and

ADROBOLON—ADULTERATION.

cubical; some columnar and fusiform cells may also be seen. The cells of the zona reticularis contain brown pigment. The cell elements of the medulla are also large, less granular, wanting in oil-globules, and often have a double nucleus; the cells are sometimes branched. Notwithstanding the similarity of the cells to gland-cells, they are believed to be a modification of connective tissue, since the fusiform cells are continuous with connective-tissue fibres. Some observers have regarded these cells as nerve-cells, and have asserted that they are connected with nerve-fibres.

The function of the adrenals is unknown. Most physiologists believe that they belong to the class of blood-vascular glands; some contend that they are a part of the sympathetic nervous system; and others look upon the cortical part as a glandular, and the medullary part as a nervous apparatus.

Adrobolon. See *Adrobolum*.

Adrobolum. (Ἀδρός, large; βωλός, a mass.) A name for the Indian gum-resin *Baelium*, which is brought in larger pieces than the Arabian species.

Ad'ros. (Ἀδρός, plump and full.) Applied to the habit of body, and also to the pulse. (D.)

Adrostral. (L. *ad*, to; *rostrum*, a beak or snout.) Attached to the fore part of the face.

A. cartilages. The upper labial cartilages of the larva of anourous batrachia, answering to the anterior dorsal cartilage of the lamprey.

Adsamur. (Arab.) A term for the urine. (B. and J.)

Adseria palla. A synonym of the *Dolichos pruriens*; cowage. (D.)

Adsella'ro. (*Adsello*, to go to stool.) An ancient name for a disburthening of the belly, or a daily excretion from the bowels.

Adspersus. (F. *tacheté*; G. *gefleckt*.) Spotted.

Adspiration. A different spelling of *Aspiration*.

Adstantes. See *Astantes*.

Adstitos glandulosi. (L. *adato*, to stand near.) A synonym of *Couper's glands*.

A. conglomerati. A synonym of *Couper's glands*.

Adstriction. See *Astriction*.

Adstringens Fothergillii. A synonym of *Kino*.

Adstringentia. A different spelling of *Astringentia*.

Adula. Same as *Adularia*.

Adula'ris. (F. *adulaire*.) Epithet, originally by Pliny, applied to a variety of felspar found among others on Mont St. Bernard, otherwise called *Adula*.

Adulasso. The *Justicia bivalvis*, an Indian shrub; used as a local application in gout. (D.)

Adul oil. A product of the *Sarcostigma Kleinii*. Used in India, especially by the natives of the western coast, in rheumatism.

Adul't. (L. *adultus*, from *adoleo*, to grow; or as if *ad altum*, to a lusty or high condition. F. *adulte*; G. *erwachsen*.) Applied to living things which have arrived at maturity.

Adulteration. (*Adultero*, to counterfeit. F. *adultération*; G. *Verfälschung*.) Term for the mixing or corrupting of pure ingredients with others resembling them, but of inferior value.

Dr. Hassall defines adulteration as the intentional addition to an article of any substance or substances, the presence of which is not acknow-

ledged in the name under which the article is sold, for purposes of gain, deception, or concealment. The adulteration of food or of drugs, which is of most interest to the profession, may have one of several objects in view. It may be intended to lower the price of the article adulterated by the admixture of substances of a cheaper kind; to improve the appearance of the adulterated article, and thus to deceive the public in regard to its quality; or to simulate some property injured or destroyed in the process of adulteration. The adulterants themselves may be of two kinds, being either of a harmless kind or injurious to health in a greater or less degree. The penalty for adulterating any article of food is £50 for the first offence, and imprisonment for not more than six months with hard labour for the second. The penalty for knowingly selling adulterated food is a fine of not more than £20 and costs for each conviction. The name and address to be published in some way appointed by the justices.

The following is a list of the principal adulterations which have been practised:—

Aconitia With other alkaloids, as delphinia, aconella.

Ale, porter, and } Common salt, cocculus indicus,
stout . . . } quassia, grains of paradise, sulphate of iron, alum, sugar, treacle, water, picric acid, colchicum, tobacco, capsicum, ginger, wormwood, calamus, caraway, coriander, liquorice, honey, sulphuric acid, cream of tartar, carbonate of potash, oyster shells, hartshorn shavings, nux vomica, beans.

Allspice Mustard husks.

Anchovies Other fish and colouring-matters, Armenian bole, Venetian red.

Annatto All sorts of starch, soap, red ferruginous earths, red lead, sulphate of copper, carbonate and sulphate of lime, salt, turmeric.

Arrowroot Various other starches, such as sago, tapioca, potato, and others.

Balsam of copaiba . . . Turpentine and fixed oils.

Beef (potted) Armenian bole.

Bismuth Carbonate of lead, sometimes arsenic.

Bloaters (potted) . . . Armenian bole.

Brandy Water, burnt sugar.

Bread Potatoes, alum, inferior flour, rice, beans, Indian corn, curd, sulphate of copper.

Butter Water, salt, colouring-matter, lard, tallow, and other fats.

Cajuput oil Copper, camphor dissolved in oil of rosemary, and coloured with copper.

Calamine Coloured sulphate of baryta.

Calomel Sulphate of baryta, chalk, white precipitate, white-lead, pipe-clay.

Calumba Tinged bryony root, root of *Fraxea Walteri*, and others.

Camboge Starch.

Camphor A substitution of Borneo camphor has been made.

ADULTERATION

Cantharides . . .	Golden beetle, artificially-coloured glass.	Confection, aromatic . . . }	Expensive ingredients omitted, turmeric substituted for saffron.
Carbonate of lead .	Sulphate of baryta, sulphate of lead, chalk.	Copal	Gum dammar, resin.
Carmine (cochineal) . . . }	Sulphate of baryta, bone-black.	Curry powder . . .	Red-lead, ground rice, salt, potato starch.
Cassia (senna) . . .	Leaves of <i>Solenostemma argel</i> , and other foreign leaves.	Cusparia bark . . .	The bark of <i>Strychnos nuxvomica</i> has been substituted.
Castor oil	Other oils, often small quantities of croton oil.	Custard and egg powder . . . }	Turmeric, chrome yellow, and different flours.
Cayenne	Ground rice, vermilion, Venetian red, turmeric, mustard husk, salt.	Elaterium	Starch, flour, chalk.
Champagne	Gooseberry and other wines as a substitute, different colouring-matters.	Epsom salts . . .	Chloride of magnesium, chalk.
Cheese	Annatto, Armenian bole, Venetian red, mangold flowers, saffron, carrots, sage, parsley, beans, potato-flour.	Ether	Alcohol.
Chicory	Colouring-matters, such as ferruginous earths and burnt sugar, Venetian red, different flours, such as wheat, rye, beans, and sometimes saw-dust.	Flour	Other and inferior flours, as the flour from rice, beans, Indian corn, potato, sulphate of lime, alum.
Cider	Lead (as an impurity, not intentional).	Fruits and vegetables (bottled) }	Acetate, sulphate, and other salts of copper, logwood, beetroot, aniline.
Cigars	Substitutions of hay and other rubbish, inferior tobaccos.	Gelatine	Salt and sugar.
Cinnamon	Cassia, clove stalks, and different flours.	Gin	Water, sugar, flavouring-matters of different kinds, cayenne, cassia, cinnamon, turpentine, alum, tartar, grains of paradise, sulphuric acid, coriander, angelica, almond, calamus, orris, cardamom, orange peel.
Claret	Brandy, and substitution of inferior wines.	Ginger	Turmeric and husks of mustard, flour from wheat, sago, potato, ground rice, cayenne.
Cloves	Clove stalks.	Guaiacum resin . .	Other resins.
Cocoa and chocolate . . . }	Cheaper kinds of arrowroot, such as <i>Tous-les-mois</i> , <i>Marranta</i> , and East Indian, animal matter, corn, sago, tapioca, sugar, chicory, potato husks, Venetian red, red ochre.	Honey	Flour, cane-sugar.
Coffee	Chicory, roasted wheat, rye and potato flours, roasted beans, mangel wurzel, acorns, and colouring-matters, such as burnt sugar.	Hope	<i>Cocculus indicus</i> , grains of paradise.
Cod-liver oil . . .	Other oils mixed with it.	Iodide of potassium .	Water, carbonate of potash, chlorides of soda and potash, iodate of potash, iodine.
Colocynth (extract comp.) }	The extract is not unfrequently made with the pulp and seeds.	Iodine	Water, plumbago, charcoal, black oxide of manganese.
Confectionery, coloured . . }	Injurious colouring-matters, such as arsenite of copper, chromate of lead, cochineal, lake, indigo, Prussian blue, Antwerp blue, artificial ultramarine, carbonate of copper, carbonate of lead, red-lead, vermilion, gamboge, sap green, Brunswick green, Indian red, umber, sienna, Vandyck brown, cobalt, smalt, litmus, Naples yellow, acetate of ethyl, butyrate of amyl, acetate of amyl, valerianate of amyl, white potter's clay, pipe-clay, chalk, sand, flour, starches, hydrated calcium sulphate.	Ipecacuanha . . .	Other roots, extraneous woody fibre; also in powder, chalk, flour, have been added.
		Isinglass	Gelatine.
		Jalap	Raspings of guaiacum, false jalap root.
		Lard	Carbonate of soda, salt, alum, potato, mutton suet, potash, flour, lime.
		Lemon juice . . .	A mixture of sugar and water, acidulated with sulphuric acid, has been substituted.
		Liquorice	Rice, chalk, gelatine, and different flours.
		Magnesium sulphate . . . }	Lime, carbonate of magnesia.
		Magnesium carbonate . . }	Lime sulphate.
		Marmalade	Apple or turnip pulp.
		Meats and fish (potted) . . }	Flour, Armenian bole, Venetian red.
		Mercury	Lead, tin, zinc, bismuth.
		" green iodide of . . . }	Red iodide of mercury.
		" oxide of	Brick-dust, red-lead.
		" white precipitate of }	Chalk, carbonate of lead, plaster of Paris.

ADULTERINUS—ADUSTION.

Milk	Water, annatto, flour, starch, white carota, treacle, gum, dextrin.	Tea	Sand, exhausted tea leaves, foreign leaves, as sycamore, elm, horse-chestnut, plum, beech, plane, bastard plane, poplar, willow, fancy oak, hawthorn, aloe; lie-tea, paddy husk, quartz, magnetic oxide of iron, gum, indigo, turmeric, Chinese yellow, black lead, Prussian blue, China clay, soapstone, mica, sulphate of lime, rosepink, Dutch pink, chrome yellow, arsenite of copper, chromate of potash, carbonates of lime and magnesia.
Mustard	Turmeric, wheat flour, Cayenne pepper, ginger, charcoal, potato flour, rice, plaster of Paris.	Tobacco	Sometimes inferior tobacco mixed with good, water; other adulterations rare.
Myrrh	Gum bdellium, and other gum resins.	Turmeric	Yellow ochre, carbonate of soda or potash.
Oatmeal	Barley flour, rubble, rice, maize.	Uva ursi	Leaves of red whortleberry and others.
Opium	Stones, sand, clay, vegetable extracts, sugar, treacle, water.	Vegetables (tinned) . . . }	Sulphate of copper.
Pareira root	Different roots substituted.	Vinegar	Sulphuric acid, and metallic impurities, water, burnt sugar, pyroligneous acid, sulphate of potash, cane sugar, oider, juice of rhubarb, gooseberries, apples, pears.
Pepper	Linseed meal, different flours, mustard husks, pepper dust, sand, woody fibre.	Wines	Water, jerupiga, bitartrate of potash, substitution of inferior wines, brandy, spirits, and various other matters, elderberry juice, logwood, Brazil wood, bilberries, burnt sugar, black cherries, cochineal, mallow flowers, lead, oak sawdust, catechu, cherry laurel water, carbonates of soda and potash, artificial flavouring.
Pickles	Salts of copper, acetate of copper.	Zinc, oxide of	Chalk, carbonate of magnesia.
Pimento	Mustard husk.		
Potash	Carbonate, sulphate, and chlorides of potash, lime, iron, and alumina.		
„ acetate of	Sulphate and chloride of potash.		
„ carbonate of	Sulphate and chloride of potash.		
„ bicarbonate of	Carbonate of potash.		
„ citrate of	Sulphate of potash.		
„ chlorate of	Chloride of potassium.		
„ tartrate of	Tartrate of lime.		
„ nitrate of	Sulphate or chloride of potash.		
Preserves	Salts of copper, fuchsin, inferior fruits.		
Quinine	Sulphate of lime, chalk, magnesia, cane sugar, sulphate of cinchonine.		
Rhubarb	Turmeric, and inferior varieties substituted for Turkey.		
Rum	Water, cayenne, burnt sugar, cocculus indicus.		
Sago	Potato flour.		
Sauce	Treacle, salt, cochineal, Armenian bole, Venetian red, and other colouring-matters.		
Scammony	Chalk, starch, guaiacum, jalap, dextrin.		
Senega	Ginseng, gillenia.		
Senna	Leaves of Solenostemma argel, Tephrosia apollinea, and Coriaria myrtifolia.		
Sherry	Sulphates of potash and soda, brandy, burnt sugar.		
Snuff	Carbonate of ammonia, glass, sand, colouring-matters.		
Soda, bicarbonate of	Carbonate and sulphate of soda.		
„ carbonate of	Sulphate of soda.		
„ phosphate of	Phosphate of lime.		
Spices	Colouring materials, substitutions, and different flours.		
Squills	Wheat flour.		
Sugar	Sand, flour, tapioca, starch, dextrin, gum.		
Sulphur	Sulphurous acid (as an impurity).		
Sulphuric acid	Lead, water, arsenic, hydrochloric acid.		
Tapioca	Inferior starches.		

Adulterinus. (*Adultero*, to counterfeit.) False; counterfeited; forged; bastard.

Adum'ba. A species of *Ficus*. Hab. Ashantee. The bark and fruit boiled in fish-soup with Cardamoms, and a small plant called Awhintey-whinting, are said, when two does are taken in the third month of pregnancy, to produce abortion. (Bowditch and Waring.)

Adunc'atio unguis. (*Aduncus*, hooked, from *ad*, to; *uncus*, a hook; *unguis*, a nail.) Incurvation of the nails. (D.)

Adunciros'tres. (*Aduncus*, a hook; *rostrum*, a beak. *F. adunciros'tre*.) Applied by Schœffer to an Order of Birds which have the beak hooked.

Adurent. (L. *adurens*, from *ad*, to; *uro*, to burn.) Caustic or vesicant.

Adurion. The *Rhus coriaria*.

Adust. (*Aduro*, to burn. *F. aduste*; I. *adusto*, abbruciato; G. *cerbrannt*.) Burnt; scorched; parched. Applied formerly to the fluids of the body, when the serum of the blood was supposed to be dissipated by too great heat in the constitution.

Adustion. (L. *adustio*, from *aduro*, to scorch or roast. *F. adustion*; I. *adustione*; G.

AD-UTERUM—ECIDIUM.

Verbrennung, Anbrennen.) A term formerly employed as a synonym of cauterisation, meaning the application of the actual cautery to any part of the body.

Ad-uterum. A synonym of the *Oviduct of birds*.

Advehent. (L. *advehens*, from *ad*, to; *veho*, to carry.) Term applied to vessels conveying fluids to an organ, afferent.

Adventitia capillaris. (L. *adventitus*, foreign, from *advenio*, to come to.) A name given by His to an outer extraneous covering of the capillaries of parts containing adenoid tissue, from the branched cells of which the coat is derived.

A. tunica. The external covering of the blood-vessels. See *Artery* and *Vein*.

Adventitious. (L. *adventitus*; from *advenio*, to come to; F. *adventice*, *adventif*; L. *adventitius*, G. *hinzukommend*, *zufällig*.) Extraneous, foreign, not naturally belonging to the person or thing. Applied to what is accidental or acquired, in opposition to what is natural or hereditary.

In Botany, used to denote organs or structures developed in unusual positions.

A. buds. A term applied to those buds which do not arise, as usual, from the axils of leaves, but from some indeterminate point of the stem, root, leaves, or other organs. They invariably take origin from parenchymatous tissue.

A. cyst. The outer part of an hydatid cyst which is developed from the tissues of the affected animal, and is not a part of the parasite itself.

A. diseases. Acquired diseases.

A. membrane. A membrane covering a structure which is not a part of the structure itself, but is derived from the surrounding connective tissue.

In Pathology, a term synonymous with false membrane.

A. murmurs. Cardiac murmurs which depend upon other causes than defects of the heart structure itself, such as anæmic murmurs.

A. roots. Roots that are not produced by the direct elongation of the radicle of the embryo. They have no leaves or buds, and, when subterranean, no epidermis furnished with stomata. Adventitious aerial roots are, however, frequently furnished with a true epidermis and stomata, and are sometimes of a green colour. In monocotyledons they first appear as conical bodies in the substance of the parenchyma. These break through the tissue that envelopes them, and appear externally at first as parenchymatous elongations, but ultimately with the structure of a monocotyledonous stem. Where they break through they are surrounded at the base by a kind of sheath or collar, called a coleorhiza, and they end in a pileorhiza, which is usually thrown off as development takes place behind it. The adventitious roots of dicotyledonous plants appear as conical bodies near the cambium layer, and ultimately break through the bark. They are provided with a pileorhiza at their extremity, and have a coleorhiza at their base. See *Aerial roots*.

A. sounds. Same as *A. murmurs*.

Adverso. (*Adverso*, to turn to another place; F. *adverser*, G. *entgegengesetzt*, *seitwärtsgebogen*.) Opposing, or opposite; against.

Adversifoliate. (*Adversus*, against;

folium, a leaf.) Having leaves opposite, or against each other, on the same stem.

Adversifoliated. Same as *Adversifoliate*.

A'dy. A tree growing in the island of St. Thomas, the juice of which ferments into wine. The stone of the fruit contains a kernel, which yields a yellow oil, hardened by cold, and used as butter. The kernels are given, three or four times a day, as a restorative.

Adya'o. A shrub of the Philippine Islands, probably belonging to the Genus *Premna*, Nat. Ord. *Verbenaceæ*, employed locally to relieve headache and colic, and as an application to tumours and ulcers.

Adynam'ia. (A. priv.; *dynamis*, power. L. *Adynamia*; F. *adynamie*; G. *Kraftlosigkeit*, *Kraftmangel*, *Schwäche*.) A term for the loss, want, or deficiency of vital power or strength, especially the loss of muscular strength in typhus fever and similar conditions.

The term has also been used in systems of classification to include a series of diseases, such as apoplexy, dyspnoea, syncope, impotence, in which there is abolition or diminution of the power of sensation or voluntary motion.

A. virilis. Impotence.

Adynam'ic. (Same etymon. F. *adynamique*; L. *adynamico*; G. *adynamisch*, *kraftlos*, *unvermögend*.) Deficient in power, or, pertaining to, the state of *Adynamia*.

A. fevers. Fevers in which the tendency is to death by æsthenia.

A. stato. A term indicating a condition of great weakness and depression of the bodily powers, as in the last stage of typhus fever.

Adynamico-atacticus. Same as *Adynamico-atacticus*.

Adynam'ico-atax'ic. Pertaining to *Adynamia*, and *Ataxia*; a term for a form of fever.

Adynamon. Same as *Adynamum*.

Adynamum vinum. (*Adynamos*, deficient in strength, from *a*, priv., *dynamis*, strength or power.) Applied to a kind of wine made by boiling down must with water, or by mixing new white wine with water. Given to the sick to whom pure wine was likely to be injurious.

Adyna'sia. Same as *Adynamia*.

Adyna'tia. Same as *Adynamia*.

Adynatoco'mium. (*Adynatos*, disabled, *κομιν*, to tend; F. *adynatocôme*; G. *Invaliden-Haus*.) A hospital for invalids.

Adynatodoch'ium. (*Adynatos*, disabled, *δοχεῖον*, to receive hospitably.) Same as *Adynatocorium*.

Æcidiumycetes. A Suborder of the Order *Basidiomycetes*, Class *Carporporeæ*, Subkingdom *Thallophyta*. Parasitic fungi, the mycelium of which bears two forms of fruit, *æcidium* and *uredo*, or some analogous form.

Æcid'ium. A cup-shaped body, formerly regarded as a distinct species of Fungus, but now believed to be only a development, on a second host-plant, of certain of the *Æcidiumycetes* fungi. *Æcidia* are at first round or oval bodies, developed, together with spermatogonia, from a mycelium resulting from the germination of spores produced by a promycelium, which is again the product of telic spores, these oval bodies burst and constitute cup-shaped receptacles, with reflected margins, the walls of which, the peridium, are composed of pseudoparenchyma, short polyhedral closely fitting mycelium cells. At the base of

ÆDEPSOS—ÆGALE SEPIARIA.

the *Æcidium* is the hymenium, a circular layer of short, elongate, clavate cells, or basidia, on each of which rests a series of spores in regular chain-like order, one above the other, the stylogonia. The spores are spheroidal and filled with protoplasm coloured red or yellow by oil. On the bursting of the enclosing peridium of pseudoparenchyma the spores are liberated in a state fit for germination, which takes place in the form of short crooked germ tubes, that penetrate through the stomata of another host-plant, and rapidly produce a new mycelium in the intercellular spaces, which after a few days forms a farther fructification, the uredo fruit. *Æcidia* affect usually the Compositæ, Ranunculaceæ, Leguminosæ, and Labiata, but to which they are by no means so destructive as uredo fruits are to the Gramineæ. See *Æcidio-myces*, *Heterocism*, *Teleutospore*, and *Uredo*.

Æ. abietinum. A parasite of the *Abies ezzeles*, appearing in June and August.

Æ. columnæ-re. A parasite found on the under surface of the leaves of fir trees, appearing in the form of a silvery streak of columnar form, containing a yellow dust (spores). *Æ. conorum piceæ*, *Æ. coruscans*, and *Æ. strobiliana*, are all found on fir trees.

Æ. fruits. A synonym of *Æcidium*, in contradistinction to uredo fruits.

Ædep'sos. Greece, in the Island of Eubœa, thirty miles from Negropont. Hot springs, well known to the ancients under the names of *Ædepsi therma* and *Herculis laocæra*. The place is now called Diæpo. Temp. varies from 31° C. (87·8° F.) to 76° C. (167° F.). Here Sulla bathed.

The waters spring from the micaceous and the clay slate in the presence of limestone; they contain sodium and magnesium chloride and sulphate, sodium carbonate, and small quantities of sodium iodide, and magnesium bromide, with free carbonic acid, and some sulphuretted hydrogen. They deposit a plentiful dark sulphurous mud, which is used for general and local baths in rheumatic deposits. The waters are used in rheumatic gout and joint contractions, in gastric catarrh, gallstones, lymphatic diseases and scrofula.

Ædicorinæ. A Sub-family of the Family Gammaride, Suborder Amphipoda, Order Eriophtalma, Class Crustacea. Anterior antennæ having no accessory branch; seventh pair of legs very long, armed with claws.

Ædœa. (*Alidœa*, the privy parts both of men and women.) The genital organs.

Ædœa'gra. (*Alidœa*; *ἔγγρα*, a prey, a seizure. *F. ædœagra*.) Pain in the genital organs.

Ædœagraphy. (*Alidœa*; *γράφω*, to write.) A description of the generative organs.

Ædœalogy. (*Alidœa*; *λόγος*, a discourse.) A treatise on the organs of generation.

Ædœatomy. (*Alidœa*; *τέμνω*, to cut.) The dissection of the genital organs.

Ædœau'ro. (*Alidœa*; *αὔξη*, increase. *F. ædœausis*.) Enlargement of the genital organs.

Ædœoi. (*Alidœoi*, of, or belonging to, the genital organs.) Diseases of the generative organs.

Ædœocrysipelas. (*Alidœa*; *crysipelas*. *F. ædœocrysipile*.) Erysipelas of the genital organs.

Ædœotitis. (*Alidœa*, the pudenda or parts of generation. *F. ædœite*.) Inflammation of the genital organs.

Ædœoblennorrhœa. (*Alidœa*; *blennorrhœa*. *F. ædœoblennorrhœa*.) A flow of mucus from the genitals.

Æ. semina'rum. Leucorrhœa.

Ædœodyn'ia. (*Alidœa*; *ὀδύνη*, pain.) Pain in the genital organs, from whatever cause.

Ædœogargalis'mus. (*Alidœa*; *γάργαιμος*, a tickling.) Masturbation.

Ædœogargalus. (*Alidœa*; *γάργαιλος*, to tickle.) Masturbation; nymphomania.

Ædœography. (*Alidœa*; *γράφω*, to write. *F. ædœographis*.) The description of the parts of generation.

Ædœology. (*Alidœa*; *λόγος*, a discourse; *F. ædœologie*.) A treatise or dissertation on the parts of generation, their structure, and functions.

Ædœoma'nia. (*Alidœa*; *mania*.) Nymphomania.

Ædœomycoderm'itis. (*Alidœa*; *mycodermis*. *F. ædœomycodermite*.) Inflammation of the mucous membrane of the genitals.

Ædœon. The groin. (*D.*)

Ædœops'ia. (*Alidœa*; *ὄψις*, a viewing. *F. ædœopsis*.) An ocular examination of the genitals.

Ædœopsophe'sis. Same as *Ædœopsophia*.

Ædœopsoph'ia. See *Ædœopsophy*.

Æ. uter'ina. Air in the uterine cavity. See *Physometra*.

Ædœos'copy. (*Alidœa*; *σκοπία*, to see. *F. ædœoscopie*.) Term for an investigation of the pudenda.

Ædœotitis. (*Alidœa*.) Inflammation of the genital organs.

Æ. gangræno'sa. Gangrenous inflammation of the genital organs.

Æ. gangræno'sa puella'rum. Gangrene of the genital organs in young girls; noma.

Æ. gangræno'sa puerpera'rum. Gangrene of the genital organs in women recently delivered.

Ædœotomy. (*Alidœa*; *τέμνω*, to cut. *F. ædœotomie*.) The anatomy or dissection of the parts of generation.

Ædœopsophy. (*Alidœa*; *ψόφος*, a sound. *F. ædœopsophis*, *ædœopsophie*.) Term for the sound caused by the escape of wind from the vagina in women, or from the bladder by the urethra in man.

Ædœopto'sis. (*Alidœa*; *πτῶσις*, a falling.) A prolapse of some part of the genital organs.

Æ. u'teri. Prolapse of the uterus.

Æ. u'teri inver'sa. Inversion of the uterus.

Æ. u'teri retrover'sa. Retroversion of the uterus.

Æ. vaginæ. Prolapse of the vagina.

Æ. vesicæ. Prolapse of the bladder.

Ægiglu'ces. See *Ægigluces*.

Ægagropilus. (*Ἀγᾱγροπίλος*, from *ἀγᾱγρος*, a wild goat; *πίλος*, hair wrought into felt. *F. ægagropile*, or *ægagropile*; *G. Gemsenkugel*, *Gems-kugel*.) A concretion found in the stomach of goats, deer, and cows, composed of hair collected on the tongue of the animal in licking itself, and swallowed; formerly also called bezoar, because similarly found within the bodies of animals, and believed to have the same virtues as the medicinal bezoars; described by Geo. Hieronymus Velschius in *Dissert. de ægagropilis*.

Ægale sepiaria. Nat. Ord. *Aurantaceæ*. A native of Japan. The fruit resembles the orange, is said to be laxative, and a celebrated Japanese medicine is prepared from the dried rind. (Waring.)

ÆGEIROS—ÆGOPHONY.

Ægeiros. (Αἴγυρος) The *Populus nigra*, or black poplar, the leaves of which soaked in vinegar were used locally in gout, whilst the fruit drunk with vinegar was employed in epilepsy and other affections. (W)

Ægor. (L. *Æger*, derivation unknown. F. *malade*; G. *krank*.) Sick; faint, feeble, weak unwell.

Ægias. (Αἴγιο, the shield of Zeus, from *αἴσω*, to move violently; also a goat skin coat.) Name for a white speck on the cornea causing an obstruction of sight, according to Hippocrates, *Coac. prout* ii, 218; so-called because the opacity seems like a cover or shield before the pupil, also called *Egia*.

Ægicera cœa. An Order of plants of the Subdivision *Epipactis*, Subclass *Corollifloræ*, Class *Dicotyledonæ*, or, according to some, a Tribe of the Family *Myrsinaceæ*, Order *Primulinæ*, Subclass *Gamopetalæ*. It contains one genus only, which grows on sea shores in the tropics, and roots from the seed-vessels, like *Rhizophoraceæ*. Anthers dehiscence transversely, fruit a follicle, seeds ex-albuminous.

Ægidos. Same as *Ægias*.

Ægidion. Same as *Ægidium*.

Ægidium. A name formerly applied to a collyrium, probably considered efficacious for the affection *Ægus* or *Egus*, from which its name is drawn, described by Aëtius. Gortæus. See *Ægopropion*.

Ægilops. (Αἴξ, a goat, ὤψ, the eye; because goats were supposed especially subject to it. F. *argilops*, or *egilops*; I. *egilope*. G. *Augenwinkelgeschwür*, *Gesauge*, *Thranenackgeschwür*.) An abscess of the eyelid opening at the inner canthus, and so-called from its resemblance to the lacrimæ or infra-orbital glandular sac of goats.

Also a synonym of the *Bromus arvensis*.

Ægina. Greece. A warm salt water spring from the chalk and clay strata.

Ægineæ. A Sub-family of the Family *Cymothoidæ*, Suborder *Isopoda*, Order *Edriophthalma*, Class *Crustacea*. Antenna inserted into the frontal border, the four pairs of posterior legs slender, and fitted for walking, foot-jaws long, composed of four to six segments.

Æginetia. Name of a species of *Orobanchæ*, used in Malabar as masticatory.

Æ. indica. Nat. Ord. *Orobanchææ* Hab. Nepal. This plant, when prepared with sugar and nutmeg, is considered an antiscorbutic and a masticatory.

Æginidæ. A Family of the Suborder *Trachymedusæ*, Order *Hydroida*, Class *Hydro-medusæ*, Subkingdom *Cœlenterata*. Medusæ having a flattened discoidal form, diverticula of the alimentary canal reach the border of the umbrella and produce the sexual elements from the parietes, marginal filaments rigid, traversed by cartilaginous rods formed from the endoderm which penetrate the umbrella, marginal vesicles pedunculated and free.

Ægiphila salutaris. Nat. Ord. *Verbenacæ* Hab. banks of the Orinoco. Used by the natives, both internally and externally, as a remedy in snake bites. (Waring.)

Ægironon. Same as *Ægironum*.

Ægironum. (Gr. Αἰγίριον, from αἴγυρος, the poplar.) A name for a kind of ointment made with the fruit of the poplar tree, described by Paulus Ægineta.

Ægia. (Αἴγιο, the shield or breast-plate

of Jove, also a goat's skin.) Another name for the affection of the eye called *Ægias*, which see.

Ægithalil. (Αἰγυθάλλος, the titmouse. F. *egithalle*.) A Family of *Passeræ* which live upon berries.

Ægithognathæ. (Αἰγυθός, the hedge sparrow, γνάθος, the jaw.) A Suborder, according to Huxley, of the Order *Carinata*, Class *Aves*, distinguished by the broad vomer, truncated in front, and embracing the rostrum of the sphenoid between its distal posterior extremity. It includes the greater number of *Passerine* birds.

Ægle marmelos. (G. *Marmelosfrucht*, *Modjibere*; Hind. *Bel Sirimul*, Tam. *Vilva*; Tel. *Maredu*, Mal. *Kucalam*.) Nat. Ord. *Aurantaceæ*. Bael or Bel tree, Bengal Quince. An Indian tree. Flowers ♂, petals 4—5 patent. Stamens 30—40. Ovary 8—15 celled, with numerous ovules in each cell. Style short, thick. Stigma capitate. Fruit baccate, with a hard rind. Seed with a woolly coat. The dried fruit, Bael, is imported in vertical slices or in broken pieces consisting of a part of the rind with the adherent pulp and seeds. The fruit is agreeable when ripe, but astringent when unripe, and thence given in diarrhoea and dysentery, especially when combined with a scorbutic taint. The bark of the root is given in decoction in intermittent fevers. See *Belu*.

Ægila. Same as *Ægias*.

Ægoceras. (Αἴξ, a goat; κίρας, a horn; because the pods are like a goat's horns.) A name for the plant *Trigonella fœnum Græcum*, or fenugreek.

Ægolethron. (Αἴξ, a goat; ὀλεθρος, destruction, because believed to be poisonous to the goat.) Old name for a plant, indigenous about Heraclea in Pontus, supposed to be the *Chamaerhodendron*, or *Azulea pontica*; by some to be the *Ranunculus flammula*, by others the *Lathræa squamaria*.

Ægoli. (Αἰγυλίς, a nightbird of prey. F. *egulen*.) A Family of Birds, including the owl.

Ægony. (Dim or cont. *Ægophonia*, ægophony.) A term proposed for a minor degree of ægophony, or a resonance of voice intermediate between well-marked bronchophony and ægophony.

Ægonychon. Same as *Ægonychium*.

Ægonychium. (Αἴξ, a goat, οὐνχ, a hoof.) An old name for the plant *Lithospermum affinale*, so-called from the hardness of its seed.

Ægoor. An article of the Indian *Matéria Medica*, described as powerfully astringent and bitter, an antidote to poison, and useful in leprosy. *Shingiff* is given as its Persian name, and it is therefore probably Cinnabar. (W)

Ægophonie. Having the characters of *Ægophony*.

Ægophony. (Αἴξ, a goat; φωνή, the sound of the voice. F. *egophonie*; G. *Meckersstimme*, *Zitterstimme*; I. and S. *egofonia*.) A term in auscultation, denoting a modification of bronchophony, in which the voice is sharp, or jerking and tremulous, like that of the kid. It is heard best by the naked ear, and most frequently near the lower angle of the scapula in pleurisy, where there is only a small amount of effusion. It would appear to depend upon the arrest by the fluid of the graver tones of the voice while the higher ones are transmitted; it has also been attributed to the natural resonance of the voices in the bronchial tubes being rendered more distinct by the compression of the pulmonary

EGOPODIUM—AERELATEROMETER.

texture, and by its transmission through the medium of a thin and mobile layer of fluid.

Egopodium. (Αἶξ; πούς, a foot; from its likeness to a goat's foot.) A Genus of plants of the Nat. Ord. *Umbelliferae*. Goatweeds.

E. podagra'ria. The goatweed, or goutweed; it is sedative, and was formerly esteemed in cases of gout and piles.

Egoproso'pon. (Αἶξ; πρόσωπον, a face.) An old name for a collyrium, according to Gorræus; synonymous with *Egidion*.

Egrippa. See *Agrippa*.

Egritu'do. (L. *Eger*, sick.) Sickness, ill-health, disease.

E. ventricu'li. (L. *ventriculus*, the belly.) Vomiting.

Egrotat'io. (L. *Eger*, sick.) Sickness, disease.

Egyptia moscha'ta. The Egyptian musk. *Hibiscus abelmoschus*.

E. ulcera. Egyptian ulcers, an old term used by Aretæus for ulcers of the fauces and tonsils, which were described as common in Egypt and Syria, thus—*Αἰγυπτία καὶ Συρία καὶ Ἰλκεα*.

Egypti'acum balsamum. A synonym of the *Balsam of Gilead*.

E. unguon'tum. Name given to several corrosive or detergent unguents; the simple *Egyptiacum*, however, improperly called an unguent, is composed of verdigris, honey, and vinegar, boiled together to a proper consistence. See *Egyptium*.

Egyption. Same as *Egyptium*.

Egyptium. (Αἰγύπτιος, Egyptian.) Old epithet of a white oily ointment (Αἰγύπτιον μύρον), prepared from leaves and aromatic substances; also called *Menesium*; also applied to the *Egyptiacum unguentum simplex*; also a term for lint or thread.

E. al'bum. A synonym of *Crinomyron*.

E. medicamen'tum ad au'res. A synonym of the *Pharmacum ad aures*.

E. ol'eum. An old name of castor oil.

Egyptius. (Αἰγύπτιος, Egyptian.) Of or belonging to Egypt.

E. pes'sus. The Egyptian pessary; a term for an unguent in form of a pessary, composed of honey, butter, turpentine, saffron, oil of roses or lilies, and sometimes a little verdigris.

Aeichry'son. (Αἶ, always; χρυσός, gold.) The plant *Sempervivum tectorum*, or houseleek.

Aeiglu'ces. See *Aeiglucis*.

Aeiglu'ces. (Αἶ, ever; γλυκύς, sweet.) A kind of sweet wine or must.

Aeipathi'a. (Αἰεπάθεια, from αἶ, always; πάθος, a suffering.) An unyielding or inveterate disease.

Aei'thales. (Αἰεθαλής, evergreen.) The *Sempervivum tectorum*, or houseleek.

Aeizo'on. (Αἶ, always; ζωός, alive.) The *Sempervivum tectorum*, or houseleek.

Elu'ropo. (Αἰλουρος, a cat; πούς, a foot.) A synonym of *Gnaphalium montanum*, from the resemblance of its leaves and flowers to a cat's foot.

Emopto'ica pas'sio. (αἷμα, blood; πτῖς, to spit.) Hemoptysis.

En'e'a. (L. *Encus*, brazen.) A catheter.

Enecoceph'alus. (En'eus, coppery; κεφαλή, the head. F. *enecocephalus*.) Having the head of a copper-colour.

Enothion'ic. See *Enothionica*.

Eolecthy'ma. (Αἰόλος, variable; from Αἰολός, the god of the winds; ἔλθυμα, a pustule.

F. *eolecthy'me*.) An old term for a species of varicella.

Eolidæ. A Family of the Section *Dermatobranchia*, Subclass *Platypoda*, Class *Gasteropoda*. Dorsal surface of the body with numerous tufts, often branched, containing prolongations of the alimentary canal; tongue with longitudinal dental plates.

Eollan'thus sus'vis. Nat. Ord. *Lauraceæ*. A Brazilian plant used as a diuretic in spasmodic strangury.

Eollion. Varicella.

Eollium. Varicella.

E'on. (Αἶον, one's lifetime.) The age of man from birth to death; life.

Also, the spinal marrow, according to Hippocrates, vii, *Epid.* lii., 8.

Eone'sis. (Αἰώνησις, from αἰών, to sprinkle.) Term for a sprinkling or washing of the whole body, according to Hippocrates, de *Humid. usu*, i, 8; Erotianus in *Onomastic. Hipp.*

Eo'nion. (Αἰώνιος, eternal.) The *Sempervivum tectorum*, or houseleek.

Eo'ra. (Αἰωρία, to raise into the air. F. *brandillement*.) A form of exercise called by the ancients *Gestatio*, in which the swinging action was predominant, as in a hammock, in a litter, in a chariot, or in a boat.

Equal'is. (E'quo, to make equal or level. F. *égal*; G. *gleich*, gleichförmig.) Of the same dimensions or proportions; equal.

Equat'or. See *Equator*.

E. oc'uli. A horizontal line on the level of the junction of the closed eyelids; it is below the centre of the eye.

Eque. (E'quus, alike, or equal. F. *égale-ment*.) Justly; alike; equally.

Equilateral. (L. *æquus*; *lateralis*, belonging to the side.) Equal sided.

Equilibrium. (E'quus, equal; *libro*, to balance. F. *équilibre*; G. *Gleichgewicht*.) That rest which occurs when many forces, applied to the same body, are equally opposed. See *Equilibrium*.

Equival'ed. (E'quus, equal; *valve*, folding doors; F. *équivalve*; G. *gleichklappig*, *gleichschalig*.) Having equal valves; applied to a dehiscient pericarp when its valves are nearly of the same size.

Equor'idæ. A Family of the Suborder *Calyptoblastea*, Order *Hydroidea*, Class *Hydromedusæ*, Subkingdom *Cœlenterata*. Large discoidal medusæ, with short and stout buccal peduncle; marginal filaments and radial canals numerous, on which are placed the sexual organs.

A'er. (Αἶρ, the atmosphere; F. *air*; G. *Luft*.) The atmosphere; atmospheric air.

A. fix'us. Fixed air; a term for carbonic dioxide or carbonic acid gas.

Aerated. (Αἶρ. F. *aéré*.) Applied to liquids that are impregnated with carbonic acid, which was called fixed air.

A. bread. See *Bread, aerated*.

A. waters. See *Waters, aerated*.

Aeration. (Αἶρ.) The charging of a fluid with some gas.

Also a term for ventilation.

A. of blood. The oxygenation of the blood in the lungs.

Aerato'r. (Same etymon.) An apparatus for making aerated waters.

Also a contrivance for fumigating grain in bulk to destroy fungi and insects.

Aerelaterometer. The same as *Ela-terometer*.

AERENDOCARDIA—AEROLITE.

Aerendocardia. (*Aër*, air, *endocardium*.) Air in the interior of the heart. (D)

Aerenterectasia. (*Aër*, air; *ἐντέρον*, intestine, and *ἐκτασις*, dilatation.) Tympanitis.

Aerolum. Same as *Erolus*.

Aerolus. A term synonymous with *Chalcus*. Equal to 1-16th of an obolus, or 1-12th of a scruple.

Aëreus. (*Aër*, the air. F. *aérien*; G. *luftig*.) Of or belonging to the air; aerial.

Aergia. (*A*, neg., *ἔργον*, work.) Torpor.

Aerhæmoptoënia. (*Aër*, air; *αἷμα*, blood, *κτόνος*, the action of killing. F. *aërhemotomie*.) Death by the introduction of air into the veins. This is an occasional accident in surgical operations about the neck, arm, and axilla, when a vein of large or moderate size has been divided in such a manner as to prevent the collapse of its walls. A suction power is exerted during inspiration and the distole of the heart, and air enters the vein with a peculiar sibilant gurgling sound. The patient utters a cry of distress, becomes suddenly pale, and passes into a condition of syncope, which generally proves fatal. The arrest of the action of the heart appears to be due in part to interference with its action by the presence of foam or elastic air in the cavities instead of blood, but chiefly to the pulmonary capillaries becoming blocked by minute bubbles of air.

The treatment which has proved successful is the immediate performance of artificial respiration and electricity applied to the heart and diaphragm.

Aerhæmotoxia. (*Aër*, air; *αἷμα*, blood; *τοξικόν*, poison. F. *aëriemoloxie*; G. *Aeramoloxie*.) Poisoning, or death from entrance of air into the blood through the blood-vessels.

Aërial. (*Aër*.) Of, or belonging to, air.

A. acid. Another term for carbonic acid.

A. bulbs. Small conical or rounded fleshy bodies of the nature of bulbs produced in the axils of the leaves of certain plants, as of some species of lily, the coral wort, and pile wort. They differ from ordinary bulbs in their fleshy nature, by spontaneously separating from the parent and by producing new individuals when placed under favorable circumstances, and from true bulbs in their small size and aerial position.

A. fistula. A fistulous opening into the larynx or trachea, the result of non-union after operation or accident.

A. leaves. Leaves that are developed and live entirely or partially in the air.

A. plants. Applied to certain plants which after a time can live by absorption from the atmosphere, without requiring their roots to be fixed to any place, as the *Flos aeris*.

A. roots. Roots that are not produced by the direct elongation of the radicle of the embryo, but from the stem or other part of the plant above the ground. Such roots are well seen in the ivy, where they act as mechanical supports, and in the screw pine, Indian fig, and mangrove tree, where they both act as support and as a means of obtaining nourishment.

A. stems. Stems that appear above ground and maintain this position more or less perfoliately throughout life.

Aerides tessellatum. Nat. Ord. *Orchidaceæ*. Hab. Circular forests and other parts of India. It is mentioned in the Tale of Shams under the name of Banda, and is stated to be beneficial in disorders of mucus, wind, and blood;

also in boils and cutaneous eruptions, and to act as an alexipharmic. (Waring)

Aerification of lung. (*Aër*; *facio*, to make.) A term indicating conditions of the lung in which the amount of air is unnaturally increased, as in emphysema.

Aeriferous. (*Aër*; *fero*, to carry. F. *aëri-fère*; G. *luftführend*, *lufttragend*.) Air-bringing or carrying. Applied to the air-passages, as the windpipe, bronchi.

Aerification. (*Aër*; *facio*, to make. F. *aëri-fication*; *gaseification*.) Term for the converting of a liquid or solid into the gaseous state.

Aerifluxus. (*Aër*, air; *fluo*, to flow.) The discharge of gas and foetid emanation from the sick, flatulence (D)

Aeriform. (*Aër*; *forma*, form or shape. F. *aëri-forme*, *gazi-forme*; G. *luftartig*, *luft-formig*.) Having the form of air or gas, gaseous.

Aeriperitonitis. (*Aër*; *peritonitis*.) Term by Pirry for *tympanitis*.

Aëria flores. Flowers of copper; obtained in small grains by pouring cold water on fused copper. Formerly used in medicine.

A. squamæ. Flakes of copper, obtained by hammering heated copper. Formerly used in medicine.

Aëritis. (*Aër*, the air, or sky, from its blue colour.) A Greek name for a plant supposed to be *Anagallis arvensis*; the blue pimpernel, according to Turton.

Also in Mineralogy the jasper.

Aërobia. (*Aër*, air; *βίωσ*, life. F. *aëro-bie*.) Term applied to microscopic organisms which require air in order to live, as opposed to the *Anerobia*.

Aërocysts. (*Aër*, air; *κύστις*, a bag; L. *aerocyste*, F. *aërocyste*.) Term applied to small closed sacs containing air scattered over the vegetative organs of certain Algae, sometimes sessile as in the *Fucus*; sometimes pediculate, as in many *Floridæ*; sometimes basilar. They enable the parts in which they are found to float on or near the surface of the sea. They result from the breaking down of a group of subepidermic cells.

Aerodermectasia. (*Aër*, air; *δέρμα*, skin; *ἐκτασις*, dilatation.) Emphysema of the connective tissue.

Aerodiaphanometer. The same as *Diaphanometer*.

Aerodiaphthora. (*Aër*; *διαφθορά*, corruption.) A vitiated state of the air.

Aerodynamic. (*Aër*, the air, *δύναμις*, power. L. *Aerodynamicus*, F. *aërodynamique*.) Of or belonging to the force or power of the air.

Aerodynamics. (Same etymon. F. *aërodynamique*; G. *Aerodynamik*, *Luftkraft-lehre*.) A term for the doctrine of the laws regulating the air and its movements.

Aerenterectasia. (*Aër*, *ἐντέρον*, intestine, and *ἐκτασις*, dilatation.) Tympanitis.

Aerognoësis. (*Aër*, *γνώσις*, knowledge. F and G *aërognose*.) That branch of science which treats of air, and the part it plays in nature.

Aerography. (*Aër*, *γράφω*, to write. Fr. *aérogaphie*; G. *Luftbeschreibung*.) A description of, or treatise on, the air.

Aerohydropathy. (*Aër*, *υδωρ*, water, *πάθος*, affection.) The treatment of disease by air and water.

Aerolite. (*Aër*, the air or atmosphere;

λίθος, a stone. *F. aerolithe*; *G. Aerolith*, *Himmelstein*, *Luftstein*, *Meteorsteine*, *Meteorstein*.) A term for certain meteoric stones which fall from the heavens: an aerolith; also termed a *Meteorolite*.

Aerolithus. Same as *Aerolite*.

Aerology. (*Ἀήρ*; λόγος, a discourse.) *Aerologia*. *F. aérologie*; *G. Aerologie*.) A treatise, dissertation or consideration of the nature and properties of air.

Aeroman'cy. (*Ἀήρ*; *μαντεία*, divination.) Divination by air or substances contained in it. (*D.*)

Aeromel'l. (*Ἀήρ*; *μέλι*, honey.) Name for a substance formed on the leaves and boughs of trees, which was believed to fall like dew from the atmosphere; anciently called *δρυσουμέλι*; also termed *Mel acreum*, *Mel roscidum*, or honeydew; it is the same as manna; used by Aldrovandus, *de Insect.* i. 2, and Keuchenius, *not. ad Sammonie*. p. 147.

Aerometer. (*Ἀήρ*; μέτρον, a measure. *L. Aerometrum*; *F. aëromètre*; *G. Luftdichtigkeitsmesser*.) An instrument for ascertaining the density of gases. That invented by Dr. M. Hall for ascertaining the mean bulk of air or gases in pneumatic experiments, consists of a glass bulb of a capacity of four and a half cubic inches and a long tube with a capacity of one cubic inch. This tube is inserted into another tube, in which it is sustained at any required height by means of a spring. Five cubic inches of air are introduced into the bulb and tube, of the latter of which it will, at mean temperature and pressure, fill one half. The other half of this tube, and part of the tube in which it is inserted, are occupied by the liquid of the pneumatic trough. The point of the tube at which the air and liquid meet is marked by the figure 5 to denote five cubic inches. The upper and lower halves of the tube are each divided into five parts indicating tenths of an inch, and the external tube has also a scale of inches attached. (Knight.)

Aerometry. (*Ἀήρ*; μέτρον, to measure. *L. aerometria*; *F. aërométrie*; *G. Luftmesskunst*, *Luftmessungskunde*.) The branch of physics which treats of the density of atmospheric air, and the means of measuring it.

Aeroperiton'ia. (*Ἀήρ*; *peritonæum*. *F. aëropéritone*; *G. Luftbauch*.) Term by Piorry for gas in the peritoneum.

Aeroph'ano. (*Ἀήρ*; φαίνω, to appear.) A light gauze or imitation crape.

Aeropho'bia. (*Ἀήρ*; φόβος, fear. *F. aërophobie*; *G. Luftscheu*.) A fear, or dread of any current of air, because in hydrophobia and some other diseases, as hysteria, of which this is a symptom, it is apt to produce a paroxysm.

Aerophob'ic. (Same etymon.) Affected with *Aerophobia*.

Aerophon'i. (*Ἀήρ*; φωνή, the voice. *F. aerophoni*.) A family of *Grallatores*, that fill the air with their fullness of voice.

Aeroph'orous. (*Ἀήρ*; φέρω, to bear.) Bearing or conducting air.

Aeroph'orum. (Same etymon.) Term applied by Meltenius to elongated glands found in some Genera of Ferns, especially in *Aspidium*.

Aeroph'thora. (*Ἀήρ*; φθορά, corruption. *F. aërophthora*; *G. Luftverderbniss*.) Vitiating of the air.

Aerophyte. (*Ἀήρ*; φυτόν, a plant. *F. aërophyte*.) A plant that grows entirely in the air.

Aeropleu'ria. (*Ἀήρ*; πλεῦρα, a rib, in the plural, the side. *F. aëropleurie*.) A synonym of *Pneumothorax*.

Aeropneumona'sia. (*Ἀήρ*; πνεῦμα, the lungs. *F. aëropneumonie*.) A synonym of *Vesicular emphysema*.

Aeropneumonectas'ia. (*Ἀήρ*; πνεῦμα; ἵκτασις, extension. *F. aëropneumonectasie*.) A synonym of vesicular emphysema.

Aerora'chia. (*Ἀήρ*; ῥάχis, the spine.) Accumulation of air in the vertebral canal.

Aeroscope. (*Ἀήρ*; σκοπέω, to examine.) Pouchet's aeroscope is an apparatus for examining the purity of the air microscopically. It consists of a small funnel drawn to a fine point, below which is a slip of glass moistened with glycerin. The end of the funnel and the slip of glass are enclosed in an airtight chamber, from which a small glass tube passes out and is connected by india-rubber tubing with an aspirator. The glycerin arrests any foreign particles in the air.

Aero'seo. (*L. Aërosus*, from *as*, brass or copper. *F. cuivreux*; *G. kupferhaltig*, *kupfericht*.) Of the nature of copper; coppery.

Aero'sis. (*Ἀήρ*; *G. ausluftung*.) Pneumatosi; tympanitis. An imaginary resolution of the blood into vapour, supposed to be necessary for the support of the vital spirits, and to be brought about by the ventilation of the air during inspiration, in the manner that the flame of fuel is kindled by blowing it. (Parr.)

Aerosphere. (*Ἀήρ*; σφαῖρα, sphere.) Boerhaave's term for atmosphere.

Aerostatic. (*Ἀήρ*, the air, or atmosphere; *στατική*, the science which ascertains the properties of bodies at rest; from *ἵστημι*, to stand. *L. aërostaticus*; *F. aërostatique*.) Of or belonging to aerostatics.

Aerostatics. (Same etymon. *L. aërostaticus*; *F. aërostatique*.) The doctrine of air, its specific gravity and properties while in a state of rest.

Aerosta'tion. (Same etymon. *L. aerostatio*.) The raising and supporting of machines in the air, by the buoyancy of heated air, or light gases contained in a spherical bag called a balloon. The science of ballooning.

Aero'sus la'pis. A synonym of the stone called *Cadmia lapidosa*.

Aerotherapeu'tics. (*Ἀήρ*, air; *θεράπειω*, to cure.) A mode of treating disease by varying the pressure, or by modifying the composition, of the surrounding atmosphere. The patient is placed in an air-tight chest or room, provided with adit and exit pipes, and air is pumped in. Three periods are recognised, that of increasing compression, that of fixed or uniform pressure, and that of reduction of pressure or decompression. The first and third of these should be executed slowly. The cases in which Aerotherapeutics have been found useful are in pulmonary emphysema, bronchitis, chronic laryngitis, catarrhal and nervous asthma, in anæmia, slowly developing phthisis, in whooping cough, and in catarrh of the Eustachian tube. By means of india-rubber sheeting applied round a limb and connected with a pump, the local variation of pressure can be obtained.

Aerotho'rax. (*Ἀήρ*; θώραξ, the chest. *G. Luftbrust*.) Same as *Pneumothorax*.

Aerotonometer. The same as *Tonometer*.

Aerozo'a. (*Ἀήρ*; ζῷον, an animal. *F. aërozoë*.) Applied to vertebrate and articulated animals to which air is indispensable. (Im-moureux.)

ÆRUA LANATA—ÆSTHESIOMETER.

Ærva lanata. Nat. Ord. *Amaranthaceae*. (Chaya root. Hab. Bengal. Root mucilaginous, used as an emollient in strangury.)

Æruca. Believed to be corrupted from *Ærugo*, with which it is in all respects synonymous.

Æruginose. (L. *ærugineus*.) Verdigris green.

Æruginous. (*Ærugo*, the rust of copper. L. *ærugineus*. F. *ærugineux*; I and S. *ærugineoso*; G. *Kupfergrün*, *spangrün*.) Of, or belonging to, verdigris. A bluish-green colour like verdigris, or the leaves of some pine trees.

Æspu'ta. A term given to very green expectoration.

Ærugo. (L. *ox*, brass or copper. *Æris rubigo*, the rust of brass or copper; F. *vert de gris*, G. *Grünspan*.) The rust of a metal, but especially applied to that of copper, *Verdigris*, which is a mixture of several basic cupric acetates.

Æ. æris. The rust, or impure subacetate of copper, *Verdigris*.

Æ. crystallis'ata. A synonym of the *Cuprum aceticum*, G. Ph. Cupric acetate.

Æ. distilla'ta. A synonym of the *Cuprum aceticum*, G. Ph. Cupric acetate.

Æ. factitia. A synonym of *Æ. preparata*.

Æ. ferri. A synonym of *Æ. Ferrus carbonatæ*.

Æ. plumbi. A synonym of *Lead carbonatæ*.

Æ. prepara'ta. Verdigris carefully prepared so as to be free from impurity.

Æ. ras illa. Scraped verdigris. Verdigris made by hanging a copper plate close over vinegar, but not so as to touch it, and after ten days scraping off the incrustation.

Æ. sublima'ta. Sublimed or distilled verdigris used in painting.

Æ. viride crystallisa'tum. Cupric acetate.

Æ. viride distilla'tum. Cupric acetate.

Ærum'na. (L. *Ærumna*, either a contraction of *ægrumna*, sorrow, or from *ærumnula*, a forked or crooked staff, which travellers used to carry their packs upon.) A term for weariness or unhappiness, conjoined with fatigue, or suffering.

Æer'va. Same as *Æruca*.

Æs. (Sans. *Ajas*, iron. F. *airain*; I. *rame*; S. *alumbr*; G. *Eyz*.) The metal brass, a combination of copper and zinc.

Æ. es tum. Burnt copper. Thin plates of copper, laid stratum super stratum in a crucible, with sulphur and sea salt, and placed over a hot charcoal fire until the sulphur is consumed, and the copper can be reduced to powder. Formerly used as an escharotic, and internally in epilepsy.

Æschni'æ. A Subfamily of the Family *Libellulidæ*, Group *Amphibiotica*, Suborder *Pseudoneuroptera*, Order *Neuroptera*, Class *Insecta*. Posterior wings larger at the base than the anterior, lateral lobes of the inferior labium little larger than the external lobes and terminated by a movable point.

Æs'chos. (Aἴσχος, shame.) Deformity of the body generally, or of any member, used by Hippocrates.

Æschromythe'sia. (Aἴσχυς, base; αἴσχος, speech.) A term used by Hippocrates for the obscene language uttered by the delirious, particularly in puerperal mania and phrenitis.

Æschynomene. (Aἴσχυνη, to be ashamed.) The *Almora*, or sensitive plant, be-

cause it shrinks from the touch as if it were ashamed.

Æsculin. (*Æsculus*, the horse-chestnut) $C_{21}H_{31}O_{13}$. A glucoside contained in the bark of the horse-chestnut. A white, slightly bitterish powder, destitute of smell; soluble in 600 parts of cold and in 124 parts of hot water, and in 100 parts of cold alcohol. It has a slightly acid reaction. Its watery solution is highly fluorescent, the reflected light being of a light blue colour.

Æsculus. (L. either from *æscā*, food, or more probably connected with *ἀνίσκος*, an esculent acorn.) A Genus of the Subord. *Hippocastaneæ*, Nat. Ord. *Sapindaceæ*, Subclass *Thalamifloræ*; or of the Subfam. *Sapindæ*, Fam. *Sapindaceæ*, Order *Æsculina*, Series *Eucalyceæ*, Subclass *Choripetalæ*, Class *Dicotyledonæ*. Leaves opposite, digitate, petioles five, spreading, with short claws, unequal, stamens seven, declinate; fruit leathery, three-valved.

Æ. hippocastanum. (F. *marronnier de l'Inde*, I. *marrone d'Indie*; G. *Rosskastanie*, *weisse Kastanie*.) The horse-chestnut. Leaflets seven, seldom five; obovate, cuneate, acute, toothed, fruit prickly. The bark of the young branches has been used as a substitute for cinchona; it is astringent and bitter; it contains æsculin, pavin, tannin, and some frasin. The fruit is bitter, and contains much starch, which has been extracted and used; dried and powdered it is used as a sternutatory. An oil is extracted from the fruit by percolation with ether, and has been used as a local application in gout and rheumatism.

Æ. obioten'sis. A synonym of *Æ. pavia*.

Æ. pa'via. (F. *Pavia rouge*.) Red buck-eye. Hab. Southern United States. Said to be a febrifuge, the seeds are actively poisonous.

Æ. rubicunda. A synonym of *Æ. pavia*.

Æsca'vum. (Etymology unknown.) An old term for brass.

Æstas. (Probably akin to *αἶσθαι*, to burn; and *τῆς*, nutty heat. F. *été*; G. *Sommer*.) Summer, hot scorching weather.

Æsta'tes. (*Æstas*, summer.) Heat-spots; freckles, sun-burnings. Pliny, xxviii, 12.

Æsthe'ma. (Aἴσθημα, a perception, or the thing perceived by the senses.) Sensation.

Æsthematology. (Aἴσθημα; λόγος, a discourse.) The philosophy of, or a treatise upon, the organs of sense.

Æsthematonu'si. (Aἴσθημα; νόσος, a disease.) Diseases affecting the organs of sensation. (D)

Æsthematorganu'si. (Aἴσθημα; ὄργανον, an organ of sense; νόσος.) The pathology of the organs of sensation. (D)

Æsthesiography. (Aἴσθησις, sensation; γραφή, to write.) A description of the senses and their organs.

Æsthesiology. (Aἴσθησις, sensation; λόγος, a discourse.) An account or description of the senses and of sensation.

Æsthesiometer. (Aἴσθησις, sensation; μέτρον, a measure.) An instrument for determining the tactile sensibility of the skin or mucous membranes. Its value in medicine depends on the circumstance that the capability of distinguishing two impressions, made upon the skin simultaneously, varies in different regions of the body according to the distance they are apart. In sensitive regions, as the end of the finger, the two points of a pair of compasses can be distinguished at about the one twelfth of an inch apart,

ETAS--ETHER.

also to the *Strophulus volutions*, or wild-fire rash of children.

Etas. (Contraction of *etates*, from *etatem*, an age or term of life.) The natural life-time, age.

E. bona. Adolescence.

E. crepita. Decrepit age, which was reckoned by the ancients from the 60th year and upwards, ending in death.

E. decrepita. Old age.

E. ma'ia. Old age.

E. provecta. Old age.

E. senectus. Old age.

E. senilis. Virile age, or manhood, which belongs to the 35th to the 50th year.

E. virilis. Virile age, or manhood, which belongs to the 35th to the 50th year.

Eteida. A Family of the Suborder *Gymnolamata*, Class *Chilostomata*, Order *Sarcina* with a subterminal aperture.

Ethaliini. Applied to a tribe of Fungi having the *Ethalius* for their type.

Ethalius. (*Albalus*, reddish-brown.) One species of which—viz. *E. septicum*—is commonly known as flowers of tan. The Genus belongs to the *Myxomycetes*, or slime moulds.

Do Bary, who was the first to carefully investigate this group of plants, at one time thought they ought to be classed with animals rather than with vegetables, owing to the circumstance that during a portion of their existence they do not form cells or tissues. A stricter examination into their life history has led him to abandon this view, and they are now acknowledged by all to be of vegetable origin solely.

The *Ethalius* have upon decaying vegetable matter, such as tan or sawdust, over the surface of which they creep with a streaming motion, and leave a shiny track behind them like that of a snail. Thus is the vegetative condition of the reproductive state the whole of the protoplasm (plasmidium) becomes transformed into receptacles (cysts), often a foot in diameter and an inch deep. The exterior of this cyst is formed of a brittle skin, which is yellow, but afterwards becomes differentiated into a network of delicate tubes (capillaria), the interstices of which are filled with smooth spherical spores. These spores, when set free and brought into contact with moisture, germinate, the thick cell wall bursts, and the whole of the contents of the cell issues forth as an amoeboid corpuscle, which in a few minutes becomes pointed and furnished with long cilia. These amoeboid corpuscles (swarm spores) increase by division. At the end of two or three days this multiplet on by division ceases, and at last they form the plasmodium.

E. septicum. Wood *Ethalius* Vari- only coloured, external bark yellow, thin, dec- duous, internal mass compact, black.

E. vaporeum. A synonym of *E. sep-* ticum.

E. viola ceum. A synonym of *E. sep-* ticum.

Etheogamia. (A. neg.; 800s, custom; yama, marriage.) A synonym of the *Crypto-* gamia.

Ether. Brit Pharm See Ether.

E. acetous. B. Ph (Ether acet qu.)

E. acetic. Acetic ether. $C_2H_5O_2$. Dry

sodium acetate 8 parts, rectified spirit of sulphuric acid 10 parts, is distilled, the pro- duct added to half its weight of calcium chloride, left 24 hours, decanted and rectified. A colourless liquid, of agreeable odour and pleasant taste, sp. gr. 0.9; boiling point $74.4^{\circ}C$ ($165^{\circ}F$). It dis- solves in 12 parts of water, and in all proportions in alcohol. A stimulant and antispasmodic.

Dose, 15–40 drops or more in water.

Aust Ph. This ether is made by distilling a mixture of acetate of soda, alcohol, and English sulphuric acid. Sp gr 0.9, 1 part dissolves in 9 of water.

E. anæstheticus. Helv. Ph. *Ethyl* chloride, which see.

E. arant. A synonym of the *Ether* anæstheticus, Helv. Ph.

E. cantharidis. Helv. Ph. Ten parts of cantharides macerated in 15 parts of ether and strained. Used as a vesicant.

E. chloratus alcoholicus. The *E. chlorhydricus alcoholicus*, Belg. Ph.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. anæstheticus. Helv. Ph. *Ethyl* chloride, which see.

E. arant. A synonym of the *Ether* anæstheticus, Helv. Ph.

E. cantharidis. Helv. Ph. Ten parts of cantharides macerated in 15 parts of ether and strained. Used as a vesicant.

E. chloratus alcoholicus. The *E. chlorhydricus alcoholicus*, Belg. Ph.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

E. chlorhydricus alcoholicus. Belg. Ph. Spirit of hydrochloric ether. Sodium chloride 334 parts, manganese oxide 125 parts, distilled with sulphuric acid 250 parts, and rectified spirit 1000 parts.

ÆTHEREA HERBA—ÆTHRIOSCOPE.

Æ. prussicus. A synonym of *Ethyl cyanide*.

Æ. purus. B. Ph. Pure ether. Twenty parts of ether, after being twice shaken with 10 parts of water in a bottle and decanted, is distilled with one eighth part of recently burnt lime and two parts of dried calcium chloride. The product has a sp. gr. of .720, a vapour density of 2.588, and boils at 35.5° C. (96° F.) Used for purposes of inhalation as an anæsthetic. See *Ether*.

Æ. pyroæoticus. A synonym of *Acetone*.

Æ. rectificatus. A synonym of *Æther purus*.

Æ. sulfuricus alcoholisatus. The *Æther sulfuricus alcoholisatus*, Fr. Codex.

Æ. sulfuricus. Sulphuric ether. A synonym of *Æther*. B. Ph. The *Æther sulfuricus*, Fr. Codex.

Æ. sulfuricus actus. The *Æther acidum Halleri*.

Æ. sulfuricus alcoholicus. Belg. Ph. Hoffmann's anodyne. Sulphuric ether 468 parts, rectified spirit 532 parts.

Æ. sulfuricus crudus. A synonym of the *Æther crudus* of the Aust. Ph.

Æ. sulfuricus cum alcoholi. A synonym of *Hoffmann's anodyne*.

Æ. sulfuricus cum alcoholi aromaticus. A synonym of the *Spiritus ætheris aromaticus*.

Æ. terobinthinus. See *Æther, terobinthinatus*.

Æ. vegetabilis. A synonym of the *Æther æoticus* of the Aust. Ph.

Æ. vitrioli. A synonym of the *Æther depuratus* of the Aust. Ph.

Æ. vitriolicus. A synonym of *Ether*.

Ætherea herba. The *Eryngium maritimum*.

Æthero-oleo'sa. Medicines or drugs which contain an essential oil on which their properties depend.

Ætherolata. Ethereal distillations from drugs.

Ætherolatura. Ethereal tinctures of fresh plants.

Ætherolea. A synonym of *Essential oils*.

Ætherolica. (*Æther. F. æthéroliques*.) Term for combinations of ether.

Æthiopificatio. (*Æthiops*, and *facio*, to make.) The discolouration of the skin, caused by the use of silver nitrate, or mercurial ointment.

Æthiopsis. Same as *Æthiopificatio*.

Æthiopsis (Althiopsis) of the ancients is referred by Sibthorpe to *Salvia æthiops*; by others to *Salvia argentea* or the silver sage. It was used in affections of the uterus, in sciatica, pleurisy, and some forms of sore throat. (Dioscor., L. iv., c. 105; Paul. Æg., L. vii., s. 3; Pliny, L. xxvii., c. 4.) Another plant, named *Æthiopsis*, is mentioned by Pliny (L. xxiv., c. 102) as being very serviceable in dropsy. It has been referred to an Euphorbium. (Waring.)

Æthiopsis mus. Same as *Æthiopificatio*.

Æthiopo'psis. Same as *Æthiopificatio*.

Æthiops. (*Αἰθίοψ*, an Ethiop, or native of Ethiopia, a region of Africa; also the son of Vulcan, from *αἶθω*, to burn, in reference to the dark complexion of Ethiopians, or as if blackened

or charred by burning. *F. Æthiops*.) A name anciently given to several black powders, because of their colour.

Æ. albus. An Albino; also a synonym of *Mercurius alkalizatus*.

Æ. alkalizatus. A synonym of the *Hydrargyrum cum Creâ*.

Æ. animal. The pigment layer of the choroid membrane.

Æ. animalis. The powder formed by burning various animals to a cinder, as the hedgehog, sparrow, mole.

Æ. antimonialis. A preparation composed of one part of quicksilver to two of sulphuret of antimony; used in skin affections.

A synonym of *Hydrargyrum sulfuratum stibiatum*, Helv. Ph.; and of the *Sulphuretum hydrargyri et antimonii*, Belg. Ph.

Æ. antiphthysicus. An old preparation of mercury with balsam of Peru; used in consumption.

Æ. antirheumaticus. An old preparation of mercury with gum guaiacum, used in rheumatism.

Æ. auripigmentalis. An old preparation of quicksilver with sulphuret of arsenic.

Æ. diureticus. An old preparation of mercury with juniper.

Æ. jovialis. An old preparation of tin, quicksilver, and sulphur, rubbed together.

Æ. martialis. The black oxide of iron, used formerly as a tonic. A synonym of the *Oxidum ferri nigrum*, Belg. Ph.; and of the *Ferrum oxydulato-oxydatum*, Helv. Ph.

Æ. mercurialis. Mercury sulphide. A synonym of *Sulphuretum hydrargyri nigrum*, Belg. Ph.

Æ. mercurii per se. The *Hydrargyri oxidum*, or mercury oxide, because formed by merely triturating mercury for a long time while exposed to the air.

Æ. mineralis. A preparation composed of mercury sulphide with sulphur: the *Hydrargyri sulphuretum cum sulphure* of the pharmacopœias.

A synonym of the *Hydrargyrum sulfuratum nigrum*, Germ. Ph. and Helv. Ph.; and of the *Sulphuretum hydrargyri nigrum*, Belg. Ph.

Æ. narcoticus. A synonym of *Æthiops mineralis*.

Æ. purgans. An old preparation of mercury with manna or jalap.

Æ. saccharatus. See *Hydrargyrum saccharatum*.

Æ. vegetabilis. *Æthiops*. A black powder, formed by incinerating the *Fucus vesiculosus* in a covered crucible; it contains iodine, and was employed in glandular diseases.

Æthmoides. See *Æthmoid*.

Æth'na. (*Αἶθω*, burning.) An old term for subterraneous, invisible, sulphureous fire, which calcines rocks in the earth.

Æthnici. The fiery meteors emitted from burning mountains. (R. and J.)

Ætholices. (*Αἶθω*, to burn.) Term for burning pustules on the skin; considered to be furunculi, or boils, by some.

Æthom'na. (*Αἶθω*, burning or shining; *ἵμμα*, a sight or spectacle.) An old term for the appearance of flashes of light before the eyes.

Æthrioscope. (*Αἶθρ*, air; *σκοπεῖν*, to see. *F. æthrioscope*; *G. Äthrioskop*.) An instrument for measuring the degree of cold arising from exposure under different conditions of the sky. It consists of a differential

ETHUSA—AFFECTUS.

thermometer, so placed in the interior of a highly polished cup or concave mirror that one of the bulbs is in the focus of the mirror, and the other not in the focus. The cup or mirror is kept covered by a lid, on the sudden removal of which the liquid in the arm passing to the focus rises, owing to the bulb in which it terminates becoming cooled.

Ethusa. (Αἶθος, to burn.) A genus of the Sub-tribe *Xanthoxea*, Tribe *Sesuvieae*, Nat. Ord. *Umbelliferae*. General involucre none; partial involucre long, pendulous, valved, calyx obsolete, fruit ovate, ridges 5, raised, thick, acute, the lateral on the edge and broader, with one to each furrow, albumen torate, the bracts longer than the umbel.

E. cynapium. (Κύων, a dog. *F. petite eagle, faux persil, ethuse*; *G. Hundspetersilie, Gartenschierling*; *L. cucula minor*.) Fool's parsley. Root fusiform, stem corymbose branched, terete, fistular, leaves deltoid, leaflets pinnatifid, umbels small, rays spreading, irregular, bracteoles 3—5, slender, flowers irregular, small, fruit green. A well-known narcotic, acrid, and emetic plant, growing in hedgerows and waste places, the leaves have been occasionally mistaken for parsley, and the roots have been eaten for parsnips and turnips. It is very poisonous, death having occurred in an hour, with nausea, vomiting, insensibility, tremors, dilated pupils, and tetanic contraction of masticators. It is distinguished from parsley by its stem, which is glaucous, reddish at the base, and slightly spotted with red, while that of parsley is green; by its leaves, which are tripinnate, with numerous narrow segments, while those of parsley are bipinnate, with large trilobed segments, by its absent involucre, while parsley possesses one, by its involucre, which consists of three dependent bracteoles, while that of parsley is composed of 8—10 circularly disposed bracteoles; by its flowers, which are white, while those of parsley are yellowish-green; and by its odour, which is nauseous, while that of parsley is agreeably aromatic.

E. meum. A synonym of *Meum athamanticum*.

Ethusin. A crystallisable poisonous alkaloid, which is the active principle of the *Ethusa cynapium*. It forms a crystallisable salt with sulphuric acid.

Ethyle. See *Ethyl*.

Ethyleum chloratum, *O. Ph.*, *Helv. Ph.* Dutch liquid. See *Ethene chloride*.

Etia. (Αἰτία, a cause.) A cause, as of disease.

Actiophilæbes. (Ἄκτος, an eagle; φλέψ, a vein.) Eagle veins; a term for the veins of the temple.

Etiology. (Αἰτία, a cause; λόγος, a discourse. *F. ætiologiæ*; *G. ætiologie*.) Term for the doctrine of the Causes of disease.

In Biology, ætiology has for its object the ascertainment of the causes of the facts of this science, and the explanation of biological phenomena, by showing that they constitute particular cases of general physical laws.

Etion. (Αἰτιον, a cause.) A cause; as of disease.

Actites. (Ἄκτος, an eagle, because believed to be carried by the eagle to her nest to assist in the hatching of her eggs.) The eagle-stone, a stone, hollow and containing another substance within it, the former, or shell, of clay-

iron stone; the latter, or nucleus, of variable composition.

Etoclon. Same as *Etolon*.

Etolon. (Αἰτάλιος, or αἰγώλιος, a night bird of prey, or from αἰτός, an eagle.) Old name for the berries of the *Daphne mezereum*, or widow-wail; their colour being that of the eagle.

Etomorphæ. (Ἄετός, an eagle; μορφή, form.) A Group, according to Huxley, of the Suborder *Desmognatha*, Order *Carinatae*, Class *Aves*. The birds of prey. Rostrum more or less arched and hooked at the tip, maxillo-palatine processes united with an ossification of the osptum, breadth of the articular surface at the distal end of the quadrate bone greater than its length, the outer condyle extending about as far downwards as the inner.

Etomychum. (Ἄετός, an eagle; μυχή, a claw.) The plant *Lithospermum officinale*. Same as *Egomychon*.

Afabond. A dried mucilaginous fruit, sold in the Bazaars of Upper India, imported from Khorasan, and employed as a tonic. (Waring.)

Afa'e. The native name in Delhi of the *Echis carinata*, one of the *Viperidae*.

Afa'i. Same as *Afa'e*.

Afebrile. (Α-, neg.; *febris*, fever.) Term applied by Liebermeister to cases of typhoid fever in which the temperature rises but slightly or not at all.

Affadyl. (Ἀσφοδύλος; *L. asphodelus*.) An old term, replaced in latter times by *Daffodil*. The *Narcissus pseudonarcissus*.

Affectio. (*L. afficio*, to affect.) An affection.

A. arthritica cordis. Gout at the heart.

A. hypochondriaca. Hypochondriasis.

A. hysterica. Hysteria.

A. sarmatica. A synonym of *Plica polonica*.

A. tympanica. Tympanites.

Affectio. (*L. Affectio*; from *afficio*, to affect. *F. affection*.) Term applied to the passions or emotions of the mind, as anger, hatred, jealousy, and love.

In Pathology, it is nearly synonymous with disease, as inflammatory, nervous, or rheumatic affection.

Affective faculties. (*F. les facultés affectives*.) An Order including Animal Propensities, Sentiments common to man and the lower animals, and Affective Faculties peculiar to man.

A. insanity. A form of insanity, opposed to the ideational, in which the emotions or feelings only are affected. Maudsley and others divide affective insanity, or emotional, as it is sometimes called, into two varieties—impulsive and moral insanity. In both, the language may be coherent, and the memory and judgment sound and accurate. In impulsive insanity one only, or a few of the moral faculties, sentiments, or feelings, are perverted. There is an irresistible tendency to the performance of some one act or class of acts, as in kleptomania, homicidal mania, or pyromania. In moral insanity the moral faculties are generally perverted; there is a loss of power of the will to contest the emotions. Affective insanity precedes and accompanies every other variety of insanity.

A. monomaniac. Esquirol's term for emotional insanity.

Affectus. (*L. afficio*, to affect.) A state or disposition.

AFFENAH—AFRICAN AMMONIACUM.

A. an'imi. Mental disorder.
A. sacrum postilians. A synonym of *Cynanche maligna*.
A. hydero'des. A synonym of *Dropsy*.
A. spasmodico-convulsivus labio-rum. A synonym of *Facial neuralgia*.
Affen'ah. An undetermined African plant, the leaves of which, with cardamoms and other ingredients, are given by the natives of Ashantee internally, and applied externally in painful affections to swollen parts. (Waring.)
Affen'icum. Old term for the *Anaim*, or soul.
Affoos. Foam; froth; spuma. (Ruland.)
Afferent. (L. *afferens*, from *ad*, to; *fero*, to bear or carry. F. *afferent*.) Bringing to; applied to the lymphatic vessels (*Vasa afferentia*), because they bring their contents to the system.
A. impulse. The impression conveyed by an afferent nerve to its centre.
A. nerve. A nerve which conveys impressions from the periphery to the centre. In most cases synonymous with sensory.
Affidra. Arabic name for Cerussa, or white lead.
Affiliation. (L. *ad*, to; *filius*, a son.) The legal determination of the paternity of a child.
Affanage. The act of refining or purification of metals.
Affinity. (L. *affinitas*; *affinis*, akin to, related to; from *ad*, to; and *finis*, boundary, limit. F. *affinité*; G. *Verwandtschaft*.) Relationship; a term nearly synonymous with attraction.
 Also used to denote an intimate relationship between animals or plants in regard to their structural organisation.
A. appropriate. Same as *Intermediate affinity*.
A. chemical. (F. *affinité*; G. *chemische Kraft*; *Verwandtschaft*.) The force by virtue of which bodies of dissimilar nature unite together to form compounds of definite constitution which cannot be destroyed by mechanical agencies; as contradistinguished from the attraction between molecules of like kind, which is *cohesion*. It is exerted only at inappreciable distances and always between definite and invariable weights of the combining substances.
A. elective. A term employed to indicate the greater attraction which a substance, when brought into contact with other substances, often has for one in preference to others.
A. compound. Applied to the uniting of three or more bodies, by their mutual affinity, to form one homogeneous body.
A. disposing. Applied to the tendency of many bodies to enter into combination, by being presented with a third substance, exerting a strong attraction to the compound they form, but which may be withdrawn whenever the combination is established.
A. divellent. That which tends to arrange the particles of a compound in a new form, producing decomposition.
A. double. See *Attraction, Double elective*.
A. intermediate. The affinity of an intermediate; used when two substances of different kinds, showing no compound affinity for each other, combine by the aid of a third, and unite into a homogeneous whole.
A. of aggregation. The force by which two substances of the same kind tend to unite without alteration of their chemical properties; attraction of cohesion.

A. of composition. The force by which substances of different kinds unite and form matter, the properties of which are different from those of the substances before their combination.
A. quiescent. That which tends to maintain the elements of a compound in their present state.
A. recip'ocal. An old term explained thus: a body consisting of two principles may be separated by another, which, with one of the principles of the first, forms a new compound; but the separated principle, after some time, will effect a separation of the new union.
A. simple. See *Attraction, simple elective*.
A. vital. The power by which the various solids and fluids of organised bodies are formed from the common circulating fluids.
Affion. Arabic name for opium.
Affium. A term borrowed from the Orientals, who apply it to the unmixed opium tears which collect around the incisions in the capsules of the poppy, and given to the indigenous opium of France.
A. d'Aubergier. An extract of the capsules of the *Papaver rhigrum* containing 5 per cent of morphia.
Affiat'us. (L. *afflo*, to blow upon.) A blowing or breathing upon; a blast. Applied to a species of erysipelas, from the suddenness of its attack, as if caused by an unwholesome blast.
Affluent. (L. *ad*, to; *fluo*, to flow.) Flowing into; applied to a stream which runs into another.
Afflux. (L. *affluo*, to flow towards, from *ad*, to; *fluo*, to flow. Gr. *ἰκίρροια*. F. *afflux*; G. *Auffluss*, *Zufuss*; I. *afflusso*.) The abundant flow of the blood or other fluid to a particular region or organ of the body. The congestion of the vessels of the mammary gland when the infant takes the breast is a good example of the afflux of blood to a gland.
Afformas. An old name for glass. (R.)
Affrodile. The *Narcissus pseudonarcissus*.
Affrodina. (Ἀφροδίτη, Venus.) Alchemical name for the metal Cuprum, or copper.
Affronitrum. (Ar. *Baurach*; G. *Glasgalle*.) Sandiver. Spuma nitri; Cappadocian salt.
Affrotron. (L. *Spumeus*; G. *Schaumig*.) Frothy, foamy.
Affrun'ena. A plant of Guinea, which, boiled in wine, proves purgative. (W.)
Affusio. (L. from *affundo*, to pour upon.) A pouring upon; affusion.
A. frigida. A cold affusion.
A. orbicula'ris. A synonym of the *Placenta*.
Affusion. (*Affundo*, to pour upon. F. *affusion*; G. *Aufguss*.) The pouring of water or some liquor repeatedly on a substance to cleanse it. Term applied to a remedy in fevers, consisting in the pouring on the patient a quantity of water, varying in temperature according to his state, but usually from 50° to 60° or 70° F.; the duration of the affusion varies from two to ten minutes. It has a powerful action in reducing febrile heat and in calming nervous symptoms. The occurrence and degree of reaction should be watched.
Afo'ba. A plant of Guinea, which, bruised with oil, is used as a cure for a-babies. (Waring.)
Afoetal. (L. *A*, neg.; *fetus*, progeny.) Having no fetus.
Afragar. (Arab.) Verdigris.
African ammoniacum. See *Ammoniacum, African*.

AFROB--AGALACTIA.

A. baellianum. A gum resin obtained from *Balsanodendron africanum*; and by some also said to be derived from *Amyris commiphora*, both of which are Amyridaceous plants.

A. black pepper. The fruit of the *Piper* (Lind. cubeba class, Miguel) It closely resembles cubeba, but contains piperin, and not cubebin.

A. co'pal. A kind of gum resin found on the Island of Zanzibar and the neighbouring mainland, embedded in loose soil and touchwood. It is the product of vast extinct forests.

A. cubeba. See *Cubeba*, African.

A. damp. A fibre derived from *Sansevieria zeylanica*, a Liliaceous plant, resembling dragon's blood, obtained from the *Pterocarpus* crinaceus.

A. millet. An edible grain obtained from the *Penicillaria spicata*, or *Panicum spodium*.

A. oak. A synonym of *African oak*, according to Dr. Bhan-Dajiana, and *B. Prerocana*, according to the Somali country, and belonging to the Nat. Ord. *Amyridaceae*.

A. saffron. The flowers of the *Lycopodium* of South Africa. They closely resemble saffron in smell and taste, and have similar medicinal properties. They yield a fine orange dye.

A. teak. A valuable timber, obtained from the *Oldfieldia africana*, a Euphorbiaceous plant.

A. tragacanth. A gum obtained from the *Sterculia tragacantha*, a Sterculiaceae plant, and a native of Sierra Leone.

A. turmeric. A rhizome resembling ordinary turmeric; probably obtained from *Curcuma speciosa*, a Musaceae plant.

Agrob. Spuma, foam, froth. (Ruland.)

Agros. (F. *arruri* saiz, l. *seconda*;) Common term for the placenta, cord, and membranes, otherwise called the *semina*, what is termed delivery.

A. damp. (F. *mosettes*; l. *mefta*; 8 *Wetter*.) The product of the partial combustion of coal gas. It contains a large proportion of carbon dioxide or carbamic acid, and proves very fatal to miners after explosion.

A. fever. Term applied by Boerner to those brief paroxysms of fever which are not relapses, and not dependent on any local disease, in typhoid fever.

A. images. (F. *images accidentelles* ou *consecutives*; G. *Nachbilder*.) The retention of a vivid impression on an organ of sense, but especially by the retina, when the original stimulus has ceased to act. When the after-image is simply a prolongation of the sensation, it is termed a positive after-image, as when on closing the eyes after looking at a window the bars are seen of a dark colour and the panes illuminated. This is probably due to the continued vibration of the retina appearing in response to the previous stimulus. After a short period a reversal takes place. This is termed the bright and the panes dark. In the case of coloured negative after-image for some time, the negative is regarded fixedly for a white, the negative

after-image is of a complementary colour; a red wafer, for example, giving a green image. This reversal is usually attributed to fatigue of the retinal elements, and consequent inability to perceive the red light proceeding from the white surface, the complementary tint green being alone perceived by the exhausted or less sensitive part of the retina. Dr Hartshorn, however, attributes the negative after-image to the interference of the continued retinal vibrations with those rays of the same colour in the light reflected by the white surface looked upon, so that only the complementary rays are seen. The after duration of sensations consequent on impressions on the retina explains the appearance of a circle of light produced by moving a luminous body in a circle before the eye, as well as that of the confusion of the images of the spokes of a rapidly revolving wheel.

After-images may also be experienced in the case of smells, tastes, tones, and impressions of contact. This term is applied to those impressions on the organs of sense which continue to be perceived by the mind after the original stimulus has ceased to act—a persistence, as it were, of the vibration into which the nerves were primarily thrown by the application of their appropriate stimulus.

The duration of after-images is very variable, but seems to augment with exhaustion of the nerve, and perhaps with the advance of age. Newton suffered for many years from an after-image of the sun, caused by incautiously looking at it through a telescope.

A. pains. (F. *tranchies uterines*; l. *ostia d'ipo il pinto*; G. *Nachschmerz*.) Term for those pains generally felt, and which are more or less severe for a time, after the birth of the child and expulsion of the uterus to expel clots.

After-pains usually are more severe in those who have borne children previously, and by distension of the rectum or bladder. Occasionally they are very severe and of a neuralgic character. An aperient, with opium and warm sedative fomentations to the hypogastrium, generally give relief. Anodyne applications to the breasts have been recommended.

A. sensation. The continuation or prolongation of an impression made on the special nerves of touch, taste, smell, hearing, or sight, when the stimulus producing the impression has ceased to act.

A. shaft. The secondary shaft of the feather of a bird growing immediately above the upper umbilicus at the junction of the barrel with the rachis.

A. to. A cruciferous plant of Guinea, which, dried and powdered, is regarded as a good emetic.

Agah. Intermittent fever. Same as *Agalaetia*.

Agalactia. (A. neg.; yala, milk. F. *agalactie*; G. *Milchmangel*.) A want or deficiency of milk after child-birth. It is a frequent result of acute febrile disorders occurring in the puerperal condition, and is then often of evil omen. If the disorders improve, the secretion of milk frequently returns, and its re-establishment may be promoted by warm fomentations. Local applications of the leaves of the *Ricinus communis* and of a decoction of the *Jatropha curcas* have been recommended.

AGALACTOS—AGARIC.

In deficiency or threatened loss of the milk secretion, good diet, malt liquors, milk, conger eel soup, infusions of fennel and aniseed, and electricity, have been advised.

Agalactos. (Ἀγάλακτος.) Applied by Hippocrates to a woman who has no milk after child-birth (*de Natur. Puer.* xi, 19, 20).

Agalactous. (A, neg.; γάλα, milk; G. *milch-los*, *milch-verlorendes*.) Without, or having no milk.

Agalaria. The same as *Agalactia*.

Agalaris. Same as *Agalactia*.

Agallochum. (Ἀγάλλοχος. F. *agaloe*, *bois d'aloë*; G. *Adlerholz*, *Aloëholz*.) An old name for the wood of the aromatic aloe, *Aquillaria agallochum*.

Agallugen. A synonym of *Agallochum*.

Agallugi. A synonym of *Agallochum*.

Agalorrhoea. (A, neg.; γάλα, milk; ρίσι, to flow. F. *agalorrhée*.) Cessation of the flow of milk.

Agamia. (A, neg.; γάμος, marriage.) Term formerly applied to the *Cryptogamia*, because they were thought to be destitute of sex.

Agamic. (Same etymon.) Having origin without sexual intermeditation.

Agamidae. (G. *Erdagamen*.) A Family of the Suborder *Vermilingues* (*Rhaptoglossi*, Wieg., *Dendrosauria*, Gray), Order *Sauria*, Class *Reptilia*. Body flat and broad, with short legs, spinous integument, and short tail. Many have a toad-like aspect, live on the earth, and are capable of changing the colour of their skin. The excrements of some species, as of the *Stellio vulgaris*, have been used in medicine.

Agamias. A synonym of *Agamia*.

Agamogenesis. (A; γάμος; γένεσις, an origin.) An asexual generation; as in plants, when multiplication takes place by buds; in the lower forms of life when the body divides into two parts, each of which may grow into the exact similitude of the parent; and in other low organisms when a bud sprouts from the parent body, separates, and grows into an individual of like nature.

Agamonema. (A, neg.; γάμος, marriage; νῆμα, a thread.) A term under which Düring has included all the agamous nematode worms, which migrate to their final host.

A. alausae. In the intestine of the *Alausa vulgaris*.

A. a'pri. In the mesentery of *Capros aper*.

A. as'pii. In the peritoneum of *Aspius repes*.

A. belo'ne vulga'ris. Encapsuled in the walls of the intestine of the *Belone vulgaris*.

A. bf'color. Encapsuled in the peritoneum of *Perca fluviatilis*.

A. capsula'ria. In the peritoneum of *Belone acus*, and in the intestine, and encapsuled in the peritoneum of *Alosa sapidissima*, in the peritoneum of *Trigla gurnardus*, and elsewhere.

A. caran'eum. In the mesentery of *Caranus brachurus*.

A. chrysoph'rydis auro'tæ. In the ovary of *Chrysophrys aurata*.

A. commun'e. In the liver of *Sebastes norvegicus*.

A. cys'ticum. Encapsuled in the muscles of *Synbranchus laticaudatus*.

A. fa'ri. In the peritoneum of *Zeus faber*.

A. h'chie glau'ce. In the peritoneum of *Lichia glauca*.

A. lo'phi piscato'rii. Encapsuled in the stomach of *Lophius piscatorius*.

A. merlu'cii vulga'ris. In the peritoneum of *Merlucius vulgaris*.

A. mu'lli. In the abdominal cavity of *Mullus barbatus*.

A. ova'tum. In the liver of *Gobio fluviatilis*.

A. papillig'erum. In the peritoneum of *Scomber scombrus*.

A. rhombi bos'cii. In the mesentery of *Rhombus bosci*.

A. scombro'rum. In the intestines and pyloric appendages of *Scomber scolias*.

A. scorpe'næ cirrho'sæ. In the peritoneum of *Scorpena cirrhosa*.

A. serra'ni cabril'læ. In the peritoneum of *Serranus cabrilla*.

A. sparo'dum. In the peritoneum of *Box vulgaris*.

A. syngna'thi pelag'ici. In the mesentery of *Syngnathus pelagicus*.

A. tin'ce. In the mesentery of *Tinca vulgaris*.

A. trig'læ hiran'dinis. In the peritoneum of *Trigla hirundo*.

A. trig'læ lineatæ. In the peritoneum of *Trigla lineata*.

A. umbrinæ vulga'ris. In the peritoneum of *Umbina vulgaris*.

A. wach'nise. In the peritoneum of *Gadus wachnia*.

A. ze'nis. In the abdomen of *Zeus faber*.

Agamonematodum. (Same etymon.) Larval forms of Nematode worms, of which specimens have been found in the intestines or abdominal cavity of species of Armadillo, Triton, Gobius, Blaps, Geotrupes, Passalus, and Pecten.

Agamous. (A, neg.; γάμος, marriage.) Term applied to the forms of reproduction occurring in animals and plants in which the sexes are not differentiated.

Also to the production of young by virgin mothers, as in parthenogenesis.

Also to living things having no sexual organs.

Agamus. A synonym of *Agamia*.

Aganote'sis. (Gr. from Ἀγασσάριος, to ache.) Severe pain in any part.

Agapanthæ. A Tribe of the Nat. Ord. *Liliaceæ*, having fibrous or tuberous roots, a tubular six-partite perianth, perigynous androecium, and a membranous and pale episperm.

A'gar. Arabic name for *Cals*.

Agaracine. The same as *Agaricin*.

Agar-agar. (F. *algue de Java*.) A kind of glue which is prepared from the *Gelidium cornutum* or *Fucus spinosus*, and from the *Gracilaria* or *Plocaria lichenoides*. It is the object of a large trade in Java, and also between the E. Indies and China. It is used for dressing silks, and as a food. It is said that the swallow (*Collocalia esculenta*) which makes the edible bird's nest uses this alga for the purpose. The nests are, however, composed of the inspissated saliva of the birds, and only have a little vegetable matter on their surface.

Agaræ. A Tribe of the Family *Lamiaræ*; stipitate, caulescent, large-growing and regularly perforated.

Agardh, Carl Adolph. A Swedish botanist. Born 1785, died 1869. The son, Jacob George, also a botanist, was born in 1813, and is still living (1878).

Agaric. Touchwood; spunk; tinder. This is the product of different species of *Polyporus*. See *Amadou*.

A. acid. An acid obtained from *Poly-*

AGARICIC—AGARICUS.

porus officinalis by extracting with ether. It crystallises in fine white needles, fuses at 145-7° F., does not sublime, dissolves easily in strong alcohol, less in chloroform, and still less in ether, acetic acid, sulphide of carbon, benzole, and water. It is emetic and purgative.

A. amadou vier. (Fr.) A synonym of the *Polyporus officinalis*.

A. aux mousses. (Fr.) A synonym of the *Agaricus muscarius*.

A. à verrous. (Fr.) A synonym of the *Agaricus bulbosus*.

A. blanc. The French official name for the *Polyporus officinalis*, or *Fungus of the Larch*.

A. brulant. (Fr.) A synonym of *Agaricus urens*.

A. caustique. (Fr.) A synonym of *Agaricus rufus*.

A. comestible. (Fr.) A synonym of the *Agaricus campestris*.

A. de l'olivier. (Fr.) A synonym of *Agaricus olearius*.

A. des médécins. (Fr.) A synonym of *Polyporus officinalis*.

A. du chêne. (Fr.) The *Polyporus fomentarius*, from which Amadou is prepared.

A. femelle. A synonym of the *Polyporus fomentarius*.

A. femelle. (Fr.) A synonym of the *porus fomentarius*.

A. meurtrier. (Fr.) A synonym of *Agaricus necator*.

A. moucho. (Fr.) The *Agaricus muscarius*.

A. moucheté. (Fr.) A synonym of *Agaricus muscarius*.

A. odorant. (Fr.) A synonym of *Trametes suarcolens*.

A. of the oak. The *Polyporus fomentarius*.

A. purging. The *Polyporus officinalis*.

A. printanier. (Fr.) A synonym of the *Agaricus bulbosus*.

A. resin. A resin obtained from *Polyporus officinalis* by extracting with ether. It is of a brown colour, insoluble in water, easily soluble in ether, absolute alcohol, and ammonia.

A. tête de méduse. (Fr.) A synonym of the *Agaricus annularis*.

A. vénéneux. (Fr.) A synonym of *Agaricus bulbosus*.

A. white. Relating to or belonging to *Agaricic*.

A. acid. A synonym of *Agaric acid*.

Agaricic acid. (Agaricum; colo, to inhabit) *G. feuerschiummiberoheund* Living in agarics, as *B. letophagus agaricicola*.

Agariciform. (Agaricum; forma, likeness) Like an agaric. Applied to many *Polyporus*, as *Millepora agariciformis*.

Agaricin. A peculiar concrete fatty substance, analogous to cholesterol, found by M. Gobley in the edible mushroom.

Agaricin. It has been used as a synonym of the poisonous principle amanitin.

Agaricini. (*G. Blatttrachumme*.) A Fam. of the Subord. Hymenomyces, Ord. Basidiomycetes, Div. Fungi, Class *Thallophytes*, Sub-division *Cryptogamia*.

The Mushroom family. Distinguished from other Hymen-

mycetes by the hymenium being always inferior and spread over the surface of gills, which radiate from the stem. The gills may be either simple or branched, and attached to, or distinct from, the stem. The spores vary in colour, but one colour is constant, as a rule, to a genus. The stem is sometimes cartilaginous, and sometimes fleshy, and varies in colour according to the species and the age. In some genera and subgenera a ring or annulus is to be found on the stem, which is the only remains of a veil or covering, *velum partiale*, which united that part of the stem with the outer edge of the cap or pileus, but was ruptured on the expansion of the latter. In some genera (Volvaria, Amanita) the whole fungus is enclosed at first in a volva, *velum universale*, which, on bursting, falls away and is independent of the cuticle on the upper surface of the pileus, but remains attached to the base of the stem. Sometimes, as in Amanita, both forms of veil are found together. The stem is not always central. The species are usually terrestrial.

Agaricinous. (F. agaricin; G. *feuerschiumm*) Resembling, living in, or growing upon, agarics.

Agaricoides. (*Agaricoides*; also, form. *Agaricoides*; G. *feuerschiummabund*.) Applied by Persoon to a Division of mushrooms having the *Agaricus* for their type.

Agaricum. (*Agaricum*.) The old Pharmacopoeial name used for tinder.

Agaricus. (*Agaricus*.) A Genus of the Family of *Agaricini*. The structure, usually called the fungus, is the receptacle which sprouts from a mycelium vegetating in the ground or on wood, or some other substance. The receptacle is at first a solid pear-shaped body, composed of young hyphae, all similar to one another. At an early stage the tissue of hyphae gives way beneath the apex, leaving an annular air cavity, the upper wall of which forms the under side of the pileus, and from this the radial hymenial lamellae grow downwards, filling up the air cavity. The substance of this constitutes the trama, consists of rows of long cells occupying the central portion, external to which are several rows of short and rounded cells, from which spring the club-shaped cells attached at right angles to the surface of the lamellae, which form the hymenial layer, many of these remain sterile, and are called paraphyses; others produce the spores, and are the basidia. The basidia put forth two slender branches, each of which swells at the end; the swelling increases, becomes a spore, and drops off, and germinating gives rise to the mycelium. In some species the hyphae unite to form laticiferous vessels.

Bentley gives the following general characters distinguishing edible from poisonous mushrooms. Edible mushrooms grow solitary in dry airy places, are generally white or brownish, have a compact brittle flesh; do not change colour, when cut, by the action of the air, have a watery juice, an agreeable odour, and their taste is neither bitter, acrid, salt, nor astringent.

Poisonous mushrooms, on the contrary, grow in clusters in woods and dark damp places, are usually of a bright colour; have a tough, soft, or watery flesh; acquire a blue, green, or brown tint when cut and exposed to the air; the juice is often milky, the odour commonly powerful and disagreeable, and have an acrid, astringent, or salt, or bitter taste.

AGARICUS.

A. (Stropharia) scragino'sus. Verdigris mushroom. Pileus subumbonate, covered with green slime, which soon gets washed off by the rain, flaked with white scales; stem hollow, tinted with blue; lamellae adnate, brown, tinged with purple. Poisonous.

A. (Tricholoma) albatrus. Confluent Tricholoma. Pileus first conical, then expanded, smooth, moist, mottled; disc compact, subumbonate; margin thin, even; stem solid, somewhat silky; lamellae adnexed without a tooth, crowded, entire, white. On the ground. Edible.

A. albus. A synonym of *Polyporus officinalis*.

Also a synonym of the official *Fungus larius*.

A. alutaceus. A synonym of *Russula alutacea*.

A. amarus. (F. *agaric amer.*) Pileus at first convex, then flat, afterwards concave, dry, reddish yellow; laminae serrated, unequal, greyish green, then black; stem yellowish, with an imperfect ring; odour agreeable; bark very bitter. Emetic and purgative.

A. annularis. A synonym of *A. melleus*.

A. aquilellus. An edible mushroom used in France.

A. (Psalliotia) arvensis. (G. *Schaff-champignon*, *Gugemuke*.) The horse mushroom, resembling the *A. campestris*, but larger, with the gills browner, and with the stem inclined to be hollow. Edible.

A. auratus. A synonym of *A. amarus*.

A. auriculæ forma. A synonym of *Hirneola auricula-Judea*, or Jew's ear fungus.

A. (Tricholoma) brevipes. Short-stemmed mushroom. Pileus fleshy, soft, convex, then plane, even, umber; stem solid, brown, very short; lamellae emarginate, crowded, ventricose, brownish, then dirty white. In plantations. Edible.

A. (Amanita) bulbosus. (F. *amanite bulbeux*.) Pileus convex, citron or olive coloured, fleshy, moist; lamellae numerous, large, unequal, detached, white; stem cylindrical, bulbous at the base, where it is surrounded by a ring, stuffed, then hollow; ring large, very complete, regular, moist; odour nauseous. Poisonous.

A. bulbosus vernus. A synonym of the *A. vernus*.

A. (Psilocybe) bulla'ceus. Pileus $\frac{1}{2}$ inch in diameter, at first hemispherical, subsequently flattened, striated near the centre, dark brown; lamellae decurrent, triangular, at first greyish-yellow, subsequently reddish-brown; stem $\frac{1}{2}$ inch high, yellowish, hollow, fibrous. Found in summer and autumn on dung heaps.

A. coccineus. Pileus smooth, wartless, crimson; lamellae yellow; stem stout, white. The species commonly eaten in Italy. Not known in England.

A. (Panseolus) campanulatus. Pileus about $\frac{1}{2}$ inch in diameter, bell-shaped, at first brown, then reddish brown, dry, somewhat polished; lamellae speckled with grey and black spots; the stem slender, reddish brown, the upper part dusted with black and striated. Found on dung heaps.

A. (Psalliotia) campestris. (F. *champignon*; L. *pratyradio*; G. *Feldschwamm*, *Brachpilz*, *Treutschling*.) The common meadow mushroom. Pileus 2 to 6 inches in diameter, at first hemispherical, subsequently flattened; flocculent and silky, or with fine scales

on the surface; with firm white flesh, becoming faintly rose-coloured on exposure; gills at first white, then pink, and ultimately brown and moist; stem two to four or five inches high, solid, smooth, white, with well-marked white woolly ring. Found in summer and autumn throughout Europe in fields and woods. Edible.

A. cantharellus. (F. *chanterelle*.) A synonym of *Cantharellus cibarius*; a mushroom much esteemed in France.

A. (Pholiotia) caperatus. (G. *Runzel-schwamm*.) Pileus 2 or 3 inches in diameter, at first egg-shaped, then expanded, with whitish flocculi, and becoming wrinkled with age; lamellae adherent; stem 3 inches high, solid, with a membranous ring. Found in woods in summer and autumn. It is eaten in Thuringia.

A. castaneus. A synonym of *Cortinarius castaneus*.

A. chirurgorum. A synonym of *Polyporus fomentarius*.

A. cinnamomeus. A synonym of *Cortinarius cinnamomeus*. The brown mushroom, which has a pleasant smell.

A. coma'tus. A synonym of *Coprinus comatus*.

A. (Psathyra) corrugis. Pileus 1 inch in diameter, bell-shaped, membranous, somewhat wrinkled, smooth, rose red, but subsequently becoming paler. Lamellae ventricose, of a violet-black colour; stem 2—4 inches high, white. Found with tolerable frequency in gardens.

A. (Hebeloma) crustuliniformis. (G. *Ekel-schwamm*.) Incrusted mushroom. Gills pale, spores umber brown; odour disagreeable. Autumnal. Poisonous.

A. (Clitocybe) dealbatus. Ivory or white firwood mushroom. White; pileus convex, afterwards revolute, smooth, shining; stem stuffed, thin, subpruinose above, ringed at the base; gills adnate, thin, white. Fir woods. Edible.

A. deliciosus. (G. *Reizer*.) The delicious mushroom, so called because it has the flavour of a roasted mussel. A synonym of *Lactarius deliciosus*.

A. eburneus. A synonym of *Hygrophorus eburneus*.

A. edulis. A synonym of the *A. campestris*.

A. emeticus. A synonym of *Russula emetica*.

A. (Collybia) esculentus. (G. *Nagel-schwamm*.) Nail mushroom. Pileus nearly plane, obtuse, smooth; stem fistulose, straight, rooting, smooth, clay-coloured; lamellae adnate, lax, whitish. In pastures in spring. Edible.

A. (Leptia) excoriatus. Flaky mushroom. Pileus fleshy, soft, subumbonate; cuticle thin, scaly; stem hollow, short, white; ring movable; lamellae rather distant. Pastures in May to September. Has been eaten, but not recommended.

A. exquisitus. A synonym of *A. campestris*.

A. (Hypholoma) fascicula'ris. (G. *Büschelschwamm*, *Schwefelkopf*.) Bundled stump mushroom. Found everywhere in groups at the bases of old trees. Pileus subumbonate, smooth, ochre yellow; flesh yellow; the stem is hollow, and the gills are greenish and subdliquescent; odour heavy; taste bitter and repulsive. Poisonous.

A. (Hebeloma) fastidius. (G. *Ekel-*

AGARICUS.

Agaricus. Pileus about 2 in. in diam., firm, smooth; stem, solid, even; ring pale, then tawny, lamellae rounded, adnate, pallid, then cinnamon coloured; spores profuse. On stumps.

A. (Amanita) mappa. A synonym of *Russula lepida*. Pileus without separable cuticle. Flesh delicate. Edible.

A. (Clitocybe) maxima. Sowerby's room. Pileus stuffed, then hollow, nearly globose at the base, volva with its free margin acute and narrow, ring membranaceous; lamellae adnexed. Under trees. Poisonous.

A. (Clitocybe) maxillaris. Pileus broad, fleshy, dry, silky, broadly infundibuliform; stem stuffed, compact, attenuated, pubescent; lamellae decurrent, whitish. Meadows and woods, in September.

A. (Armillaria) mellea. Honey-coloured annulate, *luteo de medusa*. (F. *agaric* mushroom. Pileus fleshy, with fibrous scales; margin striate; stem stuffed, fibrillose; ring floccose; lamellae adnate, ending in a decurrent tooth, spotted, mealy with profuse spores. In dense tufts on dead stumps, in Vienna. (G. Bergmühl, *Bergmühl*.) A term applied to a pure native carbonate of lime, found under the name of Halbmuschel, Marga, Lac Lanza.

A. (Tricholoma) monstrosum. Monstrous *Tricholoma*. Pileus fleshy, at first convex and externally as astringent, then waved and lobed, opaque; strous Tricholoma, then waved and lobed, white, and umbonate; stem compressed, solid, white, margin inflexed; stem cream coloured. On the squamose, lamellae cream coloured. Probably edible.

A. (Amanita) muscaria. (F. *agaric* *moche* or *mochele* *manate*, *fauc orange*; G. *Flugenschitz*, *Bluterschwanen*; Dan. *fluevamp*; Dut. *Vlieg doodende kampernagel*; Swed. *flugvamp*.) Fly mushroom, or Bug-sgaric. Pileus 3-7 inches broad, warty, reddish orange, viscid when moist; flesh yellowish; margin thin, striate, stem hollow, or internally flocculent, bulbous at base; volva adnate, scaly; lamellae white, sometimes adnexed. It contains a poisonous alkaloid, *Muscarin*, and also, according to Harnack, a non-poisonous alkaloid, *Amanitine*. Hab. Woods of Europe, especially birch woods. In Russia, Tartary, Kamschatka it is used as a stimulant, and the plant being eaten the toxic principle is eliminated by the urine, which is drunk again and again to keep up the debauch. It has been recommended for paralysis, in epilepsy, and in chorea. It has also been used for dressing cancerous ulcers.

A. (Phallops) mutabilis. (G. *Stork-schwamm*.) Pileus 1-2 inches in diameter, smooth, cinnamon coloured, and then brown, occasionally somewhat scaly, lamellae adnate, decurrent, at first pale, then cinnamon colour; stem 1 in. high, at first solid, then hollow, slightly scaly, ring white, then brown. Summer and autumn, on trunks or on the ground. Edible.

A. (Clitocybe) nebularia. The clouded mushroom. Pileus convex, then lead coloured, stem first clouded grey, then lead coloured; lamellae arcuate, stout, striated; lamellae reflexed, white. In woods. Edible.

A. (Agaricus) nectator. (F. *agaric* *meurtrier*, *ra-fout*.) Pileus reddish brown, margin reflexed, hollow in the centre, sometimes with deeper coloured concentric zones, covered when young

A. (Clitocybe) fragrans. Fragrant mushroom. Pileus with an odour of anise, ochraceous, convex, then plane, elastic, smooth, stem stuffed, then hollow, elastic, smooth, whitish. In woods. Edible.

A. (Collybia) fulipes. Spindle-stem mushroom. Pileus fleshy, smooth, vinous brown, lamellae adnexed, broad, distant, white. On stumps. Edible.

A. (Tricholoma) gambosus. (G. *Pomonaschramm*.) The St. George's mushroom. Pileus white, or slightly tinged with ochre, thick, convex, moist, spotted or cracked, stem solid, flocculose at apex, lamellae emarginate, with an adnexed tooth. Edible.

A. Georgii. An indigenous variety of the *A. arvensis*.

A. (Clitocybe) geotrupes. Trumpet mushroom. Pileus fleshy, white, infundibuliform, umbonate, smooth, stem solid, fibrillose; flesh white, lamellae decurrent, crowded, white, then tan-coloured. First smelling of garlic, and then of bitter almonds. Grows in rings near fir trees. Edible.

A. (Clitocybe) giganteus. Giant mushroom. Pileus infundibuliform, flocculose, white; stem equal, thick; lamellae white, then yellowish, shortly decurrent. Edible.

A. (Leptota) gracilipes. Slender mushroom. Pileus campanulate, subumbonate; cuticle thin, rather bulbous, lamellae distant, hollow, long, in pastures. Edible.

A. (Psathyrella) gracilis. Pileus } 1/2 inch in diameter, conically bell-shaped, yellowish-brown, finely striated, when dry paler and unstriated, frequently reddish; lamellae high, adherent, greyish-black, stem 2 inches broad, stiff, naked, pale. By hedges, where they occur in groups, in summer and autumn.

A. heterophyllus. A synonym of *Russula heterophylla*.

A. (Leptota) holosericeus. Silky lepiota. Pileus large, fleshy, soft, silky, floccose; stem solid, bulbous, ring superior, persistent; reflexed, lamellae free, ventricose, white. In moist woods. Edible.

A. hortensis. The cultivated variety of the *A. campestris*.

A. ignarius. A synonym of the *Polyporus fomentarius*.

A. laticus. A synonym of *A. amarus officinalis*.

A. laterius. A synonym of *A. amarus*.

A. (Phallops) leucostomus. Pileus convex, then depressed, soft,

AGARICUS.

with dark scales; stem cylindrical, dirty white; juice acrid, white or yellowish. Woods in autumn. Poisonous.

A. (Clitocybe) odoratus. Sweet mushroom. Pileus plano-convex, smooth, dullish green; stem stuffed, unequal, smooth, base thickened; lamellae adnate, broad, pale. In woods in August to November. Smells of new-mown hay. Said to be edible.

A. olearius. (*F. agaric d'olivier.*) Pileus large, irregular, flexuous, brownish red; lamellae decurrent, golden yellow; stem short, curved, excentric, reddish. In tufts on the roots of olive and other trees; phosphorescent. Very poisonous.

A. optatus. A synonym of *Polyporus officinalis*.

A. (Clitopilus) creolius. Plum mushroom. A variety of *A. prunulus*, than which it is somewhat smaller and less fleshy; with a short flocculent stem, and growing in more open places. Largely eaten in the south of Europe.

A. cretensis. A synonym of *Marasmius cretensis*.

A. (Pleurotus) ostreatus. (*G. Buchenpils; Austernpils; Drehlingpils.*) Oyster mushroom. Pileus soft, fleshy, sub-dimidiolate; stem short or wanting, firm, strigose at the base; lamellae decurrent, white; spores white; on trees, especially elm and laburnum, in groups; autumn and winter. Edible.

A. palometus. (*F. palomet.*) An edible mushroom used in France.

A. personatus. Masked mushroom. Has a lilac band round the upper part of the stem; gills white; stem ringless and rough; pileus smooth. Grows in the autumn. Edible.

A. (Amanita) phalloides. Matrix-bearing or stinking mushroom. Pileus first well-shaped, then expanded, obtuse, variously coloured; margin regular; stem bulbous below, becoming more slender upwards; volva with the margin free; lamellae ventricose; odour offensive; very poisonous. Common everywhere.

A. piperaeus. The pepper agaric, or mushroom; also called *Fungus piperatus albus*. A species which has proved fatal when taken in quantity. The powder has been recommended in diseases of the lungs.

A. polytrichus. A synonym of *A. melleus*.

A. proparatus. A synonym of *Amadou*.

A. pratensis. (*G. Wiesenschwamm.*) A variety of the *A. campestris*; sometimes called the champignon. Scales of pileus small and reddish; flesh pinkish. It has little smell, is dry, but when cooked has an agreeable flavour.

A. (Leptota) procerus. (*F. coulemelle; I. bubbla maggiore; S. cogomelos, G. Parasol-schwamm.*) Parasol or scaly mushroom. Pileus 3-7 inches broad, fleshy, umbonate; cuticle thick, very scaly; stem hollow, bulbous, spotted; ring movable; gills far removed from the insertion of the stem. Pastures. Edible.

A. (Clitopilus) prunulus. (*F. mouswron; I. prugnolo; G. Mooschwamm.*) Plum mushroom. Pileus fleshy, at first convex, then expanded, dry, pruinose; stem solid, ventricose, striated; lamellae strongly decurrent, white, then flesh-coloured, running far down the ringless stem. The flesh with a fresh smell of meal. In woods, from June to October. Edible.

A. pseudo-aureatus. A synonym of *A. aurantiacus*.

A. (Phellota) pudicus. Modest mushroom.

Pileus fleshy, convex, then expanded, obtuse, even, dry, smooth; stem solid; lamellae adnate, venricose, whitish, then tawny. On elder trunks and on the ground. Edible.

A. pyrogalus. A synonym of *A. rufus*.

A. quercinus preparatus. A synonym of the *Agaricus chirurgorum* of the Aust. Ph.

A. quercus. A synonym of the *Polyporus fomentarius*.

A. (Leptota) racheodes. Large grey mushroom. Pileus soft, fleshy, globose when young; cuticle thin, scaly; stem hollow, smooth, unspotted; flesh red when bruised; lamellae remote. In shady pastures. Said to be edible.

A. (Amanita) rubescens. (*G. Pal-schwamm.*) Reddish mushroom. Pileus convex, then expanded, with unequal mealy warts; flesh when broken becomes red; stem stuffed, scaly; ring entire; lamellae thin, white. In woods. Edible.

A. rufescens. A variety of the *A. campestris* of a rufous colour, the flesh of which turns bright red when bruised; lamellae at first white.

A. rufus. (*F. agaric caustique, calalos.*) Pileus bright red, convex, depressed in centre, with black circles; lamellae unequal, reddish-yellow, decurrent; juice yellowish, caustic. Very poisonous.

A. (Pleurotus) salignus. Willow mushroom. Pileus compact, subdimidiolate, subtrigose; stem short, white, tomentose; lamellae decurrent, somewhat branched, eroded. Trunks of trees; October to January. Said to be eaten in Austria.

A. scorodoni. A synonym of *Marasmius scorodoni*.

A. (Stropharia) semiglobatus. (*G. halbkugelichter Blätterschwamm.*) Slimy dung mushroom. Pileus hemispherical, yellowish slimy; stem slender, hollow, glutinous, yellowish; lamellae adnate, broad, mottled with the purple-brown spores. Very common; poisonous.

A. (Pleocybe) semilanceatus. Liberty-cap mushroom. Pileus submembranaceous, acutely conical, moist; stem medullate, tough, smooth, pale; lamellae adnate, ascending, purple black. In rich pastures. Poisonous.

A. (Hanoaria) semiorbicularis. Pileus fleshy, hemispherical, smooth, rather viscid, at length rivulose; stem slender, ferruginous; lamellae adnate, broad, crowded, pale, then ferruginous. On pastures. Doubtfully edible.

A. semipetiolatus. A synonym of *A. stypticus*.

A. (Psalliotia) silvaticus. (*G. Wald-champignon.*) Pileus 2 or 3 in. in diameter, first bell-shaped and with brownish scales, subsequently expanded, naked, whitish, the flesh quickly becoming rosy; lamellae tender, dry, attenuated at each end, at first red, then brown; stem 3 or 4 in. high, hollow. Frequent in woods. Edible. Often mistaken for the common mushroom.

A. silvicola. A variety of the *A. campestris*, with a smooth shining pileus, and elongated bulbous stem. Woods.

A. (Entoloma) sinuatus. Poisonous forest mushroom. It grows to a large size. Pileus fleshy, convex, then expanded; the top is a little downy, pinkish buff; stem solid, whitish; lamellae adnate, nearly free, rose-coloured. It smells like fresh meal, and grows in woods; autumnal. Poisonous.

A. (Amanita) strobiliformis. Fir-

AGASSIZ, LOUIS JOHN RUDOLPH - AGATHOSMA.

aroom. Pileus with large scales like a fir cone, flesh white, compact; stem fibrous, ring well defined; lamellae free of woody. Edible.

stypicus. (F. *Oreille d'homme*) Pileus annular coloured, oblong, reniform, margin ed; laminae equal, white or red, easily scaling, decumbent, stem excentric, bulbous at base, mealy, odour slight, taste acrid, bitter, ingent. Purgative.

(Mypholo) sublateritius. (G. *terrestris*) The olive-gilled mushroom, as pileus 2-3 inches in diameter, first convex, then flattened, leathery, dry, smooth, reddish yellow or brown or yellow, pale at the margin, with whitish flesh, lamellae at first white, then olive-tinted, closely applied to each other; stem 3-4 inches high, stuffed, fibrous, thinner below; yellow or reddish brown, taste bitter. Doubtfully poisonous.

(Tricholo) sulfureus. Sulphur mushroom. Pileus fleshy, subumbonate, unequal, at first silky, then smooth and even, laminae distant, sulphur coloured, stem firm and sulphur coloured. The plant has a disagreeable, penetrating smell, like gun-tar. Poisonous.

(A. sylvaticus). A synonym of the *A. campestris*.

(A. theleale). A highly poisonous species of mushroom, having a yellowish coloured juice. A synonym of *Lactarius chrysorrheus*.

(A. torminosus) ulmaris. Elm mushroom. Pileus fleshy, smooth, spotted, moist; stem stout, submentose, lamellae adnexed.

(A. u'rens). (F. *agaric brulant*) Pileus at first convex then flat, occasionally concave, dirty reddish grey spotted with black; lamellae numerous, thin, unequal, detached, reddish; stem cylindrical, smooth, bulbous at base, striated, stuffed; flesh white; taste acrid. Very poisonous.

(A. vapora) rhus. A variety of the *A. campestris*, with an even pileus, having a brown pilose coat.

(A. Amanita) verus. (G. *Frühlingsschwamm*) Poisonous spring mushroom. Pileus at first ovate, then expanded, viscid, stem floccose, bulbous at base, volva close-sheathing; ring reflexed, gills free. Grows in woods in the spring, and is white in all its parts. Poisonous.

(A. vesca). A synonym of *Russula vesca*.

(A. villaticus). A very scaly variety of *A. arvensis*.

(A. viola) ceus. A synonym of *Russula violacea*.

(A. virens) cons. A synonym of *Hygrophorus virgineus*.

(A. Lepiota) vittatina. Great white Lepiota. Pileus fleshy, obtuse, rough; stem solid, cylindrical, concentrically squarrose, ring large; lamellae free, ventricose, thick. Pure white. In pastures. Poisonous.

(A. vole) mium. A synonym of *Lactarius volemus*.

Agassiz, Louis John Rudolph. A great naturalist, especially devoted to ichthyology. B. 1807, d. 1873.

Agastor. (Gr.) A twin. Also an animal's stomach.

Agastrius. (A. neg.; *γαστήρ*, belly. F. *agastrius*.) An organised body without a proper intestinal canal, whose functions are limited to exhalation and absorption, as the sponges (Blainville.)

Agastrom. (A. neg.; *γαστήρ*, belly.) A synonym of the *Cestoda*.

Agastric. (Same etymon. F. *agastric*, G. *ohne Bauch*) Deslute of an intestine.

Agastronervia. (A. neg.; *γαστήρ*, belly, *νῆρον*, nerve.) Defective nervous supply to the stomach. Want of tone in the stomach.

Agastrozon. (A. neg.; *γαστήρ*, belly, *ζώνη*, an animal.) Synonymous with *Agastrius*.

Agastrozom. Same as *Agastrius*.

Agastyllis galbanum. (*Agastyllis*, the *Heracleum gummiferum* of Dioscorides.) A synonym of the *Bubon galbaniflorum*.

Agate. (*Άγαθη*, so called from the river Achates, now the *Phillo*, in Sicily, where it was first found. L. *achates*; F. *agate*; I. *agata*; G. *Achat*.) A semi-pellucid mineral, chiefly (98 per cent) composed of silica, stained with a little oxide of iron, or other metallic oxides. The silica is partly amorphous, partly in form of quartz and tridymite.

Agathis alba. A synonym of *Dammara australis*.

(A. australe). A synonym of *Dammara australis*.

(A. damarra). A synonym of *Dammara australis*. Hab. E. India. Yields a kind of turpentine.

(A. loranthifolia). A synonym of *Dammara australis*.

Agathis tega. (*Άγαθίς*, a ball of thread; *τεγήν*, a roof) A Fam. of *Foraminifera*, so called from the appearance of the folding of the segments.

Agathodemon. (*Άγαθόδαιμον*.) A good angel or spirit. 2. The healing serpent.

Agathodes. A synonym of *Agathotes*.

Agatholecus. A term employed in Botany to express a nebulous transparency like that of the *Agate*.

Agatholepis. (*Άγαθός*, good; *λεπίς*, a scale.) A term applied in Botany to plants with brilliant or coloured bracts or scales.

Agathon's antidotus hepaticus. Agathon's antidote for the liver, composed of gentian six drachms, elecampane, wormwood leaves, and Indian spikenard, of each one drachm.

Agathophyllum aromaticum. (*Άγαθος*, good; *φυλλον*, a leaf. F. *noix de Grosse*; G. *Nilkenmuskatnuss*.) Nat. Ord. Lauraceae. A plant of Madagascar, yielding a kind of false nutmeg, sometimes called the Ravensara nut.

Agathosma. (*Άγαθός*, good; *σμά*, a smell.) A Genus of the Tribe *Eudiosmeae*, Nat. Ord. Rutaceae. The leaves of several species of this genus, as well as of the genus *Barosma*, are collected by the Hottentots, who value them on account of their odour; and under the name of bookoo, or *Buchu*, rub them in the state of powder into their greased bodies.

AGATHOTES—AGE.

A. crenata. A synonym of the *Barosma crenata*.

Agathotes. (Ἀγαθότης, goodness.) A Genus of the Nat. Ord. *Gentianaceae*. Estivation of corolla left-handed; style absent; corolla naked at the base, with glandular pits covered in by a fringed scale; stamens monadelphous.

A. chirayta. (Tam., *Shayraet*; Duk. and Hind. *Chirasta*; Tel. *Sheelassettoo*; Mal. *Kiriyatha*.) Chirayit Gentian. Hab. Nepal, Northern India. An annual, 3 ft. in height. Flowers tetramerous; corolla longer than the calyx; leaves ovate and cordate, smooth. A tonic and febrifuge, four drachms of the root being infused in a pint of cold water. It does not cause constipation. It promotes the discharge of bile; especially useful in gout and scrofula. From its efficacy as an anthelmintic it is termed the wormseed plant. It is useful in diarrhoea, dysentery, and intermittent fevers. The hot infusion causes violent headache. The *Ophelia chirata* of the B. Ph.

Agati grandiflora. Nat. Ord. *Leguminosae*. (Tam. *agathes*; Tel. *anisay*; Mal. *agati*; Beng. *buko*.) An Indian tree, 30 ft. high. The bark is bitter and tonic, and an infusion of the leaves a useful cathartic. At Patna it is employed in the form of infusion as a febrifuge, and by the inhabitants of Malabar in cases of catarrh. The juice of the flowers is squeezed into the eyes in amblyopia.

Agave. A Genus of the Nat. Ord. *Amaryllidaceae*. Caulicent; flowers funnel-shaped, persistent, with erect or revolute tubes; capsule coriaceous, loculicidal.

A. americana. (G. *Pracht-aloë*, *Baum-aloë*.) The American aloë, Maguey or hundred years' plant, being erroneously supposed to flower but once in a century. It closely resembles an aloë in its general aspect. Leaves very large, stiff, perennal, spiny on the edge; scape lofty, branched; stamens longer than the perianth. It is naturalised in some parts of S. Europe, and on account of its large spiny leaves is planted to form fences. From this and other species is obtained Pita hemp, or Pité thread, a valuable fibre. The juice of the leaves contains, in 100 parts, levulose, 2.6; saccharose, 6.2; malic acid, 0.3; gum, 0.6; albumen, 1; ashes, 0.6; water, 88.7. This juice, collected just before the plant flowers, and called Aquamiel, or Honey-water, is fermented, producing a drink termed Pulque. From this a spirit called Mescal is distilled. The roots and leaves of the plant are reputed to possess alterative, diuretic, and antisyphilitic properties. The juice is an excellent antiscorbutic, and is used as a substitute for soap. A thin slice of the leaf forms a good poultice.

A. cubensis. The roots of this species constitute one of the varieties of false sarsaparilla.

A. foetida. In Spain a species of aloës is prepared from this plant.

A. mexicana. In Mexico the viscous juice of this plant is used as a detergent.

A. pulque. A species of aloës, from which a sweet fermentable juice is prepared in Mexico.

A. ramosa. A synonym of *A. americana*.

A. saponaria. This plant is a useful detergent, and the roots are employed in Mexico as a substitute for soap.

A. virginica. False aloë, or Rattlesnake's master. A native of the Southern States

of America. The root is bitter, and has been used in the form of tincture as a carminative in colic, and as a remedy in the bites of serpents.

A. vivipara. (*Karata ceratoc.*) A common plant in the W. India Islands and in South America. The juice of this plant acts as a powerful emmenagogue, diuretic, and lithontriptic. The extract relieves the pain of gout. The root chewed is said to be serviceable in diarrhoea.

Agaveae. (G. *Agavengewächse*.) A Family of the Order *Ensaeae*, having a six-partite perianth, fibrous roots, and a leafy stem.

Agdestidae. A Family of the Nat. Ord. *Phytolaccaceae*. Carpels four, inferior, united to each other on a concave receptacle; stamens, epigynous; stem climbing, herbaceous.

Age. (Ger.) See *Arin*.

Age. (F. *age*, from L. *ætas*; G. *alter*.) The term age has a double signification; one referring to various periods arbitrarily defined in the lifetime of the individual, as the embryonic age lasting nine months, the age of infancy lasting to the third year, of childhood 3—12 years, adolescence 12—25 years, maturity 25—50, and decline 50 onward; and the other more strictly limited to the last-named period, namely, that of decline or senility. The periods of life might otherwise be divided into the period of growth and development (up to 25 years), the stationary period (25 to 50 years), and the period of degeneration (50 years onwards). The embryonic age is that period when growth and development are most rapid, and the succession of the changes that then occur must be looked for under the head of *Development of embryo*. The embryo is liable to arrest and abnormalities of development; to some diseases received directly through the blood of the mother, as smallpox and syphilis, and to other affections, the etiology of which is less certainly known, as pleurisy and peritonitis. At birth, when some die, pulmonary respiration commences, the umbilical vessels cease to convey blood, the communications between the two auricles, and between the pulmonary artery and aorta are closed. During the early weeks of life a condition, termed by Lorain the purulent diathesis, exists, characterised by tendency to erysipelas, ophthalmia, phlebitis, peritonitis, pleurisy, &c. The diseases that attack the infant at a later period are chiefly those resulting from the administration of improper food, exposure to cold, or the processes of dentition, or associated with the development of inherited disease. In childhood, growth and development are still in full activity, and at this period the infectious diseases, as whooping-cough, measles, scarlet fever, smallpox, are most common. Adolescence is marked by the sudden development of the sexual organs; the whole frame acquires solidity and vigour; the capability of acquiring knowledge is at its height; and disease, except, perhaps, typhoid fever, and the like, becomes more rare, the system being better able to resist harmful influences. Adult age is marked more by changes in the mind than in the body, which remains comparatively stationary. Though less rapid and keen in observation the faculties are better under control, and judgment predominates over all. The diseases are those which result from overwork or accident in men, from child-bearing in women. In old age the powers of the system undergo slow but steady decay; loss of the

AGE.

teeth, followed by impairment of the digestive powers, paves the way to imperfect nutrition of the blood, enfeebled action of the heart, fatty and atheromatous degeneration of the arteries, loss of generative power; and finally, impairment of the function of all parts of the nervous system, death taking place in a large number of cases from apoplexy, and from pulmonary and cardiac affections.

A., anthropozo'ic. A synonym of the *Quaternary* or *Post-tertiary age*.

A., archæolith'ic. A synonym of the *Secondary age*.

A., archæolog'ical. Archaeologists admit three ages in the history of the race of man—the age of stone, the age of bronze, and the age of iron. The stone age seems to have been the first stage of evolution of the human race in every part of the world. Lartet divides it into four periods, the first contemporaneous with the cave bear and lion, the second contemporaneous with the mammoth and tichorine rhinoceros; the third contemporaneous with the reindeer, and the fourth contemporaneous with the aurochs. Another classification is that adopted by Professor Renvier, viz. 1. The antiglacial epoch, when man was contemporaneous with the *Elephas antiquus*, the rhinoceros, hemitoceros, and the cave bear. 2. The glacial epoch, when man was contemporaneous with mammoth, rhinoceros, and cave bear. 3. A postglacial epoch, during which man lived contemporaneously with the mammoth and reindeer. And 4, a final epoch, or epoch of lake dwellings, during which man lived contemporaneously with the great elk, the aurochs, and many domestic animals of the present day. In the early periods of the stone age the stone instruments were exceedingly rough, but by degrees the forms became more varied, the workmanship greatly improved, sharpness, symmetry, and polish being attended to. In the later periods the knowledge of the art of making pottery seems to have been acquired, and some knowledge of the art of drawing. The age of bronze seems to have been more limited in its occurrence, and in some instances it has been preceded by the age of iron.

A., archæozo'ic. A synonym of the *Secondary age*.

A., cœnolith'ic. Same as *A. camolith'ic*.

A., cœnozo'ic. Same as *A. camozoic*.

A., camolith'ic. (*Kavos*, new; *λίθος*, a stone.) A synonym of the *Tertiary age*.

A., camozo'ic. (*Kavos*, new, fresh; *ζωικός*, of or belonging to animals.) A synonym of the *Tertiary age*.

A., critical. A term occasionally used to denote the period of the cessation of menstruation, synonymous with *Menopause*.

A., educa'tional. In the countries in which education is made compulsory by the State, children are required to attend elementary and advanced schools for certain periods. In Austria the age is from 6–14; in Denmark, 7–14; England, 6–13; France, 6–13; Germany, 6–14, though with some differences in different states; Wurtemberg, for example, requiring attendance from 7–14; the Duchy of Oldenburg from 6–16 for boys, and 6–14 for girls; Greece, 6–12; Italy from the age of 6; Portugal, 7–16. In Sweden the entry of no child can be postponed beyond the ninth year. In the United States obligatory attendance is, in by far the greater number of states, from 8–14

years, and this may be continued to the twenty-first year.

A., in'fluence of, on tem'perature. At birth the temperature is 37.76° C. (99.96° F.) in the rectum, in the course of the first few hours it falls to 37° C. (98.6° F.), but in the course of the subsequent ten days rises again to 37.2°–37.6° C. (99.06°–99.68° F.), and remains at this level till puberty. From this period it gradually falls to the age of fifty years, when it reaches the minimum, 36.4° C. (98.4° F.), to again gradually rise in old age.

A., mesolith'ic. (*Mésos*, middle; *λίθος*, stone.) A synonym of the *Secondary age*.

A., mesozo'ic. (*Mésos*, *ζωικός*, of animals.) A synonym of the *Secondary age*.

A., of adoles'cence extends from puberty to the completion of the growth of the body, or from the fifteenth to the twenty-fifth year.

A., of an'imals. This is usually determined in the horse, ox, pig, and dog, by an examination of the teeth, which furnishes data that are tolerably reliable in youth, but which diminish in value as age advances.

In the horse there are from 40–44 teeth. The median incisors, nippers, or guthers, appear about the 16–18th day, sometimes before birth, the two adjoining incisors, or first intermediates, from the 30–40th day, the two outside incisors, or corner teeth, about the 9th month, or a little earlier or later. The canine teeth appear at 6 months, the first three or temporary molars before or some days after birth, the fourth molar about the 12th month, the fifth at 2 ½ years, the sixth at 4–5 years, soon followed by the seventh. The first and second permanent molar appears about the middle of the third year; the third molar about the middle of the fourth year. The eruption of the inferior incisors of the second set takes place at 2 ½–3 years, the nippers at 2 ½ years, the intermediate teeth and the corner teeth at 3 ½–4 ½ years. The canines appear before the fifth year. The infundibulum disappears between the 6th and 10th year in the inferior nippers, between the 10th and 11th year in the intermediates, and between the 11th and 12th year in the corner teeth. The table or grinding surface, hitherto circular, becomes first transversely oval and then triangular, assuming the latter form about the 13–14th year for the nippers, 14–15th year for the intermediates, and 16–18th year for the corner teeth. At a still later period the table again becomes oval, with the principal diameter in the antero-posterior direction, and this occurs about the 17–19th year for the nippers, 19–21st year for the intermediates, and 21–23rd year for the corners.

In the dog, which has 42 teeth, the temporary teeth are cut by the end of the sixth week and the eruption of the permanent teeth is completed by the seventh month.

In the sheep, which has 32 teeth, the eruption of the deciduous nippers takes place between birth and the third week. The permanent nippers appear from the 16–18th month; and the rest of the permanent teeth appear by the end of the fifth year.

In the pig, which has 44 teeth, the molars, corner teeth, and the canines are cut at birth; the other incisors appear before the 4th month. The permanent teeth are all cut by the end of the third year.

In the steer, which has 36 teeth, the deciduous central incisor teeth appear between birth and the

20th day. The permanent nippers appear from the 19–20th month; the milk intermediates appear soon after birth; the permanent intermediates from 42–48th month. The permanent corner teeth appear from 4½ years to 6 years. The three temporary molars are present at birth; and all the permanent molars are cut between the 6th or 9th month and the fifth year.

A. of boyhood and girlhood lasts from the period of second dentition to puberty, or from the seventh to about the fourteenth year.

A. of childhood lasts from the occurrence of the first to that of the second dentition, or from nine months to seven years.

A. of infancy lasts from birth to the first dentition (seventh or ninth month). This is a period of energetic growth, the length of the body increasing by 2-3rds.

A. of maturity, or adult age, lasts from the termination of adolescence until involution occurs in woman, and until retrograde changes occur in man, or from the twenty-fifth to the forty-fifth year.

A. of new-born children. See under *Fetus*.

A. of senility. This is the age of gradual retrograde changes, commencing about the fiftieth year and lasting until death.

A. palæolith'ic. (Παλαιός, older in years; λίθος, a stone. *F. age paléolithique.*) A synonym of the *Primary age*.

A. palæozoic. (Παλαιός; ζωικός, of animals. *F. paléozoïque.*) A synonym of the *Primary age*.

A. post-tertiary. A synonym of the *Quaternary age*.

A. primary. The period succeeding to the primordial age. It is divisible into three periods, the Devonian, the Carboniferous, and the Permian. The strata forming it are estimated by Haeckel to have an aggregate thickness of 42,000 feet. It is essentially the age of Fishes and of Ferns, and in the latter period of some Reptiles.

A. primordial. The age of the Acranians and of Algae. The period during which all the invertebrate ancestors of the human race, from the Monera upwards, are by some believed to have been developed. During the whole of this age, Haeckel remarks, the population of the earth was purely aquatic. Estimating the whole thickness of the geologic strata at 130,000 feet, 70,000, or more than half, is attributable to this age. He divides it into three periods, the Laurentian, the Cambrian, and the Silurian.

A. quaternary. The age of the human race, extending from his first appearance on the earth to the present time. It constitutes an extremely small proportion, Haeckel estimates it at only one half per cent., of the whole period represented by the geological strata. Equivalent to *Post-tertiary age*.

A. secondary. The period intervening between the Mesolithic and the Cainolithic Ages. It is divided into three sections, the Triassic, the Oolitic, and the Cretaceous, the aggregate thickness of these strata being 15,000 feet. This is the age of Reptiles and Conifers.

A. tertiary. The fourth great period of terrestrial organic history. The strata deposited during this period had only an aggregate thickness of about 3000 feet, and it was therefore of short duration. It is divided into three periods, Lower, Middle, and Upper, or into Eocene, Mio-

cene, Pliocene, and Pleistocene. The placental mammals constitute at once the most remarkable and the predominant group of animals that appeared in this period.

Age de retour. (*F.*) The period of involution, or commencing old age.

Age vita. The name of an antidote; it is a medicated wine made with galangal root, long and white pepper, sage, ginger, cinnamon, saffron, and cloves, boiled in wine. (*Parr.*)

Agédoite. A term applied by Caventou to a crystallizable substance obtained from liquorice root; it is identical with asparagin.

Ageing. A term indicating the mental and bodily signs of advancing senility.

Agelæus. (Ἀγέλαος. *G. gering, gemein, grob.*) Small, coarse, common.

Agelenidæ. The same as *Ageleninæ*.

Ageleninæ. A Subfamily of the Family *Tubulularia*, Group *Sedentaria*, Suborder *Dipneumones*, Order *Araneida*, Class *Arachnida*. Feet with an accessory claw, having five to eight teeth.

Ageneios. (Ἄ, neg.; γενεύς, a beard.) Destitute of a beard.

Ageneisia. (Ἄ, neg.; γένεσις, a generation; an engendering; from γίγνομαι, to be born. *F. agénésie; G. Nichtzeugung.*) A form of *Homogenesis*, in which sexual products are formed, but these are absolutely incapable of fertilising each other, or individuals of the maternal race.

Applied by Brechet to anomalies of organisation, consisting in the absence or imperfect development of parts.

In Botany, it denotes a monstrosity of flowers in which the reproductive parts are altogether absent.

Also impotence. (*F. impuissance; G. männliche Unvermögen.*)

Also female sterility. (*F. stérilité; G. Unfruchtbarkeit.*)

A. dyspermia. Imperfect emission of the seminal fluid.

A. impotens. Impotency of the male, which may be organic or atonic.

A. incongrua. Sterility supposed to depend on a want of fitness of the semen for the sexual organization of the special female.

Ageneia. (Same etymon.) Imperfect development of the body or any part of it.

Also the same as *Ageneisia*.

Agénia. See *Agenosoma*.

Agennesia. (Ἄ, neg.; γένεσις, an engendering; from γεννάω, to generate.) Impotence, sterility.

Agennesia. Same as *Agennesia*.

Agenosoma. (Ἄ, neg.; γεννάω, to beget; σῶμα, the body.) In Teratology, a monster which presents medium or lateral evagination, affecting principally the inferior part of the abdomen, and in which the urino-genital organs are absent or reduced to simple rudiments.

Agent. (*L. Ago*, to act, or do. *F. agent; I. and S. agente.*) A body or force capable of influencing directly or indirectly the state of another; agents are spoken of as physical, chemical, therapeutic, psychical, morbid, and such like.

Agerasia. (Ἄ, neg.; γῆρας, old age. *F. ageratie; G. Altersfrische.*) The non-appearance of the effects or infirmities attendant upon old age; a green old age. (*Casteilus and Galen.*)

Agerateæ. A Subtribe of the Tribe *Eupatorieæ*, Nat. Ord. *Compositæ*, having radiated

AGERATON—AGGREGATE.

flowers with anthers having an appendage at the summit, achenes with five ribs, the secondary ones feebly marked.

Ageraton. (*Άγέρων*) This plant is referred by Kée to *Achillea argentea*, and by Latré to *Hypericum organifolium*, but was probably the *Achillea ageratum*. It was employed in the form of baths and fumigations, as a diuretic, and as a remedy in uterine diseases.

Ageratum. (*Άγέρων*, not growing old, the flowers continuing a long time) A Genus of the Nat. Ord. *Compositæ*.

A. altissimum. A synonym of the *Eupatorium ageratoides*.

A. conyzoides. Hairy ageratum. Hab. India, Madagascar, and the Mauritius. This plant has a strong and unpleasant smell. In the Mauritius a decoction of the roots is used in certain cutaneous affections, and is esteemed a good remedy for an endemic disease known under the name of *Tambou*. In the I. of France it is named *Herbe antieuphrasique*. (Waring)

Ageratus lapis. (*Άγέρων*, a stone used by the ancients for polishing women's shoes.) Employed by the Greeks as astringent and discutient, mentioned by Galen (Castellus)

Ageraturæ. (*Άγέρ*, a field, *natura*, nature) The uterus

Ages. Palm (D.)

Ageusia. Same as *Agenusia*.

Ageusia. (*Ά*, neg.; *γῆστις*, taste, G. *Geschmackslosigkeit*) Diminution or abolition of the power of perceiving the flavour of sapid substances, absence of the sense of taste. It occurs in lesions of the glossopharyngeal nerve, in certain cases of lesion of the fifth nerve, and sometimes when there is evidence of disease affecting the *paries dura* of the seventh nerve. Loss of taste occurs in local catarrhs, in insanity, and in hysteria, and may be the result of suppressed secretion of saliva. Also the fasting state.

A. febrilis. The loss of taste produced by the febrile condition.

A. paralytica. The loss of taste depending on nervous disease.

Aggedulæ. A term applied by Hoffmann to either the receptacles or the whole plant of some very ptygmata, as to the *Acidæ*.

Agger-Agger. A synonym of *Agar-agar*.

Agglomerate. (*Agglomerata*, to form into a heap, F. *agglomère*; G. *geklaubt, gesammelt*.) Crowded together. Synonymous with *Aggregate*.

In Botany, applied to *stamina* when collected in a globular form, also to *amenta*, similarly disposed.

A. glands. A synonym of *Peyer's glands*.

A. individuals. A term applied to animals having a common centre from which they spring, as the *dentularia*.

Agglomerate. (Same etymon) Formation of angular fragments of compact scoriae and compact lavas, often intermixed with granites, and sometimes with fossiliferous limestone, produced by volcanic eruptions.

Agglomeration. (Same etymon. G. *Anfackelung*) The collecting or mingling together of substances or of particles of the same substance into one mass.

Agglutinant. (*Agglutino*, to glue on to, F. *agglutinant*; L. *conglutinatio*; G. *verbindend, anklebend*) Adhesive, applied to external applications of a gluey or gummy nature, which favour the healing of parts by keeping them together.

Agglutinate. (Same etymon. F. *agglutiné*; G. *Zusammengeleimt*) To cause to adhere. Sticks or glued together.

Agglutination. (Same etymon. F. *agglutination*; G. *verklebung, anheftung*.) A joining or joining together; also the action of an agglutinant substance.

A. immediate. Union by the first intention, of the flaps after amputation, or of the lips of a wound.

A. mediate. The interposing, for a certain space of time, of some foreign substance between the lips of a wound, or the flaps after amputation, as agaric, charpie, or lint, on which cerate is first spread.

Agglutination pilorum. An old term for a mode of treatment of inversion of the eyelashes by means of glutinous matter on a probe, by which they were reduced to their proper order.

Agglutinative. Same as *Agglutinant*.

A. languages. (G. *agglutinierende Sprachen*) Polysyllabic languages in opposition to monosyllabic and inflective languages. They are represented by the idioms of the American, Basque, Berber, Mongolian, Finnish

Agglutinatives. (F. *agglutinatifs*.) Substances which by their adhesive property are fitted either by direct application, or when spread on linen, silk, or leather, to retain the edges of wounds in apposition. The chief are caoutchouc, collodion, dextrin, starch, paste, gum arabic, gutta-percha, plaster of Paris, and resin.

Aggravement. (F.) A term applied by French veterinary surgeons to a disease of the foot of the dog, consisting in an inflammation of the capillary net work of vessels situated beneath the *pada*. It follows exercise on hot and stony country, and may be treated by cold fomentations and the application of astringents.

Aggregate. (L. *aggregatus*, from *aggrego*, to add together as a flock, collect together, G. *Hausbluthige*) An Order of the Tribe *Epigynæ*, Subseries *Anisocarpæ*, Series *Gamæ* or *Sympetale*, of the Division *Tetracyclæ* of Dicotyledonous plants. It includes the Families *Rubiaceæ*, *Cuprifoliaceæ*, *Palmaraceæ*, and *Dipsacæ*.

Flowers actinomorphic or zygomorphic, generally in capitula or close inflorescences, usually pentamerous or tetramerous, stamens equal to the parts of the corolla, epipetalous; calyx often rudimentary or a pappus, carpels 2-5, united.

In Zoology, a synonym of *Acidæ compositæ*.

Aggregate. (Same etymon) An assemblage of particulars.

A term employed in a special signification by Spencer to indicate differences of morphological composition. Thus, an organism consists of units constituting an aggregate of the first order, these units may be aggregated into a mass by the addition of unit to unit, constituting an aggregate of the second order, or they may be united into groups and the groups joined together, forming an aggregate of the third order, or these groups of groups may be combined so as to form a doubly compound aggregate of the fourth order, and so on in increasing complexity.

The first order of aggregation, or the primary aggregate, is that in which each aggregate is formed of physiological units united into a group that is structurally a unity, and cannot be divided without destruction of its individuality. Such aggregates may exist as independent organisms, as *Protococcus*, *Desmidsia*, and *Diatoma*.

In secondary aggregates, the compound indi-

AGGREGATE—AGLYPHODONTIA.

viduality is more or less dominant, whilst the simple individualities are proportionately more or less obscured. Secondary aggregation occurs when a greater or less number of morphological units are held together in one mass which has a compound individuality; or in other words, a secondary aggregate is an organised group of primary aggregates. Aggregates of the second order, or secondary aggregates, may be formed by linear aggregation, as in yeast, *Saccharomyces*; by central aggregation, as in *Gonium pectorale*; or by spherical aggregation, as in *Volvox globator*.

Aggregates of the third order, or tertiary aggregates, are produced when two or more aggregates of the second order, well individualised by their forms and structures, are united together; as in *Sargassum*.

An ordinary branched flowering plant is an aggregate of the fourth order, for it consists of secondary shoots growing from primary shoots, which are composed of tissues consisting of small masses of protoplasm or cells.

In chemistry, when substances of the same kind are combined, producing one larger substance, it is called *aggregate*, its chemical properties not differing from those of the original substances of which it is formed.

Aggregate. (Same etymon.) Collected together.

A. animals. A term applied to those enclosed in one and the same envelope, as Pennatularian corals.

A. flowers. Those which arise by distinct pedicels from the same part of the stem; also the heads of the *Compositae*.

A. fruits. Fruits formed by the combination of the carpels of several flowers. A synonym of *Anthocarpous fruits*.

A. glands. A synonym of *Peyer's glands*.

A. hairs. The hairs of the endocarp which form the fleshy part of the orange and such like fruits.

A. pills. A term applied to pills containing a variety of substances, the properties of which were supposed to be combined.

Aggregated. (Same etymon. *F. agrégé*; *G. angehäuft*.) Gathered, or associated together, aggregate.

In Botany, applied to flowers which have a number of smaller flowers collected into clusters.

Aggregation (*Aggrego*, to add together as a flock. *F. agrégation*; *G. Zusammenfügung, Zusammenhäufung*.) The state of several parts or things added together to make a whole.

A. state of. (*G. aggregatzustand*.) A term used to denote the differing relationship of the atoms of a substance according as to whether it be in the gaseous, liquid, or solid condition.

Aghous'tia. The same as *Agustia*.

Ag'houl. A Persian shrub yielding manna; the leaves are purgative. Probably the *Athagi maurorum*.

Agialah'id. An Egyptian and Ethiopian shrub similar to Ximenia. The Ethiopians use it as a vermifuge. The fruit is purgative. (*D.*)

Agialah'id. The same as *Agialah'id*.

Ag'ila wood. A fragrant resinous substance of a dark colour, contained in the interior of the trunk of the *Aquilaria ovata* and *A. agallochum*. It is considered a cordial by some Asiatic nations, and has been prescribed in Europe in gout and rheumatism.

Agillochum. Same as *Agallochum*.

Ag'inin. A bright yellow amorphous friable substance resulting from the decomposition of axinic acid. It is insoluble in water, alcohol, and ether.

Ag'ios kyrillos. Island of Icaria, Mediterranean Sea. Here are ferruginous and sulphuretted springs.

Ag'is. An old name for the thigh.

Agist'ment. A dike or embankment to prevent the overflow of land abutting upon a stream or the sea.

Agita'tion. (*L. Agitatio*, from *agito*, to trouble. *F. agitation*; *I. agitazione*; *S. agitacion*; *G. heftige Bewegung, Unruhe, Aufregung*.) The act of putting into motion by quickly repeated action. Agitation of the body was formerly used for the cure of toothache and deafness.

General excitement of the mental or bodily powers. Perturbation, mental emotion, or disturbance arising from the violence of some prevailing passion.

Agita'tor. A rotating beater or armed shaft for mixing and disturbing particles mechanically suspended in water.

Agitato'rius. Convulsive.

Agialact'io. Same as *Agalactia*.

Agial'a odora'ta. *Nat. Ord. Meliaceæ*. The flowers of this plant are sometimes used to give a perfume to certain varieties of tea.

Aglaophotis. (*G.*) The Pæony.

Ag'lia. (*Ἀγλαός*. *F. aglie*.) A term of Hippocrates, interpreted by Galen to be a whitish cicatrix on the eye, or a compact tumour on the cornea.

Agli'thes. (*Ἀγλις*, used in the plural to signify a head of garlic which is made up of several cloves.) A synonym of *Allium*.

Aglobulia. (*A. neg.*; *globulus*, a globe. *F. aglobulie*.) A state of decrease or diminution in the quantity of red blood-corpuscles, along with an increase of the normal quantity of serum. The skin becomes pale yellow, there is palpitation, anæmic cardiac bruit; sometimes œdema and purpuric spots; the ungual furrow is well marked. This condition has been described as a result of dyspepsia.

Agloss'a. (*A. neg.*; *γλῶσσα*, the tongue.) A Group of the Order *Batrachia*. Tongueless frogs. Body flat; the Eustachian tubes usually with a common opening; tympanum hidden; hind feet with a swimming membrane.

Agloss'ia. (*A. priv.*; *γλῶσσα*, the tongue. *F. aglossie*; *G. Zungenmangel*.) Term for absence or privation of the tongue.

Aglossostoma. (*Ἀγλωσσα; στόμα*, a mouth. *F. aglossostome*.) In Teratology, a monster having a mouth without a tongue.

Aglossostomograph'ia. (Same; *γράφω*, to write.) A description of a mouth without a tongue. The title of a work by Roland.

Agloss'us. (*A. neg.*; *γλῶσσα*, the tongue. *F. aglosse*; *G. ohne Zunge*.) Without a tongue.

Aglot'tia. A synonym of *Aglossia*.

Ag'lution. (*A. neg.*; *glutio*, to swallow.) Inability to swallow, from whatever cause.

Aglyph'ia. (*A. neg.*; *γλυφή*, carving, a hole cut.) A Division of the Order *Ophidia*. Equivalent to non-venomous snakes.

Aglyphodon'tia. (*A. neg.*; *γλυφή*; *ὀδών*, for *ὀδούς*, a tooth.) A Group of the Order *Ophidia*, which do not possess channelled teeth. Usually united with the *Opisthoglyphia* in the Suborder *Colubrifformes*.

AGMA-AGONIC LINE.

Ag'ma. ('Αγυς, a fracture.) An old term for a fracture.

Agmatology. ('Αγυς, λόγος, a discourse.) A treatise on fractures.

Ag'me. Same as *Agma*.

Ag'mina digito'rum. The phalanges of the digits.

A. membra'na. The amnion.

Ag'minate. (*Agmen*, a multitude.) Applied to glands, like the glands forming a Peyer's patch, which are collected together in a mass.

A. follicles. A synonym of *Peyer's glands*.

Ag'minated. (*Agmen*, a multitude.) Grouped together. A term applied to the acinous glands aggregated to form a Peyer's patch.

A. glands. A synonym of *Peyer's glands*.

Ag'mos. ('Αγυς, a fracture.) A term formerly used for fracture, employed by Hippocrates. (*Cassellius*.)

Ag'nacal. The *Persea gratissima*, growing about the isthmus of Darien like a pear tree, the pulp of the fruit of which is highly provocative of venery. (*Quincy*)

Ag'nacat. Same as *Ag'nacal*.

Ag'nail. (*Sax anse*, angry.) A term applied to the shreds of epidermis which separate from the skin covering the root of the nail, and which, on being torn, give rise to a painful state of the fingers.

Agna'no. Italy, near Pozzuoli. A lake occupying the basin of an extinct crater, the waters of which are constantly agitated by the escape of gas. There are here remains of ancient baths (the *Anianum thermæ* of the Romans), into which the vapours are conducted, having a temp. of 60° C. (122° F.) These vapours contain hydrogen sulphide.

Also, a village three miles from Pisa, in Tuscany, remarkable for a grotto, from the interior of which issues thermal acidulated water.

Agna'thia. ('Α, neg.; γνάθος, the jaw.) A malformation from arrest of development, in which one or both jaws are defective, the mouth is either absent or closed posteriorly, and with this is commonly associated imperfect development of the upper jaw, palatine process, and vomer. The two maxillæ are brought into proximity or contact, and the ears are closely approximated.

Agna'thous. ('Α, neg.; γνάθος, a jaw. *F. agnathe*, *G. ohne Kinnbacken*.) Having no jaws.

Agna'tus. See *Adnate*.

Ag'nean de scythie. (*F.*) The *Polypodium* or *Cibotium barometz*.

Ag'nia membra'na. The amnion.

A. tu'nica. The lamb's coat; a term for the navel.

A. pellic'ula. The amnion.

Agni'nus. (*Agnus*, a lamb. *F. agnus*; *G. lammarthig*.) Belonging to a lamb. See *Ag'nia tunica*.

Agno'a. ('Αγνοια, from *ἀγνοια*, to be ignorant. *F. agnoie*, *G. Besinnungslosigkeit, Unwissenheit, Unkunde*.) State of a patient who does not recognise the persons or things around him.

Agnoi'a. The same as *Agnoia*.

Agnos'tidæ. A Family of the Order *Trilobita*. Extinct trilobites of small size; head and tail covered by nearly equal and similar shields, body rings two, eyes and facial suture wanting.

Agnos'tus. ('Αγνοστος, unknown.) A Genus of small Trilobites, of the Family *Agnostidae*, interesting as being one of the first manifestations of life known to have existed on

the earth. It is supposed to be peculiar to the Cambrian rocks of the primary or palæozoic period.

Ag'nus. ('Αγνος, chaste. *F. agneau*; *G. Lamm*.) A lamb, the young of *Ovis aries*.

A. cast'us. ('Αγνος, from *ἀγνος*, chaste; *castus*, chaste. *F. gailther commun*; *I. agno casto*, *G. Keuschiamm strauch*.) The duplication of the term chaste has probably arisen from the intercalation by a commentator of the term *castus* into the Greek text. All ancient authors laud its unaphrodisiac virtue, but modern writers speak of it as an aphrodisiac. It was formerly employed in hepatic and splenic diseases. Pliny speaks of it as a febrifuge, diaphoretic, diuretic, and emmenagogue. The fruit, which is the part used, is a globular berry, of the size of a grain of pepper, surrounded at the base by the calyx of the flower. See *Flex agnus-castus*.

A. Scyth'icus. (*F. agneau de Scythie*.) Scythian lamb, a term for *Polypodium* or *Cibotium barometz*, from some fancied resemblance to a lamb.

Ag'oas Bell'as. Portugal, between Lisbon and Cintra. A sulphur water.

Ag'oge. ('Αγωγη, a treatment of a subject, from *ἀγω*, to lead. *F. agoge*, *G. Föhrung, Leitung*.) The order, ways, reason, and conduct, the whole condition and tenor of a thing, consideration and purpose of life. Applied singularly by Hippocrates to the consideration of disease. Specially, it denotes the state or condition of the atmosphere.

Agomphi'asia. ('Α, priv.; γόμφασια, a bolting together, the mode of insertion of the teeth into their sockets. *G. Zahneackeln*.) Looseness of the teeth in their sockets.

Agom'phious. ('Α, priv.; γόμφιον, a grinder tooth. *F. agomphos*.) Destitute of teeth.

Agom'phius. (Same etymon.) Without teeth. A term applied by Ehrenberg to those Rotifers in which the mastax is destitute of teeth.

Agom'phosis. The same as *Agom'phious*.

Ag'one. ('Α, neg.; γόνος, offspring.) Old name for *Hyoscyamus niger*, because it was supposed to produce sterility.

Agon'ia. ('Αγονος, sterilo. *F. sterilité*; *G. Unfruchtbarkeit*.) Sterility, unfruitfulness, or barrenness.

Agon'ia bark. The bark of the *Plumifera lancifolia*. Nat. Ord. *Apocynaceæ*. It is largely used as a febrifuge.

Agonia'din. $C_{10}H_{11}O_6$. A glycoside contained in the Agonia bark. It crystallises in silky needles, destitute of smell, and of very bitter taste. They are scarcely soluble in cold water, ether, or benzol, but with greater facility in hot water, alcohol, and carbon bisulphide. They melt at 155° C. (311° F.), and decompose at a somewhat higher temperature. It dissolves in sulphuric and nitric acids, with golden yellow colour.

Agonic line. ('Α, neg.; γωνία, an angle.) An irregularly curved imaginary line connecting those parts of the earth at which the magnetic coincides with the geographical meridian. It is sometimes called the *line of no variation*. Such a line cuts the east of S. America, and passing east of the W. Indies, enters N. America near Hudson's Bay, thence it passes through the North Pole, entering the old world east of the White Sea, traverses the Caspian, cuts the east of Arabia, turns then towards Australia, and passes through the South Pole to join itself again.

AGONIOUS—AGRIMONY COMMON.

Agonious. (A, neg.; *γωνία*, an angle. F. *agone*; G. *ohne Winkeln.*) Without angles.

Agonis'ma. (Αγωνισμα, a contest.) Agony.

Agonis'mus. (Αγωνισμός, rivalry.) Agony.

Agonis'tion. (Αγωνιστικόν, mastery.) Applied anciently to the coldest water, which was given freely in fevers, that it might thus strive against the excessive heat of the blood. (P. *Agineta* and *Castellus*.)

Agoni'zans. (L. *agonizor*, to struggle.) Moribund, dying.

Agonos. (A, neg.; *γόνος*, seed.) Sterile.

Agonous. (Αγονος, unfruitful. F. *stérile*; G. *unfruchtbar*.) Barren; sterile; unfruitful; opposed to *Gonimus*.

Agony. (Αγωνία, from *άγων*, strife for the mastery, anguish or sorrow. F. *agonie*; I. and S. *agonia*; G. *Todeskampff*.) The struggle which sometimes precedes death.

Also, fear and sadness of mind.

Agoraphobia. (Αγορά, an assembly, a market place; φόβος, fear. F. *peur des espaces*.) The fear of space. This neuropathic condition occurs without any loss of consciousness, and is quite distinct from vertigo; there is a feeling as if the heart were grasped and caused to beat violently, the face flushes, the limbs tremble, and the surface generally is cold and moist. No special antecedent nervous symptom has been noted, but epilepsy and insanity in the ancestors have been observed.

Agostus. (Αγοστός, the flat of the hand.) The palm of the hand; or the hand with the ulna and radius.

Agouti. (L. *dasyprocta agouti*. F. *licvre doré*; G. *Steizthier*, *Goldhase*.) Ord. *Rodentia*. Class *Mammalia*. Tail short; posterior extremities with three toes; clavicles imperfectly developed. Native of West Indies, Guiana, and Brazil. Formerly much used as an article of diet by the Indians. The flesh is white and tender.

Agrafe de Valentin. A kind of clamp with parallel limbs, employed by Valentin to keep the lips of the wound together after the operation for harelip.

Agrah'id. Same as *Agiahalid*. An Egyptian vermifuge.

Agrammatis'mus. (A, neg.; *γράμματα*, letters.) Inability to form a grammatical sentence. See *Akataphasia*.

Agraph'ia. (A, neg.; *γράφω*, to write.) Inability to form the letters in writing, a kind of paralysis; the patient possesses the capability of thinking and speaking, but not of writing.

A. absolu'ta. A condition in which the patient is unable to write a single letter.

A. amnemoni'ca. The form in which letters or words can be written, but they convey no meaning; due to loss of memory.

A. atne'tica. The form in which the power of writing the separate letters is lost; due to loss of the power of co-ordinating the muscles.

A. ltera'lis. A condition in which the patient is unable to write a single letter.

A. verba'lis. The condition in which the patient can write a series of letters readily enough, but these convey no sense.

Agreement. (F. *agréer*, from *gré*, free goodwill to do a thing; from the root of L. *gratia*, grace, favour.) Concord, accordance. The consciousness of agreement has been called the second

fundamental property of intellect; it implies an identifying process or a feeling of recognition.

Agresta. The juice of unripe grapes, expressed, strained, and placed in tubs, then preserved in a closed vessel, according to Schröderus.

Agres'tis. (L. *ager*, a field or manor. F. *agresté*; G. *wild*.) Belonging to a field; applied as the specific name of many plants. Also used to denote exceeding malignity in a disease.

Agres'ton. (F. *agreste*.) Old term for tartar before it is purified.

Agria. (Αγριος, wild or barbarous.) A pustular eruption, accompanied with redness and erosion; so named from its intractability.

Also applied to forms of lichen and herpes.

Also a name for the *Ilex aquifolium*.

Agriam'pelos. (Αγριος; άμπελος, the vine.) Name for *Bryonia alba*.

Agricola'tion. (L. *ager*; *colo*, to cultivate.) Tillage; husbandry.

Agric'olous. (L. *ager*, a field; *colo*, to inhabit. F. *agricole*; G. *Feldbewohnend*.) Living in the fields.

Agricultu'ra. (L. *ager*; *cultura*, husbandry, or tillage. F. *agriculture*, *labourage*; G. *Ackerbau*, *Feldbau*, *Landwirthschaft*.) The cultivation of the earth; farming; tillage; husbandry.

Ag'ridæ. (Αγριοι.) A Section of Dipterous insects found in arid and rocky places.

Agriolæ'a. (Αγριος, wild; *λάλα*, the olive tree.) The same as *Agrielaia*.

Agrielaia. (Αγριελαία.) The oleastrum of the ancients, generally referred to *Elæagnus spinosus*, Linn., the wild olive. The leaves were deemed astringent, and employed in this character both externally and internally in a great variety of diseases.

Agrioloo'sis. (Αγριος, wild; *δκωσις*, ulceration. F. *agrieolose*.) Malignant ulceration.

Agriofolium. (Probably corrupted from *Aquifolium*.) A synonym of the Holly, *Ilex aquifolium*.

Agrimo'nia. (Perhaps a false reading for *Argemonia*, a plant mentioned by Celsus; by some derived from *άγρός*, a field; *μονιας*, living alone. 'Αγρεμώνη, was a kind of poppy, mentioned by Dioscorides.) Agrimony; egremoine. A Genus of the Suborder *Rosææ*, Nat. Ord. *Rosaceæ*. Calyx 5-cleft, without bracts; tube at first fleshy, afterwards tough, covered with hooked bristles; 2 carpels.

A. eupato'ria. F. *aigrémoine*, *herbe d'eupatoire*, *Eupatoire des Gécis*; G. *Odermennig*; Dan. *agermaane*; Dut. *Leverkruid*; Swed. *akermynja*; Ar. *cafil*; Turk. *koionun otov*.) Herb Agrimony, official in F. Ph. Characterised by the leaves being interruptedly pinnate, serrate, downy beneath. Calyx of the fruit obconic, outer bristles spreading. It grows in fields and roadsides. The decoction of the leaves being slightly aromatic, bitter, and styptic, it has been used in gargles, and internally in inflammations of the mouth and throat, and in diarrhoea; the root is regarded as a vermifuge.

A. odora'ta. A synonym of *A. eupatoria*.

A. officina'lis. A synonym of the *A. eupatoria*.

A. parvifo'ra. Sweet scented Agrimony. Hab. United States. Used as *Agrimonia eupatoria*.

Ag'rimony, com'mon. The *Agrimonia eupatoria*.

A. hemp. The *Eupatorium Cannabinum*.

AGRIOCARDAMUM - AGROSTIS.

AGROSTOGRAPHIA—AGUE

Windham.) A Genus of the Subtribe *Agrostideae*, Tribe *Poaceae*, Series *Euryanthæa*, Nat. Ord. *Graminaceae*. Bent grass. Empty glumes membranous, awnless; floral glumes membranous, with few or no basal hairs.

Also, an old term for the *Bryonia alba*.

A. verticillata. The *Andropogon muricatum*.

Agrostographia. (Ἀγροστίς, grass; γράφω, to write.) A treatise on grasses.

Agrostology. (Ἀγροστίς, grass; λόγος, a discourse. F. and G. *Agrostologie*.) A treatise on grasses.

Agrotidae. A Family of the Group *Nocturna*, Order *Lepidoptera*. Body well developed; abdomen conical, without a tuft; proboscis strong; tibiae of the middle and posterior legs with spines. Larva thick and naked.

Agro'mina. An old term for leaks and onions.

Agro'na. The *Prunus communis*, var. *spinosa*.

Agrun'la. The *Prunus communis*, var. *spinosa*.

Agryp'nia. (A, neg., or *αγrios*, restless; *νύκτος*, sleep. L. *insomnia*, *pervigilium*; F. *agrypnie*; G. *Schlaflosigkeit*.) Sleeplessness, watchfulness, or wakefulness.

A. excita'ta. Sleeplessness from mental excitement, with listlessness as to surrounding objects.

A. portæ'sa. Sleeplessness from bodily disquiet, with attention alive to surrounding objects.

A. senilis. The sleeplessness of old age.

Agrypnoco'ma. (Ἀγρυπνός, sleepless; *κόμα*, lethargy. G. *Wachschlafsucht*.) A lethargic state of wakefulness generally attended with low muttering delirium, often occurring in the more severe cases of typhus; aptly expressed by the term *Coma vigil*.

Agrypno'des. (Ἀγρυπνώδης, making sleepless.) Agrypnod fever. A fever that prevents sleep.

Agrypnot'ic. (Ἀγρυπνία, sleeplessness. F. *agrypnotiques*; G. *schlafraubende Wachmittel*.) Agents which produce wakefulness. They are used to rouse from torpor or from coma, whether pathological or toxic. Coffee, tea, small doses of the essential oils or essences, as of clove, canella, mint, and vanilla, balm (*Melissa officinalis*), and the electric bath, are reckoned among the most effectual agrypnotics. In some special cases opium in small doses produces the same effect.

Agua'i-gua'ree. Species *Arbol del Estoraguo*. Nat. Ord. *Styracaceae*. A tree of Paraguay. Yielding on incision an aromatic resin. A balsam is prepared from the bark. (Waring.)

Agua'pi-gua'zie. Species *Camalote*. Nat. Ord. *Hydrocharidaceae*. A plant of Paraguay. An infusion of the flowers, according to Parodi, is used as a diuretic, emollient, aphrodisiac, and sedative. (Waring.)

Agua'ra-quí'ya. The Brazilian name of a Solanum, probably *S. oleraceum*, which is regarded as a sedative. The leaves are applied to wounds.

Aguardient de ma'gney. A very intoxicating spirit or brandy, obtained by the Mexicans from pulque, or the fermented juice of the leaves of the *Agave Americana*.

Aguas Calien'tes. Mexico; State of *Jacatecas*. Here are hot springs issuing from granite, at a temperature of 90° C. (194° F.),

and forming the source of the river of the same name. (Humboldt.)

Ag'uas de Comang'il'las. Mexico; State of Guanajuato. Here are thermal springs, 96.4° C. (206° F.), issuing from basalt. (Humboldt.)

Agua'sem. A poisonous serpent of the Philippine Isles.

Ague. (F. *Aigu*, sharp, acute. Διαλείπων πυρετός; L. *febris intermittens*, *frigida febris*; F. *fièvre intermittente*, *fièvre tremblante*, *dialecypre*; I. *febbre intermittente*; G. *Wischelfieber*, *aussetzende Fieber*, *kalttes Fieber*.) A specific, non-contagious, malarial fever, having more or less regular paroxysms, consisting of a hot, cold, and sweating stage in succession, with a distinct remission, and accompanied by splenic engorgement. The febrile paroxysm, which may occur suddenly or after some days of headache, pains in the limbs, quickness of pulse, and general malaise, commences with chilliness, which soon passes into shivering; the teeth chatter, the skin is shrivelled and dusky, and the nails blue; the pulse is small and often irregular, the breathing is quick and panting, often with cough and precordial oppression; nausea and sometimes vomiting occur; there is a frequent passage of pale urine, and headache; but the thermometer indicates a heightened temperature, as high, it may be, as 41° C. (105.8° F.). In a short time, this cold stage gives place to the hot stage; the sensations of cold are intermingled with flushes of heat; the latter grow more frequent and stronger, until there is a violent burning; the body becomes swollen and red, the urine is high coloured, the pulse and heart beat fiercely, the temples throb violently, the headache increases, delirium may occur, and the temperature may rise still further. Presently the sweating stage succeeds, in which the distress gives place to a feeling of comfort, the hot and dry skin becomes relaxed, gets moist, pours out profuse sweat, the urine deposits lithates, the pulse gets slower and softer, the breathing is tranquil, the headache goes, and after a sleep, it may be, there is only more or less weakness, more or less pallor, left to tell of what has gone before. The different stages vary in absolute and relative durations; the cold stage may vary from half an hour to four or five hours; the hot stage varies from half an hour to twenty hours; the sweating stage may be very slight or very prolonged. When the paroxysm is over, a certain time elapses before another occurs; this is the *intermission*. The period between the commencement of one paroxysm and that of a second is the *interval*, and its length determines the epithet describing the form; as *quotidian*, *tertian*, *quartan*. When the interval between two paroxysms tends to grow shorter the ague is said to anticipate, and is probably increasing in severity; when the interval becomes longer the ague is said to postpone, and is probably improving. Ague is not often fatal, and is generally curable, but it imprints a distinct and often permanent character on the body, tending to an easy reproduction of the attack by slight influences, and modifying materially the progress of subsequent diseases. It is probable that the sympathetic nervous system is the main channel through which the poison of ague, whether organic or organised, exerts its influence. The one constant condition seen after death is enlargement of the spleen, with some induration, and a deposit of pigment, probably resulting from disintegra-

AGUE

tion of the colouring matter of the red blood-corpuscles. The liver is apt to undergo similar changes, and pigmentary deposits in other organs are not rare. The blood in ague has been found to contain more albumen, more salts, and more fat than in health. The excretion of urea is largely increased during the hot and cold stages, decreased during the intermission, uric acid is increased during the paroxysm, and sodium chloride very largely so, whilst the amount of phosphoric acid is diminished. Albumen and renal casts and blood are sometimes found in the urine passed during the paroxysm. Ague is not contagious, but is endemic, and takes its origin in some product developed in marshy districts. For a further account, see *Malaria*.

The attacks of ague vary in severity; sometimes it is by no means severe, at others it becomes of most serious moment. Occasionally it is abortive or irregular in its progress, the cold stage may be predominant and most severe, producing collapse, the sweating may be premature, profuse, and persistent, with great depression of temperature and extreme debility, coma and convulsions may occur prior to perspiration, hæmorrhage into an organ or from the intestinal or genito-urinary canal may supervene. Sometimes the chief symptom is intense neuralgia.

Ague has been observed in the horse, cow, pig, and dog.

Quinine is the chief specific for ague; it is given either in very large doses, twenty or thirty grains either just before or just after the commencement of the paroxysm, or during the sweating stage, or it is given in smaller doses, three to five grains, three or four times a day. Arsenic is by many considered equal to quinine, and is given in the form of *Liquor arsenicalis*, in doses of five minims or more, three or four times a day. The administration of either drug is usually prefaced by a calomel purge. During the cold stage warmth, hot drinks, ether, and ammonia, have been advised, and sometimes emetics, during the hot stage bleeding has been recommended by some, a dose of calomel, tartar emetic, and diuretics are sometimes advised, and in both stages opium has been given with some advantage. Liver and other complications are to be treated on their own merits. An essential of success to any great degree is removal of the patient from the malarial district. Other remedies, which have been used with some success, but with much less effect than quinine and arsenic, are, opium in full doses during the cold or the hot stage, apocynum, eucalyptus, ammonium chloride, ipecacuanha, piperin, camphor, cascarella, chamomile, hyposulphite of soda, narcotine, quassia, calhene, salicylic acid, and boberine. *Warburg's tincture*, a powerful antipyretic, is of most service in the remittent form of malarial fever.

A., A'den. A synonym probably of *Dengue*.

A., antiopa'ting. A form in which each paroxysm occurs some time before its proper period.

A., brass'founder's. An affection occurring in brass founders, and believed to depend on the inhalation of the fumes of zinc oxide. The symptoms are tightness and oppression of the chest, with indistinct nervous sensations, followed by rigors, an obscure hot stage, and profuse sweating. There is no periodicity in the attacks.

A., brow. (*G. Larvætes Wechselfieber.*) An irregular form of ague in which the chief

symptom is neuralgia of the supraorbital branch of the fifth nerve.

A., cake. (*G. Milzanschwellung*) Enlargement of the spleen, the effect of protracted ague.

A., catena'ting. A term formerly used to describe an attack of ague associated with foreign symptoms or other diseases, as lumbago, epilepsy.

A., chronic. Persistence of the disease in a more or less regular form, which may occur as a result of continued residence in a malarial district or of renewed attacks of the disease. Under these circumstances splenic and hepatic enlargements are common, and the malarial cachexia is strongly developed. Jaundice, ascites, and melæna are frequent results.

A., dead. An ague in which the paroxysms are obscure.

A., double quar'tan. (*F. fièvre double-quarte; G. doppelttertagig.*) That form in which the febrile paroxysms occur in two sets within one interval, each set having the usual seventy-two hours' interval.

A., double quotid'ian. (*F. double quotidienne*) An ague in which there are two paroxysms every day.

A., double tert'ian. (*F. double tierce; G. doppelttertagig*) That form in which the paroxysms occur every day, but the alternate ones only are similar to each other.

A., double unequal tert'ian. A double tertian ague, in which one set has a more perfect, the other a less perfect, intermission.

A., drop. A solution of arseniate of potash in water, known as *Fowler's tasteless ague-drop*, and for which the *Liquor arsenicalis* is a substitute, called also *Fowler's solution*.

A., drop, taste'less. A synonym of the *Liquor arsenicalis*.

A., dumb. An ague in which the paroxysms are obscure.

A., duplicated quar'tan. A quartan ague having two paroxysms on the regular day with the normal interval.

A., duplicated tert'ian. (*F. tierce doublee.*) That form in which two paroxysms occur every other day, and none on the intermediate days.

A., face. Facial neuralgia of malarial origin.

A., grass. The *Aletris farinosa*.

A., hebdomadai. (*F. fièvre hebdomadaire.*) A variety in which the paroxysms recur every seven days.

A., irreg'ular. Another name for *Brow ague*.

A., leap'ing. A synonym of *Dancing mania*.

A., mask'ed. (*F. fièvre larvée, or masquée.*)

An irregular form of ague in which some serious symptom, especially pain, returns at definite intervals instead of the ordinary paroxysm.

A., partial. A term formerly applied when the attack was confined to a particular part or organ, and usually accompanied by distressing pain.

A., plant. A term applied by Dr. Sahabury to delicate cottony flocculi in the urine, which he believes to be developed in the organism of patients suffering from intermittent fever. He was led to this opinion by examining the secretion of the mouth, and finding amongst other extraneous bodies, such as zoosporeid bodies, desmids, and alveol cells and filaments, one only constant presence, minute oblong cells, single or aggregated, with a distinct nucleus, a smooth cell wall, and a clear intervening space, which he believes to be a *Palmella*. Similar bodies he has found in a bog in an aquatic district, and he

suggests that these taken into the body produce the disease, and are eliminated by the urine as the above-mentioned cottony flocks. He names the plant *Gomizama*. These observations have not been confirmed.

A. pot'ion. See *Malaria*.

A. protract'ed. The form in which the paroxysm is prolonged beyond the usual period, so that there is little or no intermission.

A. quartan. (L. *quartus*, the fourth. Gr. *tetrapaios*; F. *quarte*; I. *quartana*; S. *cuartana*; G. *viertägige*.) That form of ague in which the paroxysms occur every third day, and last usually about six hours. It has the longest cold stage and the shortest hot stage. The interval is seventy-two hours.

A. quintan. (L. *quintanus*, the fifth. Gr. *pentapaios*; F. *quintane*; I. and S. *quintana*; G. *Quintantäglich*.) A form in which the paroxysm occurs every fourth day, not counting the first day of paroxysm.

A. quotidian. (L. *quotidie*, daily. Gr. *ἀμφημερινός, καθημερινός*; F. *quotidienne*; I. *quotidiana*; S. *cotidiana*; G. *tägliche Fieber*.) That form of ague in which there is a daily paroxysm, the mean length of which is about sixteen hours. It has the shortest cold stage and the longest hot stage. The interval is twenty-four hours.

A. retard'ing. A form in which each paroxysm delays its attack for some time.

A. root. The *Aletris farinosa*.

A. septan. (L. *septem*, seven. F. *septane*.) A form in which the paroxysm returns at the end of seven days, counting both days of paroxysm.

A. sextan. (L. *sextaneus*, the sixth. F. *sextane*.) A form in which the paroxysm returns every six days, counting both days of paroxysm.

A. tertian. (L. *tertius*, the third. Gr. *τρῆτατος*; F. *terree*; I. *terziana*; S. *terciana*; G. *dreitägige*.) That form of ague in which the paroxysms recur every second day, the average duration of the paroxysm is ten hours; the cold stage is longer and the hot stage shorter than that of the quotidian. The interval is forty-eight hours.

A. third-day. A synonym of *Tertian ague*.

A. tree. Common name for the *Sassafras officinale*, because of its febrifuge virtues.

A. triple quartan. A quartan ague with a regular paroxysm, and a slight attack on each of the intermediate days.

A. triple quotidian. (F. *triple quotidienne*.) A form in which the paroxysm returns three times in the twenty-four hours.

A. triple tertian. That form in which there are two paroxysms on alternate days and one on the intermediate days.

A. triplicated quartan. A quartan ague having three paroxysms on the regular day and a normal interval.

A. wood. The *Eupatorium perfoliatum*.

Agueda. See *Santa Agueda*.

Ague'free. The *Sassafras officinale*.

Ague'tree. The *Sassafras officinale*.

Aguios. (Αγῖος, from a. priv.; γῦος, a limb.) Having no limbs, chiefly referring to the hands or feet. Applied by Hippocrates to the fetus. Also weak, imbecile, feeble.

Agul. A Persian shrub, *Athagi maurorum*.

Agunie char. An article of the Indian *Materia Medica*. The produce of Western India, highly esteemed in rheumatic affections. (W.)

Aguoma'da. The *Plumifera lancifolia*.

Agy'gos. Austria-Hungary; in the Zemplin County. A mild sulphur water, having a temperature of 25° C. (77° F.)

Agyion. (Α, priv.; γῦος, a limb.) Without limbs, especially hands and feet; applied by Hippocrates to embryos. (Castellus.)

Agyium. Same as *Agyion*.

Agy'nary. (Α, neg.; γυνή, a woman. F. *agynaire*.) A term given by De Candolle to those flowers which are formed of floral integuments and transformed stamina, but in which the pistil is wanting.

Agy'nic. (Α, priv.; γυνή, a woman. F. *agynique*.) Applied to the stamens when they are adherent to the pistil.

Agy'nous. (Α, priv.; γυνή, a woman. G. *unbeweibt*.) Having no female organ.

A. flower. A flower without a pistil.

Agyra'tee. A synonym of *Danaeaceae*.

Agy'rate. (Α, neg.; γῦος, circle.) A term used in Botany to denote that which is not rounded or disposed in a circle.

Agyria'cel. A Family of Thecasporous Fungi of the Order *Discomycetes*, having a tuberculous or warty pedicellate receptacle.

Agy'ria. Ectocheal Thecasporous Fungi, described by Léveillé as forming a Section of the Tribe *Cyathidea*, having a fleshy, sessile, convex, or flat receptacle.

Agy'rias. (Αγῦρις, a congregated multitude.) Formerly employed for opacity of the cornea, or of the lens, supposed to proceed from the aggregation of foreign particles.

Agyr'ta. (Αγῦρτης, a collector, a fortune-teller. F. *agyrte*; G. *Marktschreier*.) Originally applied to mountebanks and jugglers, who pretended to inflict and cure diseases by incantations and mysteries of sacrifices, according to Plato, but latterly to all quacks and pretenders to medical knowledge. (Stephanus.)

Agyrt'a. (Αγῦρτια, begging. G. *Quack-salberer*.) Charlatanism.

Agyr'tria. (Same etymon.) A female quack.

Ahalim. The same as *Ahaloth*.

Ahaloth. The Hebrew name of *Aloe wood*.

Ahamell'ia. A synonym of *Acmeila*.

Ahe'num. (G. *Kessel*.) A vessel or boiler made of brass or copper or iron.

Ahia-endote. The name in Southern Abyssinia of a species of *Phytolacca*, employed in syphilis. The seeds are also used as a charm against hydrophobia.

Ahioli. Turkey; a short distance from Constantinople. Several sources of mineral water springing from the chalk and mica slate at the foot of Mount Hæmus in the Balkan range. Temperature 38° C. (100.4° F.) They contain sodium, magnesium, and calcium chloride, with some oxide of iron. Used in liver obstructions, glandular diseases, and anæmia.

Ahius. (Arabic.) Name for rock salt. (B. and J.)

Ahmella. A synonym of *Acmeila*.

Aho'ra. (Α, neg.; ὄρα, manhood.) Retarded development of the organs. (D.)

Ahou'al. A name common to two plants belonging to the Nat. Ord. *Apocynaceae*, one of which is the *A.* of the Antilles, *Thereticia nerifolia*, the other the *A.* of Brazil, *Thereticia ahouai*, or *Cerbera ahouai*. Both are large trees with highly venomous milky juice. The fruit is a dry drupe, the hard stone of which contains four seeds that are very poisonous.

Achaea. A berry sold in the markets of India. From *Arachis*, of *perovskianae* family according to Linnaeus, the fruit of *Arachis* *perovskiana*. It is said to be very effective in dysentery and utilized in it to a great extent in a preparation. (Waring.)

Achaea medea. Arachis-like name of a species of *Chrysanthemum*. (Waring.)

Achaea. Arabic. Name for argument.

Achaea. (Fr.) Neg. : from sleep. Sleep.

Ach. Painful suppuration of the tendons. A name given by the Persian physicians, and by Hippocrates, to a swelling accompanied by a peculiar cracking of the sheaths of tendons, a condition not infrequently seen affecting the tendons of the fingers of the thumb. It results from strain or overwork of the parts. Once begun, the inflammatory symptoms increase for six or eight days, remain stationary for a week, and then subside. The essential treatment is rest.

Achazath. (Ar.) Plumum, lead.

Achazath. (Fr.) The *Arachis perovskiana*.

Achea. The name given in Tartary to the fermented milk of the cow. (Waring.)

Achea. A Brazilian palm from the trunk of which exudes a liquor which is rendered alcoholic by fermentation; either an *Elas* or *Bactra*. (Waring.)

Achling. A spa two miles from Munich, Bavaria. Altitude 1500 feet. Good or strong salt baths; there are also mud baths.

Ach. Germany; upper region of the Danube. A carbonated calcic water. (D-F.)

Achion. The dried testes of the stag drunk with wine. (Used as a remedy by the ancients for the loss of sperm.) (Waring.)

Achiel. (Achoia, the genital organ.)

Achielomania. (Achoia, the generative organ; mania) A synonym of *Erolomania*, which includes catyriana and nymphomania.

Achion. A town of Turkey in Europe, about sixty miles from Adrianople, at the foot of the Balkans and near the Black Sea. The waters are sulphuretted, temp. 48° C. (118° F.), and are of very ancient reputation.

Achion. The *Iran Germanica*.

Achle. Switzerland. Salt springs. See *Bez*.

Achrette. (Fr.) The pappus of *Composita*.

Aigta. A tribe of men of the Negrito type occupying the Philippine Islands; they are of low stature, have woolly hair and a black skin, and are somewhat brachycephalous.

Aigues-bonnes. See *Eaux-bonnes*.

Aigues-caudes. See *Eaux-caudes*.

Aiguille. (Fr.) A needle. In Geology, applied to the sharp peaks of high mountains. Crystalline rocks, as gneiss and quartz, most usually assume this shape.

Aiguillonée. (Fr.) Armed with spines or prickles. In Botany, applied to the surface of stems.

All. (Fr.) The *Allium sativum*, or garlic. **Allanthic acid**. An acid prepared from the bark of the *Allanthus asclepias*. It is reddish brown, very bitter, and forms a deliquescent mass of waxy consistence, very easily soluble in water, less in alcohol and ether, and insoluble in chloroform and benzol.

Allanthus. A genus of the Nat. Ord. *Umbelliferae*, or according to others, of *Ranunculaceae*.

Allanthus. A large Indian tree. The aromatic bark is used in dysentery, and regarded as a powerful astringent and tonic. It has been recommended in the early stages of cholera.

Allanthus. (Fr.) *Allanthus*. A tree of the Nat. Ord. *Ranunculaceae*. The juice of this tree is said to be febrifuge. The bark of the fresh root has been recommended in dysentery and fever, and as an antiseptic.

The leaves supply food to the *Bombyx quercus*, or Chinese silkworm. The analyses of Payson and Kiefer show that the plant contains lignine, mucoglycol, yellow colouring matter, pectin, other substances, aromatic resin, essential oil, nitrogenised fat, and some salts. The powder of the bark may be given in doses of seven grains; the powder of the leaves and the watery extract of the bark in doses of four grains; the oleo-resin in doses of three grains; and the resin in doses of six grains. These preparations act as emetocathartics, as well as astringents. Neither the bark nor the oleo-resin produce vomiting in man, unless the vapour is inhaled.

Allanthus. An Indian tree. The bark is given in dysentery, and is a tonic and febrifuge. It yields a fragrant resinous juice, known as *Muttee pail*, or *Muti pail*, which, reduced to powder, mixed with milk, and strained, is given in small doses in dysentery and bronchitis.

Alla. (Fr.) Wing; *ala*.

Alla. (Fr.) Winged; *alate*.

Allamad. (Arab.) Name for antimony.

Alluredea. (Allureda, a cat, a weasel.)

A group of the Order *Carnivora*, which includes the Felidae, Viverridae and Hyenidae.

Allmaug. A race of men; one of the four branches of the Mongols. Also called *Hazara*.

Allmorhoea. Hemorrhage.

Allmorhoea. Hemorrhoids.

Ain. This word in Arabic signifies spring or fountain, and is often found in maps of Africa and Arabia, either as the name of a place or in composition indicating the site of thermal or mineral springs, as *Ain-el-Mouza* (Arabia), *Ain-el-Hammam*, *Ain-Melah*, *Ain-Merdja*, *Arabia*.

Ain-el-Mouza. Arabia Petraea. A hot sulphurous spring, the water escaping in jets.

Ain-Weslay. Algeria. Province of Oran, Arrondissement of Mostaganem. About forty miles from Oran. A saline sulphuretted spring.

Ain'cille. Upper part of the valley of Cize, Basse Pyrénées, France. The mineral waters are strongly impregnated with sodic chloride. Temperature cold.

Ain'hum. (Ain'hum, Negro term, meaning to saw.) A disease peculiar to the Negro race, consisting in the spontaneous amputation of the little toes, unaccompanied by any other disorder of the system. The disease commences by a not quite semicircular furrow in the digito-plantar fold, without marked inflammation, pain, or ulceration. Gradually the furrow becomes deeper and sometimes slightly ulcerated, and extends to the dorsal surface. The toe in front of the now circular groove becomes swollen to twice or thrice its natural size, and forms an oval or round knob. The epidermis becomes rough, but the nail is not materially changed. If left to itself it is either trodden off or becomes gangrenous.

The progress of the disease is very slow, lasting sometimes for ten years. The sensibility of the toe is not lost. As soon as both the small toes are removed, neither any other toe nor any other part of the body becomes affected. (Weber.) The cause of the disease is unknown. In a specimen shown at the Pathological Society in 1868, the osseous tissue and joints were healthy, the substance of the true skin was hypertrophied, and there was enlargement of the calibre, with great thickening of the walls of the blood-vessels permeating it.

Ain'os. A people of Japan, chiefly in the Island of Jeddo. The allophyll branch of the white races of man. They possess strongly marked supraciliary arches, and a great development of hair over the body. They resemble the European type.

Allophyllous. (*Alwv*, one's lifetime; *φύλλον*, a leaf. *F. aiophylle*.) A botanical term applied to trees having their leaves persistent.

Aipathia. (*Αἰπαθία*; *aii*, always; *πάθος*, disease. *G. relative Gesundheit*.) That conception of health which considers every living body as being always more or less unhealthy. As Galen expressed it, the seeds of all forms of disease are in us; it is only on account of their smallness that they pass unnoticed. By subsequent writers the term was applied to persistent and incurable disease.

A'pi. Ancient name for *Jatropha manihot*.

Aipima coxera. Same as *Aipi*.

Aipim'ia. Same as *Aipi*.

Aipipo'ca. Same as *Aipi*.

Aipsurus. A Genus of poisonous water snakes, belonging to the Family *Hydrophidae*.

Air. (*Αἶρ*, from *άω*, to blow. *L. Aer*; *F. air*; *I. aere*; *Sp. aire*; *G. Luft*.) The natural or atmospheric air. Also a term applied to any gas or æriform fluid.

A., alkaline. A synonym of *Ammonia*.

A., atmospheric. The gaseous envelope or covering of the earth. Its composition, when dry and freed from carbon dioxide, is singularly uniform, but it is a mixture of gases, not a chemical compound. It consists of 77 parts by weight, or 79.19 by volume, of nitrogen, and 23 parts by weight, or 20.81 parts by volume, of oxygen in every 100 parts. The carbon dioxide varies from 3.7 to 6.2 parts by volume in 10,000 of air. The amount of aqueous vapour is variable, depending upon the temperature, and there is a trace of ammonia. Ozone is present in pure air, but usually absent in towns and dwelling-rooms. Organic vapours and other matters occur as impurities. A litre of pure and dry air at 0° C. and 760 mm. pressure weighs 1.29366 grains; 100 cubic inches at 60° F. and 30 inches barom. weigh 30.935 grains, hence a cubic foot weighs 636.96 grains, which is 813.67 times lighter than a cubic foot of water at the same temperature. The pressure of the atmosphere at 32° F. and 29.905 barom. at London is nearly 14½ lbs. on the square inch, or 1.033 kilos. on a square centimètre. There are two regions of high pressure, the one north, the other south, of the equator, passing completely round the globe as broad belts, and there are three regions of low pressure, one at each pole, and an equatorial belt. Atmospheric pressure is more regular throughout the year over the ocean than over the land, if we except the higher latitudes. It is more uniformly distributed over the globe in April and October than in any of the other months. In May and Novem-

ber the great annual rise and fall occur. There are two maxima of pressure during the day, one from 9—11 a.m., and one from 9—11 p.m., and two minima, occurring from 3—6 a.m. and 3—6 p.m. See *Atmosphere*.

A. bag. Same as *A. bladder*.

A. bath. An arrangement of a vessel or chamber into which a limb or a part of the body, or the whole body may be introduced, and varying pressure of air exerted by the establishment of a connection between the cavity of the chamber and an exhausting or condensing pump.

Also, an arrangement for drying chemical substances, consisting of a metallic chamber heated by a lamp from below, and having a shelf on which the substance to be dried is placed; a thermometer introduced from above gives the actual temperature. Air baths may be made self-regulating.

A. battery. Dr. Gladstone and Mr. Tribe's. In this form of battery pieces of copper and silver in contact are immersed in a (6 per cent.) copper nitrate solution in presence of oxygen. A deposit of cuprous oxide takes place on the silver plate, with a corresponding solution of the copper plate.

A. bed. A mattress-like sack composed of leather, Mackintosh fabric, or vulcanised india rubber, which is divided into compartments, each of which can be inflated by bellows, the escape of air being prevented by a valve. A drawing of an air bed is given in 'Knight's Dictionary of Mechanics,' taken from a German work dated 1511. Linden's air bed has an outside flap of enamelled cloth, which forms a coverlet to the person lying on the bed. When collapsed it folds into the form of a knapsack.

A. bladder. (*L. Vesica natatoria*; *F. vesicule natatoire*; *G. Schwimmblase*.) An organ present in many fishes, and most highly developed in the Dipnoi. In the Physostomi it is connected with the œsophagus by means of a short tube, the ductus pneumaticus. In Physoclisti there is no such communication. It is absent in the Leptocardia, the Cyclostomi and Plagiostomi, and in some Teleostei. It is filled with air, the composition of which varies, and it appears to have a hydrostatic function, or the regulation of the specific gravity of the animal. In the mud fish, *Lepidosiren*, it acts as a respiratory organ. It differs from true lungs in being only sparingly supplied with vessels, and in these vessels being derived from the aorta. The walls are muscular.

A. brick. (*F. brique creuse*; *G. Hohziegel*; *I. grato dello spiraglio, della sfalatore*; *S. ladrillo perforado*.) A brick of ordinary size, built into the walls of a house, but perforated to admit air under the floors or into the rooms.

A. canals. (*F. Lacunes*; *G. Luftkanäle*.) Intercellular passages in the stem of plants which contain air.

A. cavities of plants. (*F. Lacunes*; *G. Lufthöhle*.) A term given to the intercellular spaces of water plants; they are usually of considerable size, and are enclosed by regularly arranged cells. They diminish the weight of the plant and so enable it to retain a position on the surface of the water.

A. cells of animals. (*F. vesicules pulmonaires*; *G. Lungenbläschen*.) A series of depressions which open into and are grouped around the ultimate terminations of the bronchial tubes, the air sacs. They vary in size in different animals; in man they average $\frac{1}{125}$ of an inch in

AIR.

diameter; they are larger at the apex and the thin edges of the lung than in the interior; in man than in woman, and in old age than in the infant. The walls consist of connective tissue containing some corpuscles, of some elastic tissue, and a few muscular fibre cells, among which lie the ultimate capillaries of the lung, the air cells are lined by delicate tessellated epithelium and contain not infrequently granular, rounded amoeboid cells, with particles of carbonaceous material.

A. cells of plants. A term used synonymous with *Air cavities*.

Also applied to the spaces formed by the obliteration of the contiguous walls of cells, as in the pith of plants.

A. chamber. (F. *chopinette*, *trachée*, *reservoir d'air*; I. *serbatoio d'aria*; S. *câmara de ar*; G. *Windkessel*, *Windraum*.) A cavity containing air to act as a spring for equalising the flow of a liquid in pumps and other hydraulic machines.

A. chamber of egg. (F. *chambre d'air*.) A space existing between the two layers of the shell membrane at the obtuse end of a bird's egg, it is not present in a perfectly fresh egg, but soon appears and increases in size, whether the egg is incubated or not, as the white shrinks from evaporation.

A., complementary. That volume of air which, after the termination of an ordinary inspiration, can still, by an effort, be inhaled. It amounts to rather more than 100 cubic inches.

A., condensed. For its therapeutic influence, see *Bath, compressed air*.

A., dephlogisticated. A synonym of *Oxygen*.

A. drain. (F. *conduite d'air*; I. *condotto d'aria*; S. *alcantarilla para la conducción de aire*; G. *Luftcanal*.) A cavity in the external walls of a building to prevent dampness.

A. duct. A synonym of *Air canal*.

A., empyreal. A synonym of *Oxygen*.

A., factitious. A synonym of *Carbonic acid gas*.

A. du fen. (Fr.) A synonym of *Oxygen*.

A., filtered. Air which has been made to traverse a layer of cotton wool, with the object of arresting tangible impurities. This plan is employed to purify the air admitted to the Houses of Parliament.

A., fixed. (L. *Aer fixus*.) Carbonic acid gas.

A. gas. Air mixed with the higher and volatile paraffins, formed by passing air through petroleum, which contains them, and used for illuminating purposes.

A. gato. (Fr.) A synonym of *Nitrogen*.

A. grating. An iron grating in a wall to allow of ventilation.

A., hépatique. (Fr.) A synonym of *Hydrogen sulphide*.

A., inflammable. A synonym of *Hydrogen gas*.

Also, of *Carburetted hydrogen*.

A. in the veins. Air has been observed in the veins, especially in those of the pia mater, very soon after death, it is still doubtful whether it is exclusively the result of post-mortem changes. Air has been found in the iliac veins in a case of sudden death after delivery.

For the entrance of air into the veins during operations see *Arterioecclatoma*.

A. mephitique. (Fr.) A synonym of *Carbonic acid gas*.

A., mountain. See *Mountain air*.

A. of sewers and drains. See *Sewer air*.

A. passages. A term including the larynx, trachea, bronchi, and bronchial tubes.

Also, a synonym of *Air canals* in plants.

A. pes'sary. See *Pessary, air*.

A. pipes. (F. *ventilateurs conduits* or *carreau d'air*; I. *tubi dell'aria*; S. *ventiladores*; G. *Luftrohren*.) Pipes used to draw foul air from a ship's hold, mines, and other close places.

A. plants. A synonym of *Epiphytes*. Examples are found amongst the *Tillandsias* and *Orchids*. Air plants require a high temperature, diffused light, a large amount of moisture, and freedom from stagnant water.

A. port. An opening in a ship's side for air, closable by a shutter side light, or dead light, according to circumstances.

A. puant. (Fr.) Hydrogen sulphide.

A. pump. (F. *pompe d'air*, I. *macchina pneumatica*; G. *Luftpumpe*.) An engine by which the air contained in vessels placed in communication with it may be drawn out, or exhausted. It consists essentially of a cylinder, having a valve at the bottom, opening away from the vessel to be exhausted, and a close fitting piston, also provided with a valve opening in the same direction. As the piston is drawn out its valve closes and the air contained in the receiver enters the cylinder through the lower valve in a rarefied condition, whilst when the piston is forced down the cylinder-valve closes and the piston-valve opens, permitting the escape of the air, but preventing any return by closing as the piston is again drawn out.

A., pure. A synonym of *Oxygen*.

A. receptacle. A synonym of the *Air sacs* of birds.

A., reserve. That volume of air which, when an ordinary expiration is completed, can still by an effort be expelled from the lungs. It amounts to rather less than 100 cubic inches.

A., residual. The air which remains in the lungs after the most complete expiration possible. It varies with the size of the chest, but amounts on the average to about 100 cubic inches.

A. sacs. Elongated cavities constituting the ultimate branches of the air tubes in the lungs of mammals, their walls present pits, which are the air vesicles or alveoli. They are arranged in groups radiating from the end of a bronchial tube, with which they communicate by a circular opening. Their walls contain a large amount of elastic tissue, and are lined by a layer of tessellated epithelium. The pulmonary capillaries ramify over their surface, as well as over the air cells.

A. sacs of birds. (F. *Reservoirs* or *sacs d'air*, *cavités aériennes*.) Large cavities, nine in number, lined by mucous membrane, independent of each other, but connected with the lungs. These reservoirs are the thoracic sac, situated at the anterior part of the thorax; two cervical reservoirs situated at the base of the neck, two anterior diaphragmatic reservoirs placed between the two diaphragms, two posterior diaphragmatic reservoirs also placed between the two diaphragms, but behind the preceding, and lastly, two abdominal reservoirs placed against the superior wall of the abdomen. Of these nine reservoirs, the first only is single and asymmetrical, the others are in pairs, and are similarly arranged on each side of the median plane. All the reservoirs, with the exception of the diaphragmatic, communicate with the interior of

AIX LES BAINS—AJUGA.

Elisenbrunnen, and the Quirinusquelle, which has a temperature of 49° C. (120° F.). The lower and cooler springs are the Rosnquelle, temp. 47° C. (116° F.), the Cornusquelle, temp. 45.4° C. (113.7° F.), and several minor ones. Used in chronic skin diseases, in ulcers, gunshot wounds, in chronic rheumatism and gout, in uterine diseases, and in advanced syphilitic diseases, especially when complicated with mercurial cachexia.

Aix les Bains. France, department Alpes-maritimes, known also as Aix-en-Savoie. Formerly known as Aquæ Allobrogum and Aquæ gratiana. Altitude 792 feet, in the beautiful valley of Chambéry. It is somewhat hot and close in summer, and occasionally wet; the neighbourhood is picturesque, well wooded, and hilly; the bath arrangements are good and varied, and the accommodation excellent. The chief water is that from the Source de soufre, having a temperature about 45° C. (113° F.). It contains sodium, magnesium and calcium sulphate, calcium and iron carbonate, aluminium sulphate, sulphuretted hydrogen, carbonic acid, and nitrogen. The Source d'eau, or de St. Paul, of a temperature of 47° C. (116.6° F.), contains no sulphuretted hydrogen, and is the one usually employed internally. The chief use is as a bath, and in the form of douche in chronic rheumatism, in chronic gouty thickenings of the joints, in syphilitic and scrofulous affections of the skin and joints, in eczema, in old wounds and ulcers, and in nervous diseases. Mud baths are also used.

Aizoonaceæ. A Family of the Order Opuntifera. Herbs or bushes, usually with fleshy, juicy leaves, without stipules, flowers hermaphrodite, separate or in clusters, sometimes inconspicuous, sepals 4—8, petals indehiscant, anthers 4 or indefinite; carpels 4—20, with indehiscant amphitropal ovules, seeds with an endosperm. The *Micondriaceæ*, and the *Tetragoniaceæ* of some authors.

Aizoidæm. A synonym of the *Tetragoniaceæ*.

Aizo'on. (Aiz, always, ζῶν, alive G. *Hauslaub*.) Name for *Sempervivum tectorum*, as well as generally for evergreen plants.

Aja Aja. The *Gelidium cornutum*. In a beautiful situation, protected from the north winds by mountains 6000 to 8000 feet high, the chief wind is the south-west, which often brings moisture, although rainy days are not common. The average temperature of November to March inclusive is about 12° C. (53.6° F.), with comparatively small daily variations; the nightly dew-fall is considerable, but the rainy days few in number. As a climatic health resort for consumptives, Ajaccio might stand in the first rank if the conveniences and comforts of living were better attended to. There is a certain amount of ague in the autumn.

Ajas. Turkey. A place near Angora in the ancient Galatia. Here, on the road leading to Constantinople, are hot springs, whence the former name *Therma*. In repute for diseases of the skin. There is accommodation for visitors.

Aja va. (Portuguese.) A drug brought from Malabar, and celebrated in the East Indies as a remedy for colic. See *Ajowan fruit*.

A. seeds. See *Ajowan fruit*.

Aja zarath. (Arabic.) Name for *Plumbum*, lead.

Aj'sch. See *Ajas*.

Ajcuba. A Japanese tree, the fruit of which is edible.

Aj'mud. The Hindustani name of the fruit of the *Carum* (*Pychnotis*, *Roxburghianum*). Used as a carminative and stomachic.

Ajnâc'sko. Ausria Hungary, in the Gomory county. A chalybeate water containing both sulphate and carbonate of iron, with calcium, magnesium and sodium carbonate, some iodine, a large amount of carbonic acid, and some sulphuretted hydrogen. Used in gout and rheumatism, hepatic congestions, hemorrhoids, scrofula, and anæmic conditions.

Aj'one. (F.) A common name for several species of *Ulex*.

Aj'owan fruit. See *Ajowan fruit*.

Aj'owan fruit. *Semen Ajawai* or *Ajowan*. True Bishop's weed. *Omnium*. The fruit of the *Amim copticum*, L., or *Ptychotis coptica*, or *Carum Ajowan*, B. C. Nat. Ord. *Umbellifera*. A native of Africa, and much cultivated in India. The fruits vary in size, the largest resembling that of parsley, having a length of 1-1½ to 1-10 of an inch. They are greyish brown, pump, very rough on the surface. Each mericarp has five prominent ridges, with one suture beneath each intervening channel. The commissural suture has two vittæ. The fruits exhale a strong odour of thyme, and have a biting aromatic taste. They yield 5-6 per cent of an agreeably aromatic volatile oil, and in addition there collects on the surface of the distilled water a crystalline substance or steareoptene, named by the natives *Ajowan-ka-phut*, or flowers of Ajowan. Ajowan is much used in India as a condiment. The distilled water is a carminative, and a good vehicle for nauseous medicines.

Ajuga. (Ktymo ogy doubtful.) A Genus of the Tribe *Ajugoideæ*, Nat. Ord. *Labiata*. Bugle. Calyx coid, 5-lobed; upper corolla-lip entire or notched. The genus contains 50 species, occupying temperate regions of the old world.

A. chamaepitys. (F. *vetula*; L. *campanula*, G. *Schlag-Kraut*, *Fend-ypprase*.) Ground pine. Annual, villous plant, entire leaves 3-partite, flowers solitary, in the axil of leaf bracts, yellow. Chalky fields; flowers May-September. It possesses a strong, resinous, aromatic odour, and is described by Linnaeus as tonic, stomachic, and emmenagogue, and as being useful in rheumatism, gout, and fever. The flowering tops are official in the French Codex.

A. dealisn'gii. A plant growing in the Himalayas, where it is employed as a remedy in quartan ague.

A. decumbens. Hab. Himalayas, Nepal, and Cashmere, where it is called *Ajan-abadan*, i. e. the sheep man, from its manifold virtues.

A. fruticosæ. A synonym of the *Anisomela malabarica*.

A. l'va. (F. *vetula musget*; G. *Bismunguel*.) A plant in high repute amongst the Arabs in cholera, and much used by them as a remedy in other diseases. It is official in the French Codex. See *Le moschate herba*.

A. pyramidalis. (F. *Bugle*; G. *Goldensugel*, Dut. *Pyramidule Senegron*.) Mountain bugle. Biennial or upright bugosa. A perennial plant. Herb, with soft, jointed hairs, leaves obscurely crenate, whorls in a compact pyramidal spike, upper bracts appressed, flowers blue. It has been employed as an astringent and bitter in phthisis, cyncache, and a lithic.

A. rep'tans. (F. *Bugle*, L. *erba mora*,

morandola; *S. bugula*; *G. kriecheuder Günzel*, *Wiesengünzel*.) Common bugle. A perennial plant; almost glabrous, stoloniferous; leaves repand-crenate; whorls in a loose spike, with spreading bracts; flowers blue. Used in lung and liver diseases. The leaves are officinal in the French Codex.

Ajugeæ. A synonym of *Ajugoides*.

Ajugoides. A Tribe of the Nat. Ord. *Labiata*. Stamens four, parallel, ascending, exserted, two upper shorter; nutlets connate; base oblique, reticulate, and rugose.

Ajutage. (*F. ajutage*, *ajutoir*; *I. tubo & aggiunta*; *G. Aufsatz*.) A cylindrical or conical tube through which water is discharged from a receptacle, as the ajutage of a fountain. It greatly increases the rapidity of the flow as compared with a simple aperture.

Ajwain-kaphul. Flower of Ajwain. The native name of a stearoptene, derived from the distillation of Ajowan fruit. It is identical with Thymol.

Aka'ia. A synonym of *Acacia arabica*.

Akat'alis. The berries of the *Juniperus communis*.

Akataphasia. ('A, neg.; *καταφασις*, to declare.) A term applied to syntactic disturbances of speech, as opposed to the faulty use of words. Inability to form a perfect sentence. The correct diction of a sentence in the grammatical languages presupposes three things—unbroken flow of words, perfect grammatical diction, and correct arrangement of words; when any one of them is absent akataphasia results. (Kussmaul.)

Akate'ra. The berries of the *Juniperus communis*.

A'ka tree. The *Metrosideros scandens*. Nat. Ord. *Myrtaceæ*. The clubs and weapons of the South Sea Islanders are made from this and other species of the genus.

Akazga. Boundu. The ordeal poison of the Gaboon country in West Africa. It is obtained from a plant growing in marshy places to a height of eight feet, and probably an undescribed species of the Genus *Strychnos*.

Akazgia. An alkaloid obtained by Dr. Fraser from the *Akazga*. It is a colourless difficultly crystallisable alkaloid, soluble in alcohol, ether, chloroform, benzol, and bisulphide of carbon, but nearly insoluble in water. Its physiological effects are precisely those of strychnia.

Akargin. A synonym of *Akazgia*.

Ako'bia. A Genus of Chinese and Japanese climbing plants of the Nat. Ord. *Lardizabalaceæ*, or *Berberidaceæ*. The flowers are monœcious, with a petaloid calyx; male flowers with about six stamens, with extrorse anthers; female flowers with sterile stamens, and from 3—12 carpels; ovary with numerous anatropal ovules; fruit a large fleshy follicle; seeds arillate, with abundant albumen and excentric embryo.

A. quina'ta. Hab. Japan. The fruit is used as an emollient.

A'kee tree. *Blighia*, or *Cupania sapida*. Nat. Ord. *Sapindaceæ*. The succulent aril of this tree is an article of food; the fruits boiled down with sugar and cinnamon are used in diarrhoea; and the distilled water of the flowers is regarded by Negro women as a cosmetic, probably owing to the large amount of saponaceous matter contained in it.

Ake'omine. A synonym of the *Teinture de noix de galls composée*.

Ak'hil Alme'lech. A Leguminous plant in high repute amongst the Arabs as a medicine. It is probably the *Trigonella hamosa*, L., or *Melilotus ægyptius* of Alpinus. It was formerly so much esteemed by the Arabians that it was reserved for the royal use.

Ak'ho. The principle of conscience, one of the five parts or principles of which, according to Zoroaster, the soul of man consists. See *Boe*, *Feroher*, *Jan*, and *Ronan*.

A'kibot. (Arab.) Term for *Sulphur*. (Ruland.)

Akidopeiras'tics. ('Axis, a point; *περιπαίνω*, to explore.) A term applied by Mid-deldorpf, of Breslau, to a method of exploration by means of needles, or other pointed instruments. Amongst the more important means included under this head are some that have been long in use, as the exploring needle, trocar, grooved needle, trephine, and drill, and others, as the harpoon needle, so useful in extracting small portions of muscular tissue, with the view of establishing the diagnosis of trichinism, and galvano-puncture, which are of modern introduction.

Akidurg'ia. ('Axis, a point; *ἔργον*, a work.) A term for operative surgery.

Akinesia. The same as *Acinesia*.

Akinesic. ('A, neg., and *κίνησις*, to set in motion.) That which is opposed to movement; the diastole as opposed to the systole of the heart.

Akine'sia. ('*Ἀκίνησις*; *ἀ*, neg.; *κίνησις*.) Absence or defect of movement, hence applied to the diastole of the heart.

Akiurg'ia. ('Axis, a point; *ἔργον*, a work.)

A title given to a treatise on surgical operations.

Ak'as. A race of African Negroes.

Akmella. Same as *Acmella*.

Ak'na-Ba'ho'. Austria-Hungary; in the Marmaroser County. An alkaline chalybeate water having a local reputation.

A.-Sug'atagh. Austria-Hungary; in the Marmaroser County. A strong salt spring. Used as a bath.

A.-Szlati'na. Austria-Hungary. Sool or concentrated saline baths in connection with the salt mines of Szlatina.

Ak'ne. A synonym of *Acne*.

Aknemia. ('A, priv.; *αἷμα*, the leg. F. *aknémie*.) A monstrosity, characterised by the absence of legs. (Breschet.)

Aknes'tis. (Gr.) A synonym employed by Dioscorides of the *Cneorum tricoccon*.

Ako'ko. The native name in the Sandwich Islands of a species of *Euphorbia*, the milky juice of which, according to Bennett, is applied to ulcers, and removes the fætid odour of the discharge. (Waring.)

Akology. Same as *Acology*.

Akor'ia. ('*Ἀκοπία*, from *ἀκωπος*, untiring. *G. Unerättlichkeit*.) In Hippocrates, 1180 F., moderation in eating; but in Aretæus, Cor. M. Acat. 2—2, it is used in regard to drink in the sense of insatiable desire. Bulimia.

Akos'mol. A synonym of *Acosmia*.

Akratop'egæ. Same as *Acratop'egæ*.

Akratothermæ. ('A, neg.; *σπᾶρος*, strength; *θέρμη*, heat.) Indifferent thermal waters.

Ak'rott. Bengali name of Bancoul, the *Aleurites moluccana*.

Ak'sis. A synonym of *Intermittent fever*.

Akul'kara. The Arabic name of the Pel-litory root.

Akulo'nion. (Gr.) A synonym in Dioscorides of the *Lychnis*.

Akum. A synonym of *Mudar*.

Akumite. (Ἀκμος for ἀκμαστός, not washed by the waves.) A term applied to those laminated clays and sands which immediately overlie the boulder clay, and which appear to have been formed during a period of repose. Synonymous with the brick clays of the Post-tertiary epoch.

Akund. Hub India. The inspissated milk of the root and bark of the *Culotropis gigantea*; it is a powerful alterative and purgative, used in cases of leprosy, elephantiasis, and intestinal worms, and venereal affections.

Aku'ron. (Gr.) A synonym in Dioscorides of the *Atropa*.

Akyanoblep'sia. (A, neg.; κῡανος, dark blue, βλέπω, to see.) Incapacity to distinguish a blue colour.

Akys'tica. (A, priv.; κύστις, a bag.) Applied by Latreille to a group of fishes which have no natatory bladder.

Al. (Arab.) A syllable of nearly the same import as the English definite article, used as a prefix by way of eminence, or to denote essence, as alkali.

Ala. (Etymology doubtful, perhaps from ago, to put in motion, to move. F. aile; G. Flügel.) A wing.

Applied to certain parts, from a supposed resemblance to wings, as *Ala nasi*, wings or lateral cartilages of the nose.

Also, the arm-pit.

Also, a synonym of *Pterygium*.

In Botany, applied to the side petals of papilionaceous flowers.

Also, to the angles formed by leaves or stalks with the branches from which they proceed.

Also, to a membrane added to a seed-stalk.

A. au'ris. The wing or upper and outer cartilaginous part of the external ear, the *Pinna*.

A. cine'rea. The projection in the floor of the fourth ventricle on each side of the median line, formed by the nucleus of the vagus nerve.

A. extre'ma. (F. aileron.) The bastard wing of a bird.

A. pon'tis Varo'lii. A small band of nerve fibres, represented by Reichert as passing obliquely downwards and backwards from the side of the pons Varolii, between the auditory and facial nerves, and crossing over the upper end of the posterior pyramids. It is probably part of the *Ligula*.

A. vespertilio'nis. (F. aile de chauve-souris; G. Fledermausflügel.) Wing of the bat. That part of the broad ligament of the womb lying between the Fallopian tube above and the ovary with its ligament below.

A. vulvæ. The Labia pudendi.

Alaba'ma. One of the southern of the United States of N. America, in which several sources of mineral waters are found. The waters of the Tallahatta springs contain sulphur and salts of iron, lime, and magnesia. The water of Bailey's spring is an acidulous sulphuretted chalybeate. The most noted is *Bladen's spring*.

Alaban'dicus la'pis. A blackish stone intermixed with sallow spots, so called from Alabanda, the place from whence it was taken. Aetius says that its powder makes grey hairs black. (Farr.)

Alaban'dine. (F. Manganblende.) Sul-

phuret of manganese occurring in veins in a crystalline or granular condition, and of a black semi-metallic lustrous appearance.

Alaban'dinus la'pis. The same as *Alaban'dicus lapis*.

Alab'ari. (Arab.) Name for Plumbum. (Rolin.)

Alabas'ter. (Ἀλάβαστρος, more correctly ἀλαβαστρος, gypseous alabaster, a kind of stone. F. albatre, I. alabaastro, G. Alabastrer.) A mineral of which there are two varieties, calcareous alabaster, white or yellowish white, found as a stalagmite or stalactite, and consisting of carbonate of lime, and gypseous alabaster, $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$, a semitransparent granular crystalline variety of gypsum or sulphate of lime, sometimes pure white, often coloured. The former is the alabaster of the ancients, employed in sculptural works.

Alabastri cappar'idis. Capers. The flower buds of the *Capparis spinosa*. They are treated with salt and vinegar, and form a pickle which is said to be very useful in scurvy.

Alabastron. A name of an ointment of old times.

Alabastrus. (Ἀλαβαστρον, or ἀλάβαστρος, gypseous alabaster, and also that which is wrought of it, a box for unguents. L. alabastrer; F. alabastrer, bouton, G. Bluthenkнопf.) Applied to the five green leaves forming the calyx of some flowers before the expansion of the bud, from its resemblance to alabaster vessels or boxes.

Alabe. (Ἀλάβη, a kind of ink.) Carbon; soot. That which on being touched makes dirty or unpleasant.

Also, a fish, probably electrical, of the Nile.

Al'acab. (Arab.) Name for *Sal ammoniacum*. (Ruland.)

Alachil. Arabic name of *Scilla maritima*.

Alact'ia. A synonym of *Agalactia*.

Alacnoth. (Arab.) One who, while in coitus, at the same time expels the feces.

Alæ antice. (G. vorderflügel.) The anterior pair of wings in insects possessing two pairs.

A. cordis. A series of elastic ligaments which pass from the cardiac surface of the pericardial or auricular membrane in Arthropoda, to attach themselves to the wall of the heart, their function being probably to open by their recoil the venous orifices which each systole of the heart closes. They may also serve to suspend the heart in the pericardial sinus.

A. diaphragmatis. Term applied to the three lobes of the central or cordiform tendon of the diaphragm.

A. inter'ne mino'res elitor'idis. The *Nymphæ*.

A. mag'næ. The Labia pudendi.

A. mayo'res. (F. grandes ailes, G. grosse Flügel.) The great wings of the sphenoid bone. The alæ majores and the external pterygoid processes form the Alasphenoid bone.

A. mino'res. (F. petites ailes, G. kleine Flügel.) The small wings of the sphenoid bone, also called the wings of Inguissinus.

Also, a synonym of the *Nymphæ*.

A. mulie'bres mino'res. The Nymphæ.

A. na'si. (F. aile de nez, G. Nasenflügel.) The wings or lateral parts of the extremity of the nose; that part which bounds the nostril externally. It is composed of skin, thin expansions of muscles, tendons, cartilage, and mucous membrane.

A. orbita'lis os'sis sphenoid'e'i. (F. *petites ailes du sphenoid*; G. *Augenhöhlenflügel*.) The smaller wings of the sphenoid bone.

A. os'sis sphenoida'lis mino'res. (G. *Augenhöhlenflügel*; *Schwertfortsätze*.) The lesser wings of the sphenoid bone.

A. os'sis sphenoid'e'i descenden'tes. (G. *Gaumenflügel*.) The pterygoid plates or processes of the sphenoid bone.

A. os'sis sphenoid'e'i mag'næ. (G. *Schläfenflügel*.) The great wings of the sphenoid bone.

A. palati'næ os'sis sphenoid'e'i. (G. *Gaumenflügel*; *flügelartigen Fortsätze*.) The pterygoid processes.

A. par'væ Ingra'ssæ. (F. *apophyses d'Ingrassias*.) The lesser wings of the sphenoid bone.

A. par'væ os'sis sphenoid'e'i. (F. *petites ailes du sphenoid*; G. *Augenhöhlenflügel*.) The lesser wings of the sphenoid bone.

A. posti'cæ. (F. *ailes postérieures*; G. *Hinterflügel*.) The posterior pair of wings in insects possessing two pairs.

A. proces'sus vermifor'mis lob'uli centra'lis. (G. *Flügel des Centralhöhlchens*.) The six or eight short lamellæ which are attached to the central lobe of the superior vermiform process of the cerebellum.

A. pterygoide'æ. (F. *apophyses pterygoïdes*; G. *Gaumenflügel*.) The pterygoid processes of the sphenoid bone.

A. puden'di mulle'bris. The labia pudenti.

A. pulmo'num. The lobes of the lung.
A. sept'i cartilag'inis na'rîum. (F. *cartilages lateraux*; *cartilages de l'aile du nez*; G. *Seitenplatten, Flügel des Nasenscheidewandknorpels*.) The superior and inferior lateral or triangular cartilages of the nose.

A. tempora'lis os'sis sphenoid'e'i. (F. *grandes ailes du sphenoid*; G. *Schläfenflügel*.) The greater wings of the sphenoid bone.

A. vesper'tilio'num. See *Ala vesper'tilionis*.

A. vo'meris. (F. *ailes du vomer*.) An everted process of bone on each side of the mesial depression of the upper and anterior part of the vomer which receives the septum nasi.

Alæform. (*Ala*, a wing; *forma*, resemblance. F. *aileforme*; G. *flügelformig*.) Resembling wings.

Ala'li. (Arab.) Alchemical term for the substance now called alkali. (Ruland and Johnson.)

Ala'for. Same as *Ala'li*.

Ala'fort. Same as *Ala'li*.

Ala'freg. (Arab.) A species of *Cerussa*.

Alaga'o. A shrub of the Philippine Islands, probably a species of *Premna*; used in cataplasms for tumours and ulcers.

Alagas, os. Old name for the *Sacrum* and *Coccyx*. (Hooper.)

Alag-taga. The *Dipus jaculus*. A species of *Jerboa*, considered by some to be the coney of the Scriptures and the mouse of Isaiah. It is called by the Arabs the Lamb of the Israelites.

Alahabar. (Arab.) Ancient name for *Plumbum*, according to Ruland; *Calx*, according to Johnson.

Alahic. Alchemical term for an oven, and also, according to some, for coal or carbon.

Alais. France; Department of Gard, Arrondissement d'Alais. Cold chalybeate springs, one of which is named *Le Comtesse*, the other *La Marquise*.

Alakre'atin. The same as *Isokreatin*.

Alakreat'inin. The same as *Isokreatinin*.

Alalia. (A, neg.; *αλίσω*, to talk. F. *alalie*; G. *Sprachlosigkeit*.) A condition in which, from more or less complete paralysis of the muscles concerned, articulation is impaired or lost. It is a symptom of bulbar paralysis. When the loss of power is confined to the lips, *b, p, f, m, v, o*, and *u*, are the letters lost; when the tongue is affected, *r, s, l, h, g, t, d, n*, and *e*, are impossible of correct pronunciation; and when all the letters are gone the alalia is said to be complete.

A. llera'lis. Incapacity to pronounce the letters properly; stammering.

Al'amad. An old name for Antimony.

Alamam'dina. Supposed to be another name for the *Alabandicus lapis*. (Parr.)

Alam'bic. Same as *Alēmbic*. Also a synonym of *Hydrargyrum*, mercury.

Alame'da de Cervera. Spain; Province of Ciudad-Real. Chalybeate waters, containing iron bicarbonate. Temperature, 15° C. (59° F.)

Alam'pes. (*Αλαμπής*, obscure. G. *undeutlich*.) Indistinct, not obvious; *πυρετός αλαμπής, febris lentæ*, little fevers. Aræteus names such fevers *πυρετός λαθάνοντες*, concealed or masked fevers.

Ala'na terra. The earth ochre, of a pale red or yellow colour; used as an astringent.

Also, (L. *argylla tripolitana*; G. *Tripplastein*, or *Trippele*) Tripoli stone.

Alan'dahal. Arabian term for *Citrullus colocynthis*, or bitter cucumber. Quincy renders it—bitter apple.

Alan'futa. (Arab.) A vein between the chin and lower lip, which formerly was opened with the intention of correcting a fœtid breath. (Avicenna and Castellus.)

Alanga'zi. South America. A village at the foot of the volcanic mountain Cotopaxi. A simple thermal water of 36·7° C. (98° F.). It is of extreme purity. Near the foot of the mountain are several hot sulphurous springs.

Alan'ge. Spain; Province of Estremadura, near Merida. An ancient Roman station. A salt water, of a temperature 28° C. (82·4° F.), containing free carbonic acid. The baths are recommended in rheumatic and neuropathic affections, in atonic ulcers, and abdominal congestions.

Alangia'cæ. Sometimes regarded as a Tribe of the Nat. Ord. *Combretacæ*. Trees or shrubs. Leaves alternate, entire, exstipulate, without dots; calyx superior, 5—10 toothed; petals 5—10, linear, reflexed; stamens equal to, or 2 or 4 times as numerous as, the petals; anthers adnate; ovary inferior, 1—2 celled; ovules simple, pendulous; fruit drupaceous; seed solitary, pendulous, with fleshy albumen and large leafy cotyledons.

Alangia'æ. A synonym of the *Alangiaceæ*.

Alang'gium. A Genus of the Nat. Ord. *Alangiaceæ*.

A. decapetalum. The East Indian tree Angolan; the sage-leaved Alangium. The juice of the root is said to possess medicinal qualities, purgative and vermifuge, and the powdered root is a reputed antidote in snake bites.

A. hexapetalum. A synonym of *A. decapetalum*.

A. tomento'sum. A synonym of *A. decapetalum*.

ALANIN—ALBADARAN.

Al'anin. A synonym of *Lactamidic acid*.
Alanines. A synonym of the acid amides called *Amic acids*.

Alantcamphor. $C_{10}H_{16}O$. Found in the root of *Inula helenium*. It melts at $64^{\circ} C$. ($147^{\circ} 2 F$), and tastes and smells as peppermint.

Alantin. A synonym of *Inulin*.

Alaos. (Αλαός, incapable of seeing, said to be from α, neg.; and λαω, to behold, but more probably from ἀλαομαι, to stray.) Blind.

Alaotocus. (Αλ. os, and τος, child-birth.) Producing young that are blind at birth, as in the instance of dogs and cats.

Al'ap. Austria Hungary; near Stahl-weissenburg. The town consists of Feisó-Alap and Also-Alap, each of which has a distinct spring.

Al'so-Al'ap. A stronger water of the same character as the following, and used in the same cases.

Feisó-Alap. A saline water, containing magnesium iodide. It is a purgative, and is used in abdominal congestions, disorders of mucous membranes, and chronic lepra.

Alaqueca. Indian name for a sulphuret of iron, supposed to arrest hæmorrhage when externally applied. It is found in small polished fragments at Balagatch in India.

Alar. (Ala, a wing. Gr. πτερυγός; F. aile; G. flug-formig.) Belonging to a wing; wing-like in form.

A. chest. (G. geflügelten Schultern.) A small chest with projection of the angles of the scapula, giving the appearance of wings and indicating a predisposition to phthisis.

A. ligaments. (G. Flägelbänder.) Two lateral folds of the synovial mucous membrane of the knee-joint lying in the space between the patella and the tibia and femur.

A. odontoid ligaments. The lateral ligaments of the odontoid process of the axis which are attached to the inner side of the condyles of the occipital bone.

A. thoracic artery. A somewhat inconstant branch of the axillary artery which supplies the glands and the fatty tissue of the armpit.

A. vein. A vein which, after collecting blood from the axilla, joins the axillary vein.

Alarari. (Arab.) Name for *Plumbum*.

Alaraz. Spain, Province Avila. A sulphur water, warm in winter and cold in summer. Used in gastralgia, hysteria, amenorrhœa, nervous disorders, migraine, chronic rheumatism, and skin diseases.

Alare externum. (L. alaris, belonging to the wing; externus, outside.) A synonym of the external pterygoid muscle.

Alares musculi. A synonym of the *Pterygoid muscles*.

A. venæ. (L. ala, the armpit.) The basilic and median basilic vein, because it is connected with the axilla.

Alaria. A Genus of the Nat. Ord. *Fucaceæ*; or of the Family *Laminariæ*, Order *Fucoidæ*. Froid membranous, with a stout midrib, stem pinnated, spores pear-shaped.

A. esculenta. (F. *Laminaria comestible*.) Bladderlike. Froid 2' 12" long, olive green; stem 4" 8" long, pinnated, with several short, flat, narrow leaflets. It contains mannite, the boiled midrib is eaten when the thin part is stripped off. Before being cooked it requires soaking in fresh water. It is also made into a pickle.

Alaria ossa. The wing-like bones. The lateral processes of the sphenoid bone.

Alartar. (Arab.) Name for oxide of copper. (Ruland.)

Alary muscles. (Ala, a wing.) The delicate triangular sheets of muscular fibre which are attached in pairs by their bases to the wall of the pericardial chamber in insects, whilst their apices are inserted into the hypodermis. They occupy the interspaces, in the cockroach, left by the principal dorsal branches of the tracheæ, which form arches on each side of the heart.

Alas'alet. (Arab.) Name for *Sal ammoniacum* (Ruland.)

Al'aset. An old term for sal ammoniac.

Alas'tar. Another spelling for *Alartar*.

Alas'trob. Same as *Alahubar*.

Alatan. Arabic for litharge.

Al'atar. A synonym of *Æsuletum*.

Alate. (L. alatus, from ala, a wing. Gr. πτερυγός, F. aile; G. geflügelt.) Winged, or having lateral appendages, as certain stems and leaf stalks that are winged with membranes.

A. inflorescence. A synonym of *Inflorescence*, definite.

Alate-pinnate. A pinnate leaf having a winged petiole.

Alaternus. The *Rhamnus alaternus*.

A. latifolius. The *Rhamnus alaternus*.

Ala'ti. (L. alatus, winged. Gr. πτερυγός.) An old name for persons whose chests were compressed and whose scapulae were prominent.

A. processus. The great wings of the sphenoid bone.

Alation. (L. ala, a wing. G. Beflügelung.) Term for the general manner in which the wings are configured or disposed on the body.

Alaton. Arabic for *Litharge of gold*.

Alau'da. A genus of the Family *Alaudæ*, Order *Passeres*, Class *Aves*.

A. arvensis. (F. *alouette des champs*; I. *allodola*; G. *Feldlerche*.) The skylark. Used as an article of food.

A. cristata. The crested lark. This species has been identified with the *Alauda* or *Gallinula* of the Romans, and the *κοροδο*, or *κοροδάλλος*, of the Greeks. A broth made from its flesh was used as a remedy in colic.

Alau'didæ. A Family of the Group *Cornuivores*, Order *Passeres*, Class *Aves*. Beak of moderate length, wings long and large, usually with six primaries, tail short, nares transverse, usually covered with bristles; tarsus scaly on its anterior surface. Example: Common lark, *Alauda arvensis*.

Alaurat. (Arabic) *Salnitrum*, or nitre.

Alausa. Same as *Alon*.

Alba pituita. White phlegm. A synonym of the old term *Leucophlegmana*.

A. simplex. A synonym of *Ocimum*, a kind of basil.

A. terra. White earth. The *Lapis philosophicus*, a compound of mercury and sulphur.

A. tunica. The sclerotic

Alba ca. The Peruvian name of a fragrant plant (Sweet Basil), which, according to Dr. A. Smith, is applied to the nostrils for the purpose of dislodging maggots, an affection not uncommon in some districts of that country (Waring.)

Albadaran. Arabic for the sesamoid bones of the great toe, to which extraordinary virtues were attributed. Bartholin, *Anat. de Ossib. libell. 17*, p. 22.

ALBAGENZI—ALBICOSTATUS.

Albagen'zi. (Arab.) Name for the sacrum, according to Hooper.

Albagia'zi. The sacrum, according to Fallopius, *Expos. de Ossib.* i, c. 22, p. 515.

Albamentum. The white of egg.

Alban. A white crystalline powder, which is deposited from a hot alcoholic extract of gutta percha on cooling. It melts at 160° C. (321° F.), and is entirely liquid and transparent at 175°—180° C. (347°—356° F.). It is violently attacked by concentrated nitric and sulphuric acids, but not by hydrochloric acid, nor by dilute acids or alkalis. It is soluble in benzol, oil of turpentine, carbon bisulphide, ether, and chloroform. Alban forms from 14 to 16 per cent. of gutta percha. (Payen.)

Alban, St. France; Department of the Loire. Situated in a wild, romantic district. Chalybeate waters of 21° C. (69·8° F.), containing also traces of sodium iodide and arseniate. Used in anæmia, disorders of menstruation, nervous debility, and hysteria.

Albanians. One of the European brown races, sometimes termed Pelasgian.

Albano. Italy; a small town in the Roman Campagna. Here are saline and ferruginous springs having a temperature of 30° C. (86° F.), which are used in the form of mud baths in rheumatism. The place was much frequented by the ancient Romans.

Albanum. The saline portion of the urine.

Albara. A Brazilian plant, probably *Canna angustifolia*. The leaves are used as a vulnerary; the roots are eaten, and used locally as a means of promoting suppuration. (Waring.)

Also, a name of the *Populus alba*.

Alb'ra. (Arab.) A species of leprosy.

A. al'ba. A synonym of *Lepra alphoides*.

A. n'gra. A synonym of *Lepra græcorum*.

Albar'es. A synonym of *Lepra alphoides*.

Albar'as. A synonym of the *Leprosy* of the Greeks.

Also, the Arabic name for arsenic.

A. al'ba. A synonym of *Lepra alphoides*.

A. n'gra. A synonym of the form of *Lepra*, anciently called *nigricans*.

Albaros. A synonym of *Lepra alphoides*.

Albas'trum. (L. *album astrum*, white star.) An old name for An'imony; so called from its stellate or foliated appearance.

Alba'tion. (L. *albus*, white. F. *albatton*; G. *Bleichen*.) A Spagiric term in reference to the transmutation of metals, particularly of copper into silver; meaning the blanching or whitening of metals, and synonymous with albi-fication and dealbation. (R. and J.)

Albatross. (F. *albatros*; I. *albatro*; G. *Kriegschiffsvogel*, *Schiffsfugler*.) The *Diomedea exulans*, the flesh of which is eaten as food by the New Zealanders, as well as the eggs.

Albe'do. (L. *albus*, white.) Whiteness. The same as *Albation*, and *Albor*.

The term was specially used to describe urinary conditions, which were called the crystalline, the snowy, the limy, and the limpid albedo.

A. unguium. The lunula of the nails.

Albens. France; Savoy. On the road from Aix-les-Bains to Annecy. A carbonated chalybeate spring; the waters of which are used by the women of the country for their supposed emmenagogue powers, and by calculous patients for their diuretic and lithotriptic properties.

Al'beras. (Ar.) A name given to *Staphi-*

sagria, because it was able to remove those pustules on the face which have the same name.

Also, an old term for pustules on the face.

Al'berik. Arabic for the whitening or blanching of brass or copper.

Al'bert coal. A synonym of *Alberite*. Incorrect, inasmuch as the mineral is a form of asphalt and not a coal.

Albertia. A Genus of the Family *Albertiidae*. Rotatory organs absent, or reduced to a straight ciliated band on the frontal margin.

A. cal'vus. Clap. Parasitic on the skin of Oligochaeta.

A. crystalli'na. M. Sch. Found in the intestine of the Nais.

A. vernic'ulus. Duj. Found in the visceral cavity of earthworms, and in the intestine of snails.

Alberti'dæ. A Family of the Class *Rotifera*, Subkingdom *Vermes*. Parasitic vermiform rotifers having no foot.

Al'bertite. A bituminous mineral occurring in New Brunswick; it is very brilliant, conchoidal in fracture, and strongly electric. It consists of carbon 85·4, hydrogen 9·2, nitrogen 3·0, oxygen 2·2, ash 1·20, and a trace of sulphur.

Albes'cent. (L. *albesco*, to begin to be white.) Growing or becoming white.

Albes'ton. Arabic for quicklime.

Albetad. Arabic for *Galbanum*.

Albi. (L. *albus*, white.) An old term for corrosive sublimate, mercuric chloride.

Al'bian. (L. *albus*, white.) An albino.

Albibar'bis. (L. *albus*, white; *barba*, a beard.) White bearded.

Al'bicans. (L. *albico*, to grow white.) Growing, or becoming white; being somewhat white.

Al'bicant. (L. *albico*, to make or grow white.) Becoming or growing white.

Albicantia corpora. See *Corpora albicantia*.

Albica'tion. (L. *albus*, white.) Whiten-ing. Albication consists in the appearance of spots of variable form, rounded, elongated, linear, or forming a continuous zone along the border of a leaf. The shade varies from the purest white to yellow. This anomaly is hereditary; a good example of it is afforded by the *Phalaris arundinacea* which presents bands alternately of white and green. It is not yet certainly known whether albication is a pathological change or not.

Albicau'dus. (L. *albus*; *cauda*, a tail.) Having a white tail.

Albicau'lis. (L. *albus*; *caulis*, a stem.) Applied to plants the stem of which is covered with a thick whitish down.

Al'biceps. (L. *albus*; *caput*, the head.) Whiteheaded; the head capped with white.

Albicera'tus. (L. *albus*, white; *cera*, wax.) Of the colour of white wax; yellowish white.

Albic'eris. (L. *albus*; *kipas*, a horn.) Having white antennæ.

Albicoll'is. (L. *albus*; *collum*, the neck.) Having a white neck.

Albic'omus. (L. *albus*, white; *coma*, hair. G. *Weisshaarig*.) A term applied to petals having white hairs.

Albicorn'is. (L. *albus*; *cornu*, a horn.) Having the antennæ white or pale.

Albicosta'tus. (L. *albus*; *costa*, a rib.) Applied to white-ribbed shells.

ALBIDIPENNIS—ALBO-VITTATUS.

Albidipennis. (L. *albidus*, white; *penna*, a wing.) Having white wings.

Albiduria. (L. *albidus*, white, *urina*, the urine. L. *Leucuresis*, F. *albumurie*, G. *Wassersuchen*.) White urine. An old term for a morbid state of the urine in disease of the kidneys, at the crisis of acute diseases, and during the course of some bilious affections.

Albification. (L. *albus*, white, *facio*, to make.) Whitening, term synonymous with *Albation*.

Albiflorous. (L. *albus*; *flos*, a flower.) Having white flowers.

Albigo. (F. *rouille*; G. *Mehlthau*.) Mildew.

Albibris. (L. *albus*, *labrum*, a lip.) Applied to *Crustacea* having the rostrum spotted with white, and to univalve shells having their border white.

Albimanus. (L. *albus*; *manus*, a hand.) Having white hands, as the *Lemur albinus*.

Albimec. Arabic for ornament. (Quincy.)

Albinervius. (L. *albus*, *nervus*, a nerve.) Having white nerves of the leaves.

Albines. (Fr.) Small bodies associated with aleuron grains. They are usually spheroidal and colourless, and present a vacuole. According to M. Hurlig, the aleuron-mass is composed of two concentric vesicles in contact every where except in one point, where they are separated by these peculiar corpuscles. See *Aleuron*.

Albinism. (L. *albus*, white. F. *albinisme*; G. *Albinismus*, I and S. *albinismo*.) A congenital anomaly, characterized by the absence of pigment in the body, rendering the skin very fair, the hair white or yellowish-white, the iris of a pale bluish-red colour, and the choroid red. It occurs both in man and animals, as in rabbits, mice, some birds and fishes, and also in plants.

Albinismus. (Same etymon.) The same as *Albinism*.

A. partialis. Albinism occurring in circumscribed patches.

A. universalis. General albinism.

Albino. (Portuguese, from L. *albus*, white.) A term originally applied by the Portuguese to those Negroes in whom there was a congenital absence of pigment in the skin, hair, and irides.

Albinos are called *B-das*, *Kakerlaken* and *Dondos*. The absence of pigment in the iris causes them to suffer from great intolerance of light, hence they have been termed *actiophobes*, in that they see better by night than by day. They are indolent and weakly.

Albino plants may be obtained by causing them to germinate and grow in a dark place. No chlorophyll is formed, and they are said to be etiolated.

A. skin. A synonym of *Albinism*.

Albino, St. Italy; in Tuscany. A sulphuretted and carbonated chalybeate water springing from iron holding chalk strata at a temperature of 15° C. (59° F.) It contains calcium, magnesium, and sodium sulphate, iron carbonate, and 100 volumes of the gas is composed of carbonic acid 39, sulphuretted hydrogen 12, oxygen 14, and nitrogen 36 parts.

Albinismus. The condition *Albinism*.

Albinum. (L. *albus*, white.) An old name for the species of *Gnaphalium* used in medicine, from the whiteness of its flowers or its pappus.

Also, a term for *Album græcum*.

Albinuria. Same as *Albiduria*.

Albion. A synonym of *Albino*.

Albionæ. (F. *albionens*.) A Family of Leeches, according to Moquian-Tandon, having very distinct rings, an opaque body, red blood, and a unilobate buccal sucker.

Albipennis. Same as *Albidipennis*.

Albiperle. (Fr.) A term given by Morret, to a material obtained from a calculus found in the abdominal parietes; probably margarite.

Albipes. (L. *albus*, *pes*, a foot.) Having white feet.

Albitros'tris. (L. *albus*; *rostrum*, a beak.) Having a white beak or snout.

Albisbrunn. Switzerland. A cold water establishment in the Canton of Zurich, on the west side of the Alps chain of mountains, accessible by rail, altitude, 1960 feet.

Albitarsus. (L. *albus*; *tarsus*.) Having white tarsi.

Albite. (L. *albus*, white.) A Feldspar containing sodium instead of potassium. It is of a grayish-white colour, and is a frequent constituent of granites, syenites, and greenstones.

Albitudo. The condition *Albinism*.

Albivenius. (L. *albus*, *vena*, a vein.) Same as *Albinervius*.

Albiventer. (L. *albus*, white; *venter*, the belly. F. *albinentre*.) Having a white belly; applied to birds and other animals.

Albiventer. Same as *Albiventer*.

Albizia. A Genus of the Nat. Ord. *Leguminosæ*, differing from the *Acacia* in the filaments of the stamens being united at the base.

A. anthelmintica. An Abyssinian tree, the powdered bark of which, named *musenna* or *besenna*, is an effective tannifuge in doses of two ounces. See *Muscina bark*.

A. Leb'bek. (Hind *ariz*; Tam *kattuvagai*, Tel *derisana*; Mal *velu cake*; Beng. *siraguchh*.) Surissa tree. An Indian tree, thirty to forty feet high. The seeds are used in the treatment of piles, and as an astringent in diarrhoea. The flowers are used in the cure of boils, eruptions, and swellings, and also as antidotes to poison. The leaves are said to be useful in ophthalmia, and the powdered bark in ulcers and snake bites. The oil from the seeds is given in cases of white leprosy.

Albo-flaves'cens. (L. *albus*; *flavescens*, to become yellow. F. *jaunâtre*; I. *giallatro*; S. *algua-amarillo*, G. *scwangelblich*.) Yellowish or yellowish white.

Albo gutta'tus. (L. *albus*, *gutta*, a drop. I. *tuchete*, I. *maekhratu*; S. *manchado*; G. *scwengelsticht*.) Speckled with white.

Albo-lactes'cens. (L. *albus*; *lactescens*, to turn to milk. F. *blanc-de-lait*, G. *scwasmilchend*.) Milk white.

Albo pubes'cens. (L. *albus*; *pubescens*, to reach the age of puberty. G. *scwiesflaumhaarig*.) Having short, downy, white hairs.

Albo tomento'sus. (L. *albus*, *tomentum*, a stuffing for cushions. G. *scwiesflaug*.) Having long, downy white hairs.

Albo-variega'tus. (L. *albus*, *variegatus*, to make of various colours. G. *scwiesgeschekkt*.) Spotted or speckled with white.

Albo-villo'sus. (L. *albus*; *villus*, a tuft of hair. G. *scwieszottig*.) Having shaggy or tufted white hair.

Albo-vitta'tus. (L. *albus*; *vitta*, a fillet

ALBOR—ALBUMEN.

or band. *G. weissstriemig.*) Having white bands.

Al'bor. (L. from *Albus*, white.) Whiteness; the same as *Albedo*; more specially it signifies albumen; also, the urine.

A. o'vi. The albumen of the egg.

Al'bra. (Arab.) Paracelsus gives this name to a disease stated to be a mixed species of malignant scabies, formed by *Morphea*, *Serpigo*, and *Lepros*.

Al'bor'ca. Arabic for *Hydrargyrum*, or mercury.

Al'bot. Arabic for a crucible.

Al'botal. Arabic for *Terebinthina*, or turpentine.

Al'botar. (Arab.) Castellus's spelling of *Al'botal*.

Al'botar'sus. Same as *Albitarsus*.

Al'botat. Arabic for *Cerussa*, or white lead.

Al'botim. Arabic for *Terebinthina*, or turpentine.

Al'buca'sis. An Arabian physician who lived in the eleventh century. He wrote several excellent works, and has described many instruments and operations of his time.

Al'bugin'ea. (L. *albus*, white.) Of a white appearance, or like the sclerotic coat of the eye; also, of or belonging to albumen, or white of egg. Applied to a membrane or tunic of the eye, also to a covering of the testicles, each named *Tunica albuginea*, and to other tissues of like character, from their similarity to the white of the eye.

A. oc'uli. The sclerotic.

A. ova'rii. The tunica albuginea, or fibrous investment of the ovary.

A. tes'tis. The tunica albuginea of the testicle.

Al'bugin'eous. (Same etymon. F. *albugo*; I. *albugine*.) Having a white appearance, like the sclerotic.

Also, having the properties or appearance of albumen.

A. a'bre. One of Chaussier's four elementary fibres. The fibrous bundles which form the tendons, ligaments, and aponeuroses.

A. tis'sue. A term formerly applied to white fibrous tissues, as aponeuroses, the fibrous structure of the skin and serous membranes, and generally to those tissues which could be reduced to a gelatinous condition by boiling.

Al'bugini'tis. Inflammation of white fibrous tissue.

Al'buginosus hu'mor. A synonym of the *Aqueous humour* of the eye.

Al'bug'o. (*Albus*, white. Gr. *ἀργερον*; G. *Augenweißchen*, *weisser Fleck*.) A white opacity of the cornea, not superficial, but affecting its very substance; also called the pin and web. See *Leucoma*.

Also, a synonym of the white of egg.

A. cap'itis. (G. *Kopfschupp*in.) A scaly eruption on the scalp.

A. cora'lii. A synonym of an old remedy, the *Magistery of coral*.

A. oc'uli. The sclerotic.

A. oculo'rum. The same as *Albugo*.

A. o'vi. The white of egg.

Al'buhar. Arabic for *Cerussa*, or white lead.

Al'bukalin. A nitrogenous body found by Reichardt in the blood of leukhæmic patients, identical in composition with a substance obtained by Theile from the action of potassium on

albumen and vitellin, which has the formula $C_8H_{16}N_2O_6 + H_2O$.

Al'bula. A synonym of *Leucoma*.

Al'bula. Italy; near Tivoli. *Albunia fons* or *Albulæ aque* of the Romans. A mild sulphuretted water of 24° C. (75·2° F.) It contains sodium and calcium carbonate and sulphate, calcium, magnesium, and sodium chloride, and sulphuretted hydrogen gas; used in atonic conditions of the body, in mucous diarrhœa and urinary catarrh, in chronic diseases of joints, in atonic ulcers, and in skin diseases.

Al'bulae aque. See *Albula*.

Al'bum bal'samum. White or copaiba balsam.

Also, the name of an old remedy composed of solution of acetate of lead and oil of roses.

A. ca'nis. The same as *A. græcum*.

A. ce'ti. A synonym of *Spermaceti*.

A. græ'cum. (G. *weisser Hundskoth*.)

Term for the dung of dogs, and other bone-eating carnivora, which becomes white like chalk on being exposed to the air, consisting chiefly of phosphate of lime; formerly applied when mixed with honey to the outside of the throat in quinsy.

A. hispa'nise. A mixture of oxides of tin and bismuth, formerly used as a cosmetic.

A. jus. A white soup made from fish with aniseed and leeks; considered very nutritive.

A. ni'grum. (G. *Mäusekoth*.) The dung of mice; formerly employed in epilepsy, and as a purgative.

A. oc'uli. The sclerotic.

A. o'lus. The white pot-herb; the plant *Valerianella olitoria*.

A. zha'sis. An ointment of white lead and hog's lard; named after Rhazes, the Arabian physician.

Al'bumen. (F. *albumen*, *endosperme*, *perisperme*; G. *Sameneiweiss*.) In Botany, the term is used to denote the material which surrounds the embryo in those seeds in which the embryo does not constitute the whole kernel. It is a nutrient material consisting of starch and fatty matters, and is developed in the interior of the embryonal sac from cells; the cell contents vary in density and quality, and produce varieties, such as mucilaginous, horny, oily, and farinaceous albumen. It may also be uniform in structure or vacuolated.

For an account of the albumen of animal origin, see, among others, *Albumins* and *Albuminoid principles* and their subheadings.

A., ac'id. See *Acid-albumin*.

A., al'kali. See *Alkali-albumin*.

A., cel'loid. A term applied to the albuminous substance which may be found in pus or cancer juice, in the form of globular masses resembling cells; also to the envelope which may be found surrounding groups of blood corpuscles in hæmorrhagic apoplexies.

A., cer'ebral. Same as *Neurine*.

A., cir'culating. The fluid, unassimilated blastema of the body.

A., a'broid. A term sometimes given to the deposit which occurs in fibroid degeneration.

A., mem'branous. Laminated deposits of albuminous material occurring in cavities or vesicles into which serous effusion has taken place.

A., molec'ular. That form of granular albuminous matter which may be found in certain degenerations, as in induration of the brain,

ALBUMEN IODATUM—ALBUMINATE.

yellow albuminous deposits in the kidney and spleen, and some forms of tubercle.

A. of egg. See *Albumen ovi* and *Albumin, ovum*.

A. of pancreat'ic juice. A term for *Pancreatine*.

A. of plants. See *Albumin, plant*.

A. of saliv'a. A synonym of *Ptyalin*.

A. of serosities. A term for *Metalbumin*.

A. of serum. See *Albumin, serum*.

A. of vegetables. See *Albumin, plant*.

A. process. The form of photography in which the negative image in the camera is received and fixed on a transparent film of iodised albumin on a glass plate.

A., solution of. A test solution of the Brit. Ph., consisting of the white of one egg triturated with four ounces of distilled water and filtered through tow. It should be recently prepared.

A. store. Albumen which is assimilated and forms part of the structures of the body.

A., tissue. Albumen of the solids, as distinguished from that of the liquids.

Albumen iodatum. (*G. Jodessence*.) One part of finely divided iodine dissolved in water with eight parts of white of egg, spread on a flat surface and dried. Given in doses of 1.0 to 5.0 grammes.

A. oculi. A synonym of *Albumo*.

A. ovi. (*B. Ph.*) The liquid white of the egg of *Gallus Banckia*, var. *domesticus*. A glairy transparent fluid surrounding the yolk, and lying immediately beneath the shell membrane. It contains 12 per cent. of albumen, 1.5 of fatty and extractive matter, 5 of sodium and potassium chloride, with phosphates and sulphates, and 86 of water. A white of one egg mixed with four ounces of water and strained is given in poisoning by metallic salts, and as a demulcent in dysentery and other diseases. It is used to clarify liquids.

Albumenate. Same as *Albuminate*.

Albumenoid. A synonym of *Albuminoid*.

Albumen-pepton. See *Pepton*.

Albuminum. The white of egg.

Albumenuria. A synonym of *Albuminuria*.

Albumin. The generic term for the several varieties of the *Albumina*.

A., muscle. (*F. albumine des muscles; G. Muskalbumin*.) A peculiar form of albumin is believed to exist in muscular tissue, though it has not been isolated. When voluntary muscular fibre is treated with cold water, the extract contains an albuminoid matter which is not precipitated from a neutral solution, and which separates in flocculi at 47° C. (116.6° F.) It appears to approach in character to the coagulated albumens.

A. of egg. See *A., ovum*.

A. of plant. See *A., plant*.

A. of serum. See *A., serum*.

A., ovum. (*F. albumine de l'œuf; G. Eieralbumin*.) Egg albumin or ovalbumin. It is obtained by diluting the white of egg with distilled water, straining through linen, filtering, evaporating somewhat, and then dialysing. When dried it has the same appearance as serum albumin, and it is equally soluble in water, but its rotatory power is less, being -35.5°, according to Hoppe-Seyler, or -38.08°, according to Haas. Absolutely pure solutions are not coagulable by heat or alcohol, but a very small saline con-

tamination will produce a precipitate with these agents. Carbonic acid produces flocculent masses, but does not precipitate this form of albumin. acetic acid in sufficient quantity and strength produces a transparent gelatinous mass; hydrochloric acid does not at first produce coagulation, but increases the rotatory power to -57.5°; a further quantity produces a flocculent deposit, with difficulty soluble in water and saline solutions, and only slowly and incompletely in the concentrated acid. Dilute nitric acid acts as on serum-albumin. Caustic potash produces a transparent, gelatinous mass, potassium albuminate. When free from salts it is not precipitated by ether; in their presence precipitates result. When ovum-albumin is injected into the veins or hypodermically, it passes out by the urine without change. By some it is believed that ovum-albumin is a compound of several forms of albumin, two of which are said to have been separated, one with a left rotatory power of -45.2°, and the other with one of -26°.

A., plant. The juices of plants, albuminous seeds, and tubers, contain this variety of albumin. It is coagulable by heat, and possesses generally the properties of ovum-albumin.

A., salivary. A term for *Ptyaline*.

A., serum. (*F. albumine du serum; G. Serumalbumin*.) Serum-albumin or serine. The form of albumin found in the serum of blood, in lymph, chyle, exudations, the fluid of cysts, in albuminuria from whatever cause, and in the colostrum. It is obtained from the serum of blood by precipitation with lead acetate, washing with water, suspending the precipitated lead compound in water, decomposing by carbonic anhydride and filtering, a cloudy solution of serum-albumin results. It may be obtained also by adding drop by drop diluted acetic acid to blood serum until a flocculent deposit is produced, which does not disappear on agitation; the fluid is filtered and evaporated to a much smaller quantity, it is then re-strained by sodium carbonate, and placed in a diffusion apparatus, when by renewal of water it may be obtained free from saline matter. When carefully evaporated the albumin is left as a yellowish, transparent, brittle, hygroscopic substance, which, when quite dry, may be heated to 100° C. (212° F.) without decomposition. It is soluble in water; its specific rotatory power for yellow light is -56°, it is said to be precipitable from aqueous solution by alcohol only when it contains saline matters, which it usually does, when the alcoholic precipitate is retained for a while in the alcohol it becomes changed into globulin and coagulated albumin, and finally entirely into the latter. It is not precipitated by carbonic, acetic, phosphoric, or tartaric acids, or by small quantities of very dilute mineral acids, it is precipitated by strong mineral acids and by most metallic salts, the hydrochloric acid precipitate is readily dissolved in excess of the reagent. It coagulates at 72°-73° C. (161.4°-163.4° F.) Ether precipitates it from solutions free from salts, but not when saline matters are present.

A., vegetable. Same as plant albumin.

Albuminate. The combination of albumin with certain bases, in which the albumin plays the part of a very feeble acid.

Also, a synonym of *Alkali, albumin*.

A. of iron. A preparation made by dissolving the freshly precipitated oxides of iron in a filtered solution of albumen.

ALBUMINATED—ALBUMINOUS

A. of iron and potassium. Thirty-six parts of a solution of 5 per cent. Baumé of iron persulphate is precipitated by 100 parts of a solution of white of egg; 2 parts of potassium hydrate, dissolved in 50 parts of water, are added, when the precipitate dissolves; $\frac{1}{4}$ part of its weight of sugar converts the solution into a syrup, which contains one per cent. of anhydrous sesquioxide of iron. Proposed as an easily assimilated form of iron.

A. of iron and sodium. White of egg is treated with solutions of sulphate of iron and of caustic soda; sulphuric acid is removed by lime water, and the lime by carbonic acid. Proposed as a form of iron, which would be easily taken up in the alimentary canal.

Albuminated. Term applied to any body covered or impregnated with albumen.

Albuminimeter. (*L. albumen*; μέτρον, a measure.) A polarising apparatus serving by the measurement of the amount of rotation to determine the quantity of albumen contained in a liquid.

Albumini'na. Name by which Couerbe designated what he afterwards called *Oonina*.

Albuminip'arous. (*L. albumen*; παρίω, to bring forth, to produce.) Secreting or producing albumin.

Albuminoid. (*L. albumen*; εἶδος, form.) Of the nature of, or resembling albumin.

A. ammo'nia. A term used to describe the ammonia which may be obtained from water or air after the free or saline ammonia, that which is in solution or which forms part of easily decomposable substances like urea, has been removed or its amount determined. It largely represents contamination with animal substances, but it may be yielded by vegetable matter also.

A. degenera'tion. A synonym of *Lardaceous degenera'tion*.

A. deriva'tives. According to v. Gorup-Besanez, the nearest derivatives of albumin include mucin, spermatin, keratin, fibroin, spongin, elastin, collagen, gluten, chondrigen, chondrin, the peptones, and some ferments. They are very similar to albumin in constitution; they are all nitrogenous; most contain sulphur, swell up in water, and are prone to putrefaction. Being burnt they leave an ash containing an alkaline phosphate, as well as calcium phosphate. Their behaviour to reagents is very similar to that of albumin. Many are constituents of organic tissue, others are found in the fluids of the body, and some are powerful animal ferments.

Some authors include under this term all forms of albumin, making it synonymous with albumin principles.

A. prin'ciples. That division of the Albuminous principles which by some authors is called Proteids; they form the chief part of the organs and tissues of the animal body, and occur in most parts of plants, especially in the seeds.

The proportion of the elements in these various substances differs within moderate limits; the carbon ranges from 52.7 to 54.5 per cent., hydrogen 6.9 to 7.3, nitrogen 15.4 to 16.5, oxygen 20.9 to 23.5, and sulphur 0.8 to 2.0 per cent.

The empirical formula $C_{72}H_{112}N_{12}O_{22}S$ has been constructed as approximately correct; but although as yet no certainty has been arrived at as to their exact constitution, some recent experiments seem to show that urea or a urea-like substance may be the centre around which the compound molecules are grouped, while others

have suggested the notion that many different radicles go to their formation.

They are amorphous and colloid, having low diffusive powers, traversing membranes with difficulty, capable of being dried, when they form a yellowish mass like gum arabic, tasteless and odourless. In solution they coagulate at a temperature of about 70° C. (158° F.), rotate a polarised ray of light to the left, and possess a certain amount of opalescence. They are precipitated from their aqueous solutions by mineral acids in excess, by potassium carbonate when added to saturation, tannic acid, boracic acid, and many metallic salts; most are precipitated by alcohol, but not altogether in the presence of alkalis or their carbonates. They dissolve in strong acetic acid, and are precipitated from the solution by potassio-ferrous and potassio-ferric cyanide. On boiling with concentrated hydrochloric acid they dissolve, giving a violet-red colour to the fluid, and on boiling with nitric acid they give a yellow colour (xanthoproteic acid), becoming orange on the addition of ammonia. Iodine colours them intensely brownish yellow, which is a useful reagent in microchemical research; and mercury nitrate (Millon's reagent) with the application of a gentle heat gives a red colour. With sulphuric acid containing molybdic acid they assume a dark blue tint.

They are divisible empirically into the following classes: *Albumina*, *Globulina*, *Fibrina*, *Derived albumina*, *Coagulated albumins*, *Peptones*, and *Lardacein* or *Amyloid*.

The term Albuminoid has been loosely used; sometimes as synonymous with proteids, the manner here adopted, and occasionally as synonymous with what in this work are called *Gelatinous principles*.

Albuminoids. A synonym of *Proteids*, or *Albuminoid principles*.

Albu'minose. A series of bodies derived from albumen by the action of pepsin in weak acid solutions. They are crystalloid, are not precipitated by acids, nor by boiling, and turn the plane of polarisation to the left. See *Peptone*.

Albumino'sis. A condition of the blood in which the proportion of albumen is increased.

A. chron'ic. A synonym of *Plethora*.

Albu'minous. (*L. albuminosus*. G. *eiuweissartig*, *eiuweisshaltig*.) Of or belonging to, having, full of, or of the nature of, albumen.

A. concre'tions. A term given to certain concretions very rarely found loose in the abdomen, consisting of layers of albuminous substance.

Also, the concentric layers of aneurismal coagula.

A. degenera'tion. A synonym of *Lardaceous degenera'tion*.

A. expectora'tion. A term used to describe the expectoration of tenacious albuminous matter in acute edema of the lung, which occasionally results from the sudden removal of pleuritic effusions by thoracentesis.

A. foods. See *Foods*, *albuminous*.

A. gland. An elongated, triangular-shaped, tubular gland found in the Tænia, situated just above the inferior transverse branch connecting the longitudinal vessels between the vitelligene and inferior or posterior border of the segment. The ducts are convoluted, and unite first into three or into five collecting tubes, which again unite to form one that opens into the oviduct.

A. prin'ciples. Under this term a large

ALBUMINS—ALBUMINURIA.

number of substances found in both animals and vegetables are included, composed of carbon, hydrogen, oxygen, nitrogen, and, in some, sulphur. Some contain phosphorus, but this is believed to be an extraneous substance, resulting from the difficulty of separating the calcium phosphate.

The albuminous principles are contained in the solids and fluids of the body in the following proportions. In 1000 parts of cerebrospinal fluid there are 0.9 of albumen, in aqueous humor 1.4, liquor amni 7.0, intestinal juice 9.5, pericardial fluid 23.6, lymph 24.6, pancreatic secretion 33.3, synovia 39.1, milk 39.4, chyle 40.9, blood 195.6. In the solids of the body: spinal cord 74.9, brain 86.3, liver 117.4, thymus (of calf) 122.9, fowl's egg 134.3, muscle 161.8, middle coat of arteries 275.3, crystalline lens 383.0.

Albuminous compounds are in great part prepared by vegetables and consumed by animals. They minister to the nutrition both of the solids and fluids alike, and after performing their function are reduced by oxidation to lower and lower planes of chemical composition till they are discharged from the body, their nitrogen being eliminated chiefly in the form of urea.

They are extremely useful in some forms of poisoning, as in that by corrosive sublimate, and other metallic salts.

These bodies are divided into *Albuminoid principles* and *Gelatinous principles*. There appears to be no essential difference in their constitution, and pending further knowledge the division is more a matter of convenience.

The term albuminous is by some authors restricted to the class of bodies described under *Albuminoid principles*.

A. sarcoma. The term under which Abernethy described what is now known as myeloid or giant-celled sarcoma.

A. seeds. Seeds which possess albumen in addition to, and surrounding the embryo.

A. substances. A term used to designate the different forms of albumin. Same as *Albuminous principles*.

Albumins. (L. *album*, whiteness. F. *albumine*, G. *Eiweissstoff*.) One of the artificial divisions of Albuminoid principles. They occur in animals and vegetable tissues, and are soluble in water, they are not precipitated by very dilute acids, by alkaline carbonates, by sodium chloride, nor by platinum hydrocyanic acid. These solutions are precipitated by boiling and by alcohol in the presence of alkaline salts, but in the absence of salts, the solutions are said to be neither precipitated by boiling nor by alcohol.

A. coagulated. (F. *substances albuminoides coagulées*, G. *coagulierte Eiweissstoffe*.) Also called coagulated proteid. According to Hoppe-Seyler, neutral solutions of several forms of albumin, as syntonin, fibrin, myosin, are converted by boiling or by the prolonged action of alcohol into these substances; alkaline solutions of these bodies are not thus changed. Ovum albumin is thus converted by the action of hydrochloric acid or by agitation with ether. The albuminates and casein when precipitated from their solutions after neutralization are changed by heat into coagulated albumin. Their chemical properties are not well known, they are said to be insoluble in water, alcohol, and other indifferent fluids, soluble with difficulty in the caustic alkalis, especially in ammonia. In acetic acid they swell up and, little by little, dissolve. Most, if not all of them, are insoluble in

dilute hydrochloric acid, except when mixed with pepsine, when they are slowly transformed into peptones and syntonin. Concentrated hydrochloric acid dissolves them with the production of syntonin and substances analogous to peptones, which have left-handed polarisation and are not precipitated by heat. Caustic alkalis form albuminates with them. These solutions in acetic acid in the presence of concentrated saline solutions are precipitated by cold, and their ammoniacal solutions by heat.

A. derived. Products of the action of acids and alkalis on albumins. They are combinations of albumin with acids and alkalis, the albumin acting in the one case as an acid, and in the other as a base, are insoluble in water and in solutions of sodium chloride, but are soluble in dilute acids and alkalis. They consist of *acid-albumin* or *syntonin*, *alkali albumin* or *casein*, and *legumin*.

A., native. A term used synonymously with *Albumins*.

Albuminuria. (L. *albumen*; *oûpov*, urine. G. *Eiweissharnen*.) Albumen may appear in the urine as the result of modification in the mechanical conditions of the renal circulation, as after ligation of the renal vein, or the injection of a large quantity of water into the veins, in pregnancy when pressure is exerted on the renal veins, in the later stages of certain cardiac diseases, in the cold stage of ague, in cholera, and in paralysis of the sympathetic nerves supplying the kidney.

As the result of changes in the blood, such as are consequent on the absorption of raw albumen introduced in too large proportion into the alimentary canal, or injected directly into the vessels, or such as result from the exclusion of salt from the food, or from dyspepsia, or such as accompany diseases of the respiratory organs, pyæmia, septicæmia, and purpura.

As the result of changes in the blood associated with lesion of the kidneys, such as are seen in pyrexia, scarlet fever, diphtheria, measles, smallpox, erysipelas, typhoid, yellow, and typhus fevers. After the introduction of various poisonous agents into the system, as lead, turpentine, cantharides, and oil of mustard, in ecchymæ, and after the retention of excremental products in the blood, in burns.

As the result of lesion of the renal organs themselves, such, for example, as occur in acute and chronic interstitial nephritis, in amyloid, lardaceous, and fatty degeneration of the kidneys, in cancer and cirrhosis, in cholera, in pyelitis and renal cysts, and in the acute parenchymatous nephritis of pregnancy.

Albuminuria is commonly associated with the appearance of renal casts in the urine, consisting, in order of relation, gravity, and importance, of detached epithelial cells, of epithelial cylinders, colloid cylinders, either with or without normal epithelium, granular-fatty cylinders, fatty cylinders, and hyaline casts.

The presence of albumen in the urine is indicated when, on boiling the suspected urine, a turbidity appears which is not dissolved by nitric acid. If the urine be alkaline, it must be acidified by acetic acid before boiling, or the albumen may not be coagulated. If a small quantity of nitric acid be added before boiling the albumen may not be thrown down. If there be an excess of phosphates in the urine, these may be thrown down by boiling, and thus simulate albumen; but the sediment may be distinguished by being

ALBUMINURIC—ALCARRAZA.

soluble in nitric acid. The addition of nitric acid to urine may produce a deposit simulating albumen; but a microscopical examination will show it to be uric acid, or it may possibly be nitrate of urea. A turbidity simulating albumen may be produced by the action of nitric acid on urine containing resinous substances, as copaiba; but in this case no deposit is produced by boiling.

The term albuminuria was at one time used synonymously with Bright's disease; but it is now restricted to the symptom—the presence of albumin in the urine.

A., acute. A synonym of acute Bright's disease, or of acute desquamative nephritis.

A., chronic. A synonym of chronic Bright's disease, or of those various morbid conditions which were formerly grouped under that name.

A., critical. The albuminuria which occurs in the course of pneumonia and typhus fever.

A., desquamative. A synonym of acute or chronic desquamative nephritis.

A., inflammatory. A synonym of scarlatinal nephritis.

A., irritative. Albuminuria dependent upon the passage of cantharidine, or other irritating substance, through the kidneys.

A., permanent. Albuminuria dependent upon organic disease of the kidney.

A., saturnine. Albuminuria resulting from lead poisoning.

A., temporary. Albuminuria dependent upon congestion of the kidney or other condition not involving permanent structural change.

Albuminuric. Of or pertaining to albuminuria.

A. retinitis. Applied to the peculiar form of retinitis which is associated with albuminuria. See *Retinitis albuminurica*.

Albuminurorrhoea. (L. *albumin*; *orrhoea*, a flow of urine.) Term by Piorry for the *Morbus Brightii*.

Albumor. A synonym of the white of egg.

Albunea fons. See *Albula*.

Albumum. (L. *albus*, white. F. *aubier*; I. *alborno*; G. *Splint*.) The young wood of trees; a soft colourless substance found between the inner bark and the wood; the white or sap wood, the cells of which have as yet undergone little lignification, and contain sap.

A. pini. A synonym of *Cortex piceae vulgaris interior*.

Albus. (F. *blanc*; I. *bianco*; G. *weiss*.) White. The absence of colour. Applied to several parts of the body, from their whitish appearance.

Applied also to certain diseases, or symptoms of such, as *Fluor albus*.

A. liquor. The white of egg.

A. Romanus pulvis. A synonym of *Magnesia*.

Alcas. The Portuguese name of the Liquorice plant.

Alcaes. A synonym of *Alcahest*.

Alcafuche. Portugal; Province of Beira. A village about ten miles from Vizeu. The water is sulphurous, and the temperature 46° C. (115° F.) Used in chronic syphilis and skin diseases.

Alcahest. (Supposed Arabic, a universal salt; or as if *Alkali est.*) Term for a liquor supposed to be capable of removing every kind of morbid obstruction.

Also, applied to a universal solvent supposed to

be capable of reducing all substances in nature to a state of purity.

A. glauberi. A thick liquid obtained by detonating nitre on hot coals, producing potassium carbonate.

A. resputi. A product formed by detonating nitre with metallic zinc, and treating the residuum with water, which was then said to contain the alcahest.

A. zwelferi. A former term for acetic acid distilled from verdigris.

Alcohol. A synonym of *Alcohol*.

Alcala del Rey. Spain; Prov. of Mancha. The waters are used in disorders of digestion.

Alcalamides. A term given to bodies which are derived from ammonia by the replacement of two of the hydrogen atoms by an alcohol radicle and an acid radicle.

Alcalescence. See *Alkalescence*.

Alcalescent. See *Alkalescent*.

Alkali. See *Alkali*.

Alkaligene. (*Alkali*; γεννάω, to beget. L. *alkaligenum*; G. *Alkalizugende*.) The alkali producer. A term formerly applied to Nitrogen.

Alkalinity. See *Alkalinity*.

Alcalinuria. (*Alkali*; ὄψον, urine.) See *Alkalinuria*.

Alcalisation. (L. *alcalisatio*. G. *Alkalisirung*.) The addition of an alkali to any fluid or substance. Also the conversion of a neutral substance into an alkali, as by roasting chalk to form lime.

Alcaloid. See *Alkaloid*.

Alcamo. Sicily; not far from Palermo. Sulphur waters of a temperature 74° C. (165° F.) Used in rheumatism, joint affections, and skin diseases.

Alcamphora. A Brazilian synonym of the *Croton perdicipes*. Employed as a remedy in syphilis, and in the bites of snakes.

Alcana. The *Anchusa officinalis*.

Alcanna major latifolia dentata. The *Prinos verticillatus*.

A. orientalis. The *Lawsonia inermis*.

A. spuria. The *Anchusa tinctoria*.

A. vera. The *Lawsonia inermis*.

Alcantud. Spain; Province of Cuenca, District of Priego. A ferruginous bicarbonated spring, temperature 20° C. (68° F), on the banks of the River Guadiciela. These waters have a local reputation for the treatment of paralysis and rheumatism.

Alcaol. A name for the *Lac acetosum*, or *mercurius*, or *philosophorum*; the solvent for the preparation of the philosopher's stone.

Alcaparra. (Ar.) A synonym of *Cap-paris*.

Alcapton. An amorphous substance resembling grape sugar found in the urine of a patient by Bodeker. It is a pale yellow, glazy, amorphous substance, burning with a pale flame, and giving off a urinous smell; and when heated with calcium nitrate gives off ammonia; it is soluble in water and alcohol; and reduces copper and silver oxides in the presence of free alkali, but not bismuth oxide. It is not fermentible.

Alcar. (Αλκα, a safeguard.) An old term for a remedy. (Castellus.)

Alcarad. An Egyptian tree yielding gum Arabic, probably *Acacia arabica* or *nilotica*.

Alcaras. Spain; Province of Albacete. A town at the foot of the mountains of the same name. A cold sodium chloride water.

Alcarraza. (Sp.) A porous earthen

ALCASSUS—ALCOHOL.

vessel used to cool water. Evaporation of the fluid takes place by the percolation through the walls, which cross the contents.

Alcas'sus. The Brazilian name of the *Peruvia dulcis*. A Leguminous plant sought after by the Indians for its sweet root.

Al'ce. (Αλκη. G. *Stärke*, *Kraft*, *Hulfe* *Wahr.*) Power, strength, defence, a remedy.

Al'cea. The *Abelmoschus moschatus*.
A. Egyptiaca villosa. The *Abelmoschus moschatus*.

A. in'dica. The *Abelmoschus moschatus*.

A. ro'sea. The *Athaea rosea*.

Al'cea egyptiaca. The seeds of the *Abelmoschus moschatus*, *Seimen abelmoschi*.

Alcebi'adum. Ancient name of the *Echium vulgare*.

Alcebr'is. Arabic for Sulphur vitrum. (Ruland and Johnson.)

Alcedin'idæ. A synonym of *Haliætopidae*.

Alce'do. A Genus of birds of the Family *Haliætopidae*, Group *Leucostres*, Order *Passeres*. Beak long, straight, compressed; nostrils covered with a feathered scale.

A. his'pida. (F. *marin-pecheur*; I. *ucello di San Martino*, G. *Eurogel*.) The kingfisher. This bird was at one time highly esteemed in medicine, when dried it was worn as an amulet, and its heart was used in epilepsy.

Al'ces. A Genus of the Family *Cervidæ*, of the Order *Ungulata*, Class *Mammalia*.

A. mal'chis. The *A. palmatus*.

A. palma'tus. (F. *elan*; I. *alce*; G. *Elenchur*.) The elk or moose. The hoofs were used as a remedy for epilepsy, the flesh is used as food.

A. ungulae. (G. *Elenaklauen*.) Elks' hoofs. Formerly used in epilepsy.

Alchab'ric. Arabic for Sulphur vitrum. (Quincy.)

Alchachenge. The *Phyllis alchachenge*.
Alchachil. Arabic for the plant *Rosmarinus*, or rosemary. (Quincy.)

Alchaest. See *Alcahest*.

Alcharith. Arabic for *Argentum vivum*, or quicksilver. (Johnson.)

Alchemilla. (So named from Arabic *al-kemiyah*, alchemy, from its supposed use.) A Genus of the Suborder *Danguisauræ*, Nat. Ord. *Ranunculæ*. Lady's mantle. Annual or perennial herbs. Leaves orbicular, divided, flowers small in scorpioid cymes, calyx inferior, urceolate, persistent, petals 9, stamens 14, filaments jointed, carpels 1-6, basal in the calyx-tube, achenes one to four.

A. arven'sis. Parsley pier, Breakstone. Leaves cuneate or fan-shaped, 3-lobed, lobes cut. A decoction of 1 part to 20 has been used, in two-ounce doses, in retention of urine, and in calculus; and it was eaten raw or pickled for the relief of the same diseases.

A. vulga'ris. (F. *alchemille vulgaire*, *predelion*, I. *pode dytrone*, S. *aquimila*, G. *Loosen-fuss*, *Frauenmantelkraut*.) Lady's mantle. Lion's foot. Leaves reniform, parted, 6-9-lobed, green beneath. The root is a fibrous, of a disagreeable odour and an astringent taste. The whole herb is used as a vulnerary and an astringent.

Alchemist. One who practised alchemy.

Alchemy. A chimerical art which proposed to find out the means of effecting the transmutation of metals, and to prolong life by pre-

paring a remedy for all diseases; also spelled alchymy.

Alcher'mes. See *Alkermes*.

Alcheron. (Arab.) An ancient name for a stone or calculus in the gall-bladder of the bull, or cow, or ox, otherwise termed *Bizaræ bovinæ*.

Alchion. An Arabic word, anciently employed to signify that power in nature by which corruption and generation are effected.

Alchim'ia. See *Alchemy*.

Alchimilla. See *Alchemilla*.

Alchit'rum. (Arab.) Arsenic prepared by washing. (Ruland and Johnson.)

Al'co, an ancient name for oil of juniper. (Castellus.)

Also, the impure liquid resin of the *Pinus sylvestris*.

Alchit'ura. The impure liquid resin of the *Pinus sylvestris*.

Al'chool. See *Alcohol*.

Alchor'nea. A Genus of the Nat. Order *Euphorbiaceæ* growing in the Antilles, Brazil, and Senegal, which was formerly believed to yield the *Alcornoro* bark.

Alchor'nine. A bitter principle obtained from the *Bauhinia virgiloides*.

Al'chur. Same as *Alcubrith*.

Al'chymist. See *Alchemist*.

Al'chymy. See *Alchemy*.

Al'chytran. A term for the residuum after distillation.

Also, a dentifrice or medicament for the teeth.

Alcib'ium. A synonym of *Echinum*.

Alcicor'nis. (L. *alces*, the elk, cornu, a horn.) Elk-horned. Having horns like the elk, or having the appearance of elks' horns.

Alcidæ. (F. *algues*, G. *Aiken*.) A Family of the Order *Palmipedia* or *Natatores*, Class *Aves*. Wings recurved, short, and unfitted for flight, feet placed somewhat back, palmate, beak strong, compressed. Represented by the Guillemot, *Uria trois*, and Puffin, *Mormon arcticus*.

Al'cidmid. Arabic for *Antimonium*, or antimony.

Alciop'idæ. A Family of the Suborder *Nereidæ*, Order *Polychæta*, Class *Annelida*, Subkingdom *Vermeæ*. Body cylindrical, transparent, cephalic lobe distinct, with two large prominent eyes and short tentacles, the last ring of the cephalic lobe bearing tentacular cirrhi, but no bristle-bearing ear, feet simple, one-oared, with an acule and a tuft of bristles, ventral and dorsal cirrhi lamellar, proboscis retractile, larvae parasitic on *Idippidae*.

Alciop'idæ. A Family of the Suborder *Abdominalia*, Order *Cirripedia*. Body having a slightly developed pedicle, feet in four pairs, the first pair palpsiform, the two last simple, sexes distinct, females parasitic in the shells of Mollusca, males small, destitute of mouth, stomach, and cirriform feet.

Alcob. Arabic for Sal ammoniacum.

Alcoc'alum. A name of the Arctioko.

Alcofol. Arabic for Antimonium.

Alcohol. (Arab. *al*, the, *kohal*, by this phrase antimony very finely levigated was described, and hence anything very subtle. F. *alcool*, *esprit de vin*, I. *a colla spiritus di vino*, *acquardente*; S. *alcohol*, *aquardente*, G. *Alkohol*, *Wesgeist*; Ar. *prohibet*, Iur *charab roushan*.) C_2H_6O ($C_2H_5(OH)$, C_2H_5 (H , OH)). Ethylic alcohol, hydroxyl-ethene or methyl carbinol. Spirit of wine, usually known by the term alcohol simply, ethylic being omitted, is a product

ALCOHOL.

of the *alcoholic fermentation* of saccharine fluids from which it is obtained in a state of purity by distillation. It is formed by the mixture of ethene gas with strong sulphuric acid, ethyl sulphuric acid is produced, which, when distilled with water, yields alcohol and sulphuric acid; and also by the action of moist silver oxide on ethyl chloride, bromide, or iodide. Alcohol when distilled from fermented fluids contains a considerable quantity of water; redistillation reduces the amount greatly, but the strongest rectified spirit still contains 13 per cent. of water. The whole of the water may be removed by distillation with quicklime, when the result is *absolute alcohol*.

Ordinary alcohol is a colourless, limpid, volatile fluid, of pungent taste and agreeable smell, varying in sp. gr. according to the amount of water it contains. It burns with a pale blue, smokeless flame, and when anhydrous boils at 78.4° C. (173° F.), or a few degrees higher in proportion to its dilution with water. It absorbs moisture from the air and from organic substances placed in it; when mixed with water it contracts in volume and rises in temperature; it is a good solvent and forms crystalline compounds, *alcoholates*, with some salts; 100 volumes of alcohol absorb 7 of hydrogen, 28 of oxygen, 13 of nitrogen, 52 of methene, 353 of ethylene, and 433 of carbonic anhydride. When passed through a red-hot tube it is resolved into methene, hydrogen, and carbon monoxide, which partly recombine into ethene, benzene, and naphthalene, with a deposit of carbon. By oxidation it is converted into aldehyde and water, and then into acetic acid.

When alcohol is treated with potassium bichromate and sulphuric acid, a green colour is obtained; mixed with a little potash and sufficient iodine to make it yellow, hexagonal plates of iodoform are produced; treated with a little strong sulphuric acid and a drop or two of butyric acid, ethyl butyrate is formed, and may be recognised by its smell of pine apple; when burned it does not blacken white porcelain. But all these tests are uncertain, especially when alcohol is mixed with other substances. Probably the use of *Getzler's vaporimeter* is the best mode of determining its presence and proportion.

Alcohol may be absorbed into the body by the stomach, or by the rectum, possibly through the unbroken skin, and subcutaneously as a fluid; and by the lungs as a vapour. When taken by the stomach a small amount seems to be then and there converted into acetic acid, but by far the greater part in this and also in the other modes of administration is absorbed unchanged. Its further course is a much disputed point. Many investigators have contended that under all circumstances it is given out again from the body without chemical alteration; but late experiments have invalidated this position, and the truth would seem to be that up to a certain extent, probably to the amount of one and a half to two ounces of alcohol taken properly diluted in the twenty-four hours, it is oxidised in the body; the discrepancy arising from two chief causes, first, that when alcohol has been observed in the excretions it had been given in larger doses than that mentioned, an amount which all admit cannot be disposed of by oxidation; and secondly from the fact that in the urine of some persons who have never taken alcohol, and in the brain, liver, and muscles of some animals, a substance has been found in small quantities which

gives the reaction of alcohol. It is said that alcohol escapes as such by the breath of drunkards, but it is probable that acetone and other derivatives of the accompanying ethers are the cause of the supposed alcoholic odour. It may, then, be taken as certain that a large amount of absorbed alcohol is oxidised in the body, but in what part this process takes place, or into what new forms it is changed, is as yet unknown. Aldehyde, oxalic and acetic acids, have been supposed to be the resulting products; but evidence is strongly against aldehyde, oxalic acid has not been discovered, and the presence of acetic acid is by no means demonstrated, even in the form of a carbonate, which it would probably ultimately assume. When an excess of alcohol has been administered, it is in great part got rid of by the kidneys and probably none by the breath or skin, but its exact progress has not yet been traced.

The action of alcohol on living structure is conditioned by its faculty of abstracting water from the tissues, of precipitating albumin, pepton, mucus, and gelatin from their solutions, of dissolving fat, and of arresting fermentation and digestion. These actions are effected only by strong alcohol; when it is diluted with water they are less pronounced, and by extremely dilute solutions they are not manifested at all. The mode of action, too, varies according to circumstances; it may be local, on the organ through which it is administered; reflex, through the action of sensory nerves; or direct, on the central nervous system itself, after absorption into the blood, or on any other organ through which the blood containing alcohol may flow.

Strong or slightly diluted alcohol, when applied to the skin and its evaporation prevented, produces redness, heat, and destruction, and whitening from albuminous coagulation, of the epidermis; coldness, paleness, diminution of perspiration, and some anæsthesia when allowed to evaporate.

The action on the mucous membranes varies according to the alcoholic strength; heat and intense burning of the mouth, gullet, and stomach, varying to a pleasant sense of warmth, is produced, according as the alcohol is concentrated or diluted; and the physical appearances vary in a similar manner; there is slightly increased redness, with the weaker dilutions, almost an inflammatory condition with the stronger fluid, and whitening and shrivelling, from coagulation of albumen and absorption of water, with the strong alcohols.

When drunk in moderate quantities and in a dilute form there is a sensation of local warmth, which gradually becomes diffused over the body; the secretion of saliva and of gastric juice is immediately increased, and the muscular action of the gastro-intestinal canal is intensified. When a larger quantity or stronger alcohol is taken digestion is made difficult, or, it may be, arrested in consequence of coagulation of the albuminates and peptons, and of the arrest of the secretion of gastric juice from the contraction of the blood-vessels; thus, fermentation of the stomach contents may take place and the poisonous action of fatty acids and other matters resulting therefrom may produce their own symptoms. If the irritation be continued, mucus is poured out, there is loss of appetite, nausea, and perhaps vomiting. Very concentrated alcohol produces acute pain and inflammation of the gastric mucous membrane, with dysenteric diarrhoea, and death from exhaustion or from reflex stoppage of the heart's

ALCOHOL.

action. In these cases the gastric and duodenal mucous membrane has been found in a state of haemorrhagic softening and the blood coagulated in the vessels.

Absorption in all probability takes place chiefly through the veins, and occurs in the stomach and duodenum when taken in the usual manner. In order that this should happen the alcohol must not be sufficiently concentrated to be able to coagulate the blood. Soon after taking alcohol little is found in the blood, for the reason that many of the organs absorb it with great avidity. It would appear that it is taken up first by the parenchyma of the brain, then by the lungs, afterwards by the kidneys, muscles, and liver, and it is only when these are saturated that the blood becomes equally charged. When death has occurred from asphyxia the blood is found darker in colour, but not under other circumstances. Some have observed an increase of fat in the blood, others have found sugar. It is said that the presence of absorbed alcohol in the blood of living animals increases the size of the red corpuscles, in consequence of accumulation of their oxygenated contents, and that the movements and changes of form of the white corpuscles are diminished. When strong alcohol is added to blood withdrawn from the body coagulation is produced, and this probably from the abstraction of water, for the coagulated albumen may be re-dissolved, and the oxyhaemoglobin is said to be retarded in its conversion to haemoglobin by reducing substances.

The action of absorbed alcohol on the voluntary muscles is little known, it appears to diminish muscular power, but whether by its direct influence on muscle structure or by its indirect action through nerves is uncertain. A solution of myosin is rendered opaque by alcohol vapour.

The breathing is at first slightly quickened after taking alcohol, and then slowed, partly from its action on the respiratory centres, partly as a consequence of respiratory changes.

The organs of circulation resist the poisonous action of alcohol longer than all others, the heart is the last to be destroyed. When a small amount of alcohol is taken there is a slight increase of heart action depending partly, probably, on direct stimulation of the accelerating nerves or their centres, in part as a result of the increased activity of the body generally; there is increased warmth of the surface and a redder colour of the skin, in part, no doubt, from this influence on the cardiac accelerating nerves, in part also on depression of the vaso-motor system, and so a dilatation of surface capillaries. The farther action is the reverse of this, the heart becomes slower and weaker, and so the blood pressure sinks, in consequence, it is believed, of the direct action of the spirit on the cardiac ganglia, and on the cerebral centre of the vagus nerve.

In moderate doses little or no change occurs in the temperature, at first it may be a little increased, in large doses the temperature falls.

The nervous system is that which is most manifestly affected by alcohol. The age and manner of life of the person taking it, and the nature and quality of the alcoholic beverage taken, modify the effect. Small quantities produce, in most persons, a short lived increase, apparent or real, of the mental and bodily faculties, but in many the immediate result is to lessen muscular force, to diminish the acuteness of the senses, and to obscure in some degree the

powers of the mind. In intoxicating quantities there is over-distension of facial capillaries, heat of head, increased volume and rapidity of pulse, excitement of the spirits, want of control over the muscles. To this follow confused and uncertain speech, unsteadiness of gait, great diminution of sensibility. Then succeed nausea, often vomiting, and a heavy sleep. When a fatal dose has been taken there is violent delirium, succeeded by, or alternated with, stupor, sometimes a turgid face and staring eyes, sometimes a pale countenance and closed lids. The muscles lose all power, the lips are blue, the breathing becomes stertorous, the skin cold and perspiring, and death ensues from asphyxia.

It is probable that alcohol effects some change in the grey matter of the nervous system, but on which of the constituents it acts is unknown, its first action is usually on the cerebrum, hence the excitement, soon succeeded, or it may be preceded, by its influence on the cerebellum, from whence arises the unsteadiness of movement, the spinal cord is then affected, and so the disturbance of impressions on the motor and sensory nerves, and lastly the medulla oblongata, when respiration ceases.

Tissue metabolism, as indicated by the excretion of urea, phosphates, and carbonic acid, is said to be lessened, but here, again, there is conflicting evidence.

In regard to the use of alcohol as a diet much difference of opinion exists. There are some who contend that, even in the smallest quantity, it is injurious as an habitual beverage. Perhaps the view of the majority may be thus stated that a large number of young healthy persons, the number decreasing as age advances, do not need it, that of these many may take a moderate quantity, say a diluted beverage representing an ounce and a half or two ounces of alcohol daily, without absolute harm, that a considerable number of persons, especially those who have much mental wear and tear in the professions or the business of a large city, and those who perform much physical work with a somewhat small amount of animal or other food, are benefited by a moderate amount, that a very large number of persons take an amount of alcoholic stimulant, which, along with excessive eating, insufficient exercise, and an otherwise unhygienic life, produces degeneration of tissue, and gouty and other diseased conditions.

The therapeutic uses of alcohol are many, both local and general. It is used as a refrigerant lotion in bruises and strains, and to produce cold in inflamed or too hot parts; as an astringent in the form of lotion for cracked nipples and threatened bedsores, in the form of gargle for relaxed throat, as an irritating injection in hydrocele and hæm, and as an astringent and antiseptic in the treatment of wounds and ulcers, and in chronic otitis. Internally its chief use is as a stimulant and a nutrient to assist in the digestion and in the economy of food, and in the rousing up of nerve power in the convalescence from acute disease, and in the course of many wasting disorders. Alcohol has been largely given in the treatment of fevers, it is said to lower the temperature and to increase perspiration by its power of producing paralysis of the vaso-motor nerves, and the consequent dilatation of the skin capillaries, by its undergoing oxidation instead of food, and also by its power of lessening oxidation of tissue, and so preventing waste. It is not

ALCOHOL—ALCOHOLEA.

now so much used, and indeed doubts have been thrown on its power as a cooling agent.

Alcohol is employed in Pharmacy to dissolve and to preserve medicinal substances.

A., absolute. Pure alcohol free from water. The B. Ph. orders carbonate of potash 1½ oz., and rectified spirit 1 pint, to be put into a stoppered bottle for two days. Slaked lime, 10 oz., having been exposed to a red heat for half an hour and cooled, is put into a flask, into which the supernatant alcohol is poured; the pure spirit is then distilled off, the first 1½ oz. which passes over being rejected. It is colourless, free from empyreumatic odour, of sp. gr. .795; entirely volatilized by heat, is not made turbid when mixed with water, and does not turn anhydrous sulphate of copper blue.

A., amylic. (F. *alcool amylique, bihydrate d'amyline, paramylene, essence, or huile de pomme de terre*; G. *Gährungs-amylic alcohol, Amylglucol*.) Amylic alcohol, fusel or fusel oil. $C_5H_{12}O = (CH_3)_2C_2H_5 \cdot OH$. An alcohol of the pentacarbon series, which may be obtained pure by fractional distillation of the impure alcohol or fusel oil. It is an oily, colourless, mobile liquid, having a penetrating oppressive smell and a burning acid taste. Its sp. gr. is 818 at 15.5° C. (60° F.), 825 at 0° C. (32° F.); it boils at 132° C. (269.4° F.), and solidifies at -20° C. (-4° F.). It makes a greasy stain on paper, which is not permanent, is insoluble in water, soluble in alcohol and ethers. It occurs in two forms, one of which exercises no influence on the plane of polarised light, and yields on oxidation valeric acid; the other produces a right rotation, and yields on oxidation lower carbon acids. It may be known by its smell; on mixing it with two parts of potassium acetate and one of sulphuric acid, the jargonelle pear-like odour of amyl acetate is smelt; and on adding potassium bichromate and sulphuric acid, the green chromium oxide is formed. Its vapour produces great irritation of the throat, respiratory organs, and eyes, and giddiness. It is much more intoxicating than ordinary alcohol, and is said to produce nervous symptoms, especially tremors, at a much earlier period. It has been used as a stimulant in feeble scrofulous children, and in bronchial affections, when it is said to moderate the cough and diminish the expectoration.

As used in Pharmacy it contains a small proportion of other spirituous substances, as propyllic, butylic, and other alcohols, and sometimes ethylic alcohol.

It is used to prepare valerianate of soda.

A., anhydrous. A synonym of *Absolute alcohol*.

A., glyceric. A synonym of *Glycerine*.

A., meitic. A synonym of *Acetone*.

A., methyl. See *Methylic alcohol*.

A., phenylic. A synonym of *Phenol* or *Carbolic acid*.

A., phlorylic. A synonym of *Phlorol*.

A., poisoning by. See *Drunkenness, Alcohol, and Alcoholism*.

A., pyroxylic. A synonym of *Methylic alcohol*.

A., thermometer. See *Thermometer, alcohol*.

A., wood. A synonym of *Methylic alcohol*. **Alcohol**, Br. Ph. The official term for *Alcohol, absolute*.

U.S. Ph. Spirit of the specific gravity 0.835.

The term alcohol is used as a synonym of *Spiritus* or *Tinctura*.

A. ace'ti. A synonym of *Acetic acid*.

A. ammo'niæ et gua'iaci. The *Tinctura guaiaci ammoniata*.

A. ammonia'tum. The *Spiritus ammoniæ*, U.S. Ph.

A. ammonia'tum aroma'ticum. The *Spiritus ammoniæ aromaticus*.

A. ammonia'tum fœ'tidum. The *Spiritus ammoniæ fœtidus*.

A. amylicum, Br. Ph. See *Alcohol amylic*.

A. camphora'tus. A synonym of the *Alcohol camphrè*.

A. camphora'tus debilior. A synonym of the *Eau-de-vie de camphrè*.

A. castoria'tum. The *Tinctura castorei*.

A. cum al'oe perfolia'ta. A synonym of the *Tinctura aloes*.

A. cum aroma'tibus compos'itus. The *Tinctura cinnamomi composita*, P. L.

A. cum aroma'tibus sulphurica'tus. The *Acidum sulphuricum aromaticum*.

A. cum cro'tone cascari'læ. The *Tinctura cascari'læ*.

A. cum fer'ri sulph'a'te tartariza'tus. The *Ferri potassio-tartras*.

A. cum gua'iaci officina'le ammo'nia'tus. The *Tinctura guaiaci ammoniata*.

A. cum op'io. The *Tinctura opii*.

A. dehydrogena'tus. A synonym of *Aldehyde*.

A. dilu'tum. U.S. Ph. Alcohol mixed with an equal measure of distilled water. The sp. gr. is 0.941.

A. ethe'reus ferra'tus. A synonym of the *Tinctura sulphurico-etherea ferri*.

A. ferra'tus. The *Tinctura ferri sesquichloridi*.

A. fortius. Un. St. Ph. Spirit of the specific gravity 0.817.

A. io'dii. The *Tinctura iodi*.

A. martis. A synonym of the *Ferrum pulcratum*, G. Ph.

A. sulfur'is. A synonym of *Carbon bisulphide*.

A. sulphurica'tum. A synonym of the *Elizir acidum Halleri*.

A. sulphur'icum. A synonym of the *Elizir acidum Halleri*.

A. vini. Rectified spirit.

Alcohol'a'ta. (G. *destillierte Weingeiste*.) A term applied by Bérál to spirits distilled from any remedial agent.

Al'coholate. Term employed to signify a definite crystalline compound in which alcohol has taken the place of the water of crystallization, as $ZnCl_2 \cdot 2C_2H_5O$.

Also, applied to pharmaceutical preparations containing alcohol.

Alcoholat'iva. (F. *alcoolatif; Wein-geistlösungen*.) Name given by Bérál to alcoholic medicaments, simple or compound, prepared by solution, maceration, or digestion, and which were used chiefly as an external agent.

Alcoholatura. (G. *Weingeistauszüge*.) Bérál's term for tinctures or elixirs made with alcohol.

Al'cohol-ba'ses. Organic bases produced by the substitution of alcohol radicles for the hydrogen in ammonia.

Alcohol'ea. (G. *Weingeistauflösungen*).

ALCOHOLIC—ALCOHOLS.

A term applied by Béril to solutions in spirit of various remedies.

Alcoholic. Of or belonging to, mixed with, or of the nature of alcohol.

A. beverages. Fluid articles of diet which contain alcohol as part of their natural composition, such as beer, wine, spirits, cider, perry.

A. coma. Same as *A. narcotism*.

A. fermentation. The conversion of sugar under the influence of ferments into carbonic dioxide and ethyl alcohol ($C_2H_5H_2O = 2CO_2 + 2C_2H_5O$). The temperature most favorable to the process is 21° — 26° C. (70° — 80° F.) Other products make their appearance coincidently, as glycerin, succinic acid, cellobiose, fats, and occasionally lactic acid. The best ferment is yeast. It is probable that the yeast plant grows at the expense of the sugar, which it decomposes, applying part to the growth and formation of its own tissues, whilst the remainder breaks up into the above-mentioned compounds. See *Fermentation*.

A. insanity. See *Insanity, alcoholic*.

A. narcotism. A term expressing the extreme stage of *Drunkenness*.

Alcoholica. (L. *alcohol*. F. *alcooliques*; G. *Wassersuchtverbindungen*.) Term by Béril of Paris for combinations of alcohol, as *Alcoholata*, or distillations with aromatic substances, *Alcoholatæra*, or tinctures, elixirs, *Alcoholica*, or solutions of acids, alkalies, oils, *Alcoholation*, or solutions by distillation and maceration, for liniments and embrocations.

Alcoholisation. (F. *alcoolisation*; G. *Alcoholisirung*.) The development of the characteristic properties of alcohol in a liquid.

The saturation or mixture of a substance with alcohol.

The act of obtaining alcohol from a fluid by distillation.

Alcoholism. (G. *Saufruchtsucht*, *Alkoholisyrant*.) A term now generally used to express the destructive changes which occur in the body from the drinking of alcoholic liquors to excess. The first organ to suffer is the stomach, the appetite is bad, nausea and vomiting, especially in the morning, occur, the tongue is foul, and the breath offensive and peculiar in smell, from acetone and similar products; diarrhea is not uncommon, occasionally there is constipation. Sometimes there is emaciation, sometimes fatness, there is often paleness of skin, and frequently acne and tubercles on the nose. The respiratory organs often suffer; chronic bronchitis and emphysema are not rare, cirrhotic diseases, especially of the liver, kidney mischief, and arterial degeneration, gout, epilepsy, *dearrium tremens*, and insanity, are common consequences.

The constant drinker seldom long escapes indications of serious disorder of the nervous system, tremor is commonly early in appearance, first of the hands and facial muscles, then of the mouth; afterwards the muscles of the legs are affected, memory fails, the speech becomes thick, the sensations are blunted, and paralysis may occur, or attacks of an epileptic character may ensue. The mental condition is gradually weakened, and the moral state degraded. The post-mortem changes consist of congestion of the membranes of the brain, with serous effusions and opacities, and atheromatous or other degeneration of the walls of the blood-vessels, which also pervades those of the whole body, interstitial thickening or sclerosis is not infrequent. The cranial bones are hardened and thickened. The

lungs, liver, and kidneys undergo cirrhotic and other changes.

Capneum and gentian have been given to stop the craving for drink, morphia along with stomachics before a meal is said to relieve the nausea and gastric pain, phosphorus and arsenic have been recommended, strandas, lupulin, and tonics, are also of service.

See also, *Dearrium tremens*, *Dipsomania*.

A., acute. See *Alcohol* and *Drunkenness*.

Also, a synonym of *Delirium tremens*.

A., chronic. The term has been used to express the condition described under *Alcoholism*; and also as a synonym of *Alcoholic insanity*.

Alcoholized. Continuing or relating to alcohol.

Alcoholometer. (*Alcohol*, μέτρον, a measure.) An instrument for ascertaining or measuring the quantity of alcohol in any alcoholic fluid. It is essentially an hydrometer graduated so as to indicate the percentage of alcohol present, either when the determination is made at a given temperature, to which the liquid which is tested is to be reduced, or at any temperature, when the amount is determined by reference to a scale which has been constructed. Also called *Alcometer*.

Alcoholophilia. (*Alcohol*; φίλος, to love.) An overpowering desire for intoxicating liquids.

A. periodica. Paroxysmal attacks of drunkenness.

Alcohol radicle. The hydrocarbon radicle which forms the basis of the composition of alcohols, as the hydrocarbon radicle ethyl, C_2H_5 , which is the root of the structure of ethyl alcohol, which may be considered as water, H_2O , in which one equivalent of H is replaced by the radicle, C_2H_5 , which by uniting with OH, forms C_2H_5OH , or C_2H_5O .

Alcohols. Organic compounds which are derived from hydrocarbons by the substitution of one or more of the contained atoms of hydrogen by an equivalent number of hydroxyl atoms, and are thus compounds of hydroxyl with hydrocarbon-radicals, which are thence called alcohol-radicles, or they may be looked upon as water in which one atom of hydrogen is replaced by an alcohol-radicle. They are monatomic, diatomic, triatomic, or otherwise, according to the number of hydroxyl groups which they contain, or according to the equivalent values of their hydrocarbon radicles. Monoacid, diacid, are equivalent terms to monatomic, diatomic. Ethyl alcohol, C_2H_5O , is considered to be composed of the radical ethyl, C_2H_5 , and hydroxy, OH, and its rational formula is C_2H_5OH . When the hydroxyl is replaced by chlorine, bromine, iodine, or fluorine, the resulting compound is a haloid ether, thus ethyl alcohol, C_2H_5OH , treated with hydrochloric acid, HCl, yields $C_2H_5Cl + H_2O$, ethyl chloride and water. Ethers may thus be looked upon as salts; and so while from a monatomic alcohol one ether only can be formed, from a triatomic alcohol three ethers can be formed, and so on. The hydroxyl of an alcohol may be replaced by an oxide of a metal, as potash or potassoxyl, thus ethyl alcohol, C_2H_5OH , yields potassium ethyrate, C_2H_5OK . These compounds are called oxygen ethers.

A., aromatic. Alcohols formed by the substitution of an hydroxyl group, OH, for an atom of hydrogen in benzene, toluene, and the higher benzene homologues. The substitution may be of

ALCOHOMEL—ALCOOLAT.

one, two, or three atoms, forming monatomic, diatomic, and triatomic alcohols.

A., caustic. A term which has been applied to sodium and potassium ethylate from their action on the tissues.

A., condensed. A term applied to sugar and amylaceous substances.

A., diatomic. Alcohols containing two hydroxyl groups replacing two hydrogen atoms.

A., monatomic. Alcohols containing one group only of hydroxyl in substitution for a hydrogen atom.

A., primary. Alcohols in which one or two only of the four hydrogen atoms existing in the type methane, CH_4 , is replaced; in the first instance by hydroxyl forming CH_2OH , methyl, and in the second instance, another atom is replaced by a hydrocarbon, as $\text{C. CH}_2\text{H}_2\text{OH}$, ethyl alcohol. Primary alcohols on oxidation yield aldehydes.

A., secondary. Alcohols in which three of the hydrogen atoms in the type methane, CH_4 , are replaced; one by hydroxyl and two by hydrocarbons, as $\text{C. CH}_2\text{CH}_2\text{H. OH}$, propyl alcohol. Secondary alcohols on oxidation form ketones.

A., tertiary. Alcohols in which all the hydrogen atoms in the type methane, CH_4 , are replaced; one by an hydroxyl group, and the three others by hydrocarbons, as $\text{C. CH}_2\text{CH}_2\text{CH}_2\text{OH}$, butyl alcohol. Tertiary alcohols on oxidation give rise to acids.

Alcohol. A pharmaceutical preparation composed of one part of alcohol and three of honey.

Alcol. (Same word as *Alcohol*.) An old name for *Acetum*, or vinegar.

Alcola. (Arab.) A term for Aphtha, according to Avicenna, l. i. *fem.* 2. *doct.* 3, c. 3.

A term also for the tartar, or sediment of the urine, being of three forms, in solution, sandy, or mucilaginous; used by Paracelsus.

Alcolae. A synonym of *Aphtha*.

Alcolismus. Ancient name for the reduction of anything to powder by corrosion.

Alcolita. A name for the urine; according to Paracelsus, *de Urina jud.* l. i. tr. 2, c. 1, 2, 3, to indicate that it contained a sediment.

Alcone. (Arab.) An old name for the metal *As*, or brass. (R. and J.)

Alcool. The same as *Alcohol*.

A. camphoratus. The *Alcool camphré*, Fr. Codex.

A. camphoratus debiliior. The *Eau-de-vie camphrée*, Fr. Codex.

A. camphré. Fr. Codex. Camphor 100, alcohol of 90 per cent. 900 grammes. Dissolve and filter.

A. repurgatus. The *Alcool rectifié*, Fr. Codex.

Alcoolat. A French term for the product of the distillation of alcohol with medicinal substances.

A. ammoniacal tétide. (F. *essence antihysterique*.) Castor 40, asafetida 20, oil of amber 10, oil of rue and of savin, of each 5, alcohol 800 parts. Macerate four days, and distil; to the product add camphor 5, ammoniacal spirit of hartshorn 80 parts. Distil to dryness. Antihysteria. Used by friction over the epigastric region, by inhalation, and internally.

A. antiscorbutique. The *Spiritus armaracia composita*, P.B.

A. aromatique ammoniacal. Fresh rind of oranges and of lemons 100, vanilla 30,

cloves 10, canella 15, sal ammoniac 500, carbonate of potash 500, eau de cannelle 500, alcohol 500. Macerate three or four days, and distil 500 parts. Stimulant, diaphoretic, carminative, and emmenagogue. Dose, 5 to 30 drops.

A. aromatique de Sylvius. See *Alcoolatum aromaticum Sylvii*.

A. d'absinthe composé. The *Alcoolatum absinthii compositum*.

A. d'anis. Fr. Codex. Aniseed 1000, alcohol of 80 per cent. 8000 grammes. Macerate for two days and distil off.

A. d'au'née composé. (F. *elixir américain de courcelles*.) Compound spirit of elecampane. Roots of elecampane 640, of birthwort and of sugar-cane of each 480, of Arundo donax 30, of asarabacca 10, leaves of Persea gratissima 160, of St. John's wort 320, of elder 80, of Croton balsamifera 40, of rosemary 20, of Justicia pectoralis 20, orange flowers 40, bark of Bois de fer 60, juniper berries 30, lime flowers 20, opium 25, half a fruit of the *Crecentia cujete*, ashes of the above plants 240, alcohol 2000 parts, water q.s. An antilactic.

A. de badiane. Fr. Codex. Spirit of star-anise. Made like *A. de cannelle*.

A. de bergamotte. Fr. Codex. Made like *A. d'écorces d'orange*.

A. de cannelle. Fr. Codex. Ceylon canella bark 1000, alcohol at 80 per cent. 8000 grammes. Macerate for four days, and distil the spirituous part.

A. de cannelle composé. (F. *esprit de vie de Mathiolo*.) Canella 30, galanga, marjoram, mint, cubeba, aloes wood, ginger, zedoary, cloves, nutmeg, mace, of each 15, sweet flag 8, thyme, wild thyme, sage, rosemary, red-rose petals, of each 8, yellow sandal wood, small cardamom, anise, fennel, of each 4, lemon peel 45, alcohol 3000 parts. Distil all the spirit.

A. de carvi. Fr. Codex. Spirit of caraway. Made like *A. d'anis*.

A. de cedrat. Fr. Codex. Spirit of citrons. Made like *A. d'écorces d'orange*.

A. de citron. Fr. Codex. Spirit of lemons. Made like *A. d'écorces d'orange*.

A. de citrons composé. Eau de Cologne.

A. de cochlearia. Fr. Codex. Spirit of scurvy grass. Fresh leaves of scurvy grass 3000, fresh root of wild horseradish 400, alcohol of 80 per cent. 3500 grammes. Macerate for two days, and distil 3000 grammes.

A. de cochlearia composé. The *Alcoolatum cochlearia compositum*.

A. de cochlearia et de cresson composé. (F. *eau de Madame de la Vrillière*.) Fresh scurvy grass, fresh watercress, of each 160, canella 40, fresh lemon peel 30, red-rose petals 20, cloves 15, alcohol 960 parts. Macerate four days, and distil. A favourite remedy for toothache.

A. d'écorces d'orange. Fr. Codex. Spirit of orange peel. Fresh orange peel 1003, alcohol of 80 per cent. 6000 grammes. Macerate for two days, and distil the spirituous part.

A. de coriandre. Fr. Codex. Spirit of coriander. Made like *A. d'anis*.

A. de fenouil. Fr. Codex. Spirit of fennel seed. Made as *A. d'anis*.

A. de Fioravanti. Fr. Codex. Balsam of Fioravanti. Turpentine of the larch 500, elemi, tacamahaca, amber, liquid storax, galbanum, and myrrh, of each 100, aloes 50, laurel berries 100, galanga, ginger, and zedoary roots, of each 60, Ceylon canella, cloves, nutmeg, and leaves of

ALCOOLATE—ALCOOLOMETER.

Dictamnus of Crete, of each 50, alcohol of 80 per cent. 3000 grammes. Macerate the roots, canella, cloves, nutmegs, and laurel berries, for four days in the alcohol, then add the remainder, and macerate for two days more, and distil 2500 grammes.

A. de fleurs d'orange. Fr. Codex. Spirit of orange flower. Made as *A. d'écorces d'orange*.

A. de fourmis composé. (F. *eau de magnanimité*.) Red ants 720, alcohol 1080 parts. Macerate for five or six days, distil to dryness, and infuse in the product canella 90, cubebs 15, cloves 22, zedoary 38, cardamoms 22 parts. Distil again to dryness. It contains formic acid. Cordial, stomachic, and diuretic. Used also externally in paralysis and weakness of the joints. Dose, 4—8 grammes.

A. de Garus. Fr. Codex. See *Alcoolatum Gari*.

A. de genièvre. Fr. Codex. Spirit of juniper. Made as the *A. de canelle*.

A. de genièvre composé. (*Spiritus juniperi compositus*, F. L.) Juniper berries 500, caraway and fennel seeds, of each 60, alcohol 4000, water 1000 parts. Distil to 4000 parts. Diuretic and stomachic.

A. de girofle. Fr. Codex. Spirit of cloves. Made as the *A. de canelle*.

A. de lavande. Fr. Codex. Spirit of lavender. Made as the *A. de romarin*.

A. de mélisse. Fr. Codex. See *Alcoolatum melissæ compositum*.

A. de menthe poivrée. Fr. Codex. Spirit of peppermint. Made as *A. de romarin*.

A. de romarin. Fr. Codex. Fresh leaves of rosemary 1000, alcohol of 80 per cent. 3000, water of rosemary (*Eau distillée de romarin*) 1000 grammes. Macerate for four days, and distil 2500 grammes.

A. de térébenthine composé. See *Fioravanti, balsam of*.

A. de theriaque composé. Root of angelica, elecampane, Cyperus longus, of each 60, root of contrajerva, Imperatorix Ostruthium, serpentary, valerian, zedoary, and galanga, of each 30, canella, cloves, fresh orange peel, fresh lemon peel, juniper berries, laurel berries, tops of rosemary, of rue, and of sage, of each 14, treacle 250, alcohol 1500, water of walnuts 1500 parts. Macerate the dry material in the alcohol, add the other substances, and distil the spirituous part. Sudorific, cordial, stomachic. Dose, 2—15 grammes.

A. vulnérère. Fr. Codex. See *Alcoolatum vulnerarium*.

Alcoolate. Same as *Alcoholate*.

Alcoolatum. (F. *alcohol*; S. *espritus*; G. *geist*.) An essence or spirit. A pharmaceutical preparation, consisting of alcohol charged with the volatile and other principles of drugs obtained by distillation. Alcoolata are simple and compound; of the former are those of wormwood, aniseed, canella, castoreum, pyrethrum, saffron, vanilla, and many others.

A. absinthii composé. Fr. Codex. Absinthium 2000, juniper berries 250, canella 60, angelica root 15, alcohol 8500 parts; distil twice to 5000 parts. Stimulant, tonic, stomachic.

A. anisi. The *Alcoolat d'anis*, F. Codex.

A. antiscorbuticum. (F. *esprit de raifort composé*.) The compound spirit of horseradish, P. B.

A. aromaticum ammoniacale. The *Alcoolat aromatique ammoniacal*, Fr. Codex.

A. aromaticum Sylvii. (F. *esprit carminatif de Sylvius*.) Dried leaves of basil, marjoram, rosemary, and rue, of each 24, seeds of angelica, aniseed, and lovage, of each 8, laurel berries, nutmeg, canella, angelica root, of each 6, galanga root, ginger, cloves, orange peel, of each 3, alcohol, 760 parts. Cordial and stomachic. Dose, 6—8 grammes.

A. bryoniæ compositum. Belg. Ph. Castor in coarse powder 7 grammes, alcohol of 75 per cent. sufficient to form 50 grammes of tincture; add to the marc of the castor, fresh leaves of rue 84, of savin 7, of pennyroyal 7, of basil 7, of matricaria 7, of catmint 7, orange peel 14, myrrh 14, fresh bryony root 168, alcohol of 60 per cent. 336, and water 2000 grammes. Distil 950 grammes, and add it to the tincture of castor.

A. cochlæris compositum. Fr. Codex. Fresh leaves of scurvy grass 3000, fresh roots of wild horseradish 400, alcohol 3000; macerate two days, and distil 3000 parts. Antiscorbutic. Dose, 1—4 grammes. Used also as a gargle.

A. corticis cinnamomi. The *Alcoolat de canelle*, Fr. Codex.

A. cor'ticum fructuum aurantii. The *Alcoolat d'écorces d'orange*, Fr. Codex.

A. de croco compositum. A synonym of the *Elixir of Garus*.

A. fragrans. Eau de Cologne.

A. Gari. Fr. Codex. Socotrine aloes and saffron, of each 5, myrrh 2, canella 20, cloves 5, nutmeg 10, alcohol 5000; macerate four days, filter, add a litre of water, and distil over the spirit. Used to prepare the Elixir of Garus.

A. melissæ compositum. Fr. Codex. (F. *eau de mélisse à Carmes*.) Fresh balm 900, fresh lemon peel 150, canella, cloves, and nutmeg, of each 80; coriander seeds 40, angelica root 40, alcohol 6000; macerate four days, and distil the spirituous part. Excitant, stimulant, nervine. Dose, a teaspoonful to a tablespoonful. Used also externally.

A. rosmarini. The *Alcoolat de romarin*, Fr. Codex.

A. vulnerarium. Fresh leaves of basil, calamint, hyssop, marjoram, balm, mint, origanum, rosemary, savory, sage, wild thyme, thyme, wormwood, angelica, fennel, rue, tops of hypericum, and lavender flowers, of each 100, alcohol 4500 parts; macerate six days, and distil 3000 parts. Stimulant and vulnerary. A popular remedy in bruises, contusions, and wounds of the head. Used internally and externally. Dose, 8—15 grammes.

Alcoolatura. See *Alcoholature*.

A. de aconito. The *Alcoholature d'aconit*, Fr. Codex.

Alcoolaturæ. (Fr.) An alcoholic tincture prepared with fresh plants.

A. d'aconit. Fresh leaves of the *Aconitum napellus* collected at the beginning of the flowering of the plant 1000, alcohol of 90 per cent. 1000. Bruise the leaves, add the alcohol, and in ten days express and filter.

In the same manner are prepared, according to the Fr. Codex, alcoolatures of leaves of pulsatilla, belladonna, hemlock, spilanthes oleracea, digitalis, henbane, lactuca virosa, rhus radicans, stramonium, flowers of arnica and colchicum, and bulbs of colchicum.

Alcoolé. (Fr.) An alcoholic tincture prepared by dissolving medicinal substances.

Alcoolom'eter. A synonym of *Alcoholometer*.

ALCOOMETER-ALDEHYDE.

Alcoom'eter. A synonym of *Alcoholometer*.

Alcoothio'nic acid. (*Alcohol*; *θειον*, sulphur.) Applied by Magnus to *œnothionio acid*.

Al'cophyre. A substance once supposed to be a definite albuminoid principle, but now believed to be a mixture of several substances.

Al'cor. (Arab.) Old name for the oxide of copper or burnt copper. (R. and J.)

Al'core. Arabic for a stone said to have spots or streaks like silver. (R. and J.)

Alcor'nin. Name of a peculiar substance discovered by Bilts in the alcornoco bark, and which he supposed to be intermediate between fat and wax.

Alcorno'co. See *Alcornoque bark*.

Alcornoque bark. (*F. corce d'alcornouga*.) The bark of the *Bouditchia virgilioides*, Tribe *Sophorea*, Fam. *Papilionaceæ*, Nat. Ord. *Leguminosæ*, a S. American tree formerly prescribed for phthisis; now disused. It gives a yellow colour to the saliva, and a strong decoction acts as an emetic.

A., American. A bark used in tanning, said to be the produce of *Byronima laurifolia*, *B. rhopalæfolia*, and *B. coccolobæfolia*; together with the bark of the *Bouditchia virgilioides*.

A., Brazilian. (Fr. *alcornoque de Brésil*.) The bark of the *Bouditchia major*. Used in rheumatic pains, syphilis, and dropsy.

A., European. The name applied in Spain to the bark from the small branches of the cork tree, *Quercus suber*.

Aloruella. Nat. Ord. *Compositæ*. Several species are aromatic and sialogogue.

Alc'ote. An old name for a plant mentioned by Hippocrates, which was supposed by Fœsius to be the elder tree.

Alcu'ba. (Arab.) Term for crude butter.

Alcu'brith. Arabic term for sulphur.

Al'cyon. (Ἄλκυων, the kingfisher, often written *ἀλκυών*; from its supposed derivation from *ἄλς*, the sea; *κύω*, to conceive; because it was supposed to hatch its eggs in the sea. *F. salangane*.) A synonym of the *Collocalia esculenta*, a swallow, whose nest is eaten. See *Bird's nest, edible*.

Aloyon'ceæ. A synonym of *Acyoniidæ*.

Aloyon'ria. (G. *Rinden*-, or *Fieder-coralien*.) An Order of the Class *Actinozoa*, Subkingdom *Calenterata*. Polypes and colonies of polypes provided with eight bipinnate tentacles in one series, and the same number of uncalcified mesenteroid folds. Corallum external, spicular, or with a sclerobasis axis, or consisting of rigid calcareous tubes.

Aloyon'ise. A Subfamily of the Family *Acyoniidæ* having the polypary formed by lateral budding, constituting lobed or ramified masses.

Acyoniid'ideæ. A Family of the Suborder *Ctenostomata*, Order *Gymnolasmata*, Class *Polysoa*, Subkingdom *Vermes*. Zoecium united into fleshy colonies of an irregular form.

Acyoniid'ideæ. A Family of the Order *Acyonaria*. Polypary fixed and fleshy, having no axis, and only a small number of calcareous spicules. The general cavity of each polype directed to the base of the *œnosome*.

Aloyon'ium. (For *Halecyonium*, fancifully said to be the foam of the sea indurated, wherewith halecyons make their nests.) A Genus of the Family *Acyoniidæ*, Order *Acyonaria*, Class *Actinozoa*, Subkingdom *Calenterata*. Dead

men's fingers. Polypary spongy, digitate; having stellate apertures, through which the polypes can be entirely retracted. Corallum consisting of cruciform spiculae scattered through its substance. Its ashes were used as a dentifrice, and as a remedy for baldness; also to promote the growth of hair. Several species were employed.

Al'daba'ram. Another spelling by Joh. Van Horne, *Microcosm*. s. 69, of *Al'dabara*.

Al'dehyde. (*Al*, the first syllable of *alcohol*; *dehyd*, the first two of *dehydrogenatus*, deprived of hydrogen.) Usually applied specially to acetic aldehyde.

A., acetic. C_2H_4O . (G. *ethylaldehyde*, *ethylaldehyd*, *acetaldehyde*.) Acetic aldehyde, or acetaldehyde, is formed from the oxidation of ethyl alcohol. Six parts of sulphuric acid, four parts of rectified spirit of wine, and four parts of water, are mixed and poured upon six parts of powdered manganese dioxide; six pints of fluid are distilled over, and then redistilled twice with calcium chloride; the product is mixed with twice its volume of ether, and saturated with ammonia gas; the resulting crystalline compound of ammonia and aldehyde, when washed with a little ether, is dried in the air; it is then distilled in a water bath with sulphuric acid, diluted with an equal quantity of water, and the distillate rectified with calcium chloride. It is limpid, colourless, of characteristic ethereal odour, and mixes well with alcohol, ether, and water. Density 0.807, at 0° C. (32° F.), boils at 21°–22° C. (69.8°–71.6° F.), and is very inflammable. On further oxidation it is converted into acetic acid. It is found in first runnings of beet sugar spirit, and potato spirit, probably from oxidation during the filtration through charcoal. It is an energetic re-reducing agent.

It is an antiseptic when diluted with thirty parts of water; applied undiluted it is an irritant, and causes inflammation of the parts, at times it has even a caustic action. When taken internally in a diluted form it produces intoxication, *anæsthesia*, and *asphyxia*. When inhaled it soon produces insensibility; in large amounts it arrests the breathing at first, soon afterwards this is re-established and becomes very quick; there is often vomiting and convulsions; the heart's impulse and the blood-pressure are increased, and it is believed that the excitability of the cardiac fibres of the *vagus* is extinguished; death occurs from suspension of the respiration, whilst the heart's action persists; aldehyde is found in the blood, in the urine, and in the breath, after administration.

A., acryl'ic. A synonym of *Acrolein*.

A., anis'ic. $C_6H_4(OCH_3)COH$. Formed by the oxidation of anisic alcohol or of the volatile oils of anise, fennel, and tarragon. An oily liquid of fragrant odour, of sp. gr. 1.123 at 15° C. (59° F.), and boils at 247° C. (476.6° F.)

A., benzo'ic. The oil of bitter almonds. $C_7H_6O = C_6H_5COH$. It is produced by the oxidation of benzylic alcohol; by distilling a mixture of calcium benzoate and formate; by the oxidation of amygdalin with nitric acid; and by digesting bitter almonds in water. It is a colourless mobile liquid, of great refractile power, of sp. gr. 1.063 at 0° C. (32° F.), boiling at 180° C. (356° F.), soluble in alcohol and ether and in thirty parts of water. It forms crystalline salts with the alkaline bisulphites.

A., cinnam'ic. $C_9H_8O = CH(C_6H_5).CH$. COH. The essential part of the oils of cinnamon and cassia. A colourless, heavy oil, which

ALDEHYDENE—ALECTORIUS

rapidly absorbs oxygen on exposure to moist air, and is converted into cinnamic acid.

A., ethal'ic. A synonym of *Cetyl alcohol* or *Spermaceti*, which is also called ethal.

A., methoxybenzo'ic. A synonym of *Anisic aldehyde*.

A., methyl protocatechu'ic. A synonym of *Vanillin*.

A., oenanthyl'ic. $\text{CH}_3(\text{CH}_2)_9\text{CHO}$. A substance formed during the dry distillation of castor oil, also called oenanthol.

A., oxybenzo'ic. A synonym of *Salicylic aldehyde*.

A. res'in. A brown resin-like substance obtained from aldehyde when heated with caustic potash.

A., salicyl'ic. $\text{C}_6\text{H}_5\text{O}_2$. A thin, colourless fragrant oil, occurring in the flowers of the meadow sweet, *Spiraea ulmaria*, and other species of the same genus. It is formed by the oxidation of salicin and populin. It has a sp. gr. of 1.1725 at 15°C . (59°F), solidifies at -20°C . (-4°F), and boils at 196°C . (384.8°F). It is soluble in alcohol and ether, slightly in water. It forms salts, salicylates, with alkalis.

A., trichlorinat'ed. A synonym of *Chloral*.

A., vinic. A synonym of *Acetic aldehyde*.

Aldehydene. A name given to the radicle C_2H_4 , derived from ethylene by the abstraction of hydrogen.

Aldehydes. Bodies containing the bivalent group CO , associated, on the one hand, with a monatomic alcohol radicle, and on the other, with hydrogen, as $\text{H}-\text{CO}-\text{CH}_3$, acetic aldehyde; $\text{H}-\text{CO}-\text{C}_4\text{H}_9$, valeric aldehyde. They are derived from primary alcohols by elimination of one or more equivalents of hydrogen (H_2) without introduction of an equivalent quantity of oxygen, so that they hold a position intermediate between the primary alcohols and the corresponding acids. They contain two atoms of hydrogen less than the alcohols, and one atom of oxygen less than the corresponding acids. The aldehydes are derived from monatomic alcohols by the withdrawal of two units of hydrogen, and from diatomic alcohols by the withdrawal of four units. Aldehydes are easily converted by oxidation into the corresponding acid, whilst nascent hydrogen converts them into the corresponding alcohols. Many of the oxygenated essences are aldehydes; ordinary camphor, for example, is camphoric aldehyde. Aldehydes are powerful reducers.

A., aromatic. Aldehydes of the benzene group, of which benzoic aldehyde is the representative.

Aldehyd'ic. (Same etymon.) Belonging to or having the nature of aldehyde.

A. acid. (*F. acide lampique*) A synonym of what was supposed to be acetic acid, but which is now known not to differ from acetic acid. It obtained this name because it was a product of the oxidation of aldehyde as well as of alcohol.

Alder. The *Alnus glutinosa*.

A., American. The *Alnus serrulata*.

A., berry-bearing. The *Rhamnus frangula*.

A., black. The *Rhamnus frangula*; also the *Prunus coccinellata*.

A., European. The *Alnus glutinosa*.

A., tag. The *Alnus incana*.

A., white. The *Clethra alnifolia*.

Al'dide. The generic name applied by L. Gmelin to the aldehydes, the latter term being by him restricted to acetic aldehyde.

Ale. (Sax. *cala*, *cale*, or *aloth*; Gael. *ol*, to drink.) An ordinary English alcoholic beverage made or brewed from pale malt and hops. London ale contains 6.20 per cent. of alcohol, Edinburgh ale 6.22, and Burton ale 3.88. Burton ale contains about 14 per cent. of extract of malt, Edinburgh ale about 10 per cent. Pale or bitter ale is well fermented, so that it contains little sugar, and great care is taken so as to preserve the aroma, and to obtain it clear and bright. The same may be said of Bavarian alea. See *Barr*.

A., Devonshire white. The wort, prepared in the ordinary way, is boiled with hops and crushed grouts, it is then strained and set aside to ferment. It is drunk in a state of effervescence, and is considered nutritive, but somewhat relaxing.

Ale. (Αλῆ, a wandering; G. *Geistesverwirrung*.) Perplexity or confusion of mind.

Ale'berry. An old nutritive stimulant, consisting of toasted bread soaked in hot ale in which spices and sugar had been boiled.

Alec. Arabic for Sulphas ferri, or vitriol. (Quincy.)

Alec. (G. *Fischlake*, *Haringlake*.) The same as *Alex*.

Alech. Same as *Alec*.

Alech'arith. Arabic for Hydrargyrum, or mercury. (R. and J.)

Ale cost. (*Ale*; *κάρτος*, an unknown aromatic herb.) The *Balsamita suaveolens*, so called because it was used for flavouring ale.

Alect'or. (Αλιετορ, a cock.) Term applied to one who watches or is unable to sleep.

Alecto'ria. (Same etymon.) Same as *Alectorius*.

Alecto'ria. (Same etymon.) A Genus of the Nat. Ord. *Lichenes*.

A. arabum. Oschnah. Said to be sedative and soporific.

A. crinalis. A species which is used by the edible swallow, *Hirundo esculenta*, to form the interior of its nest. It grows on the ground, and consists of white, cylindrical, very fine filaments.

A. juba'ta. A species which yields a colouring matter like litmus.

A. usneofides. Used as tonic, demulcent, and nutrient.

Alecto'ria gem'ma. Lapis Alectorius. A stone from the intestine of the cock. See *Alectorius*.

Alector'idæ. (Αλιετορ, a cock.) A Family of the Order *Grallatores*, Class *Aves*. A link between *Grallatores* and *Natatores*. Beak strong, short, and bulged, the borders of the mandible overlapping those of the maxilla, wings strong but short, and not well fitted for flight, often armed with a spur, legs long, strong, toes short, often with a rudimentary web, hind toe rudimentary. Dwell in marshes in hot countries. Representative the Screamer, *Fulamea charadrius*.

Alecto'roid. (*Alectoria*, a Genus of *Lichens*, *aleor*, form.) Being filiform, like the thallus of *Alectoria*.

Alecto'rius. (L. *alectorius*.) Of or belonging to a cock.

Alecto'rius. (Αλιετορ, a cock.) Name for a stone said to be transparent, and about the size of a bean, and to be found in the stomach of

ALECTOROLOPHUS—ALEURITES.

a cock, or capon, after it is four years old; it was said also to possess great virtues, rendering those who wear it rich and brave. It acts as a philtre, and restrains thirst.

Alectorolophus. (Ἀλέκτωρ, a cock; ἄσφοδ, the cock's comb. G. *Hahnenkamm*.) The *Crista galli* of the ethmoid bone.

Also, a plant used by the Romans in cough and opacities of the cornea, identified with *Rhinanthus Crista Galli*. (Pl. 27, 5, 23.)

Alectoromorphus. (Ἀλέκτωρ, a cock; μορφή, form.) A synonym of *Galline*.

Alectrides. (Same etymon.) The *Crista galli* of the ethmoid bone.

Alectros. (Gr.) Same as *Alectrus*.

Alectrurus. (Ἀλέκτωρ, a cock; οὐρά, a tail.) Cock-tailed; having a tail like the cock's.

Alectrus. (A. neg.; λίκτρον, a bed. G. *ehelos*.) Without a bed; unmarried.

Alectryomania. (Ἀλέκτωρ, a cock; μαντία, prophecy.) Divination from the order in which a cock picked up grains distributed upon an alphabet.

Alegar. (*Ale*, and *F. aigre*, sour.) Vinegar.

Alegill. Ale in which the leaves of the *Nepeta glechoma*, the ground ivy, have been infused.

Alehoof. (*Ale*; A. S. *hufa*, a crown.) The *Nepeta glechoma*.

Aleimma. (Ἀλείφω, to anoint.) An ointment of any kind.

Aleipha. (Ἀλείφα, anointing oil; from ἀλείφω, to anoint.) Name for an ointment made with medicated oils. Used by Hippocrates, *l. ii, de Morb.* xxvi. 14.

Aleipterium. (Ἀλειπτήριον.) The place for anointing in the gymnasia.

Aleiptron. (Ἀλειπτρον, for ἐξάλειπτρον.) A box for ointments.

Alelaion. (Ἀλέλαιον, from ἄλε, salt; λαίον, olive oil.) A term for a compound of salt and oil to be applied to tumours; used frequently by Galen. (Quincy.)

Alema. (Ἀλμα, from ἄλεω, to grind.) Fine flour.

Alembic. (Arab. article *al*; ἀμβίξ, a cup or pot, from ἀμβη, a projecting lip, or, perhaps, from ἀμβαίνα, for ἀναβαίνα, to ascend. F. *alambic*; G. *Destillirkolben*.)

Name for a utensil made of glass, metal, or earthenware, by means of which distillations were conducted; consisting of a body, the cucurbit, with a conical head, the capitol, adapted to it, from which a beak descends to be inserted into a receiver, or condenser; a moorthead; a capitulum.

Also, an ancient name for Hydrargyrum, or mercury.

Alembroth. (Chald. The key of art.) The preparation Sal alembroth; also called salt of wisdom, $HgCl_2 \cdot 2NH_4Cl \cdot H_2O$, a chloride of mercury and ammonium, corresponding to the Hydrargyrum præcipitatum album of the late London Pharmacopœia.

A. desiccatum. A term for Sal tartari, the carbonate of potash.

Alemzadar. Arabic for *Sal ammoniacum*, native ammonium chloride.

Alemzadat. Same as *Alemzadar*.

Alemon. Ancient epithet, Gr. ἄλμον *δαίον*, of oil of almonds, according to Aëtius, vii. 69. (Gortzeus.)

Aleocharides. A Subfamily of the Family *Staphylinidae*, Group *Pentamera*, Order

Coleoptera. The antennæ inserted on the inner border of the eyes.

Aleos. (Ἀλεός, for ἀλειωός, lying open to the sun, from ἄλεια, warmth.) An old word sometimes signifying heat, according to Hippocrates, *l. de Morb. Mul.* xiv. 6, 8.

Alepidotus. (A. neg.; λεπίς, a scale. G. *schuppenlos*.) Without scales.

Aleppo button. The Aleppo evil.

A. boli. A synonym of *A. evil*.

A. evil. (F. *bouton d'Alep*; G. *Aleppo-beule*; Arab. *Habab el seuch*.) A tuberculous exanthem developing in the subcutaneous cellular tissues, and subsequently attacking the skin, which ulcerates underneath scabs. The duration of its evolution is a year; it chiefly attacks the face and extremities. There is little or no accompanying pain or fever. Common in Aleppo, but seen also in Bagdad, Ispahan, Egypt, and other eastern places. Occurs at all ages, is not contagious; due to endemic causes; sometimes single; it sometimes appears in crops. No treatment appears to be effective; energetic cauterisation has been recommended. It appears to be of the same nature as the *Delhi sore*.

Late observations would seem to show that cases of syphilis, scrofulous disease, lupus, and other disorders, have been confounded with the true Aleppo evil.

A. pustule. The Aleppo evil.

A. scammony. A name formerly given to the better kinds of scammony.

A. ulcer. The Aleppo evil.

Ales. (Ἄλες.) Old term for a compound salt. Adjectively this word means heaped or collected together; sometimes it means contracted, as when applied to the uterus in that state; Gr. ἄλες, the tonic form of ἄλες, used by Hippocrates, *iv. Epid.* xxix, 10.

Alesh. Old term for the *Alumen plumosum*. (Quincy.)

Alet. France; Depart. de l'Aude; Arrond. de Limoux. Bicarbonated calcic waters. There are three warm springs, of which, the hottest, is 28° C. (82.4° F.), and one cold and ferruginous. They are easily digested, and are used in dyspepsia.

Aleth. Same as *Alet*.

Aleton. (Ἄλητον, that which is ground; from ἄλεω, to grind.) A term for meal or farina.

Aletris. A Genus of the Nat. Ord. *Hæmodoraceæ*.

Also, the former pharmacopœial name, U.S., of the root of the *Aletris farinosa*.

A. alba. A synonym of *A. farinosa*.

A. aurea. Hab. United States. Has similar properties to *A. farinosa*.

A. farinosa. Star grass. Hab. United States. Leaves sessile, entire, lanceolate, smooth; flowers in a slender scattered spike; calyx absent; corolla oblong, tubular, six-partite, white. The root is small, crooked, branched, blackish, intensely bitter. Does not precipitate salts of iron. In small doses, ten grains, tonic and stomachic. Used in colic, dropsy, and chronic rheumatism. It sometimes produces nausea, and in large doses it is cathartic, emetic, and slightly narcotic. It is said to have an action on the uterus.

Aletudo. (L., from *alo*, to nourish. G. *Fettsein*.) Obesity; fatness of the body.

Aleurites. (Ἀλευρίτης, of wheat meal. G. *Gummilacbaum*.) A Genus of the Nat. Ord. *Euphorbiaceæ*.

ALEUROMANTIA—ALEXIPHARMIC.

A. ambinnx. (*F. aleurite des Moluques*.) A synonym of the *Croton moluccanum*.

A. cordata. (*F. arbre à l'huile, arbre à vernis*; Jap. *Wu-iung*.) Abami of Kämpfer. This plant yields an oil that is extensively used as a varnish to preserve woods and textile and other fabrics.

A. gomesii. A Brazilian species having similar properties.

A. laocifera. A Cingalese plant yielding gum lac.

A. moluccana. (*F. bancoul, noix de Bancoul*.) Yields the Bancoul nuts, an efficient purgative. A synonym of *Croton moluccanum*.

A. triloba. The Candlenut tree, the Tutui nut, Bancoul, Belgau, or Indian walnut. Bab. Moluccas and the Sandwich Islands. Fruit a nut as large as a walnut, with a thick shell, and a kernel yielding nearly half its weight of oil, Kekene or Belgau walnut oil. The nuts, strung on fibres of the palm leaf, are used as candles. The oil is very liquid, of an amber colour, insoluble in alcohol, solidifying at 0° C (32° F.). It is a simple cathartic, like castor oil, and does not produce nausea, dose, half an ounce to an ounce. The nuts are said to be aphrodisiac. The tree exudes a gummy substance, called by the natives Takitcheu.

Aleuromantia. (*Ἀλευρον*, meal; *μαντήριον*, divination) Divination from meal or flour.

Aleurometer. (*Ἀλευρον*, meal; *μέτρον*, a measure) An instrument for estimating the increase of volume that a portion of gluten undergoes on being heated. It resembles an ordinary syringe, and the gluten is placed below the piston, the rod of which is graduated. The whole is placed in a bath of oil, and the amount of swelling, which is the greater the better the quality of the gluten, is easily read off.

Aleuron. (*Ἀλευρον*, wheaten flour; from *ἀλεω*, to grind. *G. Weizenmehl*.) A word used by Hippocrates, *I. de Natur. Mul. et. 3*, signifying farina or meal, but properly, that of wheat or barley.

A. grains. (*F. aleurone*; *G. Aleuronhormer, Klebermehl*.) Amorphous granules of an albuminoid or proteinous nature, enclosed in a thin amorphous envelope, found in the endosperm and cotyledons of the seeds of certain plants, replacing or accompanying starch. They are soluble in water, weak acids, and alkalis, they are insoluble in oil, alcohol, and ether. The surface of the granules is revolved, sometimes warty, and they are stained brown by iodine tincture. They have no action on polarised light. They frequently contain crystals of calcium oxalate, or granules of calcium and magnesium phosphate. Aleuron masses or crystals are found in the vitellus of the ova of fishes and other vertebrata, and have received the name of vitelline plates or scales.

Aleurote sis. (*Ἀλευροτήσις*, a flour sieve.) The process of, or the apparatus for, separating bran from meal.

Aleutian Isles. Forming the Archipelago of Russian America, in which are several active volcanoes. Hot springs burst through the frozen soil of the Islands of Oumnak, Kausgh, and Ounabichki.

Aleutians. A Mongolian race inhabiting the Aleutian islands, a chain of volcanic islands, treeless, and generally enveloped in fog, lying between the peninsulas of Alaska and Kamts-

chatka. They are good sailors. They approximate somewhat in character to the Esquimaux; the cephalic index is 78.

Alex. (*G. Fischlake*.) A preparation of the small fish called Aphna, with oysters, aculephs, and other marine animals, in use by the ancient Romans both as a condiment and as a vulnerary in bites and burns, also as a cure for the scab in sheep. (Waring.)

Alexan'ders. The *Smyrniun olusatrum*.

A., round-leaved. The *Smyrniun rotundifolium*.

Alexan'dersbad. Bavaria, near Wunsiedel, in a charming neighbourhood, 1760 feet above sea level. An earthy saline chalybeate water of 11° C. (52° F.) Used as a tonic internally and as baths. There is a whey-cure establishment and pine est. baths.

Alexan'dersquelle. Russia; in the Caucasus, near Piatigorsk. Seven springs of carbonated saline waters, arising from the chalk, in which tufa, trachite, and basaltic conglomerate appear. Two contain a very small quantity of sodium iodide.

Alexandri antidotus aurea. Alexander's golden antidote. A compound of some seventy kinds of animal, vegetable, and mineral substances. Used in apoplexy.

A. emplastrum. A garlic plaster invented by the same Alexander.

Alexan'dria. Italy; Piedmont. Five springs, one calcareous, in the Valley of Andusia; a second, sulphuretted and saline, in the district of Camagna; a third and fourth, of an hepatic odour, in the valley of Baos, and the last, sulphurous, in the valley of Pirata.

Alexan'dria. Egypt. A town situated in the low sandy sea shore close to Lake Mareotis. The climate is very damp, malarious fevers and dysentery are commonly present. It is an unfit residence for invalids.

Alexan'dria. (*Alexandria*, the place of its growth.) The *Prunus lauro-cerasus*, common laurel.

Alexandrian laurel. The *Prunus lauro-cerasus*, common laurel.

Alex., the *Ruscus aculeatus* of Linneus.

Also, the *Calophyllum inophyllum*.

A. sen na. See *Senna alexandrina*.

Alexan'drine. The Emplastrum Alexandri, or Garlic-plaster.

Alexan'thi. The *Rhus coria*.

Alexeterium. (*Ἀλεξήτριον*; from *ἀλεω*, to repel, to ward off. *G. Heilmittel*.) A term employed by the Greeks for a remedy of whatever kind, but especially an alexipharmic medicine, the term was specially used to describe those remedies which counteracted the action of poisons when applied externally.

Alexia. (*A. nix*, *λέξις*, a word.) Loss of the comprehension of written symbols, inability to understand writing.

Alexicacum. (*Ἀλεξίκακος*, keeping off all, from *ἀλεω*, to drive away; *κακόν*, evil.) Old term for an amulet or antidote to resist the effect of poisons.

Alexipharmacum. (*Ἀλεξω*, to repel; *φάρμακον*, a poison. *F. alexipharmaque*, *G. Gegengift*.) A medicine against poison; an antidote.

Alexipharmic. (*Ἀλεξω*, to repel, *φάρμακον*, a poison.) Having power to neutralise the effects of poison, applied to medicines supposed to have this power.

ALEXIPYRETIC—ALGARAH.

Alexipyretic. (Ἀλεῖν, to repel; *superius*, a fever. *G. febricidrig.*) Having power to drive off fevers; febrifuge.

Alex'ir. A synonym of *Elizir*.

Alex'isbad. Germany; near Bernburg, about two hours' drive from Quedlinburg. Altitude 1350 feet. The Selke spring (for baths) contains iron sulphide, but no CO₂. The Alexis spring, the drinking water, contains iron carbonate and free carbonic acid. There are pine-needle baths, and the whey cure can be carried out.

Alexite'rian. The same as *Alexiteric*.

Alexiter'ic. (*G. Giftwidrig.*) Having the properties of an *Alexiterium*; antidotal.

Alexite'rium. Same as *Alexiterium*.

A. chlo'ricum. Fumigation by means of chlorine evolved from sodium chloride, manganese oxide, and sulphuric acid.

A. ni'tricum. Fumigation by means of nitrous acid evolved from potassium nitrate and sulphuric acid.

Alexaram. Term for the washing of lead.

Alfa'cta. A former term for distillation.

Alfa'd'idom. (*A.*) The scoris of gold, iron, or copper; also the oxide of copper, or burnt copper.

Alfa'tide. Arabic for Sal ammoniac.

Alfa'no. Italy; Piedmont, Province of Cune. Sulphur waters springing from the tufa, rich in sulphates; but little used.

Alfa'des. (*Arab.*) Old term for *Cerussa*.

Alfol. Arabic for Sal ammoniac.

Alfo'rian race. The *Alfura*.

Alfour'ous. The same as *Alfura*.

Alfurs. A people of the island of Celebes, Moluccas and Philippine islands, believed to be Malays, or the predecessors of the Malays. They are dark, have black, thin, lank hair, very flattened nose, projecting cheek-bones, large eyes, prominent teeth, thick lips, and wide mouth.

Alfusa. (*Arab.*) Old name for Tutia or tatty. (*R. and J.*)

Alga buccalis. The *Leptothrix buccalis*.

A. car'agaboen. The *Chondrus crispus*.

A. digita'ta. The *Laminaria digitata*.

A. gemias'ma. A term given to the supposed Ague plant.

A. helminthochor'ton. The *Alsidium helminthochorton*.

A. mari'na. A synonym of *Pila marina*.

A. morbill'i. A cryptogam which Dr. Salisbury believed he had discovered to be the cause of measles.

A. Orde'nei. A name given to a fungus which was supposed by M. Ordonez to exist in certain heteradrenic tumours.

A. spine'sa. A synonym of *Agar-agar*.

A. vesiculo'sa. The *Fucus vesiculosus*.

A. zeylan'tica. The Ceylon Moss.

Alga'cea. A synonym of *Alga*.

Algae. (*Algor*, coldness, from their being constantly in the water; or *aligo*, to entangle, from the entangled appearance of particular species. *F. algae*; *G. Meergras*, *Tang.*) A Nat. Order of the Sub-kingdom Thallophyta. They consist of a thallus, which may be foliaceous and branched, filamentous or pulverulent; it contains chlorophyll, which may be green, red, or brown. The tangles or algae are parenchymatous cellular plants living in salt or fresh water, and form the first and most imperfect of the great provinces or branches of the vegetable kingdom. The complete body is a mass composed of simple cells, which is called a lobe or thallus, such thallus not yet being

differentiated into true axial organs, stem and root, and leaf organs. The difference between the epidermic and central structure lies in the fact that the outermost cells are smaller with thicker walls, but the parenchyma and cambium of higher plants are equally wanting; growth takes place from a single apical cell. The cell wall consists of cellulose, which in many species becomes gelatinous. Many of the sea-weeds contain deposits of calcium carbonate, and the Diatoms have a siliceous envelope.

The algae, whilst largely composed of very simple forms, include some that are highly developed. Reproduction is either asexual by means of motionless or motile spores; or sexual by fertilisation, or by conjugation. It may be effected by fission, as in the Diatomaceae; by budding, either of single cells or of groups of cells, as in the Floridaceae; by zoospores, cells provided with two or more vibratile cilia, which, after escaping singly or in numbers from the rupture of a cell of the parent plant in which they have been developed, exist in an active moving condition for a while, then rest, and develop into a new plant like the parent; and by oospores, from which new plants grow, and which themselves arise in several ways, either by the conjugation of two apparently similar cells, or by the coming together and coalescence of two unequal-sized zoospores, from which the oospore-bearing cell arises; or by the fertilisation of a female cell, or germ-cell from which the oospores arise, by male cellules, or antherozoids. Some species present more than one of these modes of reproduction, and alternation of generations results.

The chief divisions of the Algae, as given by Sachs, are:—

Family 1. The Nostochineae, including the Genera Nostocaceae, Rivulariaceae, Chroococcaceae, Hydrodictyceae, and Volvocineae.

Family 2. The Conjugatae, comprising the Desmidiaceae, Zygnemaceae, Diatomaceae, Siphonaceae.

Family 3. The Fucaceae, including Edogoniaceae, Coleochaetaceae.

Family 4. The Floridaceae, including Corallinae, Chondrus.

Some recent botanists have given a different signification to the term Algae, in that they have discarded it as one of the divisions of Thallophytes, and make use of it to include under each class those forms which contain chlorophyll, in contradistinction to those other forms of each class which contain none, and to which the term Fungi is now applied.

Alges'thes'is. (Ἀλγος, pain; αἰσθησις, perception.) Term by C. H. Schultz for a sense of pain; pain, especially painful disease.

Algal alliance. One of Lindley's Divisions of Thallophytes. Cellular flowerless plants, nourished through their whole surface by the medium in which they vegetate; living in water, or very damp places; propagated by zoospores, coloured spores or tetraspores.

Al'gali. (*Arab.*) Old name for Nitre. (*R. and J.*)

Al'galic. (*Arab.*) Same as *Algalie*.

Algalie. (*Arab.*) A catheter or sound. (*James.*)

Al-gam-bay. The Burmese name of a bitter root, used as a tonic in infusion (3*ʒ* to *Oj* of water). (*Waring.*)

Al'gamet. (*Arab.*) Charcoal. (*R. and J.*)

Algarah. (*Arab.*) An old term for the disease Anchilope. (*James.*)

ALGAROBIA—ALGIERS.

Algaroba. The fruit of the *Prosopis dulcis*. A tree growing to the height of 40 feet. Indigenous in Catamarca, a province of the Argentine Republic; the long pods are pounded, sifted, and made into cakes, which are dried in the sun, and called Patay. In some parts it forms the exclusive food of the people.

Also, a synonym of *Carob*.

A. bean. The fruit of *Ceratonia siliqua*, the Carob tree, consumed in the South of Spain by horses, and imported into this country as a substitute for onocake. The dry pulp in which the seeds are imbedded is very nutritious, and being supposed to have been the food of St. John in the wilderness, has been called Locust tree and St. John's bread.

Algarobia. A Genus of the Tribe *Mimoseae*, Nat. Ord. *Leguminosae*.

A. glandulosa. A small American tree. Yields the *Mesquite gum*, which closely resembles gum arabic. The fruit is a long compressed pod, containing a sweet pulp, which is used as food.

A. ferruginea. The bark of this species added to jaggery water is distilled in India as an intoxicating liquor.

A. julaeformis. The leaves and branches of this species are said to be poisonous to cattle.

A. leucophæa. The bark of this species is used as that of *A. ferruginea*.

Algaroth, powder of. (*Victor Algarotti*, a physician of Verona, its inventor. *F. mercurio de vie*, *G. Algarothpulver*.) A compound of antimonious chloride and oxide, produced by dissolving antimonious chloride in strong hydrochloric acid and pouring it into water, when the powder falls as a bulky white precipitate, which after a short time becomes crystalline and of a fawn colour. It is an emetic, purgative, and diaphoretic, but very uncertain, and is now disused. Is powerfully emetic in doses of two or three grains.

Algarotti, Victor. An Italian physician of the sixteenth century.

Algarovilla. The very bitter and acrimonious mullia of the fruit of *Inga Maritima*.

Algarrobo. A synonym of *Algaroba*.

Algasaf. (Arab. *al-asaf*, filth.) A term for pajumar or vesicular eruptions.

Algebra. (Ar. *al-Ischabr*.) The union or combination of different parts into one whole. Also applied to the union of fractures. Hence the Spanish term *algebraica*, applied to a bone-setter.

Also, combination and comparison.

Algedo. (Ἀλγος, pain.) A violent pain about the urethra, testes, bladder, perineum, and anus, caused by a sudden stoppage of a severe gonorrhœa.

Algefacient. (L. *algus*, coldness; *facio*, to make. *G. Kälte-erzeugend*.) Cooling; having the power to make cold.

Algemea. (Ἀλγῆμα, from ἄλγος, to suffer pain.) A term for pain, and also the disease which causes the pain, according to Hippocrates, *Aph. iv*, 11, and *vi*, 7; *Fœtus de Econ*, p. 27.

Algiers. A French colony on the northern coast of Africa, lying between Morocco and Tunis, about 600 miles long and from 100 to 300 miles broad. It is divisible into three regions—a coast region bordering the Mediterranean, an elevated woody plateau with numerous peaks, and extensive salt marshes in the south bordering the Great Desert. The chief rivers are the Schelif, the Seybouse, and the Summam. It

produces in abundance corn, oil, tobacco, wine, and cotton. The population in 1876 amounted to about 2½ millions, of which about 150,000 were French and the rest Mahomedans. The climate of the northern region is generally healthy and temperate, but when the dry khamsin or southerly wind blows, the thermometer rises to 38° C (100.4° F), or more. Dr. Shaw knew the thermometer reach 0° C (32° F) only twice during twelve years' residence in Algiers, but the extreme diurnal variation is considerable, especially during the summer months. From April to September the prevailing winds are from the east, and during the rest of the year chiefly from the west. The heavy rains are in November and December. The months of January and February are generally very fine; and the fields are bright with verdure in April. In the summer months the surface of the country is parched. Ophthalmia and cutaneous diseases are common, and elephantiasis is not unfrequent. Algeria possesses numerous springs and mineral waters, some of which were known to the Romans and highly prized by them. Thus, at Hammam Berda, between Bone and Constantine, near an ancient grove of olives, still called the "Sacred Wood," are the remains of vast circular buildings surrounding a basin, about 50 feet long by 36 wide, containing numerous hot springs. Similar ruins exist near the vestiges of the ancient Julia Casarea, now called Cherchell.

Algérie. (Arab.) Old term for Calx, or lime. (R. and J.)

Algaroth. See *Algaroth*.

Algesia. (Ἀλγῆσις, a sense of pain.) A synonym of *Hyperæsthesia*.

Algesis. (Gr.) Same as *Algedo*.

Algetic. (Ἀλγῆσις, to feel pain.) Producing, or having relation to, pain.

Algeticus. (Ἀλγῆσις.) Very painful, or often, or ordinarily painful. Applied to diseases attended with pain, as epilepsy algeticus, phthisis algeticus.

Algia. (Ἀλγος, pain. *F. douleur*; *I. dolore*; *G. Schmerz*, *Leiden*.) Pain.

Algibio. An Arabic name for Sulphur vivum.

Algide. (L. *algere*, to be grievously cold. *F. algide*, *G. kalt*.) Become cold; chilled with cold.

A. cholera. A synonym of *Epidemic cholera*.

Also, the term *Algide* is used for a stage of Epidemic cholera, that of collapse.

Algid fever. (*F. Fèvre algide*.) A type of pernicious intermittent fever, characterized by icy coldness on the surface, continuing from the beginning to the end of the paroxysm; the rigor is very intense, and lasts many hours; the temperature is low; the face is cadaveric, and the pulse slow.

Algidity. (Same etymon. *F. algidité*.) A state of coldness and collapse, as in epidemic cholera and fevers, or in the agony of death.

A. progressive. A condition of collapse and lowering of temperature, occurring in infants during the course of wasting diseases.

Algiers. Africa. The capital of the French Colony, Algeria, lying on the southern shore of the Mediterranean, about 36 to 40 hours from Marseilles. The town stands on a declivity facing the north, the old part is dirty, with narrow tortuous streets, the new town is well built and clean, and the hotel accommodation good. Mean temperature of winter is given by Hellet as

11-07° R. (56-4° F.), by others variously as 55° F. and 62° F.; daily range 5-5° C. to 6-6° C. (10° F.—12° F.). The average annual fall of rain is about 32 inches, of which some 27 inches fall in the six winter months, not on many days, but a heavy rainfall during few days. The temperature is not very suddenly variable, the air is bright, but in the evening it is often laden with moisture. Malarial fevers are not uncommon. It is said that phthisis is rare. The climate is somewhat bracing. The soil is light, and dries very rapidly. It is generally considered that Algiers is more fitted for cases of chronic bronchitis than for those of any of the forms of pulmonary consumption, especially when in the later stages. Chronic winter cough, emphysema, and heart disease, are said to be benefited, but not nervous diseases.

There are mineral springs in the neighbourhood of Algiers. See *Hammam-Melonane*, *Ouon Sekhakhna*, *Hammam-Kira*.

Algoïd. (L. *alga*, sea weed; *eidōs*, likeness.) Resembling sea weed.

Algo-l'ichen hypothesis. An hypothesis promulgated by Schwendener to the effect that all lichens are algae, which have collected around them a parasitic fungal growth, and that those peculiar bodies which, under the name of *gonidia*, are considered as special organs of lichens, are only imprisoned Alga.

Algology. (L. *alga*; *lógos*, a discourse.) The science or knowledge of *Alga*, or sea weeds.

Algon'kins. A tribe of Indians of North America, formerly dwelling in the territory near the sources of the Missouri, in the neighbourhood of the Rocky Mountains.

Algor. (L. *algeō*, to be grievously cold.) The sense of coldness experienced in the onset of fever; chilliness, rigor.

Algos. (Gr.) (G. *Schmerz*, *Leiden*.) Pain.

Algospasmus. (Ἀλγος, pain; σπᾶσμος, a spasm.) Painful contraction of muscles.

Algous. (L. *alga*, seaweed.) Of the nature of, or resembling, an Alga or seaweed.

Alguada. (Arab.) A name for the disease Alphas.

Algue de fain. (Fr.) The *Gelidium cornutum*.

Algyógy. Austria-Hungary; in the Siebenbürg. Three springs of thermal mineral waters, the chief of which is named Apa-Bad, containing sodium, magnesium, and calcium carbonates, and magnesium sulphate. They are used in chronic catarrhs. They were known to the Romans, and were formerly in high repute, though now neglected.

Alhagi. A Genus of the Suborder *Papilionaceae*, Nat. Ord. *Leguminosae*.

A. mammifera. A synonym of *Alhagi maurorum*.

A. mauro'rum. (F. *alhagi à la manne*.) A thorny Arabian and Persian shrub; yields a kind of manna. See *Alhagi-manna*.

Alhagi-manna. The produce of the *Alhagi maurorum*. It occurs in the form of small brown tears, mixed with leaflets and stalks. It is of a yellow-green colour, nauseous odour, and sweet taste, and is a purgative.

Alhama. Spain; in the Province of Murcia. Mild chalybeate waters of 38° C. (100-4° F.) containing calcium and magnesium sulphate and iron carbonate; a neighbouring spring has a temperature of 13° C. (55-4° F.), and is a stronger chalybeate. Used in nervous

diseases, hemicrania, chlorosis, menstrual troubles, and mucous discharges. The stronger water is especially used in weakness of digestion, pyrosis, and anæmic uterine diseases.

Alhama de Aragon. Spain. A mineral water, containing sodium chloride, some iron, and carbonic acid gas. Temperature 32° C. (89° F.) Employed in rheumatic and calculous affections, in asthma, and in skin diseases, both internally and in baths. Season, middle of June to the middle of September.

Alhama de Granada. Spain. A saline mineral water. Temp. 43° C. (109-4° F.) Recommended in rheumatic affections. Season, April to June, and September and October.

Alhama di Murcia. Spain. Saline mineral water at 41° C. (105-8° F.), containing calcium and magnesium sulphate, with a little iron carbonate. Recommended in rheumatic affections, in anæmic and neurotic affections, and in intermittent fevers. Season, April to June, and September and October.

There is a second spring of the same general character, but containing more iron, which is used in atonic dyspepsia, pyrosis, and uterine diseases.

Alhandal. (Arab.) A name of the *Citrullus colocynthis*. (James.)

Alhanna. The same as *Alana terra*. (James.)

Alhas'ba. (Arab.) A name for the disease Rubella, or measles. (Hooper.)

Alhasef. (Ar.) Hidra. Vesication.

Alhenna. The same as *Henna*, the root of the *Lawsomia inermis*.

Alì. Sicily; on the sea coast between Messina and Taormina. Sulphuretted waters of a temperature 38° C. (100-4° F.). They contain small quantities of calcium sulphate and carbonate, a trace of iron, with carbonic acid and sulphuretted hydrogen. Some calcium and sodium chloride percolate from the sea water. Used in sciatica, rheumatic pains, and skin diseases.

Alia squilla. (Ἄλιος, belonging to the sea; σκίλλα, a squill.) An old name for the Prawn.

Alibert. A French physician.

A's k'oid. See *Cheloid*.

Alib'ity. (L. *alibilis*, from *alo*, to nourish; G. *nährhaft*.) A term used to express the capacity of a nutritive substance for absorption; assimilation.

Al'ible. (Same etymon.) Fit for nourishing.

A. substance. Applied to the nutritive portion of the chyme, as distinct from the excrementitious.

Alibon'fier. (Fr.) Storax.

Al'ica. Italy; in a valley between Palaja and Patrino, on the right bank of the Rigone. Two mineral waters springing from the blue clay.

The Aqua di Sant Andrea a Corsini has a temperature of 16° C. (60-8° F.), and contains magnesium, calcium and alumina sulphate, sodium and magnesium chloride, calcium carbonate, some iron, and carbonic acid gas. It is used in urinary deposits, congestions of the spleen and liver, atony of the stomach, menorrhagia, and leucorrhœa.

Acqua di Clemente, the other spring, is of the same temperature and general constitution, but contains more iron. It is used in chronic gout and rheumatism, hysteria, and anæmic conditions.

ALIMENTATION—ALIPTA.

segments corresponding to the coxa, femur, and tarsus of the insect's foot, and a special lamina internally. The isbium or lower lip is between them, and behind this again is the mentum. Connected with the fore part of the mentum is the tongue or ligula and the labial palpi. In suctorial insects the above parts are more or less modified. The mouth is continuous with a pharynx and oesophagus, which often dilates into a crop or ingluvies. To this follow a proventriculus, armed with chitinous processes and moved by powerful muscles, a chylific stomach, lined by a glandular membrane representing a liver, and an intestine divisible into an ileum, colon, and rectum. Salivary glands are present in most insects, but there are none in *Hydrophil.*

In Fishes the usually wide mouth is at the anterior extremity of the body, and has two thick fleshy lips. Teeth are usually present, adherent to, but not implanted into, the bones. Tongue small and hard, no salivary glands; pharynx muscular, stomach tubular, surrounded at its pyloric extremity with caecal processes, appendices pyloricae, supposed to be the rudiment of the pancreas, but their secretion is acid. Intestine straight or convoluted, villi sparse, mucous membrane longitudinally folded, but with a spiral fold in cartilaginous fish. Anal opening in front of the openings for the urinary and sexual organs. Liver large, generally with gall-bladder. Pancreas and spleen usually present.

In Batrachia the oral cavity is wide, the bones entering into its composition often beset with small teeth, some of which are implanted in alveoli. Tongue usually present. No salivary glands. The oesophagus leads into a stomach with pyloric valve, and this into a small and large intestine, distinguished by their size. The intestine is spirally coiled in the larva. The gastric tubules are simple, and the intestinal villi comparatively few in number; but the mucous membrane is rugose. The liver, two-lobed in *Anom.*, has a gall bladder. Pancreas and spleen always present.

Amongst Reptiles the jaws are usually beset with teeth lodged in sockets, but in *Chelon* the jaws have a horny covering. Salivary glands are present. Oesophagus wide and extensible, beset in *Chelonia* with villous-like processes. Stomach elongated, with pyloric valve, the intestine short in the carnivorous, long in the herbivorous families. Large intestine separated from the small by a circular muscle. Liver and pancreas always present, gall-bladder only absent in *Ophidia*.

In Birds the jaws are covered with a horny beak; a tongue is present, varying much in form and covering, a caecal process often extends from its floor far down the neck; three pairs of salivary glands usually present. Oesophagus long and wide, often with a crop at its extremity, the proventriculus, which secretes the gastric juice, then follows the muscular gizzard. The intestine is divided into small and large, the rectum opens into the cloaca, which receives the oviducts and ureters. At its posterior extremity is the bursa fabricii.

In Mammals, lips and cheeks are present in all, with the exception of the monotremes and the dolphins, cheek pouches are sometimes present, the surface of the mouth usually smooth, but often beset with hair or bristles. At the posterior edge of the hard palate is the soft palate, teeth implanted in alveoli, almost universally present.

Tongue of various form and size, ministering to taste; three pairs of salivary glands usually present, but none in the flesh-eating Cetacea. Oesophagus very muscular; stomach simple or compound, with mucous and peptic glands, intestine divisible into three parts—small intestine with villi, large intestine without villi, and the rectum, liver large, usually with one gall-bladder. Pancreas and spleen constantly present.

A. tube. A synonym of the *Alimentary canal*.

Alimentation. (Same etymon. *F. alimentation*, *G. Ernährung*.) The act or process of taking or receiving nourishment.

Also, the process of conversion of food into material fit for nutriment.

A. iod'ic. A mode of giving iodine in conjunction with farinaceous food.

Alimentiveness. (Same etymon. *F. alimentiverté*.) The desire for food. A faculty supposed by the phrenologists to exist in the fossa zygomatica, exactly under Acquisitiveness, and before Destructiveness, and to produce the appetite for food, or the nutritive instinct.

Alimon. (*Ἀλιμον*, a shrubby plant growing on the sea shore, from *ἄλς*, the sea.) Probably the *Atriplex halimus*, in use amongst the ancients, both as a food and as a medicine in dysentery and gastric diseases, as an aphrodisiac and galactagogue. *Hab. Crete.* (Waring.)

Alimonia. (*L. alimonia*, nourishment. *G. Ernährung*.) Sustenance, food.

Alimonium. The same as *Alimonia*.

Alimos. Common liquorice.

Al'mum. (*'A*, neg.; *λυμός*, hunger.) A plant serviceable in allaying both hunger and thirst.

Also, an old name for the *Arum maculatum*.

Alina'sal. Belonging to the *Alu nass*.

A. process. A cartilaginous outgrowth surrounding each nasal aperture in the frog.

Alindesis. (*Ἀλινδής*, a rolling in the dust; from *ἄλινδω*, to roll over.) A kind of exercise among the ancient Greeks; the wrestlers, being anointed with oil, rolled themselves in the dust, according to Hippocrates, *l. 2, de Diet.* xlii, 15.

Alinthisar. Arabic for an elongation of the Uvula. (*Waltherus, Syll. Med.* p. 1611.)

Alinzadir. Arabic for Sal ammoniac.

Allocab. (Arab.) Term for Sal ammoniac.

Alipæna. (*'Αλιπία*, without fat.) A plaster made without any fatty matter.

Alipæn'os. (*'A*, neg.; *λιπαίνω*, to make fat.) A term applied to very lean persons.

Also, to external remedies of a dry or non-greasy nature, as powders, according to Celsus, v, 19.

Alipan'tos. The same as *Alipænos*.

Alipas'ma. (*Ἀλιπία*, to anoint.) A powder which, when mixed with oil, is rubbed on the body to prevent sweating.

Alipa'ta. A tree growing in the Philippine Islands, and reputed to be highly poisonous, its milky juice and the smoke of its wood are said to cause blindness.

Alipes. (*L. ala*, a wing; *pes*, a foot.) A winged foot, same as *Cherimpterus*.

Also, (*G. schnellfüssig*) swift-footed.

Alipta. (*Ἀλειπτός*, an anointer. *G. Einsalber*.) He that anointed the wrestlers in the ancient games, before they went to exercise, and kept them in strength and good complexion.

Also, a term for a surgeon, or one who

ALIPTERIUM—ALKALESCENT.

preferred to keep the body in a good condition as to strength, activity and colour.

Alipterium. (Αλιπτήριον, a place for anointing.) A room in the baths of the Romans and Greeks where persons were anointed after bathing.

Aliptes. Same as *Alipta*.

Aliptis. (Αλιπτίς, from ἀλίζω, to anoint. *F. aliptique*; *G. Salbtkunst*.) Term for that department of ancient medicine which treated of inunction as a mode of cure.

Alisandera. Same as *Alexandera*.

Alisida. Spain, near Las Navas de Tolosa, in the Sierra Morena. An astringent chalybeate water of 16° C. (60.8° F.) Its mineralization is slight. It is used in gastric weakness, chronic diarrhoea, in amenorrhoea, and in chlorosis.

Alisma. (Άλς, the sea. *G. Froschlopf.*) A Genus of the Nat. Ord. *Alismaceae*. Root fibrous, leaves erect or floating; inflorescence umbellated or panicled, branches whorled, bracteate; petals deciduous, involute; stamens six, filaments filiform; carpels many, free; ovules solitary, campylotropous; achenes ribbed; embryo hooked.

Also, an old name of the *Arnice montana*, and of a species of *Damastrum*.

A. graminifolia. A synonym of *A. plantago*.

A. lanceolata. A variety of *A. plantago*, with lanceolate leaves, ovate sepals, and styles as long as the ovary.

A. plantago. (*F. futeau*, or *plantain d'eau*; *G. Wasserwurz*.) Leaves erect; flowers panicled, carpels in one whorl, laterally compressed, styles ventral. The juice is acrid. The rhizomes, which smell likeorris root, when deprived of acidity by drying, are used as food by the Kalmucks; they have been used in doses of ten grains, gradually increased, in chorea, epilepsy, and hydrophobia; sometimes they produce nausea. The dried leaves will produce vesication; they have been recommended in chronic cystitis.

Alisma com. (*F. alismaceae*; *G. Froschlopf.*) A Nat. Order or a Family of the Nat. Order *Helobaeae*. Swamp or floating plants. Leaves narrow, or with an expanded blade, parallel-veined; flowers perfect, very rarely unisexual; sepals 3, herbaceous; petals 3, petaloid; stamens few or numerous, anthers introrse; ovaries several, superior, one-celled; ovules solitary, or two superposed; placentae axile or basal, fruit dry; seeds without albumen; embryo undivided, horseshoe shaped.

Alisma coene. Similar to the plant *Alisma*.

Alismal alliance. One of Lindley's divisions of Exogenous plants. Hypogynous, tri-hexapetaloidous Endogens, with separate carpels and no albumen.

Alismaceae. A Tribe of the Nat. Ord. *Alismaceae*, having a semi-petaloid calyx, one or two erect or ascending sutural seeds, and a straight or horseshoe-shaped embryo.

Alismia. A crystallizable substance obtained from the *Alisma plantago*.

Alismoid. (*Alisma*; *Alis*, form.) Like to the plant *Alisma*.

Alison. The same as *Alison*.

Alisphenoid. (*L. ala*, a wing; *sphenoid* bone.) That part of the infero-lateral wall of the endocranium which lies between the second and fifth nerves, and corresponds to the alae magna,

wings, of the posterior sphenoid; the greater wing of the sphenoid of man. It is a separate bone in the osseous fishes, an extension of the preotic in front of the fifth nerve in Batrachia, sometimes free and sometimes ankylosed in reptiles, though absent in Chelonians. In birds it is large, and at first composed of two bones, but subsequently it is fused with the surrounding elements. In Mammals it is developed from one or two centres, but never remains separate from its basal piece, the basisphenoid.

A. canal. A canal perforating the alisphenoid at the origin of its external pterygoid plate, and giving passage to the external carotid artery. It occurs in the dog.

A. tube. The same as *A. canal*.

Alison. (*A. neg.*; *Alison*, raging madness.) An old name of a plant which was used to avert hydrophobia, probably the *Eleocharis arvensis*.

Also, a name of the plants of the Genus *Alisma*.

Alistetos. (Άλς, salt.) Arabic for Sal ammoniac. (*Ruland*.)

Alites. (*L. alatus*, winged.) The winged things. Birds.

Alitura. (*L. alitura*, a nourishing; from *ala*, to nourish.) Term for the process of assimilation or nutrition, as anciently employed, but the word simply means food or nourishment. (*Blancardus*.)

Alizar. The *Rubia tinctorum*, or madder.

Alizarin. (*G. Krapproth*.) $C_{15}H_{10}O_4$. The red colouring matter of the madder root, *Rubia tinctorum*, a result of the resolution of ruberythric acid which is present in the fresh root, glucose being the other product. It is now chiefly obtained from anthraene. It consists of reddish-yellow delicate prisms, sparingly soluble in hot water, easily in alcohol and ether. It acts as a weak acid. It produces insoluble compounds, lake colours, with alumina and stannic oxide, and purple ones with ferric oxide. A tincture, and papers soaked in it, have been used as a test for acids and alkalis instead of litmus.

Alizarinic acid. A product of the action of nitric acid on alizarin. Identical with *Phthalic acid*.

Alkafat. Arabic for Antimony, or antimony. (*Ruland* and *Johnson*.)

Alkafet. Same as *Alkafat*.

Alkabest. (Arabic.) In Alchemy, the universal solvent.

The properties of the Alkabest, according to Van Helmont, are the following:—It is a fluid of perfect simplicity and purity, is never found native, but always prepared by art; is capable of dissolving all substances into a liquor, which rises wholly in distillation, leaving no scum behind, at the same time that the alkabest itself spontaneously separates from the body on which it has produced such a remarkable change.

Alkalamides. A synonym of secondary monamides containing an acid radicle and an alcohol radicle.

Alkalo. Ancient name for the fat or oil of the common hen, the *Oleum gallinae*. (*Ruland*.)

Alkaloesence. (*F. alkaloesence*; *I. alkaloesence*; *S. alkaloesence*; *G. Alkalität*.) A state of alkalinity; having the properties of an alkali.

Alkaloesent. (*F. alkaloesent*; *G. alkaloesent*.) Of the nature, in some degree, of

ALKALI.

an alkali; having slightly alkaline qualities; becoming alkaline.

Alkali. (Arab. *Al*, the whole, or essence; *kali*, the name of the plant from which soda was first obtained. *F. alkali*, *I. and S. alkali*; *G. Alkali*.) A term which includes several hydrated oxides of the alkali-metals, potassium, sodium, rubidium, lithium, cesium, and the hypothetical ammonium. They are all electropositive, possess well-marked basic properties, and form salts with acids, turn red litmus blue, turn mercuric brown, syrup of violets green, they can saponify fats, are caustic, and are easily soluble in water.

The term alkali has been applied to two classes of compounds, which have only this in common that they are able to neutralise acids. One of these classes includes the mineral alkalis, and are of comparatively simple chemical constitution; whilst the other includes the complex organic compounds produced by plants, and which are now usually distinguished as alkaloids.

When potash, soda, or lime, are applied to the skin in the caustic state, they withdraw water and form an eschar. They are hence used for the destruction and removal of warts, condylomata, moles, erectile tumours, and hæmorrhoids, and for the opening of abscesses. Also for effecting powerful derivation in cases of disease of bone, or cartilage, or joint. The salts of potash, and the other members of the group, are sometimes applied to the skin in cases of prurigo and scabies, to allay the itching and to kill the parasite. Solutions of the salts are employed to excite inflammation in old fistule, and baths containing them have been given in tetanus, convulsions, paralysis, and epidemic cholera, in amenorrhœa and cerebral congestion, to determine a flow of blood to the skin. In still more feebly acting solutions, or in combination with oil, as in soap, the alkalis are used as detergents, and in the treatment of many cutaneous affections. Lime water is said to be beneficial in epithelias, and to effect the solution of the false membrane in croup. When taken into the stomach, the alkalis and alkaline carbonates at first neutralise the free acid contained in the gastric juice, but, as Bernard's experiments have shown, almost immediately cause a great increase in the quantity of acid secreted. In a healthy condition, however, they are probably unnecessary, if not absolutely injurious, but in cases of gastric catarrh dependent upon excess of acid they may prove of great service. When absorbed into the blood the alkalis and their salts, as the citrates and tartrates, favour the metabolism and combustion of the hydrocarbonaceous compounds, but taken in excess they diminish its plasticity and render it poor in solid constituents, spasmodic, ultimately inducing a condition similar to or identical with scurvy. Fat and pathological products or deposits disappear, and they have hence been largely administered in scrofula, syphilis, obesity, enlargement of the liver, and other glands. Sodium sulphate and magnesium sulphate, in Dr. Rutherford's experiments on dogs, greatly augmented the secretion of bile. Their powerful action in neutralising acids has long rendered them important agents in the treatment of calculous diseases, in which they are given, partly with the view of correcting the condition of the blood which leads to lithæmia, partly to form compounds with uric and oxalic acids that are more soluble than the corresponding lime salts, and therefore less likely to produce gravel, and

partly, both internally and in the form of injection into the bladder, to effect the solution of stones already formed. The carbonates, and especially the bicarbonates, in doses of from 8 to 10 or 12 drachms daily, have been extensively employed in the treatment of acute articular rheumatism, and are believed to have a powerful effect in preventing the occurrence of cardiac complications.

A., a'erated. Bergman's name for salts of carbonic acid.

A. ammoniacum aceta'tum. Liquor ammoniac acetatis.

A. ammoniacum caust'icum. Ammonia.

A. ammonia cum an'dum. Liquor ammoniac.

A. ammoniacum spirituo'sum. Spiritus ammoniac.

A., an'imal. Ammonia.

A., caust'ic. A term for a pure oxide, unhydrated, of an alkali metal, which possesses strong caustic powers. Applied especially to caustic potash, which is employed in making issues.

A., deliques'cent. A name for Potash.

A., efferves'cent. An old name of Alkaline carbonates.

A., fix'ed. Term applied to potash and soda, because they are not, like ammonia, volatile by heat.

A. fixum tartar'icum. Potassium tartrate.

A., mari'ne. Soda.

A., min'eral. A term given to soda.

A. minera'le. Crude sodium carbonate.

A. minera'le nitra'tum. Sodium nitrate.

A. minera'le phospho'rum. Sodium phosphate.

A. minera'le sali'num. Sodium chloride.

A. minera'le sulphu'ricum. Sodium sulphate.

A. of nit're. Potash derived from potassium nitrate.

A. of tar'tar. Potash obtained by the calcination of potassium tartrate with charcoal.

A., phlogis'tic. Potassium chlorate.

A., phlogis'ticated. Term applied to the product of a fixed alkali when mixed with bullock's blood, or other animal substance, and lixiviated, because it was supposed that iron and the alkali became combined with a body containing phlogiston.

A. pne'um. (Πνεύμα, air, life.) A salt which Hahnemann described as a new alkali, to which he attributed wonderful properties. It is borax.

A., Prus'sian. Same as *A. phlogis'ticated*.

A. tar'tari ace'to satura'tum. Potassium acetate.

A., u'rinary. Ammonia.

A. vegetab'ile cum ace'to. Potassium acetate.

A. vegetab'ile fixum caust'icum. Potassa fusa.

A. vegetab'ile mi'to depura'tum. Pure potassium carbonate.

A. vegetab'ile sali'to-dephlogis'tica'tum. Potassium chlorate.

A. vegetab'ile tartarisa'tum. Potassium tartrate.

A. vegetab'ile vitriola'tum. Potassium sulphate.

ALKALIA—ALKALOID.

A., vegetable. A name for potash, because it is obtained from the incineration of vegetable substances.

A., volatile. Name for Ammonia.

A. volatile. A synonym of *Ammonia*, and also of its sesquicarbonate.

A. volatile aceta'tum. Liquor ammoniac acetatis.

A. volatile aera'tum. Ammonia sesquicarbonate.

A. volatile ammoniacale. Ammonia sesquicarbonate.

A. volatile causticum. Ammonia.

A., volatile, con'crete. Sesquicarbonate of ammonia.

A. volatile ex sale ammoniaco. Ammonia sesquicarbonate.

A., volatile, mild. Sesquicarbonate of ammonia.

A. volatile nitra'tum. Ammonium nitrate.

A. volatile tartarisa'tum. Ammonium tartrate.

A. volatile vitriola'tum. Ammonium sulphate.

Alkalia. Arabic for Vase, or vessel.

Alkali-albumen. (G. *Alkali-albuminate*.) Formed as a precipitate when a liquid albuminous substance is treated with dilute caustic alkali, and then neutralised by a dilute acid. It is probable that the deposits thus formed vary in some minute way according to the special albuminous fluid from which they are thrown down, inasmuch as they differ in their action on polarised light. Alkali-albumen is not distinguishable from *Casein*, which is also termed natural alkali-albumen. It is the same substance as *Proteine* of Hoppe-Seyler.

Alkalid. Arabic for Oxide of copper, or burnt copper.

Alkaligene. (Alkali; γενέω, to beget.) Nitrogen, because it is a chief constituent of ammonia.

Alkalig'eneous. (Alkali; γενέω, to generate or produce.) Capable of yielding or producing alkaline qualities; alkali-producing.

Alkalim'eter. (Alkali; μετρέω, to measure.) A burette graduated to scale; used in alkalimetry.

Alkalim'etry. (Same etymon.) A process by which the amount of alkali or alkaline carbonate in a substance, such as the soda of commerce, is determined by the amount of an acid of given strength required for neutralisation, as tested by solution of litmus. Sulphuric acid is generally used; its exact capacity for the complete neutralisation of anhydrous sodium carbonate determined, it or the alkali to be tested is coloured by means of litmus, and the operation is conducted in a burette, the *alkalimeter*, graduated in known proportions.

Alkaline. (F. *alkalin*; G. *alkalisch*, *laugenhaft*.) Belonging to, or having the nature or properties of, an alkali.

A. earth metals. Calcium, strontium, and barium.

A. earths. The oxides of barium, strontium, and calcium.

A. met'als. Potassium, sodium, cesium, rubidium, lithium, and ammonium.

A. mineral wa'ters. See *Mineral waters*, *alkaline*.

A. phosphates of urine. Sodium, potassium and ammonium phosphates.

Alkalif'able. (Alkali; βο, to become.) Having the capacity to become alkaline.

Alkalinity. (F. *alcalinité*.) Having the properties of an alkali.

Alkalinuria. A condition of alkalinity of urine.

Alkalisa'tion. (F. *alcalisation*; G. *Alkalisierung*.) The act of conferring alkaline qualities on any substance.

Alkaloid. (Alkali; αἶδος, likeness.) Resembling an alkali.

A. process. The following account of the processes for the detection of alkaloids, by Prof. Dragendorff, is taken from the 'Year Book of Pharmacy':—1. The substance to be analysed should be first cut into small pieces and treated with water containing sulphuric acid, at a temperature between 40° C. and 60° C., two or three times, and the filtrates are put together after all the liquid has been pressed out of the solid matter. Most of the alkaloids are not injured by this treatment, even when too much acid has been used. Solanine, colchicine, and digitalin are the only ones that might be injured by a large excess of acid. If there is abundance of time, the macerations may be made at common temperatures.

Berberine is less soluble in acidulated water than in pure water, but it is completely dissolved by the large quantity of liquid used. Piperine also dissolves with difficulty in acidulated water, and part of this alkaloid may remain in the undissolved residuum, where it should be sought for afterwards.

2. Evaporate the filtrates, after the free acid has been partially neutralized with magnesia, until the liquid reaches the consistency of syrup; mix this with three or four times its volume of alcohol and a little dilute sulphuric acid, allow it to digest for about twenty-four hours at about 30°, let it become quite cold, and filter from the solid matters that have been separated by the alcohol. Wash the solid residue with spirits of wine of about seventy per cent. The remarks made at 1 concerning solanine, colchicine, and digitalin, apply equally to this digestion.

3. The alcohol must be separated from the filtrate by distillation (evaporation), and the watery residue, after the addition of a little more water, if necessary, is filtered into a flask, and in its acid condition is treated with freshly rectified petroleum naphtha (see note at the end of this translation) by continued and repeated shaking together at a temperature of about 40° C. After the liquids have separated, the naphtha, sometimes containing colouring matter and such impurities as may be removed by this treatment, is drawn off from the aqueous solution. The naphtha may also take up piperine, and if a considerable quantity has been used, and there is not much impurity present, the alkaloid will be left upon evaporating the naphtha in well-defined crystals belonging to the rhombic system. Concentrated sulphuric acid dissolves it gradually, with the production of a handsome brown colour.

4. Shake the aqueous solution with benzol, in the same way, at from 40° C. to 50° C., and evaporate the benzol after removing it. If there are traces of any alkaloid in the residue from this evaporation, it indicates caffeine. In this case, neutralise the greater part of the acid in the aqueous solution with magnesia or ammonia, but still leave it decidedly acid, and treat it again with fresh portions of benzol, until the latter leaves no residue upon evaporation. Wash the benzol

ALKALOID.

solution by shaking it with distilled water; separate from the water, and filter it. Distil off the greater part of the benzol from this filtrate, and evaporate the remainder upon several watch glasses. Care must be exercised that in case a drop of the aqueous fluid passed through the filter it is not evaporated with the benzol.

The residue from this evaporation may contain caffeine, delphine, colchicine, cubebene, digitalin, and traces of veratrine, physostigmine, and berberine. Caffeine forms definite crystals, as colourless, glossy needles; it is known by its reaction with chlorine water and ammonia. Sulphuric acid does not colour it. Cubebene also forms small crystals, which may be known by their behaviour with sulphuric acid, and the same may be said of colocynthine, elaterine, and syringine. A yellow coloured residue indicates colchicine and berberine. Sulphuric acid dissolves and colours colchicine an intense and durable dark yellow; berberine olive green, becoming clear afterwards. Berberine may be distinguished from colchicine by the behaviour of its alcoholic solution with tincture of iodine. Delphine, digitalin, veratrine, and physostigmine are left as amorphous nearly colourless residues. Delphine is coloured light brown by sulphuric acid; digitalin yields with it, in less than fifteen hours, a number of colours, changing from amber, through red and brown, to dark cherry red, and its presence may be confirmed by the sulphuric acid and bromine reaction. Veratrine, with pure sulphuric acid, becomes yellow orange, and in less than half an hour beautiful orange red, and this test may be confirmed by boiling with fuming hydrochloric acid. Physostigmine is not coloured by sulphuric acid. It may be known by its action on the eyes of cats.

5. The acid watery liquid is shaken with amylic alcohol in the same way as in 3 and 4, if the presence of theobromine is suspected.

There are also taken up by the amylic acid some of the above-named alkaloids remaining from 3 and 4; namely, veratrine and berberine, and traces of narcotine, aconitine, and atropine, and they are left in crystals after the evaporation of the solution.

Theobromine is recognised by its reaction with chlorine water and ammonia, and also as it dissolves without colour in concentrated sulphuric acid.

Narcotine is not readily soluble in acetic acid, and may be recognised by its reaction when warmed with concentrated sulphuric acid.

6. The acid watery liquid is shaken with chloroform only when the presence of the alkaloids of opium is suspected.

Chloroform takes up papaverine, thebaine (slowly), together with small quantities of narcotine, brucine, physostigmine, berberine, and, when the treatment given at 5 is omitted, veratrine and narcotine.

Crystals of papaverine and brucine are left after the evaporation of the chloroform solution. Papaverine may be readily distinguished by testing with sulphuric acid (beautiful blue violet colour), and brucine by the red colour imparted to it by Erdmann's reagent. Most of the narcotine, thebaine, narcine, veratrine, physostigmine, and berberine, are left as amorphous substances.

Narcotine may be separated from the other alkaloids by dilute acetic acid, in which it is not readily soluble, and it may be proved as in 5. Thebaine is characterised by its behaviour with

cold sulphuric acid. Veratrine and physostigmine as above.

7. The watery liquid at about 43° C. is then covered with a layer of petroleum naphtha, made distinctly alkaline with ammonia, and immediately well shaken. After the first naphtha solution has been drawn off, other extractions should be made at the same temperature with fresh portions of petroleum naphtha. The warm naphtha solutions should be washed with distilled water and afterwards filtered and evaporated. If the solution is too highly coloured by foreign matter, it may be purified by taking up the alkaloids in acidulated water, adding ammonia and shaking with pure naphtha again.

The petroleum naphtha takes up strychnine, brucine, quinine, emetine, veratrine, conine, nicotine, and papaverine.

(a) Of these, conine and nicotine are fluids, and have characteristic odours. They may be brought into solution in distilled water, and nicotine is precipitated in minute crystals by potassium-cadmium-iodide from the diluted solution after neutralising with sulphuric acid, while conine is precipitated in amorphous form.

(b) Upon cooling the warm naphtha solution, quinine separates, and traces of strychnine and papaverine also crystallise out.

(c) After evaporation, the remainder of the quinine, strychnine, and papaverine are left in crystals, and brucine, emetine, and veratrine in amorphous form.

The dry alkaloids are treated with anhydrous ether, which dissolves quinine, emetine, papaverine, and veratrine; and also conine and nicotine, if they have not been removed by water.

Strychnine and brucine may be separated by absolute alcohol, in which strychnine is nearly insoluble. Brucine is recognised after the evaporation of its solution by its behaviour with Erdmann's reagent. Strychnine may be determined by means of sulphuric acid and bichromate of potash.

After evaporating the ether solution, quinine, emetine, veratrine, and papaverine are dissolved in the smallest possible quantity of very dilute sulphuric acid; and the cold solution, which should not contain less than one per cent. of the alkaloids, is treated with carbonate of soda, when quinine, emetine, and papaverine are precipitated.

Quinine may be determined by its behaviour with chlorine water and ammonia. Emetine by producing an emetic effect, and by the absence of the veratrine reaction with hydrochloric acid. Papaverine by its behaviour with sulphuric acid. Veratrine, after its watery filtrate has been treated with chloroform, and the latter evaporated by boiling, with hydrochloric acid.

8. The alkaline watery liquid is shaken with benzol at 40° C. or 50° C., purifying as in 7. This removes quinidine, cinchonine, atropine, hyoscyamine, aconitine, physostigmine, and codeine.

Crystals of cinchonine, sometimes accompanied by a little atropine and quinidine, separate from the solution on cooling.

After evaporating the solution there remain with those just named, crystallized codeine (very distinct), aconitine, hyoscyamine, and physostigmine (mostly amorphous).

(a) The residue left by evaporation is treated with ether, which dissolves all the above-named alkaloids except cinchonine.

ALKALOIDAL—ALKANT.

(b) The residue from the evaporation of this ether solution must be dissolved in the smallest possible quantity of water containing sulphuric acid, and treated with ammonia slightly in excess, which separates quinidine and aconitine, leaving atropine, hyoscyamine, and codeine in solution.

The precipitate, which may contain quinidine and aconitine, is collected on a very small filter and dissolved in the least quantity of hydrochloric acid. Upon the addition of chloride of platinum the whole of the quinidine is precipitated.

The solution of aconitine is freed from platinum by a current of sulphuretted hydrogen; then it is made alkaline and shaken with chloroform. In the residue left by evaporating this chloroform solution, the aconitine may be recognised by means of sulphuric or phosphoric acid.

(c) Atropine dissolves with difficulty in cold benzol, and codeine dissolves readily. The former is not coloured by concentrated sulphuric acid; the latter is gradually coloured blue. Atropine, when warmed with concentrated sulphuric acid, gives the characteristic odour previously described; codeine does not. Atropine (hyoscyamine) distends the pupil of the eye; codeine does not. For physostigmine, see 4.

9. The watery liquid is now acidulated with sulphuric acid and heated to 50° C. or 60° C., covered with amylic alcohol, purifying as in 7 and 8. By shaking with amylic alcohol at the temperature just given, the morphine, solanine, and part of the narceine are obtained. The latter should be dissolved in lukewarm water, and put with the watery liquid at 10.

The solution of solanine in amylic alcohol gelatinises upon cooling, that of morphine forms the best of alkaloid crystals. Morphine is proved by Fröhde's reaction (with molybdate of soda) and by Hersemann's test (concentrated sulphuric acid solution and nitric acid).

Solanine is characterised by its decomposition in hydrochloric acid, and the retention of the products of this decomposition by ether; and also by its behaviour with iodine water and sulphuric acid.

10. The watery liquid may still contain curarine and traces of berberine, narceine (and digitatin).

Evaporate it to dryness with powdered glass; digest the pulverised residue for a day in alcohol; filter, and evaporate the filtrate. If the residue is very impure, it may be repeatedly recrystallised from water and alcohol.

Berberine remains as a yellow coloured residue, and is known by the behaviour of its alcoholic solution with iodine water.

Narceine is left in colourless crystals. It is recognised by its reaction with sulphuric acid, or by the behaviour of its aqueous solution with iodine water.

Curarine is left mostly amorphous, and is distinguished by its reaction with sulphuric acid alone, and with sulphuric acid and chromate of potash.

NOTE.—Petroleum naphtha has a boiling point between 30° C. and 80° C. It should be purified by shaking with an ammoniacal solution of acetate of lead, and distilling. That which is sold in Russia as an illuminating fluid, under the name of "chandorine," may be rectified for use in this way. Petroleum naphtha does not dissolve asphalt, which is soluble in benzol. Benzol boils

at 80° C. or 81° C. Petroleum naphtha begins to boil at a much lower temperature.

Alkaloidal. (*Alkali*; εἶδος, form.) Having the properties or composition of an alkaloid.

Alkaloids. (*Alkali*; εἶδος, likeness. *F. alcaloide*; *G. Alkaloid, Pflanzenbasen, organische Salzbase*.) Certain nitrogenous basic substances of highly complex chemical constitution, found in many plants, either alone or in combination with acids, or produced by the destructive distillation of organic matters, having usually an alkaline reaction; they are slightly soluble in water, easily in alcohol; they turn reddened litmus paper blue, and have a bitter taste. Most of them contain oxygen, and are non-volatile and crystallizable; those which contain no oxygen are generally liquid and distillable. They are all precipitated from solution by tannic acid, and the double iodides of potassium and mercury or bismuth. Almost all the alkaloids have a very marked, and many have a poisonous, action on the living animal body, an action which in most is chiefly concentrated on the nervous system. The mode of action is unknown, but recent experiments tend to the view that arrest of oxidation processes and combination with some of the protoplasmic materials of the body is not an infrequent condition. Alkaloids are in many instances destructive to the lowest forms of life, bacteria, vibriones, and such like.

In the treatment of poisoning by alkaloids, after the administration of an emetic, a solution of tannin or an infusion of galls may be given with advantage.

A., sublimation of. The recrystallization of alkaloids on a cool surface after being converted into vapour, or sublimed, by the application of heat. This process has been suggested as a means of detection in cases of poisoning; there is considerable uncertainty in the form of the resulting crystals, unless the surrounding physical conditions are exactly similar; but many alkaloids under favorable circumstances sublime in distinctive forms.

Alkanet. (*Ar. alkanah*, a reed. *F. orcanette*; *I. arganetta, ancusa*; *S. orcaneta*; *G. Ochsenzunge, Alkannawurzel*.) The root of the *Anchusa tinctoria*. Twisted, dark red pieces, 3"—4" long. The colouring principle, anchusic acid, chiefly residing in the bark, is yielded to alcohol, ether, and oils, but not to water. Alkanet was formerly used as an astringent, but now only as a colouring material.

A., bastard. The *Lithospermum officinale*.

A., dyer's. The *Anchusa tinctoria*.

A., garden. The *Anchusa officinalis*.

A., officinal. The *Anchusa officinalis*.

Alkan'na. (*Arab.*) See *Alcanna*. Also a term for Isinglass.

A. major latifolia denta'ta. The *Prinos verticillatus*.

A. orientalis. The *Lawsonia inermis*.

A. spuria. The *Anchusa tinctoria*.

A. tinctoria. The *Anchusa tinctoria*.

A. vera. The *Lawsonia inermis*.

Alkan'ne ra'dix. The root of the *Anchusa tinctoria*. See *Alkanet*.

Alkant. Old name for either Hydrargyrum or mercury, or for a kind of ink. (*Ruland*.)

ALKANTUM—ALLANTODES.

Alkan'tum. Arabic for Oxide of copper; also applied to arsenic. (Ruland.)

Al'kar. An Arabic term for a remedy.

Alkara. Arabic for a cucurbit. (Ruland.)

Alkargen. A synonym of *Cacodylic acid*.

Alkarsin. Cadet's fuming liquid. Prepared by distilling equal parts of potassium acetate and arsenious oxide in a glass retort. It consists of cacodyl and its oxidation products; it is very poisonous.

Alkasa. Arabic for a crucible. (Ruland.)

Alkeken'gi. (Arabic. *F. coqueret, cerises d'hiver, cerises de juif*; *G. Judenkirsche, Taufelskirsche, Schlafkirsche*) The winter-cherry, *Physalis alkekengi*. The round red berries are acedulous and slightly diuretic, and enter into the formation of the French *Sirap de Chicorée composé*. They contain a bitter principle, *Physalin*. They have been used in suppression of urine, gravel, and urinary disorders generally, in gout as a substitute for colchicum, and as a febrifuge. The dried and powdered hull of the fruit has been used in intermittent fever.

Alkemelych. The Arabic name of the *Alchemilla*.

Alkerm'es. (*Al*, eminence; *kermes*, the reddish galls found on the branches of the scarlet oak, *Quercus coccifera*, in Italy, Spain, and South of France.) Term for an old remedy, of the consistence of a confection, of which the kermes formed the basis.

Christophorus Ayrerus prefers bezoar stone and the confection of *Alkermes* before other cordials, and amber in some cases, *alkermes* comforts the inner parts, and bezoar stone hath an especial virtue against all melancholy affections. Burton, *Anatomy of Melancholy*.

A. auriflorum minerale. A synonym of *Antimony oxy-sulphuret*.

A. liquid. A synonym of *Elixir of alkermes*.

Alker'va. Arabic for the *Oleum ricini*, castor oil.

Al'kes. Arabic for burnt brass. (Quincy.)

Al'ketran. Arabic for the Oil of cedar.

Alkibric. Arabic for Sulphur vivum. (Ruland and Johnson.)

Alkin. Arabic for Potash, also for the smoke of coals. (Ruland and Johnson.)

Alkitram. Arabic for Pix liquida, or tar. (Ruland and Johnson.)

Alkitran. Arabic for a resin obtained from the cedar tree.

Al'koel. Arabic for the Sulphuret of lead, also for the Lapis lazuli, and for Antimonium, or antimony. (Hooper.)

Al'kofol. A synonym of *Alcohol*.

Al'kohol. Same as *Alcohol*.

Al'kol. *Alcohol*.

Also, a term for burnt brass.

Alkool. *Alcohol*.

Al'kosor. Arabic for Camphire, or camphor. (Ruland and Johnson.)

Al'ky. Arabic for the Sugar of lead. (Ruland and Johnson.)

Al'kymia. Arabic for the Powder of basilicon. (Ruland and Johnson.)

Alkymist're. An alchemist.

Al'la. Latin for Ale.

Al'labor. Arabic for Plumbum, or lead. (Hooper.)

Allage. The same as *Allaxis*.

Allagostemones. (*Ἀλλὰγῆ*, change; *στήμων*, a thread, from *στημι*, to stand.) A term applied by Gleditsch and Monch to plants in which the petals and stamens are arranged alternately on the receptacle.

Allamand, Jean Nicholas Sebastian. Swiss naturalist, born at Lausanne, 1713; died at Leyden, 1787.

Allaman'de. A Genus of the Nat. Ord. *Apocynaceæ*. Calyx five-partite, without glands; flowers funnel-shaped, with a campanulate limb; fruit a prickly capsule.

A. cathartica. (*F. orile*) Leaves whorled or opposite, oblong, acuminate, membranous, lobes of the calyx acuminate, smooth. A shrub growing in Guiana, an infusion of the leaves of which is said to be valuable as a cathartic in painter's colic in large doses it is emetic.

A. grandiflora. A synonym of *A. cathartica*.

Allaman'dee. A Tribe of the Nat. Ord. *Apocynaceæ*, having a unilocular capsule.

Allan, Bridge of. Scotland; near Stirling. The residential place for persons who drink the mineral waters of *Airthrey*.

Allandoa. The native name in Ceylon of the *Alibonthus zeylanicus*.

Allanite. A silico-aluminate of cerium, containing varying proportions of iron, lime, magnesia, and other matters.

Allant'iasis. (*Ἀλλὰς*, forced meat.) Sausage poisoning. The affection probably arises from putrefactive changes occurring in the sausage owing to imperfect curing or storage, or the use of improper materials in the manufacture. The presence of a poison is only suspected from the symptoms. No organic poisonous base has been isolated by any chemist. The Wurtemberg Black Forest and the neighbourhood of the Welsheimerwald are said to be the districts where cas have most frequently occurred. The whole number that have been reported does not much exceed 500. The poisonous sausages when cut across have a dirty greyish-green colour, soft cheesy consistence, disagreeable smell, and taste, sometimes causing smarting or soreness in the throat. The symptoms are usually seen in families, not in individuals, and run a subacute course. The first symptoms usually occur in from eighteen to twenty-four hours after ingestion, the sufferers often complaining of nausea, followed by diarrhoea and vomiting, with intermittent colicky pains and vertigo. The gastrointestinal symptoms may, however, be absent, and difficulty in swallowing, disordered vision, muscular weakness, and general prostration, constitute the disease. Dyspnoea and precordial anxiety are common symptoms. Death, when the disease is fatal, occurred in twenty-four out of forty-eight cases between the seventh and tenth days, but it may occur in the course of twenty-four hours, or be protracted to three weeks or more. The post-mortem appearances are not very well marked, but there is usually hyperæmia of the alimentary tract and of the lungs and bronchial mucous membrane. The treatment should probably consist in the administration of emetics and of purgatives or of purgative enemata.

Allan'tis. A variety in spelling of *Allant'iasis*.

Allantodes. A synonym of the *Allant'iasis*.

ALLANTOIC—ALLARTON.

Allantoic. (*Allantois*. *F. allantoïque*.) Belonging to the allantois.

A. acid. (*F. acide allantoïque*; *G. Allantoinsäure*.) A little-known acid, resulting together with urea from the oxidation of allantoin. Probably only *Allantoin*.

A. fluid. (*F. liquide allantoïdien*; *G. allantoische Flüssigkeit*.) The fluid of the Allantois. It contains, besides allantoin, albumen, alkaline lactates, sodium chloride, calcium and magnesium phosphate, glucose, except in man, and some urea. The solid constituents amount to about 0.15 per cent.

In the allantoic fluid of the mare peculiar bodies called *Hippophane* are found, either floating free or fixed to the walls of the allantois.

Allantoid. (*Allantois*; *εἶδος*, form; *G. wurstförmig*.) Resembling the allantois.

A. animalis. The Mammalia, Aves, and Reptilia, which all have an allantois.

A. fluid. The same as *Allantoic fluid*.

A. membrane. The Allantois.

A. vesicle. The Allantois.

A. vessels. The blood-vessels of the allantois, which ultimately become the umbilical vessels.

Allantoidea. (Ἀλλάντ, a sausage.) A Group of Vertebrata in which the fetus is furnished with an allantois, comprising the reptiles, birds, and mammals.

Allantoides membrana. The Allantois.

Allantoin. (Ety. same as *Allantois*.) $C_4H_5N_3O_3$. The nitrogenous constituent of the allantoic and amniotic fluids; it occurs also in the urine of new-born animals, and has been found in normal urine, and generally in that of well-fed dogs and in that of pregnant females. It forms small, but brilliant, four-sided prismatic crystals, having usually dihedral unequal summits, transparent, colourless, and tasteless. It is soluble in hot alcohol, in 160 parts of cold water, more soluble in hot water, insoluble in cold alcohol and ether. It is one of the products of the decomposition of urea; strong sulphuric acid decomposes it into ammonia, carbonic acid, and carbonic oxide; nitric acid produces urea and allanturic acid; with strong alkalies ammonia and oxalic acid are formed. It forms salts with metals, but not with acids.

Allantois. (Ἀλλάντ, a sausage; *εἶδος*, likeness, so called because of its shape in some animals. *F. allantoïde*; *I. allantoides*; *G. Wurst-käntchen*.) The urinary vesicle—a foetal structure not found in fishes or amphibia, but present in reptiles, birds, and mammals. One of the foetal appendages which, about the eleventh to the sixteenth day of incubation, during the period of embryonic life in the fowl, serves as the chief organ of respiration. The allantois originates as a vesicular bud from the mesoblastic and hypoblastic elements of the splanchnopleure close to its junction with the somatopleure at the hinder end of the embryo, in intimate connection with the part which afterwards becomes the cloaca; it is consequently an appendage of the alimentary canal. After the eighth day to the end of foetal life it is contractile, the movements being due to the presence of smooth muscular fibre cells. At an early period it develops a long stalk, pushes its way between the true and the false amnion, and curves over the embryo, so that, in the fowl, during the later stages of incubation it is separated from the shell only by the thin chorion.

At its earliest stage blood-vessels make their appearance in the outer layer. The arteries are branches or outgrowths of the iliac arteries, and subsequently become the umbilical arteries; the blood is returned by two veins, which very soon after their appearance unite close to the allantois into one trunk, which joins the omphalomesenteric vein. Thus by its proximity to the shell the allantois is an important respiratory organ.

In birds it begins on the third day, in man not until the twelfth or thirteenth. In the Pachydermata and the Cetacea it is very large; in the Carnivora it is, like the placenta, sonular; in the Rodentia and man it is small. In mammals it serves to convey by its growth the blood-vessels to the interior of the chorion, and in man, when it has accomplished this purpose, at the end of the fourth week, it ceases to grow as a vesicle, and seems to disappear at the end of the second month, though the vessels remain, and the lower part forms the urinary bladder, the connection between the extra- and intra-somatic parts remaining as the urachus, which, though usually obliterated about the fifth month, is occasionally pervious. It is lined by epithelium with large nuclei. It receives the secretion of the Wolffian bodies and later that of the kidneys.

In mammals the allantois thus performs a double function: on the one hand establishing a communication between the foetal and maternal blood, by which the aeration of the former is provided for, though the two bloods do not actually mingle; and on the other, aiding in forming part of the adult urinary bladder. The arteries, which convey the blood to be aerated by coming into near relation with the maternal blood, spring from the primitive aorta, and their branches, after penetrating and ramifying in the villi of the chorion, reunite to form the umbilical veins. With the closing up of the navel and the fuller development of the placenta, these vessels become greatly elongated and form the umbilical arteries and vein.

A. vas'cular lay'er of. The outer mesoblastic layer of the allantois which, separating from the deeper hypoblastic layer, is also called the *Endochorion*.

Allantotox'icum. (Ἀλλάντ, forced-meat, a sausage; *τοξικόν*, a poison. *G. Wurstgift*.) Term for a poison developed in putrid sausages made of blood and liver, and often proving speedily fatal. See *Allantiasis*.

Allantu'ric acid. $C_{10}H_{11}N_3O_7$. An acid obtained by Pelouze by treating allantoin with nitric acid, or boiling uric acid or allantoin with peroxide of lead. It is volatile and uncrystallisable.

Allarinoch. Old name for Plumbum, or lead. (Quincy.)

Allarton. An English surgeon of the nineteenth century.

A.'s opera'tion. A modification of median lithotomy in which little or no incision is made into the prostate; an ordinary staff is used. The left finger in the rectum touches the prostate, a straight bistoury is carried from half an inch in front of the anus into the membranous urethra in front of the prostate, and a few lines of incision towards the bladder is made; the external opening is enlarged to an inch or more as the bistoury is withdrawn. A long ball-pointed probe is run along the staff into the bladder, the staff is withdrawn, the finger is introduced under the

ALLASIA—ALLIUM.

guidance of the probe, the prostate and neck of the bladder are dilated so as to receive the forceps, when the stone is extracted.

Alla'sia. Name of a tree that grows on the coast of Mozambique; its leaves, applied in form of a cataplasm to the loins, being supposed to facilitate parturition.

Allax'is. (Ἀλλάσσω, to change. G. *Umwechslung*.) Change, conversion, metamorphosis.

Alley'ing. See *Alligation*, *Alloy*.

Allec'rim braho. A Brazilian plant, the *Hypericum laxiusculum*, reputed to be a specific against the bites of serpents.

Allec'tuary. A varied spelling of *Electuary*.

Alleghany Mountain springs. United States of America; Pennsylvania State, Cambria county. Altitude 2000 feet, on the summit of the Alleghany. The waters are indifferent, with one exception, the Ignatius spring, which is a chalybeate.

Allegrez'za. Italy; Tuscany, Commun del Montagno. Mineral waters having a temp. 15° C. (59° F.), and containing sodium carbonate, and chloride and calcium carbonate, also probably sulphur. Used in urinary concretions, vesical catarrh, rheumatic affections, and skin diseases.

Alle'lo. The common name in Egypt of the *Solanum nigrum*.

Allelu'ia. (Heb.) A name for the plant *Oxalis acetosella*, because it was plentiful in Haggan week, when the priests sung their hal-lu-lu-lahs.

Allen'oe. Ancient name for *Stannum*, or tin.

Allenimentum. (L. *ad*, to; *lenis*, soft. G. *Linderungsmittel*.) A soothing remedy.

Allen thesis. (Ἄλλος, another, ἐπιθεσις, an insertion. F. *allenthes*.) The introduction into, or actual losing of, a foreign body within the organism.

Allen'theton. (Same etymon.) That which is introduced or inserted into the organism.

Allen thetium. Same as *Allen'theton*.

Alleet'ic. An erroneous spelling of *Allotetic* or *Allot'ic*.

Allerheil'gen. Switzerland; Canton of Solcure, between Leugnan and Grenchen. Altitude 1360 ft. Mineral waters containing calcium and magnesium carbonate and sulphate, they are of a temp. 13° C. (55° F.), and are well adapted for neuropathic diseases; they are very ancient, and much frequented. There is a whey-cure establishment.

Allerimbra'bo. A Brazilian name for the *Hypericum laxiusculum*. (D.)

Allevamen'tum. (L., from *allero*, to make smooth. G. *Erleichterungsmittel*.) A means of alleviating.

Allevard'. France; Dep de l'Isère, Arrond. de Grenoble; about ten miles from the town of Grenoble. The spring, which is situated in a narrow and very picturesque valley, contains a large proportion of free hydrogen sulphide, with various sulphates, chlorides, and carbonates. Temp. 24.3° C. (75° F.) Altitude 1544 feet. Recommended in cutaneous diseases and pulmonary catarrh. The waters are used for inhalation, chiefly for an hour or more; under their influence the respiration becomes slower and fuller, the heart quieter. Chronic laryngeal and bronchial affections are treated thus, with the effect of diminishing the cough and improving the expectoration. Asthma is said to be greatly benefited

when baths are used here for diseases of the nervous system and of the heart.

Alleva'tion. (L. *allevatio*, from *allero*, to lift up. G. *Erleichterung*.) A raising up; and so an alleviating, an assuaging, as of pain.

Alleva'tor. (L.) One who raises up, an apparatus for raising sick persons.

Allex. The thumb or great toe.

Alleza'ni. France; Corsica, Arrond. de Corse. Bicarbonated chalybeate springs. Temp. 55.4° C. (131.7° F.).

All-flower wa'ter. A name for the urine of the cow, which was used as a remedy. (D.)

All-good. The *Chenopodium bonus Henri-cus*. The syllable *All* is a corruption of *Hen-* Harry = *Henricus*.

All-heal. The *Heracleum spondylium*; the *Stachys palustris*; and also the *Hypericum androsaemum*, or St. Peter's wort.

A. heal, clown's. The *Stachys palustris*.

A. heal, Hercules. The *Opoponax chironium*.

Allia'ceous. (L. *allium*, garlic. F. *alliacé*; G. *knoblauchartig*, *lauchartig*.) Belonging to, or of the nature of, garlic.

Alliaræ'ria. Ancient term for the copper used in preparing the philosopher's stone.

Allia'ria. Nat. Ord. *Crucifera*. The plant Jack by the hedge, or Sauce-alone, having a taste like garlic; now called *Sisymbrium officinale*. The herb and seeds are regarded as diuretic, diaphoretic, and expectorant, and have been given in asthma and catarrh. Also used in gangrenous affections and to promote suppuration.

Allia'rious. The same as *Alliacous*.

Allia'rium. Same as *Alliaria*.

Allicar. Arabic for Acetum or vinegar.

Allicola. Name for *Petrocum* (Hoopee.)

Alliga'men. (L., from *alligo*, to bind. Gr. *ἀνδράστωρ*, G. *Binde*, *Schnur*.) A band, a bandage, a cord.

Alligans. (L., from *alligo*, to bind to. G. *anklammernd*.) Attaching to, binding to.

A. ra'dix. (G. *Klammerwurzel*, *Huf-wurzel*.) An aerial or accessory root.

Alliga'tion. (L. *alligatio*, from *alligo*, to bind to. F. *alliage*; G. *Verbindung*, *Legung*.) A combination of two or more metals; applied by Berzelius to combinations of electro-positive bodies, as sulphur, hydrogen, and boron, with certain electro-negative bodies, as silicon, arsenic, and electro-negative metals.

Alligatoridæ. A Family of the Order *Crocodylæ*, Subclass *Hydrosauria*, Class *Reptilia*. Muzzle long, without fangs for the inferior canine teeth, ventral plates usually separate; web of feet rudimentary. Hab. America.

Alligatu'ra. (L. *alligo*, to bind to. G. *Verband*.) Term for the act or process of bandaging; or for a ligature, or bandage, according to Scribonius, n. 200.

Alli bul'bus. Belg. Ph. The bulb of the *Allium sativum*.

Allio'ni, Charles. Italian naturalist and physician. Born at Turin, 1725, died in same city, 1803.

Allioporum. The ancient name of the *Allium scorodoprasum*.

Allio tic. The same as *Allotetic*.

Allituric acid. $C_6H_8N_2O_4$. A product of the disintegration of alloxantin when its watery solution is heated with hydrochloric acid.

Allium. (Perhaps from ἄλλω, to avoid; be-

cause of its offensive smell. *F. Ail*; *G. Lauch*.) The pharmacopoeial name of the *Allium sativum*, or *Bulbus allii sativi*.

A Genus of the Tribe *Liliæ*, Nat. Ord. *Liliaceæ*. Bulbous foetid plants; flowers umbellate, enclosed within a spathe; sepals and petals spreading; the stamens inserted into their base; fruit a capsule; seeds angular.

A. ampeloprasum. The *A. porrum*.

A. arenarium. The *A. scorodoprasum*.

A. ascalonicum. (*F. ichalote*; *G. Schalotte*.) The shallot. Hab. Syria. Umbels not bulbiferous, globose; stem leafy at the base only; leaves awl-shaped; spathe two-valved; stamens tricuspidate; lobes of the flowers ovate-lanceolate; bulbs clustered. It is stimulant and diuretic. Used in cookery.

A. canadense. Meadow garlic. Hab. North America. Has the same properties as garlic.

A. cepa. (Κρόμμυς; *L. cepa*, or *cepa*; *F. oignon*; *L. cipolla*; *S. cebolla*; *G. Zwiebel*.) The onion. Hab. Egypt. Umbel not bulbiferous, globose; stem ventricose, leafy at the base; leaves terete; spathe reflexed; lobes of the flower obtuse, hooded, half as long as stamens; bulb solitary, compressed. The expressed juice has been used as an expectorant, diuretic, and antiscorbutic, in doses of two or three tablespoonfuls daily. Onion poulitice is used for boils and buboes.

A. centurium. The *A. scorodoprasum*.

A. fistulosum. (*F. ciboule*.) Welsh onion. Hab. Siberia. Umbel not bulbiferous, globose; scape and leaves terete, fistular; lobes of the flower half as long as the stamens; ovary three-cornered. Perennial. Used as a condiment, and as a stimulant and expectorant.

A. gallicum. The *Portulacca oleracea*.

A. hirsutum. Perhaps the *Moly*.

A. leptophyllum. An Indian species, the bulbs of which are eaten, and the leaves dried and used as a condiment.

A. magnum. The *A. victorale*.

A. moly. A species of garlic. (Linnaeus).

A. nigrum. Perhaps the *Moly*.

A. oleraceum. Field garlic. Bulb diuretic.

A. ophioscorodon. A synonym of the *A. scorodoprasum*.

A. plantaginum. The *A. victorale*.

A. porrum. (Πράσον; *F. poireau*; *I. porro*; *S. puerro*; *G. Lauch*, *Porrey*.) The leek or porret. Hab. S. Europe. Umbel not bulbiferous; stem leafy; spathe one-valved, deciduous; lobes of the flower oblong, obtuse; bulb simple, soft. Used as a food and condiment. The infusion has been employed as an injection.

A. redolens. The *Teucrium scordium*.

A. sativum. (Σκόρδο; *L. allium*; *F. ail*; *G. Knoblauch*; *I. aglio*; *S. ajo*.) The garlic plant. Hab. Sicily. Umbel bulbiferous; leaves slightly carinate; spathe one-valved, deciduous; bulbs compound, covered with a white skin. A local irritant, tonic, stimulant, diuretic, antelmintic, and emmenagogue. Infused in water or milk it has been used as an injection in ascariasis. The essential oil is given in the later stages of acute bronchitis of infants as a stimulating expectorant, and in diphtheria. Externally it has been used as a vesicant and rubefacient poultice to the chest in the capillary bronchitis of children, and to the extremities in convulsions. Garlic poultices have been used in burns and snake bites. When absorbed either by the alimentary canal or the skin it gives the peculiar odour to the breath of its essential oil, allyl-

sulphide, of which 112 lbs. of garlic contains about 3 oz. The expressed juice has been used in enfeebled digestion and dyspepsia, chronic catarrh, atonic dropsies. Dose ʒss—ʒij. Formerly the infusion was given in milk. The U.S. Ph. has a *Syrupus allii*. Water, alcohol, and vinegar, extract the properties of garlic.

A. schoenoprasum. (*F. civette*; *I. ci-poletta*; *S. cebolleta*; *G. Schnittlauch*.) Chives. Hab. Europe, Asia, N. America. A pot herb. Leaves fistular; head dense flowered, without bulbs; spathes two, stamens included.

A. scorodoprasum. (*F. rocambole*; *G. spanische Schalotte*.) The rockambale or sand leek. Hab. Europe. Leaves flat, keeled, edges scabrid; sheaths two-edged; spathes two; head with bulbs; stamens not exerted. Used as a food and condiment.

A. ursinum. Ramsons. Bulb diuretic.

A. victorale. (*F. victorale longus*; *G. Siegwurz*, *langer Allermannsharnisch*.) A plant, the root of which, when dried, loses its alliaceous taste and smell, and is said to allay the abdominal spasms of gravid females.

A. vineale. (*F. ail des vignes*; *G. Wilderlauch*, *Weinberglauch*.) Filaments three-pointed; leaves tubular. A species the bulbs of which are occasionally found in wheat grown in places not carefully farmed. They give a disagreeable garlicky flavour to bread made of it.

Allman, William. Professor of Botany at Dublin. Born 1771; died 1846.

Allochetia. (ἄλλος, another; χέω, to ease one's self.) The discharge of extraneous matters from the bowels.

Also, the discharge of feces through an unnatural opening. (D.)

Allocheria. (ἄλλος, other; χέω, from χέω, to go to stool. *F. allochézie*.) A dejection of abnormal substance.

Also, a dejection through an artificial anus; an abnormal opening.

Allochromic. (ἄλλοχρως, changed in colour; *G. schillernd*.) Changeable in colour shot-colour.

Allochroite. (ἄλλος, other; χρῶμα colour.) A variety of iron-garnet, which exhibits varied colours when heated with sodium phosphate in the blowpipe flame; hence its name.

Allochromasia. (ἄλλος; χρώμα, colour. *F. allochromasie*; *G. Farbenveränderung*, *Farbenuwechsel*.) A changing of colour.

Also, a synonym of *Achromatopsy*.

Allochromatic. (Same etymon.) Changing colour, causing or depending on a change of colour.

Allochromous. (*L. discolor*; *G. verschiedenfarbig*.) Frequently changing colour; a symptom in disease regarded by Hippocrates as of bad omen.

Alloepa typica. A sexually mature Nematoid Entozoon found in the cæcum of *Dicholophus cristatus*.

Alloeanthus. A Genus of *Moraceæ*. The only species known, *A. zeylanicus*, is a tree with milky sap and alternate leaves. The liber is employed to make paper and coarse textile fabrics.

Alloepathy. (ἄλλος, different; πάθος, disease.) A synonym of *Allopathy*.

Alloesis. (ἄλλοισις, from ἀλλοίω, to render different, or to change. *G. Umänderung*.) Term for a change in the constitution.

Alloetic. (*Alloosis*, a change in the

ALLOGAMY—ALLOTROPY.

constitution. *F. alléotique*; *G. Umändernd.*) Belonging or pertaining to *Allæosis*; applied to medicines capable of bringing about a change in the constitution; alterative.

Allogamy. (*ἄλλος*, another; *γαμός*, marriage.) The fecundation of a flower by pollen either from the andrœcium of the same flower, or from the andrœcia of flowers on the same plant.

Allolo'sis. Similar to *Allæosis*.

Allolot'ic. Similar to *Allæotic*.

Allolalia. (*ἄλλος*, other; *λαλιά*, talk. *F. allolalie.*) An unusual state of speech or utterance.

Allom'erism. (*ἄλλος*; *μέρος*, a part.) A term given by Cooke to that condition in which the crystalline form continues the same, although the proportions of the isomorphous constituents vary.

Allomorphia. Same as *Allomorphosis*.

Allomorphosis. (*ἄλλος*, other; *μορφή*, form. *F. allomorphie*; *G. Gestaltveränderung.*) The same as *Metamorphosis*.

Allopath. (*ἄλλος*, other; *πάθος*, affection.) A practitioner of Allopathy.

Allopath'ic. (Same etymon.) Of or belonging to allopathy.

Allopathist. (Same etymon.) A practitioner of allopathy.

Allopathy. (The same etymon.) A term for the curing of a diseased action, by inducing another of a different kind, yet not necessarily diseased; but it has been put forth by homœopaths to signify a doctrine of applying remedies according to the material condition of the organs affected by disease, and by such application, as it were, exciting another and different kind of disease, in which, they assert, the entire legitimate system or science of medicine, as opposed to homœopathy, consists. It need scarcely be stated that such a definition so applied is not a correct statement of the theory or theories underlying modern medicine. According to the homœopaths there are only three possible relations between the symptoms of diseases and the specific effects of medicines; namely, opposition, resemblance, and homogeneity. It follows, therefore, that there are only three imaginable methods of employing medicines against disease, and these are denominated *antipathic*, *homœopathic*, and *allopathic*.

Allophane. (*ἄλλος*, other; *φαῖνω*, to appear.) A substance of the clay family, consisting chiefly of silica, alumina, and water of crystallization; it is brittle, translucent, of a resinous lustre, and green, blue, brown, or white in colour.

Allophanic acid. $C_2H_5N_2O_4$. (*G. Ureincarbaminsäure*, *Bers. Harnstoffkohlen säure*, *Gmelin*.) This acid is only known in combination in the form of salts or ethers. Allophanic ether was first obtained by Liebig and Wöhler by the transmission of hydrocyanic acid vapour through alcohol.

Allophasia. (*ἄλλος*, other; *φάσις*, a saying; from *φημί*, to say.) Delirium, or incoherent talk.

Allophyle. (*ἄλλος*, another; *φυλή*, tribe. *G. fremd, ausländisch.*) Foreign.

A. race. A term applied by Quatrefages to the Esthoniens, Caucasians, and Ainœs, which he regards as making up, with the Aryan and Semitic nations, the white group of the human race.

Alloptera. (*ἄλλος*, other; *πτερον*, a wing. *F. Alloptère.*) Applied by Duméril to the pectoral fins, the situation of which varies much.

Allosteatod'es. (*ἄλλος*; *στίαρ*, suet.) An alteration of the secretion of the sebaceous glands of the skin.

Allotre'ta. (*ἄλλος*, one for another; *τρητός*, having a hole.) Applied by C. G. Ehrenberg to two Families of the *Polygastrea* having the mouth or the anus terminal.

Allot'ria. (*ἄλλότριος*, strange.) Foreign bodies or substances in unnatural positions.

Allot'ria. A Genus of the *Hymenoptera entomophaga*, Class *Insecta*.

A. vic'trix. A parasitic cynipis which deposits its ova in the rose aphid, where they develop.

Allotriapost'e'ma. (*ἄλλότριος*, of another; *ἀπόστημα*, a large abscess. *L. abscessus alienus*; *F. Allotriapostème*; *G. Fremdgesehwulst.*) A term by Sennflieben for an abscess containing another.

Allotric'oc'risis. (*ἄλλότριος*; *ἰκκρσις*, secretion.) An abnormal quality of the secretions from the body.

Allotriochet'ia. (*ἄλλότριος*, of another, foreign; *χέζω*, to ease one's self.) The same as *Allochet'ia*.

Allotriochex'ia. (*ἄλλότριος*; *χέζω*, to ease one's self. *F. and G. allotriochésie.*) An abnormal evacuation from the bowels.

Allotric'oc'risis. (*ἄλλότριος*, strange; *ἰκκρσις*, secretion.) The separation or excretion of extraneous matters in disease.

Allotriodon't'ia. (*ἄλλότριος*; *ὀδούς*, a tooth.) The fixing in of artificial or prepared natural teeth.

Allotriogen'ia. (*ἄλλότριος*; *γούσις*, taste. *F. allotriogenesis*; *G. Geschmackstörung.*) Perversion of taste, either from affection of the nervous system or from disease of the mouth.

Allotriogeust'ia. (*ἄλλότριος*; *γούσις*, taste.) Same as *Allotriogenesis*.

Allotriolith. (*ἄλλότριος*; *λίθος*, a stone.) A calculus of unusual material.

Allotriolithi'asis. (*ἄλλότριος*; *λιθίασις*.) The formation of calculi of unusual substances, as the calculous bezoar.

Allotriophag'ia. (*ἄλλότριος*; *φαγείν*, to eat; *G. Dreckessen.*) Morbid desire to eat unwholesome substances. Same as *Allotriophagy*.

Allotrioph'agy. (*ἄλλότριος*; *φαγείν*, to eat.) The eating of unnatural things, such as occurs in certain forms of insanity and hysteria.

Vogel has given this term to the disease called *Pica*.

Allotriotek'nia. (*ἄλλότριος*; *τέκνον*, that which is born, a child.) The birth of a mole or other unnatural foetal product.

Allotriotex'is. (*ἄλλότριος*; *τίξις*, child-bearing.) An unnatural delivery; also the product of such, as a mole.

Allotriuria. (*ἄλλότριος*; *οὖρον*, urine.) The presence of foreign matters in the urine.

Allotrophic. (*ἄλλος*, other; *τροφή*, food.) Term applied to substances which, whilst preserving their ordinary chemical and physical characters, lose their normal physiological nutritive properties, and may even become injurious.

Allotropic. (*G. Allotropisch.*) Having the properties belonging to *Allotropy*.

A. ox'igen. A synonym of *Ozone*.

Allot'ropism. (*ἄλλος*, other; *τρόπος*, a way, manner, or custom.) The condition of *Allotropy*.

Allotropy. (*ἄλλος*; *τρόπος*.) A term

ALLOUCHE—ALMAGRO

employed to express the fact that certain elements are capable of existing in two or more conditions, in which they possess different physical and chemical properties; as sulphur melted at a high temperature, which before bright yellow, and brittle, becomes dark, tenacious, and may be drawn out into threads like caoutchouc. Carbon presents allotropic forms in charcoal, plumbago, and the diamond.

Allouche. (Fr.) The fruit of the *Allochier* or *Cratogeomys*.

Alloxan. $C_4H_2N_2O_4$. Obtained by adding cold concentrated nitric acid to uric acid. It forms large, efflorescent, rectangular prisms, containing four equiv. of water of crystallisation; it dissolves in water; has an acid reaction, an astringent taste, and stains the skin red or purple. Its solutions are recognised by giving a white precipitate of oxaluramide with hydrocyanic acid and ammonia. It is said to have been found in the urine in a case of heart disease.

Alloxanate. A salt of alloxanic acid.

Alloxanic acid. $C_4H_2N_2O_4$. Formed when baryta water is added to a solution of alloxan heated to $60^\circ C.$ ($140^\circ F.$), until the precipitate ceases to be redissolved; barium alloxanate is formed, and on the addition of dilute sulphuric acid the barium is removed as insoluble sulphate, and the alloxanic acid crystallised from the solution in fine needles. It is a bibasic acid. The alloxanates are decomposed on boiling with water into urea and mesoxalic acid.

Alloxantin. $C_4H_2N_2O_4$. Obtained by the action of hot dilute nitric acid upon uric acid. It forms small, four-sided, oblique, rhombic prisms, colourless and transparent, which become red on exposure to ammoniacal vapours.

Alloy. (F. *alloyer*; to mix metals. F. *alliage*; I. *lega*; G. *Legirung*.) The combination or mixture which takes place when two or more metals, with the exception of mercury, are melted together. This may be a solution of one metal in another, a chemical combination, or a mechanical mixture, or a combination of these. Alloys of which mercury forms a part are called amalgams. The least valuable of the two metals is called the alloy. Alloys of most metals offer a greater resistance to the current of electricity than the mean resistance of their component parts.

A., false. An alloy used for filling hollow teeth; it melts at a sufficiently low temperature to enable it to be applied by instruments, which are not heated to such an extent as to damage the structures of the mouth.

All'spice. The common name for the fruit of the *Eugenia pimenta*, or Jamaica pepper. See *Pimenta*.

A. bush. The *Benzoin odoriferum*.

A. Carolina. The *Calycanthus floridus*.

A. wild. The *Benzoin odoriferum*.

Hallucination. A variety of the more common form of spelling *Hallucination*.

Allume. Italy; in the Island Giglio. Chalybeate waters of $16^\circ C.$ ($59^\circ F.$). They contain a large quantity of iron sulphate and some sodium chloride. Used in abdominal diseases and in chronic psoriasis.

Allus. The thumb; the great toe.

Alluvial. (L. *alluvio*, to wash.) Of or belonging to Alluvium. Applied to deposits on the land which have been produced by the action of water.

A. soils. Soils which have resulted from

recent deposit from water, consisting largely of sand, clay, and much vegetable matter; they are frequent in the deltas of rivers and in low-lying districts; from their origin they are wet and often marshy, whilst drainage is difficult. As a rule they are unhealthy, unless the drainage is well carried out.

A. waters. Well water from alluvial soils is generally impure, often containing much organic matter, which occasionally gives rise to abundance of nitrites; in addition, they generally contain calcium carbonate and sulphate, magnesium sulphate, sodium carbonate and chloride, silica, and iron. From 20 to 120 grains of solids per gallon is no unusual amount.

Alluvium. (L. *ad*, to; *luo*, to wash. F. *alluvion*; I. *alluvione*; G. *Alluvium, angelschwemmte Land*.) The stratum immediately below the superficial mould, which has been washed down by the ordinary operations of water, and consisting of coarse gravel, sand, or mud. The product of the extraordinary operations of water, as in a deluge, is called *Diluvium*.

Allux. Same as *Hallux*.

Allyl. C_3H_5 . A non-saturated univalent alcohol-radicle. Allyl can be obtained in the free state by decomposing the iodide with sodium at a gentle heat, and afterwards distilling the liquid product. It is a very volatile liquid, with a pungent odour, resembling horseradish; sp. gr. 0.884 at $14^\circ C.$ ($57^\circ F.$). It boils at $59^\circ C.$ ($138^\circ F.$). It is but little attacked by strong sulphuric acid.

A. alcohol. C_3H_5HO . A colourless liquid, boiling at $97^\circ C.$ ($207^\circ F.$), and having a pungent odour. It mixes in all proportions with water, alcohol, and ether. It burns with a brighter flame than alcohol.

A. aldehyde. C_3H_5O . A synonym of *Acrolein*.

A. sulphide. $(C_3H_5)_2S$. A natural product, being the essential oil of garlic. It occurs also in the herb and seeds of *Thiapsi arvensis*, which, when distilled, yield a mixture of 90 per cent. of oil of garlic and 10 per cent. of oil of mustard (sulphocyanide of allyl).

A. sulphocarbimide. $C_3H_5CS.N$. The essential oil of black mustard seed. It does not exist ready formed in the seeds, but is produced by the decomposition of myronic acid by myrosine.

A. sulphocyanide. (G. *Schwefelcyanallyl*.) C_3H_5NS . See *Mustard, essential oil of*.

A. thiocarbimide. A synonym of *A. sulphocarbimide*.

Allylene. C_3H_4 . An allyl compound of the acetylene series.

Alma. Arabic for Aqua, or water. (R. and J.)

Also, the first motion of a fœtus to free itself from its confinement. (Parr.)

Also, (Gr. *ἄλμα*, a spring), a pulsation; palpitation of the heart.

Al'mabri. Arabic for a stone like to amber. (Ruland.)

Alma'gra. Arabic for the operation of washing, or the substance washed.

Term for red earth or bole; used as an astringent.

Also, a name for the white sulphur of the alchemists.

Old term for a lotion. (Ruland.)

Alma'gro. Spain. A carbonic acid spring of a temperature of $8^\circ C.$ ($46.4^\circ F.$); the gas is so plentiful that animals are soon suffocated.

ALMAKANDA—ALNUS.

Almakan'da. Arabic for litharge. (R. and J.)

Almakist. Arabic for litharge.

Almame'zo. Austria-Hungary, in the Bereg Ug'essa County. Many mineral waters are found in this district, the composition of which is little known.

Almandine. A name for the violet or violet-red varieties of the garnet and its congeners.

Almarago. See *Almargen*.

Almarcab. Arabic for litharge. (Turton.)

Almarcarida. Arabic for litharge of silver (Ruland), also called *Almarcab* (Turton); and *Almarab*, according to Castells.

Almar'cat. Arabic for the *Scoria auri*. (R. and J.)

Almargen. Arabic for the substance coral, also called *Almarago* and *Armalgor*. (R. and J.)

Almarlab. The litharge of silver, which is litharge having a pale colour.

Almarkesita. Arabic for Hydrargyrum, or mercury. (R. and J.)

Almartak. Arabic for powder of litharge. (R. and J.)

Almas. Hungary, a village about ten miles from Komorn, on the right bank of the Danube. Tepid mineral waters strongly impregnated with hydrogen-sulphide.

Almatatica. (Arab.) Term anciently used for the metal Cuprum, or copper. (R. and J.)

Alme. (Αλμη.) Brine; also called *Muria* by Pliny and Celsus. It was used for ulcers of the mouth and rectum in dysentery, and as a local application in diseases of the joints of the hands and feet. (Waring.)

Almeccasite. Same as *Almatativa*.

Almechasite. Same as *Almatatica*.

Alme'ida. Spain, Province of Leon, near Bonar. A hot spring containing sulphur and alkaline salts, which has a local reputation for almost all diseases.

Almellelu. Used by Avicenna to signify a preternatural heat, less than that of fever, and which may continue after a fever. (Castells.)

Almeno. Arabic for Rock-salt. (R. and J.)

Almeri'a. Spain. Mineral waters springing from the foot of a quartz rock. They contain calcium, magnesium and sodium chloride, magnesium and calcium sulphate, and magnesium carbonate, and much free carbonic acid. They are used in nervous diseases, paralysis, rheumatism, chronic mucous discharges, and skin diseases.

Almetat. Arabic for the *Scoria auri*.

Almezer'ion. The *Cnecorum tricoecum*.

Almi'sa. Arabic for Moschus, or musk (Johnson.)

Almis'adlr. Arabic for Sal ammoniacum. (R.)

Almisdach. Arabic term used by Albucaasis for the larger of two kinds of forceps, furnished with teeth on the inside, for crushing the head of the fetus when of extraordinary size; the smaller was called *Misdach*.

Almizadir. Arabic for Verdigris. (Dornow, R. and J.)

Almond. (Αμυγδαλη; *L. amygdalus*; *F. amando*; *L. mandala*; *S. almen'dra*, *G. Mandel*.) The seed of the *Amygdalus communis*. See *Amygdala*.

A. bis'cuits. Prepared in a similar way to almond bread, and used for the same purpose.

A., bitter. See *Amygdala amara*.

A. bread. A food for the diabetic, made of blanched sweet almonds and white of egg. Useful because almonds contain no starch and only a very small amount indeed of sugar.

A. cake. The compressed mass left after the expression of the oil from almonds. Used as a cosmetic.

A., coun'try. The same as *A., Indian*.

A., earth. The *Arachis hypogaea*.

A. sa'vor. A liquid prepared from the bitter almond, and containing variable quantities of its essential oil. Poisoning by this substance has been recorded.

A., Gu'iana. Brazil nuts; the fruit of the *Bertholletia excelsa*.

A., In'dian. The fruit of the *Terminalia catappa*; it is oleaginous and nutritious.

A., Ja'va. The fruit of the *Canarium commune*. They are made into a kind of bread, and an oil, like almond oil, is obtained from them.

A., Jor'dan. The best variety of the *Amygdala dulcis*, imported from Malaga.

A. of the ear. (*F. amygdale des oreilles*; *G. Ohrenmandel*.) Various applied to the tonsils and to a small lymphatic gland over the mastoid process or below the external ear.

A. of the throat. (*F. amygdale*; *G. Halsmandel*.) A popular name of the tonsils.

A. oil. See *Oleum amygdala*.

A. paste. Four ounces of blanched bitter almonds, the white of one egg, rose water and spirit of wine equal parts, as much as is sufficient; beaten up into a paste, and used for preventing chapped hands.

A. powder. Almond cake powdered and used, instead of soap, for washing the hands when chapped.

A., sweet. See *Amygdala dulcis*.

A. tree. The *Amygdalus communis*.

Almuri. Arabic for a cathartic preparation used by the ancients, mentioned by Rhazes.

Alnaba'ti. Used by Avicenna for the Carob fruit.

Al'neo. Arabic for Stannum, or tin. (Ruland and Johnson.)

Alnerio. Arabic for Sulphur vivum.

Alnic'olus. (*L. alnus*, the alder tree; *colo*, to inhabit.) Living on the alder tree.

Alnites. A Genus of Fossil *Botulaceae*, found only in the Tertiary system.

Alnus. (*F. alne*; *G. Erle*.) A Genus of the Nat. Ord. *Betulaceae*. Stamens four; nuts angular, wingless, one- or two-seeded.

A. commun'is. The *A. glutinosa*.

A. glutin'osa. (*F. alne commun*; *I. ontano*; *G. Schwarzerle*.) The alder. Hab. Europe, Asia. Leaves roundish, blunt, wedge-shaped at the base, bearded at the angles of the veins beneath. The bark and leaves are astringent and bitter; the nuts are astringent. The leaves when bruised are used as an antiseptic poultice and as an application to wounds and ulcers. The infusion of the nuts is used as an astringent gargle. The bark has been recommended as an antiperiodic in ague.

A. inca'na. The tug alder. Hab. North America. The bark is used internally and externally as a hemostatic. The tree is believed to possess the same properties as the *A. glutinosa*. In Kamtschatka the bark is used for making a kind of bread.

ALOCASIA—ALOE.

A. n'gra. The *Rhamnus frangula*.

A. rotundifolia. The *A. glutinosa*.

A. serrulata. The *A. serrulata*.

A. serrulata. The American alder.

Used as *A. glutinosa*. It is credited with antisyphilitic and antiscurfous properties.

Aloca'sia. A Genus of the Nat. Ord. *Ardeas*.

A. montana. Hab. India. The fresh juice is acrid, and is used by the natives as a stimulant and rubefacient.

Alochia. (*A. neg.*; and *lochias*.) Absence of the lochial discharge.

Al'oe. (*Al'oe*. F. *aloës*; I. and S. *aloe*; G. *aloe*; Ar. *cabar*, *musabber*.) Aloes. The inspissated juice of the leaves of many species of aloes. The leaves are cut off and allowed to drain naturally, without pressure, into a receptacle, and the juice is evaporated either in the sun or by boiling. It varies in appearance and in consistence, according to age, the kind of aloes used, the mode of preparation, and other circumstances. Aloes is somewhat sweetish and also very bitter, of a strong and disagreeable odour, of a brownish colour, and a more or less resinous fracture. It contains crystalline and amorphous aloin, resin, volatile oil, gallic acid, albumen, and calcium and potassium salts. Aloes has been used as a stimulating application to slowly healing wounds and ulcers. Aloes in sufficient dose is a cathartic. It increases the secretion of bile, and in some degree that of the glands of the large intestine. Some late observations tend to show that a necessary condition of its purgative action is the presence of bile in the intestines. In large doses it produces active purgation, sometimes with much griping, and occasionally with rectal congestion and hemorrhoids. As a result of this action, it is considered to be an emmenagogue and an abortifacient. In small doses it is a stomachic and cholagogue. It is used in constipation, in indolence of the liver and intestines, in thread worms, and in amenorrhoea, and is counter-indicated, at least in large doses, in rectal hæmorrhage, piles, menorrhagia, threatened abortion, and pregnancy; in habitual constipation it is used in small doses, combined with nuxvomica, or other bitter. Contrary to general practice, it was recommended by Oppolzer in piles, with quinine or iron. Dose, 4-6 grains.

Death is said to have been caused by large doses of aloes; in one case two drachms were taken by an adult; diarrhoea came on, which proved fatal in twelve hours.

A. aromatica. A synonym of *Aloes-wood*.

A. Barbadosensis. Ph. B. (F. *aloës des Barbades*.) Barbadoes aloes. Derived chiefly from *Aloe vulgaris*, but also in some degree from *A. arborescens*, *A. purpurescens*, and *A. Socotrina*. It varies in colour from dark-brown to reddish-brown or liver colour, when powdered dull olive yellow, breaks with a clean, dull, waxy fracture, with opaque edges, has a strong disagreeable smell; dissolves almost entirely in proof spirit, and during solution exhibits under the microscope numerous crystals. One part dissolved in 100,000 of distilled water gives a fine rose-colour on the addition of chloride of gold or tincture of iodine; other varieties show this reaction feebly or not at all. Dose, 2-6 grains, or less.

A. caballina. (F. *aloës caballin*; G. *Rosalee*.) Caballine, horse, or fetid aloes. An

inferior variety derived from the dregs of more valuable kinds, and at one time used in veterinary medicine on account of its cheapness. It is black, opaque, dull in fracture, and very nauseous.

A. Capensis. U.S. Ph. (F. *aloës du Cap*.) Cape aloes. The inspissated juice of *Aloe spicata* and other species, as *A. ferox*, *A. africana*, *A. perfoliata*. It has a dark olive or greenish-black colour, when powdered bright yellow, slightly tinged with green, a brilliant conchoidal fracture, transparent at the edges, and without crystals when dissolved in spirit. It contains, in 100 parts, 69.45 of soluble aloes, 32.433 of insoluble aloes, and 8.117 of salts.

A. depurata. Purified aloes; a synonym of *Extractum aloes alcoholicum*.

A. opatica. The same as *A. hepatica*.

A. gummi. Gum aloes; a synonym of *Aloes*.

A. hepatica. (F. *aloës hépatique*; S. *Leberaloe*.) Hepatic aloes. A variety of uncertain origin, probably obtained from the same species as Socotrine aloes, but prepared with less care. It is reddish-brown in colour, of nauseous taste, darker and less aromatic than Socotrine aloes, and with a less smooth fracture and a more opaque appearance.

A. insuccata. Aloes dissolved in the juice of roses, violets, borage and bugloss, and then evaporated to a proper consistence.

A. insuccata tartarea. The *Aloe insuccata*, to which one third of its weight of cream of tartar has been added.

A. lu'cida. A synonym of *A. socotrina* and of *A. capensis*.

A. Natalensis. Natal aloes. A variety imported from Natal. It is opaque and of greyish-brown colour. The aloin which it contains is called *Nataloin*.

A. purgans. A term for the drug Aloes.

A. purificata. U.S. Ph. Purified aloes. Socotrine aloes 24 troy ounces, strong alcohol 4 fluid ounces. The aloes, first melted in a water bath, is mixed with the alcohol, then strained and evaporated. Ordered for the purpose of removing sticks and other impurities.

A. rosa'ta. Aloes repeatedly dissolved in the juice of roses, and as often evaporated to a proper consistence.

A. Socotrina. B. Ph. (F. *aloës socotrin*; G. *Socotrinischealoe*.) Socotrine aloes. The inspissated juice of *A. socotrina*, and probably of *A. abyssinica*, *A. officinalis*, and *A. rubescens*. It is dark reddish or yellowish brown, when powdered golden yellow, breaks with an irregular or a smooth and resinous fracture, having translucent edges, is more aromatic in smell than the other varieties, and contains an abundance of crystals when dissolved in spirit. It is supposed to be gentler in action. Dose, 2-6 grains or less.

A. succotorina. Otherwise *Aloe socotrina*.

A. viola'ta. Aloes repeatedly dissolved in the juice of violets, and as often evaporated to a proper consistence.

A. viola'ta tartarea. The *A. violata*, to which one third of its weight of cream of tartar has been added.

A. socotrina. A synonym of *Aloe socotrina*.

Al'oe. (G. *aloe*; plant; Ar. *sibbur*; Syr. *olar*.)

ALCEDARIUM—ALOES.

A Genus of the Nat. Ord. Liliaceae. Caulescent; leaves permanent, succulent; flowers cylindrical, corolla erect, mouth spreading, bottom nectariferous, stamens hypogynous, capsule membranous, 2-celled, ovules numerous. The leaves have a strong cuticle and a thick walled epidermis enclosing a transparent, large-celled, mucilaginous pulp tissue, and a subepidermic layer of small celled green parenchyma, in which run many parallel bundles of vessels having on their inner surface a layer of smaller prismatic truncated cells placed end to end, which in summer are filled with a transparent viscid juice, sometimes the divisions disappear and the cells become tubes. This juice when inspissated forms aloes; when fresh it is used as an external refrigerant application in inflammations. The pulp washed in cold water and mixed with a little burnt alum is a native remedy for ophthalmia, and is applied in a muslin bag.

A. Abyssinica. Subcaulescent, leaves lanceolate, rather erect, margin with reddish serrations, flowers greenish yellow. A species which probably affords some of the aloes shipped from the Red Sea as Socotrine or Moka aloes.

A. Africana (Miller). A Cape species, yields a less powerful aloes.

A. Americana. The *Agave americana*.

A. Arabica. A species said to supply Hepatic aloes.

A. arborescens (Miller). One of the species producing Cape aloes.

A. Barbadosensis (Miller). A synonym of *A. vulgaris*.

A. commellina (Willd). One of the species producing Cape aloes.

A. dichotoma. The arrow tree; so called because of its use by the Hottentots for arrows. It yields a kind of aloes. (W.)

A. ferax, L. A species supplying the best kind of Cape aloes.

A. gallica. An old term for a bitter drug, probably Gentian.

A. Guineensis. A synonym of the *A. vulgaris*.

A. Indica (Royle) Hab. North-West provinces of India. A variety of *A. vulgaris*, having spikes of red flowers.

A. Isipicata. A synonym of *A. spicata*.

A. lingua. A synonym of *A. linguaeformis*.

A. linguaeformis. One of the species producing the best Cape aloes.

A. litorea (König) Hab. Cape Comorin. Probably a variety of *A. vulgaris* stunted by a poor saline soil.

A. multiflorus. A source of Cape aloes.

A. officinalis. A variety of the *A. Socotrina*.

A. perfoliata. (Var. *Form*, Linnaeus) A synonym of *A. vulgaris*.

A. plicatilis. A species producing a less powerful kind of Cape aloes.

A. purpureus. A species producing part of the Cape aloes.

A. rubescens. A variety of the *A. Socotrina*, having a suffruticose stem; spreading leaves with thorny margins, and a compressed branched peduncle.

A. sinuata. A synonym of *A. vulgaris*.

A. Socotrina. Hab. Island of Socotra, southern shores of the Red Sea and Indian Ocean. Stem arborescent, 18' in height, leaves ensiform, green, with small white serratures;

flowers yellow or red and yellow; stamens unequal. The chief source of Socotrine aloes.

A. spicata. Hab. Cape of Good Hope. Stem arborescent, round, 3' 4' high, leaves ensiform, flat, dentate, spotted with white, flowers spiked, campanulate, horizontal, whitish, beneath each is a broad ovate, acute bract. Yields Cape aloes.

A. vera (Miller). A synonym of *A. Socotrina*.

A. vulgaris (Lam.). The Barbadoes aloes. Hab. India, North Africa, South Europe, West Indies. Stem arborescent, short, and woody, throwing up many suckers from the base, leaves ensiform, sinuate-serrate, glaucous, white-spotted, flowers yellow, not exceeding the stamens in length. The source of Barbadoes and Curaçoa aloes.

Aloedarium. (Ἀλογόδριον.) Old name for a cathartic medicine, having aloes as a chief ingredient, many of which are described by Aetius, iii, 101 (Gorræus.)

Aloepaticus. Composed of, or compounded with, aloes.

Aloephangine pilula. A term for pills composed of aloes and aromatics; the adjective being of Arabic origin, and signifying odorous or aromatic.

Aloeresinic acid. $C_{15}H_{16}O_7$. A brownish-yellow resin, consisting of microscopic crystalline granules, soluble in alcohol and ether.

Aloeresininic acid. $C_{15}H_{16}O_8$. A yellow crystalline substance, resulting with aloeretic acid, from the action of ether on a resinous product obtained by the action of boiling dilute sulphuric acid on the insoluble portion of Cape aloes in water. It is easily soluble in alcohol and ether.

Aloeretin. $2(C_{15}H_{16}O_8) + H_2O$. A product of the oxidation and hydration of aloeresinic and aloeretic acids. Insoluble in ether, which distinguishes it from aloeresinic acid.

Aloeretic acid. $C_{30}H_{32}O_{13}$. A substance which, under the microscope, appears under the form of brown, resinous, shining plates. With difficulty soluble in alcohol, insoluble in water and ether, of acid reaction and bitter taste.

Aloereticinic acid. $C_{15}H_{16}O_8$. A brown amorphous substance, obtained along with aloeresininic acid from Cape aloes. It is insoluble in ether.

Aloes. The English name for the juice of the several species of *Aloe*, when prepared into an extract.

A., Barba'does. See *Aloe Barbadosensis*.

A., Beth'eldorp. A fine kind of Cape aloes prepared at the Missionary Institution at Betheldorp, at the Cape of Good Hope.

A., blue. (F. *aloe bleu*.) A synonym of the *Agave americana*.

A., Bom'bay. A synonym of *Hepatic aloes*.

A., caballina. See *Aloe caballina*.

A., Cape. See *Aloe capensis*.

A., Curaçoa. A variety made in the Island of Curaçoa in the Dutch West Indies.

A., Cyprus. An excellent variety made in the Island of Cyprus.

A., East India. A synonym of *Aloe socotrina*.

A., false. The *Agave virginica*.

A., fœtid. (F. *A. novæ et fœtidæ*.) A synonym of *Aloe cuballina*.

ALOESIC ACID—ALOIN.

A., green. (F. *aloë vert.*) A synonym of *Fourcroya gigantea*.

A., hepatic. See *Aloë hepatica*.

A., horse. A synonym of *Aloë caballina*.

A., India. (G. *ostindische Aloë.*) An inferior variety made in various parts of India, but seldom found in a European market.

A., insoluble. $C_{12}H_{12}O_{12}$. A term applied by Kossmann to the resinous residue of a watery solution of Cape aloes soluble in alcohol.

A., Jambouca. The same as *Aloë badensis*.

A., liquid socotrine. Obtained from the Red Sea. It yields a crystalline deposit, and when dried is like Socotrine aloes.

A., mineral. Asphalt or Bitumen Judicum.

A., Mo'cha. Same as *Aloes, Moka*.

A., Mo'ka. An inferior kind of hepatic aloes, of dark colour and nauseous smell, brought to Aden from the interior.

A., Natal. See *Aloë natalensis*.

A., resin of. A transparent brown substance deposited from a hot watery decoction of aloes, soluble in alcohol, ether, and alkaline solutions. It is a purgative of variable action.

A., root. The *Aloë farinosa*.

A., shi'ning. A synonym of *Aloë capensis*.

A., socotrine. The same as *Aloë socotrina*.

A., socotrine. See *Aloë socotrina*.

A., soluble. $C_{51}H_{52}O_{52}$. A term applied by Kossmann to the part of Cape aloes soluble in water, which he believes to be different from aloin. It is decomposed by dilute sulphuric acid into aloë-resinic acid and aloëretin, which are insoluble, and into glucose and aloëretinic acid, which last, though insoluble in water, remains dissolved in the saccharine fluid.

A., spic'at' extractum. A synonym of *Aloë socotrina*.

A., translu'cent. A synonym of *Aloë socotrina*.

A., Turkestan. A synonym of *Indian aloes*.

A., Turkey. A synonym of *Aloë socotrina*.

A., volatile oil of. (G. *Aloëöl.*) $C_8H_{10}O_2$. A pale yellow mobile liquid existing in small quantity in aloes; of sp. gr. 0.863, boiling between 266.6° C. and 271.1° C. (510° F. and 520° F.), and having a taste and smell of mint, or of a mixture of fusel oil and prussic acid.

A., vulgaris extractum. A synonym of *Aloë hepatica*.

Aloëic acid. An impure mixture of chrysanmic and aloëtinic acids.

Aloëcin. A bitter principle found by Pfaff in aloes, probably aloin.

Aloëcinic acid. A red-brown fluid of musky odour, obtained by the action of weak chlorine water on aloëcin. It boils and is decomposed at 250° C. (482° F.). Insoluble in water, soluble in alcohol and ether; it becomes resinous on exposure to the air.

Aloes-wood. (F. *bois d'aloës, calambas*; G. *Aloëholz*.) Considerable doubt has existed as to the tree from which this substance is obtained. It would appear that the true aloes-wood is a product of the *Aloëzyllum agallochum*. It is of ashy brown colour, veined, soft when recent, becoming hard when kept; of agreeable odour, and bitter, aromatic taste and gives a pleasant perfume when burnt. It is supposed to consist largely of resinous concre-

tion. It is used as an analeptic and as a stimulant perfume, when burnt, in vertigo and paralysis. It is also called Agila wood.

An aloes-wood is obtained from a species of *Aquilaria*; also a cordial, and used in gout and rheumatism.

A., false. A product of *Eucroaria agallocha*, an Euphorbiaceous plant, which has been erroneously supposed to yield aloes-wood.

Aloëtic. (L. *aloëticus*, from *aloë*, the aloes plant. F. *aloëtique*; G. *aloëhaltig*.) Of or belonging to aloes.

A. acid. A synonym of *Chrysanmic acid*. According to some, an orange powder obtained by the action of nitric acid on aloes with heat, and distinct from chrysanmic acid.

Aloëtica. Aloëtic remedies; medicines containing aloes.

Aloëtine. The purified juice of aloes. It crystallises in prismatic needles of a beautiful sulphur-yellow colour. Its taste, at first imperceptible on account of its insolubility in water, soon becomes intensely and persistently bitter. It is probably an impure substance containing Aloin.

Aloëzyllon. A synonym of *Aloes-wood*.

Aloëzyllum. (Ἀλόη, aloë; ἔυλον, wood.) A doubtful Genus of the Suborder *Cæsalpinie*, Nat. Ord. *Leguminosæ*. Sepals four, caducous, one larger than the others, and falciform; petals five, unequal; stamens ten; ovary compressed; fruit woody, smooth, falciform, monospermous; seed arillate.

A. agallochum. Hab. Coochin China. Yields *Aloes-wood*. A lofty tree, with alternate, simple, lanceolate, petiolated leaves, and terminal many-flowered peduncles.

A. ovata. Also yields *Aloes-wood*.

Alofel. Arabic term for Pannus, or a plegdet of lint or rag, wherewith to press upon a vessel after venesection. (R. and J.)

Alogandromelia. (Ἀλογος, without reason, and so a brute; ἀνθρωπ, a man; μέλος, a limb.) Term by Malacarne for a class of monsters having the body of a brute with the limbs of a man.

Aloghermaphroditia. (Ἀλογος; ἡρμαφροδίτης, hermaphrodite.) Term by Malacarne for a class of monster-brutes having the two sexes united in the same individual, which normally ought to be distinct.

Alogia. (A, neg.; λόγος, a discourse.) Defect of speech from intellectual deficiency.

Alogotrophia. (Ἀλογος, void of reason; τροφή, to nourish.) A term which has been applied to the morbid or excessive nutrition of any part.

Alogus. (Ἀλογος, without speech. G. *unvernünftig*.) Irrational, unreasonable.

Alohar. Arabic for Hydrargyrum, or mercury. (R. and J.)

Alohoc. Same as *Alohar*.

Aloicus. The same as *Aloëtic*.

Aloid. (Ἀλόη, aloë; εἶδος, form.) Having the appearance or characters of an aloë or of aloes.

Aloin. The active principle of aloes. Its composition varies according to its source; that from Barbadoes aloes, *barbalois*, is $C_{17}H_{18}O_7$; that from Natal aloes, *natalois*, is $C_{21}H_{22}O_{11}$; that from Socotrine aloes, *socalois*, is similar to barbalois. Aloin is a glucoside, and is obtained by crystallization from a concentrated aqueous solution of aloes and recrystallization. It consists of minute

ALOINEÆ—ALOPECIA

needle-shaped radiating crystals, pale yellow, and, after a first sweetness, intensely bitter, slightly soluble in cold, readily in hot water and in alcohol. It oxidizes at 100° C. (212° F.). Nitric acid forms a deep red solution, converting it into chrysammic acid; sulphuric acid gives a dirty-green colour; paper soaked in a solution of aloin is turned pink by nitric peroxide. It is an active cathartic, although this has been doubted. Dose, 0.5—2 grains.

A., amorphous. Probably aloin, along with impurities obtained during the process of inspersion of the aloes juice. It is soluble in water, and forms 25 to 30 per cent. of aloes. It is purgative.

Aloin'ese. A Tribe of the Nat. Order *Urticaceæ*. Perianth usually tubular; episperm membranous, palish; leaves fleshy or coriaceous, fruit sometimes fleshy.

Aloin'eus. Having the characters of the aloes.

Al'oisol. A synonym of the volatile oil of aloes.

Alois'tes. A synonym in Apuleius of *Aloe gallica*, which was probably a Gentian.

Alo. a Genus of Fossil *Urticaceæ* found only in the Tertiary deposits.

Aloitin'ic acid. $C_7H_5N_3O_8$ or $C_7H_5(NO_2)_3O_8$. A yellow, almost insoluble substance, obtained by the action of strong nitric acid on aloes. Slightly soluble in water, dissolving with a purple-red colour in hot alcohol, changing to yellow with acids and restored by alkalis. On further boiling with concentrated nitric acid it forms chrysammic and then picric acids.

Aloin'ba. Arabic for Plumbum, or lead. (Quincy.)

Aloin'eæ. Applied by Lessing to a Subtribe of the Nat. Order *Eupatoriaceæ*, having the *Aloina* for their type.

Al'ooc. Same as *Alomba*.

Al'opeces. (Ἀλωπεκεν, from ἀλώπηξ, a fox, in which these muscles are strong.) The psoas muscles, according to Vesalius, *de H. C. F.* ii, 38, and Fallopius in *Obserr. Anat.* i, p. 390.

Alopecia. (Ἀλωπεκία, from ἀλώπηξ, a fox, because partial loss of hair is common in that animal. *F. alopecie*; I. and 8. *alopecia*; G. *Alopecie*, *Fuchraude*, *Fuchagrind*, *Kahlkopfigkeit*.) The partial or complete falling off of hair from a part, the beard and eyebrows, as well as from the scalp; baldness.

A. accidenta'lis. Baldness arising from definite local disease, or affections, as *Tinea decalvans*, or conditions of the general system which impair nutrition, as fevers, syphilis, gout, mental over-work or distress, pregnancy.

A. acquis'ita. Acquired, as contradistinguished from congenital alopecia.

A. adna'ta. Congenital alopecia; it does not generally last through life, but the hair begins to grow in a few years after birth more or less completely. When it is permanent, the other cuticular structures, the teeth, and nails, are often deficient. It is seldom complete; the hair bulbs are present in greater or less number, but the growth is downy.

A. areata. A form of premature idiopathic baldness, due to the falling out of the hairs from their follicles in an apparently healthy skin, beginning as a rule on the hairy scalp in a single, white, smooth, shining patch of baldness, surrounded abruptly by healthy hair. It is believed by some to be due to a lesion of nerve function;

the hair bulbs atrophy, and the hairs often become broken up or nodulated at the lower part. It is very much more common in childhood than in advanced age, but constitution and sex appear to have no influence upon it. It is probably non-contagious, and is not caused by an epiphyte. It would seem that the discrepancy amongst observers as to the presence or absence of fungous elements depends upon a confusion of this disease with a very similar one, *Tinea decalvans*, which is carried by the growth of the *Microsporon Andromiti*. The treatment consists in applying frictions with ethereal oils in alcoholic solution, or stimulating alkaloids, veratrin, aconite, dissolved in alcohol, or blistering with iodine, cantharides, or capsaicum.

A. circumscrip'ta. A synonym of *A. areata*.

A. congenita'lis. The same as *A. adnata*.

A. furfuracea. In this affection the diseased portion of the scalp is covered with thin, white, asbestos-like, glistening scales, which if removed by potash soap rapidly re-form. The condition may persist for months or years, and is a frequent condition in chlorosis. After a time the hair begins to fall off, and bald patches of greater or less extent occur. The patch of skin is smooth, shiny, pinkish, and thinned. The causes may be arranged under the three heads of chlorosis, anæmia, and cachexia.

A. neurotica. Baldness depending upon conditions of local nerve disturbance, or of central nervous disorders, or upon mental distress.

A. norma'lis. A term which includes both the falling of the lanugo of the infant, and the baldness of old age.

A. parti'alis. A synonym of *A. areata*.

A. præmatu'ra. Premature baldness, which may be either idiopathic or symptomatic.

A. præmatu'ra idiopath'ica. Baldness taking place in early life without other concomitant skin disease, and probably depending on a disturbance of local nutrition of neuritic origin.

A. præmatu'ra symptomatica. A form which results from disease of the hair follicles and sebaceous glands, and is a symptom rather than a disease. It is seen in acne, sycois, variola, lichen, herpes, tinea tonsurans, lupus erythematosus, favus, in which case the treatment coincides with that of the morbid process itself; or from certain exhausting affections, as typhus, the puerperal state, anæmia, carcinoma, tuberculosis, cirrhosis of the liver, when it is due to seborrhœa of the scalp, and is either incurable, or as the anæmic conditions of the system disappear, a new growth of hair occurs.

A. seni'lis. (*F. calvities*; I. *calvezza*; G. *Kahlheit*.) Baldness of old age, calvities. Senile baldness generally begins on the crown of the head, and is preceded by greyness of the hairs, it depends on atrophy or a physiological involution of the hair bulbs and surrounding structures.

A. syphilit'ica. Loss of hair in syphilitic patients, due, according to Kaposi, to circumscribed and discrete specific cell infiltrations, papules near sebaceous and hair follicles, and gummata. The treatment consists in softening the scales with oil and their removal by washing the part with a solution of soft soap in half the quantity of highly rectified spirit of wine, the use of astringents such as tannin, quinine, tincture of cantharides, veratrin, in such quantity and combination that they will not irritate the scalp or set up

ALOPECIE—ALPIGENUS.

ecsema or inflammation; the general treatment, which is very important, should be that necessary for the constitutional disease itself.

A. unguis. A periodical falling off of one or more of the nails.

A. universalis. Baldness affecting the whole of the body; an entire absence of hair.

Alopeceias. (Same etymon. G. *kahle Stellen, Glatze*.) Bald patches.

Alopecurioid. ('Αλωπικουρος, the fox-tail grass.) Like a fox's tail; or like the *Alopecurus*.

Alopecurus. ('Αλωπικουρος, a kind of grass, from ἀλώπηξ, a fox; οὐρά, the tail. G. *Fuchschwanzgras*.) The foxtail grass. A Genus of the Nat. Ord. *Graminaceae*.

Alopecy. Alopecia.

Alorcinic acid. $C_9H_{10}O_3 + H_2O$. A product of the action of potash on aloes; consisting of fine needles, slightly soluble in cold water, and fusible at 115° C. (239° F.)

Alos achne. ('Αλός ἀχνη. L. *spuma maris*.) The saline deposit on rocks resulting from the evaporation of sea water; used in toothache. (Waring.)

Alosa. (Θρίσσα, from θρίξ, a hair, so called because it was full of small hair-like bones; F. *alose*; G. *Mutterhäring, Alose, Schade*.) A species of the Clupea, or shad, also spelt Alausa. See *Clupea alosa*.

Alosanthi. ('Αλς, salt; ἄθος, a flower. L. *salis*.) An old term signifying the flower of salt; probably a native impure sodium carbonate. (Ruland.)

Alosat. Arabic for Hydrargyrum, or mercury.

Aloschooc. Same as *Alosat*.

Aloto. The native name in the Sandwich Islands of a species of Euphorbia, the viscid milky juice of which is used as an application to ulcers.

Alou'chi. A resin procured from the *Iceia heterophylla*.

Alouette. A French surgeon.

A's method of amputation. The plan of amputation at the hip joint recommended by Alouette consisted in making a semicircular flap extending from the upper and outer part of the great trochanter to the ischial tuberosity, cutting through all the soft parts to the joint. The capsular ligament is opened, the thigh rotated inwards, the round ligament divided with a probe-pointed bistoury, and the bone dislocated by strongly flexing it; the capsular ligament is then completely divided, and a flap four or five fingers broad made by bringing the knife down on the inside of the bone.

Aloutcha. A tobacco grown in the Crimea, probably the *Nicotiana rustica*.

Aloxanthin. $C_{15}H_{10}O_6$. A yellow substance obtained by the action of potassium bichromate on barbaloin and socaloïn. It is related to chrysophanic acid and emodin. When heated with zinc dust it yields methyl-anthracene.

Aloysia. A Genus of the Nat. Ord. *Verbenaceae*.

A. citriodora. (F. *verveine odorante*; L. *erba cedrata, cedronella*; S. *yerba luisa*.) The lemon-scented verbenia. The mint-like leaves have a pleasant smell of lemon. An infusion of 5 parts to 1000 of water is used as a stimulant, stomachic, and antispasmodic.

Alpac'a. The *Auchenia pacos*. A South American ruminant without horns, the long

woolly hair of which is used extensively for the manufacture of material for clothing.

Alp'am. A Malabar shrub, from which is prepared an ointment for scabies; it also enjoys a high reputation as an antidote to poisons. It has been identified with the *Bragantia Wallichii*.

Alpama'to. The *Pedium thea*, the leaves of which are used by the natives of the Argentine Republic for tea.

Alpes'tris. (*Alpes*, the Alps.) Applied to plants that grow on mountains somewhat elevated, or on the middle portion of high mountains.

A. plan'ta. (G. *Voralpenpflanze*.) Alpine plants; plants growing on high elevations.

Alphabeta'rius. Applied by Linnæus to botanists who in their works employ only alphabetical order to arrange the plants of which they treat.

Alphe'inæ. A Subfamily of the Family *Carididae*, of the Tribe *Macrura*, Suborder *Decapoda*, Order *Podophthalmata* or *Thoracostraca*, Class *Crustacea*. Body generally compressed; mandibles deeply two-cleft; usually bearing palpi; second pair of maxillæ with rudimentary palpi; first two pairs of legs with claws.

Alphenic. A name of Sugar-candy.

Alphenik. (Arab.) Term for *Saccharum penidum* or *S. hordeatum*; barley sugar.

Alphe'nols. A name given by Grimaux to certain chemical compounds which are in structure partly an alcohol and partly phenol.

Alphite'don. ('Αλφίτηδον from ἀλφίτον, barley meal.) A term applied to a minutely comminuted fracture.

Alphit'idum. Same as *Alphitedon*.

Alphitomorphous. ('Αλφίτον, barley meal; μορφή, form.) Applied to pulverulent microscopic fungi, parasitical on plants.

Alphiton. ('Αλφίτον, pearl-barley, barley meal, as distinguished from ἄλευρον, wheat meal. Name for meal, particularly barley meal; and also of a kind of porridge made of barley meal.

Alphitum. Same as *Alphiton*.

Alphodeopsori'asis. (*Alphodes*; *psoriasis*.) Term for psoriasis of the form called alphous.

Alpho'des. (F. *alpheus*.) Having or pertaining to alphus; alphous.

Alphoides. ('Αλφός, a dull-white leprosy; εἶδος, likeness.) Applied to diseases having a white appearance, as *Lepra alphoides*.

Alphon'sin. (Alphonso Ferr of Naples, its inventor in 1552.) Name of an instrument having three elastic branches for laying hold of and extracting balls from wounds.

Al'phos. ('Αλφός, a dull-white leprosy.) Term for the species of leprosy formerly called *Lepra alphas*.

Also, a synonym of *Lepra*, or a variety of it, *L. alphoides*, or *Psoriasis*, from the whiteness of the scales.

Alpho'sis. ('Αλφός, white.) A synonym of *Albinism*.

A. æthiop'ica. A synonym of *Albinism*.

Alphous. Relating to or resembling *Lepra alphoides*.

Al'phus. Same as *Alphos*.

Alpic'olus. (L. *Alpes*, the Alps; *colo*, to inhabit.) Living or growing upon the Alps, as the *Grimmia alpicola*.

Alpicus. (L. *Alpes*. G. *alpisch*.) Growing on, or related to, the Alps.

Alpig'enus. (L. *Alpes*, the Alps; *geno*, the

ALPINE—ALSO-KÉKED.

primary form of ginseng, is larger. Growing in the Alps or high mountains, as the *Engelmann's* *Alpine*.

Alpine. *T. alpinum*, from Alps. *G. alpinum*, belonging to, or living in, the Alps or other high mountain ranges.

A. officinale. See *Cornus alpinus*.

Alpini. A Venetian physician and dramatist. born 1563, died 1617.

A. balsamum. (After Prosper Alpini, who wrote a learned treatise upon it.) A name for the *Amyris Gileadensis*, or Balm of Gilead.

Alpinia. (In honor of Alpini.) A Genus of the Nat. Ord. Zingiberaceae. A perennial plant with terminal inflorescence; inner lateral lobes of the corolla small or absent; filament not extended beyond the anther; fruit baccate.

A. alba. The source of the ovoid China cardamom; perhaps a synonym of *Amomum medium*.

A. albiginea. Hab. India. A species which supplies an inferior but very aromatic species of Galangal. The juice of the root is used both externally and internally in gout; the root mixed with wine is used as an embrocation in painful affections, and when powdered is given in colic.

A. aromatica. A Brazilian plant; the roots are sweetly aromatic, and are employed as carminative and stomachic.

A. cardamomum. A synonym of the *Elettaria cardamomum*. The plant which produces the lesser cardamom seeds, formerly referred to the *Amomum cardamomum*, or *Amomum repens*.

A. chinensis. A synonym of *A. officinarum*.

A. exaltata. The *Renoualmia exaltata*.

A. galanga. (*F. galanga officinalis*, *g. de la Chine*; Hind. and Duk. *Baya-Kulinjan*; Tam. *Pora-Kattai*.) A perennial Indian plant; stem six or seven feet high; leaves broad, sessile, with a whitish edge; panicle oblong, branched; lip unguiculate, bifid. The tubers are used as a substitute for ginger, and are given in infusion in fevers, rheumatism, and catarrhal affections. It is stimulant, carminative, stomachic, and expectorant; useful in nervous disorders, and in incontinence of urine. See *Galanga*.

A. khulinjan. A variety of the *A. chinensis*. Its root resembles the Lesser galangal; it is stimulant, carminative, stomachic, and expectorant. It is used instead of ginger, and in nervous disorders and incontinence of urine.

A. nutans. Hab. Malay. A species which affords a rhizome, which has been confounded with Galangal.

A. odorata. Hab. British Guiana. The leaves are employed by the natives to wrap the body in for the purpose of producing diaphoresis.

A. officinarum. Hab. China. The source of the Lesser galangal.

A. pauciflora. Hab. Brazil. The root, which has a sweet aromatic odour, is carminative, stomachic, and alexipharmic; and is given in doses of 30 grains. Externally it is applied to foul ulcers. (W.)

A. racemosa. Hab. Central America and West India. Leaves ovate-lanceolate, recurved at the point; raceme spiked; bracts ventricose; lip trifid. Stimulant and carminative. The fruit is said to be poisonous.

A. tubulata. The *Renoualmia exaltata*.

Alpinus. (*L. Alpe*, the Alps. *G. alpinus*.) Growing, belonging to, or living on the Alps.

Alquistia. *F. alquistia*; *G. Hafnera*, *Sisaurus*. A kind of seed-ore containing phlegmatic matter, which when broken looks like asphodel; used by petters, who mix a small portion of magnesia with it to glaze their coarse earthen vases, thence called petter's ore.

Alra'chea. Arabic for Phlegma, or lead. (Quincy.)

Alratia. Term used by Albucares for a partial or total imperforation of the vagina; also a small foramen. (Quincy.)

Al'safat. (Arab.) Same as *Safat*, to which the article *al* is here prefixed.

Alsafatum. Same as *Alsafat*.

Alsamach. Arabic term for the large foramen or hole in the petrous portion of the temporal bone, forming the meatus auditorius internus. (Quincy.)

Alsan dora. The *Smyrniolum alacatum*.

Al'saphat. Same as *Alsafat*.

Alsaphatum. Same as *Alsafat*.

Al'sech. Arabic for Alumen plumbum. See *Alak*.

Al'selat. Arabic for the oxide of copper, or burnt copper. (Ruland.)

Alsamach. Same as *Alsamach*.

Al'sone. The native name at the Cape of Good Hope of the *Artemisia Afra*. Used as a vermifuge and as a remedy in jaundice.

Alsidium. A Genus of the Chlorophylloae Family *Rhodomeles*, Class *Carpogoneae*, Subkingdom *Thallophyta*. Thallus in thread-like forked or feathery branches, polysiphonous, and jointed.

A. helminthochortum. About 1-6' high, of the fineness of a bristle, simple or somewhat forked, purple-red when fresh, pale brown when dry. Found in the Mediterranean and Adriatic seas. Furnishes, along with other species, *Corsican moss*.

Alsinacoccus. ("Alsis, leaping.") Having a polypetalous corolla with intervals between the petals.

Alsinastrium. Old name for a species of *Elatine*, according to Linnaeus. (Quincy.)

Alsine. (Alsis, growth. *F. mouren*; *G. Micro*.) A Genus of the Suborder *Alsinaceae*, Nat. Ord. *Caryophyllaceae*.

A. aviculastrum. The *Stellaria media*.

A. media. The *Stellaria media*. The plant known to the ancients under this name has been referred to *Stellaria nemorum* (Desfontaine), to *Cerastium aquaticum* (Sprengel), and to *Parietaria cretica* (Fée.) It was used locally in inflammations, abscesses, ulcers, affections of the eyes, and as an injection to the ears. (Waring.)

A. vulgaris. The *Stellaria media*.

Alsin'ess. (*G. Mierengewichs*.) A Suborder of the Nat. Ord. *Caryophyllaceae*. Sepals distinct and opposite the stamens when the latter are equal to them in number.

Alsiracostum. Arabic name of a compound purgative medicine much praised by Mesue in *Opera*. f. 113, as a remedy in certain burning fevers.

Also-Bisztra. Austria-Hungary. Alkaline chalybeate waters.

Also-Erztergaly. Austria-Hungary; County of Neograd. A chalybeate spring with carbonic acid.

Also-Kéked. Austria-Hungary; near Kaschau. Sulphur waters of 21° C. (69-8° F.) Used in gouty and rheumatic diseases.

ALTERCANGENON—ALTERNATION

Altercangenon. Ancient name for *Nyoscyamus*, or henbane. (Hooper.)

Alteroum. Same as *Altercangenon*.

Altered. (L. *alter*, another.) A synonym of *Contrasted*.

Alternanthera. A Genus of *Amaranthaceae*. Plants chiefly inhabiting tropical or sub-tropical regions.

A. sesuvilis. Hab. Southern Asia. Used as a stomachic and for the cure of colic. In the Moluccas it is used as a pot herb.

Alternate. (L. *alternus*, to change by turns. F. *alterne*; G. *abwechselnd*, *wechselnd*, *wechselständig*.) Following by turns, or in succession.

A. aestivation. Term applied to flowers in which the inner whorl alternates with the outer.

A. hemiplegia. That form of paralysis in which the loss of power in the facial muscles is on the opposite side to that of the limbs.

A. leaves. Applied to leaves which arise singly from a node, and are placed alternately on opposite sides of the stem.

A. rubbing. A term applied to a pericardial friction sound when it is heard in both systole and diastole.

A. squint. That form of strabismus or squint in which either eye can be fixed on a definite object, so that each eye may alternately be made to deviate from its right position.

Alternately pinnate. The same as *Alternispinnate*.

Alternating. (L. *alternus*, to do anything by turns.) Following by turns.

A. calculus. A urinary calculus which is made of strata of differing substances. See *Calculus*, *alternating*.

Alternation. (L. *alternatio*, from *alternus*, to do anything by turns. F. *alternation*; I. *alternazione*; G. *abwechselung*.) The act of alternating, reciprocal succession.

A. of generations. (F. *génération alternante*, G. *Generationswechsel*.) A term used to express a form of reproduction in which the original embryo develops, by budding or fission, a series of independent asexual organisms, the last term of which only possesses sexual organs and grows to the likeness of the original parent. The phenomena included under this title occur both in the animal and vegetable kingdoms. At a certain period in a plant's life single cells become detached from the organic connection, and either immediately, or after further preparation, enter upon an independent course of development, these cells are the reproductive cells, and the plant structures which result from similar reproductive cells, and are also like one another, form a generation. Now the alternation of generations occurs in the fact that the generations which proceed from one another are unlike, that is to say, in those organisms which multiply asexually and sexually, the offspring of the impregnated germ reproduces only by agamogenesis, so that from an ovum or ovule (A) is produced in the ordinary way an animal or plant, which grows up and ultimately divides or gives rise to a new individual (B) by budding, the organism so produced growing into a sexually mature individual, forming ova and spermatozoa, from the union of which arises anew the impregnated ovum.

In the vegetable kingdom the ferns afford an instance of alternation of generations, the spore on germination first produces a parenchymatous expansion, the prothallium, and not a plant like

the parent, but from its under surface arise the sexual organs, the antheridium and the archegonium, from the conjunction of the products of which arises the new plant. A similar mode of development occurs in the *Equisetaceae*.

The best known instances of the alternation of generations occur in the animal kingdom. Amongst the *Cnidenterata* it is observed in those cases in which the Medusoid form of Hydroid polypi alternates with the Hydroid. Amongst the *Vermetæ* it may be seen in the *Trematoda* and *Cestodes*, and it has been followed in some of the *Tunicated mollusca*. In the two latter cases the alternation of generations is somewhat complicated, for instead of the impregnated ovum (A) producing a sexless organism (B) which develops the ova and spermatozoa from the union of which arises the ovum (A) again, B produces a sexless organism, which may either resemble itself (B₂) or may be of a different nature (C), in either case the organism may reproduce its like (B₃ or C₂) or may develop again a different form (D) which in turn may either produce its like (B₃) or may produce ova and spermatozoa from which an impregnated ovum (A) again arises. As for instance, the egg (A) of the common *Distoma* undergoes cleavage to form the morula, and afterwards the gastrula, the orifice of invagination closes up, and an elongated, ciliated larva is formed. This larva then escapes from its host, in the case of endoparasitic forms, and is swallowed by some aquatic animal, into whose blood-spaces and connective-tissue it passes, in this situation it grows to a large size and assumes a sac-like form, retaining its ciliated investment. This is the sporocyst (B). The interior of the sporocyst now breaks up into groups of cells, which grow till they consist of sacs devoid of cilia, these sacs form for themselves a head, a mouth, and a gullet; each zooid thus produced forms a *Redia* (C), or King's yellow worm. After a time vesicles appear in the body cavity of the *Redia*, and rapidly develop into tadpole-like zooids, the *Cercaria* (D). By the atrophy of the *Redia* the *Cercaria* escape, swim about freely for a time, and finally fix themselves on to a snail, a *Paludina*; they then lose their tails, and become enveloped in a structureless cyst. The encysted embryo (E) develops rudiments of coronal hooklets. If now the *Paludina* which is thus infested is swallowed by a water bird in which the adult *Distoma* is parasitic, the embryo gradually develops till it assumes the form of the parent *Distoma*, and acquires complete sexual organs. In this cycle of changes it is noticeable that the *Redia* may develop secondary *Redia* instead of *Cercaria*, whilst the *Cercaria* may develop secondary *Cercaria*, and the sporocysts second sporocysts, or the *Cercarian* stage may be entirely omitted, whilst occasionally the *Redia* is developed directly from the ciliated larva. Amongst the *Mollusca* the *Salpa* exhibit the alternation of generations in its simplest form viz that in which the organism (B) arising from the impregnated germ (A) produces offspring only agamogenetically, and so gives rise to a series of independent organisms, which are more or less different from the original one, and which sooner or later acquire generative organs, from which are formed impregnated germs, giving rise to the original form. Amongst the *Arthropoda*, the hexapod *Insecta* afford an example of alternation of generations, as in the *Aphides*, in which the independent organisms which correspond with B give rise agamogeneti-

ALTERNATIPINNATE—ALTITUDE.

cally to others (B_2), and these again to others (B_3), and so on, though ultimately a sexual individual (A) is produced.

Alternatipinnate. (L. *alternatim*, by turns; *pinnatus*, feathered. F. *alternatipenné*; G. *wechselgefedert*.) Applied to a pinnate leaf, the leaflets of which are alternate upon the common petiole.

Alternative. (G. *abwechselnd*.) Same as *Alternate*.

A. sestiv'ation. The same as *Alternate sativation*.

A. douche. See *Douche, alternative*.

Alternatives, Volta's. A term applied by Volta to the phenomena observed when an electrical current is made to pass through the leg of a galvanoscopic frog, and which he summed up in the two following laws:—(1) the current traversing a nerve diminishes its excitability differently according to its direction; and (2) the direct current renders the nerve less excitable than the inverse.

Alternifoliate. (L. *alternus*, one after another; *folium*, a leaf.) Having alternate leaves, as the *Valeriana alternifolia*.

Alternipetalous. (L. *alternipetalus*.) A term applied in Botany to the stamens, carpels, or styles, when these organs are inserted on the receptacle opposite the interspaces of the petals.

Alternipinnate. The same as *Alternatipinnate*.

Alternisepalous. (L. *alternisepalus*.) A term applied in Botany to the petals, stamens, carpels, ovarian loculi, or styles, when they are inserted opposite the interspaces of the sepals.

Altey plum'bl. Old term for the Sugar of lead.

Althæa. (Ἀλθαία, wild mallow.) A Genus of the Nat. Ord. *Malvaceæ*. Calyx 5-cleft; involucre 6—9-cleft; styles numerous; fruit orbicular, many-celled, with a convex centre.

Also, U.S. Ph., the official name of the root of the *Althæa officinalis*.

A. hirsuta. Hirsute; peduncles one-flowered, longer than the leaves. Emollient; seeds aperient and diuretic.

A. laurina'sis. Used in Italy as a substitute for *A. officinalis*.

A. narbonne'sis. A species occasionally used instead of *A. officinalis*.

A. officina'lis. (F. *guimauve*; I. *alteia*; S. *malvarisco*; G. *Eibisch*.) The marshmallow. Stems 2—4' high, woolly; leaves alternate, hoary on both sides, the lower 5-lobed, the upper 3-lobed; flowers terminal, axillary. The whole plant is mucilaginous, and supplies *Althæa folia* and *Althæa radix*.

A. rosea. (F. *rose trémière, passe-rose*; I. *alcea, bismalea*; G. *Stockrose, Malvenrose*.) Stem tall, straight, hairy; leaves cordate, 5—7-angled, crenate, rugose; flowers axillary, sessile, or in terminal spikes; petals hairy at base. The flowers, official in the Fr. Codex, are mucilaginous and demulcent, and supply a colouring matter which is used to adulterate wine, and as a test for acid and alkalies, like litmus.

Althæa flores. (F. *fleurs de guimauve*; G. *Altheebiumen, Eibischblüthen*.) The flowers of the *Althæa officinalis*. Mucilaginous. Seldom used.

A. folia. (F. *feuilles de guimauve*; G. *Eibischblätter*.) The leaves of the *Althæa officinalis*; they are used to make an emollient decoction.

A. rad'ix. (F. *racine de guimauve*; G.

Eibischwurzel.) Marshmallow root, from the *Althæa officinalis*, collected in autumn from plants at least two years old. As seen in commerce it is deprived of its epidermis, is whitish, fleshy, more or less fibrous, having a feeble smell, and a sweetish mucilaginous taste. It contains bassorin, a small quantity of asparagine, sugar, starch, and a fixed oil, and tannin in the epidermis. It is demulcent, and is used in decoction, syrup, pill, and lozenge, in inflammation and irritation of the bronchial and other mucous membranes; and boiled and bruised as a poultice.

Althana'ca. (Arabic.) Old name for O-riment. (R. and J.)

Althana'cha. Same as *Althana'ca*.

Althebe'gium. Arabic for a swelling which occurs in cachectic and leucophlegmatic habits, as that under the eyes. (James.)

Altheben. (Arab.) Pterygium, or Pannus.

Althe'in. An alkaloid found in the marsh-mallow, *Althæa officinalis*; once supposed to be distinct, but now known to be asparagin.

Althe'steria. (Ἀλθεστηριον, a remedy.) Remedies, especially those applied externally, or to wounds.

Altheus. (Ἀλθεύς, from ἀλθαίω, to heal.) A healer, a physician.

Alther'is. (Ἀλθεῖς, from ἀλθαίω, to heal.) An old term for the cure of a disease.

Althon'ic. Same as *Alcothionic*.

Althos. (Ἄλθος, a healing.) A medicine.

Altic'omous. (L. *altus*, high; *coma*, the hair of the head, the leaves of trees. G. *hochbelaubt*.) Clothed with leaves high up only.

Altij'ugus. (L. *altus*; *jugum*, a yoke, the summit. G. *hochgipfelig*.) Having a lofty summit or top.

Alt'il'ibat. A synonym of *Turpentine*.

Altimar. Arabic for the Oxide of copper, or burnt copper. (R. and J.)

Altimetry. (L. *altus*, high; *metrum*, a measure.) Term for the art of measuring heights or altitudes.

Altimo. Arabic for the Scoria of lead.

Altin'car. Arabic for a kind of factitious salt used in the separation of metals, according to Libavius, *S. Ch. Arc.* viii, 38.

Altingat. Arabic for the *Flos æris*, rust of copper, or verdigris. (Ruland and Johnson.)

Altingia excel'sa. A synonym of *Liquidamber altingia*.

Altingia'cea. Liquidambers. Balsamiferous trees. Leaves simple or lobed, alternate, with deciduous stipules; flowers unisexual, involucre, amentaceous; male flowers naked, with many nearly sessile anthers; female flowers in a globular head; ovary two-celled; ovules numerous; fruit cone-shaped and scaly; seeds winged, peltate, albuminous; embryo inverted; radicle superior.

Also, called *Liquidamberaceæ*.

Altinur'aum. Arabic for the Sulphas ferri, or vitriol. (Ruland and Johnson.)

Altiro'stræ. (L. *altus*, high; *rostrum*, a beak.) Applied by Blainville to a Section of his *Heterodactylous scavores*, having the beak higher than it is broad.

Alt'ith. Arabic term for Asafetida.

Alt'itude. (L. *altitudo*, from *altus*, lofty. F. *altitude*; I. *altezza*; G. *Höhe*.) Term applied to the height of any place above the level of the sea. The greatest altitude attained by Glaisher in his balloon ascents was more than 29,000 feet, when he became insensible. One of the highest,

ALTIVOLUS—ALUM.

if not the highest, known habitation of man is the village of Thok-djalsuk in Tibet, which is upwards of 15,000 feet above the level of the sea.

The most elevated baths in Europe are those of St. Moritz, 5464 feet, and Leukerbad, 4670 feet, in Switzerland: Barèges, 4000 feet, Mont Dore, 3300 feet, Cauterets, 3200 feet, and Bourboule, 2600 feet, in France.

Altivolus. (L. *altus*; *volo*, to fly. G. *hochfliegend*.) Applied to the *Rhododendron altivola*, a climbing shrub which attains even to the top of the largest trees.

Alt-oetting. See *Neu-oetting*.

Altrices. (L. *altrix*, a nourisher.) One of the two divisions of the Class *Aves* proposed by Owen, in which the young are excluded from the egg, feeble, naked, and blind, and dependent on their parents for support.

Altruism. (L. *alter*, another.) Term employed by Auguste Comte to designate the mental state opposed to that which has received the name of egoism. In Physiology, it has been used to express the desires or instincts, which have also received the name of sympathetic instincts, as directing the conduct rather in the interest of others than of the individual. It is exemplified in the sentiments of friendship, veneration, and goodness. It is the source also of domesticity and sociability, sentiments that are recognisable in animals as well as in man.

Alt-Sohl. Hungary; County of Sohl. Mineral waters containing sodium sulphate, sodium, magnesium, calcium and iron carbonates, with free carbonic acid. Temp. 11° C. (52° F.) The most important is the Czerwena Woda, or *Eau rouge*, which contains and deposits a considerable quantity of iron.

Alt-Tura. Austria-Hungary; County of Oberneutra. Cold mineral waters, containing sodium, calcium, and iron sulphate, sodium and calcium chlorides and carbonates. Used in anæmia and scrofula.

Altus. (L. *altus*, participle of *alo*, to fly.) High; profound, deep. Applied to words to signify intensity, as *Altus somnus*, *Altus sopor*, sound or deep sleep, as in a lethargy.

Altwasser. Germany, Silesia; a village near Salzbren. Situated in a pleasant valley, 1255 feet high, having a mild climate and good accommodation. There are several springs, of a temperature varying from 21° C. (70° F.) to 35° C. (95° F.), containing iron with some alkaline and earthy carbonates and free carbonic acid. There are also chalybeate peat baths. Used in anæmic cases.

Aluach. Arabic for Stannum, or tin.

Alucinatio. (G. *Träumerie*.) The better form of *Hallucination*.

Alucita. A Genus of the Family *Pterophoridae*, Group *Microlepidoptera*, Order *Lepidoptera*, Class *Insecta*. Wings divided to the base into six linear rays.

A. cerealella. (F. *alucite des céréales*.) The larvae are very destructive to wheat. When the scales of the moth abound in the dust of wheat, they cause great cutaneous discomfort, conjunctivitis, and painful sensations in the throat.

Alud. Arabic for Agallochum, Agallochum, or alves wood.

Aludel. An old term for each vessel in an arrangement of a number of globe-shaped pots or glass vessels, one placed above the other, and communicating with each other from bottom to top,

for subliming any matter; the lowest was a pot containing the substance to be sublimed, and the highest a receiver for the flowers, or sublimate.

Aludit. Arabic for Hydrargyrum, or mercury.

Aluech. Arabic for pure Tin.

Alusir. (Arab.) Term for a diffused redness of the skin called *Rubedo*. (Ruland and Johnson.)

Aluine. (Fr.) A synonym of the *Artemisia absinthium*.

Alula. (Dim. of *ala*, a wing. F. *alula*, *aillerette*, *ailette balancier*, *cuilleron*.) A little wing. Applied to the minute membranous scales situated above the *halteres* in certain of the *Diptera*, and under the *elytra* of some aquatic *Coleoptera*.

Also, the bastard wing, composed of feathers situated on the rudimentary thumb of the bird.

Alulifera. (L. *alula*, a little wing. *fero*, to carry. F. *porte-aiguillons*.) A Group of the Order *Hymenoptera*. Antennæ generally with thirteen segments in the male, twelve in the female; abdomen always pediculated, female possessing a perforated retractile sting and poison glands. Larvæ without feet and anus.

Alum. A plant in use by the ancient Romans for affections of the kidneys, lungs, and fauces, probably *Symphytium officinale*.

Also, a kind of garlic.

A. battery. A galvanic battery consisting of carbon and unamalgamated zinc plunged into acid, which is kept moist by an aqueous solution of alum.

A. gallicum. A synonym of the *Symphytum officinale*.

Alum. See *Alumen*.

A., ammoniac. A synonym of *Common alum*.

A., ammonioferrie. A synonym of *Ferri et ammoniac sulphas*.

A., burnt. The *Alumen exsiccatum*.

A. cake. The solid mixture of silica and aluminium sulphate, obtained in the preparation of the latter for dyeing purposes, by decomposing clay with sulphuric acid.

A. cataplasm. A synonym of *Coagulum aluminis*.

A., common. See *Alumen*.

A., curd. The *Coagulum aluminis*.

A., dried. See *Alumen exsiccatum*.

A. earth of Nepal. An article of no native Indian Materia Medica, which is probably a more or less pure iron alum.

A., Egyptian. The *Αἰγυπτιακή στρυγίλη* of Hippocrates, an astringent salt.

A., English. A synonym of common alum.

A., feather. A synonym of native iron-alum, and also of *Alumogene*.

A., gargle. See *Gargarisma aluminis*.

A., iron. A double salt in which iron is substituted for aluminium. See *Ferri et ammoniac sulphas*, and *Ferri et potassii sulphas*.

A., potash. The sulphate of alumina and potash.

A. poultice. A synonym of *Coagulum aluminis*.

A., Roche. A variety of common alum, so called because originally it came from *Roche*, in Syria. It is in small pieces of a pale rose-colour, obtained from bole or rose-pink.

A., Roche, common. Small pieces of common alum moistened and then stained with bole.

ALUMBOTI—ALUMEN.

A., rock. A synonym of common alum.

A., Roman. The purest variety found in commerce. It occurs in small fragments covered with a reddish-brown adventitious powder. It is crystallised in cubes; and is obtained by the repeated roasting and lixiviation of *Alumite*.

A. root. Common name of the *Heuchera americana* and *H. cortusa*. Also of the *Geranium maculatum*.

A. root, North American. The root of *Heuchera americana*.

A. slate. An alum ore consisting of a mixture of iron pyrites with alumina, silica, and bituminous matter.

A. spring. See *Virginia mineral waters*.

A. stone. A feldspathic rock, being a native mixture of aluminium sulphate and potassium sulphate, found at Tolfa and Piombino, in Italy.

A. whey. (*G. Alaumolke*.) Two drachms of alum is boiled in a pint of milk, and the curd strained off. Used as an astringent in diarrhoea, menorrhagia, hæmatemesis, and internal hemorrhages generally. Dose, a wineglassful, containing about 15 grains of alum.

Alumboti. Arabic for Oxide of lead. (R. and J.)

Al'umen. The *Alumen liquidum*; also the Mercurius and Gemma optimum of the Arabian philosophers.

Also, applied to the metal Antimony.

Al'umen. Ph. Brit. and U.S. (*F. alun*; *L. allume*; *S. allumbr*; *G. Alaun*.) $Al_2(SO_4)_3 + (NH_4)_2SO_4 + 24H_2O$. Alum, or aluminium and ammonium sulphate. The only form of alum recognised by the Brit. Pharmacopoeia. It is made by adding ammonium sulphate to solution of aluminium sulphate, and purifying by recrystallization from its solution in water. It is a white, somewhat efflorescent, crystalline mass, having the faces of regular octohedra, and possessing an acid sweetish astringent taste. It is insoluble in spirit, soluble in fifteen times its weight of cold, and three fourths its weight of boiling water. Alum precipitates albumen, and contracts the mucous and other soft tissues. It is absorbed from the stomach and intestines, as an albuminate probably, and has been found in the urine. It hinders decomposition. Its action on, and course through, the organs is not known. Alum is astringent and antispasmodic in small, purgative and emetic in large doses. It is used as a styptic, in powder or solution, in hæmorrhage from leech bites, from the nose, or after tooth-drawing; as an astringent lotion or injection in too free discharge from ulcers, in eczema, leucorrhœa, gonorrhœa, and similar mucous discharges; as a gargle in relaxed throat and in aphthous ulceration of the mouth; and as a spray in chronic laryngeal congestion and inflammation. Alum is used in pyrosis, in hæmatemesis, in mucous diarrhœa, and in internal bleedings generally. It is of use in the later stages of hooping-cough; and has been given in bronchorrhœa, in profuse perspiration, and in painters' colic. Dose, as an astringent, 5—15 grains or more; as an emetic, 1—3 drachms.

Death has occurred in eight hours from swallowing an ounce and a half of alum; there was nausea, vomiting of sanguinolent fluid, small quick pulse, hurried breathing, and intense agony; and after death the whole digestive tract was found inflamed, the œsophagus softened, the stomach congested, its mucous coat grey, softened, and disorganised; the duodenum thickened and

grey; and the peritoneum inflamed. White of egg in water, or magnesia suspended in milk, should be freely given, and vomiting immediately induced by irritation of the fauces, or the administration of an emetic.

Alum has been recommended for the purpose of purifying water from organic matter. It would appear that its action is confined to the suspended matters, and that organic substances in solution are little, if at all, affected by it.

Alum has been found in inferior bread; it is said to be used for the purpose of improving damaged flour and rendering its use possible. It is believed to prevent bread from becoming sour or mouldy, to increase its whiteness and lightness, and to cause it to retain more water. It is added, as an adulteration, along with salt and iron sulphate, to give a head to beer.

In the Ph. Germ., Ph. Helvet., Ph. Ital., and the Fr. Codex, the salt used is the aluminium and potassium sulphate.

A. al'bum. (*L. albus*, white.) Common alum.

A. al'kali. (Arab.) Nitre.

A. alko'ri. (Arab.) Nitre.

A. ammoniac'le. Sulphate of alumina and ammonia. See *Alum*.

A. vulg'num. A red and transparent species of varnish resembling mastic.

A. calcina'tum. (*L. calcinatus*, calcined) A synonym of *A. exsiccatus*.

A. cat'num. (*L. catinus*, a crucible.) The potash of commerce.

A. chroma'tum. Chrome alum, sulphate of chromium and potash.

A. commun'e. Common alum. See *Alumen*.

A. cre'pum. The tartar of good wine.

A. cru'dum. Belg. Ph. (*L. crudus*, raw, crude.) The potassium alum of commerce.

A. crystal'linum. (*Κρυστάλλινος*, of crystal.) A synonym of common alum.

A. cu'pricum. (*L. cuprum*, copper.) Sulphate of copper and potash.

A. depura'tum. Ph. Helv. (*L. depuratus*, purified.) A synonym of *Alumen*.

A. de Roch'i. The *Alum, Roche*.

A. de Roch'i gal'is. The *Alum, Roche*.

A. draconis'a'tum. Belg. Ph. (*L. draconisatus*, mixed with dragon's blood.) Two parts of crude alum are melted in an iron vessel, and then one part of powdered dragon's blood added.

A. exsicc'a'tum. Ph. Br. and U.S. (*L. exsiccatus*, dried up.) Burnt alum. Four oz. of alum are heated in a porcelain dish at a temperature not exceeding 205° C. (401° F.) until aqueous vapour ceases to be given off, and the salt has lost 47 per cent. of its weight, when it is powdered. It differs from alum only in the absence of water. It is used as an escharotic; and has been given in constipation. Dose, 5—10 grains.

A. factit'ium. (*L. factitius*, made by art, artificial.) Manufactured, or common alum.

A. fœ'cum. (*L. fœs*, lees, dregs.) Potash made from the ashes of vine branches and wine lees.

A. fer'ricum. (*L. ferrum*, iron.) Sulphate of iron and potash.

A. glac'ia'le. (*L. glacialis*, frozen.) Common alum.

A. ital'icum. (*L. italicus*, Italian.) Roman or red alum.

ALUMENIZED—ALUMINE ACETAS.

A. kinosum. Belg. Ph. (*L. kinosatus*, mixed with kino.) Two parts of crude alum is mixed in an iron vessel, and then one part of powdered kino is added.

Also a synonym of the *Puleis aluminis compositus*.

A. liquidum. (*L. liquidus*, fluid.) An old term for a substance which appears to be the rock butter of modern mineralogists, consisting of alum with alumina and oxide of iron.

A. martiale. (*L. martiale*, relating to Mars, an old term for iron.) Sulphate of iron and potash.

A. natronatum. (*L. natronatus*, belonging to natron or soda.) The *Aluminii et sodii sulphas*.

A. odig. (Arab.) Sal ammoniac.

A. philosophicum. (*L. philosophus*, a philosopher.) The lime of egg-shells.

A. plumbeum. (*L. plumbeus*, downy.) Asbestos.

A. plumosum. (*L. plumosus*, full of down or feathers.) A term applied to the fibrous variety of native alum; also to fibrous gypsum: feathery alum; asbestos.

A. plumosum Basilii Valentini. Basil Valentine's feathery alum. A synonym of *Boracis acid*.

A. prusiacum. Common alum.

A. rochum. Roche alum.

A. Romanum. Roman alum.

A. rosa. Boiled alum.

A. rubrum. (*L. ruber*, red.) Red alum. The Roman alum, which has a reddish colour.

A. rupeum. (*L. rupeus*, a cliff.) A synonym of common alum.

A. rutilum. (*L. rutilus*, red.) A synonym of Roman alum.

A. saccharinum. (*L. saccharinus*, sugary.) Term for a cosmetic preparation in former repute, made of rose water, alum, and white of egg.

A. scariola. Gypsum.

A. solisile. (*L. solisilis*, easily split or chert.) A term for gypsum.

A. solisum. (*L. solisus*, split.) Old term for atom-alum. (Quincy.)

A. soujaie. Same as *A. angule*.

A. soujaie. Schutte.

A. stictum. (*L. stictus*, dried.) A synonym of *A. rosaceum*.

A. spongiosum. (*L. spongiosus*, spongy, porous.) Burnt alum.

A. strigatum. (*L. strigatus*, shaped like an eagle.) Common alum.

A. syriac. (Arab.) Burnt alum.

A. triblitis. (Gr. $\tau\rho\iota\beta\lambda\iota\varsigma$, a hair.) Asbestos.

A. urinum. (*L. urinum*, urine.) Common alum.

A. uscum. Otherwise *A. uscum*.

A. uscum. Ph. Germ. and Ph. Belg. (*L. uscum*, burnt, Gr. $\upsilon\varsigma\kappa\upsilon\mu\alpha$, burnt.) A similar preparation to the *A. rosaceum*, Ph. Belg.

A. venale. Belg. Ph. (*L. venale*, of or belonging to selling.) The same as *A. rosaceum*.

A. vulgare. (*L. vulgare*, common.) Common alum.

Alumenized. (*L. alumen*.) Charged or mixed with alum.

Alumhair. Arabic name for Boraxum, or Bitter. (Quincy.)

Alumina. (*L. alumen*, alum; *Gr. $\alpha\lambda\upsilon\mu\epsilon\iota\alpha$* , alum; *Lat. $\alpha\lambda\upsilon\mu\epsilon\iota\alpha$* .) A synonym of *Aluminium oxide*.

A. and ammoniac sulphate of. The *Alumen* of the British Pharmacopœia.

A. and iron sulphate of. The *Aluminium and iron sulphate*.

A. benedictated solution of. A substitute for Pagliari's styptic. Eight ounces of aluminium sulphate dissolved in water is saturated with gelatinous alumina, and six drachms of bruised amygdaloid benzoin added; it is kept at 66° C. (150° F.) for six hours, and after filtration should be of sp. gr. 1.25. In a few days crystals of alum are deposited, when the liquid is fit for use. It has a pleasant odour, and an astringent balsamic taste. Diluted with 4–10 parts of water it has been used as an injection in leucorrhœa.

A. sulphate of. See *Aluminium sulphas*.

A. tannate of. A substance described as yellowish, crystalline, and soluble in hot water, and recommended in solution as an injection in gonorrhœa. Aluminium tannate is almost insoluble in water, and so it is supposed that this is probably a mixture only of tannic acid and alum.

Alumina acetica. A synonym of *Aluminium acetate*.

A. acetica liquida. A synonym of the *Liquor aluminii acetici*, Helv. Ph.

A. acidulo-sulphurica cum kaol. Common potassium-alum.

A. ammoniaco-sulphurica. The *Alumen* of the British Pharmacopœia.

A. depurata. A synonym of *Alumina*, obtained by heating aluminium sulphate to redness.

A. hydrata. Germ. Ph. and Helv. Ph. (*G. Thonerdehydrat*.) Alum, 10 parts, is dissolved in 80 parts of hot distilled water, filtered, and then mixed with 9 parts of pure sodium carbonate dissolved in 80 parts of distilled water. The precipitate having been washed with distilled water till this does not cloud a solution of barium nitrate, is dried and powdered. It is a light white astringent powder, insoluble in water. Dose, 0.1–0.6 grammes.

A. hydrochlorica. A synonym of *Aluminium chloride*.

A. hypochlorosa. (*G. waterchlorisource Thonerde*.) A solution of alum and of calcium chloride are mixed, and the solution filtered. It is only used externally as a disinfectant.

A. kaliaca sulphurica. Common potash alum.

A. mariatica. A synonym of *Aluminium chloride*.

A. natri-sulphurica. A synonym of *Aluminium and soda sulphas*.

A. nitrica. A synonym of *Aluminium nitrate*.

A. pura. The same as *A. depurata*.

A. sulfurica. A synonym of *Aluminium sulphate*, U. S. Ph.

A. sulphurica. Common alum.

A. vitriolica. (*L. vitriolus*, containing vitriol or sulphuric acid.) Common alum.

Alumina acetica. A synonym of *Aluminium acetate*.

A. et ammoniac sulphas. The *Alumen* of the British Pharmacopœia.

A. et potassee hypocrasphas. A synonym of *Aluminium and potassium sulphate*, U. S. Ph.

A. et potassee sulphas. A synonym of *Aluminium and potassium sulphate*, U. S. Ph.

ALUMINATE—ALUMINIUM.

A. et potass superoxyphos. A synonym of the *Aluminii et potassii sulphat*, U.S. Ph.

A. hydrochloras. A synonym of *Aluminium chloride*.

A. sulphas. A synonym of *Aluminii sulphas*, U.S. Ph.

A. sulphas acidulus cum potass. A synonym of *Aluminii et potassii sulphas*, U.S. Ph.

A. sulphas fuscus. (L. *fuscus*, spread out, melted.) A synonym of *Alumen exsiccatum*.

Aluminate. A compound in which alumina acts towards the stronger bases as an acid-forming oxide, or in which the hydrogen of gelatinous alumina, aluminium trihydrate, is replaced by a metal. Aluminates occur native.

Aluminated. (L. *aluminatus*; P. *aluminé*; G. *aluminirt*, *thonerdehaltig*.) Containing alum.

Alumin'ate. Same as *Aluminate*.

Alumin'io. (F. *aluminique*.) A term formerly used to express the presence of alumina.

Alumin'io. A prefix in several compound epithets, applied by Berzelius to double salts produced by combination of an aluminic salt with another indicated by the succeeding part of the epithet, as *Aluminio-ammonicus*, -baryticus.

Aluminiferous. (L. *Alumen*; *fero*, to bear. P. *aluminifere*; G. *alumintragend*.) Containing alum.

Alumin'ii acetat. See *Aluminium acetat*.

A. et ammo'ni sulphas. The *Alumen* of the British Pharmacopœia.

A. et ferri sulphas. Prepared by dissolving alumina and iron carbonate in sulphuric acid. It has been used as an astringent and vermifuge. Dose, 5–10 grains.

A. et potass sulphas. U.S. Ph. (F. *alum*, *sulfate double d'aluminium et de potass*; I. *allume*; S. *allumbré*; G. *Alum.*) $Al_2(SO_4)_3 + K_2SO_4 + 24H_2O$. Potash alum. A double salt of aluminium and potash. It is made from alum elate containing iron bisulphide. The ore is roasted, then moistened and exposed to the air, so that the sulphur absorbs oxygen, becomes sulphuric acid, and forms aluminium sulphate and ferrous sulphate, which are separated by filtration with water. The solution being concentrated is mixed with potassium chloride, which forms soluble iron chloride and potassium sulphate, the latter unites with the ammonium sulphate, and is purified by crystallization. It crystallizes in transparent regular octohedra, which on exposure to the air become opaque and white; it is insoluble in alcohol, of an acid reaction, and a sweetish astringent taste. Its action is that of the ammonia alum. See *Alumen*.

A. et sodi sulphas. $Al_2(SO_4)_3 + Na_2SO_4 + 24H_2O$. A similar salt to the potash alum, but more soluble and difficult to crystallize.

A. subacetat. A salt called by this name has been used as an astringent to exuberant granulations.

A. sulphas. U.S. Ph. (G. *Aluminium schwefelsaures*.) $Al_2(SO_4)_3 \cdot 18H_2O$, or $Al_2O_3 \cdot 3H_2O$. Prepared by adding solution of sodium carbonate to a solution of alum, dissolving the precipitated alumina in sulphuric acid and water and evaporating to dryness. It is a white powder, soluble in twice its weight of water, from which it crystallizes in thin pearly

six-sided monoclinic plates. It is used externally as an astringent and antiseptic in foul ulcers and fetid discharges, as a mild caustic in enlarged tonsils, polyp, and cancerous ulcers. A solution of a pound or more in a quart of water is an efficient preservative for some time of dead bodies when injected into the veins.

A. tan'as. See *Alumina*, *tannat* of.

Alumin'io-silicate. Applied by Bonnedorf to a group of salts in which alumina and silica are regarded as together playing the part of an acid.

Alu'minite. Native hydrated aluminium sulphate, occurring in whitish, somewhat rounded masses.

Alumin'ium. Symbol Al. Atomic weight, 27.3. An earth metal, existing abundantly in nature as a silicate in felspar and clay; it is contained in the solar atmosphere. It is prepared directly from cryolite and from the double chloride of aluminium and sodium. It is white, susceptible of a high polish, and light, its sp. gr. being 2.6. It forms alloys, and is trivalent in its combinations. It is soluble in hydrochloric and sulphuric acids, but not in nitric acid; organic acids have little action on it except in the presence of sodium chloride. Its salts, when mixed with cobalt nitrate, become blue in the blowpipe flame.

A. acetat. (F. *acetate d'alumine*.) $Al_2(C_2H_3O_2)_4$. Obtained by the direct combination of hydrated alumina with acetic acid, or by the double decomposition of plumbic acetate and aluminium sulphate. It is colourless, acid to litmus, deliquescent, and astringent in taste. When exposed in a dilute solution to a temperature of 100° C. (212° F.), the whole of the acetic acid is expelled and aluminium dihydrate is left in solution. It has been used as an astringent in chronic gonorrhœa and hæmoptysis, and as a disinfectant.

A. chlorat. Germ. Ph. A synonym of *Aluminium chloride*.

A. chlorid. Al_2Cl_6 . (F. *chlorure d'aluminium*.) Prepared by heating a mixture of alumina and finely divided carbon in chlorine gas. It is a colourless, transparent, waxy, crystalline substance, boiling at 180° C. (356° F.) Very deliquescent.

The hydrated chloride ($Al_2Cl_6 \cdot 12H_2O$) is obtained in hexagonal prisms from the solution of the chloride in water, or from the double decomposition of aluminium sulphate and calcium chloride. It has been used as a disinfectant under the name of chloralum.

A. dihydrat. $Al_2O_3 \cdot 5H_2O$. Formed when a dilute solution of aluminium diacetate is exposed for several days to a temperature of 100° C. (212° F.) in a closed vessel, and then evaporated to dryness. It is not a mordant.

A. group, metals of. Aluminium, indium, and gallium.

A. hydrat. See *A. monohydrat*, *A. dihydrat*, *A. trihydrat*.

A. hydratissim. A synonym of *A. trihydrat*.

A. hydroxid. A synonym of *A. hydrat*.

A. monohydrat. $Al_2O_3 \cdot (OH)_2$. This compound is found native in translucent masses known as diaspor; when heated it falls to powder, and loses the whole of its water at 360° C. (680° F.)

A. nitrat. $Al_2(NO_3)_6$. This salt is ob-

ALUMINIZED—ALUTACEOUS.

tained by dissolving aluminium hydrate in nitric acid, and evaporating, on cooling, deliquescent prismatic needles are deposited. It has been successfully used, in the proportion of 4 to 6 grains to the ounce of water, as a lotion or vaginal injection in vulvar pruritus.

A. oxide. (F. *aluminium oxyd*; *alumine*; I. *allumina*, S. *alumina*; G. *Thonerde*, *Alaun-erde*, *Aluminiumoxyd*.) Al_2O_3 . Alumina; the only oxide of aluminium. It occurs native, in a nearly pure state, as corundum, a grey, translucent substance, which, when less pure, is called emery, and in an equally pure condition, but coloured with cobalt, as the ruby; or chromium salts, as the sapphire. It is prepared by adding ammonia to a solution of alum, when the hydrated oxide is precipitated, which, on being heated, yields alumina as a white amorphous powder of sp. gr. 3.9, tasteless, and very little acted on by acids. It is a very weak base, and its salts, the alums, have often an acid reaction. It is used in dyeing as a mordant.

Alumina in solution yields the white gelatinous hydrate to caustic potash, soda and ammonia, which is soluble in excess of the two former agents only; potassium, sodium, and ammonium carbonate deposit the hydrate with an escape of carbonic acid, insoluble in excess. Ammonium sulphide also precipitates the hydrate.

Alumina is not absorbed by any plants except some of the cryptogams.

A. oxydum. A synonym of *Alumina hydrata*, Germ. Ph.

A. salts, tests for. The salts are colourless, have a sweet astringent taste, and an acid reaction. They become blue when moistened with cobalt nitrate and heated before the blowpipe, but do not colour the non-luminous gas flame. When in solution they are not precipitated by hydrogen sulphide, a white precipitate of aluminium hydrate is produced by ammonium sulphide, caustic potash and soda deposit white, gelatinous aluminium hydrate, soluble in excess, ammonia produces a similar precipitate, insoluble in excess, ammonium carbonate and the alkaline carbonates act in a similar manner.

A. silicates. (G. *Aluminiumsilicates*.) These salts, along with other silicates, are found in a large number of crystallised minerals, and in the form of felspar enter into the composition of granitic and other unstratified rocks, which on decomposition by natural causes form clays. The topaz, beryl, and garnet, are silicates of aluminium and other metals.

A. sulphuricum. A synonym of *Aluminium sulphas*.

A. sulphate. See *Aluminium sulphas*.

A. trihydrate. (G. *Thonerdehydrat*.) $Al_2O_3 \cdot 2H_2O$. The bulky, white, gelatinous precipitate formed on the addition of ammonia or alkaline carbonates to a solution of alum; when dried it forms a friable mass, insoluble in water, but forming a paste with it. The trihydrate appears as white crystals when a solution of aluminium oxide in caustic potash is exposed to the air. It unites firmly with vegetable pigments, and is thus used as a mordant.

Aluminized. (L. *alumen*, alum.) Mixed or charged with alum.

A. charcoal. Finely powdered charcoal is digested with sufficient of a solution of aluminium sulphate to give an impregnation of 7.5 per cent. of alumina; it is evaporated to dryness and

then ignited in a covered Hessian crucible. It is recommended as a cheap and efficient substitute for animal charcoal as a decoloriser.

Alumino-kali sulphuricum. A synonym of common potassium-alum.

Alumino-natronum sulphuricum. The *Alumina et soda sulphas*.

Alumino-sae. An order of rocks comprising aluminated stones, in the geognostic method of Marnschne.

Also, a term formerly used to describe certain mineral waters which were said to contain an acid aluminous mineral salt dissolving a slight mixture of iron. (Farr.)

Aluminose. (L. *aluminosus*; G. *Alaunhaltig*.) Containing, or having relation to, alum.

Alumino-sis pulmo-num. A name given to the form of lung disease occurring in the workers in gypsum and lime. It commences first as a bronchitis, and in the end results in curvatures of the lung.

Aluminous. (L. *alumen*, alum, F. *alumineux*, G. *Alaunhaltig*, *Alaunacht*.) Of or belonging to, or of the nature of, alum, full of alum.

A. schist. A synonym of *Alum slate*.

Aluminium. Same as *Aluminum*.

Alumium. A synonym of *Aluminium*.

A. oxydatum. A synonym of *Alumina*.

Alumonodig. A synonym of *Ammonium chloridum*.

Alums. Generic name for a group of salts, in which aluminium sulphate forms a double salt with the sulphates of potassium, sodium, ammonium, calcium, or other substitute.

Aluniferous. (F. *alun*, alum; L. *fero*, to bear.) The same as *Aluminiferous*.

Alunite. (F. *Pierre d'alun*.) Alum stone. A mineral found in trachytic formations and in some scallatus, as that of Tolfia, near Civita Vecchia. It occurs in minute rhombohedral crystals or in fine granular masses, intimately mixed with quartz or felspar. It is the source of Roman alum.

Alunogene. (F. *alun*, alum; Gr. *γενέω*, to beget.) Hair salt, feather alum. Aluminium sulphate, occurring as a feathery efflorescence in rocks and clays, or in scallatus, as a product of decomposition from atmospheric or other action. It is acicular or fibrous or lamellar, whitish and silky in colour, and astringent to the taste. It also occurs as yellowish or greenish deliquescent efflorescences, known as mountain butter.

Alunsel. A drop.

Alupes. (Ἀλupes, the fox.) Its fat or oil, in the form of bath, was in use in gouty and rheumatic patients. Paulus Aegineta, Lib. vii, s. m. (Waring)

Alus. The *Symphytum officinale*.

A. gallica. The *Symphytum officinale*.

Alusar. Arabic for Mauna (D., R. and J.)

Alusia. (Ἀλusia, to become insane.) Hallucination, illusion; mental deception, error or misconception.

A. elatio. Sentimentalism, or mental extravagance.

A. hypochondriasis. Low spirits, or hypochondriacism.

Aluta. Soft thin leather, used to spread plasters on. A term employed by Apuleius to designate the *Isatis tinctoria*.

Alutaceous. (L. *aluta*, dressed leather softened by means of alum. F. *alutace*; G. *leder-*

ALUTEL—ALVERGNAT'S PUMP.

gell, lederfarbig.) Having the colour of soft tanned leather.

Alutel. Same as *Aludel*.

Aluyne. The common name in France for the *Artemisia absinthium*.

Aluzar. (Arab.) Old term for sulphur.

Alva marina. A name given to the dried sea wrack, *Zostera marina*, which is used for stuffing chairs and mattresses.

Alvaquilla. The *Boralea glandulosa*, a Chilean shrub, used as a vulnerary. The leaves are used as a substitute for Paragua tea.

Alvaras nigra. A synonym of *Ichthyosis*.

Alvearium. (L. *alveare* or *alveus*, a hollow vessel swelling out in the middle, hence a bee-hive.) The external meatus of the ear, so-called because the cerumen or wax is found there.

Alveneu. Switzerland; Canton Graubünden. Situate in a beautiful district on the right bank of the Albula, 3000 feet above sea level. Cold sulphur waters of 8° C. (46.4° F.) Used in rheumatism and skin diseases. There is a whey-cure establishment.

Alveolar. (L. *alveolus*, a small hollow; dim. of *alveus*, a hollow. F. *alvéolé*; I. *alveolare*; G. *zahnfächerig*.) Of or belonging to the alveoli, or sockets of the teeth. Having little hollows or cavities.

A. abscess. A synonym of *Gum-boil*.

A. arch. (F. *arcade alvéolaire*; G. *Zahnhöhlenfortsatz*.) The alveolar surface of either jaw. The superior alveolar arch in man is usually in the form of an hyperbola, with shortish branches; in the chief anthropoid apes it is U-shaped, with long parallel branches; in macacus it is elliptical.

A. artery, inferior. (G. *Unterkieferarterie*.) A synonym of the *Inferior dental artery*.

A. artery, superior. (G. *Oberkieferarterie*.) A branch of the internal maxillary given off as the trunk of the vessel passes into the sphenomaxillary fossa. It descends on the tuberosity of the superior maxillary bone, and supplies the molar and bicuspid teeth, and the mucous membrane of the antrum.

A. border. The free border of the upper or lower jaw in which the teeth are lodged.

A. cancer. See *Cancer, alveolar*.

A. membrane. The dental periosteum.

A. nerves. A synonym of the dental branches of the maxillary nerves.

A. passages. (G. *Alveolengänge*.) The ultimate terminations of the bronchial tubes in the lung into which the air-cells or alveoli open.

A. plate. A bony plate, found in certain lizards, which may be single or double, developed on one or both sides of either jaw, to which teeth are attached. When double, there are occasionally transverse partitions forming alveoli.

A. point. Applied in craniometry to a point of the anterior extremity of the articulation of the alveolar borders of the two superior maxillary bones.

A. process. The border of the superior maxilla in which the alveoli are placed.

A. sarcoma. See *Sarcoma, alveolar*.

A. vein. A vessel accompanying the alveolar artery.

Alveolariform. (L. *alveolaris*, pertaining to alveoli; *forma*, shape. F. *alveolari-*

forme; G. *zahnhöhlförmig*.) Resembling the cells of honeycomb.

Alveolate. (L. *Alveolus*, a little trough or cavity. F. *alvéolé*; G. *zahnfächerig, zellig*.) Having little troughs, hollow places, or cavities.

Alveoli. (Same etymon.) Small hollows, sockets, or cells.

A. dentis. (F. *alvéoles des dents*; G. *Zahnhöhlen, Zahnfächer*.) The sockets of the teeth. See *Alveolus*.

A. laryngis. The ventricles of the larynx.

A. of glands. The ultimate sacs of a racemose gland.

A. of lungs. (G. *Lungenalveolen*.) The air-cells of the lungs.

A. of lymphatic glands. The ultimate meshes of a lymphatic gland formed by the trabeculae of the cortex, and which contain the adenoid or proper gland substance.

A. of mucous membrane. The depressions on the surface of certain mucous membranes, especially those of the stomach, gall-bladder, and vesiculae seminales.

A. of stomach. The depressions on the surface of the mucous membrane of the stomach, specially notable near the pylorus. They are polygonal, $\frac{1}{16}$ "— $\frac{1}{8}$ " in diameter, with fringed or villous borders, especially at the pyloric end.

A. salivary. The ultimate sacculi of the salivary glands opening into the fine terminal branches of the ducts.

Alveoliform. Same as *Alveolariform*.

Alveolo-condylean plane. In Anthropology, an important plane determined by three readily accessible points—viz. the alveolar or middle point of the superior alveolar arch, and the most sloping points of the inferior surface of the occipital condyles. It is sometimes called the natural plane of the base of the skull.

Alveolo-dental periosteum. The periosteal membrane lining the alveoli, and covering the fangs of the teeth; the dental periosteum.

A. membrane. The same as *Alveolo-dental periosteum*.

Alveolo-dentary. That which relates to the cavities for the teeth and the teeth themselves, as the alveolo-dentary membrane.

Alveolo-labial. (L. *alveolus*, the socket of a tooth; *labia*, a lip.) Chaussier's name for the buccinator muscle.

Alveolus. (L. *alveolus*, from *alveus*, a trough. F. *alvéolé*; I. and S. *alveolo*; G. *zahnhöhle*.) The bony socket of a tooth. The alveoli vary in form and size according to that of the teeth they enclose. They are lined with periosteum and pierced at their base for the alveolar vessels and nerve; they are part of the external skeleton, being epidermic or ecdemonic structures.

Also, the conical cavity in the guard of a Belemnite which contains the phragmacone.

Also, the individual pieces of the oral skeleton of the Echinidia.

Also, the ultimate vesicles of a racemose gland.

Alvergnat's pump. An apparatus used in the determination of the gases of the blood; it consists of an upright barometer-tube connected at the bottom by means of an india-rubber tube with a receptacle containing mercury. At the upper end is a dilatation communicating above with a funnel, and laterally with a bulbous-ended tube, into which the blood is introduced. By means of a perforated stop-

ALVEUS—ALYSSOIDEÆ.

cock a communication can be made at will between any two of these parts. In using the instrument, the barometer-tube is filled with mercury by raising the receptacle connected with its lower end. The stop-cock is now so turned as to close the upper orifice. On depressing the receptacle the mercury runs out of the tube, and an almost perfect vacuum is formed, and now, by a turn of the stop-cock, the lateral tube and bulb, already filled with blood, are brought into connection with the barometer-tube, and the gases are more or less rapidly given off, and may be collected from the upper extremity of the tube, when the mercury is again made to fill it.

Al'veus. (L. *alveus*, a trough. G *Muldo*.) A term applied to many tubes, or canals, especially the enlarged portions of them, through which some fluid flows, and particularly to ducts conveying the chyle from the receptacle to the subclavian vein.

A. ampullæ'oena. (L. *ampulla*, a flask.) The swollen vessel. The dilated portion of the thoracic duct at its commencement from the receptaculum chyli.

A. ampull'o'sus. (Same etymon.) The receptaculum chyli.

A. commu'nis. (L. *communis*, common, general.) The utricle of the membranous vestibule of the ear.

Also, a term given to the conjoined sacculus and utricle of the membranous vestibule of the ear as it exists in birds.

A. hippocam'pi. (ἵπποκάμπος, from ἵππος, a horse, and κάμψις, a bending, a monster with a horse's body and fish's tail, on which the sea gods rode, applied to certain structures in the cerebral ventricles.) A process of the medullary substance of the hemispheres investing the convex surface of each gyrus hippocampi, it is homologous to the white medulla in the axis of cerebral convolutions, and as it protrudes into the lateral ventricle is invested by the epithelium lining this cavity.

A. urogenita'lis. (L. *urogenitalis*, relating to the urinary and genital organs.) The *Sinus peculiaris* of the male urethra.

A. utriculo'sus. (L. *utriculus*, a small leathern bottle.) The utricle of the membranous vestibule of the ear.

Alvi astric'tio. (L. *astrictio*, astringency.) Constipation.

A. exere'tio. (L. *escerno*, to cleanse by sifting.) Defecation.

A. flux'us. (L. *fluxus*, a flow.) Diarrhoea.

A. fluxus aqu'o'sus. (L. *fluxus*, aqueous, watery.) Watery diarrhoea.

A. lax'itas. (L. *laxitas*, looseness.) Diarrhoea.

A. profu'sum. (L. *profusus*, to flow forth.) Diarrhoea.

Alviduca. (L. *alvus*, the belly, *duco*, to lead, or draw.) A term for purgative medicines.

Alvidu'cons. (Same etymon.) Having power to lead from the belly, that is, to purge, applied to purgative medicines.

Alviduo'tio. (Same etymon.) An old term for an enema.

Alvine. (L. *alvinus*, from *alvus*, the belly F. *alvin*.) Of, or belonging to, the belly, stomach, or intestines.

A. concre'tion. A calculus generated in the stomach or bowels.

A. defe'ctions. (L. *dejectio*, to throw down.) The feces.

A. flux. A synonym of *Diarrhoea*.

Alvi'to. Italy; Naples; in the Province of Campania. A carbonated mineral water which is little known.

Alvolon. An old name of the *Mentha pulgium*.

Al'vum evac'uans. (L. *alvus*, the feces, *evacu*, to empty out.) A purgative.

Al'vus. (Lat.) The abdomen, the stomach and intestines, the feces, and also the womb.

A. adstric'ta. (L. *adstrictus*, drawn together.) Constipation.

A. astric'ta. (L. *astrictus*, drawn together.) Constipation.

A. cit'a. (L. *citus*, quick.) Diarrhoea.

A. coac'ta. (L. *coactus*, of close texture.) The condition of constipation.

A. du'ra. (L. *durus*, hard.) Constipation.

A. flu'ida. (L. *fluidus*, fluid.) Relaxed bowels.

A. mol'lis. (L. *mollis*, soft.) Relaxed bowels.

A. re'num. (L. *renes*, the kidneys.) The pelvis of the kidney.

A. seg'nis. (L. *seignis*, slow.) Constipation.

A. solu'ta. (L. *solutus*, loose.) The condition of diarrhoea or purgation.

A. tar'da. (L. *tardus*, slow.) Constipation.

A. vir'idis. (L. *viridis*, green.) A fecal evacuation.

Aly'ce. (Said to be from ἀλίσω, to wander in mind.) A term formerly used for that anxiety and restlessness which is attendant on fevers.

Alymph'ia. (L. *a*, neg; *lymph*, water, lymph. F. *alymphie*; G. *Lymphmangel*.) Term for the morbid absence or deficiency of lymph.

Alyon. French physician, born 1750, died 1816.

A. oint'ment. An ointment prepared with 500 parts of lard and 64 of nitric acid, used in cases where the citrine ointment is now employed.

Alyp'ia. The same in derivation and meaning as *Alypon*.

Alyp'ias. Same as *Alypia*.

Alypon. (ἄλπον, free from pain and sadness, from ἄ, priv.; λύπη, sadness.) A plant described by the Greek physicians as a drastic purgative, producing a discharge of black bile, and hence called *Frax terribilis*. It is supposed to be the *Globularia alypum*, which belongs to the Nat. Ord. *Selaginaceæ*, but Lindley thinks it was a Euphorbiaceous plant. A plant, according to Dioscorides, possessing the power of relieving pain.

Alyp'tæ. (L. *unctuarii reconditores*.) Slaves employed by the Romans to anoint those who attended the public baths.

Alypum. Same as *Alypon*.

Alyselmin'thi. (ἄλυσσις, a chain; ἔλμινξ, a worm.) A synonym of the *Tænia*.

Alysis. (ἄλυσσις) Anxiety.

Alysm'us. (ἄλυσμος, from ἀλίσω, to wander in mind, to be anxious. F. *alysme*, G. *Unruhe*.) A term for the mental anxiety and mournfulness of spirits generally accompanying disease.

Alyssin'osæ. A Tribe of the Nat. Ord. *Cruciferae*; fruit a small pod with a broad septum, seeds two-seriate; cotyledons accumbent.

Alyssoid'em. A term applied by Tourne-

ALYSSON—AMALGAM.

fort to the Cruciferae comprised by Linnæus in his Genus *Alyssum*. By Ventenat it was employed to denote all Cruciferous plants having a silique fruit. De Candolle used it to designate a Sub-genus of his *Vesicaria*, which is an *Alyssum*.

Alyss'um. (Ἀλυσσός, curing madness.) The plant thus designated by the ancients has been variously referred to *Rubia sylvestris*, *Veronica arvensis*, *Marrubium alyssum*, *Asperula arvensis*, and *Farsalea clypeata*. Fée doubtfully regards it as a species of cultivated madder. The Alysson of Galen is supposed to be distinct from that of Dioscorides, which was used to cure hiccup, and has been referred to *Stachys annua*. (Waring.)

Also, a synonym of *Alisma plantago*, the water plantain.

Also, in Pliny, the supposed worm existing beneath the tongue of dogs affected with rabies.

Alyss'um. (A, neg.; ἄλυσω, to have the hiccuph.) A plant recommended by the ancients for the relief of hiccuph. (Krause.)

Also, the same as *Alysson*.

A. Gale'ni. Probably the *Marrubium alyssum*.

A. montanum. (L. *montanus*, belonging to a mountain.) Lemery identifies this plant with that which was formerly used as a remedy in rabies.

A. Pili'n. The *Galium mollugo*.

A. sativum. (L. *sativus*, that which is sown or planted.) A synonym of *Camelina sativa*.

A. verticillat'um. (L. *verticillus*, the whirl of a spindle.) A synonym of *Marrubium verticillatum*.

Alyss'us. (Ἀλυσσός, curing canine madness.) Having antihydrophobic qualities.

Alyxia. A Genus of the Tribe *Plumieraceæ*, Nat. Ord. *Apocynaceæ*. Calyx 5-partite; corolla salver-shaped with naked throat; fruit in pairs.

A. aromat'ica. A synonym of *A. stellata*.

A. Reinward'tii. A synonym of *A. stellata*.

A. stella'ta. (L. *stellatus*, set with stars.) Hab. Malay, Java. Leaves in sets of three or four, lance-shaped, blunt; flowers in short pedunculated spikes. The bark is known as *Pulassari*; it is bitter and aromatic, and is used in the pernicious fevers of Batavia, and as a vermifuge.

Alze'gi. Arabic for vitriol, or sulphate of iron; also, for ink. (R. and J.)

Alzemafor. (Arab.) Cinnabar.

Alxilat. (Arab.) The weight of three grains.

Al'xir. Arabic name for all plants possessing bulbs.

Alzofar. (Arab.) Copper oxide.

Alzola. Spain; Province of Guipuscoa. Situated in a picturesque valley. The waters have a temperature of 31° C. (87·8° F.) and contain a small quantity of sodium chloride and calcium carbonate. The season lasts from the beginning of June to the end of November. Used in loss of nervous power generally and in urinary disorders.

Al'zum. An old term for the tree yielding bdelium.

Am. (Hind.) The Mango, *Mangifera indica*.

Ama. A synonym of *Ames*.

Amab'ile. (L. *amabilis*, lovable.) The depression in the middle line of the upper lip.

Amacrat'ic. (Ἄμα, at once; κράτος, strength.) Applied to a lens in which the rays

of light are all collected into one focus, on which ever part they may fall.

Amadam. (Tel.) The castor-oil plant, *Ricinus communis*.

Amadel'phous. (Ἄμα, together; ἀδελφός, a brother.) Living in society or in flocks.

Amadi'næ. (G. *Frachthinken*.) Family *Ploceida*, Class *Aves*. A group of small Passerine birds inhabiting Africa, South Asia, and New Holland; plumage bright and varied.

Amadou. (F. *agaric de chêne*; I. *escapocaja*, *caca*; S. *yasca*; G. *Zundschwamm*, *Zunderfeuerchwamm*.) German tinder, prepared in Northern Europe from *Polyporus officinalis*, Fr., and *Polyporus fomentarius*, Fr., common on the trunks of old oaks and beeches. The outer layer having been cut away, the inner spongy part of the fungus is cut into slices, dried and beaten till it is soft. This substance, besides being used as tinder, is made into warm caps, chest protectors, compresses for the support of varicose veins, and other articles. It is used as means of stopping local bleeding, and when saturated with nitre it makes a good moxa.

A. de Panama. (Fr.) A material made of the downy hairs on the inferior surface of the leaves of *Melastoma hirta*, and used as an hæmostatic.

A. false. (F. *amadou faux*.) A kind of tinder made from the *Boletus tuberosus*.

A. nitrat'ed. (F. *amadou nitré*.) Amadou soaked in a solution of potassium nitrate and dried. Burned as nitre-paper to relieve asthma.

A. red. (F. *amadou roux*.) Amadou made from the *Polyporus officinalis*.

A. white. (F. *amadou blanc*.) Paulet has given this name to the thick felt-like mycelium of greyish colour of a fungus growing in the clefts of trees, and used for the same purpose as ordinary amadou.

Amadouvier. (Fr.) The *Polyporus officinalis* and the *P. fomentarius* are occasionally confounded under this name.

Amadam. (Tel.) The *Ricinus communis*.

Amaerythrine. A product of the action of air and ammonia on Erythrine, the colouring matter of orchella weed, *Rocella tinctoria*.

Amalgriss'ement. (Fr.) Wasting of the body; loss of fat.

Amakosah. A Tribe of Kaffirs on the east coast of Africa.

Amal'fi. Italy. A sea bathing place near Salerno, and about twenty miles from Naples.

Amalgam. (Ἄμα, together; γάμιω, to espouse; or more probably from μάλαγμα, from μάλασσω, to soften. F. *amalgame*; I and S. *amalgama*; G. *Silberamalgam*, *Mercursilber*, *Verquickung*, *Quickbrei*.) Term for a combination or alloy of mercury with any other metal; a calcination or impastation of metals by mercury, according to Ruland and Johnson. It was expressed by the alchemical writers by the character  or . A natural amalgam, containing indefinite proportions of mercury and silver, forming more or less modified cubic crystals, is found in Moschellandsberg, in Rheinbaiern, and at Rosilla, in the Province of Atakama, in Chili. That obtained from Arqueros, in Coquimbo (Chili), contains 86·5 of silver, and 13·5 of mercury.

A. for elect'rical machi'nes. This may be made by melting 2 parts of zinc with 1 part of tin, and adding 6 parts of mercury previously

AMALGAMA—AMARA.

heated to redness. Used when mixed with a little tallow, or simply softened in the hand, to apply to the cushions of electrical machines.

A. for filling teeth. Amalgams of mercury, with one or more other metals, are used for filling those cavities of carious teeth in which the use of gold is impossible. They sometimes stain the tooth, most certainly, it is said, when the amalgam contains copper or silver. An objection has been made that salivation from the production and absorption of a soluble salt of mercury may ensue, but the objection does not seem to be based on well-authenticated cases. An amalgam of silver becomes black and stains the tooth dark grey, an amalgam known as Sullivan's cement contains copper, which also produces discoloration of the tooth, an amalgam of precipitated paladium is somewhat difficult to make, but it is very plastic and does not stain; an amalgam of cadmium and tin was at one time used, but the cadmium rapidly undergoes oxidation; an amalgam of gold and silver has been used, but it is somewhat wanting in uniformity of hardness and of time required for hardening; the most approved amalgam is one of silver, tin, and a small proportion of gold. In any case it is desirable to reduce the quantity of mercury to the lowest possible proportion.

A., natural. An ore composed of mercury and silver.

A. of copper. (F. *mastic métallique*.) A mixture of 30 parts of copper and 70 of mercury; employed as a stopping by dentists. It is of grey colour, and is plastic.

A. of tin. (F. *amalgame l'étain*.) This is composed of 3 parts of tin and 1 of mercury. It has been employed as a vermifuge as well as a filling for carious teeth.

A. of tin and cadmium. This amalgam has been used to stop carious teeth.

Amalgama. (Lat.) An amalgam.

A. stannæ-mercuriale. (G. *Zinnamal-gam*.) Powdered tin and mercury in equal parts are mixed together into an amalgam, which is added to honey to form the *Electuarium stannæ-mercuriale*.

Amalgama'ted. (L. *amalgamatus*; F. *amalgamé*.) Formed into an amalgam with mercury.

A. zinc. Zinc in plate or cylinder, the surface of which has been covered or amalgamated with mercury to serve in a galvanic battery. It is thus rendered homogeneous and more strongly positive than before. Dr. Althaus recommends the zinc to be immersed in diluted sulphuric acid, after which it is painted by means of a camel's hair brush with a solution of mercury, made by gently heating 4 parts of mercury in 5 parts of nitric and 15 parts of hydrochloric acid, and then adding a further 20 parts of hydrochloric acid.

Amalgama'tion. (Same etymon.) Term for the act or process of combining mercury with a metal, or forming an amalgam.

Also, applied to a mode of obtaining silver from the ore, this is roasted, powdered, then mixed with mercury, water, and some iron, the resulting amalgam of mercury and silver is dried, pressed to get rid of superfluous mercury, and then distilled, when the silver is left as a porous mass.

Gold is also purified by amalgamation.

Amalic acid. A synonym of *Amalnic acid*.

Amalin'ic acid. $C_{15}H_{13}N_4O_7$. A product

of the decomposition of caffeine. In contact with air and ammonia it becomes first red and then violet; with baryta, or other fixed alkali, violet blue. This reaction serves as a test for caffeine. The fluid to be tested should be treated with chlorine water, slowly evaporated, and the residue exposed to the contact of ammonia, or concentrated nitric acid. A beautiful purple red coloration occurs, which disappears with excess of ammonia.

Amalops. An erroneous spelling of *Hæmalops*.

Amal'tas. (Hind.) The *Cathartocarpus fistula*.

Amal'thea. (F. *amalthée*.) Applied by Desvaux to a union of many fruits, dry and horny, in a calyx which remains without becoming fleshy, as in the *Agrimonia eupatorium*.

Amal'thel. Applied by Debusch to a Tribe of the *Ammonæ* having the *A. amalthæa* for their type.

Amambay-guaru. (S. *helecho*.) The name given in Paraguay to certain ferns of the Genus *Polypodium*, used in that country, in the form of decoction, as astringents. (Waring.)

Amambay-mini. (S. *culantrillo*.) The name given in Paraguay to a species of *Adiantum*, employed chiefly as an emmenagogue.

Amamelis. (ἄμα, at once; μήλα, an apple, or any tree fruit.) Ancient name given to a fruit like a pear, particularly to that of a species of *Mespilus*, or medlar.

Aman'de. (Fr.) The almond.

A. de terre. (G. *Birmandel*.) Round cyperus root. (Crabb.)

Aman'din. An albuminous substance contained in sweet almonds.

Amandinus lapis. Old term for a gem, or stone, of various colours, which was supposed to destroy and dispel all poisons; wherefore it is not a stone to be despised, it was said. (Kuland and Castellus.)

Aman'ita. (*Agaricus*, a sort of fungus. G. *Fliegenpilz*.) A Sub-genus of the white-spored Series *Leucopori*, of the Genus *Agaricus*. Veil entirely enveloping the young plant; pileus convex, then expanded, stem distinct from the hymenophore, with a volva, free and lax, connate with the base or friable, and nearly obsolete; gills free from the stem. Some species are edible, others highly poisonous. The term amanita was anciently restricted to edible mushrooms.

The different species are described under the head *Agaricus*.

A. caesarea. A synonym of *Agaricus caesareus*.

Aman'itæ. (Same etymon.) An old term for edible fungi.

Aman'itin. The active narcotic principle of the *Agaricus* (or *Amanita*) *muscaria* and *Agaricus bulbosus*. It is brown, non-crystallizable, without taste or odour, and is insoluble in water, but soluble in alcohol and ether.

Aman'siæ. A Tribe of Kützing's Heterocarpous algae.

Amapalatangh vari. A large tree of Madagascar, the leaves of which are used as an astringent. (Placurt.)

Amara. (ἄμα, a channel for water. G. *Wassergang*.) A cloaca or sewer.

Also (L. *amarum*, bitter. G. *bitter Mittel*). A term given to bitter medicines, bitters.

Also, the native name in Socotra of a tree which yields a light coloured gum, which is

AMARANTINE-AMARYLLIDIFORMÆ.

melancholy) A native of Brazil, where it is called *Coruru vermelho*, and is employed in making emollient poultices.

A. obtusifolius. (L. *obtusius*, blunt; *folium*, a leaf) This plant is said to be a diuretic.

A. oleraceus. (L. *oleracea*, herb-like. Hind. *Mursa*; Beng. *Sada nuti*, Tel. *Tola Kura*; Burm. *Hon-kauway*) A native of India and Burmah. Demulcent. In the India Shereef it is said to prove aperient when boiled with salt and butter. The variety *Giganteus* has a thick succulent stem, which is eaten as a substitute for asparagus.

A. polygamas. (Πολύς, many, γάμος, to take to wife. Hind. *Chumli-Sag*, *Chorlat*; Beng. *Champa-nuti*) An Indian species, found also in the Moluccas and Cochin China. It possesses demulcent properties, and is said in the Taleef Shereef to prove useful in bilious disorders and to be aperient and diuretic.

A. polygonoides. (Πολυγωνοειδής; from *πολυγωνον*, the plant polygonum; *ειδός*, likeness.) Goosefoot, sowbane. A native of Barbadoes and Jamaica, where it is alleged to have the property of making a sow cast her young. It is a strong rank weed, supposed by some to be poisonous. Burmah states that, when made up with lard, it makes a good cataplasm for local inflammations and swellings. It has also been recommended internally for strangury, especially for that arising from the use of cantharides. In India it is considered very wholesome. (Waring.)

A. prostratus. (L. *prostratus*, low-lying) A species used for food.

A. spinosus. (L. *spinosus*, spiny. Hind. *Kanti-nuti*; Duk. *Kanti mat*; Tam. *Mulluk-Kira*; Tel. *Mundia tola-Kura*; Mal. *Mullanchira*; Beng. *Kanta mari*) A common weed in many parts of India, Ceylon, and Burmah. Erect, glabrous; leaves with two spines in the axils; panicles sparingly branched, utricle 2-3, cleft at top, bracts unequal, bearded; seeds black. The leaves of this plant are bruised and made into emollient poultices; and in the Mauritius a decoction of the leaves and root is administered internally as a diuretic.

A. sylvestris. (L. *sylicentris*, belonging to a wood.) A species used for food.

A. tenuifolius. (L. *tenuis*, thin; *folium*, a leaf. Hind. *multero*) A plant used in Sindia as fodder for camels.

A. viridis. (L. *viridis*, green) A native of Jamaica and Brazil domesticated in Europe. It is used in the form of enema in the dry belly-ache of Jamaica as the best and most common emollient herb that the island affords.

Amarant'ine. (Same etymon.) Everlasting, unwithering, undercayng.

Amarantous. (Ἀμάραντος, unfading; from *a*, neg., and *μαρναίω*, to quench, to decay. F. *amarante*) Undercayng, unfading.

Amarantus. (Ἀμάραντος, unfading.) *Amaranthus* A plant in use amongst the ancients as an emmenagogue and resolvent. It is supposed to be the *Celosia cristata*, or cock's comb.

Amararit. A plant of Southern Abyssinia possessing emetic properties.

Amaro. (Lat.) Bitter.

Amarella. (L. *amarus*, bitter.) A name of the Gentian, *Gentiana lutea*. Also, the *Polyala cubensis*, because of its bitterness.

arrellus. (Lat.) Bitterish.

arilla del Rey. A name of a bark

furnished by the *Cinchona Bonplandiana*. It is of the size of a goose-quill, with a tawny-grey epidermis, a fracture clean on the outer part, fibrous within, a slightly aromatic odour, and a bitter, astringent taste. It contains 8 per cent. of alkaloids, of which seven is quinine.

Amarin. $C_{21}H_{11}N_2$ (L. *amarus*, bitter) An organic base obtained by boiling hydrobenzamide with alkaline solutions. It is insoluble in water, melting at 100° C. (212° F.), and it is poisonous.

Also, an alkaloid ($C_{19}H_{15}N_3$) resulting from the action of ammonia on essence of bitter almonds.

Also, a name formerly given to the supposed bitter principle of vegetables.

Amarinite. A name proposed by Desvauz to be applied to the several bitter vegetable principles.

Amaritas. (G. *Bitterheit*.) Bitterness.

Amarities. (Lat.) Bitterness.

Amaritudo. (Lat.) Bitterness.

Amaronium. A typical Group of the Subfamily *Polyclinna*, Family *Botryllida*, Order *Ascidia*, Class *Tunicata*. (Schmarda)

Amaror. (Lat.) Bitterness.

Amarthritis. (Ἄμα, together; ἀρθρις, gout) Gout of the whole body, or affecting many joints at the same time.

Amarucachu. The *Polyanthes tuberosa*

Amarum. (Lat.) Magnesium sulphate, or Epsom salt. (Crabb.)

A. simplex. (L. *amarus*; *simplex*, simple.) An old term for the compound infusion of gentian

Amarus. (Lat.) Bitter. Applied to certain substances termed bitters, as distinctive of their medicinal properties.

A. dulcis orientalis. (L. *dulcis*, sweet; *orientalis*, eastern) A name of the *Cosmos*.

A. sal. (L. *sal*, salt.) An old name for magnesium sulphate

Amarygæ. (Ἀμαρυγή, from ἀμάρσσω, to shine) A term understood by some to mean the eyes, by others, the eyebrows. (Gerrard.)

Amaryllæ. A tribe of bulbous plants, belonging to the Nat. Ord. *Amaryllidaceæ*, characterised by the absence of a coronet in the flower.

Amaryllidaceæ. (G. *amaryllidaceæ*) *Amaryllidæ*. A Nat. Order of the Section *Epiphyne*, Subclass *Petaloides*, Class *Monocotyledones*, or, according to some, a Family of the Order *Eusata*. Chiefly bulbous and scape-bearing herbs, not scurfy or woolly, with linear flat root leaves, and perfect regular (or nearly so) flowers, 6-androus, perianth petaloid, 6-partite, superior, with or without a corona, stamens 6, inserted on the segments of the perianth, anthers introrse, ovary inferior, 3-celled; fruit capsular, 3-celled, 3-valved, with locubrid dehiscence and numerous seeds, or a berry with 1-3 seeds, seeds with fleshy or horny albumen, embryo with the radicle next the hilum. Natives of many parts of the world, but most abundant at the Cape of Good Hope

Amaryllidæ. A synonym of *Amaryllidaceæ*

Amaryllidæous. (G. *amaryllidæous*) Resembling, or related to, the *Amaryllis*.

Amaryllidiformæ. Applied by G. Herbert to a section of the *Amaryllidææ*, which are more allied to the *Amaryllis*.

AMAUROSIS.

progressive. It may result from injury, inflammation, hæmorrhage, or growth of tumour in the cranium, affecting the cerebrum or cerebellum. The impairment of vision is commonly preceded by optic neuritis, which gradually leads to atrophy of the nerve, recognizable by the whiteness of the optic disc. The vessels are usually diminished in number and size in the later stages. In the treatment the hypodermic injection of strychnia may be tried as well as electricity.

A., ciliary. A synonym of *Abdominal amaurosis*.

A., congenital. Amaurosis resulting from imperfect development of the fœtus.

A., diabetic. This form presents symptoms similar to those of albuminuric retinitis, viz. a preliminary stage of optic neuritis, often accompanied by extrusion of white corpuscles or by hæmorrhage, succeeded by white atrophy. The patient suffers from impaired vision (amblyopia), often from scotomata and hemiopia. The prognosis is bad, and the treatment merges into that of the constitutional affection.

A., diurnal. (*L. diurnus*, belonging to the day.) A synonym of *Nyctalopia*.

A., from lightning. This form has occasionally been noticed after exposure of the eye to the light of a vivid flash of lightning, though the shock to the system must be taken into account. Optic neuritis is sometimes present.

A., from tobacco. See *A. toxic*.

A., ganglionic. A synonym of *Abdominal amaurosis*.

A., glycosuric. A synonym of *A. diabetic*.

A., hæmorrhagic. A term applied to impairment or loss of vision from rupture of retinal or choroidal vessels, or from the escape of blood-corpuscles through their walls by diapedesis. When the hæmorrhage takes place in the fibrous layer of the retina, the blood spreads in a radial direction, following the course of the fibres, and more or less fusiform or linear spots are the result; but when it occurs in the ganglionic or external layers the spots are more rounded in form. The quantity of blood thrown out is sometimes as large as to separate a great part of the retina from the choroid, or to burst through into the vitreous humour. When small or of moderate size, the hæmorrhages may gradually disappear, becoming first darker and diminishing in size, without leaving any impairment of vision behind, but choroidal atrophy and displacement of pigment with scotomata often follow. The symptoms presented are sudden impairment or loss of vision, which is more noticed by the patient as the lesion is nearer the fovea centralis, coming on without known cause, or more frequently after violent coughing or sneezing, and sometimes with, sometimes without, any symptoms of irritation in the eye affected. Sparks or flashes of light may be observed, and a glaucomatous condition is sometimes set up. Atrophy of the optic disc is an occasional sequel. Hæmorrhages of the retina are of common occurrence in Bright's disease, and are not unfrequently observed in hypertrophy of the left ventricle, in diabetes, in pregnancy, scurvy, and some other constitutional diseases. Of course it may result from accident. Its existence without obvious cause should lead to careful investigation of the condition of the vessels and of the brain. The treatment should consist in cautioning the patient against all circumstances that may lead to congestion of the head. Locally and a compress bandage may be applied.

A., hysterical. A condition occasionally observed in young persons of both sexes. It is unattended by symptoms of irritation or inflammation, and usually disappears under treatment directed to the general condition of the system.

A., in anasarca. This form sometimes occurs in patients shortly after an attack of scarlet fever; the symptoms and treatment are those of albuminuric retinitis.

A., intermittent. A typical form of amaurosis occurring as a complication of intermittent fever, or of masked ague. It presents periodical cessations and returns. (Good.)

A., muscular. Deficient sight from weakness of the muscles of accommodation.

A., nocturnal. (*L. nox*, night.) A synonym of *Hemeralopia*.

A., of pregnancy. This condition supervenes usually towards the later months of pregnancy, and is accompanied by symptoms closely resembling those of albuminuric retinitis. The urine commonly contains albumen. Complete recovery may take place, even after optic neuritis is well expressed, and there have been somewhat considerable hæmorrhages. The cause is unknown, but it may perhaps be due either to pressure on the renal veins, or to hypertrophy of the left ventricle, or to blood-poisoning.

A., rachialgic. A synonym of *Spinal amaurosis*.

A., reflex. Amaurosis proceeding from irritation of other nerves, especially of the fifth and sympathetic. Mr. Coleman knew a case in which a boy broke a tooth. It was pegged, which caused great pain, and soon after amaurosis occurred. The tooth was extracted, and recovery of vision took place. Worms are an occasional cause of amaurosis.

A., saturnine. The impairment or loss of vision that occurs occasionally from the toxic influence of lead. The amblyopia is usually slowly progressive. The disc becomes paler, the edges are somewhat blurred, and the retinal vessels smaller than natural. It is a kind of atrophy. The treatment that may be adopted is to remove the patient from the operation of the cause of the disease, to administer potassium iodide, and subsequently strychnia, iron, and quinine, and to promote by all means the general health.

A., simulated. See *Feigned diseases*.

A., spinal. Amaurosis dependent on disease of the spinal cord.

A., syphilitic. Loss or impairment of vision from hereditary or acquired syphilitic disease.

A., toxic. This form is most commonly the result of alcoholic excess. It may be observed as the result of the abuse of tobacco, after large doses of quinine or of belladonna, and is sometimes seen in lead-workers. Lastly, it is common as a result of blood-poisoning in the later stages of Bright's disease. There is often a premonitory stage of subacute optic neuritis. In other instances the optic disc presents the appearance of slowly progressive atrophy.

A., traumatic. This may either be direct and owing to injury of the eye, optic nerve tract, or brain, or reflex, and then due to injury of some sensory or afferent nerve, as the supra-orbital. The blow of a suddenly expelled soda-water bottle or champagne cork often produces temporary, and sometimes permanent, amaurosis, in the former case apparently from shock to the retina, in the latter to shock, or separation of the retina, or hæmorrhage. In cases where the optic

AMAUROSIS A MYOSI—AMBELLANIA.

nerve has been injured, the seat of the injury may sometimes be determined by noticing whether optic neuritis be present or absent. If present, the lesion is probably in front of the penetration of the sheath by the arteria centralis retinae; if absent, behind this point. The prognosis in cases of shock to the retina, even if blood be poured out, is good. Of injury to the optic nerve, either from penetrating wounds, or from jamming of the nerve at the optic foramen, bad. In injuries of the brain, the ophthalmic affection is of secondary importance. In all instances rest should be maintained. If inflammatory symptoms arise, moderate antiphlogistic measures may be adopted.

A., trita'cial. Amaurosis resulting from disease of one of the branches of the fifth nerve, most frequently a dental branch. See *A. reflex.*

A., uræ'mic. A synonym of *Uræmic retinitis.*

Amauro'sis a myo'si. Blindness from closure of the pupil.

A. a syn'chysi. Blindness from closure of the pupil.

A. aton'ica. A form of amaurosis of older authors, with permanent atony and dilatation of the pupil.

A. dimidia'ta. (L. *dimidiatus*, divided.) A synonym of *Hemipopia.*

A. ex hæmorrhæ'gia. See *Amaurosis, hæmorrhagic.*

A. hyster'ica. See *Amaurosis, hysterical.*

A. imperf'ct. (L. *imperfectus*, incomplete.) Imperfect amaurosis.

A. intermit'tens. See *Amaurosis, intermittent.*

A. lactan'tium. (L. *lactans*, giving suck.) Disturbance of vision arising from too prolonged nursing.

A. partialis fu'gax. (G. *Flimmer skotom.*) A disturbance of vision lasting for some minutes or hours, and usually associated with other nervous affections, and especially with hemiparesis. It consists of a dark spot or obscuration affecting some part of the field of vision. Its occurrence should put the surgeon on his guard for glaucoma, of an impending attack of which it is often a sign.

A. pellagros'a. A form of amaurosis observed to accompany pellagra in the districts where that disease is prevalent, as in Lombardy, Spain, and some parts of France.

A. progressi'va. That form of the disease which results from gradually advancing atrophy of the optic nerve, or of its central or peripheral termination.

A. reflecto'ria. See *Amaurosis, reflex.*

A. saturn'ina. See *Amaurosis, saturnine.*

A. spasmodi'ca. An old division in which the pupil is said to be permanently contracted.

A. uræ'mica. See *Amaurosis, uræmic.*

Amaurospo'reæ. (Ἀμαυρός, dim, dusky; σπόρος, seed.) A Subdivision of Division *Endosporæ*, of the Class *Myxomycetes*. The spores are violet or brownish violet.

Amaurotic. Belonging to amaurosis.

Amauso. (Ger.) Enamel.

Ama'xia. (A. neg.; μάξις, the breast.) Absence of one or both breasts.

Amaz'on stones. Small green stones used as amulets by the natives of Rio Negro. They consist of Jade or Orthoclase tinged with copper.

Amazon'icos. (Ἀμαζόνιος, named after the target or shield worn by the Amazons,

from its likeness.) Pastil or lozenge used against flatulence and vomiting, according to Galen, *de C. M. sec. Loc. l. viii. c. 3.* It was composed of seeds of smallage and anise, tops of wormwood, myrrh, pepper, and sugar.

Amazon'ius. Same as *Amazonios.*

Amazulus. A tribe of Kaffirs in Africa, near Cape Colony, now, with additions of neighbouring tribes, called simply Zulus.

Am'ba. (Cing.) The cultivated Mango tree.

Ambad'edo. (L. *ambi*, around; *ad do*, to eat up. G. *ringsum beffressen, ganz verzehren.*) To eat away entirely.

Am'ba'iba. A tree of Brazil. The *Cecropia peltata* of Linnæus.

Am'ba'jo. (G. *Irrweg, Täuschung.*) Error, illusion.

Am'ba-Kan'da. A gall-like excrescence from the Mango tree, which in Behar is employed medicinally.

Amb'alām. A name of the Mango tree, *Mangifera indica.*

Ambalan. (Malay.) Lac, obtained from the *Annona squamosa.*

Ambapoor'ee. The Indian name of the inspissated juice of the ripe Mango, which is cut into cakes and sold in the bazaars. It is both acid and sweet, and is used, like red currant jelly, with certain kinds of meat. (Birdwood.)

Am'bar. (Malay.) Amber.

Ambara. (Hind.) The *Spondias mangifera.*

Ambarbarees. (Arab.) The *Berberis aristata.*

Ambar'ee. A term applied in Bombay to the *Hibiscus cannabinus.* (Birdwood.)

Ambar'ee-chucka. A term applied in Bombay to the *Rumex crispus.* (Birdwood.)

Ambar'um. A synonym of *Ambergris.*

A. cinerit'ium. (L. *cineritius*, resembling ashes.) Ambergris.

Ambarvalis flos. (L. *ambarvalis*, that goes round the fields; *flos*, flower.) A synonym of the *Polygala.*

Ambashta. (Sansk.) The *Oxalis corniculata.* (Birdwood.)

Ambaville. The Creole name in Bourbon of two species of *Senecio*, which enjoy a high reputation in the treatment of many diseases.

Am'be. (Ἀμβή, the ridge or superior prominence of a rock.) A mechanical contrivance, used by the ancients for the reduction of dislocation of the shoulder, the extremity of which was ridged or shaped off for its reception into the axilla, described by Soultetus.

Also, a superficial crest or eminence of a bone.

Ambei. The *Nymphaea pubescens.* (Willd.)

Amb'ela. The Arabian name of a tree of which there are two species; the fruit of one is acescent and is eaten as a condiment, and the wood is boiled with sandal wood and turpentine-coction against fevers. The seeds of this tree yield a white purgative juice, when macerated in drachm dose.

Also, a synonym of *Phyllanthus* and the *Nymphaea lotus* of Linnæus.

Ambellania. A name of the *Apocynaceæ.*

A. ac'ida. A name of the *Apocynaceæ* and *Cayana* *Leptocarpus* *ambellania* and when macerated in water yields a pleasant and purgative juice.

The name of the *Apocynaceæ* employed in *apocynum*.

AMBELOONA—AMBIGA.

Ambeloo'na. A fruit of Hindostan, acid and astringent. Considered useful in affections of the throat and in carbuncles. (Waring.)

Amber. (Arab *amb'ar*; *kerabe*, an attractor of straw, Gr. *ἤλεκτρον ἀπαξ*, the snatcher; L. *succinum*, *electrum*, F. *ambre*, *succin*, I. *ambra*, *succino*; S. *ambar*; G. *Amber*, *Bernstein*.) A fossil resin, occurring in irregular nodules and masses of various sizes in connection with Tertiary lignites, it is found in the Tertiary clays of Sicily, Saxony, and Laberia, on the north coast of England, and the Prussian shores of the Baltic, having been washed up after storms, and in some lignite beds in North Germany, it also occurs in the United States. It is brittle, of vitreous fracture, easily cut, permanent in the air, of various shades of yellow, tasteless, inodorous when cold, fragrant when heated, generally translucent, and of sp. gr. 1.0 to 1.1. It becomes negatively electric on friction. It is often in parts of plants and insects, and is the product of the extinct Conifer *Pityoxylon succiniferum* of Kraus, the *Pinites succinifer* of Goppert. Ether dissolves 18—23, alcohol 20—25, turpentine 25, chloroform 20 parts in a 100. It contains carbon 78.9, hydrogen 10.5, oxygen 10.6 parts per cent. It melts at 286.6° C. (547.5° F.). On distillation it yields succinic acid and oil of amber, besides resinous and other substances. Amber is made into ornaments, and mouthpieces for pipes; it is used to prepare oil of amber and succinic acid. In olden times it was considered an aphrodisiac, as a fumigation and in tincture it was used as a stimulant and antispasmodic in hysteria and in chronic coughs. Dose, 10—60 grains in powder.

A., acid of. A synonym of *Succinic acid*.

A., balsam of. The resinous material left in the retort during the rectification of oil of amber.

A. bitu'men. A synonym of *Succinum*, which is a resin obtained from amber, and insoluble in alcohol and ether.

A. camphor. A yellow-coloured light sublimate, which appears in the neck of the retort in the later stages of the destructive distillation of amber.

A., euphon. One of the constituents of oil of amber, according to Esmar.

A., grey. A synonym of *Ambergris*.

A. hapi. An electuary containing musk, catechu, and opium, largely used in Constantinople, where it is regarded as a calumative.

A., liquid. A term for liquidamber, or copalm balsam; otherwise called liquid storax.

A., synonym of the *Liquidamber styraciflua*.

A. oil. (L. *oleum succini aethericum*, G. *Bernsteinöl*.) An oil obtained by the dry distillation of amber. It is dark brown by reflection, and olive green by transmitted light. It has an unpleasant penetrating smell, and is lighter than water. The crude oil is of composite nature, containing acetic and butyric acids, and perhaps also valeric and capronic acids, when rectified by distillation it is chiefly composed of two hydrocarbons, probably camphene.

A. res'in. (L. *colophonium succini*; G. *Bernsteincolophon*.) A black resin, with vitreous fracture, obtained by the dry distillation of amber. It dissolves in oil of turpentine, and may be used as a varnish.

A., salt of. A synonym of *Succinic acid*.

A. seed. The seeds of the *Abelmoschus moschatius*.

A., volatile oil of. See *Oleum succini*.

A., volatile res'in of. A synonym of the *A. camphor*.

A., white, of Brazil. One of the varieties of gum animõ.

A., white, of Cayenne. A term for a variety of gum anime.

A., yellow. A synonym of *Amber*.

Amberco. A term applied in Bombay to the *Glycymeris racemosa*.

Ambergrease. Same as *Ambergris*.

Ambergris. (Amber, F. *gris*, grey, I. *ambregria*, G. *ambra*, *grauer-amber*.) A substance excreted by the sperm whale, *Physeter macrocephalus*, but whether it is merely the inspissated feces or a pathological product is not certainly known. In Japan it is termed *Kusuranofu*, which, according to Kamper, means simply whales' dung. Ambergris is found floating on the sea near Madagascar, the Coromandel coast, and Japan, in masses weighing from a few ounces to several pounds of lighter or darker ash colour, opaque, fatty, saponaceous to the feel, and on being warmed exhales a peculiar musk-like odour. The larger fragments often contain the beaks of the *Sepia moschata* and *Octopus*, which constitute the ordinary food of the Pott's whale. Its sp. gr. is .780 to .925. It melts at 60° C. (140.6° F.), and volatilises, in the form of a white vapour, at 100° C. (212° F.). It is composed of ambreine, an alcoholic extract, with benzoic acid, an aqueous extract. It has no repute in Europe as a medicinal agent, but it enters into the *Materia Medica* of the Persian and other Indian nations, by whom it is held to be a stimulant, cephalic, and aphrodisiac. It has been prescribed in adynamic fevers, dyspepsia, and chronic catarrh, in gastric atony, ep. crisi, ataxia, hypochondria, spasmodic hiccough, in doses of one, two, or three grains, and as an antiseptic.

A., essence of. An alcoholic tincture of ambergris, which is only employed as a perfume.

Amberkund. A term used in Bombay to designate the *Eulophia bicolor* (Birdwood.)

Ambert. France, Pay de Dôme, Arrondissement d'Ambert. Here are four cold springs charged with gas. One of them (Hammou de Rodde) has a temperature of about 11—12° C. (51.8°—53.6° F.). Another contains iron.

Ambet'way. A plant of Guinea, the leaves of which are given to convalescents to improve the appetite.

Ambi. The same as *Ambe*.

Ambia. A yellow liquid petroleum smelling like terebinthina, oozing from the soil near the Indian Sea. It is used for the cure of itch.

A. monard. The same as *Ambia*.

Ambicus. (G. *Destillerheim*.) An alembic.

Ambidextrous. (*Amphi*, on both sides; *deξίος*, on the right side.) Having two right hands, able to use both hands alike.

Ambidexter. (*Ambo*, both, *dexter*, the right hand.) Able to use both hands alike; one who uses his left hand as well as his right.

Ambidextrous. (Same etymon.) Having ability to use both hands alike.

Ambient. (L. *ambia*, to go around.) A term applied to whatever encompasses other bodies, thus the atmosphere which surrounds all bodies on the earth is called the ambient air.

Ambifarius. (G. *doppeltinnig*, *zweideutig*.) Double.

Ambiga. (L. *umbiga*, a small pyramidal

AMBIGENOUS—AMBLYSTOMIDÆ.

vessel, from Gr. *ἀμβύξ*, a cup, the cap of a still.)
An alembic.

Ambigenous. (*Ambio*, both; *genus*, race, kind.) A term applied by Mirbel to a multifoliate calyx, of which the outer row of sepals presents the ordinary characters of sepals, and the inner row those of petals, as in *Grewia passiflora*.

It is also used in the sense of bastard.

Ambiguiflorous. (L. *ambiguus*, doubtful; *flos*, a flower.) Applied to plants having flowers with ambiguous corollæ.

Ambi-huldee. (Dec.) The *Curcuma zedoaria*.

Amblyvius. (L. *ambi*, both; *lævus*, the left.) Having left hands only; that is, clumsy.

Amblyopia. (*Ambio*; *ὤψ*, the eye.) A synonym of diplopia.

Ambiparous. (L. *ambo*, both; *pario*, to bring forth.) Applied to a bud that contains the rudiments of both flowers and leaves.

Ambitus. (L. *ambitus*, a going round. F. *contour*; G. *umfang*, *umkreis*.) The perimeter of a body or figure.

In Botany, applied to the border of any organ; the contour of a surface.

A. genitalis muliebris. (*Ambitus*, circumference.) The vestibule of the vagina.

Ambigua. An odorous vegetable oil, obtained by the Brazilians from a tree that is believed to be the *Ambaitinga*, a species of *Cecropia*.

Amblo. A term applied to that pace of a horse which is characterised by the alternate and exclusive action of two lateral bipeds. In the amblo the ear perceives only two beats at each pace, the two limbs on the same side striking the ground at the same instant. The pressure of the body on the ground is said to be lateral.

Ambloocarpous. (*Ἀμβλόομαι*, to be abortiv-; *καρπός*, fruit.) Applied to fruits of which the seeds are altogether, or in great part, abortive.

Ambleteuse. France; Pas-de-Calais; Arrond. de Boulogne. A sea bathing place, with excellent arrangements for visitors.

Ambli. (Hind.) The *Tamarindus indicus*.

Amblygonal. (Gr. *ἀμβλυγώνιος*, obtuse angled.) An epithet for a figure that contains an obtuse angle.

Amblygonite. The same as *Amblygonite*.

Ambloëma. Abortion.

Ambloësis. (*Ἀμβλώσις*, an abortion, from *ἀμβλόομαι*, to abort.) Another term for abortion; a miscarriage.

Amblosmus. (*Ἀμβλωσμός*.) Abortion.

Amblothridion. (*Ἀμβλωθρίδιον*, an aborted child.) The product of an abortion.

Amblotico. (*Ἀμβλωτικόν*, G. *misgebärend*.) Of or belonging to ambloësis, or abortion; having power to induce abortion.

Amblotica. (Same etymon. G. *frucht- abtreibende mittel*.) Medicines which tend to produce abortion.

Amblyaphia. (*Ἀμβλύς*, dulled, dim; *ἅψῃ*, the sense of touch.) Diminution, or imperfection of the sense of touch.

Amblygonite. (*Ἀμβλυγώνιος*, obtuse-angled, from *ἀμβλύς*, blunt; *γωνία*, an angle.) A greenish-white, translucent mineral, occurring in granitic rocks; it is found in oblique rhombic

prisms, and consists of aluminium and lithium phosphate.

Amblygonous. (*Ἀμβλυγώνιος*, obtuse angled.) Having an obtuse angle.

Amblygmos. (*Ἀμβλυγμός*, dull-sighted, from *ἀμβλῶσσω*, to be dim-sighted.) An old term used by Hippocrates, the same as *Amblyosmos* and *Amblyopia*.

Amblyopia. (*Ἀμβλυωπία*, dim-sightedness, from *ἀμβλύς*, dulled; *ὤψ*, the eye. F. *amblyopie*; G. *Stumpfsichtigkeit*, *Augenschwäche*, *Blodsichtigkeit*.) Generally impaired vision from defective sensibility of the retina; from haziness or cloudiness of the media; from incomplete amaurosis, or the weakness of sight attending certain stages and forms of this disorder, and from errors of refraction.

The causes and forms of amblyopia are for the most part similar to those of amaurosis, though the dimness of vision is less in degree. Amblyopia is, in fact, often premonitory to, or represents, the early stages of amaurosis.

A. amaurotic. The same as *Amblyopia*.

A. aræmic. The defect of sight which occurs in uræmic poisoning.

Amblyopia alcoholica. Impairment of vision from the toxic influence of alcohol on the optic nerve and central nervous system.

A. asthenica. Amblyopia depending on general or local weakness.

A. congestiva. Amblyopia depending on congestion of some ocular structure.

A. crapulosa. (L. *crapulosus*, drunken.) The same as *A. alcoholica*.

A. crepuscularis. (L. *crepusculum*, twilight.) A synonym of *Hemeralopia*.

A. dissitorum. (L. *dissitus*, distant.) A synonym of *Myopia*.

A. ex anopsia. (A, neg.; *ὄψις*, eye-sight.) Impairment of vision resulting from want of use, as often occurs in an eye affected with strabismus unilaterialis.

A. hydrophthalmica. An old term for enlargement of the eye depending upon increase of the humours.

A. hysterica. Dimness of vision occurring in hysterical patients.

A. luminis. A term for hemeralopia.

A. meridiana. (L. *meridianus*, belonging to mid-day.) A synonym of *Nyctalopia*.

A. potatorum. (L. *potator*, a drinker.) The same as *A. alcoholica*.

A. proximum. (L. *proximus*, nearest.) A synonym of *Presbyopia*.

A. sthenica. Amblyopia depending upon over-excitement of nerves.

A. tenebrarum. A term for nyctalopia.

A. toxica. Dulness of vision arising from the poisonous influence of certain drugs, as quinine and tobacco.

Amblyosmos. (*Ἀμβλωσμός*.) Same as *Amblyopia*. (Hooper.)

Amblypterus. (*Ἀμβλύς*, blunt; *πτερυξ*, a wing.) A ganoid heterocerical fish of the Millstone Grit and Permian series; body fusiform, with large obtuse fins.

Amblyrhynchus. A Genus of the Family *Iguanidae*, Suborder *Crossilingues*, Order *Sauria*. A lizard, which is esteemed a very delicate food.

Amblystoma. (*Ἀμβλύς*, obtuse; *στόμα*, the mouth.) The Amphibian termed Siredon.

Amblystomidae. (Same etymon.) A Family of the Suborder *Salamandrina*. Palatine

AMBOLIC—AMBROSIA.

teeth in two transverse rows; sphenoidal teeth absent.

Ambolic. (*Am*, for *ἀνά*, up; *βάλλω*, to throw.) Having the power to produce abortion.

Ambon. (*Ἀμβόν*, whatever is elevated on a plane.) Applied to the edge or margin of the sockets in which the heads of bones are received. *Galen, de U. P. II. 17.*

Ambor. A term for ambergris.

Ambora. A Genus of the Nat. Order *Monimaceæ*.

Also, the *Mithradatea* of Linnaeus. (*Crabb*.)

A. quadricida. This tree is indigenous in the forests of the Mauritius and Madagascar. In the Mauritius the leaves and stems are much used in baths and lotions for cutaneous affections, and a decoction of them is given internally as a refrigerant and diuretic.

Amborese. (*F. amborées*.) A Tribe of the Nat. Ord. *Monimaceæ*. Anthers opening by a longitudinal furrow, seeds inverted, embryo with the cotyledons often divergent.

Ambos. (*Ger. an anvi*.) The Incus.

Ambotay. (*Fr.*) The name applied in French Guiana to the *Anona ambotay*, the bitter and aromatic bark of which is used as a remedy in bad ulcers.

Ambouton. A plant of Madagascar, probably the *Piper betel*. It resembles flax, has a slightly bitter and austere taste, and is employed as a masticatory, to blacken the teeth, and render the breath agreeable. (*Waring*.)

Amboyna. One of the Moluccas or Spice islands, belonging to the Dutch.

A. cloves. A name given to cloves grown in the Moluccas.

A. kino. See *Kino*, East Indian.

A. pimple. A term for a disease which was endemic in the Island of Amboyna. It was described by Bontius in 1718, and is believed to have been syphilis. Its symptoms were ulcers of the skin, with indurated and raised edges, pains in the bones and caries.

Ambra. Arabic for succinum, or amber, also, ambergris, or ambergrease.

Also, a vessel amongst the Saxons, containing a measure of salt.

Ambra. (*Ger.*) A term applied by Martius to the agreeably odorous balsam of the *Liquidambar styraciflua*, now called Copal balsam.

Also, a term for amber.

A. alba. (*L. albus*, white.) A synonym of *Cedareum*.

A. ambrosiaca. (*L. ambrosiacus*, ambrosial.) A term for ambergris.

A. arabica. A term for ambergris.

A. cineraceus. (*L. cineraceus*, ash-coloured.) A term for ambergris.

A. cineritia. (*L. cinereus*, ash gray.) A synonym of *A. grisea*.

A. flava. (*L. flavus*, yellow.) A term for amber.

A. grisea. (*F. grisea*, grey.) Ambergris.

A. liquida. Copal balsam, from the *Liquidambar styraciflua*.

A. maritima. (*L. maritimus*, belonging to the sea.) A synonym of *A. grisea*.

A. subalbida. (*L. subalbidus*, whitish.) A synonym of *A. grisea*.

Ambra ambrosica. Ambergris.

Ambragris ea. Ambergris.

Ambram. A term for amber.

Ambreine. (*G. Amberfett*.) $C_{25}H_{32}O$. A peculiar, inodorous, tasteless, non-saponifiable

fat, forming 85 per cent. of ambergris, from which it may be extracted by boiling alcohol, which on cooling deposits fine colourless needles of ambreine. It is soluble in alcohol, ether and oils, but insoluble in water, and resembles cholesterol.

Ambrette. (*Fr.*) The seeds of the *Hibiscus abelmoschus*. Used as a perfume.

A. graines d. (*Fr.*) The seeds of *Hibiscus abelmoschus*.

Ambri'na. A Genus of the Nat. Order *Chenopodiaceæ*.

A. ambrosioides. This plant has an aromatic, sub-acrid taste, and is regarded in Brazil as a carminative, diaphoretic, and emmenagogue, prescribed in amenorrhœa, and for the expulsion of the dead fetus.

A. anthelmintica. (*F. americana vermifuge*.) Worm-seed, worm goose-foot. Hab. United States. The fruit and its essential oil are a powerful anthelmintic. Dose, of the powdered fruit, a teaspoonful or more, of the oil, 8 to 10 drops.

A. botrys. Possesses an essential oil, which renders it tonic and antispasmodic.

Ambrol'ogy. (*Amber*; *λόγος*, a discourse.) The science of amber, or a treatise on it.

Ambrosia. (*Ἀμβροσία*, the food of the gods, from *ἀμβροτος*, immortal.) The name of a celebrated antidote of the ancients, invented by Zopyrus for King Ptolemy. It consisted of costus, saffron, cinnamon, cassia fistula, pepper, and other aromatics and stimulants.

This term is also applied by Virgil to a plant having odiferous juice, and of a mythological character, the identification of which it is useless to attempt. The Gr. *Ἀμβροσία* is closely allied with *ἀμβροτος*, and both to the Sanskrit *amrita*, immortal, from *a*, neg., and the root *Mr*, in Latin *mors*. In Sanskrit, *amrita* in the neuter signifies ambrosia, and all objects offered in sacrifice to the gods, *amrita* in the fern, various plants, such as *Phyllanthus*, *Emblica*, *Terminalia*, and *Ocimum*, all of which are odiferous plants. The ambrosia of Dioscorides and of Pliny, which was probably an *Artemisia*, was applied by the botanists of the middle ages to *Ambrosia maritima*, which has retained the name. This name is also given to the *Ambrosia botrys*.

Ambrosia. (Same etymology.) A Genus of the Family *Ambrosiaceæ*, Nat. Order *Compositæ*. Herbaceous plants with deeply cut exstipulate leaves, and monocious flowers, the males forming a spike of capitula, at the base of which are the females. The male florets have a common receptacle, and a common involucre formed by a single row of bracts, calyx 0, corolla tubular, 6-partite; style rudimentary, female florets regular, ovary unilocular, surmounted by two flattened styles, the ovule ascending and anatropal, embryo without albumen. Hab. North America, North Africa, and Tropical Asia.

A. ambrosioides. The *Chenopodium ambrosioides*.

A. artemisiifolia. Hab. North America. It yields an extract that is employed as a ferrifuge and anthelmintic.

A. elatior. An annual herbaceous plant of North America and the West Indies, growing chiefly in barren, sandy, and rocky localities. It is known in Jamaica under the name of Wild Tansey. It has the appearance and taste of wormwood. Barham states that the plant boiled in sesamum oil, and wine is serviceable, both externally and internally, in dropsy and abdominal

AMBROSIAEÆ—AMBULANCE.

abscesses, and that the root, either boiled in oil or in powder, is a good application to ulcers. It is said also to afford ease to after-pains.

A. campestris. (*L. campestris*, pertaining to a level field.) Swine's cresses and Ruellius' buckhorn.

A. maritima. (*L. maritimus*, pertaining to the sea.) A plant of Southern Europe, possessing a pleasant odour and bitter taste. It is regarded as tonic, stomachic, and antispasmodic.

A. trifida. (*L. trifidus*, three-cleft.) Horse weed, horse mint, rich weed, bitter weed. This plant is common in North America, and has been recommended as a remedy for pytalism. Dr. Robertson, of Harrodsburg, was led to employ it from observing that it completely cured a horse affected with alabbering. An infusion of the leaves should be employed as a gargle.

A. villosissima. (*L. villosissimus*, very hairy.) An Egyptian species. According to Forskal, the vapour of the decoction of this plant is employed in diseases of the eyes.

Ambrosia cœs. (Same etymon.) A family of the Nat. Ord. *Compositæ*, characterised by the absence of calyx in the male, and of floral envelopes in the female, flowers, and by the ovary being almost always superior.

Ambrosia œœus. (Same etymon.) Resembling the *Ambrosia*; having a pleasant odour.

Ambrosiæ. (Same etymon.) A Sub-tribe of the *Helianthoid compositæ*, with heterogamous or unisexual capitula; monœcious; receptacle with subsetous scales between the male florets; female florets apetalous, or with small corolla, tubular; sterile male florets with the limb of the corolla campanulate; anthers contiguous, free, or scarcely coherent, with mucronate and sagittate appendices; style single; achenia naked.

Ambrosin. A fossil resinous exudation, probably of some coniferous trees of South Georgia. It resembles amber; yields on melting succinic acid, and a fragrant volatile oil. It dissolves freely in oil of turpentine, alcohol, ether, chloroform, and solution of potassium carbonate; in less quantity, but without decomposition, in concentrated mineral acids.

Ambubeta. A synonym of the *Common cichory*; and also of the *Dandelion*.

Ambuj. (Hind.) The *Nelumbium speciosum*.

Ambula cra. (*L. ambulacrum*, a place for walking.) The perforations in the plates of the ambulacral areas of the Echinodermata, which give passage to the ambulacral tubes, or tube feet.

A. circumscrip'ta. (*L. circumscriptus*, bounded.) Applied to that group of Echinoidea in which the ambulacral areas do not extend from base to summit.

A. perfec'ta. Applied to that group of Echinoidea in which the ambulacral areas extend from base to summit.

Ambula'cral. (Same etymon.) Related to the ambulacra.

A. a'rea. The five double rows of plates alternating with the non-perforated rows in the Echinodermata, which are perforated by minute apertures for the emission of the tube-feet or ambulacral tubes.

A. os'sicles. (*L. ossiculum*, a little bone.) The plates which bound the sides and roof of the ambulacral groove of Asterioidea.

A. tubes. The prolongations of the radiating branches of the circular canal of Echinodermata,

which are protruded through the ambulacra, and serve for locomotion; they terminate in suctorial discs, and have a lateral dilatation or ampulla at their origin, by the alternate contraction and dilatation of which movement is effected.

A. vessels. Water-vascular canals in many of the Echinodermata, which traverse the middle line of the ambulacral metameres, and unite into a circular canal around the mouth.

A. zone. The same as *A. area*.

Ambula'criform. (*Ambulacra*; *forma*, likeness.) Having the shape or appearance of ambulacra.

Ambulance. (*L. ambulo*, to walk from place to place. *F. ambulance*; *G. Feldhospital*, *Feldlazareth*; *I. ambulanza ospitale ambulante*; *S. ambulancia militar*.) The term ambulance is applied to the surgical staff and arrangements following an army on active service. A part accompanies the combatants to the field of battle, and is charged with the duty of attending to the more serious cases that require immediate assistance during and after the action; whilst a part remains some distance in the rear, and is occupied with the formation of provisional hospitals. The young, strong, and active surgeon should belong to the former, the older and more experienced to the latter division. The ambulance on the field should be placed in a shaded and protected spot, near the combatants. Peasants' houses may be taken possession of, and arrangements made to obtain abundance of clean hay or straw, to admit free ventilation, to secure cleanliness, and to avoid overcrowding.

In the English service the duties are performed by what is termed a bearer company, consisting of 1 surgeon-major (in command), 3 surgeons-major, 4 surgeons, 1 captain of orderlies, 2 lieutenants of orderlies, 1 transport officer. To these are added 36 non-commissioned officers from the Army Service Corps, the number of the latter being increased to 163 from the Militia Reserve on taking the field, making a total of 210. One bearer company is attached to each of the infantry divisions of the army corps, and one to the corps troops, including the cavalry brigade, making a total in all of 4 bearer companies for service with the army corps. The "surgery waggons" are provided with all requisites, and remain at the "dressing station." A proportion of the wheeled transport is reserve transport, and consists of 23 ambulance waggons, known as waggons of the second line.

The "bearers" go through a course of instruction, and are fitted to be dressers. The whole company is drilled in "stretcher" exercise, in loading and unloading ambulance waggons, in improvised methods of removing the wounded, in exercises with mountain equipment, such as cacolets or panniers, litters, country and railway waggons for the transport of wounded.

In France the ambulance staff for a division of infantry of about 10,000 men consists of—

- 1 Surgeon-major of the first class.
- 2 Surgeons-major of the second class.
- 4 Assistant surgeons.
- 1 Pharmacien-major of the second class.
- 1 Assistant pharmacien.

The administrative staff consists of—

- 1 Officier d'administration comptable.
- 1 Adjudant en premier.
- 2 Adjudants en second.
- 3 Infirmeries-majors (head nurses).
- 17 Infirmeries ordinaires.

AMBULANS—AMEIVIDÆ.

The materials required by this staff are carried by five waggons. Each waggon is divided into compartments variously arranged, containing 163 kilogrammes (=358 lbs.) of linen for dressing, thus divided:—18 sheets, 300 roll bandages (spices), 1260 ordinary bandages, 36 bandages, 16 squared body-bandages, 10 T-bandages, 16 triangular body-bandages, 105 escharps, 10 suspensory bandages, 10 fracture bandages for the thigh (prepared avec attelles), 18 cushions, 10 sacs, 114 kilogrammes (250 lbs.) of linen in small quantity for dressing, as 3000 compresses, 100 fenestrated compresses, &c., 120 kilogrammes of charpie.

No 20 box, or compartment for instruments, contains 21 medicine bottles, 2 delf pots, 24 sounds, 2 oesophageal sounds, a spatula, a pair of scales and weights, 10 corks, an amputation and trephine case, a box of knives, a box containing 2 lbs. of gum arabic, 2 lbs. of sugar, 2 lbs. of yellow wax and 2 lbs. of waxed cloth, 30 gum elastic bougies and 30 wax bougies, 5 quires of paper, 3 penknives, 6 pencils, 2 lbs. of soap, 4 surgical aprons, 6 nurses' aprons, 14 napkins, 8 dusthorns, 3 inkhorns, 2 candlesticks, 1 lantern, a box of matches, 15 needles in a case, 2 oz. of sewing thread, 1 lb. of cotton wool, 3 surgical boxes with bands, compresses, charpie, ligatures, sponges, &c. The waggon also contains 3 wheelbarrows, 3 coverlets, and still some things are omitted, as a reflector, a shade for candles to prevent them being extinguished, &c. &c.

When ambulance waggons cannot travel, the boxes are placed in canteens carried on the backs of mules.

American ambulances are of three kinds: four-wheeled, two-wheeled, and those adapted for pack-saddles. *Arnold* suspends his cot upon pivots, which enable it to swing in accordance with the inclination of the ground, so as to avoid rolling in the patient. The pivots rest on springs. *McKen's* carriage has stretchers which run in longitudinally upon rollers resting upon a false bottom suspended by rubber springs from the sides of the carriage. A water vessel with flexible pipe is under the control of the patient; a fan is suspended from the roof. In *Moss's* plan the sectional folding seats are arranged along the sides, and may be converted into couches. Hammocks form an upper tier for patients; an adjustable door serves for a table. Medicines and instruments are carried in cases which fit in and under the seats. The water keg is suspended beneath the rear. *Rucker, Allan,* and *Smith's* ambulance has a double or single tier. Each couch of the lower tier is divided longitudinally and hinged. It may lie flat on the floor, while the upper tier is occupied by other patients, or it may be bent so as to form a seat. The two-wheeled ambulances are spring carts, with provision for recumbent or sitting patients.

A. volante. (Fr.) The flying ambulance. This consists of two surgeons, a controlling officer, and two nurses.

Ambulans. (L. *ambulo*, to walk.) Walking. Applied to diseases that shift from one part to another, as *Erysipelas ambulans*, erratic erysipelas, &c.

Ambulation. (L. *ambulatio*, a walk.) The act of walking.

Ambulativa. (L. *ambulo*, to walk.) A term formerly applied to the more rapidly spreading forms of herpes.

Ambulatores. (L. *ambulation*, one who walks about.) A synonym of *Passeres*.

Ambulatoria. (L. *ambulatorius*, movable, changeable.) A term applied to the class of animals now called *Dasyuride*.

Ambulatory. (Same etymon.) Effecting locomotion by, or formed for, walking.

Also, applied in the same way as *ambulans*.

Ambuleia. A name of the chicory, *Cichorium intybus*. Probably erroneous orthography for *Ambubera*.

Ambuli. An Indian aquatic herb of the Nat. Order *Primulaceæ*. Aromatic, bitter, tonic, and febrifuge.

Ambulia. A Genus of the Nat. Order *Scrophulariaceæ*, constituted by a single plant, the *A. aromatica* of Malabar, named Manganari by the Indians. All the parts of the plant have a slightly bitter taste, and an agreeable aromatic odour resembling that of pepper. It is employed in fever.

Ambulipedes. (L. *ambulo*, to walk, *pes*, a foot.) A Family of carnivorous manimals, according to *Blainville*, who walk on the feet.

Ambulo. (L. *ambulo*, to walk.) Old name for a disease, otherwise called *Flatulentus*, *Flatus furiosus*, and *Farcis*, consisting in a painful periodical inflation, arising in various parts of the body.

Ambulo flatulentus et furiosus. A term signifying the same as *Ambulo*.

Ambusta. (L. *ambustum*, that which is burnt, from *amburo*, to burn.) Term applied to blisters caused by burns or scalds.

Ambustial. (L. *ambustio*, a burn.) Produced by, or being in connection with, a burn.

Ambustio. (L. *ambustio*, from *amburo*, to burn, G. *Brandschaden*.) A burn or scald on any part of the body, a lesion of the body caused by the application of heat; ambustion.

A. bullosa. (L. *bullosa*, a bubble.) Term applied to a burn sufficiently severe to raise a blister.

A. erythematosa. Erythematous burning; simple redness following a burn.

A. escharotica. (L. *escharotica*, producing a scar.) A burn producing destruction of the cutaneous tissues.

A. gangrenosa. (Γάγγραινα, a gangrene.) A burn sufficiently severe to destroy the life of the skin.

A. vesiculo'sa. (L. *vesiculosus*, full of bladders.) A burn or scald producing a blister.

Ambustum. (L. *ambustum*, that which is burnt.) A burn.

A. ex frigore. (L. *frigus*, cold. G. *Frostschaden*.) A term for frostbite.

Ambuti. (Hind. Dec.) The *Oxalis corniculata*.

Ambutua. The *Paraera brava*.

Ambuya Embo. A plant of the Nat. Order *Aristolochiaceæ*, a Brazilian shrub, used in decoctions by the natives as deobstruent.

Amduri. (Sansk.) The *Boswellia thurifera*.

Amea. A plant of Guinea which, dried and reduced to powder, is taken as snuff to arrest hæmorrhage from the nose.

Amedana. The *Alnus communis*.

Amei-nerunshil. (Tam.) The *Pedatum murex*.

Ameisensaure. (Ger.) Formic acid.

Amei'vidæ. A Family of the Suborder *Fissilinguæ*, Order *Sauria*, or a Family of the Suborder *Cyclosauria*, Order *Sauria*. American lizards with strong, obliquely directed teeth; no palatine

AMEL CORN—AMENORRHŒA.

teeth; head covered with plates, the back with rhomboid scales, the abdomen with transverse rows of square plates; two transverse neck folds; tail long and cylindrical or compressed.

Amel corn. French rice, from which starch is made.

Amelan'chier. A Genus of the Suborder *Pomæe*, Nat. Order *Rosaceæ*. The Shad- or Service-berry. A small tree or bush, with alternate simple leaves, characterised by its gynœcium, the ovary of which contains 2-5 biovulated compartments, subdivided into uniovulated compartments by false dissepiments. The fruit of this plant, which is a small berry with 4-10 seeds, is used in Rupert's Land for mixing with pemmican.

Amelanchier. A synonym of the *Chionanthus virginica*; also of the *Mespilus amelanchia*.

Ameleotic. (Ἀμελής, indifferent.) Careless.

Amelei'a. (Ἀμελεια, indifference.) The condition of apathy.

Ameli. A Malabar shrub, genus not ascertained, a decoction of the leaves of which is used against colic, and its roots boiled in oil for the dispersion of tumours.

Amelia. (A, neg.; μέλος, a limb.) A form of arrested development in which the limbs are entirely absent. In such cases it is impossible to determine whether the condition arises from primitive deficiency of the limb or from subsequent arrest followed by atrophy.

Amélie-les-Bains. France; Département Pyrénées Orientales; Arrondisse. de Ceret; formerly known as Bains d'Arles; about eighteen miles from Perpignan. Prettily situated at the foot of a hill at an altitude of 278 mètres, or about 900 feet. The waters are alkaline and sulphuretted, with a temp. of 20-61° C. (68° to 142° F.) There are three establishments here, two due to private enterprise, and one built by government on a large scale for the military. There are above twenty springs. The favorable climatic conditions—dry and protected from the north winds—of Amélie-les-Bains in winter make it a favourite resort at that season, and it is much recommended for those suffering from cutaneous affections, catarrh, rheumatism, and the early stages of phthisis.

Amella. Same as *Spilanthes acmella*.

Amelliki. The native name in Guinea of a shrub, the leaves of which, either alone or conjoined with grana paradisa, enjoy a great reputation as a cure for diarrhœa. (Waring.)

Amellus. A plant named by Virgil, regarded by some commentators as the *Aster amellus*, Lin., one of the *Compositæ*; by others, with more probability, as the *Galatella punctata*, which is still called amello in Italy.

Also, a Genus of African *Compositæ*, Tribe *Asteroidiæ*, characterised by having a short pappus.

A. umbellatus. Woundwort. A native of Jamaica. Its taste is sourish, and it is used as a vulnerary.

Amelipodi. An Indian tree, used as an alexipharmic.

Amelus. The same as *Amelia*.

Amendanus. An old term for the elder tree, *Sambucus nigra*.

Amene. (Arab.) Sodid chloride, or common salt. (Euland.)

Amo'nia. (A, neg.; μήν, a month.) A synonym of *Amenorrhœa*.

Amenoma'nia. (L. *amoenus*, agreeable; ;

Gr. *mania*, madness. *F. aménomanie*; *G. lustiger wahnsinn*.) A term employed by Rush to indicate gay partial insanity, the monomania proper of Esquirol. It ordinarily manifests itself under the form of a tranquil mania, the patient being infatuated with his beauty, his grace, his mind, his dress, talents, titles, and birth. This class of patients seize on the cheerful side of everything. They are happy, joyous, and communicative. They are susceptible and irritable, their impressions are vivid, their affections energetic, their determinations violent; disliking opposition and restraint, they easily become angry and even furious.

Amenorrhœ'a. (A, priv.; μήν, a month; πία, I flow. *L. menstruum defectus, privatio, or suppressio*; *F. amenorrhée*; *I. and S. amenorrea*; *G. amenorrhoe, verzögerte Menstruation*.) The absence, irregularity, or suppression of the menstrual discharge during some part of the period of life in which it is naturally present, thus including both *Emansio mensium* and *Suppressio mensium*.

The occurrence of amenorrhœa is referable either to imperfect formation of the secretion, or to some defect or vice of conformation preventing its discharge.

Imperfect or suppressed formation of the secretion may result from exposure to wet and cold during menstruation, may proceed from constitutional conditions, as general debility, inanition, anæmia, consequent on syphilis, scrofula, phthisis, cirrhosis, Bright's disease, or other wasting disease; or it may be sympathetic and dependent on disease of some distant organ, or be due to some psychical cause, as mental distress, or it may be caused by indolent and luxurious habits of life, or confinement in a close atmosphere, or by over-exertion; and the discharge is commonly, though not always, suppressed in pregnancy.

Retention of the secretion when formed results from congenital or acquired disease of the sexual organs, as from absence of the ovaries, uterus, or vagina; or from occlusion of the passages, as in cases of imperforate hymen; or from contraction of the cervix, the presence of tumours, or other disease.

Amenorrhœa frequently leads to other maladies, as dyspepsia, neuralgia, hysteria, hæmorrhages from other organs, and chlorosis.

The treatment must depend on the cause, and in cases of debility, however produced, merges into that appropriate for anæmia, whilst organic changes sometimes demand operative proceedings. Where it has come on suddenly in an otherwise healthy woman, hot hip-baths, leeches to the vulva, and aloetic purges may be prescribed.

A., accidental. A term used in the same sense as *A. secondary*.

A., primitive. A term given to those cases of amenorrhœa in which there has never been any menstrual secretion. It is usually accompanied by the condition called *chlorosis*, with pale, yellowish skin, deficiency in number of red blood-corpuscles, short breath, bad or unnatural appetite, pain in left side of the chest, œdematous feet, anæmic, cardiac, and jugular murmurs, leucorrhœa, and often erythema nodosum. Occasionally this form of amenorrhœa is a result of plethora, and it may be caused by imperfect development of the ovaries or uterus, or from closure of the genital passages. When plethora is present, local bloodletting, purgatives, and exercise are advised. In chlorotic cases iron in some form, preceded by salines and aperients, is

AMENORRHŒA DESTILLATORIA—AMER.

the chief remedy; potassium has been much extolled, the liquor ammoniac acetatis, saffron, Indian hemp, galvanism, strychnia, savin, ergot, apol, aloetic purgatives, are also used in fitting cases. Great attention is to be paid to general hygiene and to the digestion, good nutritive food and beer or wine, especially a red wine, is to be given, and exercise in the open air and early hours are to be enjoined. When there is pain or heat in the back or pelvis, the occurrence of the discharge may be promoted by hip or foot baths of hot water, with or without mustard; or warm vaginal injections may be used, or two or three leeches may be applied to the anus or the groins. Galvanic pessaries have been used, the interior of the uterus has been dry-cupped, and it has been advised to pass the uterine sound every day for three or four days before the day on which the discharge should be expected. The physical conditions, as imperforate hymen, are themselves to be treated.

A., secondary. A term applied to those cases of amenorrhœa in which the discharge, having once existed, has become, from some cause or other, arrested. The remarks on treatment in the other sections apply here.

Amenorrhœa destillatoria. (L. *destillo*, to drip down. F. *amenorrhée distillante*.) A term applied to those cases of retention of menstrual discharge within the uterine cavity, in which there is a continual drop-by-drop escape.

A. difficilis. (L. *difficilis*, difficult.) A synonym of *Dysmenorrhœa*.

A. emansio'nis. (L. *emansio*, a remaining absent beyond one's furlough.) The non-appearance of the menses at the usual age.

A. hymen'lea. Amenorrhœa depending upon an imperforate hymen.

A. parti'lis. Partial amenorrhœa; a synonym of *Dysmenorrhœa*.

A. suppressio'nis. (L. *suppressio*, a keeping back.) Suppression or absence of the menses subsequent to their first appearance.

Amenorrhœal insanity. Insanity often attended with homicidal impulse, occurring at each menstrual period.

Amenta lupuli. A synonym of *Strobili humuli*, Helv. Ph., the dried strobiles of the hop, *Humulus lupulus*.

A. uvas marit'ime. Under this name the flowers and branches of some species of *Ephedra*, to which a styptic property was attributed, were formerly sold.

Amenta'ceæ. (L. *amentum*, a thong, G. *Kätzchen*, *trager*.) A group of dicotyledonous plants, under which were formerly ranged *Fothergilla*, *Ulmus* and *Celtis*, *Saxifraga* and *Papaver*, *Myrica*, *Betula* and *Alnus*, *Carpinus*, *Fagus*, *Castanea*, *Quercus*, and *Corylus*, *Liquidambar* and the *Plane*, all characterised in common by having dichinous flowers arranged in catkins, achlamydeous or dichlamydeous, ovary one-celled, superior; seeds numerous, almost or quite exarbitumous. These families are, however, now generally distributed under other groups.

By some botanists it is retained as an Order, including the families *Platanæ*, *Salicinæ*, *Juglandæ*, *Cupuliferæ*, *Carpinæ*, *Betulina*, *Myricæ*, and *Cistaceæ*.

Amenta'ceous. (Same etymon. G. *Kätzchenartig*.) Catkin-bearing plants.

Amentales. (Same etymon.) In Lindley's classification, an alliance of *Inclinous* *Exogens*, having the flowers in catkins, achlamy-

deous or monochlamydeous; carpels superior; embryo small, with little or no albumen.

Amentia. (L. *a, neg*, *mens*, the mind. G. *Unverstand*, *Wahnsinn*.) A term employed both by Vogel and by Crichton. Vogel included it with mania and melancholia in his class of *Paranoia*. In Crichton's classification, *Amentia* included *Fatuitas*, *memoria imminuta*, *Perceptio imminuta*, *Vis idearum associandi imminuta*, *Vis iudicandi imminuta*, and *Vis iudicandi imminuta*.

A. acquis'ita. (L. *acquisitus*, acquired.) Imbecility from accident.

A. congen'ita. (L. *ingenitus*, inborn, participle of *ingeno*, or *ingigno*, to instil by nature.) A synonym of *Idiocy*.

A. occul'ta. (L. *occultus*, hidden.) An old term applied to describe those cases of insanity in which the motive for the injury of a person has been present, but never expressed.

A. sen'ilis. (L. *senilis*, belonging to old age.) The debility of intellect of the aged.

Amentif'eræ. (L. *amentum*, a thong, *fero*, to bear.) A name of an Order, according to some, which includes the families *Platanæ* and *Salicinæ*.

Amentif'erous. (Same etymon.) A term applied to plants whose inflorescence is an amentum or catkin.

Amentum. (L. *amentum*, a leathern thong attached to the middle of a spear to help in throwing it. F. *chaton*; G. *Kätzchen* *Bluthenkatzen*.) In Botany, a catkin, a spike, composed of sessile unisexual flowers, in which the perianth is replaced by simple scales, as in the nut. *Amenta*, at least when composed of male flowers, are articulated at their bases, and fall off entire.

A. attenu'atum. (L. *attenuatus*, from *attenuo*, to make thin.) Term applied to an amentum which grows thinner towards the point.

A. cylindricum. (L. *cylindricus*, a cylinder.) An amentum that is equally thick above and below.

A. gracile. (L. *gracilis*, slender.) An amentum that is slender in proportion to its length.

A. ova'tum. (L. *ovatus*, egg-shaped.) An amentum that is thick below and round above.

Amer. (Fr.) Bitter.

A. au maximum. (Fr.) A synonym of *Pierre acid*.

A. cinchon'ique. (Fr.) A bitter acid substance obtained by Schwartz from ordinary cinchona bark. It is gummy, yellow, slightly soluble in water and ether, very soluble in alcohol and in alkalies. It appears to be a glycoside, and identical with *chinoxine*.

A. d'absin'the. A synonym of *Absothin*.

A. d'erythrine. (Fr.) A synonym of *Amar erythrin*.

A. d'in digo. (Fr.) A synonym of *Pierre acid*.

A. de boeuf. (Fr.) Ox gall.

A. de chin'va. (Fr.) A synonym of *A. cinchonique*.

A. de rhu'barbe. A synonym of *Rhabarbarin*.

A. de Scil'le. (Fr.) A synonym of *Scillitin*.

A. de Séné. (Fr.) A synonym of *Cathartin*.

A. de Wel'tre. (Fr.) A synonym of *Pierre acid*.

A. des Al'lemands. (Fr.) Rutafia. Gentian 15, orange 16, coriander 14, canella 4,

AMERI—AMETHYST.

calamus 4, inula 2 grammes. Reduce all to coarse powder, macerate for 8 days in 2 litres of hollandia, and add 90 parts of sugar.

A. des Mol'landais. (Fr.) A synonym of *A. des Allemands*.

A. du ro'ti. A synonym of *Assamare*.

A. quino'ique. (Fr.) A synonym of *Amer cinchonique*.

Ameri. (Arab.) Old name for indigo. (Quincy.)

Ameri'can alcorno'que. A kind of bark imported for tanning purposes from America, and said to be the produce of *Byrsonima laurifolia*, *B. rhopalaefolia*, and *B. coccolobaefolia*; plants belonging to the *Malpighiaceae*.

A. aga'vo. The *Agave americana*.

A. al'oe. The *Agave americana*.

A. as'pen. The *Populus tremuloides*.

A. balm of Gil'ead. A kind of balsam produced by the *Icica heterophylla*, one of the *Myricaceae*, or, according to Birdwood, by the *Icica sarana*.

A. bal'sam. See *Balsamum peruvianum*.

A. beech. The *Fagus ferruginea*.

A. calum'ba. False calumba. The root of the *Fraxina carolinensis*, or *Walteri*, a Gentianaceous plant.

A. cen'taury. The *Sabbatia angularis*, Nat. Ord. *Gentianaceae*. The herb and root are employed in the U.S. for their tonic and febrifugal properties. See *Sabbatia*.

A. chi'na-root. The rhizomes of the *Smilax lancifolia*.

A. col'eocynth. The fruit of the *Luffa purgens* and *Luffa drastica*.

A. colom'bo. The root of *Fraxina carolinensis*, or *F. Walteri*.

A. cross. The *Barbarea precox*.

A. date plum. The *Diospyros virginiana*.

A. dit'tany. The *Cumula mariana*.

A. earth-nut. The *Arachis hypogaea*.

A. gen'tian. The root of the *Fraxina Walteri* sliced longitudinally so as to imitate gentian.

A. gum'mi gut'tae. The produce of the *Vismia guianensis* of Mexico and Surinam. (Birdwood.)

A. hel'leboro. The *Veratrum viride*.

A. hemp. The *Cannabis sativa*, grown in America, and used to prepare an extract, which is employed instead of that of the Indian hemp.

A. hol'ly. The *Ilex opaca*.

A. i'pecacuan'ha. The root of *Euphorbia ipecacuanha*, which is used as an emetic.

A. iv'vy. The Virginia creeper, *Ampelopsis quinquefolia*.

A. net'tle tree. The *Celtis occidentalis*.

A. pennyroy'al. The *Hedeoma pulegioides*.

A. pop'lar. The tulip tree, *Liriodendron tulipifera*.

A. san'telo. The *Heuchera americana*.

A. sarsaparil'ia. The roots of *Aralia nudicaulis*, which is used as an alterative and stimulant diaphoretic in rheumatic affections.

A. sen'na. Common name for the *Cassia marilandica*, in the United States.

A. sil'ver fir. The *Abies balsamea*.

A. spike'nard. The *Aralia racemosa*.

A. tube-well. A pointed iron pipe in length, the lower part perforated, which is driven into the ground; when the water, which passes through the holes, is drawn up by a pump.

A. turpentine. The product in part of

the *Pinus palustris*, and in part of the *Pinus taeda*.

A. wa'ter hem'lock. The *Cicuta maculata*.

Ameri'cans. The original inhabitants of North and South America are, by most authorities, considered to be alike, and to have no characteristics separating them essentially from the Asiatic Mongols. The hair is long, glossy, black, stiff, and cylindrical in section; the eyebrows and eyelashes are thick, but the beard and the hair of the body is scanty or absent. The colour of the skin varies from a darkish European complexion to an olive brown or a copper red. The eyes are small and sunken; the eyelids are sometimes oblique, sometimes horizontal. The nose is frequently large, prominent, and it may be aquiline; the nostrils are dilated. The malar bones are prominent, and the jaws are heavy and often projecting. The skull is probably microcephalic or brachycephalic. They are divisible into the hunting tribes of the North, the hunting tribes of the South, and the civilised races, as the Mexicans.

America'num tubero'sum. The Jerusalem artichoke, *Helianthus tuberosum*.

Also, the potato, *Solanum tuberosum*.

Ameristoneu'ra. (A, neg.; μεριστός, divided; νῆρον, a nerve.) Nerves, the nerves of which do not undergo division.

A'mes. (ἄμης.) A sort of cake made with milk.

Amesbury. An English surgeon.

A's appara'tus for frac'ture. The general principle of Amesbury's apparatus for fractures of the lower limb is to make one part of the limb form a point of resistance, from whence extension can be made and kept up at the opposite end without other aid than the machine itself; this being accomplished so as to bring the fractured ends of the bone into proper place, the splints attached to the apparatus are adjusted to the limb, and having been properly fastened there is little chance of displacement. In the apparatus for the upper limb the weight of the arm principally keeps up the extension, but the immobility of the fractured ends is especially provided for by an angular splint applied in front of both upper and forearm.

A's appara'tus for frac'tured clav'icle. This is a modification of Earle's apparatus.

Ametab'ola. (A, neg.; μεταβάλλω, to change.) Term applied to those insects which do not undergo any metamorphosis in the course of their development, and which do not, when mature, possess wings.

Ametabolic. (Same etymon.) Not undergoing metabolism or metamorphosis.

Amet'allous. (A, neg.; μεταλλων, a metal.) Non-metallic; a term given to such of the elements as are believed to be not of a metallic character, as oxygen.

Am'ethyst. (Ἀμύθυστος, not drunken; from ἀ, neg.; μεθύω, to be drunk; because it was supposed to enable to resist intoxication; or because its colour approaches that of wine.) A well-known beautiful transparent gem, of a rich purple or violet colour, or sometimes without any colour at all. It is quartz tinted with oxides of manganese and iron. It was worn as an amulet to counteract the effects of wine, and was also held to be useful in diarrhoea.

A., orien'tal. A violet-coloured form of native hydrate of alumina.

AMETHYSTA—AMIDES.

Amethysta. (Ἀμέθυστος, not drunken, from ἀ, neg., μέθω, to be drunken with wine.) A term for remedies against drunkenness.

A. pharmaca. (Φάρμακον, a drug.) Remedies against drunkenness.

Amethystine. (L. *amethystinus*; G. *amethystroth*.) Term applied to flowers and fruits of a violet colour tending to blue, like the amethyst.

Amethystine. (Fr.) A violet colouring-matter obtained by M. Baudrimont from the action of sulphuric acid on carotheline.

Amethystus. (Ἀμέθυστος, not drunken; from ἀ, neg., μέθω, to be drunk.) A remedy against drunkenness. Certain medicines, used for the purpose of correcting the effects of excess of wine, were termed *Amethysta medicamentaria*.

Also, the gem amethyst.

Also, the name of a now unknown plant.

Amethystum. (Ἀμέθυστον.) A remedy for drunkenness.

Amētra. (Ἄ, neg.; μήτρα, the womb.) The state of a woman without a womb.

Amētria. A synonym of *Amētra*.

Amētria. (Ἄ, neg.; μέτρον, a measure; G. *Unmässigkeit*, *Maasslosigkeit*, *Uebermass*.) Excess, intemperance.

Amētrohæmia. (Ἄ, neg.; μήτρα, the womb; αἷμα, blood.) Defective supply of blood to the uterus.

Also, a synonym of *Amēnorrhœa*.

Ametropia. (Ἄ, neg.; μέτρον, measure; ὤψ, the eye.) An abnormal condition of the refraction of the eye. The state in which, when the eye is at rest, or, in other words, no accommodation is exercised, parallel rays are not brought to a focus upon the retina, but either in front of or behind it. When a healthy eye is at rest parallel rays of light, or those proceeding from a remote object, are brought to a focus on the retina. If, by reason of the prolongation of the antero-posterior axis of the eye, parallel rays are brought to a focus in front of the retina, *myopia* is said to exist. If by reason of the shortness of the antero-posterior axis, they are brought to a focus behind the plane of the retina, *hypermetropia* is present, or if this last condition be due to the flattening and deficient refractive power of the lens consequent on advancing age, *presbyopia* exists. Lastly, if the curvature of the cornea differ in different diameters, so that no focus exists for parallel rays, *astigmatism* is present.

Amētrous. (Ἄ, neg.; μήτρα, the womb.) Having no uterus.

A mezza aria. Italian for the notes which keep the middle compass of the voice.

Amfractus. (Lat.) Synonym of *Anfractus*, a convolution.

Am baldi. The Hindu name for the *Curcuma amada*.

Amherstieæ. A Tribe of the Suborder *Casalpiniæ*, Nat. Ord. *Leguminosæ*.

Amiææ. A Group of the Order *Ganoidei*. Osseous fishes having large, round, enamelled scales, branchiostegous rays osseous; tail heterocercal. It contains only one living family, of which there is only one species, the *Amia calta* of American waters.

Amianta ceous. (F. *amiantacé*.) Pertaining to the Amianthus.

Amiante. (Fr.) Asbestos.

Amianthiform. (*Amianthus*, asbestos;

forma, resemblance.) Feathery and silky, like asbestos.

Amianthinopay. (Ἄ, neg.; λάρδιος, violet; ὀφθαλμ, eyesight.) Inability to distinguish violet-coloured rays of light.

Amianthium. A Genus of the Nat. Ord. *Melanthaceæ*.

Amianthus. (Ἀμιαντος, undefiled, pure, from ἀ, neg.; μαινω, to defile; because not destroyed by fire, or because its silvery appearance is not easily soiled. F. *amianthe*; G. *Bergstaube*.) Asbestos, especially that form of it which occurs in delicate and regular fibres.

Amianthus muscæstoricum. Fly poison, fall-poison. Hab. North America. It is a narcotic poison, and is employed for destroying flies, for which purpose the bulbs are triturated with molasses; the flies thus secured require to be killed, or they revive. Its foliage is said to prove fatal to cattle in the autumn.

Amiantoides. (*Amianthus*.) Resembling *Amianthus amiantoid*.

Also, in Chemistry, applied to arseniate of copper, the filamentous crystals of which are disposed in tufts.

Amiba. A synonym of *Amœba*.

Amici, J. B. An Italian botanist and physician, born at Modena in 1784, died 1863. He constructed the first achromatic microscope.

A's camera lucida. An instrument which serves to take an accurate outline of an object. It consists of a rectangular glass prism, having one of its perpendicular faces touching at right angles an inclined glass plate, and the other presented to the object to be drawn. The rays proceeding from the object are reflected from the base, deflected as they pass out to the glass plate, and are seen by the eye, placed over the plate, as if on a piece of paper, underneath, where the outline may be marked by means of a pencil.

A's prism. A prism with its base plane and the two other surfaces convex; used in the microscope as a reflector and condenser, producing oblique illumination. It has three adjustments, one on a horizontal axis, to direct the rays upwards at the required angle, one for distance from the axis of the microscope, to vary the obliquity, and one by rotation on a vertical axis, to determine the direction whence the rays shall proceed.

Amici'num. (Lat., the neck of a wine sac.) The aperture or mouth of a tube.

Amictorium. (G. *Umhangtuch*, *Gewand*.) A mantle.

Amiculum. (*Amicio*, to wrap, or cover.) A little cloak or short garment.

An old name for the amnion in animals, and for the membrane which covers the germ-sac in plants.

It also signified a covering for the pubes, used by those who exercised in the gymnasium.

Amicus curiæ. (*Amicus*, a friend; *curia*, a court.) A friend of the court, one who, as a stander by, when a judge is doubtful or mistaken in a matter of law, may inform the court. (Crabb.)

Amidacetic acid. A synonym of *Glycocin*.

Amide phenique. (Fr.) A synonym of *Amidin*.

Amides. A series of compounds derived from ammonium salts by abstraction of water; or from acids by substitution of amidogen, NH₂, for hydroxyl, OH, or from one or more molecules of ammonia by substitution of acid-radicals for

AMMAR—AMMONIA.

Am'mar. (Fr.) A synonym of *Dammarrasin*.
Am'meline. A product of the fusion of urea at 120° C. (248° F.)

Am'meos vulg'aris fructus. See *Ammi fructus*.

Am'mi. (*Ammi*, the *Ammi copticum*, now called *Psychotria coptica*; from *ammos*, sand; from its likeness to particles of gravel, or *aisle*, a urinal, from its diuretic effects.) A Genus of the Nat. Ord. *Umbelliferae*. The calyx almost obsolete; petals obovate, bilobed, emarginate, with an inflexed lobule. The disc often depressed, entire, fruit oval-oblong, compressed laterally, with prominent primary ridges; columella bipartite; seeds convex externally, plane or concave internally. Annual or biennial herbs with ternate pinnate leaves, with the last segments serrated, flowers arranged in compound umbels, with involucre and involuella.

A. bolberi. The *Ammi majus*.

A. cicutifolium. The *Ammi majus*.

A. copticum. A synonym of *Psychotria coptica*. Nat. Ord. *Umbelliferae*. An erect annual herb cultivated in Egypt and Persia, and especially in India, where it is well known as Ajwan, Ajowan, or Omam, and yields small spicy seeds, known under the name of *Ajowan* seeds.

A. oreoticum aromaticum. A synonym of *Psychotria verticillata*.

A. de Candio. The *Sison ammi*.

A. de Crête. The *Sison ammi*.

A. fructus. The fruit of the *Psychotria fœniculifolia*, used as a stomachic, carminative, and emmenagogue.

A. majus. Common Bishop's weed. The fruit of this plant, which is a native of Europe, has been mistaken for that of the *Ammi copticum*, but is smooth, whereas the latter is tuberculated.

A. matthioli. Deleschamps. A synonym of *Psychotria verticillata*.

A. odore origani. A drug mentioned by Anguillara in 1549, probably identical with the ajowan seeds obtained from *Psychotria coptica*.

A. officinalis. Fr. Codex. The fruit of the *Psychotria fœniculifolia*, D.C. It is small, acrid, and aromatic, and now rarely employed; it is one of the "*quatre semences chaudes*."

Gaubourt affirms that it has been attributed to the *Psychotria verticillata*, the *P. coptica*, and the *P. fœniculifolia*.

Also, a synonym of *A. majus*.

A. parvum foliis fœniculi. A synonym of the *Psychotria fœniculifolia*.

A. perpusillum. (L. *perpusillus*, very small.) A drug mentioned by Lobel; probably identical with the ajowan seeds obtained from *Ammi copticum*.

A. semen. A term applied to the very small fruits of *A. majus* and of *Sison amonum*, which have been often confounded with those of *Ammi copticum*, but the absence of minute tubercles on the two former, with other differences, negatives any supposition of identity.

A. semine apili. Bauhin. A synonym of *Psychotria verticillata*.

A. verum. The *Psychotria fœniculifolia*.

A. visnaga. is the "*Herbe aux cœures-dents*" or "*Herbe aux gencives*" of the south of France. The fruit was formerly considered to be diuretic, and was employed in pleurisy.

A. vulgare. The *Ammi majus*.

Ammineae. A Tribe of the Nat. Ord. *Umbelliferae*, characterised by hermaphrodite or polygamous, didynamous, variously arranged

flowers, fruit compressed at the sides, with or without alae.

Ammidæ. A synonym of *Ammineae*.

Am'mion. Minium, or red lead (Castellus.) Red mercury sulphide. (D.)

Ammios muricata. (L. *muricatus*, shaped like the murex shell, pointed.) A synonym of *Ammi majus*.

Ammismus. (*Ammos*, sand.) The cure of disease by sand baths. See *Pammismus*.

Ammium. A synonym of *Ammi alca*.

Am'mo. An African plant, growing in Ashanté, the juice of which is applied to cuts and bruises. (Bowditch.)

Ammobroma sonora. (*Ammos*, sand, *probum*, food.) A plant growing in Mexico in sandy places, as a parasite, on the roots of an undetermined plant. It is eaten by the wandering tribes of Papigoes Indians.

Ammocætes. (*Ammos*, *κοίτη*, bed.) An early stage of development of the sea lamprey.

Ammocharidæ. A Family of the Sub-order *Sedentaria*, Order *Polychæta*. Body composed of elongated rings, surrounded in front by the branchial apparatus in the form of a crown of ramified lobes; digestive tube enclosed in a hæmal space.

Ammochosia. (*Ammos*, sand; *χῶς*, to heap up. G. *Sandbad*.) Term for a remedy consisting in drying the body by immersing it in sand or salt heated by the sun's rays, employed by the Greeks in dropsy. (Orribianus, as stated by Gorræus.)

Ammodytes. (*Ammodótēs*, a sand burrower, from *ammos*, sand, *δοτα*, to enter into, and so to live.) Growing or living in sand.

Also, the name of the sand eel.

The term *ammodytes* was also formerly applied to a species of *Coluber* inhabiting Southern Europe.

A. tobianus. (F. *anguilla de sable*; G. *Sandaal*.) Order *Anacanthini*, Class *Pisces*. The sand eel.

Am'moline. (Formed from the first parts of the words *ammoniacum*, and *oleum*, oil.) One of the salifiable bases of *Dippel's animal oil*; it is a liquid which is heavier than water (L and R.)

Ammonsia. The same as *Ammonia*.

Ammonia. (From *sal ammoniacum*. F. *ammoniaque*, G. *Ammoniak*.) NH₃. A colourless pungent gas possessing powerful alkaline properties, turning turmeric brown, reddened litmus blue, and neutralising acids. Its sp. gr. is 0.589. A litre weighs 0.76271 gramme. It is obtained by heating ammonium chloride with slaked lime. It assumes the liquid form under a pressure of 6.5 atmospheres at 16.5° C. (60° F.); it has been solidified at a low temperature. Water takes up about 700 times its volume. The salts of ammonia are rather widely distributed in nature, the chloride and sulphate being found near volcanoes, the chloride in sea water and in chalybeate waters generally, the nitrate in hyoscyamus and other plants. They appear in the urine and feces as products of the regressive metamorphosis of the protids.

In the gaseous state ammonia is highly irritating to the conjunctiva and mucous membranes. It does not act so energetically on the integument as the fixed alkalies, but if its escape be prevented it soon produces redness, burning pain, vesication, and sloughing. The gas excites strong irritation and spasmodic closure of the glottis, and the

AMMONIACALIA—AMMONIACUM ACETICUM SOLUTUM.

A. gas. Term for ammonia, the volatile alkali; otherwise called alkaline air.

A. liniment. Four parts of strong solution of ammonia mixed with 32 parts of olive or almond oil.

A. liq'or. A product of dry distillation of coal in the manufacture of gas, it consists of water holding in solution ammonia, ammonium carbonate and sulphide, and other substances.

A. pomade. A synonym of *Pomade de Goudret*.

A. salt. A synonym of *Ammonii sulphas*.

A. salts. (F. *Sels ammoniacaux*.) Salts in which ammonia acts as a base. They are characterised by giving no precipitate with hydrosulphuric acid, with ammonium sulphide, nor with the alkaline carbonates. Heated with potash, ammonia is disengaged, recognisable by its odour and the white fumes that appear on the approach of a glass rod dipped in hydrochloric acid. With concentrated solution of tartaric acid crystals of ammonium bitartrate are precipitated; no precipitate with hydrofluosilicic acid or perchloric acid. With platinum chloride a pale yellow precipitate falls, slightly soluble in water, insoluble in alcohol. With aluminium sulphate alum is slowly deposited, but in dilute solutions there is no change. With sodium hypobromite nitrogen gas is disengaged in the cold. Mixed with potash and a solution of mercuric iodide in potassium iodide added, a brown precipitate or discoloration of dimercureammonium iodide is produced (Nessler's test).

A. soap. A synonym of *A. liniment*.

A. tartar. A synonym of *Ammonium tartrate*.

A. turbit. A synonym of *Ammonium and mercury sulphate*.

Ammoniacalia. A term for stimulant remedies containing ammonia.

Ammoniaci preparata. The preparations of ammonia.

A. vegetabilis. A synonym of the *Liquor ammoniac acetis*.

Ammoniaco. A term indicating the presence of ammonium in a compound.

Ammoniaco-magnesian phosphate. A synonym of *Magnesium and ammonium phosphate*.

A. calculus. This form of urinary calculus is white, friable, crystalline on the surface, not laminated on section. It is soluble in dilute acids, insoluble in potash. Under the blowpipe it exhales an ammoniacal odour, and at length melts into a vitreous substance. It sometimes attains a very large size.

Ammoniacon. (Ἀμμωνιακόν) Dioscorides, Paulus Ægineta, and other Greek writers, mention Ἀμμωνιακόν, and Pliny, under the same name, describes two kinds of this gum—Thrauston, which resembles male frankincense, and is the most esteemed, and Phyrana, which is of an unctuous and resinous nature. It is now generally admitted that the amm-nacon of the ancients differs from the ammoniacum of the present day, the former being the produce of the *Ferula tingitana*, and the latter of the *Dorema ammoniacum*.

Ammoniacum. (Ἀμμωνιακόν, so called because the plant yielding it chiefly grew in Cyreniaca, around the temple of Jupiter Ammon. F. *ammoniaque*; L. *Gomma ammoniaco*; S. *goma amoniaco*, G. *Ammoniakhart*, *Ammoniakgummi*;

Hind. *ooshak-feshook*; Arab. *fooshook ashok*; Pers. *ushak, semugh-bishersen*.) A gum resin, the product of the *Dorema ammoniacum*, collected in Persia, and the Punjab. One of the chief localities for it is the desert plains about Takhkhaat, between Ispahan and Shiraz. It occurs either in the form of whitish and brittle rounded tears, varying from the size of a small pea to that of a cherry, and breaking with a conchoidal shining fracture, or in large yellowish masses composed of agglutinated tears, and often mixed with foreign fragments. It has a faint odour, and a bitter, acrid, and nauseous taste. The nodules are of a pale creamy yellow, or in old specimens of a cinnamon brown outside, opaque, and milk white within; they easily soften with warmth, but do not melt; they are partly soluble in alcohol, ether, vinegar, alkaline solutions, and water; with the latter they form a milky emulsion. They are coloured yellow by caustic potash, and bright orange by the hypochlorites, as by common bleaching powder. Ammoniacum contains 70 to 72 per cent. resin, 18 to 22 per cent. gum, 2 to 4 per cent. of bassorin, about 2 of volatile oil, and 6 of water and loss. It is stimulant, antispasmodic, expectorant, emmenagogue, and resolvent; in large doses it is an irritant, producing vomiting and diarrhoea, and it has also been credited with diaphoretic and diuretic properties. It has been employed in pulmonary affections, especially in asthenic cases, as in spasmodic asthma, hysterical asthma, chronic catarrh of old age, and chronic cough accompanied with torpor of the alimentary canal, in anasarca, in passive dropsy; used in chlorosis, amenorrhœa, and in chronic and painful catarrhal conditions of the intestinal mucous membrane. It has been used in the form of plaster in indolent swellings of the glands and joints, and in enlarged bursæ. Dose, 10 to 20 grains, in emulsion or pill.

Also, a synonym of *Ammonia*.

A., African. A milky gum resin, having some resemblance to ammoniacum, obtained from the *Ferula tingitana*, growing in Morocco, and still an object of traffic with Egypt and Arabia, where it is employed in fumigations. Fluckiger and Hanbury believe it to be identical with the ammoniacon of Dioscorides.

A. gummi. See *Ammoniacum*.

A. in granis. (F. *ammoniaque en larmes*; G. *Ammoniae in Thränen*, *Körnerammoniak*.) Ammoniacum in tears or grains.

A. in lacrymis. The same as *A. in granis*.

A. in placen'tis. (F. *ammoniaque en masses*, or *en pains*; G. *Ammoniak in Kuchen*, *Massenammoniak*.) Ammoniacum in cakes or masses.

A. pulverat'um. Helv. Ph. Ammoniacum thoroughly dried and reduced to powder.

A. suffimen. (L. *suffimen*, fumigation, incense.) An ancient term for a variety of ammoniacum.

A. thymia'ma. (Θυμίαμα, a preparation for fumigation, incense.) An ancient term for a variety of ammoniacum.

Ammoniacum aceticum solut'um. The *Ammonium aceticum solutum*, Aust. Ph.

A. carbon'ic'um. A synonym of the *Ammonium carbonicum* of the G. Ph.

A. carbon'ic'um pyro-oleo'an'm. A synonym of the *Ammonium carbonicum pyro-oleosum* of the G. Ph.

AMMONIEMIA—AMMONII ARSENIAS.

A. liq'uida. Belg. Ph. A synonym of *Liquor ammoniac fortior*.

A. li'quor. Dub. Ph. A solution of ammonia. Sp. gr. 0.950.

A. li'quor fortior. Dub. Ph. A solution of ammonia. Sp. gr. 0.900.

A. murias. A synonym of *Ammonii chloridum*.

A. muria'ta. A synonym of *Ammonii chloridum*.

A. muriat'ica. A synonym of *Ammonii chloridum*.

A. ni'tras. See *Ammonii nitras*.

A. nitrosul'phas. A salt formed by transmitting nitric oxide gas through a solution of sulphate of ammonia. It has been used in France as a remedy in typhoid fever.

A. ox'ales. $(H_2N)_2C_2O_4 \cdot H_2O$. B. Ph. Oxalate of ammonia. One ounce of oxalic acid dissolved in eight fluid ounces of water is neutralized with carbonate of ammonia at $100^\circ C$. ($212^\circ F$), filtered while hot, and set aside that crystals may form, these are long, colourless, efflorescent, rhombic prisms; not very soluble in cold, freely in hot water. It is used, in solution of half an ounce to a pint of water, as a test of the presence of lime.

A. phos'phas. $(NH_4)_2HPO_4$. B. Ph. (*L. ammonium phosphoricum*. G. *ammonium-phosphat*). Phosphate of ammonia. Solution of ammonia is added to twenty fluid ounces of dilute phosphoric acid until the solution is slightly alkaline; it is evaporated, with the occasional addition of ammonia, to the formation of crystals as the solution cools. A salt crystallizing in transparent colourless prisms, which become opaque on exposure to air from loss of water and ammonia. They are soluble in 2 parts of water, insoluble in rectified spirit. When heated with potash ammonia is evolved. The aqueous solution gives a yellow precipitate with nitrate of silver. It has been chiefly recommended in the uric acid and gouty diatheses. It has also been employed in rheumatism, and as a diaphoretic and discutient. Dose, 5—20 grains.

A. prepara'ta. (*L. preparatus*, prepared) A synonym of *Ammonia carbonas*.

A. pu'ra. (*L. purus*, pure) Ammonia gas.

A. pu'ra liq'uida. A synonym of the *Ammonia* of the Aust. Ph., and the *Liquor ammoniac*, Br. Ph.

A. sesquicarbo'nas. A synonym of *Ammonia carbonas*.

A. sulphas. See *Ammonii sulphas*.

A. sulphure'tum. A synonym of *Ammonium sulphide*.

A. superammoni'acus. A synonym of *A. carbonas*.

A. tar'tras. See *Ammonium tartrate*.

A. uras. See *Ammonium urate*.

Ammonie'mia. (*Ammonia*, and *ai'ma*, blood.) A term applied to that condition of the blood supposed to be due to the decomposition of urea in the system into carbonate of ammonia, and the absorption of this into the circulation. The decomposition of the urea in the urinary passages, as a consequence of its retention, may result from diseased kidneys, dilatation of the ureter and pelvis of the kidney, renal abscess, paralysis of the bladder, enlarged prostate with retention, and stricture with retention. In this condition the urine is said to be ammoniacal when passed, and to contain mucous or muco-purulent secretions, the breath and perspiration are ammoniacal. The mucous membrane of the mouth is remarkably dry and shining, the complexion is sallow, the temperature high, and there is emaciation. No dropsical symptoms are present, convulsions are rare. In the acute form, vomiting and diarrhoea may occur, but these symptoms are not present in the more common chronic form. Death is usually preceded by coma. The intestines are said to contain a greenish yellow, alkaline, mucous fluid, having an ammoniacal odour, and their mucous coat to be cedematous and sometimes ulcerated. In the general absence of vomiting, diarrhoea, and convulsions, ammoniemia differs from uraemia. In the treatment, the cause of the retention of urine should, if possible, be removed, in other respects it resembles the treatment of uraemia.

Ammoniam'eter. (*Ammonia*; *μῆτρον*, a measure.) An instrument used for the purpose of determining the density of solutions of ammonia gas.

Ammonia'que al'ocollisee. A synonym of *Liquor ammonii caustici spirituosus*, Ph. G.

A. an'isee. A synonym of *Liquor ammonii anisatus*, Ph. G.

A. suc'cinée. A name of one of the formulas of *Eau de luce*.

Ammonia'ted. (G. *ammoniakhaltig*.) Charged with or containing ammonia.

A. cop'per. The *Cuprum ammoniacum*.

A. iron. A synonym of *Ferri ammonio-chloridum*.

A. mer'cury. The *Hydrargyrum ammoniacum*.

Ammon'ic. Of or belonging to ammonia.

A. salts. Salts of ammonium.

Ammonii arsenias. A synonym of *Ammonia arsenias*.

A. bromi'dum. B. Ph., U.S. Ph. NH_4Br . Bromide of ammonium. A salt crystallizing in small colourless crystals. It dissolves in 14 parts of water, and in 13 parts of rectified spirit. It becomes yellow on exposure to the air. It is an excellent nervine, and has been found useful in epilepsy, hooping-cough, in hysteria, and in the sleepiness of nervous persons. It relieves neuralgic pains, and is recommended in strumous ophthalmia. The dose is from 5—20 grains or more.

The U.S. Ph. orders a troy ounce of iron wire to be added to half a pint of distilled water and shaken until the smell of bromine has gone and the liquid becomes of a greenish colour, four fluid ounces and a half of solution of ammonia and half a pint of distilled water are then added, the mixture is heated and filtered, the precipitate on the filter washed in boiling distilled water, evaporated until a pellicle forms, and stirred at a moderate heat until granulation occurs.

A. caust'ic li'quor. Ph. Bor and Russ. A synonym of *Liquor ammoniac*.

A. chlori'dum. B. Ph. NH_4Cl . Chloride of ammonium or sal ammoniac. This salt occurs in the fumaroles of volcanoes and in the fissures of recent lava streams. It is obtained by heating the ammoniacal liquor of gasworks with lime, and passing the ammonia which then escapes through dilute hydrochloric acid until it is saturated, the solution is evaporated, and the crystals dissolved in hot water and recrystallized, or they are sublimed. It is a colorless, inodorous, translucent, fibrous mass, tough and difficult to powder; soluble in 4 parts of water and

AMMONIUM.

Tetrabranchiata, Class *Cephalopoda*. Fossil species only. Septa many times folded and complex; suture angulated, zigzag, lobed, or foliaceous; tube external.

Ammonium. NH_4 . A hypothetical compound metallic base, capable of replacing potassium and sodium, to which metals it presents close analogies.

A. acetatum. A synonym of *Ammonia acetica*.

A. aceticum liquidum. A synonym of the *Liquor ammonia acetatis*.

A. aceticum solutum. Aust. Ph. Diluted acetic acid 100, coarsely powdered ammonium carbonate about 20.5 parts, distilled water in sufficient quantity to make the solution of sp. gr. 1.03, a diaphoretic. Dose, $\frac{1}{2}$ drachm to 5 drachms.

A. alium. The *Alumen* of the B. Ph.

A. amalgam. A soft, solid substance produced when a globule of mercury, connected with the negative pole of a voltaic battery, is placed on a piece of moistened ammonium chloride and laid on platinum attached to the positive pole of the battery. It is believed to be an amalgam of ammonium and mercury.

An amalgam of the same nature has been believed to be formed when a globule of mercury is placed in a solution of ammonium chloride and connected with the negative pole of a voltaic battery, it swells up and floats to the surface, very shortly it contracts, expels hydrogen and ammonia, and the mercury resumes its original appearance. It is probable that this is caused merely by the interposition of gas in the substance of the mercury.

A. and hydrogen sulphide. A synonym of *A. hydrosulphide*.

A. arseniate. See *Ammonia arsenias*.

A. arsenicum. Ph. Russ. A solution containing 1 part of arsenic acid dissolved in 8 parts of water, and to which 3 parts of liquor ammonia have been added, is evaporated till crystals form. These are directed to be dried and kept in a glass vessel.

Also a synonym of *Ammonia arsenias*.

A. arsenicum solutum. Ph. Russ. A solution containing one part of crystals of arseniate of ammonia, dissolved in 480 parts of distilled water.

A. arsenicum. A synonym of *Ammonia arsenias*.

A. benzoate. See *Ammonia benzoas*.

A. benzoicum. Fr. Codex. A solution of 10 parts of benzoic acid in 8 parts of liquor ammonia. Sp. gr. 0.92.

Also a synonym of *Ammonia benzoas*.

A. benzoicum solutum. Ph. Russ. Two parts of benzoic acid are dissolved in 16 parts of distilled water; and to the warmed solution 1 part of carbonate of ammonia is added, or as much as is required for saturation, 8 parts contain 1 part of dry benzoate of ammonia.

A. biborate. Boracic acid in excess is dissolved in a solution of ammonia, gently heated, and then allowed to cool, when the salt crystallises in semitransparent, truncated, rhombic octohedra. It is alkaline, and dissolves in twelve parts of water. It has been given in doses of 10 to 20 grains every hour in renal and vesical calculus, and in chronic vesical catarrh.

A. bicarbonicum. A synonym of *Ammonia bicarbonas*.

A. bitartricum. (F. *Tartre ammonia-*

cal acidule, tartre d'ammoniaque acidule, alcali volatil tartreux acidule, tartrate d'ammoniaque acidule, bitartrate d'ammoniaque; G. *Ubersaures weinsteinsaures ammonium, urbersaures weinsteinsaures Salzmak; fluchtiger Weinstein sahm.*) Bitartrate of ammonia, or ammonium tartrate (acid).

A. biwolframicum. Tungstate of ammonia.

A. boracicum. See *A. biborate*.

A. borate. See *A. biborate*.

A. bromatum. A synonym of the *Ammonium bromidum*.

A. bromide. See *Ammonium bromidum*.

A. carbamate. $\text{NH}_4\text{CO}_2\text{NH}_2$. Formed when dry carbon dioxide is brought into contact with dry ammonia. It is a crystalline powder with an ammoniacal odour, and soluble in ammonia. It is contained in commercial carbonate of ammonia.

A. carbazotate. A synonym of *A. picrate*.

A. carbonate. See *Ammonia carbonas*.

A. carbonates. The carbonates of ammonia are normal ammonium carbonate, $(\text{NH}_4)_2\text{CO}_3 + \text{H}_2\text{O}$, and hydrogen ammonium carbonate or bicarbonate, $\text{H}(\text{NH}_4)\text{CO}_3$. The former is prepared by digesting commercial carbonate of ammonia, at a temp. of 12°C (53.6°F), with strong solution of ammonia, when a crystalline powder falls, and the latter is the white mealy powder formed on the surface of the crystals of the normal carbonate.

A. carbonicum. Aust., Belg., Helv., G., and Russ. Ph. A synonym of the *Ammonia carbonas*.

A. carbonicum pyro-oleosum. G. and Helv. Ph. (G. *brenzlich-kohlensaures Ammonium*.) Sal volatile cornu cervi. Impure or empyreumatic carbonate of ammonia. Ammonium carbonicum, reduced to powder, 32 parts, ethereal animal oil 1 part; mix gradually. A whitish powder, becoming yellow with time, soluble in water, to which it imparts a yellow colour. The dose is from 3 to 6 grains.

The Swiss Pharmacopæia directs it to be prepared by mixing 100 parts of carbonate of ammonia with 1 part of ethereal animal oil.

A. carbonicum pyro-oleosum liquidum. The *Carbonas ammoniac pyro-oleosus liquidus*.

A. carbonicum pyro-oleosum solutum. Fr. Codex. A liquid obtained from the dry distillation of hartshorn purified by one distillation.

G. Ph. A liquid prepared by dissolving 1 part of impure or empyreumatic carbonate of ammonia in 5 parts of distilled water. Sp. gr. 1.065–1.070.

Russ. Ph. Prepared in the same way as that directed by the G. Ph. Sp. gr. 1.070–1.074.

A. carbonicum solutum. Ger. and Russ. Ph. A liquid prepared by dissolving 1 part of carbonate of ammonia in 5 parts of distilled water. Sp. gr. 1.070–1.075.

A. causticum. A synonym of *Liquor ammoniac*.

A. causticum solutum. A synonym of *Liquor ammoniac*. B. Ph. Sp. gr. 0.959.

Fr. Codex. Sp. gr. 0.92, 100 parts contain 21 of gaseous ammonia.

G., Russ., and Swiss Ph. Sp. gr. 0.960; 100 parts contain 10 parts of gaseous ammonia.

A. causticum solutum fortius. A

AMMONIURET—AMNESIC.

A. sesquicarbon'ate. A synonym of *Ammonia carbonas*.

A. sesquicarbon'ic'um. A synonym of *Ammonia carbonas*.

A. subcarbon'ic'um. A synonym of *Ammonia carbonas*.

A. succinate. (G. *Ammoniumsuccinat.*) $C_4H_4O_4NH_2$. When added to a solution of a ferric salt, ammonium succinate throws down a reddish-brown precipitate of ferric succinate. It has been recommended in delirium tremens.

A. succin'ic'um liquidum. A synonym of the *Eau de luce*.

A. succin'ic'um solu'tum. G. Ph. and Helv. Ph. A liquid obtained by dissolving 1 part of succinic acid in 8 parts of distilled water, and adding 1 part, or as much as may be required to effect neutralisation, of empyreumatic carbonate of ammonia. Sp. gr. 1.050—1.054.

Russ. Ph. Succinic acid 24 parts, distilled water 192 parts, rectified oil of amber 1 part, and empyreumatic carbonate of ammonia 24 parts, or as much as may be necessary. Sp. gr. 1.050—1.054.

A. sul'phate. See *Ammonit sulphas*.

A. sulphide, solution of. B Ph. Three fluid ounces of solution of ammonia are put into a bottle and a stream of hydrogen sulphide passed through until gas ceases to be absorbed; two fluid ounces of solution of ammonia are then added. Ammonium hydrosulphide, $H(NH_4)S$, called in the B Ph. ammonium sulphide, is formed and is held in solution. A fetid, dark green fluid, possessing sedative and emetic properties, which has been administered in diabetes in doses of from 7—20 drops for the purpose of controlling the morbid appetite. It has also been recommended, though rarely employed, in cardiac disease and consumption. Used in testing for the metals.

A. sulphides. The sulphides of ammonium are ammonium monosulphide, $(NH_4)_2S$; ammonium hydrosulphide, $H(NH_4)S$; ammonium tetrathiosulphide, $(NH_4)_2S_4$; ammonium pentathiosulphide, $(NH_4)_2S_5$; and ammonium heptathiosulphide, $(NH_4)_2S_7$.

A. sulphocarb'olate. A salt prepared in the same way as *Sodium sulphocarb'olate*, and used for the same purposes; it crystallises in scales.

A. sulphur'ic'um. A synonym of *Ammonit sulphas*.

A. sulphhydrat'um. A synonym of *A. sulphide*.

A. tartar'ic'um. A synonym of *Potassium and ammonium tartrate*.

A. tartar'ic'um acid'ulum. (F. *tartra ammoniacal acidule*; G. *Uebersaure weinsalzsaures Ammonium*.) Bitartrate of ammonia, or *A. bitartrate (acid)*.

A. tar'trate (Neutral) $C_4H_4(NH_4)_2O_6$. It is a soluble and efflorescent salt.

A. tar'trate (Acid) $C_4H_4(NH_4)O_6$. A salt very similar to acid potassium tartrate.

A. u'rate. $C_4H_4(NH_4)N_4O_3$. A salt frequently found in urinary sediments and calculi. It constitutes a large portion of the urine of birds and serpents, and is generally obtained from the excrement of the boar. It is usually a white, amorphous, and sparingly soluble powder. Under the microscope it is occasionally seen to form crystalline needles, but more frequently spheroidal with crystalline spines. It has been used as an ointment, in the proportion of one scruple to one

ounce of lard, in skin diseases, and in tuberculous disease of the lung. It has also been given internally in phthisis, in doses of 4—7 grains. It should be given cautiously, lest it occasion the formation of oxalic acid in the urine.

A. u'ricum. (F. *urate d'ammoniaque*; G. *Karnsaure ammoniak.*) The *A. urate*.

A. valerianate. See *Ammonit valerianas*.

A. valerian'ic'um. (G. *Baldriansaures Ammoniak.*) A synonym of *Ammonit valerianas*.

A. wolfram'ic'um. (F. *wolframate d'ammoniaque*; G. *wolframsaures Ammoniak.*) Fungate of ammonia.

Ammoni'uret. (F. *ammoniate, ammonure, l. ammoniure, S. ammoniuro*.) Term for a combination of ammonia with a metallic oxide, as ammoniuret of silver, copper.

A. of peroxide of gold. See *Auric fulminate*.

Ammon's horn. A synonym of the *Hippocampus major* or *Cornu ammonis*.

Ammon'um. $(NH_4)_2O$. A term for the hypothetical oxide of ammonium.

This word has also been used as synonymous with ammonium in many pharmaceutical preparations.

Ammonoph'ileus. (*Ἀμμος*, sand; *φιλέω*, to love.) Loving sand.

In Botany, applied to plants growing in sandy places.

Ammos. (*Ἀμμος*, sand; L. *arena*.) Sand. Used as a dry fomentation and astringent in dropsy by the ancients. (*Dioscorides, Celsus.*)

Ammozalon. (G. *Sandsaure*.) A synonym of *Silicic acid*.

Amna. Ancient term for aqua, or water, or rather that which flows through lime, and where the earth is white, in other words, water impregnated with saline matters. (Quincy.)

A. alkalis'ata. Same as *Amna*.

Amnemoni'lo. (A. neg. *μνημονία*, of memory.) Applied to affects characterised by loss of memory.

Amnemos'yne. (A. neg. *μνημοσύνη*, remembrance; G. *Vergessenheit.*) Forgetfulness.

Amne'sia. (*Ἀμνησία*, forgetfulness; G. *Grübeln, Vergehen.*) Absence or want of remembrance, defect of memory, forgetfulness, amnesia, amnesia. It may be congenital or acquired, in the former case being associated with the organic changes producing idiocy, it may result from gunshot or other wounds of the head, from disease of the brain or of its envelopes, as fungus of the dura mater or aneurism, cancer, tubercle, ramollissement, chronic diffuse meningitis, haemorrhages, cysts, abscesses, metastosis, syphilitic tumours, from insolation, from chronic intoxication with lead, alcohol, and opium, acemic states of the constitution during convalescence, from fevers, cholera, &c., haemorrhages, venereal excess, from epilepsy, and old age. Of late it has been restricted to the loss of memory of words. In typical cases the organs of articulation, of vision, and of motion of the right arm may be perfect, and yet the person can neither talk, nor read, nor write, in consequence of the forgetfulness of words.

Amne'sic. (Same etymon.) Belonging to or connected with *Amnesia*.

A. aphasia. Loss of the memory of words. Same as *Amnesia*.

Amnes'tia. (Ἀμνηστία, forgetfulness.) Same as *Amnesia*.

Amnes'tic. (Same etymon. *F. amnes-tique*; *G. vergesslich, vergessen.*) Applied to poisonous agents, or cerebral diseases or injuries, causing loss of memory.

Amnestotha'less. (Ἄ, neg.; μνηστία, a wooing; θάλασσα, flourishing.) A term applied by G. Allman to plants having the sexes in separate flowers.

Am'nió. The same as *Amniotic*.

A. ac'id. A synonym of *Amniotic acid*.

Amnió'olous. (L. *amnis*, a river; *colo*, to inhabit. *G. Flussleibend.*) Living on the borders of rivers.

Amnió'tis. Same as *Amnitis*.

Amnióclep'sis. (*Amnion*; κλέπτω, to get rid of imperceptibly.) The unperceived escape of the liquor amnii.

Am'nion. (Ἀμνίον, the membrane round the foetus. In Anatomy (L. *angina tunica*. *F. amnios*; *G. Schaa/shautchen*), a double non-vascular membrane (the inner layer derived from the epiblast, the outer consisting of a fold of the somato-pleural layer of the mesoblast), which, rising up at the sides and two extremities of the embryo, meet on the dorsum. The outer layer fuses with the chorion, and is fibrous in structure; the inner or amnion proper is continuous with the skin of the foetus, and consists of nucleated cells. Between the inner layer and the embryo is the liquor amnii. The cavity between the two layers of the amnion is part of the coelom or pleuro-peritoneal cavity, and is lined by two layers of cells, one, the deeper of the two, flat and pavement-like, the other, large, nucleated, and with crenulated outline. In the chick the amnion on the seventh day begins to pulsate slowly and rhythmically, due to contraction of muscular fibres, which are developed apparently in the mesoblastic layer. The folds of the two layers, as above described, being inflected backward at each extremity of the embryo, and having reached each other, respectively unite, and form two cavities; that enclosed by the union of the inner folds is the true amnion, that enclosed by the outer folds is the false amnion. The amnion is absent in amphibia and fishes.

Also, in Botany (*G. Keimsack*), the internal membrane of the seed or germ sac.

Also, a former name for the *Hydrargyri sulphuretum rubrum*.

A., false. The outer cavity formed by the union of the external one of the folds which form the amnion. In birds and reptiles it is probably absorbed, in mammals it is believed to aid in the development of the chorion.

A., drop'sy of. A condition of pregnancy, in which there is excessive secretion of liquor amnii; it is sometimes a cause of protracted labour, in consequence of over-distension and inertia of the muscular structure of the uterus.

Amniorrhoe'a. (*Amnion*; ρέω, to flow.) Discharge of the waters.

Am'nios. Same as *Amnion*.

Amnió'sis. Same as *Amnitis*.

Amnió'ta. (*Amnion*.) Animals which, in the course of their embryonic development, possess an amnion and allantois. It includes reptiles, birds, and mammals.

Amniótate. A salt of amniotic acid.

Amniotic. (*Amnion*, the amnion.) Of or belonging to the amnion.

A. ac'id. A synonym of *Allantoic acid*.

A. liq'uid. The *Liquor amnii*.

A. sac. A term applied to the inner layer of the *Amnion*.

In Botany, the term is applied to an inner central compartment, or sac, in which the embryo of some plants, as the *Canna*, is contained. The perisperm is consequently here double.

Amni'tis. Inflammation of the amnion.

Am'nium. A synonym of *Amnion*.

Amo'eba. (Ἀμείβω, to change. *F. amibe*.) A monocellular organism found chiefly in fresh water, but also in the sea and damp earth. It is one of the types of Haeckel's Subkingdom *Protista*. It is composed of a mass of finely granular sarcode or protoplasm, soft, transparent, colourless, like a speck of white of egg or jelly, containing a nucleus with nucleolus, capable of performing movements both of change of form and place. Its nutrition is effected by extending itself over and enclosing minute organisms like diatoms, and after extracting the contents eliminating the exuvie by simply withdrawal of its body from them. It multiplies by fission.

Amo'ebæ. (Same etymon.) One of the Orders into which the Class *Rhizopoda* is divided by some authors, and is described as comprising, with one or two exceptions, naked forms, having short, blunt, lobose pseudopodia, which do not anastomose with each other, and containing a nucleus and one or more contractile vesicles.

Amo'ebidæ. A Family of the Suborder *Lobularia*, Order *Foraminifera*, Class *Rhizopoda*, Subkingdom *Protozoa*. The position of the living beings included in this group is variously determined; they have a great similarity to many low vegetable organisms, and possess only one general characteristic, namely, their faculty of amoeboid movement.

Amo'ebiform. (*Amæba*; *form*, a likeness.) Resembling the amoeba; especially in regard to the slow and characteristic changes of form and place executed by various cell structures.

A. cells. A term which has been applied to the white corpuscles of the blood.

Amo'ebina. A Suborder of the Order *Amæba*, having the body naked.

Amo'eboid. (*Amæba*; εἶδος, likeness.) Having the characteristic movements of the *Amæba*.

A. move'ments. Movements typically performed by the *Amæba*, but seen also in the white corpuscles of the blood and in various other free masses of sarcode. The movements are most active at temperatures between 20° C. and 40° C. (68° F. and 104° F.) They are greatly retarded or altogether arrested at temperatures near the freezing point, and the sarcode is coagulated and deprived of vitality in general a few degrees above 100° F. (109° F. Schultze). The sarcodeal substance appears to be composed of fine granules distributed through a transparent substance. In the movements the initiative seems to be taken by the transparent substance which protrudes itself in the form of fingers, more or less obtuse or acuminate, and a rush of the protoplasmic granules then follows. After a time the stream becomes slower and ceases, a new protrusion occurring towards some other point, whilst the first one is retracted.

Amenoma'nia. See *Amenomania*.

Amo'gabriel. Arabic for *Cinnabar*. (Wallich, Dornæus, Ruland, and Johnson.)

Amoma'ceæ. A synonym of *Amomeæ*. According to some, a Family of monocotyle-

AMOMALES—AMOMUM.

donous plants, divided into two Tribes, *Marantaceae* and *Zingiberaceae*.

Amoma'les. In Lindley's classification, an alliance of the Class *Endogens*, having unsymmetrical flowers with 1-5 stamens, some of which at least are petaloid, and albuminous seeds.

Amo'mes. A Group of the Nat. Ord. *Zingiberaceae* or *Sestamineae*, characterised by a bilocular anther and multiovulated ovarian loculi. They are usually annuals, with tuberous, fasciculated, and woody roots.

Amo'meous. Resembling or related to the *Amomum*.

Amo'mi bac'ose. Belg. Ph. The berries of the Pimenta.

A. uva. The substance mentioned by Pliny under this name was probably the round cardamom, the fruit of the *Amomum cardamomum*.

Amo'mis. A plant mentioned by Dioscorides and Pliny, identified by Cordus and Cassalpinus with *Anastatica hierochuntica*.

A. pimen'to. A synonym of *Myrtus pimenta*.

A. pimento'ides. Berg. A synonym of *Myrtus pimentoides* (Nees.)

A. pseudocaryophyllus. A synonym of *Myrtus pseudo-caryophyllus*.

Amomum. (*Amomum*) An odoriferous plant not well characterised in the writings of the ancients. Avicenna, in describing the Hamama of the Arabs, which corresponds to the *Amomum* of the Greeks, gives details which have enabled Sprengel to identify it with the *Cissus vitifolia* of Armenia. By others, in consequence of Hamama signifying Columba, the plant has been identified with *Forsteria muscifolia* and with *Geranium columbinum*. During the renaissance period Pimenta was termed Amome in the shops of Paris. The term has also been applied to the *Solanum pseudocapsicum*.

Also, a synonym of *Pimenta*.

Amomum. A Genus of the Tribe *Amomeae*, Nat. Ord. *Zingiberaceae*. They are plants of the tropical regions of the Old World, characterised by having a short calyx, trifold at the apex, corolla with 3 external unequal divisions, and a single internal division, which is plane and of large size, and constitutes the labellum, and is anterior in position. The androecium is reduced to a single fertile stamen with bilocular anther, the filament forming a crest over it. The gynoecium consists of an inferior ovary with a filiform style lying between the lobes of the anther. The ovary has 3 multiovulated loculi. The fruit, though usually fleshy, is loculicidal, and contains numerous arilless seeds.

A. Afze'lii. The *A. grana-paradisi*.

A. angustifolium. Sonnerat. (*L. angustifolium*, narrow, *folium*, a leaf) Hab. Madagascar. The fruit of which is the Great Cardamom of Madagascar.

A. aromat'icum. Roxb. This plant is a native of the valleys on the eastern frontier of Bengal. According to Roxburgh the plant blossoms during the hot season before the periodical rains, and matures its fruit in September; the latter, which is fleshy and the size of a nutmeg, is then gathered and sold to the drug dealers under the name of Morung elachi or Bengal cardamom.

A. cardamomum. Willd. (*F. amome en grappe*) A native of Cambodia, Siam, Sumatra, and Java. It is from this plant that the Round or Cluster Cardamoms are obtained.

A. citra'tum. Pereira. (*L. citratum*, citron

flavoured.) The species said to supply the *Cardamomum majus citratum*. The seeds of this cardamom are remarkable for their strong flavour of verbena.

A. Clu'sii. A species described by Clusius, having polished seeds, probably supplying the large cardamom.

A. curcuma. A synonym of *Curcuma tinctoria*.

A. Daniel'i. The bastard Melegueta of Pereira, probably identical with *A. angustifolium*.

A. exscapum. (*L. ex*, forth from; *scapus*, a stem.) A synonym of the *A. grana-paradisi*.

A. galan'ga. A synonym of *Alpinia galanga*.

A. genuinum. (*L. genuinum*, natural.) A synonym of *A. cardamomum*.

A. globosum. (*L. globosum*, spherical.) The species which supplies the Round Cardamom of China, called Tsao-Kou.

A. grana-paradi'si. Smith. A species yielding one of the varieties of *Grains of paradise*.

A. great wing'ed. The *A. maximum*.

A. hirsu'tum. Lam. (*L. hirsutus*, hairy) The *Costus speciosus*, Linn.

A. korari'ma. A term suggested by Pereira for a species of Cardamom producing fruits, which are strung and used as necklaces by the inhabitants of Uganda in Central Africa. The fruit is named Korarima by the natives.

A. latifolium. (*L. latifolium*, broad-leaved.) Long or grape-seeded amomum. Hab. Sierra Leone. Fruit very large, pulp refrigerant.

A. longiscapum. (*L. longus*, long; *scapus*, a stem.) The long-scaped amomum. Hab. Sierra Leone. Feebly aromatic.

A. macrospermum. Smith. (*Μακρός*, long; *σπέρμα*, a seed) This plant is probably identical with *A. melegueta*.

A. Madagascari'ense. The *A. angustifolium*.

A. maximu. Roxb. (*L. maximum*, largest. *F. cardamome asle de Java*) The plant producing the Java Cardamom. It is cultivated in Java, and the fruits are sold for the sake of their agreeable edible pulp.

A. me'dium. (*L. medium*, middle) This plant produces the Ovoid Cardamom of China.

A. melegue'ta. (*F. melegueta* or *manniguetta*) An herbaceous reed-like plant, 3-5 feet high, producing on a scape, rising scarcely an inch above the ground, a delicate, wax-like, pale purple flower, which is succeeded by a smooth, scarlet, ovoid, fruit 3-4 inches in length, rising out of sheathing bracts. The fruit has a thick, fleshy pericarp, enclosing a colourless acid pulp of pleasant taste, in which are embedded numerous seeds known as *Grains of paradise*. It is widely distributed in tropical West Africa.

A. montanum. (*L. montanum*, of a mountain.) The *Zingiber cassumunar*.

A. palustre. (*L. palustre*, marshy.) Swamp amomum. Hab. Western Africa. Seeds highly aromatic. Used locally in neuralgia.

A. pimen'ta. A synonym of *Pimenta*.

A. racemo'sum. (*L. racemosus*, clustering. *F. Amome en grappes*.) A term given to the Round Cardamom of Java when met with in clusters. It is the *A. cardamomum*.

A. repens. Roemer. (*L. repens*, from repo, to creep) The *Ellettaria cardamomum*.

A. repens. Willd. This plant supplies the small Cardamom of Malabar.

AMONGEABA—AMPELION.

A. sylvestre. (L. *syloestris*, of a wood.) A synonym of the *Zingiber serumbet*.

A. verum. (L. *verus*, true.) The *Elettaria cardamomum*.

A. villosum. (L. *villosus*, hairy.) This plant probably supplies the Hairy Cardamom of China.

A. xanthioides. Wild or bastard Cardamom of Siam and Tenasserim. The seeds of this plant deprived of their capsules are sometimes imported into the London market. They closely resemble the seeds of Malabar Cardamom, differing chiefly in flavour and in being rather more finely rugose. Occasionally they are imported still cohering in ovoid three-lobed masses, as packed in the pericarp. The fruits of this species grow in round clusters, and are remarkable for having the pericarp thickly beset with weak fleshy spines, which gives them some resemblance to a xanthium, and has suggested the specific name.

A. zedoaria. A synonym of the *Curcuma zedoaria*.

A. zerumbet. An Indian plant, yielding *caesumunar*, the root of the *Zingiber caesumunar* or *Z. serumbet*.

A. zingiber. Linn. A synonym of *Zingiber officinale*.

Amongeaba. The Brazilian name of a grass resembling *Panicum spicatum*. Used in S. America in fomentations and baths as an emollient in tenesmus and other painful affections.

Amoorta. The Sanskrit name of the *Tricospora cordifolia*.

Amoos. The Arabic name of the *Psychotria ajowan*.

Amorge. (Ἀμόργη, fine flax from the island of Amorgos.) See *Amurca*.

Amorginē. A synonym used by Dioscorides of the plant *Parietaria*.

Amorpha. A Genus of the Tribe *Galegeæ*, Nat. Order *Leguminosæ*, consisting of a single species, growing in America.

A. fruticosa. (G. *Zierstrauch*.) Hab. America. It has irregularly formed flowers; the bruised root is used against toothache. Bastard indigo, according to Quincy.

Amorphia. (A. neg.; μορφή, form. F. *amorphie*; G. *Formlosigkeit*.) Formless; shapeless; destitute of definite form.

Amorphism. (Same etymon. F. *amorphisme*; G. *Gestaltlosigkeit*.) A condition of shapelessness.

Amorphogranular. Consisting of amorphous granules.

Amorphophallus. (Ἀμορφος, misshapen; φαλλός, the penis.) A Genus of the Nat. Order *Araceæ*. It is characterised by having an androgynous spadix without sterile flowers, terminating in a voluminous, irregularly-shaped, somewhat conical body, the whole surrounded by a spathe convoluted at the base and dilated, spotted with brown and white. The ovaries have 2—4 loculi, with an anatropal ovum in each. The plants constituting the genus are chiefly Indian.

A. campanulatus. (L. *campana*, a bell.) Telinga potato. Mal. and Tam. *Karuna*; Tel. *Muncha Kunda*; Hind. *Ol*. The flower exhales a fœtid carrion-like odour. Stemless; leaves decoumpound; spathe campanulate, margins curled; club ovate, lobate; anthers two-celled. The acrid corms are used medicinally in boils and ophthalmia, as a stimulant and expectorant, as an emmenagogue, and in acute

rheumatism. After roasting, the corms are sometimes eaten.

A. giganteus. Bl. Hab. India. The corms of this species are also used as food.

A. montanum. (L. *montanus*, of the mountain.) Another species, similarly used.

A. orizen'sis. Hab. India. The root is very scrid, and is used when fresh as an irritant poultice to swellings to promote suppuration.

Amorphophyte. (Ἀμορφος, misshapen; from ἀ, neg.; μορφή, form; φυτόν, a plant.) Applied by Necker to plants that have irregular or anomalous flowers.

Amorphopygagra. (*Pygagra*, pain in the anus.) Irregular pain in the anus.

Amorphosis. See *Anamorphosis*.

Amorphosteophyte. (Ἀμορφος, shapeless; *osteophytum*, an osseous tumour.) A shapeless outgrowth of bone.

Amorphous. (Ἀμορφος; from ἀ, neg.; μορφή, form. F. *amorphé*, *difforme*, *informe*; G. *amorphisch*, *miegebildet*, *missgestaltet*.) Wanting form or shape; shapeless.

A. carbon. Carbon in its uncrystallisable form, as charcoal.

A. phosphorus. See *Phosphorus*, *amorphous*.

A. quinine. This substance, which has also been called quinoidine, is a yellowish or brownish uncrystallisable substance precipitated from the mother-liquor of sulphate of quinine by an alkaline carbonate. It is generally impure, but is believed to consist chiefly of quinine and cinchonine. It is used in the same manner and for the same purposes as the sulphate of quinine.

A. rocks. Rocks which have no regular structure.

Amorphozo'a. (A. neg.; μορφή, form; ζῷον, an animal.) A term applied to the lower forms of the animal kingdom, as to the sponges and their allies, so called from their want of regular symmetrical structure.

Amorphozo'ary. (Same etymon.) A sponge.

Amorphozo'ous. (Same etymon.) Related to or resembling the *Amorphozo'a*.

Amorphy. (Ἀμορφία, shapelessness.) Same as *Amorphia*.

Amos'teus. Osteocolla, or petrified carbonate of lime.

Amotes. Potatoes. (Quincy.)

Am'pac. Name of an East Indian tree which yields a highly odoriferous resin, and the leaves of which are used to medicate baths.

Am'par. A synonym of *Amber*.

Am'pelas agria. A synonym used by Pliny of the *Tamus communis*.

A. idal'a. A synonym used by Theophrastus of the *Vaccinium vitis idæa*.

Ampelida'ceæ. (Ἀμπελός, a vine.) A synonym of *Vitaceæ*.

Ampel'idæ. (Same etymon.) A synonym of the *Vitaceæ*.

Ampelid'ææ. (Same etymon. G. *Weinstockgewächse*.) A synonym of *Vitaceæ*.

According to some systems, a Family of the Nat. Order *Discanthæ* of Polypetalous exogens.

Ampelid'æous. (Same etymon.) Resembling the vine.

Ampel'idææ. Same as *Ampelida'ceæ*.

Ampel'ion. (Ἀμπελίον, dim. of ἀμπελος, a vine.) Vine leaves, or the tendrils of the vine, recommended by Hippocrates for pessaries to induce the catamenia. (Quincy.)

AMPELITIS—AMPHIBIA.

Ampelitis. (Ἀμπελίτις, belonging to the vine.) The ancient name of an earth resembling bitumen, regarded as refrigerant and resolvent Cannel coal (Waring.)

Ampelocarpus. (Ἀμπελος, a vine; καρπός, fruit.) A synonym of the *Galium aparine*; so called because of the likeness between its seed and young grapes.

Ampelodesmos. (Ἀμπελος, a vine; δεσμός, a band.) So called because of its use in tying up vines.) A Genus of *Graminaceæ*, closely resembling the *Arundo*, from which it chiefly differs in its subulate glumes.

A. tenax. (L. *tenax*, holding fast.) The Dios of the Arabs is well known in Algeria. It is liable to the growth of the mycelium of the *Claviceps purpurea*, from which is developed a peculiar form of ergot. See *Ergot of Dios*.

Ampelography. (Ἀμπελος, the vine; γραφή, to write.) A treatise on the vine.

Ampeloleuce. (Ἀμπελος, a vine; λευκός, white.) A synonym used by Pliny of the *Bryonia alba*.

Ampeloprason. (Gr.) A synonym used by Dioscorides of the *Allium porrum*.

It has also been identified with *Allium ampeloprason*. Used by the ancients as an emmenagogue, diuretic, and antidote to the bites of serpents.

Ampelopsis. (Ἀμπελος, the vine; ὄψις, appearance. G. *Ephesuspranger*.) Nat. Ord. *Vitaceæ*. A genus including some tropical species of vines, characterised by having the disc entirely confluent with the ovary.

A. hederaacea. (L. *hederaea*, of ivy.) Nat. Ord. *Vitaceæ*. Its fresh leaves contain pyrocatechin.

A. quinquefolia. (L. *quinque*, five; *folium*, a leaf. F. *vigne vierge*; G. *wilder Wein*.) The Virginian creeper. An indigenous American plant, said to be expectorant, alterative, and tonic. The bark, collected late in autumn, has been recommended in decoction for the cure of dropsy.

Ampelos. A synonym of the white bryony, *Bryonia alba*.

Also of the vine, *Vitis vinifera*.

A. agria. (L. *agria*, wild.) The *Bryonia alba*.

A. idaea. (L. *idaea*, belonging to Mount Ida.) The *Vaccinium vitis idaea*.

A. melæna. (Μελαινός, black.) The *Tamus communis*.

A. cinophorus. (Oinos, wine; φορέω, to bear.) The *Vitis vinifera*.

Ampelosagria. (Ἀμπελος, a vine; ἄγρια, wild.) Another name for the *Bryonia alba*.

Ampelotherapy. (Ἀμπελος, the vine; θεραπεία, treatment.) The grape cure.

Ampeluk'kia. A synonym used by Dioscorides of the *Atriplex halimus*.

Ampelurgia. (Ἀμπελος, ἔργον, a work. G. *Weinbau*.) The culture of wine-bearing vines.

Ampère, André Marie. French physicist. Born 1775, at Lyons; died 1836, in Marseilles. Especially devoted himself to electrodynamics.

A.'s laws. These relate to the material forces between conductors conveying currents. They are—1. That successive portions of the same rectilinear current repel one another. 2. That parallel currents, if in the same direction, attract, and, if in the opposite direction, repel

one another; and 3. That currents whose directions are inclined to each other at any angle, attract each other if they both flow towards the vertex of the angle (or if they are not in the same plane, towards the feet of their common perpendicular), or if they both flow from it, and repel each other if one of them flows towards the angle and the other from it.

The law that equal volumes of all substances, when in the state of gas, and under like conditions, contain the same number of molecules, first enunciated by Avogadro, is often called Ampère's law.

A.'s rule relates to the direction in which either pole of a needle is deflected by a current, whatever their relative position may be. It may be thus expressed if an observer be so placed that the current passes through him, entering at his feet and leaving at his head, then the deflection of a north-seeking pole will be to the left as seen by him. The deflection of the south-seeking pole will be in the opposite direction.

Ampetokos. A synonym used by Dioscorides either of the *Athanasia maritima*, or of some *Gnaphalium* with white flowers.

Amphamphoterodiplopia. (Ἀμφω, both. Ἀμφοτερος, both of two, diplopia, double sight.) Double sight in both eyes together, and particularly with a single eye.

Amphanthium. (Ἀμφι, about, ἄσθρα, a flower.) Name by Lank for a receptacle dilated by the opening of the peduncles which support, as in *Synantherea*, or contain, as in *Fici*, the flowers.

Ampharetidae. A Family of the Suborder *Sedentaria*, usually included in the *Terebellidae*.

Ampharisteros. (Ἀμφιστερος, with two left hands.) Left-handed, awkward.

Amphemerinus. (Ἀμφημερίνιος. G. *taglich*.) Occurring daily, quotidian, applied by the ancients to a quotidian ague.

Amphemerus. Same as *Amphemerinus*.

Amphiam. An old name of opium.

Amphiarthrosis. (Ἀμφι, on both sides, ἄρθρον, an articulation.) An articulation partaking of the characters of diarthrosis and synarthrosis, in which there is some amount of motion between the bones, and also a more or less complete connection by means of intervening ligament or other substance, as that between the bodies of the vertebrae.

Amphibia. (Ἀμφι, both. βίος, life. G. *Lurche*.) A Class of the Subkingdom *Vertebrata* represented by the Frog (Anura), Newt (Urodela), Cecilia (Perameia), and extinct Labyrinthodonts. Their essential characters are that the skin is naked, rarely presenting scales or ossifications; the limbs, seldom absent, have the same segments as those of higher animals, and terminate in feet; the median fins, if present, are never supported by rays. the occipital bone has two condyles, and the basioccipital region of the skull is very incompletely, if at all, ossified; there is no basiophenoidal ossification, the vertebral centra are always bony; true ribs are either absent or quite rudimentary; the visceral arches of the embryo develop gills, which are either subsequently supplanted by lungs, or continue to perform a respiratory function through life, the blood is red and cold, the heart has a single ventricle and a more or less completely divided auricle; the yolk undergoes complete cleavage; there is no trace of an amnion or allantois.

AMPHIBIAL—AMPHICOTYLE.

Amphib'ial. (Same etymon. G. *doppelpellig*.) Capable of living in water or air.

Amphib'ian. (Same etymon.) Related to or resembling the *Amphibia*.

Amphibioch'nites. (*Amphibia*; ἵχνος, a footprint.) The generic term for fossil footprints that seem to have been impressed by the feet of amphibious reptiles as they passed over the soft yielding beach.

Amphibioort'ise. (*Amphibia*; κόρις, a bug.) Applied by L. Dufour to a Family of *Hemiptera heteroptera*. Latreille had already created this Family in 1804 under the name *Ptoleres*.

Amphib'iolith. (*Amphibia*; λίθος, a stone.) A fossil amphibian.

Amphibiolog'y. (*Amphibia*; λόγος, a discourse.) A treatise on the *amphibia*.

Amphibiot'ica. (Ἀμφί, both; βίος, life.) A group of the Suborder *Orthoptera pseudoneuroptera*. Larvæ live in water, and have branchial tracheæ.

Amphib'ious. (Ἀμφί, both; βίος, life. G. *amphibisch*.) Capable of living in water or air.

Amphiblas'tic. (Ἀμφί, on both sides; βλαστός, a bud.) One of the forms of egg cleavage in which the cleavage cells are of unequal size, whilst some of them are charged with food material. The eggs of the *Amphibia*, *Petromyzon*, and the majority of *Mollusca*, are instances of this type of development. The series of this type are the *Amphimonerula*, *Amphicytula*, *Amphimorula*, *Amphiblastula*, and *Amphigastrula*.

Amphiblestrocarcinoma. (Ἀμφιβλαστρον, a net; *carcinoma*.) Carcinoma of the amphiblastroid membrane, or retina.

Amphiblestro'des. (Ἀμφιβλαστροειδής, the retina.) Net-like; the retina.

Amphiblestrodomala'cia. The same as *Amphiblestroideomalacia*.

Amphiblestroid. (Ἀμφιβλαστροειδής, net-like, the retina.) Resembling a net; retiform. Sometimes applied to the retina, or retiform membrane of the eye.

A. apoplex'ia. Apoplexy of the retina.

A. atrophy. Atrophy of the retina.

A. mala'cia. Softening of the retina.

A. mem'brane. The retina.

A. pthi'sis. Wasting of the retina.

Amphiblestroideapoplex'ia. (Ἀμφιβλαστροειδής; *apoplexia*.) Apoplexy of, or hæmorrhage in or on, the retina.

Amphiblestroideatro'phia. (Ἀμφιβλαστροειδής; *atrophia*.) Atrophy of the retina.

Amphiblestroideomal'cia. (Ἀμφιβλαστροειδής, the retina; *μαλακία*, softness.) Softening of the retina.

Amphiblestroideophthi'sis. (Ἀμφιβλαστροειδής; *phthisis*.) Atrophy of the retina.

Amphiblestroidi'tis. (Same etymon.) Term applied to retinitis, or inflammation of the retina.

Amphiblestromala'cia. (Same etymon.) Same as *Amphiblestroideomalacia*.

Amphiblestrophthi'sis. The same as *Amphiblestroideophthisis*.

Amphib'es tron. (Ἀμφιβλαστρον, a net; from ἀμφί, around, and βάλλω, to cast.) A net.

Amphib'ola. (Ἀμφίβολος, doubtful.) In Botany, applied by K. Sprengel to a Section of *Hydrophyta* corresponding to the *Diatomeæ* of Agardh.

In Ornithol., applied by Illiger and Goldfuss to a Family, by Savi to a Tribe, of *Passeres* having two toes in front and two behind, the external posterior of which is versatile.

Amphib'olê. The same as *Amphibolite*.

Amphibol'ia. (Ἀμφίβολία, double meaning. G. *Zweideutigkeit*.) Ambiguity; double meaning.

Amphibol'ic. (Ἀμφίβολος, ambiguous.) Containing or relating to amphibolite; doubtful.

A. per'iod. The period of perturbation, or doubtful stage, which usually follows the acme of a disease, and in which the temperatures generally show a more or less irregular course.

Amphibolif'erous. (*Amphibolite*; *fero*, to bear.) Containing amphibolite, as amphiboliferous granite.

Amphibol'i'nus. A term synonymous with *Amphibolite*.

Amphib'olite. (Ἀμφίβολος, doubtful.) A synonym of *Hornblende*.

Amphibolog'y. (Ἀμφίβολος, doubtful. G. *Zweideutigkeit*.) An ambiguity in the formation of a sentence, which renders it capable of more than one construction.

Amphibolost'yous. (Ἀμφίβολος, doubtful; στῦλος, a pillar.) Applied by Wachen-dorff to plants in which the style is not apparent.

Amphibran'chia. (Ἀμφιβράγχια.)

A term applied by Hippocrates, *l. de. Int. Affect.* ix, 6, to the tonsils and parts near them.

Amphibron'chia. The same as *Amphibranchia*.

Amphibry'a. (Ἀμφί, around; βρύον, a kind of moss. G. *Umsprosser*.) A term employed by Eudlicher to indicate those plants in which the stem grows at the circumference. It included the Gramineæ, Liliacæ, Iridacæ, Orchidacæ, and Palmacæ, and corresponded therefore nearly to the *Monocotyledons* of other authors.

Amphicar'plum. (Ἀμφί, about; καρπός, fruit. G. *Samenkapsel*, *Fruchthülle*.) The capsule or envelope of fruit.

Amphicar'pous. (Ἀμφί, on both sides, double; καρπός, fruit. G. *doppelfruchttragend*.) Having fruit of two kinds, either as to form or time of maturation.

Amphicaust'is. A kind of wild barley. Some (but not medical writers) use this word to express the *puenda muliebræ*. (Quincy.)

Amphiceph'alus. A sexually mature form of Trematode worm. One species of which the *A. paradoxus* of v. Beneden has been found in the intestines of *Zoarces viviparus*.

Amphice'lia. A Suborder of the Order *Orocoidia*, having ampicelous vertebræ. They are entirely extinct.

Amphice'ious. (Ἀμφί, on both sides; κοίλος, hollow.) A term applied to vertebræ, both surfaces of which are concave, as in most fishes and some reptiles.

Amphicon'dyla. (Ἀμφί, on both sides; κόρυμβος, a knob.) A synonym for the *Mammalia*, from the fact that all mammals have two convex occipital condyles, which are co-existent with a well ossified basi-occipital bone.

Amphicot'yle. A sexually mature form of Cestoid worm, of which one species, *A. typica*,

AMPHICTENIDÆ—AMPHINOMIDÆ.

has been found in the intestines of *Centrolophus pompius*.

Amphictenidæ. A Family of the Suborder *Sedentaria*, Order *Polychæta*. Tentacles disposed in two bundles on the buccal ring; two pairs of tentacular cirri; branchiæ pectinated on the second and third ring; tube straight, or slightly curved.

Amphicurtous. ('*Amphi*, curved on each side like the moon in its third quarter.) Curved on both sides, as the umbel of the *Equaria amphiurta*.

Amphide salts. ('*Amphi*, on both sides.) A term used by Berzelius to denote those salts which arise from the combination of an oxyacid with an oxybase, of a sulphide with a sulphuret, of a selenide with a selenuret, of a telluride with a tellururet, because they are due to the combination of compounds produced by amphigenous bodies. (L. and E.)

Amphideon. ('*Amphida*, a woman's bracelets, from *amphi*, about, *deia*, to bind.) Thus word, which properly signifies a bracelet, either for the neck or the arm, has been applied by Hippocrates, *l. 1, de Morb Mul.*, lxxxiii, 8, to the round extremity, or the mouth, of the uterus.

Amphidermis. ('*Amphi*, on both sides; *derma*, the skin. G. *Hudthaut*.) A term applied by some botanists to the cuticle of the epidermis.

Amphidesmitic. ('*Amphi*, *dismitis*, a band.) Applied by Latreille to a Family of *Conchifera* having a double cardinal ligament.

Amphideum. Same as *Amphideon*.

Amphiderius. ('*Amphidēxios*, having two right hands.) Equally dextrous with the right hand as with the left.

Amphidiarthrosis. ('*Amphi*, both; *diarthrosis*, an articulation.) A term applied to the articulation of the lower jaw with the temporal bone, because it is of the nature both of ginglymus and arthrodia.

Amphidion. Same as *Amphideon*.

Amphidiscos. ('*Amphi*, *discos*, a quoit.) Peculiar asteroid spicula, resembling two toothed wheels united by an axis, which form a layer surrounding the gemmules of sponges.

Amphimesocardia. ('*Amphimesos*, a covering, L. *cor*, the heart.) The pericardium.

Amphigamous. ('*Amphi*, *gamos*, marriage. F. *amphigame*.) A term formerly employed synonymous with *Agamous* and *Cryptogamous*, to designate the lower forms of vegetable life.

Amphigastria. ('*Amphi*, around; *gaster*, belly. G. *Bauchblätter*, *Bauchblätter*.) A term applied to that row of leaves in the *Juncaginaceæ* and *Hepaticæ*, which is developed upon the under or shaded side of the slender bifurcated stem. They are of smaller size than those which form the ordinary double longitudinal row, and are commonly regarded as being stipular in character.

Amphigastrium. (Same etymon.) A stipule which is inserted on the stem, which it covers and surrounds.

Amphigenæ. A synonym of *Thallogen*. **Amphigenous.** (Same etymon as *Amphigenæ*.) Having the characteristics of *Amphigenæ*.

It has also been applied to fungi in which the hymenium is not restricted to a particular surface.

It has also been applied to organisms supposed to occupy an intermediate position between plants and animals.

A. bodies. Bodies, according to Berzelius, which are capable, in combining with metals, of forming electro-positive and electro-negative bodies (bases and acids). He included under this term oxygen, sulphur, selenium, and tellurium. (L. and E.)

Amphigenæ. ('*Amphi*; *gamos*, to engender. F. *amphigène*.) Brongniart applied this name to those Cryptogams which were classed as *Thallogens* by Lindley, namely, the Algae, Fungi, and Lichens. The term is applied because in these plants the organs of vegetation or thalli grow in all directions, whilst in the *Acrogen* group they grow only by the apex.

Amphigony. ('*Amphi*, on both sides; *gónos*, offspring.) A term for bisexual reproduction.

Amphibellicæ. A Genus of the Family *Oculinidæ*, Group *Aporosa*, Suborder *Madreporaria*, Order *Zoantharia*. A coral in which the *coenenchyma* is well developed.

A. oculata. Edw. (L. *oculatus*, having eyes.) Hab. India. Furnishes white coral, which was used in powder or electuary as a tonic and absorbent.

Amphiline. A sexually mature form of Trematode worm, one species of which, *A. foliacea*, has been found encapsuled in the abdominal cavity of *Sciæna aquila*.

Amphimaschalus. ('*Amphi*, *maschalos*, covering both arms; from *amphi*, on both sides; *maschalos*, the armpit. G. *gesfügelt*.) Winged.

Amphimerina. ('*Amphi*, *hēmera*, a day.) Hectic fever, tertian fever.

A. angiosa. (L. *angina*, quinsy.) A kind of quinsy termed, by Huxham, *febris anginosa*; erysipelatous quinsy; scarlatina anginosa.

A. catarrhalis. (L. *catarrhus*, a catarrh.) A synonym of *Quotidian ague*.

A. Hungarica. A synonym of *Tertian ague*, occurring among soldiers in camp. Sauvages believed it to differ little from typhus.

A. tussiculosa. (L. *tussiculosa*, full of cough.) A synonym of ordinary catarrh.

Amphimerinos. (Same etymon.) Quotidian fever. (H.)

Amphimetron. ('*Amphi*, *metron*, that which is about, or near the womb, from *amphi*, about; *metron*, the womb.) Applied by Hippocrates, *l. vi, Epid. s. 8, t. 39*, as an epithet for a sign or symptom of an affection of the womb.

Amphimetrium. Same as *Amphimetron*.

Amphimorphæ. ('*Amphi*, on both sides; *morphæ*, form.) An Order of the *Desmognathous* Aves, according to Huxley, having the lachrymal region remarkably long, the basi-sphenoidal rostrum has oval, sessile, basi-pterygoid facets; the flat and lamellar maxillo-palatines unite and form a bridge across the palate.

Amphinoma cœa. The same as *Amphinomina*.

Amphinomæa. Applied by Blainville to a Family of *Chetopoda*, by Savigny, Lamarck, Latreille, to a Family of *Annelides*.

Amphinomææ. A Family of *Appendiculata polychæta*; synonymous with *Amphinomidæ*.

Amphinomidæ. ('*Amphi*, *nomos*, a daughter of Nereus and Doris.) A Family of the Suborder *Nereidæ*, or a Family of *Notobranchiata*. Body quadrate or flat, with a small number of similar rings, cephalic tube indistinct, or represented on the dorsal surface by a nodule; usually three

AMPHINOMINÆ—AMPHISTOMA.

tentacles, two palpi, and one or two pairs of eyes; mouth ventral; proboscis well developed, toothless; branchiæ wanting only on the last ring.

Amphinominae. A Subfamily of the Family *Amphinomidae*. A caruncle and two branchial trunks on each ring.

Amphion. France; department of Savoy; a village on the south shore of the lake of Geneva, about three miles from Evian. The water contains sulphuretted hydrogen gas, calcium, magnesium and sodium carbonate, calcium sulphate and chloride, with some iron. It is used in abdominal congestions, urinary deposits, hypochondriasis, hysteria, and menstrual irregularities.

Also, a Turkish compound containing opium. (Dunglison.)

Amphioxus. (Ἀμφί, on both sides; ὄξύς, sharp.) The only Genus of the Subclass *Leptoecardiæ*, or *Pharyngobranchii*, Class *Pisces*.

A. lanceolatus. (L. *lanceolatus*, lance-shaped.) The Lancelet lives in sand, at moderate depths in the sea; it is noticeable because it is the only vertebrate whose cranium in the adult condition is wholly membranous; because it has no brain, auditory, or renal organs, such as exist in the higher Vertebrata; because the heart is not centralised, whilst the main longitudinal trunks are contractile; because the liver is sacular; and because the notochord extends to the anterior end of the body. In some respects the *Amphioxus* shows affinity to the *Ascidians*. The endoskeleton is reduced to the notochord. The mandible and limbs are absent. The skin is naked. There are no fin rays. The gills are replaced by a perforated pharynx. There are no red blood-corpuscles. Pallas was the first to describe this form, which he supposed to be a naked Mollusc, and so called it *Limax lanceolatus*. Costa, in 1834, gave it the name *Branchiostoma*; whilst Yarrell, in 1836, denominated it *Amphioxus*.

Amphipleura. A Genus of *Diatomaceæ*, certain species of which are frequently employed as test objects to determine the relative excellence of microscopes, on account of the delicacy of the striæ on their valves, the closeness of which has been estimated to be so great that there are from 125 to 130 in 1-1000th of an inch.

Amphiplex. Old name for the perineum. (Quincy.)

Amphipneuma. (Ἀμφί, on both sides; πνῆμα, breath.) Used by Hippocrates, l. iv, *Epid.* xxiv, 17, for strong and laborious breathing; urgent respiration on both sides; a species and symptom of great difficulty of breathing.

Amphipneusta. (Ἀμφί, of both kinds; πνῆμα, to breathe.) Applied by Merrem to a Tribe of Reptiles having both branchiæ and lungs, i.e. two respiratory apparatus, otherwise called perenibranchiate.

Amphipoda. (Ἀμφί, both; πούς, a foot.) A Suborder of the Order *Edriophthalma*, Class *Crustacea*. Body generally compressed laterally, having seven, rarely six, free thoracic segments, possessing branchiæ and carrying limbs, the four anterior of which are directed forwards, the others backwards; abdomen long, consisting of six segments, the three anterior bearing swimming feet, the three posterior bearing natatory limbs projecting backwards.

Amphipodiform. (*Amphipoda*; *forma*, likeness.) Term applied by Kirby to hexapodous, herbivorous larvæ which, with long antennæ, have a body short and compressed, like that of *Amphipoda*.

Amphipodous. (Ἀμφί, on both sides; πούς, a foot. G. *doppelfüssig*.) Having feet on both sides, or all round, or possessing both swimming and walking feet.

Amphirina. (Ἀμφί, on both sides; ῥίς, a nose.) Animals having double or paired nostrils in Haeckel's classification, including all Vertebrata except *Leptocardia* (*Amphioxus*) and *Cyclostoma* (*Lamprey*, *Myxine*).

Amphisarca. (Ἀμφί; σάρξ, flesh.) Name by Desvieux for a fruit indehiscent, superior, multilocular, dry, and ligneous on the exterior, pulpy in the interior, as *Adansonia* *Baobab*.

Amphisarcous. (Same etymon.) Fleasy on both or on all sides.

Amphisarcæ venæ. (Ἀμφισάρκαι, a serpent that can go either forwards or backwards.) An old term for the veins running between the uterus and breast, probably the internal mammary and the epigastric.

Amphisbenidae. (Ἀμφίς, on both sides; βέναι, to walk.) A Family of the Suborder *Amphisbenoidea*, Order *Sauria*. The only family having the characters of the Suborder.

Amphisbenoidæ. (Same etymon.) A Suborder of the Order *Sauria*. Tongue short, thick; pupil round; tail short; anus terminal.

Amphisbenous. (Ἀμφίς; βέναι, to walk.) Walking equally in opposite directions.

Amphiscli. (Ἀμφί; σκιά, a shade.) Applied to the people that inhabit the torrid zone, because their shadows turn now to the south, now to the north, according to the position of the earth in relation to the sun.

Amphismila. (Ἀμφισμίλη, from ἄμφι, on both sides; μίλη, an incision-knife or scalpel.) A double-edged knife, mentioned by Galen, l. i, *Anat. Adm.* c. 10. (Castellus.)

Amphisorex. A synonym of *Sorex fodiens*, the water shrew.

Amphispermium. (Ἀμφί, about; σπέρμα, a seed. G. *Samenhülle*.) A unilocular, one-seeded fruit, as the achena.

Amphisphal'sis. (Ἀμφίσφαλσις.) Used by Hippocrates, iv, *de Artic.* l. 47, for circumduction.

Amphistoma. (Ἀμφί, on both sides; στόμα mouth. F. *amphistome*.) A Genus of Trematode Entozoa, the members of which infest many ruminants and other mammals. They agree in having a single large sucker at their posterior extremity. The body is muscular, rather thick, attenuated in front, larger and obliquely truncated behind. The mouth is orbicular, followed by an oval œsophageal sac and bifurcated intestine, nervous system distinct; highly developed system of excretory canals; genital orifice situated beneath the œsophagus; eggs elliptical, rather large; embryo ciliated. (Davaine.)

A. asperum occurs in the *Tapirus americanus*; *A. attenuatum* in *Myletes bidens*; *A. chelonie imbricata* in that animal; *A. conicum* in the rumen and psalterium of the *Bos* *urus* and other *Herbivora*; *A. cornu* in the *Dorcas vacu*; *A. crumeniferum* in the *Bos taurus*; *A. cylindricum* in *Dorcas mercurius*; *A. emarginatum* in *Nyctipithecus trivirgatus*; *A. explanatum* in the bile ducts and gall-bladder of the *Bos taurus*; *A. fabaceum* in *Manatus exunguis*; *A. ferrum equinum* in *Dorcas costatus*; *A. giganteum* in *Dicotyles labiatus*; *A. grande* in *Peltocephalus dumerilianus*; *Podocnemis expansa* and *P. traxa* in *Rhinomys nasuta* and *Phrynos*

AMPHISTYLIC—AMPHOTEROMORPHUS PENICULUS.

geoffroanus, gibbus, milusii, and in *Chelys fimbriata*, *A. hyrudo* in *Palamedea cornuta*, *A. lunatum* in *Cervus paludosus*, *A. megacotyle* in *Ageneiosus militaris*; *A. oxycephalum* in *Pimeiodus megacephalus*, *A. pyriforme* in *Tupirus americanus*; *A. scleroporium* in *Halichetyx atra*, *A. subclavatum* in the intestines of *Bana viridis*; *A. subtriquetrum* in *Castor fiber*, *A. truncatum* in *Phoca granlandica* and in the domestic cat, and *A. unciniforme* in *Icterus cristatus*.

A. hominis. (L. *homo*, man.) Body red, pointed in front, rounded behind, 1-5" to 1-8" long; mouth at the anterior extremity; genital pore near the centre; caudal termination very large and contractile, enclosing a large sucker; integument smooth, studded with many small glands and hyaline cells. Eggs ovoid, having an operculum. Found in the cæcum and colon of two natives who had died of cholera in India.

Amphistyllic. (Ἀμφί, on both sides; στήλος, a pillar.) A term applied to the skulls of certain sharks, as *Notidante* and *Cestracion*, in which the mandible is partly supported by its own pier, the quadrate, and partly by that of the hyoid arch, the hyomandibular.

Amphiterium. A Genus of Didelphous mammals of small size, the jaws of which have been found in the great Oolite of Stonesfield.

Amphitritinæ. A Subfamily of the Family *Terebellinæ*. Usually with branchiæ, cephalic lobe short, furnished with many tentacles; possessing both ample and hooked setæ.

Amphitropal. (Ἀμφί, on both sides; τρέπω, to turn. G. *doppeltlauffig*, *ringum umlaufend*.) A term employed by Mûrbel to designate Campylotropal ovules that have a short raphe. A term applied to the ovule when it is horizontal or in an intermediate position between straight and inverted, the adherent funiculus pushing up the chalaza at one end, while the micropyle descends to a corresponding extent until the axis of the ovule becomes horizontal and parallel with, instead of at right angles to, the placenta. An example is seen in the ovule of *Lemna trivialis*.

Amphitropous. (Same etymon.) A synonym of *Amphitropal*.

Amphiumidæ. A Family of the Group *Derotremata*, of Urodelous Amphibia. Body long, snake-like, feet short, distant from each other, three rudimentary toes.

Amphiuroidæ. A Family of the Order *Ophiuridea*, Class *Stelleridae*, Subkingdom *Echinodermata*. Disc rugose, scaly, arms covered with spines; buccal papillæ variable in number; no dentiform papillæ.

Amphodiplopia. (Ἀμφω, both; διπλωπία, double sight.) Double vision with both eyes together.

Amphodontus. (Ἀμφω, both; ὀδούς, a tooth.) Having teeth in both jaws.

Amphora. (Ἀμφόριος, shortened form of ἀμφιπόριος, from ἀμφί, on both sides, πόριος, to carry; because it had two umbracles, by which it could be carried.) Name of an ancient wine-vessel, or liquid measure, a foot square, and capable of containing about 9 gallons, of oil, 72 pounds, wine, 80 pounds; honey, 180 pounds. The Attic amphoreus was about half as large again.

Also, in Botany, the lower part of a *Pyxidium*.

Amphoric. (Same etymon.) Belonging or relating to an amphora.

A. breathing. A synonym of *A. respiration*.

A. bronchophony. The same as *A. vocal resonance*.

A. bubble. A sound occasionally heard in cases of pneumothorax, like that produced in the pouring of fluid out of a wine bottle. It is heard in the interscapular region when the patient, after sitting upright, slowly leans forwards, and is caused by the air passing under the dependent lung from the front to the back part of the chest as the position is gradually changed.

A. cough. (F. *toux amphorique*.) Amphoric resonance accompanying the sound of cough as heard through the stethoscope.

A. echo. A synonym of *A. resonance*.

A. hum. A synonym of *A. resonance*.

A. note. The amphoric resonance produced by percussion over a large lung cavity, or a stomach distended with air.

A. resonance. (G. *metallisches Nachklänge*.) A term used in auscultation for a variety of the metallic tinkling accompanying the respiratory murmur and resembling the sound produced by blowing or speaking into any large vessel, or bottle, having a narrow aperture. The cause of its occurrence is the reverberation of sound in the interior of a cavity. Its presence does not absolutely prove that there is communication between the cavity and the outer air, though this is usually the case. It is sometimes due to fluid in a stomach distended with air. It attends the respiratory sounds, especially that of inspiration, and is heard both during vocalization and in coughing. When the cavity is large it may be produced by percussion of its walls. It gives a metallic quality to the various moist râles produced in or near the cavity, and it may accompany the heart sounds when heard through a pneumothorax, a lung cavity, or a flatulent stomach.

A. respiration. The amphoric character accompanying the respiratory sounds, especially the expiratory.

A. ring. The same as *A. note*.

A. vocal resonance. The amphoric note communicated sometimes to bronchophony in cases of pneumothorax.

A. voice. (F. *voix amphorique*.) The condition of amphoric resonance accompanying the voice when heard through the stethoscope, the same as *A. vocal resonance*.

Amphoricity. The condition in which an amphoric resonance is heard.

A. pleuritic. The condition in which an amphoric resonance is heard in the pleura.

Amphoteramphodiplopia. (Ἀμφότερος, both of two, ἀμφω, both, διπλωπία.) The same as *Amphamphoterodiplopia*.

Amphoterio. (Ἀμφότεριος, both of two; F. *amphotere*.) A term applied to substances that are indifferent, neither acid nor alkaline, as gum and sugar.

Amphoterocotyle elegans. A sexually mature form of Cestoid worm found in the intestines of *Procellaria capensis*.

Amphoterodiplopia. (Ἀμφότερος, both of two, διπλωπία, double sight.) Double vision of both eyes.

Amphoterodiplopia. (Ἀμφότερος, on both sides; δις, twice, ὀφθαλμοί, eyesight, sight.) Double vision.

Amphoteromorphus peniculus. (Ἀμφότερος, double, μορφή, form. L. *peniculus*, a brush.) A sexually mature form of

AMPHYTOKY—AMPULLA.

Cestoid worm found in the intestines of *Bagrus Goliath*.

Amphytoky. (Ἀμφί, both; τόκος, birth.) The production in Parthenogenesis of both male and female forms, as in Aphides on the setting in of cold weather.

Amplectens. (L. *amplector*, to embrace. F. *embrassante*; G. *umfassend, umgebend*.) That which clasps or embraces.

In Botany, usually applied to sessile leaves or to petioles which surround the whole of the stem.

Amplective. (L. *amplectivus*, from *amplector*, to clasp. F. *amplectif*.) Embracing; clasping.

In Botany, usually applied to that arrangement of leaves (amplective prefoliation) in which a leaf completely envelopes those which are to appear after it. Examples are seen in the Aroides.

Amplexans. (L. *amplexō*, to embrace. G. *umfassend*.) A term synonymous with *Amplectens*.

Amplexatile. (Same etymon.) A term employed in Botany by L. C. Richard to a radicle that envelopes the embryo.

Amplexatio. (Same etymon.) Coition.

Amplexation. (L. *amplexor*, to embrace.) A method of treating fracture of the clavicle. It consists of resorting to certain attitudes, such as the forced elevation of the point of the shoulder, combined with the application of an irremovable bandage, as a plaster apparatus, the pressure of which can be conveniently extended over the whole upper limb and the lateral part of the neck. (Chassaignac.)

Amplexicaudate. (L. *amplexō*, to embrace; *cauda*, a tail. F. *amplexicaudé*; G. *umarmesichwanzig*.) Term applied to insects having the tail entirely enveloped in the interfemoral membrane, as *Phyllostoma amplexicaudata*.

Amplexicaul. (L. *amplexicaulis*, from *amplexor*, to embrace; *caulis*, a stem. F. *amplexicaule*; G. *stengelumfassend*.) In Botany, a term applied to a sessile leaf or a petiole which, at its insertion, envelopes the whole circumference of the stem.

Amplexicauline. (Same etymon.) Embracing or surrounding the stem.

Amplexifloral. (L. *amplexiflorus*, from *amplexō*, to embrace; *flos*, a flower.) Under this term Cassini designated the squamellæ of the clinanthium of *Synantheres*.

Amplexifoliate. (L. *amplexō*; *folium*, a leaf.) Having amplexicauline leaves, as *Loranthus amplexifolius*.

Amplexus. (L. *amplexus*, an embrace. G. *umfasst*.) A term applied to an organ surrounded or embraced by another.

A synonym of *Equisant vernation*.

Also, a term for coition.

Ampliatiflorus. (L. *amplio*, to widen; *flos*, a flower.) Applied by H. Cassini to the corona of *Synantheres* when composed of flowers with amplified corollæ.

Ampliatiform. (L. *amplio*, to widen; *forma*, likeness.) In Botany, applied to organs of large dimensions, capable of enclosing or covering another.

Ampliation. (L. *ampliatio*, an extending. F. *ampliation*; I. *ampliacione*; G. *Erweiterung*.) Increase of size; as of the thoracic cavity during inspiration, or of the abdomen in asities.

Ampliat'us. (L. *amplio*, to widen. G. *erweitert, vergrössert*.) Amplified; enlarged. In Botany, applied by H. Cassini to every coroll of *Synantheres*, the limb of which, notably enlarged or dilated, is widened in all directions, as *Cyanus segetum*.

In Entomology, applied by Kirby to elytra when disproportionately broad at their extremity, as *Lycus fasciatus*.

Amplicolis. (L. *amplus*, large; *collis*, neck.) In Botany, a term applied to the neck of an organ, as of a fruit, when larger than usual.

Amplificatio. (Lat.: from *amplifico*, to extend. G. *Erweiterung, vermehrung*.) An extending; a term formerly applied to a morbid extension of an organ.

Ampliopia. Same as *Amblyopia*.

Amplipennis. (L. *amplus*, full; *penna*, a wing.) In Entomology, having large or broad wings.

Amplitude. (L. *amplitudo*, the wide extent of a thing. G. *Weite, Umfang*.) Fullness; especially applied to the extent or height of undulations, hence applied to the pulse, and to the height of the sphygmographic tracing of it.

Applied to the vibrations of sound or light, it signifies the distance of the extreme positions from the middle position; in other words, the extent of the vibration on either side of the position of rest.

The arc of the horizon comprised between the true point of east or west and the centre of a star at the instant of its rising or setting.

Am'po. A ferruginous earth eaten in Java to prevent obesity. (Humboldt.)

Amposia. (Ἀμψωσία, contraction for ἀμψωσις, drinking up or swallowing down; a doubtful form from ἀμψωσις. L. *resorptio*; G. *aufsaugung, einsaugung*.) Absorption, resorption. A term applied by Hippocrates to indicate the retreat of the fluids from the circumference to the centre of the body.

Also, the ebb and flow of the sea.

Ampulla. (L. *ampulla*, a flask with narrow neck and bulged body. F. *ampoule*; I. and S. *ampolla*.) The dilated, or trumpet-mouthed termination of a canal.

In Chemistry, a term applied to all bulged-out or flask-shaped vessels.

In Botany (G. *Blase*) this term has been applied to a small membranous bag attached to the roots and immersed leaves of certain aquatic plants.

A. canaliculi lacrymalis. (L. *canaliculus*, a small channel; *lacrima*, a tear.) A slight enlargement of the lacrymal canaliculus at the angle of junction between the vertical and horizontal portions of its course. It is about two lines distant from the punctum in each lid.

A. chyli. (L. *chylus*, juice, chyle. F. *citerne de Pecquet*; G. *Milchsaftbehälter*.) The enlargement at the lower end of the thoracic duct; the *Receptaculum chyli*.

A. chyli'era. (L. *chylus*, chyle; *fero*, to carry.) The *Receptaculum chyli*.

A. ductus lactiferi. (L. *ductus*, a leading; *lactiferus*, milk carrying.) The dilatation of the excretory ducts of the mammary gland near the nipple.

A. Fallo'pise tu'bæ. (L. *tuba*, a straight trumpet.) The outer extremity of the Falloppian tube; that part of it which is near the ovary.

A. lactifera. (L. *lac*, milk; *fero*, to carry. G. *Milchsackchen*.) A small enlargement or dilatation of the several ducts of the mammary

AMPULLACEOUS—AMPUTATION.

gland just before they enter the nipple. They serve as a reservoir of the secretion during the intervals of suckling. They are each from 6—8 mm. in diameter.

A. membranaeœ labyrinthi. The dilatation of the membranous semicircular canal which occupies the ampulla of each osseous semicircular canal. The ampulla of the superior vertical semicircular canal is at the outer and anterior orifice, that of the posterior vertical semicircular canal is at its lower and posterior orifice, that of the horizontal semicircular canal is at its outer orifice.

A. optici ner'vi. The dilatation of the subvaginal lymphatic space surrounding the anterior extremity of the optic nerve. It is connected with the supravaginal space by lacunæ in the sheath of the nerve.

A. ossea externa. (L. *osseus*, bony.) The dilatation of the anterior extremity of the horizontal semicircular canal. It lies immediately beneath the superior ampulla above, in front of and to the outer side of the fenestra ovalis.

A. ossea inferior. The dilatation of the outer limb of the posterior vertical semicircular canal. It opens into the inferior and posterior portion of the vestibule near the aqueduct.

A. ossea labyrinthi. The dilatation at one end of each of the semicircular canals of the internal ear.

A. ossea superior. Situated at the anterior extremity of the superior vertical semicircular canal. It opens near the roof of the vestibule.

A. vasis deferentis. The sacculated enlargement presented by the vas deferens at its vesical extremity.

A. Vateri. The dilatation presented by the combined pancreatic and biliary ducts as they traverse the walls of the intestine.

A. vitrea. (L. *vitreus*, of glass.) An alembic or retort.

Ampulla ceous. (Same etymon. G. *blasenformig*, *flaschenformig*.) Having the appearance of an Ampulla.

Ampullæ of Fallo'pian tube. See *Ampulla Fallopiæ tubæ*.

A. of mammary gland. See *Ampulla lactifera*.

A. of semicircular canals. The dilated extremities of the osseous and membranous semicircular canals. See under *Ampulla*.

A. of vas deferens. See *Ampulla vasis deferentis*.

Ampullar. (Same etymon. F. *ampullaire*.) Having the appearance of an *Ampulla*.

Ampullariidæ. A Family of the Subgroup *Bulbomata*. Shell conical, spherical, or discoidal, closing by a concentric, lamellar operculum, buccal and pulmonary cavities and respiratory tubes are present.

Ampullæ cœns. A synonym of the *Receptaculum chyl.*

Ampulla te. Possessing an *Ampulla*.

Ampullula. (L. dim. of *ampulla*.) Term applied to the expanded extremities of the villi of the intestines.

Amputation. (L. *amputatio*, a pruning, from *amputo*, to cut away, Gr. *ἀποτομή*, *ἀποκομή*, F. and S. *amputation*; I. *amputazione*, G. *Amputation*, *Abschneidung*, *Beschneidung*.) The complete removal of any limb or segment of the body, by the knife, ligature, or other means.

The chief reasons for which it is resorted to

are mortification, the presence of cancer or other kind of tumour, diseases of joints, especially those attended with suppuration, severe injuries of one of the extremities, as comminuted and compound fractures and dislocations, extensive necrosis and caries, burns, extensive laceration of skin, division of arteries and nerves, aneurysm, gunshot wounds, malformations and deformities, tetanus, ulcers. To prevent the loss of blood in the operation Esmarch has proposed that the limb, when practicable, should have an elastic bandage applied from below upwards, and a strong elastic cord wound tightly round the limb above the seat of operation, and this proceeding is now commonly practised. Amputations performed immediately after the receipt of an injury are termed primary; whilst, if some days be allowed to elapse, or inflammation to be established, they are termed secondary, and are always more serious. As a general rule it may be stated that the nearer the trunk an amputation is performed the greater is the danger to life. The incision should, however, pass through healthy tissue, yet no more should be removed than is absolutely necessary.

The instruments and apparatus required in ordinary amputations are an Esmarch's bandage or a tourniquet, two or more knives of length proportionate to the cut to be made, a bistoury, saws, common and artery forceps, tenaculum, cutting pliers, scissors, osteotrite, needles, carbolised catgut, silver wire, horsehair or silk ligatures, lint, bandages, and strapping, a piece of strong sheeting to act as a retractor, sponges, and hot water.

The various methods of performing amputations are described below under their several names. See *Circular*, *Flap*, *Oval*, *Cutaneous amputation*, as well as *Hey*, *Lisfranc*, *Syme*, &c. In all the different methods the patient should, if possible, be rendered insensible by the use of anaesthetics. An elastic bandage may be applied from the extremity of the limb upwards with a view of pressing as much blood as possible out of the limb. The main artery or arteries may be compressed by the fingers of an assistant, or by the tourniquet. An assistant should take charge of the limb, supporting it, especially during the section of the bone, so that no splintering may occur. Another assistant is required to retract the flaps, and to pick up the divided ends of the vessels. The limb being removed, hæmorrhage from the blood-vessels is suppressed by catgut or other ligatures, or by torsion, or by the application of a styptic or caustic, or by a compress.

In the after treatment, early and complete closure of the wound is the object to be attained, with, in the case of the lower extremity, the preservation of such fulness and roundness of the stump as may enable an artificial limb to be worn. With these objects in view some, after applying sutures, leave the wound open to the air. Others endeavour to prevent the access of septic germs. Others carefully arrange for thorough drainage of the wound by the method called pneumatic occlusion. Others adopt the antiseptic method, whilst by many a few straps of adhesive plaster are placed across the edges of the wound, and a compress and bandage are applied. Some have recommended the application of acids; others of nitrate of silver, or chloride of zinc, or balsam of Peru, to the cut surface, but these are rarely employed. The

AMPUTATION.

patient is generally kept on somewhat spare diet, as beef tea, broth, rice panada, during the first few days; but if there be much exhaustion, wine or spirits and stronger food may be given in moderate quantity.

The early troubles and dangers of amputation are shock, hæmorrhage, retention of urine, erysipelas, spasms of muscles, pain, inflammation, osteomyelitis and retraction of muscles, and tetanus. The later troubles and dangers are secondary hæmorrhage, pyæmia, septicæmia, necrosis, caries, exostosis from the cut surface of the bone, neuralgia, trembling of the muscles, burns over the bone, fibroid degeneration of the muscles, ulceration and malignant disease of the stump, shortening of the tendons, hectic. Each of these conditions requires early and prompt treatment. Shock must be met by the careful administration of stimulants, warmth to the surface, and perfect rest; hæmorrhage, by the local application of cold, by pressure, position, or by cutting the sutures and applying pressure, torsion, a ligature, or the actual cautery, to the bleeding vessel. The employment of a catheter will relieve retention of urine; and the application of a moderately firm bandage will sometimes arrest painful jumpings and spasms of the divided muscles.

If superficial closure of the wound occur, and matter appear to have accumulated beneath, it must be allowed to escape, and a drainage tube may be inserted.

Erysipelas may be combated by the administration of the perchloride of iron, quinine, or salicine, and by the local application of belladonna and glycerin, collodion, or nitrate of silver.

Phlebitis and septicæmia may be treated with quinine, or salicine, or salicylate of soda, and stimulants.

Conical stump sometimes involves a second operation for the removal of a portion of the protruding bone, or demands very careful adaptation of apparatus.

Neuromata, if very painful, may be removed by the operation of excision, but in some instances require a second amputation.

A., circular method of. This, the most ancient method, was originally performed by division of all the parts at the same level, a proceeding that led to necrosis and conical stump. Now, a modification of the plan of double incision, suggested by Cheselden, is adopted. The surgeon, standing on the left side of the patient, with an amputating knife of appropriate length, held lightly, commences the incision just external to the median line of the limb, and divides with one circular sweep the integuments and subcutaneous tissue down to the muscles, and forcibly draws them up or turns them back for about two inches; the muscles are then cut through and drawn up, after being freed from the bone for two inches more; the bone is then sawn through, splintering at the end of the section being avoided by the limb being well supported. In amputation of the forearm, both bones should be divided simultaneously; in amputation of the leg, the fibula should be divided first; in amputation at the joints, the cartilages should, if possible, be preserved.

The advantages of the circular operation are, that the soft parts are divided vertically to the plane of the limb. Arteries, veins, and nerves, are all cut transversely, and the wound in the muscles is exactly equal to their transverse

breadth. The larger arteries are readily seized and tied, and the smaller ones retract and cease to bleed, or are twisted. The integuments are brought over the cut extremities of the muscles, and unite to them and to each other by adhesion. The stump obtained by this method is in general inferior to that made by other plans of proceeding.

A., cutaneous method of. In this method of amputation, the flaps are composed exclusively of the integuments, and may be taken from either side of the limb, and be two or several in number. They are said to unite with less chance of suppuration; caries and necrosis are stated to be less frequent; and they are thought to be better adapted to bear the pressure of an artificial limb. The chief objections are the liability of the skin to slough and to retract.

A., flap method of. This operation consists either in transfixing the limb and cutting from within outwards, as in the thigh and arm; or, in commencing at the surface and cutting from without inwards; or, in a combination of these methods, as is usual in the case of the forearm, leg, and smaller segments of the limbs. The flaps are generally made of the same length, and should be sufficiently long to form, after allowing for retraction, a good cushion for the bone. As a general rule, their length should be three fourths of the diameter of the limb. Before applying the saw to the bone, the knife is passed circularly round it, to divide all muscular fibres and the periosteum. The limb being removed, and the vessels tied, Professor Gross recommends that the principal nervous trunks should be again cut off a little above the level of the surface of the stump, in order to avoid, as far as possible, subsequent irritation and the formation of neuromata.

The advantages of the flap chiefly consist in the greater rapidity, and the consequently less pain and smaller loss of blood, with which it can be executed, points, however, of less importance since the introduction of anaesthetics and of Eschsch's elastic bandage. It has the advantage also that the cuts may be made to suit the special conditions of disease or accident, and thus a longer and more useful stump obtained.

Its disadvantages are, that the soft parts are all cut through obliquely; the smaller arteries cannot, therefore, retract, and a larger number of ligatures are required. The difficulty of finding the vessels is also increased; the cut surfaces of the muscles are large, and cannot be accurately adapted.

A., intermedial. An amputation performed immediately, or soon after the supervention of inflammation, and before the establishment of suppuration.

A., intraterrine. The same as *A. spontaneous*.

A., major. The operation on the two chief sections of a limb.

A., minor. The operation on the fingers or toes.

A., mixed. A term applied to a combination of the flap with the circular method of operation.

A., oblique method of. See *A., oval method of*.

A., oval method of. In this mode of operation, which was practised by Scultetus, and is best adapted to amputation at the smaller joints, though occasionally employed for amputation at the larger, the flaps are formed by

cutting from without inwards, or one is formed in this way, and the other by cutting in the opposite direction, or from within outwards. The two incisions are in the form of a V reversed, the angle of union falling a little above the place where it is intended to saw the bone or effect disarticulation. The tissues left undivided and periosteum are then divided by a circular cut, and the bone sawn through. By adopting this plan, the principal vessels and nerves can be left till the operation is nearly completed, thus diminishing the amount of bleeding, whilst the resulting stump is an excellent one. (Gross.)

A., pathological. Amputation performed on account of disease.

A., primary. An amputation performed immediately after the occurrence of reaction.

A., rectangular method of. This method was suggested by Mr T. P. Teale, and consists in substituting a long and a short rectangular flap for the double flap operation. The long flap should be made from the portion of the limb which does not contain important blood-vessels and nerves. The lines of the incision may be previously traced with ink. The large flap should be equal in length and breadth to one half of the circumference of the limb at the point amputated. The short flap, which should be made last, should be one fourth the length of the long one. The parts having been dissected off in close contact with the periosteum, the long flap will be found to be square, and to form a good cushion for the end of the bone. The short flap is attached to the long by several points of the interrupted suture, both in front and laterally, as is also the reflected portion of the long flap to its unreflected portion. No dressings are employed unless the wound gapes, when a few strips of adhesive plaster may be used for support.

A., secondary. An amputation performed after the limb has passed through the several stages of inflammation.

More frequently the term is used as to include all amputations performed after the super-vention of inflammation, thus including intermediate amputations.

A., spontaneous. This occurs occasionally in the fetus as the result of constriction of some of the limbs by a band of plastic matter arising from the amnion or by the umbilical cord. The division may be complete or partial.

Spontaneous amputation occurs in the remarkable affection termed *Ainhum*.

A., subperiosteal. The plan by which a longer or shorter flap of periosteum, attached or not to its superficial surroundings, is retained on the upper and lower surface of the bone to cover the cut end; necrosis of the end of the bone, and adhesion of the skin to it, is by this means said to be avoided.

A., synchronous. In some cases of accident it becomes necessary to amputate two or more limbs simultaneously, or in immediate succession. This constitutes what is termed the synchronous double operation. It may be performed by two surgeons, or by one alone. It is founded on the assumption that the shock and hæmorrhage are less, recovery more rapid, and mental anxiety to a considerable extent removed.

A., traumatic. Amputation performed on account of injury.

Amra. (Sansk.) The *Mangifera indica*. Also, the Bengali and Hindu name for the *Spondias mangifera*.

Amrata'ka. (Sansk.) The *Spondias mangifera*.

Amrool. (Beng., Hind.) The *Oxalis corniculata*.

Amrut. (Hind.) The *Psidium guajava*.

Amsterdam, Isle of. One of the group of volcanic islands of Western Australia, noted by John Barrow for its numerous hot springs. The waters appear to be both chalybeate and sulphuretted, the temperature in different springs varying from 35°–45° C. (95°–113° F.).

Amuctica. (Ἀμυκτιὰς; from ἀμύσσειν, to tear.) Provocative medicines, specially those which provoke expectoration.

Amuk-kara. (Cing.) The *Physalis vomifera*.

Amul changerie. The Hindustani name of an acid fruit, probably a species of *Solanum*. It enters into the Indian Materia Medica, and is said to be stomachic, to promote digestion, and to cure relaxation of the bowels. (Waring).

Amulbedh. The Hindustani name of a very acid fruit, probably a species of *Citrus*. It is said to be aperient, and to prove useful in promoting digestion and in relieving rheumatism.

Amuleh. (Pers.) The *Phyllanthus emblica*.

Amulet. (L. *amuletum*, from *amolo*, to put away. Gr. βακάνιον, περιπτον, φυλακτήριον, F. *amulette*, I. and S. *amuleto*, G. *amulet*.) Term for a gem or stone of some particular form, or having mystical characters engraved upon it; or for a piece of paper with certain words inscribed upon it, formerly believed to have the power of endowing with some special gift—strength, eloquence, courage, &c., or of guarding against some evil. They were used as prophylactic against various diseases.

Amulki. (Sansk.) The *Phyllanthus emblica*.

Amulla. The native name in Queensland of the *Myoporum diffusum*, the fruit of which is edible though slightly bitter.

Amulum. The same as *Amylum*.

Amulung kalung. (Tamil.) The Indian name of the root of the *Withania somnifera*. (Dunal.)

Amurca. (Ἀμύρην. L. *amurca*; G. *Oehlhefen Oehlale*.) Lees of wine, and also the acum of the olive after the expression of the oil. Used as an application to ulcers. Also, applied to a kind of expectoration, and to faeces resembling the lees of olive.

Amurga. The same as *Amurca*.

Amussa. A synonym of the *Musa paradisiaca*.

Amussat, J. Z. French surgeon, b. 1796, d. 1856.

A.'s operation for artificial anus. This operation consists in the re-establishment of an anus in its normal position. It is applicable to cases of complete anal atresia, to recto-vaginal atresia, and to ano-rectal atresia. The child is placed on the back on a hard cushion, with the thighs raised and separated. The perineal region is carefully explored with the fingers, assisted by a catheter introduced into the bladder or vagina. An incision is made in the middle line from the central point of the perineum to the tip of the coccyx through the skin and subjacent tissue. As the infant cries the projection or the pouch-like closed extremity of the rectum can usually be felt, but the dissection, which should be carefully conducted, may require to be extended to the depth of an inch or more. When recognised, the

AMYCETOSEPTIN—AMYGDALIN.

intestine must be drawn down with a hook, or by means of a loop of silk made to pass twice through the wall with a needle. Two wire sutures are passed through the integuments and the intestine, which is then divided in the middle line, and the mucous membrane and skin are sutured together on either side. This operation succeeds best when undertaken at a very early period after birth, and when the extremity of the rectum is near the surface. In other cases, it is better to make the artificial anus in the inguinal region.

A.'s operation of colotomy. The establishment of an artificial anus in the lumbar region, by making a transverse incision outside the quadratus lumborum muscle and midway between the crest of the ilium and the last rib, through the parietes of the abdomen and the colon.

Amyceto-sep'tin. See *Amykoseptin*.
Amychæ. (Ἀμυχή, scarification. G. *Schröpfunden*.) Slight and superficial wounds; scratches.

Amyche. (Ἀμυχή, a scratch.) Slight excitation, excoarication, or abrasion. Hipp. *l. de Int. Affect.* xxv, 7, and in *Coac. prænot.* 444.

Amyctio. (Ἀμυκτικός, provocative.) Excoriating; irritating; vellicating. Applied by Joh. Tagaultius, *Instit. Chir.* vi, ii, p. m. 467, and Aurelianus, *de Morb. Chron.* ii, 6, to irritating medicines, used for the purpose of exciting torpid parts into action.

Amydes. Name by Oppel for a Family established by him in the Chelonian reptiles.

Amydriasis. (A, intens.; *mydriasis*.) The same as *Mydriasis*.

Amydrosis. (Ἀμύδρωσις, a making indistinct.) Same as *Amaurosis*.

Amydum. A synonym of *Amylum*.

Amyelencephalia. (A, neg.; μυελός, marrow; ἐγκέφαλος, the encephalon.) In Teratology, the complete absence of the central nervous system.

Amyelia. (A, neg.; μυελός, marrow.) In Teratology, a monster foetus, with partial or complete absence of the spinal marrow.

Amyelonervia. The same as *Amyelonuria*.

Amyelonouria. (A; μυελός; νεύρον, a nerve. F. *amyélonurie*.) Defective action, or paralysis of the spinal cord. (L. and R.)

Amyelotrophia. The same as *Amyelotrophy*.

Amyelotrophy. (A; μυελός; τροφή, nourishment. F. *amyélotrophie*.) Atrophy of the spinal cord.

Amygdala. (Ἀμυγδαλή, the almond. F. *amande*; I. *mandorla*; S. *almendra*; G. *Mandel*, *mandelkern*.) The almond; the fruit of the *Amygdalus communis*.

Also, a synonym of the *Tonsil*.

A. amara. B. Ph. (L. *amarus*, bitter. F. *amande amère*; I. *mandorle amara*; S. *almendra amarga*; G. *bitter Mandel*.) Bitter almond. The seed of the *Amygdalus communis*, var. *amara*, brought chiefly from Mogador. It is bitter to the taste, and has a peculiar odour when moist. In addition to the constituents of the sweet almond it contains *amygdalin*, which, when mixed with emulsin and water forms hydrocyanic acid. An emulsion is used as a sedative application in irritable skin diseases; and internally in troublesome cough, in ague, and in tapeworm. Bitter almonds sometimes produce urticaria, and

in large quantities may produce poisonous symptoms. They are used as a flavouring in cookery.

A. dulcis. B. Ph. (L. *dulcis*, sweet. F. *amande douce*; I. *mandorle dolce*; S. *almendra dulce*; G. *süss Mandel*.) The sweet almond. It contains more than 50 per cent. of oil, 24 of a form of albumen called *emulsin*, with a little sugar and gum. Almonds are nutrient and demulcent; for the former purpose they are used, because of the absence of starch, as a food in diabetes, and for the latter as a mixture in catarrhs, and as a vehicle for other medicines.

The pharmacopœial name (Ed., Dub., and U.S.A.) of the fruit of the *Amygdalus communis*, varieties β and γ (De Candolle), or sweet.

A. of cerebellum. A rounded lobe on each side of the uvula of the cerebellum.

Amygdala'ceous. (L. *amygdala*, an almond. G. *mandelartig*.) Resembling or related to the almond.

Amygdalæ cerasorum. (L. *cerasus*, the cherry tree. F. *noix des cerises*, *noyaux des cerises*; G. *Kirschenkerne*, *Kirschenmandeln*.) The kernels of cherry stones.

A. Jordan'ice. A synonym of *Amygdalus communis*, var. *dulcis*.

A. pas'ta. (L. *pasta*, paste.) See *Almond paste*.

A. pecunia'rise. (L. *pecuniarius*, belonging to money.) The fruit of the *Theobroma cacao* or chocolate bean.

A. persico'rum. (L. *persicus*, Persian. F. *noix des pêches*; G. *Pfirsich-Kerne*, *Pfirsich mandeln*.) The kernels of peach stones.

A. pi'neæ. (L. *pinæus*, belonging to the pine. F. *noix or amandes de pignier*, *pignons*; G. *Pinienmandeln*, *Harzmandeln*, *Pignolen*.) Pine nuts obtained from the *Pinus pinea*, Linn.

A. placen'ta. (L. *placenta*, a cake.) See *Almond cake*.

A. ter're. (L. *terra*, the earth. F. *racine de souchet esculent*, *amandes de terre*; G. *essbare Cyperngraswurzel*, *Binsenmuss*.) The root of *Cyperus esculentus*.

Amygdalate. (*Amygdala*.) Prepared from or mixed with almonds.

Amygdalatum. (G. *Mandelmilch*.) Term for almond emulsion.

Amygdaleæ. (G. *Mandel- or Steinfruchtgewächse*.) A Suborder of the Nat. Ord. *Rosaceæ*, or a Family of the Order *Rosaceæ*, called also *Drupaceæ* and *Pruneeæ*. They are trees or shrubs, with simple leaves and free stipules. Calyx deciduous; carpel solitary, not adherent to the calyx; style terminal; fruit a drupe; seed suspended. This Suborder comprehends all the *Rosaceæ* that have stone fruit, as plums, peaches, almonds.

Amygdali fructus. (L. *fructus*, fruit.) The fruit of the almond tree. See *Amygdala*.

A. persicæ flo'res. Belg. Ph. The flowers of the *Amygdalus persica*.

Amygdalic acid. $C_{20}H_{20}O_{18}$. Formed by boiling amygdalin with an alkali.

Amygdaliferous. (L. *amygdala*, an almond; *fero*, to bear.) In Botany, applied to a plant that yields almonds.

In Geology, applied to rocks containing pale oval substances of different composition.

Amygdalin. (Ἀμυγδαλή, an almond. G. *Bittermandelstoff*.) $C_{20}H_{27}NO_{11} + 3H_2O$. A

AMYGDALINA—AMYL.

glucoside obtained in two different forms, viz in the crystalline form, in which state it is contained in the seeds of *Amygdalus communis*, *A. persica*, *Prunus domestica*, *P. laurocerasus*, *P. padus*, and from the leaves, flowers, and bark of the last, and in the amorphous form, in which form it exists in the leaves of *Amygdalus persica* and *Prunus laurocerasus*, and from the seeds of *P. cerasus*. Its existence has been deduced from the presence of hydrocyanic acid in the distillate of the following plants—*Prunus capricornis* (leaves), *P. spinosa* (flowers and seeds); *P. virginiana* (bark), *Amelanchier vulgaris*, *Cotoneaster vulgaris*, *Crataegus oxyacantha*, *Pyrus aucuparia*, *hybrida*, and *tormentosa* (flowers), *Spiraea aruncus*, *Japonica coriifolia* (leaves). It is obtained by extracting with alcohol, and precipitating with ether. It crystallises from alcohol in white shining laminae, has a taste at first sweet and then bitter. It dissolves in 15 parts of water and in 12 parts of hot alcohol of 0.939. By boiling with dilute acids and by contact with water and emulsin or *synaptase*, a ferment contained in bitter almonds, amygdalin is resolved into bitter almond oil, glucose, and hydrocyanic acid, $C_{20}H_{27}NO_{11} + 2H_2O = C_7H_5O + CNH + 2C_6H_{12}O_6$. Bitter almonds contain from 1–2½ per cent. of amygdalin.

When taken into the stomach it is decomposed in the body, and appears in the urine as formic acid.

Amygdalina. See *Amygdalin*.

Amygdalina ceous. Having flowers like those of *Amygdalus*.

Amygdalin ceous. Same as *Amygdalinoceous*.

Amygdalinum. See *Amygdalin*.

Amygdalinus. Same as *Amygdalinoceous*.

Amygdalitis. (*Amygdala*, the tonsil. *F. amygdalite*.) Inflammation of the tonsils.

Amygdalo-glossus. (*L. amygdala*, tonsil, *glossa*, tongue.) A muscle of the tongue, arising from that part of the pharyngeal aponeurosis which invests the outer surface of the tonsil, descends between the tonsil and the pharyngoglossus to the base of the tongue, where it changes its direction and runs transversely to the median line, appearing to meet its fellow of the opposite side. It aids the stylo-glossus in raising the margin of the tongue and rendering the dorsum concave.

A. hypertrophica. (*L. Amygdala*, tonsil. *Gr. υπερ, excessive, τροφή, nourishment*; *G. Mandelgeschwulst*.) Enlargement of the tonsils.

Amygdaloid. (*L. amygdalus*, the almond, *aloeos*, like. *F. amygdaloide*; *G. mandelsternartig*.) Resembling an almond, or containing white bodies, like almonds, distributed through it.

In Botany, this term has been applied by Péc to plants or products resembling in smell that of the bitter almond.

In Geology, igneous rocks containing small oval cavities which are, partially or entirely, filled with agate, jasper, calcareous spar, or other mineral.

Amygdalonus. (*Amygdala*, the tonsil. *δῆλος, a mass*.) Enlargement of the tonsil.

Amygdalopathia. (*Amygdala*; *πάθος, disease*.) Disease of the tonsils.

Amygdaloplethora. (*Amygdala*, *πληθωρη, fulness*.) Congestion of the tonsils.

Amygdalotome. (*Amygdala*; *τομή*,

a cutting, from *τμήνω*, to cut.) An instrument for removing the tonsil, a tonsillotome.

Amygdalus. (*G. Mandelbaum*.) A Genus of the Section *Prunus*, Nat. Ord. *Rosaceae*, characterised by having a drupe with coarsely furrowed and wrinkled putamen; young leaves conduplicate.

A. communis. (*L. communis*, common. *F. amandier*; *I. mandoria*; *S. almendra*; *G. Dan.*, and *Swed. Mandel*; *Port. amendo*; *Arab. Louz*, *Dut. amandelboom*; *Sans. Inghardi*; *Tark. Badem aghadj*.) Nat. Ord. *Amygdaleae*, or *Drupaceae*, or *Rosaceae*. The almond tree. A tree originally growing in the South of Europe and Barbary, and now cultivated in Provence. Gen. Char. Flowers, solitary, calyx, 5-lobed, inferior, petals 5; drupe downy, with a tough fibrous sarcocarp, leaves oblong-lanceolate, serrulate.

A. communis (var) **amarra.** (*L. amarus*, bitter, *F. amandiers amere*; *S. almendra amarga*; *G. Bitter mandelbaum*.) Bitter almond tree. A variety of the *A. communis*, characterised by having the style as long as the stamens, and the petioles spotted with glandulae. The seeds contain about 28 per cent. of oil, 30 of emulsin or *synaptase* and 1–1½ of amygdalin.

A. communis (var) **dulcis.** (*L. dulcis*, sweet. *F. amande douce*; *I. mandoria doles*; *S. almendra dulce*, *G. süss mandelbaum*; *Dut. zoete amandelen*.) Sweet almond tree. A variety of the *A. communis*, in which the style is much longer than the stamens, and the glands, instead of being on the petioles, are at the base of the dentations of the leaves. The seeds contain 64 per cent. of fixed oil, 24 of albumen, emulsin, or *synaptase*, 6 of uncrystallisable sugar, 6 of pellicle, 4 of fibrous matter, 3 of gum, 3.5 of water, and 0.5 acetic acid and loss. Used in the form of emulsion, as a demulcent in catarrhal affections, and to make a kind of bread. By Dr. Pavy in diabetes. The pharmacopoeial preparations are *Mistura Amygdala*, *Oleum Amygdala*, and *Pulvis Amygdala comp.*, containing almonds 8 parts, sugar 4, and gum arabic.

A. persica. (*L. persica*, Persian; *F. picher*; *I. persico*; *G. Persich*.) The peach. The nectarine. Leaves oblong-lanceolate, serrulate; flowers solitary; drupe downy or smooth, with a tender, succulent, sapid sarcocarp. Hab. North of India, Persia. The fruit is nutritious and refrigerant. The blossoms have been employed as a laxative and vermifuge.

A. sativa. (*L. sativa*, that which is sown.) A synonym of *A. communis*.

Amygmus. (*Ἀμυγμός, a rending*; from *ἀμύωω*, to scratch.) Scarification.

Amykos. An antiseptic liquid made of infusion of cloves, boric acid, and glycerin.

Amykosaseptin. (*A. neg.*, *micor*, mildew, *σμήσις*, fermentation.) An antiseptic solution of borax in a decoction of cloves.

Amyl. C_5H_{11} . The fifth term of the series of alcohol radicals, C_nH_{2n+1} , the presence of which is admitted in the derivatives of amylic alcohol. When attempts are made to isolate it, it doubles its molecule and gives the di-amylic $C_{10}H_{21}$, identical or isomeric with hydride of decyl. It was first obtained in the free state by Frankland, by the action of zinc amalgam upon iodide of amylic, the reaction being completed by the action of potassium, or by the action of sodium upon iodide of amylic, or by the electro-

AMYLACEA CORPORA—AMYLOGEN.

lysis of caproate of potassium, or lastly, by the destructive distillation of certain kinds of coal. It is a transparent colourless liquid, of agreeable smell and burning taste. Sp. gr. 0.77 at 11° C. (52° F.); boiling point 155°—159° C. (311°—318° F.); vapour density 4.90. It is miscible with alcohol, unmiscible with water. It is not acted on by fuming sulphuric acid, and is only slowly attacked by nitric and nitro-sulphuric acids.

A. acetate. Has a very similar action to amyl nitrite, but is much less active.

A. alcohol. See *Alcohol, amylic*.

A. chloride. $C_5H_{11}Cl$. This compound, which boils at 102° C. (216° F.), has been used as an anæsthetic.

A. ether. $(C_5H_{11})_2O$. A colourless liquid, obtained by the action of amyl iodide on potassium or sodium amylate. It boils at 176° C. (348.8° F.).

A. hydrate. A synonym of *Alcohol, amylic*.

A. hydrated oxide of. A synonym of *Alcohol, amylic*.

A. hydride. $C_5H_{11}H$. A volatile liquid, occurring, along with other hydrides, in American petroleum; it may be obtained by heating amyl iodide with zinc and water. It boils at 30° C. (86° F.). It is an anæsthetic.

A. hydruret of. A synonym of *A. hydride*.

A. iodide. Possesses the same properties in a minor degree as *Amyl nitrite*, and produces tremors, like those caused by amylic alcohol.

A. nitrate of. A synonym of *A. nitrite*.

A. nitris. See *A. nitrite*.

A. nitrite. $C_5H_{11}O, NO_2$ or $C_5H_{11}NO_2$. A compound produced by the action of nitric or nitrous acid on amylic alcohol. It is of yellowish colour, and possesses a peculiar odour. Sp. gr. 0.877, boiling point 96° C. (204.8° F.), insoluble in water, very soluble in alcohol. When inspired, a powerful cardiac stimulant. It increases the frequency of the pulse, and by paralyzing the vasomotor branches of the sympathetic nerves, especially of the head and neck, from the periphery towards the centre, causes dilatation of the vessels, and diminution of the blood pressure; it ultimately causes paralysis and diminishes muscular contractility. It prevents hæmoglobin from giving up its oxygen. It has been found useful in angina pectoris, in spasmodic asthma, cardiac dyspnoea, syncope, tetanus, epilepsy, laryngeal spasm, colic and enteralgia, headache and facial neuralgia, and has been used as an antidote in cases where toxic doses of chloroform have been administered, and has been recommended in strychnia poisoning. Care, however, should be taken in giving it to elderly people. Dose, 2 to 5 minims, carefully inhaled.

A. oxide. A synonym of *A. ether*.

A. valerianate of. A preparation recommended as a good and pleasant substitute for the more disagreeable preparations of valerian.

Amylacea corpora. (L. *amylum*, starch; corpus, body. F. *corpuscules amylicis*.) See *Amyloid bodies*.

Amylaceous. (L. *amylum*, starch. G. *stärkemehlartig*.) Consisting of or containing starch.

A. bodies. See *Amyloid bodies*.

Also, a term including starch and its congeners.

Amylamine. (F. *amyliaque*.) $C_5H_{13}N$. Is obtained by distilling isopentyl isocyanate with

potash. It is a colourless liquid, of ammoniacal odour, slightly soluble in water, which it renders alkaline. It boils at 95° C. (203° F.), and has a sp. gr. of 0.7503 at 18° C. (64.4° F.).

A. hydrochlorate. $C_5H_{13}NHCl$. Recommended in doses of half to one gramme to reduce febrile action. In small doses, in animals, it lowers the force and frequency of the pulse and reduces the temperature; in large doses it produces convulsions and death.

Amylate of amyl. A synonym of *Amyl ether*.

A. of hydrogen. A synonym of *Alcohol, amylic*.

Amylæa farinæa. A synonym of *Amylum*.

Amylene. C_8H_{10} . (G. *amylene*.) This hydrocarbon is a homologue of ethylene or olefant gas and the fifth term of the series C_nH_{2n} , and is produced by the dehydration of amylic alcohol by sulphuric acid, phosphoric anhydride, or chloride of zinc; also by the dry distillation of amyl sulphate of calcium. It is a transparent, colourless, very thin liquid, having a faint but disagreeable odour. Sp. gr. 0.663 at 0° C. (32° F.), boiling at 35° C. (95° F.). It possesses anæsthetic properties, and has been tried as a substitute for chloroform, but in several instances it has led to fatal results.

Amylenum. See *Amylene*.

A. hydricum. See *Amyl hydride*.

A. nitrosum. A synonym of *Amyl nitrite*.

Amyleon. *Amylum*.

Amyleous. A term synonymous with *Amylaceous*.

Amyli iodidum. See *Amyl iodide*.

A. ioduretum. A synonym of *A. iodidum*.

A. nitris. See *Amyl nitris*.

A. nitritum. See *Amyl nitrite*.

Amylic. (L. *amylum*, starch.) Of, or belonging to, starch. Applied to an acid obtained from starch moistened in water, and submitted to gentle heat in a retort with an equal weight of peroxide of manganese.

A. alcohol. See *Alcohol, amylic*.

A. ether. A synonym of *Amyl ether*.

A. ether, acetate of. U.S. Ph. See *Amyl acetate*.

A. ether, valerianate of. U.S. Ph. See *Amyl, valerianate of*.

A. nitrite. A synonym of *Amyl nitrite*.

Amylide cell. A term used by Kützing as synonymous with *Primordial utricle*.

Amylin. A synonym of *Glycogen*.

Also, a term for that part of a granule of starch which is soluble in water.

Amylina. The same as *Amylin*.

Amylinum. The same as *Amylin*.

Amylion. A synonym of *Amylum*.

Amyllier. An old name of the almond tree, *Amygdalus communis*.

Amylobacter. A term used by Treacal for certain microscopic forms, probably Micrococci and Bacteria, which are found in the cells of plants.

Amylo-cellulose. One of the constituents, according to Nägeli, of starch granules, the other being *granulose*; it is coloured coppered by iodine. The existence of these substances is by no means certain.

Amylogen. A term applied by Delffs to that part of granuloæ which is soluble in water.

AMYLOID—AMYLOLYTIC.

Amyloid. (L. *amyllum*, starch; *αἰός*, form. G. *starkenmehlähulich*.) The amyloid of Schleiden and Vögel is a starch-like substance, forming the cell-walls in the cotyledons of various leguminous plants, as in those of *Scholtia latifolia* and *speciosa*, *Hymenaea courbaril*, *Alcaena urens*, and *Tamarindus indicus*. When dry it is soft and horny, but on boiling with water it swells up and forms a paste, which is coloured yellow with watery solution of iodine, but blue with alcoholic solution of iodine. It is soluble in hot water and in solution of potash, but is insoluble in alcohol and ether.

The amyloid of Virchow is an albuminous substance, found in pathologically degenerated spleen and in cerebral granulations, from which it may be obtained by treatment with water, pure spirit, and alcohol acidulated with hydrochloric acid, artificial gastric juice, and again with acidulated alcohol and ether. It remains as a vitreous mass, which neither dissolves nor swells up in water or diluted acids, though dissolving, like albumen, in strong nitric or hydrochloric acid. It swells up in diluted alkaline solutions and ultimately dissolves, forming a cloudy fluid. On boiling with diluted potash it forms potash-albuminate. It undergoes no change in artificial gastric juice, nor by decomposition. In the purest condition as yet obtained it contains 53.6 per cent. carbon, 15.5 nitrogen, 1.3 sulphur. (Fehling.)

A. bodies. Round or oval bodies, varying in size from 1-25th to 1-850th of an inch, composed of concentric layers of a homogeneous material, surrounding one or more granular nuclei, without any disposition to coalesce. Under polarised light they present, like starch grains, a black cross; with feeble solutions of iodine they give a blue reaction, especially if a little sulphuric acid be added; when the acid is more concentrated, the colour passes into violet or reddish or blackish brown. They occur in various organs, especially in the nervous substance and in the prostate. They have also been noticed in the degenerated connective tissue surrounding the capillaries of the grey matter of the brain in the general paralysis of the insane. The corpuscles found in the prostatic liquid and in the canals of the epididymis are large, yellowish, or brownish-red, transparent, and become of a greenish tint on the addition of a solution of iodized iodide of potassium; those that are of a brownish colour are scarcely affected, but when sulphuric acid is added they become purple or yellowish; with dilute sulphuric acid alone they become blue, passing into indigo. They dissolve in sulphuric acid, and also in potash solution when heated.

Some consider them to be primarily of a composition analogous to starch, though admitting that this material may be replaced by azotised calcareous and colouring substances (Paulicky). Others, as Robin, regard them as being transitional between ternary compounds and nitrogenous substances, in favour of which is the lively red colour they give when acted on by Millon's reagent, and the orange tint of xanthoproteic acid they assume when treated with ammonia and nitric acid. They are insoluble in alcohol, by which they are sharply distinguished from cholesterin and fatty bodies generally.

A. degenera'tion. (F. *amyloide dégené-*

rescences, metamorphose lardacée; G. *Amyloid-entartung, Speck-krankheit*.) Sometimes called waxy or lardaceous degeneration. A form of disease most frequently observed in the spleen, liver, and kidney, but also seen in the lymphatic glands, the intestinal mucous membrane, the great omentum, and the adrenals, and more rarely in the pancreas, thyroid body, in the heart and muscular tissue of the intestines, in the lungs, muscles of animal life, and even in the skin. The occurrence of the disease is an indication of profound impairment of the nutritive functions, and it is most commonly developed in the course of chronic suppurative diseases, such as chronic disease of bones, pulmonary phthisis, pyelitis, and such like, and in tertiary syphilis. It has been noticed in chronic diarrhoea. The organ affected, as the liver or kidney, when examined with the naked eye, is enlarged from the infiltration of a translucent material, and at the same time is paler than natural, partly from the pressure of the deposit, partly from diminished supply of blood. Its substance is firm and resistant, the surface of its section polished and homogeneous, so that in advanced cases neither the vessels nor the proper tissue of the gland, nor the connective tissue, can be distinguished. When the diseased structure, except in the very early and late stages, is touched with a solution of iodine it becomes of a dark red-brown colour, which gradually fades and leaves the surface its original colour; with care, a blue colour may frequently be obtained by touching the iodine-stained surface with a drop of concentrated sulphuric acid; in this latter respect the reaction is similar to that of cholesterin and cellulose; but with starch, iodine alone produces a blue colour. Amyloid matter is also stained blue by solution of sulphate of indigo. Microscopic examination has shown that the smaller arteries are first affected, the deposit being formed in the middle coat. The unstriated muscular-fibre cells are replaced by a compact homogeneous material, and the vascular wall is transformed into a uniform friable mass, through which the blood is transmitted with difficulty or not at all. By degrees, this extends to the cells and intercellular structure of the affected organs; and gradually the nuclei, together with the cell-walls of adjoining cells, become obliterated. Amyloid degeneration is frequently accompanied by a deposit of fat or of cholesterin in the substance of the tissue. In the case of the spleen, the corpora Malpighii, and in the kidney, the glomeruli are primarily affected; the term sago-spleen being applied at a certain stage to the former, and the affection constituting one of the forms of Bright's disease in the latter organ. In 1200 autopsies, Wagner met with 48 cases of amyloid degeneration, 13 of which occurred in males from 20 to 30 years of age.

Late observations clearly show that amyloid substance is not a starch, but a nitrogenous body; its exact composition is not known, but it is generally regarded as a modification of albumen or fibrin and a new formation. It has been suggested that it is the result of diminution of potash salts in the blood.

A. matter. A synonym of *Glycogen*.

Amyloids. Non-nitrogenous starchy foods.

Amyolytic. (L. *amyllum*, starch; *λύω*, to loosen.) Term applied to ferments that are capable of converting starch into dextrine and sugar, like those of the saliva and pancreatic juice.

Am'ylon. According to Maumené, a body which, in grape-juice, is combined with a substance he calls symoproteine; these substances determine, by their separation in contact with air, fermentation. (L. and B.)

Also, a synonym of *Amylum*.

Also, a synonym of *Glycoen*.

Amylonin. A term applied to a substance produced by the united action of sulphuric and nitric acids on starch.

Amylonitrous ether. A synonym of *Amyl nitrite*.

Amylop'sine. A name given by Defresne to that ferment of the pancreatic juice which converts starch into sugar.

Amylosclema. (*Amylum*; σκλημα, dryness. G. Stärkemehkleien.) Bran; the refuse of starch.

Amylo'ses. One of three classes, the others being sucroses and glucoses, into which the carbo-hydrates have been divided. They are starch, glycogen, dextrin, inulin, gums, cellulose, and tunicin.

Amylum. B. Ph. (Ἀμυλον, fine meal, prepared more carefully than by grinding; from ἀ, neg.; μύλη, a mill. F. amidon; I. amido; B. amidon; G. Stärkemehl, Stärke.) The starch from the seeds of common wheat, *Triticum vulgare*. It is white, opaque, and pulverulent, and, as found in the shops, in columnar masses. It is insoluble in alcohol, ether, and cold water; with boiling water it forms a gelatinous fluid, which, when dried in thin layers, is converted into a yellowish horny substance like gum. Starch is nutritive and demulcent. It is used as a powder to sore surfaces, dissolved in glycerin as a vehicle for other medicines, and in boiling water as a demulcent application or injection.

A. album. (L. albus, white.) Wheat starch.

A. america'num. A synonym of *Arrowroot*.

A. a'ri triphy'lli. The starch from the tuber of the *Arum*, or *Caladium sequinum*, used as a substitute for arrowroot.

A. ave'næ. (L. avena, oats. G. Haferstärke.) Oat starch. Starch obtained from the *Avena sativa*. It is composed of simple and compound granules; the former are spheroidal or barrel-shaped; the latter contain from 2—70, usually regularly 3—6-angled granules, 0.003—0.008 mm. in size.

A. canna'ceum. (L. canna, a reed.) A synonym of *Tous-les-mois*, a starch obtained from the *Canna edulis*.

A. curcu'mæ. (G. Tinkmehl.) East Indian arrowroot, obtained from the tuber of *Curcuma angustifolia* and *C. leuorrhiza*.

A. en'u'sæ. Starch from the root of elecampane. See *Inulin*.

A. glutino'sum. (L. glutinosus, gluey.) A synonym of *Mucilago amyli*.

A. holo'nii. The same as *A. enule*.

A. hor'dæi. (L. hordeum, barley. G. Gerstenstärke.) Starch made from barley.

A. ioda'tum. Russ. Ph. (G. Jodstärke-mehl.) Pure iodine 1 part, spiritus vini alcoholisati 10 parts; mix, and rub down with starch 29 parts. Dose 1—5 grammes.

A. ioda'tum solu'tum. The *A. iodatum* after being heated for some time in a water bath, when it becomes liquid from the production of dextrin and glucose.

A. ipeca'uanhæ. A synonym of *Ipeca-cuanha, white*.

A. leguminosa'rum. (L. legumen, pulse.) Starch obtained from peas, beans, lentils, and other leguminous plants.

A. ma'idis. (G. Hulsenfrüchtstärkemehl.) Starch obtained from maize, or Indian corn.

A. mandiocæ. The starch of the *Jatropha manihot*, or Mandioc plant.

A. man'ihot. (G. Cassawastärke.) A synonym of *Tapioca*, which is obtained from the *Jatropha manihot*.

A. maran'tæ. (F. amidon de marante; G. Pfeilwurzelstärke.) West Indian arrowroot, from the *Maranta arundinacea*.

A. maranta'ceum. A synonym of *Arrowroot*, a product of the *Maranta arundinacea*.

A. nitro'sum. A synonym of *Amyl nitrite*.

A. ory'zæ. (L. oryza, rice. G. Reistärke.) Rice starch.

A. palma'ceum. (L. palma, a palm-tree.) A synonym of *Sago*, the product of several species of *Palma*.

A. palma'rum. (L. palma, a palm-tree.) Sago.

A. quer'neum. (L. quercus, belonging to the oak.) A synonym of *Kacahout*; a starch which, according to some, is obtained from the acorn of the *Quercus ilex*.

A. sa'gi. Sago.

A. sagitta'risæ. Arrowroot.

A. seca'lis. (L. secale, rye. G. Roggenstärke.) Starch obtained from the rye.

A. sola'ni. (F. fécule de pomme de terre, fécule de parmentière; G. Kartoffelstärke.) Potato starch, *Solanum tuberosum*.

A. sola'ni tubero'si. Belg. Ph. Potato starch.

A. tac'cæ. Tahiti arrowroot, obtained from the *Tacca pinnatifida*.

A. trit'iceum. (L. triticeus, of wheat.) A term for the starch of wheat.

A. trit'ici. (L. triticum, wheat. F. amidon; G. Weizenstärkemehl.) Wheat starch.

Amylus. The same as *Amylum*.

Am'yon. The same as *Amyos*.

Am'yo's. (A, neg.; μῦς, a muscle. G. muskellos, fleischlos.) Without muscle or flesh; fleshless. Applied to limbs in a state of extreme emaciation, so that they appear to be without flesh or muscle altogether.

Amyosthe'nia. (A, neg.; μῦς, a muscle; σθίς, force.) Failure of muscular power. Impaired contractibility of the muscles without obvious disease of the muscles or nerves. It is best seen in cases of anæmia, chlorosis, dyspepsia, hysteria, and hypochondria. The treatment should be directed both to the improvement of the general health by tonics and hydrotherapeutic means; and of the local debility by active and passive movements, the application of electricity, and shampooing.

Amyosthen'ics. (Same etymon. F. amyosthéniques.) Medicines which depress muscular action. They are divisible into general and special amyosthenics; to the former belong belladonna, opium, curare, nicotine, chloral, chloroform, amyl nitrite, camphor, bromides; to the latter, calumba and creasote, as gastro-intestinal, and stramonium as a pulmonary amyosthenic.

Amyotroph'ic. (A, neg.; μῦς, a muscle; τροφή, nutrition.) Muscular atrophy. Amyo-

AMYOTROPHY—ANABENOSAURUS-

trophic paralysis is paralysis that is due to muscular atrophy.

Amyotrophy. (Same etymon. *F. amyotrophus*.) Atrophy of muscle. (Hammond.)

Amyous. ('A, neg., *μῦς*, a muscle.) Weak or poor in muscle.

Amyridæ. ('A, intens.; *μύρον*, a fragrant juice.) According to Lindley, a Tribe of the Nat. Ord. *Amyridaceæ*, having the ovary one-celled.

Amyridaceæ. (Same etymon.) According to Lindley, Rutæ Exogens, with consolidated, hard, dry, and somewhat valvular fruit, valvate petals, free stamens, and generally dotted leaves.

Amyridææ. (Same etymon.) Bentham and Hooker, instead of forming a separate class of these plants, as Lindley has done (see *Amyridaceæ*), make them a Suborder of *Burseraceæ*, whilst Jussieu places them under the *Terebinthaceæ*, and Baillon makes them a Tribe of *Rutaceæ*. Trees or shrubs with compound leaves, chiefly natives of America. Flowers regular, hermaphrodite; petals free, valvate, or imbricated, androecium iso- or dipto-stemonous; gynoecium consisting of one carpel, ovary unilocular, containing two descending ovules, with micropyle external and superior, fruit fleshy; embryo without albumen.

Amyrin. (Same etymon.) $C_{25}H_{42}O$. A snow-white crystalline resin, obtained from *Manilla elemi*, of which it constitutes about 20 per cent., by treating it with cold spirit of wine. The fusing point of the crystals is 171° – 176° C. (340° – 349° F.). Water does not dissolve it, but ether, chloroform, and carbon bisulphide dissolve it easily. The alcoholic solution rotates the plane of polarised light to the right. Concentrated sulphuric acid dissolves amyrin with a reddish colour. It is not attacked by solution of potash.

Amyrina. (Same etymon.) Name by Bonastre for a sub-resin obtained from the resinous juice of *Amyris elemifera*; *Amyrin*.

Amyris. ('A, intens.; *μύρον*, a fragrant juice.) The name of a Genus of the Nat. Ord. *Rutaceæ*. Trees or shrubs, chiefly found in the Antilles and North and South America. Leaves exstipulate, compound, imparipinnate; flowers cymose, regular, hermaphrodite, or polygamous, with convex receptacle, calyx gamopetalous, persistent, quadrid; corolla with 4 imbricated petals, stamens 8, 4 being opposite the petals; anthers introrse, with longitudinal dehiscence; ovary with fleshy disc, and short capitate style, unilocular, with two anatropal ovules, fruit a drupe, seed solitary, exalbuminous. Every part of these plants is charged with glandular frouds, containing a resinous and odorous fluid.

A. agallocha. Roxb. ('*Agallochon*, bitter aloe wood.) The source of the elemi of Bengal.

A. ambrosiaca. ('*Ambrosios*, immortal.) A synonym of *Isca icariba*.

A. balsamifera. (L. *balsamum*, a fragrant gum; *fero*, to yield.) Hab. Jamaica. Furnishes one of the kinds of rosewood, *Lignum rhodii*.

A. caranina. Hab. Mexico. A tree said to yield caranna resin or gum.

A. commiphora. (*κομμι*, gum; *φορέω*, to bear.) The *Balsamodendron agallocha*.

A. elemifera. (*Elemi*; *fero*, to bear.) The plant to which the elemi resin of the London and Dublin Pharmacopœias was formerly ascribed.

A. gileaden'sis. Hab. Shores of the Red Sea. A tree which yields the balm of Gilead.

A. gummifera. (L. *gummi*, gum; *fero*, to yield.) A synonym of *Balsamodendron Roxburghii*.

A. gummiphora. (L. *gummi*; *φορέω*, to bear.) A synonym of *Balsamodendron Roxburghii*.

A. heterophylla. Willd. ('*Eτερος*, different; *φύλλον*, leaf.) A synonym of *Isca araucariina*.

A. hexandra. (*Hexandra*, six stamens.) A species which is said to yield a part of the gum elemi of commerce.

A. ka'tar. Forsk. A tree believed at one time to yield myrrh.

A. lign aloë. A Mexican tree, from the wood of which a perfume is distilled.

A. niout tout. The source of African bdellium which is often used for myrrh.

A. opobalsamum. A tree growing in Arabia Felix, and yielding balsam of Mecca.

A. papyracea. Del. (L. *papyraceus*, made of papyrus.) A synonym of *Ploislea papyracea*.

A. plumieri. A plant of the Antilles, which yields a resin, formerly supposed to be elemi.

A. sylvatica. (L. *sylvaticus*, belonging to a wood.) One of the trees yielding the Bois de citron, and also a kind of elemi. It grows in St. Domingo. It is said to be poisonous.

A. tomento'sa. (L. *tomentum*, a stuffing for cushions.) A synonym of *Euphorbia tomentosum*.

A. toxifera. (L. *toxicum*, a poison; *fero*, to bear.) A synonym of *A. sylvatica*.

A. zeylan'ica. A tree growing in Ethiopia, which is believed by some to produce elemi.

Amyron. A synonym of *Centrophyllum lanatum*, or *Carthamus tinctorius*.

Amythao'nis medicamen'tum. A compound, ascribed to Amythaon, either for plasters or used in malagmata, applied in tension of the præcordia, contracted and convulsed limbs, as described by Paulus Ægineta, Adams's Transl. vol. ii. p. 89, and recommended by him for scirrhus and other tumours.

Amyxia. ('A, neg.; *μύξα*, mucus. G. *Schleimangel*.) A want or deficiency of mucus. amyxy

Amyxis. ('*Ἀμυξις*, a tearing. G. *Stechen*, *kratzen*, *Schrapfen*.) Scarification.

Amyxodes. ('A, neg.; *myxodes*, having mucus. F. *amyxeux*, G. *ohne Schleim*.) Without or having no mucus.

Also (*ἀμυξις*, a scratch), scratched or scarified.

An. (Arab.) Term for Sulphur.

An'a. ('*Ἀνά*, a distributive preposition with numerals.) Of each, abbreviated, as *ἀν*, in the writing of prescriptions.

Anaba'xia. ('*Ἀναβαίνω*, to climb; F. *anabim*.) Name by J. A. Ritgen for a Family of Saurian Reptiles that climb to the tops of trees, as chameleons.

Anabenodactylous. ('*Ἀναβαίνω*; *δάκτυλος*, a finger. F. *anabenodactyle*.) Applied by J. A. Ritgen to a Family of Saurian Reptiles having the toes proper for climbing, as chameleons.

Anabenosau rus. ('*Ἀναβαίνω*, to climb; *σαῦρος*, a lizard. F. *anabenosaurus*.) Applied by J. A. Ritgen to a Family of *Reptilia*, comprising saurians that, as chameleons, climb to the tops of trees.

ANABAINA—ANACARDIÆ.

Anaba'na. (Ἀναβαίνω, to mount up.) One of the Genera of filamentous Algae found in *Baregins*.

Many authors refer this Genus to *Trichormus*.

Anabantoid'eol. (F. *anabantoides*.) Term applied by Eichwald to a Family of Osseous *Acanthopterygii*, having the *Anabas* for their type.

Anaba'sese. (F. *anabasi*.) Applied by C. A. Meyer to a Tribe of *Chenopodeæ*, having the *Anabasis* for their type.

Anab'ases. (Ἀναβαίνω, to go up.) An old term for fevers which increase steadily as they proceed to the period of decline.

Anab'asis. (Ἀνάβασις, a going up. G. *Aufsteigen*.) Used by Galen for the increase either of a disease, or of a particular paroxysm.

Anab'asia. A Genus of the Nat. Order *Chenopodiaceæ*. A Genus presenting the characters of *Salsola*, from which it only differs in its thick and fleshy calyx, its five stamens, alternate with the stamens, and its spiral and upright embryo. Under-shrubs growing in cold and temperate regions.

A. aphylla. (A, neg.; φύλλον, a leaf.) A plant employed in Persia as a detergent.

A. creta'cea. (L. *cretaceous*, chalk-like.) A perennial growing in Siberia.

A. foliosa. (L. *foliosus*, leafy.) Leafy anabasis. An annual growing in the south of Europe.

A. tamariscifolia. (*Tamarisk*; *folium*, a leaf.) A plant yielding the drug named *Chouan*. All parts of the plant yield soda.

Anabat'ic. (Ἀναβατικός.) Of, or belonging to, anabasis; augmenting; increasing.

Anabat'ica. A term applied formerly to a continued fever, the symptoms of which gradually increase in severity.

Anabénic acid. (F. *acide anabénique*.) A synonym of *Oxaluria acid*.

Anaber'is. (Ἀναβήσσω, to cough up.) Term formerly used for expectoration and ptialism.

Anabiot'ic. (Ἀναβίωω, to come to life again.) A term applied to stimulants and tonics which restore strength.

Anablaste'ma. (Ἀναβλάστημα, a shooting up again. F. *anablastème*; G. *thallodische Legetersprosse*.) Applied by Wallroth to peculiar productions of certain lichens, called by Gartner *Propagines bracteolatae*, by Dillenius *Fimbrie farinose crispæ*.

Anablaste'sis. (F. *anablastèse*; G. *Legetersprossenbildung*.) The production of anablastemata.

Anablep'sis. (Ἀναβλέπω, to see again.) A term for the recovery of sight.

Anaboa'ma. (Ἀναβοήμα, a loud shout.) The same as *Anaboesis*.

Anaboe'sis. (Ἀναβοήσις.) A loud cry or scream.

Anaboe'tic. (Ἀναβοήσις.) Causing loud cries.

Anabolæ'on. (Ἀναβόλαιον, from ἀνάβω, to lift up.) Applied to forceps used to extract darts, or other foreign bodies.

Anab'ole. (Ἀναβολή, from ἀναβάλλω, to throw up.) Term, used by Galen, *de C. M. sec. Loc. viii. 3*, for the rejection or discharge of anything by vomiting. It also came to mean expectoration and regurgitation.

Anabroch'esis. (Ἀναβροχίζω, to draw

out. F. *anabrochèse*; G. *Aufsaugung*.) Resorption, as of pus.

Anabroch'ismus. (Ἀναβροχισμός.) Used by Galen for the extraction or turning up of the eyelashes by a small loop.

Formerly applied to the ablation of the eyelashes, and the operation for trichiasis.

Also, the application of a ligature to a limb or tumour.

Anabronch'ismus. The same as *Anabrochismus*.

Anabro'sis. (Ἀνάβρωσις, an eating up. G. *Anfressen*, *Aetzen*.) Used by Galen, *de Loc. Affect.*, v, 5, for a corrosion, or ulceration of the soft parts.

Anabro'tic. (Ἀναβρωτικός, corrosive.) A term formerly applied to corrosive agents.

Anacahu'ite wood. (G. *Anacahuiteholz*.) A Mexican plant, exported from Tampico, believed to belong to the Papilionaceæ. It appears to be the *Cordia boissieri*. The decoction of the wood is almost tasteless, and it contains no special constituent on which any medicinal action could be supposed to depend. It has been greatly extolled in the treatment of phthisis, but its use in Europe has not been productive of benefit; its action has been attributed to the large amount of oxalate of lime it contains.

Anacamp'seros. (Ἀνακαμψίρος, from ἀνακάμπτω, to make to turn; ἔρως, love. L. *amoris redux*.) A plant that can reanimate decaying love; the *Sedum telephium*.

Anacamp'sis. (Ἀνακάμψις, from ἀνακάμπτω, to bend back. F. *anacampsie*; G. *Zurückbeugung*, *Rückwirkung*, *Gegenwirkung*.) Reflection; also, reaction or reciprocation.

Anacamp'tic. (Ἀνακάμπτω, to bend back. F. *anacamp'tique*.) Pertaining to anacampsis. Applied to a body which reflects sound or light.

Anacamp'tics. (Same etymon.) A synonym of *Catoptrics*.

Anacamp'tis. (Same etymon.) A Genus of the Nat. Order *Orchidaceæ*.

A. pyramida'lis. (F. *orchis pyramidal*.) A species supplying *Salep*.

Anacam'pyla. (Ἀνακάμπτω, to bend back. F. *anacampyle*.) Name by Hedwig for scales exposed and bent back at the summit, found in some Cryptogamia; on the pileus of certain *Agarici*; on the thallus of certain lichens, as *Lichen squamosus*.

Anacan'thini. (A, neg.; ἀκανθα, a thorn.) A Suborder of the Order *Teleostei*. Fishes with fins supported by soft rays, not spiny ones; ventral fins absent, or if present attached to the throat, beneath or in front of the pectoral fins; they approximate to the *Acanthopterygii* in having a swim-bladder without an œsophageal duct.

An'acar. (Ἀνάκαρ, up to the head, upwards.) Raising up to the head.

Old term signifying (etym. as *Anacardium*) in the superior part. (Gorræus.)

Anacardia'ceæ. (Same etymon as *Anacardium*.) A group of plants regarded by Lindley as a distinct Order, and by Baillon as a Tribe of *Terebinthaceæ*.

They are Rutal Exogens with apocarpous fruit, and a single ovule rising by a cord from the base of the cell. Seeds exalbuminous, or nearly so.

Anacardiæ. (Same etymon. F. *anacardié*.) A Tribe or Section of the Family *Terebinthaceæ*, having a single unilocular

ANACARDIC ACID—ANACNESMUS.

monospermous carpel; seed borne on a basilar podosperm; radicle folded on thick cotyledons.

Anacardic acid. An acid substance found in the *Anacardium occidentale*.

Anacardium. (*Ἀνά, up to; καρδιά, the heart*; because its fruit was thought to be like the heart of a small bird.) A Genus of the Nat. Order *Anacardiaceae*. The plants belonging to this Genus are trees or shrubs; with alternate, petiolated, simple, and entire leaves; flowers in compound terminal clusters, irregular, polygamous, and pentamerous; receptacle concave; calyx with five sepals, caducous; corolla with five petals, imbricated or twisted; stamens 8—10; ovary surmounted with a simple lateral style, containing in its single cell a placenta, on which is placed the long single fertile stamen, and to which is attached a single anatropal ovule; the fruit a reniform acheneum, supported by the greatly hypertrophied peduncle; the pericarp presents cavities filled with a resinous juice, and containing a seed; embryo fleshy, exalbuminous.

A. humile. (*L. humilis*, low.) A bush resembling in its character the *A. occidentale*.

A. indicum. A synonym of *A. orientale*.

A. latifolium. (*L. latus*, broad; *folium*, a leaf. *F. Anacardi d'Orient.*) A synonym of *Semocarpus anacardium*.

A. longifolium. (*L. longus*, long; *folium*, a leaf.) A synonym of *A. orientale*.

A. nanum. (*L. nanus*, a dwarf.) A small tree or bush, the properties of which resemble those of *A. occidentale*.

A. occidentale. (*L. occidentalis*, belonging to the West. *F. anacardier d'Occident*, or *Acajou d'Indes*, or *Acajou d'Inde*, or *Acajou d'Inde*; *S. anacardio*; *G. Elaphantenlans*; Hind. and Duk. *Kaju*; Tam. *Mindiri marum*; Tel. *Jidi-mamidi*, *Muntamamidi*; Mal. *Puranki-mara*, *Kappa-marakum*; Hind. *Hijli-badam*.) The Cashew-nut tree. A large tree; leaves oval, very blunt or emarginate, a little narrowed to the base, rather longer than broad. The nutshell or husk contains an acrid oil, known as *Curdol*, capable of blistering the skin, and used to destroy warts, stimulate ulcers, and for the cure of chronic skin diseases. It forms a good marking ink. On roasting the nut the juice volatilises; the vapour irritates the larynx, provoking cough, but is said to act beneficially on eyes suffering from serofulous ophthalmia. The seed is edible and contains a sweet oil. In Brazil it is sometimes named the *Salsepareille des pauvres*, which indicates its sudorific or antisyphilitic properties. The juice of the fruit and the hypertrophied peduncle, when fermented, yields an agreeably flavoured wine; when fresh, it is used in diarrhoea and diabetes; when fermented, it produces a diuretic wine. The bark is a good astringent, and from it a gum resembling gum Arabic exudes, named Cashew gum. In fusion of the bark is given for syphilitic swellings.

A. officinarum. (*L. officina*, a shop.) See *Semocarpus*.

A. orientale. (*L. orientale*, belonging to the East. *F. anacardi orientale*.) The Malacca bean tree. Hab. India. A species the fruit of which is said to have an intoxicating effect; the pericarp supplies a corrosive oil. See *Semocarpus*.

A. rhinocarpus. (Pex. the nose; *carpus*, fruit.) Hab. South America. The bark is

poisonous, and is used by the natives to poison fish.

Anacatharsis. (*Ἀνακάθαρσις*, a clearing away; from *ἀνακαθάρω*, to cleanse upwards. *F. anacatharsis*.) Used by Hippocrates, *Aph. v. 8*, for purgation by sputa, or expectoration; it has also been applied to purging upwards by any medicament, emetic, sternutatory, or masticatory.

A. catarrhalis simplex. Catarrh.

Anacathartic. (*Anacatharsis*, expectoration. *F. anacathartique*.) Of, or belonging to, *Anacatharsis*. Promoting expectoration, or vomiting.

Anacathartica. (Same etymon.) Medicines which act as emetics or expectorants.

Anacephalosis. (*Ἀνακεφαλαιώσις*, a summary; *L. recapitulatio*.) The recapitulation of facts of a chapter or book.

Also, applied to man, as the microcosm, or summary of the whole animal kingdom.

Anacesus. (*Ἀνάκτορος*; *L. insanabilis*. *F. incurabilis*; *G. unheilbar*.) Incurable; unhealthy.

Anacharidæe. A Tribe of the Nat. Order *Hydrocharidaceae*.

Anachmus. Arabic term for an incorporated spirit. Dornæus in *Dict. Paracelsi*.

Anachonchylismus. Same as *Anaconchylismus*.

Anachrempsis. (*Ἀναχρεμψίς*; from *ἀναχρεμπτω*, to cough up.) Expectoration, according to Hippocrates, *Coac. prenot. 320*.

Anachremptum. (Same etymon.) Same as *Sputum*.

Anachron. A synonym of *soda*.

Anacineæ. (*Ἀνάκινες*, motion of the arms; from *ἀνακίνη*, to sway to and fro.) Ancient term used by Hippocrates, *I. ii. de Diata xlii. 6*, for a movement of the arms upwards, forming a species of exercise then employed.

Anacineæ. (*Ἀνάκινες*, the gesticulations used by combatants before they entered the lists. *F. anacineæ*; *G. Anakinesis*.) Term for excitement.

Anaclosis. (*Ἀνάκλωσις*; from *ἀνακλῶ*, to bend back. *F. anaclosæ*.) Reflection, as of light or sound.

Also, a figure of speech which is understood by the auditor in a sense contrary to what was intended by the speaker.

Used by Hippocrates for the bending back of a joint upon its external parts; or of a broken limb.

Anaclastic. (*F. anaclastique*.) Relating to *Anaclosis*. Applied to that point where a luminous ray is refracted.

Anaclastics. (*Ἀνακλίστις*, to refract.) That department of Optics which treats of the refraction of light; synonymous with *Dioptrics*.

Anaclinorium. (*Ἀνακλιντήριον*, a recumbent chair; from *ἀνακλίνω*, to lean back, as of persons asleep, or rowers.) A kind of couch or seat, so formed that a man could lie down on it in a reclining posture; a pillow.

Anaclintrum. Same as *Anaclinorium*.

Anaclosis. (*Ἀνάκλωσις*, a lying back; from *ἀνακλῶ*.) The mode of reclining, or the attitude of the sick in bed, which affords important indications in several diseases, according to Hippocrates, *de Diet. lib. xi. l.*

Anaclosmos. (*Ἀνάκλωσμος*, the back of a chair or couch.) That part of a chair or couch on which the back of a sick person rests.

Anacnesmus. (*Ἀνά, up to; ἀνέμω*,

an itching. *F. anacneume.*) An itching on or in a part.

An'acocche. Properly *Anococche*.

An'acock. The name of the seed of an undetermined Leguminous plant, probably *Abrus*.

Anacollas'mus. (Ἀνά, up to; κοιλία, the belly.) A remedy used by Diocles, which seems to have been gentle purging, to relieve the lungs. (Parr.)

Anacolle'ma. (Ἀνακόλλημα, that which is glued on; from ἀνακόλλω, to glue together. *G. Klobmittel.*) Used by Galen, *de Rem fac. Par. c. 10*, for an epithem of medicinal substances, employed to prevent defluxion of humours into the eyes.

Also, any substance causing rapid healing.

Anacolle'mata. (Same etymon.) Frontal bandages.

Anacolup'pa. A Malabar plant, used as a remedy in epilepsy, and an antidote against the bite of the Naja, a Genus of highly venomous serpents. Believed to be the *Zappania nodifera*.

Anacolu'thon. (Ἀνακολούθια, a sentence in which the construction changes and so becomes ungrammatical. *F. Révauxerie; G. Aorwirthheit.*) Incoherence.

Anacomi'dē. (Ἀνακομιδή, a recovery; from ἀνακομιζω, to bring back, to recover.) Used by Hippocrates, *Coac. Prænot. t. 220, 335*, for the refreshing or recreating of the convalescent after sickness.

Anacomptis. An undetermined species of tree growing in Madagascar, the milky fruit of which is used to curdle milk.

Anaconchylas'mus. (Ἀνακογχυλίσμους; from ἀνακογχυλλίζω, to gargle.) Used by Galen, according to Dioscorides, for a gargling, or the act of using a gargle.

Anaconchylis'mus. The same as *Anaconchylas'mus*.

Anacōpē. (Ἀνακοπή, the act of forcing back. *L. fastidium.*) Nausea.

Anacuphism'a. See *Anacuphism'a*.

Anacrotic. (Ἀνακροτίω, to lift up and strike together.) A term applied to a secondary wave observed on the ascending line of a sphygmographic curve.

Pertaining to, or exhibiting, anacrotism.

Anacrotism. (Same etymon.) An oscillation in the ascending portion of the curve obtained in a sphygmographic tracing. Landolt, using a schematic artery, obtained it under one of three conditions: when the exit opening was narrowed; when the elasticity of the walls was diminished; and when from increased volume of the contents the internal tension was augmented. Eulenbergh showed that an anacrotic elevation may be obtained by compression of the artery beyond the point at which a sphygmograph is applied.

It occurs in dilatation and hypertrophy of the left ventricle; in conditions in which the vessels possess diminished extensibility; in conditions in which the flow of blood is greatly diminished in rapidity, as in paralysed limbs; in vessels given off distally to the point where a ligature has been applied to the main vessels, and in which the channels of communication are small or narrow; and in cases of insufficiency of the mitral valve.

Anacrot'ous. (Ἀνά, upwards; κρότος, a striking.) A term applied to a dicrotic pulse in which the dicrotism occurs in the rise of the

blood-wave, and is shown in the upward stroke of the sphygmographic tracing.

Anacter'ion. See *Anactirion*.

Anact'e'is. (Ἀνακτησις, a regaining. *F. anactenis.*) Restoration of strength, and recovery of health; the same as *Analepsis*; used by Hippocrates, *de Vet. Med. ix, 6*.

Anactir'ion. This plant, regarded as a vermifuge by Dioscorides, has been identified with *Artemisia*.

A. an'reus. (*L. aureus*, golden.) A plant that is employed in Spain in the same way as chamomile.

A. officina'rum. (*L. officina*, a shop. *F. pyréthre commun, or de Germanie.*) A plant used in the South of Europe in the same way as the Pellitory of Spain.

A. valent'ius. (*Valentinus*, from *Valentia*.) A plant growing in the South of Europe, and used for the same purposes as the Pellitory of Spain.

Anacto'ri'on. A synonym of the *Gladiolus communis*.

Anacuphism'a. (Ἀνακούφισμα, a relief; from ἀνακουφίζω, to lift, or hold up.) A term used by Hippocrates, *l. i, de Diet. xlii, 6*, for the raising up, or swaying up the body, as a species of exercise.

Anacycleon. (Ἀνακύκλιος, to turn.) A mountebank, a quack. Same as *Agyptia*.

Anacyclo'sis. (Ἀνακύκλωσις. *L. circumactio.*) The phenomena of circulation in cells. See *Cyclosis*.

Anacycles'mus. (Ἀνακύκλωσιμός.) The same as *Anacyclosis*.

Anacyclo'sis. (Ἀνακύκλωσις.) The same as *Cyclosis*.

Anacyclus. A Genus of the Nat. Order *Compositæ*, differing from *Anthemis* only in that the achenia are winged and obcordate.

A. officina'rum. (*L. officina*, a shop. *G. Deutscher Bertram.*) A species cultivated in Thuringia for medical purposes, and said to be substituted for the *A. pyrethrum*.

A. pyrethrum. (*F. pyréthre officinal; I. piretro; S. piletre; G. Römischer Bertram.*) Pellitory of Spain. Hab. Barbary, Spain, Levant. Stems procumbent, downy; radical leaves nearly smooth, pinnate, with pinnatifid segments and linear subulate lobes; branches monocephalous; pappus 0; florets of the ray ♀ or 0, in one row of the disc ♂; bracts imbricated; receptacle conical, scaly; achenia winged and obcordate. The root, which is the part employed in medicine, is perennial, and sends up numerous stems; when dried it is slightly curved, wrinkled, and ash-brown, whitish within, hard, and brittle. Its taste is burning, and it excites a free flow of saliva. It contains 0.59 of an acrid resin, insoluble in potash; 1.06 of a dark brown oil; 0.35 of a yellow acrid oil, both soluble in potash; 9.40 parts of gum, inulin; 7.60 parts of potassic sulphate, carbonate, and chloride, calcic, and other salts; and 19.80 of lignin. It is used as a sialogogue in toothache, neuralgia, and paralysis of the tongue, and as a gargle in relaxed uvula. Dose, 30 grains as a masticatory. See *Pyrethri radix*.

Anacyr'iosis. (Ἀνακυρίωσις, authoritative confirmation.) An ancient term used by Hippocrates, *de Decent. Ornat. ix, 9*, for the authority and gravity which the physician ought to maintain at the sickbed.

Anacystis. (Ἀνά, throughout; κύστις,

ANADENDROMALACHIA—ANÆMIA.

the bladder.) An Alga belonging to the Tribe of *Palmellæ*. It consists of isolated gelatinous cells containing colored gonidia.

A. Grevillei. Inhabits certain thermal waters, it is one of the species which form *Bareguis*.

A. marginata. (*L. marginatus*, bordered.) Grows on the dead stems of asparagus.

A. parasitica. (*L. parasitica*, parasitic.) Lives on the *Cladophora* of ponds.

Anadendromalachia. (*Ἀναδένδρομαλαχία*, the tree mallow, from *ἀνά*, up, *δένδρον*, a tree, *μαλάχι*, the mallow.) A synonym of the *Althea rosea*. Apuleius also uses it, in all probability, as a synonym of the *Lavatera arborea*.

Anaden'dron. (*Ἀνά*, up to; *δένδρον*, a tree.) Name for *Althea*.

Anadesma. (*Ἀναδέσμη*, a band for women's hair.) A bandage for wounds.

Anadesmus. (Same etymon.) A fascia, or bandage.

Anadicrotic. (*Ἀνά*, upwards, *δίσ*, twice, *κροτός*, a striking.) A term applied to the venous pulse-wave which is dicrotic, but in which the dicrotism occurs in the rise of the blood-wave, as shown in the upward stroke of the sphygmographic tracing.

Anadicrotous. The same in etymology and meaning as *Anadicrotic*.

Anadiplosis. (*Ἀναδιπλωσις*; from *ἀναδιπλωμα*, to be made double. F. *anadiplosis*.) A figure in rhetoric, otherwise, reduplication. Used by Galen, *de Typis*, c. 4, to the reduplication of the paroxysm in ague of a double type. (Gorrieus.)

Anadipsia. (*Ἀνά*, intensive; *δίψα*, thirst. F. *anadipsie*.) Intense thirst.

Anadipsio. (Same etymon. F. *anadipsique*.) Applied to things which produce excessive thirst.

Anadora. (*Ἀναδωρά*, a stripping off the skin.) Excitation, especially of the urethra.

Anadosis. (*Ἀναδωσις*, a yielding up, distribution, from *ἀναδίδωμι*, to send forth or produce. F. *anadose*.) Used by Galen, l. 2, *de Fac Nat.* c. 6, for the distribution of chyle through its proper vessels, or of nourishment through the vessels generally; digestion; concretion of the upper parts of the body.

Anadrome. (*Ἀναδρῶν*, a running up; from *ἀνατρέχω*, to run back.) Used by Hippocrates, *Coac Prænat.* i, 303, 314, 316, for the retreat of a pain from the lower to the upper parts of the body, also a recession of the humours, according to Charlton and Thompson.

Anadromi. (*Ἀναδρόμοι*, a running up. F. *anadrome*; G. *aufwärtslaufend*.) Applied to those fishes that swim up from the sea into the interior of rivers.

Anadyomenem. A Subtribe of the Tribe of *Acetabulariæ*, Group *Alga*, characterized by its being formed of articulated, branched, anastomosing tubes connected by an amorphous membrane, the whole forming a flat frond. The species are found in the Mediterranean, the Atlantic, and the Southern Seas.

Anædoæ. (*Ἀν, neg.*; *αἰδοῦα*, the privy parts. F. *anædo*; G. *ohne Geschlechtstheile*.) Wanting the genitals.

Anæma. (*Ἀν, neg.*; *αἷμα*, blood. F. *anéma*, *by blutlos*.) Applied by Latreille to every animal without organs of circulation and without blood, as intestinal worms.

Anæmæsis. Same as *Anæmia*.

Anæmatopoiesis. (*Ἀν, neg.*; *αἷμα*, blood, *ποίησις*, to make.) Imperfect formation or development of the blood. (Dunghsen.)

Anæmatopœstic. (Same etymon.) Interfering with the formation of blood.

Anæmato'sis. (*Ἀν, neg.*; *hæmatosis*, F. *anematose*.) Deficient action and preparation of the blood.

Also, a synonym of *Anæmia, idiopathica*.

Anæmia. (*Ἀν, neg.*; *αἷμα*, blood. F. *oligæmia*, *anémie*, G. *Blutarmuth*, *Blutleere*, *Blutmangel*.) A want, or deficiency, of blood; the condition of the body after great loss of blood, extanguinity. There may either be a defect in the total quantity of blood, as occurs for a short time, perhaps, after profuse hæmorrhages, or a diminution in the relative amount of red corpuscles as compared with the other constituents of this fluid, as occurs in chlorosis. In many organic diseases, as in cancer, both conditions are present. In an extreme case the proportion of red corpuscles, which is normally 127 in 1000, but may fall, without decided indication of disease, to 80, has been known to be reduced to 21 (Lorain), the white corpuscles are probably not much diminished in number; the fibrin and the solids of the serum are not diminished, the water is increased. The causes of anæmia are hæmorrhages, such as those occurring in menorrhagia after delivery, and from injury; long-continued discharges, as from leucorrhœa, diarrhœa, chronic suppurations, general disorders of the system, as fever; affections without organic lesion, as chlorosis, dysmenorrhœa, hysteria, and dyspepsia, cachectic conditions resulting from the development of disease, impairing the functions of nutrition, as organic disease of the stomach, cancer, pulmonary tubercle; the toxic influence of lead, alcohol, tobacco, insufficient food, and deprivation of light. Amongst the more important symptoms are pallor, debility, loss of appetite, dyspnoea on slight exertion, diminished activity of all the functions, leading again to many indications of defective nerve power, indicated by convulsive neuroses, paralysis, neuralgia, dyspepsia, palpitation of the heart, perverted mental faculties, murmurs are heard over the heart, in the veins, and occasionally in the arteries. The treatment of anæmia consists in removing the cause if practicable, in paying the strictest attention to the diet and regimen, in the administration of various remedies, amongst which iron holds the first place, and manganese, zinc, arsenic, and the vegetable tonics, a secondary, in extreme cases transfusion.

A., acutæ. Anæmia depending on rapid and great loss of blood, on great muscular exertion, on pregnancy, and such like.

A., cerebral. (*L. cerebrum*, the brain.) A synonym of *Syncope*.

Also, a synonym of *Hydrocephaloid disease*.

A., chronic. Anæmia arising from repeated small losses of blood, from chronic suppurations, from chronic disturbances of digestion, from insufficient food, or other slowly acting cause.

A., collateral. Anæmia the result of dilatation of the arteries and hyperæmia of a contiguous and connected part.

A., compensatory. The same as *A., mechanical*.

ANÆMIÆ CUTANÆÆ—ANÆROPLASTIC

A., essen'tial fe'brile. A synonym of *A., idiopathic.*

A., essen'tial malig'nant. A synonym of *A., idiopathic.*

A., idiopath'ic. A form of anæmia, tending uninterruptedly towards a fatal issue. The causes of the disease are unknown, though its frequent occurrence in the Canton of Zurich renders it possible that it may have an endemic origin. Lebert thinks it not unlikely that there is a special neurosis of the great sympathetic. It is more common in females than in males, pregnancy being a powerful predisposing cause, and between the ages of twenty and forty years than at other periods of life. The subjects of it have often been exposed to debilitating influences, but the removal of these does not effect the cure of the disease. The affection commences insidiously, the patient gradually presenting the aspect of chlorosis or extreme anæmia with the concomitant symptoms, as palpitation, dyspnoea, digestive atony, fainting fits, and anasarca of the legs. There is no bronzing of the skin, nor any disproportion between the number of the red and white blood-corpuscles, nor enlargement of the spleen or lymphatic glands, as in leukæmia, nor is emaciation at all frequent. Loud blowing systolic murmur, with purring tremor, is usually audible at the base of the heart and in the jugular veins. Epistaxis, retinal ecchymoses, or some other form of hæmorrhage, is of common occurrence. Febrile symptoms of an irregular character are almost always present, until a little before death. It must be diagnosed from chlorosis, leukæmia, and Hodgkin's disease. The duration of the disease is from six weeks to eight months. After death the lesions found are œdema, ecchymosis of the serous membranes and other parts, fatty degeneration of the abdominal viscera, and specially of the heart. Minute red corpuscles have been found in the blood, as also under other circumstances; and the medulla of the bones has in many cases been found with all its cytogenic structures hypertrophied.

Tonica and nutritive diet have been found useless, and transfusion of blood has been recommended.

A., lo'cal. Deficient supply of blood to an organ or part.

A., lymphat'ic. A synonym of *Hodgkin's disease.*

A., mechan'ical. Local anæmia resulting from pressure.

A., pas'sive. Local anæmia resulting from pressure.

A., progres'sive pernicious. A synonym of *A., idiopathic.*

A., spin'al. A synonym of the condition known as *Spinal irritation.*

A., splen'ic. A synonym of *Hodgkin's disease.*

Or, according to some, a condition of simple anæmia connected with enlargement of the spleen.

A., trop'ical. A form of anæmia which occurs in Europeans resident in hot climates, and which appears to be the direct effect of the high temperature. The development of Entozoa in the blood has been found to be concurrent with the symptoms of this form of anæmia.

Anæmie cutanææ. (L. *cutis*, the skin.) Morbid appearances of the skin caused by deficiency of blood in the cutaneous capillaries.

Anæ'mial. (*Anæmia*, a want of blood.) In a state of anæmia; bloodless; exsanguine.

Anæ'mic. (*Anæmia*.) Wanting in blood.

A. bru'it. See *A. murmur.*

A. gol'tre. A synonym of *Exophthalmic goitre.*

A. insan'ity. One of Batty Tuke's classes of insanity.

A. mur'mur. A soft sound heard on applying the stethoscope over various parts of the vascular system.

Cardiac murmurs are systolic, and are heard as a soft bellows sound over the base of the heart, where they are loudest; the murmur heard in diastole is probably venous.

Arterial murmurs are only occasionally heard in anæmia; they are synchronous with the systole of the heart, and are confined to the larger arteries.

Venous murmurs are of a different character and are more common; they have been likened to the sound made by a humming-top, and are heard in the jugular vein, sometimes in the femoral, and also over the site of the torcular herophili.

Anæmoch'rœous. (Aν, neg.; αἷμα, blood; χρώς, the colour of the skin. G. *blasse, ohne Blutfarbe.*) Pale; exsanguine; of a bloodless complexion.

Anæmosar'cous. (Aν; αἷμα; σάρξ, flesh. F. *anémosargue.*) Without red flesh; applied to animals with white blood.

Anæmo'sis. A synonym of *Anæmia.*

Anæmot'rophy. (Aν, neg.; αἷμα, blood; τροφή, nourishment.) A deficiency of nourishment or formation of the blood.

Anæmyd'ria. (Aν, neg.; hæmydor, serum. F. *anémydrie*; G. *Blutwassermangel.*) Defect of serum in the blood.

Anæret'ics. (Aναιρετικός, from ἀναίρειν, to destroy. F. *anéretiques.*) Agents which destroy more or less rapidly the tissues; a term used by Fossagrives, who divides them in the several following heads:—

A., an'imal. The gastric juice and vaccine lymph.

A., electrolyt'ic. The several modes of producing destruction of tissue by electrolysis.

A., mechan'ical. A term under which is included all operative procedures resulting in loss of tissue, whether healthy or diseased.

A., medic'inal. All caustics which produce destruction of tissue by chemical action.

A., ther'mic. The actual cautery in its various forms, the application of solar heat by means of a condensing lens, and the galvanic cautery.

Anaerob'ia. (Aν, neg.; ἀήρ, air; βίος, life. F. *anaérobie.*) A term applied by Pasteur to *Bacterium, Vibrio* and other minute organisms which absorb oxygen from a state of combination, and which can not only live without free oxygen, but are even killed by the action of air. The term is opposed to aerobia, but Pasteur observes that some of these organisms are aerobia at one time and anaerobia at another. In one sense the living tissues of the body of the higher animals may be regarded as anaerobia.

Anaerob'ic. (Same etymon.) Unable to live in ordinary atmospheric air.

Anaeroplast'ic. (Aν, neg.; ἀήρ, air; πλάσσω, to form. F. *anaéroplastique.*) A term applied to an apparatus for the application of

ANALDIA--ANALYSIS.

has obtained its name from its feeble electric properties.

Anal'dia. (Ἀναλδή, not thriving, from ἀν, neg., αἰδανός, to nourish.) Defective nutrition. (Dunghusen.)

Analec'tronous. The condition of *Anec'etonus*.

Analem'sia. The same as *Analepsia*.

Analem'tia. The same as *Analepsia*.

Analen'tia. A Paracelsian term for a species of epilepsy. Perhaps a corruption of *Analepsia*.

Analep'sis. Epilepsy, arising from disorder of the stomach, according to Joh. Anglicus, *Ros Angl.* p. 35.

Analep'sis. (Ἀνάληψις, from ἀναλαμβάνω, to recover. F. *analepsis*, *analepsia*; G. *Denkerung*, *Erholung*, *Genesung*, *Wiederzunehmen*.) Recovery from sickness.

Also, the support given to a fractured extremity. (Dunghusen.)

Analep'tic. (*Analepsia*, recovery from sickness. F. *analeptique*; G. *herzstärkend*, *nervenstärkend*, *stärkend*.) Applied to those things calculated to restore strength lost by sickness.

A. foods. The starches, soups, and animal jellies especially.

A. med'icines. Tonics in general.

Analep'tica. (Same etymon.) Medicines which restore strength.

Analep'tics. (F. *analeptiques*.) This term, though generally understood to include medicines, is by some restricted to restorative foods.

A. fatty. Under this head are included milk, eggs, cream, butter, and all animal and vegetable oils.

A. gelatinous. Animal jellies and vegetable gelatinous substances, as the decoction of Iceland moss.

A. proteinous. A term which includes foods derived from animal structures.

A. sac'charine. Sugar, and all substances, especially fruits, such as grapes, which contain much sugar.

A. starchy. Such alimentary materials as arrowroot, tapioca, and sago.

Analges'ia. (Ἀναλγία, void of pain; from ἀν, priv., ἄλγος, pain. F. *analgesie*; G. *Schmerzlosigkeit*.) Indolence, insensibility to, or want of, pain; a condition of ease.

This condition is more or less present in drunkenness, in the torpor produced by chloroform, in commencing frostbite, and similar conditions; it is present also in certain diseases of the brain, in epileptic seizures and the immediately following period, in some forms of hysteria, and in poisoning by many narcotics and the salts of lead. According to Schull, it occurs when the spinal cord is divided, with the exception of the posterior columns.

Analges'ics. (Same etymon.) A term given to remedies which relieve pain.

Anal'gia. Same as *Analgesia*.

Anallantoid'ea. (L. *an*, neg.; *allantoides*, F. *anallantoidien*.) Synonymous with one of the two great divisions into which the Vertebrate Subkingdom is divided, it is coextensive with the Branchiata and Ichthyopsida, as it includes the Pisces and Amphibia, that is to say, forms in which the embryo is without an amnion, and the gills are present at some period of existence. It is at present, however, a moot point as to whether

or not an allantois is present in Pisces and Amphibia.

Analogism. (Ἀναλόγισμα, a result of reasoning. F. *analogisme*.) Term used by Galen for any very strong argument from cause to effect, implying an unanswerable necessity. Anciently applied to the judgment of diseases by a similar appearance, or the discovering of a thing unknown by its likeness or analogy with something already known. This was called Rational or Dogmatic Medicine, as contrasted with the Empirical, or that conducted by symptoms or appearances alone without theory.

Analogous. (Ἀνάλογος, conformable.) F. *analogue*; G. *übereinstimmend*, *ähnlich*.) Answering in fashion, bearing relation, resemblance, or proportion to. Applied to things or parts of a different nature, but having a similar relation of functions, and therefore contradistinguished from the term *Homologous*, which see.

A. pole. That end of a pyroelectric crystal which is positively electric with a rising temperature, and negatively with a sinking temperature.

An'alogue. (Ἀνάλογον, conformable. F. *analogue*; I. *analogo*; G. *Analog*.) That which resembles, or runs a parallel course to something else.

Term applied by Professor Owen, in his 'Homologies,' to a part or organ in one animal which has the same function as another part or organ in a different animal. It is thus used as a correlative to *Homologue*. The wing of a butterfly is the analogue of the wing of a bird, since, though differing in structure, they resemble each other in function, but the wing of the bird is the homologue of the arm of man or foreleg of quadrupeds, being composed of the same bones, yet differing in function.

Analogy. (Ἀναλογία, equality of ratios, proportion. F. *analogie*; I. *analogia*; G. *Ähnlichkeit*, *übereinstimmung*.) The relation which one thing bears to another. A term for the condition or relation of things, or parts of a different nature, but similar in their functions, and so contradistinguished from the term *Homology*, which see.

Analosis. (Ἀνάλωσις, from ἀναλύνω, for ἀναλίσκω, to consume, or waste. F. *analose*; G. *Auszerbrung*.) A consumption, wasting, or atrophy. Applied to the cerebrum by Hippocrates, *I. vi*, *Epid. s. 3*, *t. 1*.

Anal'thes. (Ἀναλθή, from ἀν, neg.; ἄλθεω, to heal. F. *analthé*.) Incurable.

Anal'thetic. (Ἀναλθητος.) Incurable.

Anal'tos. (Ἀν, neg., ἄλς, salt.) Unsalty.

Analys'er. (Ἀναλύω, to unloose, to examine.) A doubly refracting prism forming the upper or eye prism of a polarising apparatus.

Anal'y'sis. (Ἀνάλυσις, from ἀναλύνω, to undo. F. *analyse*; I. *analisis*, S. *analyse*; G. *Zerlegung*, *Auflösung*.) A breaking up or resolution of anything compound or complex, be it substance, sentence, or mental operation, into simpler or into elementary constituents.

A. absorptiomet'ric. (L. *absorptio*; μέτρον, a measure.) A method by which the proportion of the different constituents of a gaseous mixture may be calculated by observation of the amount of absorption which takes place on exposure to a fluid, the coefficient of absorption being previously known.

A. chem'ical. (F. *analyse chimique*.) The separation and recognition of the several

elementary principles of a compound substance, or its resolution into simpler bodies, although not necessarily elementary.

A., clin'ical. The method which consists in the determination and isolation of the several symptoms which collectively constitute a disease.

A., colorimet'ric. (L. *color*, colour; *μέτρον*, a measure.) A method by which the proportionate quantity of a substance may be estimated by the intensity of the colour, either alone or after the addition of some reagent.

A., densimet'ric. (L. *densitas*, thickness; *μέτρον*.) A method by which the proportionate quantity of a substance may be estimated by determining its specific gravity.

A., element'ary. The form of analysis which deals only with the nature and weight of the elementary constituents of a compound.

A., eudiomet'ric. See *Eudiometry*.

A., gasomet'ric. A synonym of *Eudiometry*.

A., gravimet'ric. (L. *gravis*, heavy; *μέτρον*, a measure.) A mode of analysing compounds by weighing the elements after separation, or by weighing after separation and combination with another element whose combining proportion is known.

A., imme'diate. A term used to describe the separation of the several substances of which a compound body is made up.

A., indirect. A mode of analysis, dependent on the law of constant proportion, whereby the amount of a substance can be determined by combining it with a known quantity of another body whose combining proportion is known.

A., log'ical. The analytical mental consideration or resolution into elementary conceptions of a subject or object considered abstractly.

A., mathemat'ical. By Euclid it was considered to be that form of reasoning on mathematical questions in which, the conclusion being assumed, consequences are deduced from it which can be proved to be true and consistent. At a subsequent period it was held to be the resolution of problems by reducing them to equations by the help of symbolical characters. In modern times it signifies the employment of the algebraical and higher calculus, or any direct treatment of the properties of geometrical figures in the manner of the ancients, without the use of algebraical notation and transformations.

A., organ'ic. The process by which the different elementary substances contained in an organic compound are determined.

A., prismet'ic. A synonym of *Spectrum analysis*.

A., psycholog'ical. The reduction to simpler conditions of complicated mental states.

A., qual'itative. The method by which the constituents of a compound are distinguished and recognised.

A., quan'titative. The method by which the proportionate or absolute weight or volume of the constituents of a compound are determined.

A., spec'tral. See *Spectrum analysis*.

A., spectromet'ric. A term for *Spectrum analysis*.

A., spec'trum. See *Spectrum analysis*.

A., thermomet'ric. (Θέρμη, heat; *μέτρον*, measure.) A method of analysis which has been proposed for the determination of the quantity of a body by thermometric observation during its solution in or combination with other bodies.

A., ult'imate. The determination of the elementary constitution of a body.

A., volumet'ric. A mode of analysis by which the amount of an element or compound in a body may be calculated by observation of the volume of another substance needed to combine with it.

A., zoöchem'ical. The qualitative analysis of chemical substances.

Analyt'ic. (Ety. as *Analysis*.) Having the power or capacity of analysis.

A. crystals. A term applied to crystalline structures, as tourmaline, which have the power of analysing polarised light.

Anamese. A Mongolian people of the Altaian division.

Anamir'ta. A Genus of the Nat. Order *Menispermaceae*. Stamens monadelphous; anthers indefinite, forming a globose head; drupes 1—3.

A. coc'culus. (F. *cocque du Levant*; G. *Kokkel*; Tam. *Penkottai*, *Kaka-coollie*; Tel. *Kaki-chempoo*; Hind. *Kakmari*; Mal. *Polla* or *Kaandaka-conuvoh*.) Hab. Malabar. It is a climbing plant. The only known species of the Genus. The flowers are regular and dioecious; the calyx is formed of two to four trimerous verticilli; corolla absent; stamens 6—9, sterile in the female flowers, but forming a short column of six vertical series; anthers with transverse dehiscence; fruit composed of two or three arched drupes, each containing a single seed; albumen horny; embryo with divergent cotyledons. The fruit is sometimes used to adulterate beer. Powdered, the berries destroy pediculi; in ointment, are used to allay inflammation, and in cases of itch and herpes. The poisonous principle of the seeds is *Picrotozin*, of the pericarp, *Menisperm*. See *Cocculus indicus*.

A. panicula'ta. (L. *paniculatus*, panicled.) A synonym of *A. cocculus*.

A. racemo'sa. Colebr. (L. *racemosus*, full of clusters.) A synonym of *A. cocculus*.

Anamir'tic acid. $C_7H_{10}O_2.HO$. An acid resulting from the saponification of anamir'tin; white, crystallisable; melts at $68^\circ C.$ ($154^\circ F.$)

Anamir'tin. $C_7H_{12}O_2$. A peculiar oil obtained from the *Anamir'ta cocculus*. It is white, crystallisable, fusible at $36^\circ C.$ ($97^\circ F.$) It yields acrolein on distillation.

Anamne'sia. (Ἀνάμνησις; from ἀνά, anew, and μνήσις, memory.) In Pathology, the recalling of the phenomena preceding a given period of the disease. (L. and R.)

Anamne'sis. (Same etymon.) Same as *Anamnesia*.

Anamnes'tic. (Ἀνάμνησις; from ἀναμνήσκω, to recall to mind. F. *anamnestique*.) Recalling to the memory; bringing to mind; reminding.

A. symp'toms. Phenomena occurring in a previous stage of an illness, by the remembrance of which the present condition is made more manifest.

Anamnes'tica reme'dia. (Ἀναμνηστικός, able to recall to mind readily; L. *remedium*, a cure.) Medicines which are supposed to restore the memory.

A. signa. (L. *signum*, a sign.) Signs or symptoms which discover the precedent state of a sick person or a disease.

Anamnes'tical. Same as *Anamnesic*.

Anamn'ina. (L. *an*, neg.; *amnion*.) One of the four divisions of the Vertebrata in Haeckel's Classification. It embraces Pisces, Dipnoi (Lepi-

ANAMNIOTA—ANAPHI

dosiren), Halisauria (Ichthyosaurus), and Amphibia.

Anamniota. (L. an, neg; amnion) Animals which possess no amnion; the Abranchiate Vertebrata, with the possible exception of Pisces and Amphibia.

Anamorphism. (Ἀνά, up; μορφή, form.) Progression from a lower to a higher type.

Anamorphosis. (Ἀναμορφωσις, a forming anew. F. *anamorphose*, I. *anamorphosis*; G. *Umbildung*, *Umgestaltung*, *Umformung*.) Applied by Wadroth and Fries to degenerations which the Cryptogamia, especially Agae, frequently undergo, and which transform them into a typical species, i.e. their natural form is changed either by excess or by arrest of development.

Also, applied to the progressively higher development of species.

Also, applied to any kind of degeneration which so modifies the aspect of a plant as to render it unrecognisable.

Applied to figures that, beheld in a certain point of view, or with the aid of glasses, represent another thing than when examined under a different point of view, or without glasses.

Anamphodon'ta. (L. an, neg; amphodonta) Animals not having continuous rows of teeth, as the Cetacea and Ungulata.

Ananulu. Under this name Rheede has described a Leguminous plant growing in Malabar, the decoction of which, in rice water or milk, is employed in the form of baths to cure ascites and tympanitis.

Anan'as. See *Ananassa*.

A. aculea'ta. (L. *aculeatus*, pointed.)

A synonym of *Ananassa sativa*.

A. America'na. The *Bromelia pinguin*.

A. lu'ida. (L. *lucidus*, shining.) A

species the fruit of which is eaten.

A. ova'ta. (L. *ovalis*, egg-shaped) The *Ananassa sativa*.

A. semi'serra'ta. (L. *semi*, half; *serratus*, saw-shaped, notched) A species the fruit of which is eaten.

A. wild. The *Bromelia pinguin*.

Ananassa. A Genus of the Nat. Order Bromelaceae. Fruit succulent, in spikes, consolidated into a single, tuberculated, comose mass.

A. sati'va. (L. *sativus*, that which is planted. F. *ananas*, S. *ananas plante*, G. *Ananas*, Tam. *Anasa*; Mal. *Poorerthei*.) The pineapple. Hab. Moluccas, China, Ceylon, India. Leaves glaucous, mealy, bracts shorter than the fruits. The plant succeeds well in the open air as far north as 30°. The leaves yield a fine white fibre. The fruit, which is much esteemed, is yellow in colour, conical in form, and pleasant in flavour.

Ananaxip'ta. A word or motto written on an amulet to charm away disease.

Ananchit'inæ. A Subfamily of the Family *Spatangidae*. Echinoderms having an oblong test, with a lengthened apical apparatus, and inhabiting deep waters.

Anander. (Ἀν, neg; *andros*, a man. F. *anandre*, G. *unmannlich*.) An impotent man.

Anand'ra. (Same etymon.) Plants without stamens.

Also, applied by Link to those classes of plants, as fungi, in which the male sex was supposed to be absent.

Anan'dria. (Ἀνανδρία, unmanliness.) Impotence in the male.

Anan'dria. A Genus of the Nat. Order Composite.

A. disco'idea. (Δίσκος, a round plate; είδος, likeness) The leaves of this species are mucilaginous and bitter, and are used by the Chinese in shortness of breath.

Anan'drion. Same as *Anandrian*.

Anan'drion. In Medicine, impotent.

In Botany, wanting stamens.

Ananeo'sis. (Ἀνανεομαι, to renew.) Renewal, or reformation, of any fluid, tissue, or organ.

Anani. A lofty Brazilian tree. The wounded bark yields a yellow viscid gum; becoming red and then umber coloured on drying. Plasters made of it are used by the Indians in chest disorders. It is probably the *Potatia resinifera*. (Waring.)

Ananpala. Probably the *Rhus lazones*. Hab. Philippine Isles. The bark is astringent. (Waring.)

Anan'thes. (Ἀν, neg; *anthos*, a flower) Term employed by Martius to indicate Cryptogamous plants, as having no flowers.

Anan'therate. (L. an, neg; *anther*. G. *staubbeutellos*.) Having no anthers.

Anan'therum. (L. an, neg; *anther*.) In Botany, a filament having no anther.

Anan'thous. (Ἀν, neg; *anthos*, a flower. F. *ananthe*, G. *bluthelos*.) Having no flowers.

Anapai'ma. A tree of British Guiana, the bark of which is aromatic, and is used by the Indians in fever and dysentery. (Waring.)

Anap'alin. (Ἀνάπαλις, contrariwise.) On the contrary side, as if nature endeavoured to free herself from some disease, by her exertions on the side opposite to that wherein the affection arose. It is opposed to *Catexis*. (Larr.)

Anapall'us. A synonym of *Cactus opuntia*.

Anapau'sis. (Ἀνάπαυσις; from *αναπαύω*, to rest.) Used by Hippocrates, Aph. iv, 13, for rest, ease, or quiet, also remission from suffering or pain.

Anapeiratic. (Ἀναπειράται, to do again, to renew exercises.) A term applied by Dr. Hammond to a class of paralyses produced by the habitual use of certain muscles in the same way for a long time. Thus, we have writer's paralysis, telegrapher's paralysis, hammer paralysis. It occurs chiefly in adult life, and is accompanied by symptoms indicative of disorder of the central nervous system, as headache, pain in the back, want of power to co-ordinate the muscles of articulation. The treatment is rest and the application of the galvanic current.

Anaperia. (Ἀνάπηρος, crippled. F. *anpéria*; G. *Verlümmerung*.) Mutilation, or a crippled condition.

Anapetia. (Ἀναπέται; from *αναπετάω*, to expand.) Used by Galen, l. i, de Morb. Diff. c. 6, for an expansion of the orifices of the vessels or canals.

Anaphalanti'asis. (Ἀναφαλαντίσις, forehead baldness.) A falling off of hair from, or baldness of, the eyebrows.

Anaphalanto'ma. (Ἀναφαλάντωμα, forehead baldness.) The same as *Anaphalan'tiasis*.

Anaphe. Same as *Anaphia*.

An'aphi. An island situated to the east of Thera, in the Greek Archipelago. A hot sulphuretted spring rises in it, which is in repute in the treatment of cutaneous diseases.

Anaphia. ('Αν, neg.; ἀφή, touch.) Defect or loss of the sense of touch.

Anaphlas'mus. ('Αναφλασμός.) Masturbation.

Anaphonē'sis. ('Αναφωνία, to speak aloud. F. *anaphonēse*; I. *anafonēsi*; G. *Schreier*.) Term for loud speaking, or vociferation, which was anciently practised as a means of strengthening the lungs. (Gorræus.)

Anaphora. ('Αναφορά.) Used by Hippocrates, *de Arte*, v, 13, for the bringing up of anything by the mouth, as in spitting of blood.

Anaphoricol. ('Αναφορικός.) Those who spit blood.

Anaphrodis'ia. ('Αν, neg.; 'Αφροδίτη, Venus. F. *anaphrodisie*; G. *Geschlechtsabneigung*; I. and S. *anafrodisi*.) Absence of venereal desires; diminution or abolition of genital sensibility.

Anaphrodis'iac. (Same etymon. F. *anaphrodisiaque*.) Applied to medicines or remedies allaying or preventing sexual excitement. The chief anaphrodisiacs are camphor, digitalis, potassium bromide, and carbon sulphide; and tobacco and opium when used in excess.

Anaphrodit'ic. ('Αν, neg.; 'Αφροδίτη, Venus. F. *anaphroditique*.) Applied to an organised body developed without concurrence of the sexes, i.e. not the product of generation, properly so called.

Anaphroditous. (Same etymon. F. *anaphrodité*.) Not enjoying physical love; impotent.

Anaphrom'eli. ('Αν, priv.; ἀρόε, froth; μέλι, honey.) Clarified honey. Mel desummatum. (Quincy.)

Anaphyses. (F. *filaments ostiolaires*.) Filaments often articulated, attached to the interior of the cavity of pyrenocarpous apothecia near the mouth, and directed downwards or towards the centre of the organ. Their direction, therefore, is opposed to that of the paraphyses, and they have been named periphyses. They are believed to aid in the expulsion of the spores.

Anaphysis. ('Ανάφυσις. F. *anaphyse*; G. *Wiederwachsen*.) A growing again, or regeneration. See *Anagenesis*.

Anaphytopy'ra. ('Αναφύω, to produce again; πυρ, a fever. F. *anaphytopyre*; G. *Entwickelungsfeber*, *Wechselfeher*.) A fever or irritable condition arising at the period of evolution of the organism; a growing fever.

Anaplas'is. ('Ανάπλασις; from ἀναπλάσσω, to form again. F. *anaplasie*.) A renewal, or forming anew; applied by Hippocrates to the reunion of a fractured bone.

Anaplas'matic. The same as *Anaplastic*.

Anaplas'mus. The same as *Anaplasia*.

Anaplas'tic. (Same etymon as *Anaplasty*. F. *anaplastique*.) Of or belonging to anaplasty. Term applied to the new formation of deformed or lost parts.

Also, applied to agents which increase the plastic matter of the blood.

Anaplasty. ('Αναπλάσσω, to form anew. F. *anaplastie*.) Term for operations by which reparation is made of superficial lesions, or solutions of continuity, by the use of the adjacent healthy structure, as in operating for vesicovaginal fistula.

Anaplerosis. ('Αναπλήρωσις, a filling up; from ἀναπλήρωω, to fill up, or supply. F. *anaplerose*; G. *Anfüllung*, *Ausfüllung*.) Term

for the supplement or filling up of parts that have been destroyed, as in wounds, and cicatrices.

Anaplerotic. (Same etymon as *Anaplerosis*. F. *anaplerotique*.) Of or belonging to anaplerosis; applied by Galen, *de Dynamid.*, to medicinal substances which promote the restoration of deficiencies in wounds.

Anapleu'sis. ('Ανάπλευσις.) Term used by Hippocrates, *Coac. Prænot. t. 239*, for the exfoliation and throwing off of dead portions of bone; also applied to carious teeth and the decayed portions which scale off from them.

Anaplo'sis. ('Ανάπλωσις, an unfolding. F. *anaplose*; G. *Entfaltung*, *Entwicklung*.) Applied to the evolution of the organs of the body.

Anapneu'sis. ('Αναπνίω, to respire.) Term formerly employed for respiration. (Quincy.)

Anap'noe. ('Αναπνοή; from ἀναπνίω, to respire.) Another term for respiration. See *Anapneusis*, *Apneusis*.

Anapnoeu'si. (Αναπνοή; νόσος, for νόσος, disease.) Diseases of the respiratory organs.

Anap'nograph. ('Αναπνοή, respiration; γράφω, to write. F. *anapné graphé*.) An instrument invented by MM. Bergeon and Kastus, which is capable of registering at one and the same time the movements of inspiration and expiration, the variations of the pressure of the current of air at each movement of respiration, and the quantity of air inspired or expired.

Anapno'ic. ('Αναπνοή, drawing breath. F. *anapnoïque*.) Belonging to respiration.

A. remedies. Medicines which render respiration easier.

Anapnom'eter. ('Αναπνοή, a drawing breath; μέτρον, a measure. F. *anapnéometre*.) A spirometer.

Anapnoconu'si. ('Αναπνοή; νόσος, for νόσος, disease. F. *maladies de respiration*; G. *Krankheiten der Respiration*.) Diseases of respiration.

Anapod'isis. ('Αναπόδισις, a going back, from ἀναποδίζω, to go back.) Retroversion.

A. uteri. Retroversion of the uterus.

Anapodis'mus. ('Αναποδισμός.) Same as *Anapodisis*.

Anapodophyllum canadense. The *Podophyllum peltatum*. (Dunglison.)

Anapophysis. ('Ανά, backwards; απόφωσις, an offshoot.) A small projection springing from the neural arch of a vertebra between the upper articular and the transverse processes, and having a backward direction.

Anapo'sis. Same as *Amposis*.

Anapothym'ia. ('Αν, neg.; ἀποθύμιος, not according to the mind. F. *anapothymie*; G. *Abtheilungsigkeit*.) The absence of aversion.

Anapotis. Same as *Amposis*.

Anapsectic. ('Αναψία, to wipe up.) Detergent.

Anapso'tica. ('Αναψυκτικός. G. *abkühlend*, *abfrischend*.) Refreshing, cooling.

Anapsy'is. ('Ανάψυξις.) Old term used by Hippocrates, iii, *de Fract. t. 8*, for refrigeration.

Anapty'sis. ('Ανάπτωσις, from ἀναπτύω, to spue up, or spit.) Old term for expectoration.

Anaptyx'is. ('Ανάπτυξις, from ἀναπτύσσω, to unroll. F. *anaptyxis*.) An unfolding

ANARCOTINA—ANASARCA.

or mechanical obliteration of morbidly wrinkled parts.

Anarcotina. A name proposed for *Narcotina*.

Anarh'non. ('Ανά, upward; πῖν, the nose) Things which return through the nose.

Also ('Ανά, πῖν, the skin), things which return through the skin.

Anarraphe. ('Αναρραφή; from ἀνά, up; ραφή, a seam, from ράπτω, to sew together) A term formerly applied to the operation of excising a horizontal fold of skin from the upper eyelid and sewing the edges together, so as to cure a ptosis dependent on over-abundance or hypertrophy of skin.

Anarrhegnuminos. ('Αναρρηγνυμίνος; from ἀναρρηγνυμι, to break out.) Breaking out. Applied to ulcers which healed quickly and then broke out again, or fractures when they become disunited, Hipp. i, de Morb., xix, 6.

Anarrhegnymous. Same as *Anarrhegnuminos*.

Anarrhesis. ('Αναρρησις, a breaking up. F. *anarrhexis*; G. *Wiederaufreissung*, Zerreißung.) Disruption or breaking again of a united fracture.

Anarrhicas. ('Αναρρηχίαι, to scramble up) A Genus of the Family *Blenniidae*, Order *Acanthopteri*, Class *Pisces*. Body clothed with rudimentary scales; mouth large; teeth, of which the anterior are conical and the molars rounded, situated on the sides of the jaws and on the palate, abdominal fin separate from the caudal fin.

A. lupus. (L. *lupus*, a wolf. F. *loup de mer*, chat de mer.) The wolf fish, sea cat. Hab. Coasts of Northern Europe and America. The liver furnishes an oil which, mixed with that of many other fishes, especially of the cod family, was formerly used in medicine, as well as in the arts.

Anarrhizum. ('Αναρρηζον) Returning through the nostril or skin.

Also, a stimulatory.

Name for *Nasturtium*; also for *Antirrhinum*.

Anarrhizos. ('Ανά, upwards; ρίζα, a root.) A term applied by L. C. Richard to plants which have no true or earth roots.

Anarrhos. Same as *Anarrhiza*.

Anarrhesa. ('Ανά, upwards; πῖν, to flow) Term used by Schneiderius, l. i, de Catarrh. c. 3, for a flow of humours upwards, or rather of humours brought upwards from the inferior parts, also, regurgitation of the faeces, through inversion of the peristaltic action of the intestines.

Anarrhophe. ('Αναρροφή, to suck down again) A term for absorption.

Anarrhophenous. (*Anarrhophe*; νοῦσος, for νόσος, disease.) Diseases of the lymphatics.

Anarrhophesia. ('Αναρροφήσις, a gulping down again) A term for absorption.

Anarrhopia. ('Αναρροπία, ἀνά, upwards, πῖν, to tend) Term used by Hippocrates, l. de Humor. i, 11, for a flow or tending of the humours from below upwards.

Anarthria. ('Ανά, neg.; ἄρθρα, the limbs. F. *anarthrie*, G. *Gliederlosigkeit*) Defect or absence of the limbs.

Also ('ἀναρροπία, want of vigour), disjointed speech, an impairment of the articulation usually dependent upon bulbar paralysis; when the loss of power is complete, it appears to be invariably accompanied by aphonia.

A. literalis. (L. *literals*, belonging to a letter. G. *Stammeln*.) Inability to pronounce the letters properly, stammering.

A. syllabaria spasmodica. (L. *syllaba*, a syllable, *spasmus*, spasm. G. *Stottern*) Stuttering. A temporary spasmodic inability to vocalise certain sounds, especially the explosive consonants.

Anarthropoda. ('Ανά, neg.; ἄρθρον, a joint; ποῦς, a foot) A Division of the Sub-kingdom *Annulosa*. Animals having no jointed limbs.

Anarthrous. ('Ανά, neg.; ἄρθρον, a joint. F. *anarthre*, G. *ohne Gelenke*.) Without joints, applied to a man stout and fleshy, so as to appear jointless.

Anas. (F. *canard*; It. *anitra*, G. *Eute*) The duck. A Genus of the Family *Zenaidrotes*, Order *Palmipedes*, or *Natatores*. Freely placed far back, neck short, beak broad in front, longer than the head; nostrils near base of keel, tail short and wedge-shaped. This genus includes the domestic duck, the mallard, widgeon, and other species used for food.

A. boschus. (Booschus, a kind of duck.) The wild duck, largely consumed as food.

Anasarca. ('Ανά, through, σάρξ, the flesh. F. *anasarque*, I and S. *anasarca*; G. *Hautwassersucht*, *Wassersucht*) A term for dropsy in the integuments of the body. Anasarca differs from oedema in being more extensive, the latter affecting some part of the body only, as the foot, hand, or eyelid, whilst the former is general, and affects either the entire subcutaneous tissue, or at least the whole of a limb. The causes to which it is attributable are renal disease, when it often commences in the face, and cardiac, pulmonary, and hepatic affections, interfering with the course of the circulation, and leading to venous congestion, when it usually commences in the lower limbs, and extends upwards, it is said to occur sometimes in cases of retention of urine. In either case it may be acute or chronic. The skin is pale or rosy, and pits on pressure. The removal of the fluid is partly to be effected by treatment directed to the primary disease, of which the anasarca is only symptomatic, and partly by direct or indirect revulsive and derivative treatment. — Small punctures with a triangularly-pointed needle (Paget), the introduction of one or more drainage tubes, as Southey's cannulae, flying blisters, frictions with croton oil (Boechut), diuretics, sudorifics, hydragogue cathartics, chalybeates, are amongst the more important means of treatment.

A. anemica. (*Anemia*, poverty of blood) Anasarca dependent on anemic conditions, the result of hemorrhage.

A. debili. (L. *debilis*, feeble) Anasarca occurring in weakened conditions of body.

A. exanthematica. ('Εξανθήματα, an eruption) Anasarca after erysipelas and eruptive diseases.

A. hysterica. A transient swelling in an hysterical person.

A. oppilata. (L. *oppilo*, to stop up.) Anasarca from pressure on veins, as in pregnancy.

A. pulmonum. (L. *pulmo*, the lung.) Edema of the lung.

A. renalis. (L. *ren*, the kidney.) Anasarca depending on kidney disease.

A. serosa. (L. *serum*, the watery part of things.) A term to describe anasarca dependent

ANASARCOS—ANASTOMOTIC.

on the suppression of some customary evacuation, or from too fluid a condition of the blood.

Also, applied to *Phlegmaria dolens*.

Anasar'cos. (Same etymon.) Having or relating to *Anasarca*.

A.sound. A moist sound, like fine bubbling, heard on the first application of the stethoscope to the chest when the integuments are oedematous.

Anasis'mus. ('Ανα, up; σείω, to shake.) Concussion.

Anaso'mia. ('Ανά, upon; σῶμα, a body. F. *anasomie*.) Adhesion of the more outward limbs to the body.

Anaspa'dia. The condition of *Anaspadias*.

Anaspadia'mus. (Same etymon as *Anaspadias*. F. *anaspadicus*.) One whose urethra opens on the upper portion of the penis.

Anaspa'dias. ('Ανά, upwards; and σπᾶν, to draw out, to tear.) In Teratology, the opening of the urethra on the upper surface of the penis.

Anaspad'isis. The same as *Anasparis*.

Anaspadis'mus. The same as *Anasparis*.

Anas'pasis. ('Ανασπᾶν, to draw up.) Contraction, or retraction; applied specially to contraction of the stomach.

Anaspas'mus. The same as *Anasparis*.

Anas'sa. The pine-apple, *Ananassa sativa*.

Anastalt'ic. ('Αναστέλλω, to gird up. F. *anastaltique*; G. *hemmend, blutstillend*.) Formerly applied to medicines that were styptic or astringent.

Term used by Dr. M. Hall, in his 'Diastaltic Nervous System,' for the course of the vis nervosa upwards.

Anas'tasis. ('Ανάστασις, from ἀνίστημι, to raise up.) Used by Hippocrates, *Coac. Prænot.* f. 616, 620, 621, for a recovery from sickness, or restoration to health.

Anastatic. Of or belonging to *anastasis*, or a recovery from sickness; having the power of restoring to health.

Anastatica. A Genus of the Family *Arabide*, Nat. Order *Crucifera*.

A. hierochun'tica. (L. *hierochunticus*, from Jericho. F. *Rose de Jéricho, jérôse hygrométrique*; G. *Rose von Jericho*.) The only known Species of the Genus. A branching herb, with alternate, oblong, dentated leaves; flowers presenting the ordinary cruciferous type disposed in small spikes. The fruit a short silicula, with two mono- or dispermous loculi. After the fall of the leaves and fruits the branches curve inwards, forming a kind of ball, which may be carried by the wind to great distances in the deserts of Syria. It is collected by charlatans and placed in water near the bed of women in labour. The branches then expand, and the more quickly this occurs the more easy and rapid is the labour expected to be.

A. hierochun'tina. The same as *A. hierochuntica*.

Anastoecheio'sis. ('Αναστοιχείωσις, dissolution. F. *anastoechiose*.) A dissolving of matter into its first elements.

Anas'tolê. ('Αναστολή, a putting back. F. *Anastole*; G. *Zurückbeugen, Zurückschlagen*.) A putting back, as of the hair, but, especially, the ragged portions of a large wound.

Anastomo'sant. (Same etymon as *Anastomosis*. F. *anastomosant*; G. *anastomosierend, aderästig*.) That which *anastomoses*. Applied to *Jussiaea anastomosans*, because the lateral nervures of the leaves unite into one unique nerve parallel to the borders.

Anastomose. (Same etymon as *Anastomosis*.) To effect *anastomosis*; to unite with each other.

Anastomosis. ('Αναστομῶν, to bring to a mouth. F. *abouchement, anastomose*; G. *Ineinandermündung, Einmündung, Zusammenmündung, Mündung, Vereinigung, Ausfluss, Zusammenfluss*.) Term for the communication of branches of vessels with each other, as if one mouth or open end of a vessel were joined to another.

In Botany, applied to the union of two nervures in leaves or vessels in fruits and seeds. It is rare in stems, except at the level of the nodes or between laticiferous vessels.

A., an'curysm by. See *Aneurysm by anastomosis*.

A. aneurysmatica. (*Aneurysm*.) A synonym of *Telangiectasia*.

A. Jacobso'nii. (G. *Paukengeflecht*.) The communications in the tympanum, the tympanic plexus, of the branches of *Jacobson's nerve*.

Anastomot'ic. (*Anastomosis*. F. *anastomotique*.) Belonging to, or of the nature of, *anastomosis*.

Applied to medicines like aperients and diuretics, believed to open the mouths of vessels.

A. arch. (F. *arcade anastomotique*.) The curved line or arch sometimes formed by the *anastomosis* of two vessels, as in the mesentery.

A. artery of arm. (G. *untere, innere Nebenschlagader*.) A branch of the brachial artery arising about two inches above the bend of the elbow, which, running transversely inwards on the brachialis anticus and penetrating the intermuscular septum, turns outwards behind the humerus, underneath the triceps, and joins the superior profunda to form the arcus dorsalis humeri posticus immediately above the olecranon fossa. In front of the humerus it gives off a branch to the pronator teres which unites with anterior ulnar recurrent, and at the back of the humerus several branches to the bone and joint, one of which joins the posterior ulnar recurrent.

A. artery of thigh. (G. *oberste Kniegelenkschlagader*.) A branch of the femoral in Hunter's canal, the anterior wall of which it pierces and then descends, under cover of some fibres of the vastus internus, along the tendon of the adductor magnus to anastomose with the internal articular arteries and the recurrent branch of the anterior tibial artery. It gives off a superficial branch, which accompanies the long saphenous nerve, and supplies the integument on the inner side of the knee; and an external branch, which sends twigs to the knee-joint and, forming an arch above the articular surface, anastomoses with the superior external articular artery.

A. artery, pub'ic. Branches of the obturator artery given off as it is about to escape from the pelvis; they lie on the inner side of the crural ring and anastomose with branches of the epigastric artery.

A. artery, trans'verse. (G. *quere Verbindungsarterie*.) A synonym of the communicating branch of the peroneal artery.

ANASTOMOTICA MAGNA- ANATOMY.

A. branches. Twigs of nerve or blood-vessel which connect two branches.

Anastomotica magna. The Anastomotic artery of the arm.

Anastrophe. (Ἀναστροφή; from ἀναστρέφω, to turn upside down. F. *anastrophe*, G. *Umkehrung*.) Inversion, as of the uterus, or urinary bladder.

Anatase. (Ἀνάτασις, extension; from ἀναταίω, to stretch forth.) A mineral consisting chiefly of Titanic oxide, and deriving its name from its long pyramidal crystals; it is blue, red, or yell. with brown, it is very electric.

Anatasis. (Ἀνάτασις; from ἀναταίω, to stretch up. F. *anatase*, G. *Ausstrecken*.) Term for extension.

Anatechnia. Köchlin's term for *Atchma*.

Anates. Old term for disease of the anus.

Anatherapeusis. (Ἀναθεραπεύσις, to rear with care. F. *anatherapeusis*.) A progressive cure.

Anathermum. (Ἀναθερμαίνω, to warm up. F. *anathermon*.) A warming medicine.

Anatherum muricatum. (L. *muricatus*, pointed like a murex shell.) The *Andropogon muricatum*.

A. nardus. The *Andropogon nardus*.

Anathlasis. (Ἀναθλάσις, a squeezing out.) Same as *Eithypus*.

Anathomia. Anatomy.

Anathropis. (Ἀνάθροψις, fresh growth.) Renovation of health after illness.

Anathron. The older authors describe this as a salt which vegetates on rocks in the form of a white stony mass, and as being a form of sodium chloride.

Anathymia'ma. The same as *Anathymia'sis*.

Anathymia'sis. (Ἀναθυμίασις; from ἀναθυμιάω, to make to rise in vapour. F. *anathymiasis*, G. *Rauschen, das hysterische Aufsteigen*.) A fuming, or an evaporating.

Also, hysterical status, or the vapours.

Anathymion'sis. (Ἀναθυμίασις; νόσος, for νόσος, disease. F. *maladies de vapeur*; G. *Krankheiten der Ausdünstung*.) Diseases arising from vapour or evaporation.

Anatides. (L. *anas*, the duck. F. *canard*; L. *antra*, G. *Ente*.) A Subfamily of the Family *Lamellirostres*, Order *Natatores*, or a Family of the Order *Cheuomorphie*, Class *Aves*. The duck tribe. The legs are shorter than the middle toe, hal. with no broad membrane.

Anatiferus. (L. *anas*, a duck; *fera*, to bear. F. *anatifera*, G. *entetragend*.) Applied to *Lepus anatifera*, from an absurd notion of the inhabitants of the north of Europe that it produces wild ducks.

Anatine. A synonym of *Anatidae*.

Anatininæ. A Subfamily of the Family *Myida*. Molluscs having a do. icate shell with a granular surface, cardinal teeth obsolete, siphon long and fibrinated.

Anatinus. (L. *anas*, a duck. F. *anatin*.) Pertaining to the *Anas*; applied to *Lingula anatina*, because its shell resembles the bill of a duck.

Anatipes. (L. *anas*; *pes*, a foot. F. *anatipede*, G. *entfussig*.) Resembling a duck's foot, as *Spongia anatipes*.

Anatole unguis. (Ἀνατολή, a growing. L. *unguis*, a nail.) The denticle of the nail.

Anatomē. (Ἀνατομή, dissection; from ἀνατίνω, to cut up.) Anatomy.

A. animata. (L. *animatus*, animated.) A term for physiology.

Anatomia. (Lat., from ἀνατομή, dissection.) Anatomy.

A. animalis. (L. *animalis*, living.) A term for Comparative Anatomy, or the dissection of animals.

A. comparata. (L. *comparatus*, to compare.) Comparative Anatomy, or the dissection of animals.

A. comparativa. (L. *comparativus*, comparative, from *comparo*.) Comparative Anatomy.

A. viva. (L. *vivus*, alive.) A term for Physiology.

Anatom'ical. (G. *anatomisch*.) Of or belonging to Anatomy.

Anatomism. The doctrine that the physical arrangement of parts explain the phenomena of life.

Anatomist. Term for a dissector of organised bodies, whether human, brute-animal (called also Zootomist), or vegetable (then also termed Phytomist).

Anatomy. (Ἀνατομή, dissection, from ἀνατίνω, to cut up. F. *anatomie*; L. *anatomia*, *notomia*; S. *anatomia*, G. *Anatomie*, *Zergliederung*, *Zergliederungskunst*, *Zergliederungskunde*.) Generally, the cutting up, or dissection, of organised bodies, whether human, brute animal (also called Zootomy) or vegetable (otherwise termed Phytotomy), to expose the structure, uses, &c., of their different parts.

A., analog'ical. The study of the bodily structures and organs in their relationship to each other in the different animals.

A., animal. A term for Comparative Anatomy.

A., artifi'cial. (F. *anatomie artificielle*.) The imitation of dissections in wax, or other material.

A., chirur'gical. The same as *A. surgical*.

A., clas'sic. (Κλασ., to break.) The study of the bodily structures from models which may be separated into pieces.

A., comparative. (F. *anatomie comparée*, G. *vergleichende Anatomie*, *Zergliederung der unteren Thiere*.) This expresses the dissection of the lower animals and plants, in order to ascertain their resemblance to, or difference from, the human body, and to illustrate the general principles of organization.

A., descrip'tive. (F. *anatomie descriptive*; G. *beschreibende Anatomie*.) This term includes the details of the situation, form, or shape, and the relative attachments of the various parts.

A., developmen'tal. A synonym of *Embryology*.

A., foren'sic. A term given to morbid or Pathological Anatomy when applied to jurisprudence.

A., gen'eral. (F. *anatomie générale*, G. *allgemeine Anatomie*.) The description of the structure and physical nature of the various tissues composing the body, as embraced in this term, apart from any consideration of the organs they compose.

A., homolog'ical. The study of the bodily structures and organs in their relationship to each other in the same animal.

A., hu'man. (F. *l'anatomie de l'homme*, or *du corps humain*; G. *Anatomie des Menschen*,

or *des menschlichen Körpers*.) Term for the dissection of man.

A., medical. (*F. anatomie médicale*; *G. medizinische Anatomie*.) Term embracing Descriptive, Physiological, and Pathological Anatomy, with special regard to the situation of the various internal organs, and their nervous connections.

A., medico-chirurgical. The same as *A., regional*.

A., microscopical. The minute structural anatomy of the tissues.

A., morbid. (*L. morbidus*, having disease.) The dissection of bodies for the purpose of displaying the diseased organs or structures.

A., pathological. (*F. anatomie pathologique*; *G. pathologische Anatomie*.) Term for the investigation of changes in the structure of organs, produced by disease, or as effects of congenital malformation.

A., philosophical. See *A. transcendental*.

A., physiological. (*F. anatomie physiologique*; *G. physiologische Anatomie*.) Term for the examination of the numerous organs of animals, in order to understand their respective functions in the healthy state.

A., practical. A term for dissection.

A., regional. The special and relative description of the anatomy of regions of the body, the parts of which region have some relationship to each other in regard either to disease, or injury, or operation.

A., special. Same as *A., descriptive*.

A., surgical. (*F. anatomie chirurgicale*; *G. chirurgische Anatomie*.) Term for the examination of the various organs, particularly the muscles, nerves, and blood-vessels, and the precise points of situation in which they are found, their connections with, and relations to, each other, and where they are most exposed to injury under all circumstances.

A., textural. The minute structural anatomy of the tissues.

A., topographical. The same as *A., regional*.

A., transcendental. (*F. anatomie transcendante*.) A term for that branch which treats of the development of parts, their analogies, the primary model or type according to which they are formed, and their approximation to, or deviation from, that model; also termed philosophical anatomy.

A., vegetable. The study of the structure of plants.

A., veterinary. (*L. veterinarius*, of or belonging to *veterina*, or draught-cattle)

Anaton. The same as *Anatron*.

Anatresis. (*Ἀνάτρησις*, a boring; from *ανατρίπτω*, to bore through, to perforate. *F. anatrière*.) Term for a perforation; applied by Galen, *de C. M. per Gen.* vi, 2, to the operation of trepanning the skull.

Anatribe. (*Ἀνατρίβω*, to rub well.) Friction.

Anatriptologia. See *Anatriptology*.

Anatripsis. (*Ἀνατρίψις*; from *ανατρίβω*, to rub well. *F. anatribe*, *anatripsie*; *G. Anreiben*, *Einreiben*.) Term used by Galen for friction of the body, but more particularly from the inferior parts upwards.

Anatriptology. (*Ἀνατρίψις*, friction; *λόγος*, a discourse. *F. and G. anatriptologie*.)

Ancient term for a history of, or treatise on, the employment of friction.

Anatripticus. (*Ἀνατρίβω*, to rub well. *F. anatriptique*; *G. eingereiben*, *Zerreiben*.) Belonging to friction; applied to medicines having a mechanical action of this kind in the bowels; *anatriptic*.

Anatriptology. The same as *Anatriptology*.

Anatris. (*Arab.*) Old name for hydrargyrum, or mercury. (*Euland and Johnson*.)

Anatron. Arabic for soda, which was formerly called Natron. (*Dornæus, R. and J.*)

Also, a synonym of *Potassæ sulphas*.

Also, a synonym of the scum which rises to the surface in the manufacture of glass. It consists chiefly of sodium or potassium chloride, and sodium or potassium sulphate. It was formerly used as a laxative.

Anatropal. (*Ἀνατρέπω*, to turn up. *L. anatropus*; *F. anatropé*; *G. gegenläufig, umgewendet*.) In Botany, a term applied to an ovule, which becomes in the course of growth and development recurved, so that the micropyle or organic apex is applied to the hilus or point of insertion of the funiculus, and is situated at one extremity of the ovule, whilst the chalaza or organic base of the ovule is at the other extremity, and is connected with the hilus by a raised vascular band termed the raphe. It is well seen in ranunculaceæ.

Anatropé. (*Ἀνατροπή*, an overthrow; from *ανατρίπτω*, to upset. *F. anatropé*.) Used by Galen, *l. viii, de C. M. sec. Loc. s. 1*, for inverted action of the stomach; nausea and vomiting.

Anatropous. The same as *Anatropal*.

Anatto. See *Annatto*.

Anatum. An old term for egg-shells.

Anaudia. (*Ἀναυδία*; from *α, neg.*; *αὐδή*, speech. *F. anaudie*; *G. Sprachlosigkeit, ein höher Grad von Heiserkeit*.) Another term for aphonia, or loss of voice, according to Hippocrates, *Coac. Prænot. t. 34*, and 359.

Also, a term for *Catalapsy*.

Anaxyris. The common sorrel, *Rumex acetosa*.

Anaycal. A local name for Barbadoes ley.

Anaze. A name given in the Mascarene Islands to the acidulous pulp which surrounds the seeds of the common baobab.

Anazesia. (*Ἀνάζεις*, a boiling.) Ebullition; the act of boiling.

Anazotic. (*L. an, priv.*; *azotum*, nitrogen. *F. anazotique*; *G. kein Azot*.) Without azote or nitrogen; *anazotic*.

Anazoturia. (*L. an, neg.*; *azotum*, azote, or nitrogen, the chief constituent of urea; *urina*, the urine.) Name given to a variety of chronic diuresis, in which urea is partially or entirely absent from the urine.

Anberry. A warty condition of the roots of cruciferous plants caused by insects.

Also, a term given to pedunculated warts often seen on the belly and throat of horses.

Anceps. (*L. an*, abbreviation of *ambi*, around; *caput*, a head. *G. doppelt, zweisichtig*.) Two-headed, and by metonymy double, wavering.

Used to imply doubt as to the nature of a disease, or of the action of a medicine.

In Botany, applied to leaves having both edges sharp.

Ancha. (*Arabic*.) The coxa, or hip-

ANCHÆ OS—ANCHYLOSTOMUM.

joint, according to Avicenna, iv, *fen. 5, tr. 1, c. 24.*

An'chæ os. (*Ancha*; *os*, a bone) The femur.

Anchælos. Old term for the femur, or thigh bone.

Anchaphtha. (Ἀγχω, to strangle; *aphtha*. F. *anchaphthe*; G. *Aphthendruum*.) Term by Bateman for *Aphtha anginosa*.

Anchie'tea. A Genus of the Nat. Order Violaceæ.

A. salutaris. (L. *salutaris*, healthful) A climbing plant, native of Brazil, the root of which, under the name of Piriguar, is often employed as a purgative, and as a remedy in cutaneous diseases.

Anchilops. (Ἀγχυ, near to; ὤψ, the eye. F. *anchilops*, I. *anchilops*; S. *angulops*; G. *Augenwinkelgeschwulst*.) Term for an abscess near to the inner angle of the eye superficial to the lachrymal sac.

Anchitherium. (Ἀγχυ, near, θήρ, a wild beast.) A fossil animal of much interest in regard to the pedigree of the horse, to which it presents many points of similarity, the bones are found in the Eocene deposits of some parts of Europe. It differs from the horse, however, in having had three complete toes, the lateral toes being much larger in proportion to the middle toe than in Hipparion, and probably resting on the ground in ordinary locomotion.

Anchoas. The Mexican name of the *Annonum zingiber*.

Anchoné. (Ἀγχών, from ἄγχω, to strangle. G. *Halverachnungung*.) A term for the sensation of strangling, as experienced in hysteria, suffocation.

Anchoniæ. A Family of the Nat. Order Crucifera.

Anchondro'a. (Ἀγχών, a strangling, ἰδρω, heat-spots. G. *Braunfriesel*.) Term for *Miliaria anginosa*.

Anchonise. (F. *anchonisé*) Applied by de Candelille to a Tribe of Crucifera, having *Anchonium* for their type.

Anchonoporphyrtyphus. (Ἀγχών, L. *porphyrotiphus*. F. *anchonoporphyrtyphus*.) Term for *Porphyrotiphus anginosa*, or typhoid scuriantina.

Anchor'alis. (L. *anchora*, an anchor. G. *ankerformig*.) Of or belonging to an anchor, anchor-like.

A. processus. The coracoid process of the scapula.

Anchovy. (F. *anchois*; I. *accuga*; S. *anchou*, G. *Anchore*, *Anschore*.) The *Engraulis*, or *Clupea encrancholus*, belonging to the *Clupeidae*, *Malacopterygii abdominalis* Hub. Mediterranean. It is salted, or otherwise prepared, and used as a condiment. They are said to be aphrodisiac. Several other species of fish are substituted for the true anchovy, and they are generally coloured with Venetian red, or Armenian bole.

A. pear. The fruit of the tree *Grias cauliflora*.

Anchu'sa. A Genus of the Nat. Order Boraginaceæ. Corolla hypocrateriform, with five inflexed scales in the orifice; nuts surrounded at the base by a tumid edge.

The Ἀγχυσία of the ancients appears to have been the *Anchusa tinctoria* of the moderns. They recognised four kinds (1) Ἀγχυσία (*Anchusa tinctoria*); (2) Ἀ. λυκαψον (*Echium*

italicum); (3) Ἀ. ἀλαβήδειον (*Echium diffusum*); and a fourth, identified with *Lithospermum fruticosum*. The root was employed as an astringent, and was given internally in affections of the liver, spleen, and kidneys, in bites of venomous animals. (Waring.)

A. angustifolia. (L. *angustus*, narrow; *folium*, a leaf.) A synonym of *A. officinalis*.

A. incarnatus. (L. *incarnatus*, in the flesh, flesh-coloured.) A synonym of *A. officinalis*.

A. italica. (F. *Buglosse*; G. *Ochsenzunge*.) A plant formerly employed as an emollient. Divisions of the calyx somewhat long and pointed, appendages of corolla bearded; limb unequally divided.

A. lutea. (L. *luteus*, yellow.) The *Onosma echinoides*.

A. lycopactides. (*Lycopis*, the plant so named; ἰδος, likeness.) A synonym of *A. officinalis*.

A. officinalis. (L. *officina*, a shop. F. *buglosse*; G. *Ochsenzunge*.) Root stout, biennial, leaves narrow, lanceolate, cymes forked or in pairs, bracts and calyx-lobes ovate-lanceolate; flowers subsessile, appendages of corolla velvety; limb regular. The root is mucilaginous, and the flowers slightly bitter. It was formerly used as a cordial in hypochondriasis.

A. tinctoria. (L. *tinctorius*, belonging to a dyer. F. *orcanette*; G. *Alkanna echminkwurzel*, *Ochsenzungenwurzel*.) The alkanet plant. Garden bugloss. Stem herbaceous, with rough hairs; leaves lanceolate, obtuse, hoary; nuts warty. The roots yield a reddish colouring matter. Alkanet is used to colour fatty substances, as ointments, alkunes render it blue. See *Alkanet*.

Anchuseæ. A Family of the Nat. Order Boraginaceæ.

Anchusic acid. A synonym of *Anchusin*.

Anchusin. C₂₀H₁₆O₈. (G. *Anchusaroth*, *Alkanaroth*.) A red-coloured principle obtained from the *Anchusa tinctoria*. It is amorphous, insoluble in water, but soluble in alcohol, ether, fixed or volatile oils, carbon disulphide, and acetic acid. It melts at 60° C. (140° F.), volatilising in violet vapours. It combines with alkalies and alkaline earths. The alkaline solutions are precipitated by alum and lead acetate.

An'chyle. See *Ankyle*.

Anchyloblepharon. See *Ankyloblepharon*.

Anchylomeris'ma. (Ἀγκύλη, a contracted joint, a nose, μέροςμα, a part.) A growing together of the soft parts.

Anchylosis. See *Ankylosis*.

Anchylostoma. The same as *Anchylostomum*.

Anchylostomum. (Ἀγκύλος, curved; στόμα, mouth. F. *ankylostome*.) A Genus of Nematoid Entozoa found in the intestine of man. The worms are ash-coloured, cylindrical; the head slightly attenuated, mouth in form of a sucker, subcircular, with a large circular opening directed dorsally, containing four teeth situated within its inferior margin, pharynx infundibuliform, with resistant walls, œsophagus muscular, expanding posteriorly, integument transversely striated, two conical papillæ situated opposite to one another at the junction of the first sixth with the remainder of the body, anus lateral, a little in front of the extremity of the tail. The sexes separate—male provided with a caudal terminal sac, entire, excised below, multiradiate, penis

ANCHYROIDES—ANCORALIS.

double and very long; female with obtuse tail, vulva situated behind.

A. duodenale. A worm common in Northern Italy, and attacking the fourth part of the whole population in Egypt, where it is the cause of the disease named Egyptian chlorosis. In form it is thick and cylindrical; anterior extremity recurved; head obliquely truncated, with a hard chitinous and bell-shaped capsule for the mouth; at the anterior margin of this are four, and at the posterior margin two, strong claw-like hooks; still more internally are two more pointed projections; pharynx muscular; intestine simple, wide. The male is from 6–10 mm. long, and ends in a three-lobed bursa, in which are placed two thin spicula; the sexual organs consist of a long convoluted canal, forming the testis and efferent duct, an oval or fusiform seminal vesicle, and a long and broad ejaculatory duct. The female is from 10–18 mm. long and about 1 mm. thick; the tail pointed; genital opening behind the middle of the body, and through a short tube, leading into a muscular double vagina; the uterus long and double, with tubes and ovaries; the ova are 0.05 mm. long and 0.023 mm. broad. Segmentation has already commenced in them when laid, and after twenty-four hours' exposure to moist air a worm-like embryo escapes through the thin shell. The worm is probably a stage in the development of the *Dochmius trigonocephalus* of the dog, which is taken into the system in its Rhabditis form with foul water. It attaches itself to the lower portion of the human duodenum and jejunum. The symptoms of the presence of the worm are those of anemia, some cases running an acute course and terminating fatally in a few weeks; whilst others, especially if the food supply be abundant, may last for years. The remedies found most useful have been the milky juice of the *Ficus doliaria* and the milky juice of the *Carex dodekaphylla*.

Anchyroides. (Ἀγκυρα, an anchor; είδος, form.) Having the form of an anchor.

A. processus. The coracoid process of the scapula.

Ancl. The same as *Ancus*.

An'cinar. An old term for borax.

Ancipital. (L. *anceps*, double. F. *ancipiti*; G. *zweischneidig*.) In Botany, having two sharp edges like the stem of Narcissus.

Ancipitate. (L. *anceps*, double.) A term applied to any organ presenting flat faces and two cutting edges.

Ancistroïd. (Ἀγκιστροειδής, hook-shaped, barbed; from ἄγκιστρον; είδος, form. F. *ancistroide*.) Hook-shaped.

Ancistron. (Ἀγκιστρον, a fish-hook.) A hook-like or hamular process.

Ancistropodous. (Ἀγκιστρον; ποῦς, a foot. F. *ancistropode*; G. *hakensfüssig*.) Having long claws. Applied by some authors to a Suborder of Birds.

Ancisus. (L. *ancisus*, cut all round; from *an*, for *ambi*, around; and *cedo*, to cut. G. *ringumbeschnitten*.) Incised all round.

Anclam. A mineral spring in Pomerania.

An'cle. See *Ankle*.

An'cler. The malleolus. (Dunglison.)

An'clet. The malleolus. (Dunglison.)

An'cliff. The malleolus. (Dunglison.)

An'clove. The malleolus. (Dunglison.)

An'colle. (Fr.) The *Aquilegia vulgaris*.

An'con. (Ἀγκών, the bend of the arm, the elbow.) Term for the elbow; or the trian-

gular surface of the olecranon process of the ulna, being the part on which pressure is made when leaning on the elbow.

Anco'nad. (Same etymon.) Used by Dr. Barclay as meaning towards the ancon, or triangular surface of the olecranon.

Anconagra. (Ἀγκών; ἄγρα, a seizure. F. *anconagre*; G. *Ellenbogengicht*.) Arthritic pain of the elbow.

Anconal. (Ἀγκών.) Of or belonging to the ancon, or elbow.

A. aspect. The surface on which the ancon is situated.

Anconeus. (Ἀγκών, the elbow. F. *ancone*; G. *Knorrenmuskel*.) A small, triangular muscle at the back of the elbow-joint. Also, called *Cubitalis musculus*, *Epicondylus-cubitalis*. It arises from the posterior surface of the outer condyle of the humerus by a separate tendon, and is inserted into the outer part of the olecranon and the upper fourth of the posterior surface of the shaft of the ulna. It is covered by a strong fascia, and is in contact by its deep surface with the supinator brevis. An anastomosis between the superior profunda and recurrent interosseous arteries lies between the two muscles. It is supplied by a branch from the musculo-spiral nerve, which enters its upper border. It helps to extend the forearm. In the armadillos and some seals it is a very large muscle.

The term was formerly applied to all the muscles inserted into the olecranon.

A. externus. (L. *externus*, outward.) An extensor muscle of the pterygo-radial joint in Craniote Vertebrates, extending from the pre-axial side of the pterygium to the fore limb. It is the external head of the triceps extensor cubiti muscle, and corresponds to the vastus internus in the hind limb.

A. internus. (L. *internus*, inward.) An extensor muscle of the pterygo-radial joint in Craniote Vertebrates, extending from the post-axial side of the pterygium to the fore limb. It is the inner head of the triceps extensor cubiti muscle, and corresponds to the vastus externus of the hind limb.

A. longus. (L. *longus*, long.) An extensor muscle of the pterygo-radial joint in Craniote Vertebrates, extending from the scapula to the fore limb. It is the long head of the triceps muscle, and corresponds to the rectus femoris of the hind limb.

A. ma'jor. (L. *major*, comp. of *magnus*, great.) The long head of the triceps extensor cubiti.

A. mi'nor. (L. *minor*, comp. of *parvus*, small.) The anconeus muscle.

A. sextus. (L. *sextus*, the sixth.) A small muscular slip, which in man is sometimes independent, sometimes a factor of the triceps brachii, but in the rest of the mammalia is always an independent structure. It extends from the humerus to the ulna, nearly at right angles to the triceps, and arches over the ulnar nerve.

A. tertius. (L. *tertius*, the third.) The *Epitrochleo-anconeus muscle*.

Anconocace. (Ἀγκών; κακός, bad. F. *anconocace*; G. *Ellenbogengelenkverderbniss*, *Ellenbogengicht*.) Term by J. F. Lobstein for pain in the elbow-joint.

An'conoid. (Ἀγκών.) Resembling the ancon, or elbow.

Ancora. Arabic for calyx, or lime. (R. and J.)

Ancoralis. Same as *Anchoralis*.

ANCORINIDÆ—ANDERFA.

Ancorinidæ. (Ἀγκυρά, an anchor. L. *ancora*, an anchor.) A Family of the Order *Fibrospongia*, Class *Spongia*. Sponges in which the cortical layer contains no spines or spherules of silica, but is traversed by anecho-susaped spicules, which project externally.

Ancosa. Arabic for lacca, or lac.

Anc'ter. (Ἀγκυτή, from ἄγκω, to press tight. G. *Hefnadel*.) Name for a clasp or fibula with which the lips of a gaping wound, which did not allow of the suture, were maintained in apposition, according to Langius, l i, cp. 77. See *Infibulatio*.

Anc'teres. (Same etymon.) The plural of *Anc'ter*.

Ancterias'mus. (Ἀγκυριασμός.) Used by Galen for the operation of employing ancteres, or of keeping the lips of wounds together by clasps, or fibulae, according to Gorravius. See *Infibulatio*.

Anoubitus. A disease of the eyes and eyelids, as if they contained sand; also called petrification, according to John Anglicus, *Ros. Angl.* p. 887.

Anoulé. See *Ankule*.

Ancunulen'ta. (Lat.) A woman during menstruation.

An'cus. (Ἀγκών, the elbow.) Term applied to one whose arm is fixed in the bent position, whether from congenital deformity or accident.

An'culé. See *Ankule*.

Ancylen'terum. (Ἀγκύλη, a loop, or noose, intestine. F. *ancylentéron*, G. *Darmverwachsung*.) Adhesions or growing together of the bowels, causing obstruction.

Ancyloblepharon. See *Ankyloblepharon*.

Ancyloche'ilia. (Ἀγκύλη, a loop; χείλος, the lip. F. *ancylocheilion*; G. *die Verwachsung der Lippen*.) Adhesion of the lips.

Ancylocol'pus. See *Ankylocolpus*.

Ancylo'doré. See *Ankylodore*.

Ancylo'doris. See *Ankylodoris*.

Ancylo'dontia. See *Ankylodontia*.

Ancylogloss'ia. See *Ankyloglossia*.

An'cyloid. (Ἀγκύλη, a loop or noose. F. *ancyloide*, G. *hakenähnlich, hakenförmig*.) Resembling a clasp, noose, or hook.

Ancylo'm'elē. (Ἀγκύλος, curved, μῆλα, a probe.) A curved probe. See *Ankylo'mete*.

Ancylo'meris'mus. See *Ankylomerismus*.

Ancylopo'dia. (Ἀγκύλος, crooked; πούς, a foot. F. *ancylopodie*; G. *Fusskrümmung*.) A curvature of the foot.

Ancyloproct'us. (Ἀγκύλη, a noose, πρωκτός, the anus. F. *anus imperforé*; G. *der verwachsene After*.) Atresia, or imperforation of the anus.

Ancylo'r'rhina. See *Ankylo'r'rhina*.

Ancylos'is. See *Ankylosis*.

Ancylos'toma duodenale. See *Ankylosoma in duodenale*.

Ancylo'tia. See *Ankylotia*.

Ancylotome. See *Ankylotome*.

Ancyra. See *Ankyra*.

Ancyracanthop'is bilabia'ta. (Ἀγκυρά, an anchor, ἀλυσθᾶ, a prickly, ὤψι, the eye. L. *bilabialis*, *labia*, a lip.) A sexually-mature Nematode Entozoon found in the coats of the stomach of *Eurypterus helius*.

Ancyracanth'us. (Ἀγκυρά, an anchor; ἄκανθα, a spine.) A Genus of sexually-mature Nematode Entozoa, of which five species have been named.

A. bi'dens. (L. *bidens*, with two teeth.) Found in the walls of the stomach of the *Merops apicatus*.

A. cystid'io'la. (Κύστις, the bladder; L. *cystis*, to inhabit.) Found in the swim-bladder of *Trutta furo*.

A. im'par. (L. *impar*, uneven.) Found in the swim-bladder of *Osmernus eperlanus*.

A. longico'r'nis. (L. *longus*, long; *cornu*, a horn.) Found in the coats of the stomach of *Tringa alpina*.

A. pinnat'ifidus. (Pinnat'ifidus, from L. *pinnis*, a feather, *Ando*, to cleave.) Found in the intestine of *Podocnemis erythrocephalus*.

An'cyroid. See *Ankyroid*.

An'cyroides. See *Ankyroides*.

And'a. A Genus of the Nat. Order *Euphorbiaceae*.

A-a'on. Same as *Anda*.

A. Brasil'ien'sis. A species yielding *Anda oil*.

A. de pison. Same as *Anda*.

A. Gome'sii. A Brazilian species yielding oval nuts, each containing two seeds, which are strongly cathartic, and also emetic, the green rind or shell being astringent, and used in diarrhoea. The bark thrown into the water intoxicates fishes.

A. oil. (G. *Andaöl*.) A fixed oil prepared by expression from the seeds of *Anda Brasilensis* or *Anda Gome'sii*, a tree of Brazil. The bark yields a milky juice, which is used for stupefying fish. In doses of fifty drops it operates moderately on the bowels, and copiously in large doses.

Anda'bre. France; Aveyron, Arrond. St. Affrique. About 30 miles from Lodève and 40 from Aubi. Here are cold bicarbonated ferruginous springs, resembling those of Vichy, but containing a larger proportion of iron. These waters are recommended in disorders of the digestive tract, and in passive dropsy dependent on abdominal engorgement. They are contraindicated in states of nervous irritability and in inflammation.

Andacho'ca. The lotus, *Nelumbium speciosum*.

Andalu'site. (From Andalusia, where it was first discovered.) Ore of the garnet family found in mica schist, consisting of silice and alumina, with small amounts of iron, manganese, and calcium.

Andamans. Inhabitants of the Andaman Islands, members of the Negrito type. They are short, have square shoulders, and well developed chest, they are glossy black, and have little beard. Forehead prominent, face squarish, lips large.

And'arac. Arabic for *Sandaracha graciosa*, or *radgar*. (R. and J.)

Andas. A solution of salt. (Paracelsus.)

Andas'su. Same as *Anda*.

Ande. Breath; halitus.

And'eer. Switzerland, Canton Graubünden. Two springs arising in a moorland district at Pignau are conveyed in troughs to Anderfa. They contain a considerable amount of hydrogen sulphide and some calcium sulphate. Temp 19° C. (66 2° F.) The bathing arrangements are complete, and there is a whey cure.

Andelys. France. A cold chalybeate spring near Ruen, prescribed in anæmia.

Andena. Arabic for soft steel.

Anderfa. The native name of a Species

ANDERJOW—ANDREA JAPOI, MINERAL WATERS OF.

of Euphorbia, the berries of which, according to Harris ('Highlands of Ethiopia'), serve as a drastic cathartic. (Waring.)

Anderjow. Hindustani name of the seeds of *Holarrhena antidysenterica*.

Anders. Name given in Auvergne to a slight cutaneous disease affecting calves, and attributed to insufficient food. (L. and R.)

Andersch. A German anatomist, who lived at the close of the 18th century.

A's. ganglion. A synonym of the petrous ganglion of the glosso-pharyngeal nerve.

Andersdorf. Moravia; about seven miles from Neustadt. A bicarbonated calcic spring rises here, with a temperature of 12° C. (54° F.). The water is recommended in catarrhal affections of the respiratory organs.

Anderson. A Scottish physician of the seventeenth century.

A's pills. Barbadoes aloes, 3xxiv; gamboge, 3j; soap, 3iv; colocynth, 3j; oil of aniseed, 3as; mix, and divide into 3-grain pills. A purgative. Dose, 1—4.

Andes. The lofty continuous belt of mountain district along the western coast of South America. Very many high-lying stations, at heights varying from 5000 to 10,000 feet above sea level, are much frequented as resorts for pulmonary invalids.

Andesite. (From Andes, where it has been found.) A form of trachyte.

Andic'olus. (*Andes; colo*, to inhabit. F. *andicole*.) Inhabiting the Andes mountains.

And'ius. Similar to *Andic'olus*.

And'ra. (G. *Kohlbaum*.) A Genus of the Group *Andiræ*, represented by trees with alternate imparipinnate leaves, either exstipulate or with setaceous stipels, and straight and very small stipules. The flowers are in terminal clusters or thick cymes; calyx gamosepalous, with five short teeth, or almost absent; the vexillum orbicular, unguiculate at the base; also oblong, and resembling the carina, which is formed of two free petals; androecium didelphous, occasionally monadelphous; ovary stipitate; fruit a drupe; mesocarp more or less fleshy; endocarp forming an indehiscent and monospermous nut; the seed descending; embryo fleshy, without albumen.

A. anthelmintica. Benth. (*Ανρί*, against; *ἄλμυρ*, a worm. F. *semences d'Angelin*.) A tree growing in Brazil. The fruit is called *Angelin amargo*. The seeds are emetic, cathartic, and anthelmintic. The dust produced by sawing the wood causes great irritation of the eyes, throat, and skin.

A. Marshfieldii. Hab. Java; on the mountains of Tingar. The fruit is said to be used as an antidote to the poisons upas antiar and upas tienté.

A. ibai-ariba. A synonym of *A. rosea*.
A. inermis. Kunth. (*L. inermis*, without defensive armour. F. *Bois palmiste sauvage des Antilles, Geoffrée de Jamaïque*.) The wild cabbage tree. A tree growing in the tropical and subtropical regions of America and in Senegambia. It is believed to be the source of the bark called by the French *Ecorce de Geoffrée des Antilles, or de la Jamaïque*. It is a drastic cathartic, an anthelmintic, and when given in a large dose, a violent narcotic poison. See *Cabbage tree bark*.

A. racemosa. Lamarck. (*L. racemosus*, clustering.) A species having the same properties as *A. inermis*.

A. retu'sa. Kunth. (*L. retusus*, blunted.) A tree growing in all the Guianas, and producing the bark called by the French *l'écorce de Geoffrée de Surinam*. It is said to have the same properties as the bark of the *A. inermis*, but is more actively anthelmintic.

A. rosea. Benth. (*L. roseus*, belonging to roses, red-coloured.) A species acting like *A. anthelmintica*.

A. stipula'cea. Benth. (*Stipulaceus*, having stipules.) A vermifuge, like *A. anthelmintica*.

A. surinamen'sis. De Candolle. A species growing in Surinam, and having similar properties to the *A. inermis*.

A. vermifu'ga. Benth. (*L. vermis*, a worm; *fugo*, to drive away.) A tree growing in Brazil. The seeds are employed as an anthelmintic.

And'rees. A Group of the Family *Papilionaceæ*, Nat. Order *Leguminosæ*. The ovary is uni- or pauciovulated, and becomes a monospermous indehiscent fruit, sometimes fleshy and drupaceous, sometimes thin and swollen.

And'i'rin. The bitter substance of the wood of *Andira anthelmintica*. It is yellow brown, and soluble in water, alcohol, and ether.

And'janc. An Indian name of a Species of *Elæocarpus*, the seeds of which are very oily.

Andol-andol. A Chinese fly used, like cantharides, in tincture as a vesicant.

Andorn-kraut. (Ger.) The *Herba marrubii albi*, white horehound.

Andrachah'ra. A synonym of the houseleek, *Sempervivum tectorum*.

A. cad'ishaw. A tree producing a poisonous Indian fruit, probably the *Chrytia collina*.

Andrach'le. See *Andrachne*.

Andrach'ne. (*Ἀνδράχνη*.) A name given to a Euphorbiaceous plant, and also to an Arbutus, but chiefly to the *Portulacca oleracea*, Linn., or purslane.

Dioscorides (Lib. ii, cap. 150) recommends andrachne as a cooling and astringent medicine, internally in fevers, intestinal inflammation, worms, piles, and locally for pains in the head, ophthalmia, and other external affections. (Waring.)

Andræ'cium. A misspelling of *Andræcium*.

Andrædo'sa. (*Ἀνρί*, a man; *αἰδοΐα*, the pudenda. F. *andredée*; G. *die männliche Geschlechtstheile*.) The male genitals.

Andrædooblennorrhœ'a. (*Andrædæa; blennorrhæa*. F. *andrædooblennorrhée*.) A flow of mucus from the male genitals.

Andra'da. A plant of the I. of Lemnos. The infusion is employed by the inhabitants for the relief of pain in the stomach and chest. (Belou, 'Singularitatus,' p. 71.)

Andralogomelia. (*Ἀνρί*, a man; *αλογος*, deprived of reason; *μῦλον*, any domestic animal. F. *andralogomelie*.) In Teratology, term suggested by Malacarne to signify a monster having the body of a man and the extremities of some lower animal.

Andranat'omy. (*Ἀνρί*, a man; *ἀνατομή*, dissection.) The dissection of the human body, particularly that of the male.

And'rappax. (*Ἀνδράφαξις*.) An old name of the *Chenopodium vulgare*.

Andrea Japoi, mineral waters of. A chalybeate spring in Tver, Russia. Temp. 8° (46° F.).

ANDREACEÆ—ANDROGYNIA.

Andreaeaceæ. Split mosses. In Lindley's classification, a Nat. Order of the Alliance *Muscales*. Spore cases opening by valves, with an operculum, without elaters. They are natives of cold and temperate regions, on rocks up to snow level.

In other arrangements, a Family of the Order *Schizocarpæ*, Class *Musci*.

Andreasberg. Germany; in the Harz mountains, 1800 feet high. Climate rather severe. Here is an establishment where pine-leaf baths can be obtained.

Andrejapol. Russia, in the government of Zver. A mineral water—temperature 5° C (41° F)—containing ferric and magnesium carbonate, calcium, magnesium and sodium chloride, and carbonic acid. Used in dyspepsia, pyrosis, abdominal congestions, hypochondriasis, glandular enlargements, scrofula, hysteria, and atonic nerve disorders.

Andrenetæ. (F. *andrenetes*.) Applied by Latreille to a Tribe of *Melichæra*, by Lamarch and Geoffroy to a Family of *Hymenoptera*, having the *Andrena* for their type.

Andrenida. (G. *Grabbienæ*.) A Group of Family *Anthophila*, Order *Hymenoptera*, Class *Insecta*, or *Condyloptida*; a similar Group to *Andrenina*.

Andreninæ. A Subfamily of the Family *Apidae*. Bees, with the lower lip provided with a short and broad tongue, mentum very long; labial palpi with four joints.

Andrenoides. (*Andrena*. F. *andrenoides*.) Applied by Latreille to a Subtribe of *Apianæ*, because they resemble the *Andrena*.

Androïdæ. (F. *androïdes*.) Applied by Brühl to a Family of *Musci*, having the *Andrea* for their type.

Andrews, Henry C. English botanist, who published monographs on heaths, geraniums, and roses, between 1797 and 1828.

Andria. (*Andria*, manliness.) Old name, used by Bonetus, *Med. Septentr.* l. iii, for a hermaphrodite woman.

Also, the adult condition.

Androarium. (*Andrō*; *ἀνδρῶν*, a little egg. F. *androarion*.) The testicle.

Androclum. A misspelling of *Andracium*.

Androcline. (*Andrō*, a man; *κλίση*, a bed. G. *Staubbeutelgrube*.) A term applied by Blume to the extremity of the gynostemium of orchids, on which lie the lobes of the anthers.

Androdamas. A black mineral substance mentioned by Pliny (probably specular iron), which was considered an excellent remedy in diseases of the liver. (Waring.)

Androdicæous. (*Andrō*, *διαικούς*.) Term suggested for plants that produce hermaphrodite flowers on one individual and males on another. No instance, however, seems to be known of such a condition.

Androdynamous. (*Andrō*, *δυναμῖς*, power. F. *androdynamie*.) Applied by Fries to Dicotyledonous vegetables, which he terms *Plantæ androdynamæ*, because of the great development of the stamens and their analogues the petals.

Androclum. (*Andrō*, a man, *οἶκος*, a house. F. *androclie*.) The entire male sexual apparatus of a flower. The whole of the male organs of a flower. The whorl or whorls of organs situated between the corolla on the outside and the gynaecium on the inside.

The stamens taken collectively. The number of parts is variable. In *Centranthus*, some willows, and in the *Amomeæ*, there is only one stamen; in the *jasmīn*, *lilac*, and *valerian*, two; in the *iris* and *Crocus sativus*, three; in *Rubiaceæ*, *Labiata*, *Verbenaceæ*, many *Scrophulariaceæ*, four; in most dicotyledons, five; in many monocotyledons, and almost constantly in *Crucifera* amongst dicotyledonous plants, six; in the *Horse-chestnut*, seven; in some *Eleagnaceæ*, *Combrétacæ*, *Myricæ*, eight; in *Rhubarb*, nine; in the *Oxalidaceæ*, many *Leguminosæ*, *Rutaceæ*, and *Phytolaccaceæ*, ten; the number eleven is not known to occur as a permanent condition, in some *Aristolochiaceæ*, twelve; in *Rosaceæ*, *Ranunculaceæ*, *Magnoliaceæ*, and some others, a greater, but usually variable, number. The parts of the androecium are usually separate, but may be united to a greater or less extent, either to each other or to adjoining parts. See *Stamen*.

Androgalaetozemia. (*Andrō*; *γάλα*, milk; *ζημία*, loss. F. *androgalaetozemie*; G. *der Milchverlust bei Männern*.) Secretion of milk in the male breast.

Androgenetia. (*Andrōgynia*.) Used by Hippocrates for the propagation of the male sex, descent by the man's side, the succession of their race by men, according to Foenus, *Ec.* p. 67.

Androgonidia. The male reproductive cells of *Fulva globator*.

Andrographidæ. A Family of the Nat. Order *Acanthaceæ*.

Andrographis. A Genus of the Nat. Order *Acanthaceæ*. Herbaceous annuals, or suffrutescent plants, growing in tropical Asia, with opposite leaves. Flowers hermaphrodite, regular, with two opposite bracts; corolla gamopetalous, with two lips, stamens two; ovary with two loculi, bi- or multiovulated.

A. paniculata. (Tam. *Shirai-kuch-chi*; Tel. *Nella vemu*; Mal. *Nila-reppa*, Hind. *Mahatita*; Duk. *Kalafnath*; Beng. *Cherota*.) Kariyat or Creyat. An annual, much valued for its stomachic and tonic properties, especially the root. It is occasionally used in cholera and dysentery. The whole plant is very bitter, and is the basis of the preparation termed "La drogue amère," which is tonic and anti-dysenteric.

Androgyna. (*Andrō*, man, *γυνή*, woman.) Term applied to monœcious plants which have male and female flowers in the same inflorescence, as in the *Ricinus* and certain species of *Cereæ*, of which the spike bears female flowers at the base and male flowers at the summit. Many Euphorbiaceous plants and many species of *Moracæ* are androgynous. The word is also often used synonymously with hermaphrodite.

Androgyna. (*Andrō*, *γυνή*, a woman. F. *androgynaire*; G. *Zwitter*.) A female in whom, from imperfect development, the genital organs approach in character to those of the male.

Androgynal. (Same etymon.) The same as *Androgynous*.

Androgynaria. (Same etymon.) Applied by Candolle to double flowers in which the change into petals recurs on both kinds of sexual organs without the floral teguments being altered.

Androgynary. (F. *androgynaire*.) A term applied by Candolle to double flowers in which the male and female organs are transformed without the perianth being altered.

Androgynia. (Same etymon. F. *androgynie*; G. *englisch männlich und weiblich*.) The union of the sexes either in one flower or only

ANDROPOGONEÆ—ANDROSPORE.

beard. *G. Barigras*.) A Genus of the Nat. Order *Graminaceæ*. Found in all hot and temperate regions. Spikelets composed of two flowers, the inferior neutral and with a single glumella, the superior hermaphrodite or unisexual. The glumes become hard and are mucous. The glumellæ are shorter than the glumes; the inferior is mucous or aristate in the hermaphrodite flower, the superior smaller, mucous, and sometimes absent. The two glumellules are truncate and ordinarily glabrous. Stamens one to three; ovary sessile, glabrous, with two terminal styles and plumose stigmata. The caryopsis does not adhere to the glumes.

A. bicornis. (L. *bis*, twice; *cornu*, a horn.) A synonym of *A. citratus*.

A. calamus aromaticus. A Species said by Dr. Royle to be the plant of that name described by Dioscorides, and the "sweet cane" and "rich aromatic reed from a far country" of the Bible. It is used as *A. citratus* and as a perfume.

A. citratus, De C. (L. *citratus*, furnished with citron leaves, and so citron-smelling. *F. scenanthe de l'Inde*, G. *Wohlruchendes Barigras*. *Kameethu*; Hind. *Akya-ghas*, Duk. *Hazar-masaleh*; Tam. *Vashanap-pullu*; Tel. *Nymma-gaddi*; Beng. *Ayya-ghaus*.) Lemon grass came's hay, or sweet rush. Root perennial, panicles somewhat secured, linear, leafy, spikelets in pairs, having a common footstalk furnished with a spathe; florets sessile, awnless; male with only one valve. The roots of this plant are whitish, about a foot long, and nearly straight. An infusion of the leaves of this fragrant grass is given to children as an excellent stomachic, and when roasted they are used as a tonic. An essential oil prepared from them is used externally in sprains, rheumatism, and neuralgia. It allays vomiting in cholera. Mixed with butter-milk the leaves are used in cases of ringworm, and when young as a substitute for tea.

A. citriodorus. (L. *citrus*, the citron tree; *odoros*, fragrant.) A synonym of *A. citratus*.

A. eriophorus, Willd. (*Ἐριόφορος*, bearing wool.) A synonym of *A. lanigerus*.

A. iwarancusa, Roxb. Root perennial, fibrous, panicles axillary and terminal, consisting of numerous fascicles of pedicelled, five-jointed spikes, each pair having a spathe; terminal florets three, one hermaphrodite, two male. Used by the natives of Northern India in intermittent fevers. It is said not to furnish an oil.

A. lanigerus, Desfont. (L. *laniger*, wool-bearing. *F. schenanthe officinal*.) An Arabian plant, the leaves and stems of which constitute the *Schenanthus* employed by Hippocrates and Dioscorides. It enters into the composition of *Theriacum dracordium*.

A. Martini, Roxb. Rousa grass, Ginger grass. Yields the pale, straw-coloured, aromatic grass oil of Nemaui, which is valuable as a rubefacient, and is employed as a substitute for capot oil in rheumatic affections. Applied externally it prevents the hair from falling off after fevers. It is a stimulant and diuretic.

A. muricata, Retz. (L. *muricata*, pointed like a murex shell. *F. setiver*, *chien-ent des Indes*.) Cuscut grass. Root perennial, culms numerous, smooth, florets in pairs, awnless, one pedicelled and male, the other sessile and hermaphrodite. The root of this plant is yellow, short, and fibrous, it is known as *Khus-khus* and

Vetiver, and has a strong and aromatic odour resembling that of myrrh. It is employed in India and many other countries to perfume apartments and prevent the attacks of insects. Antispasmodic, diaphoretic, diuretic, and emmenagogue properties have been somewhat doubtfully ascribed to this grass. The infusion of the root is used as a grateful drink in fevers, powdered it is used in liver disorders, and mixed with milk it is applied to irritable skin diseases.

A. nardus, Linn. (L. *nardus*, spikenard.) A synonym of *A. Martini*.

A. pachnodes. (Ἰαχυδὸς, frosty.) The essential oil of this species, known as *Ruan-ka-tet*, is sometimes adulterate otto of roses. It is used as an external application in rheumatic and neuralgic affections.

A. parancusa. Hab. India. The root is employed as a stimulant.

A. saccharatus. (L. *saccharatus*, containing sugar.) The *Sorghum saccharatum*.

A. schenanthus, Linn. (Σχονάνθος, the flower of the aromatic rush; from *σχοινος*, the aromatic rush; *άνθος*, a flower.) A synonym of *A. citratus*.

A. sorghum. The *Sorghum vulgare*.

A. squarrosus. (L. *squarrosus*, scurfy.) A synonym of *A. muricatus*.

Andropogoneæ. A Family of the Nat. Order *Graminaceæ*, characterised by having bifloral spikelets, the inferior flower of which is always complete, and by having glumellæ that are usually hyaline and more delicate than the glumes.

Androsæce. (Ἀνδρόσακς.) The *Umbellatus marinus*.

A. math'oil. The *Umbellatus marinus*.

Androsæmon. (Ἀνρί; *aiua*, blood; from the colour of its juice. *G. Bruthel*.) Tutsan. The *Hypericum androsæmon*.

Androsella. A Genus of the Nat. Order *Primulaceæ*. The plants are small herbs, with leaves in the form of a rosette, and resembling the *Primula*, from which it differs by its calyx, which is often accrescent after the expansion of the flowers, and by its infundibuliform or hypocrateriform corolla contracted at the throat, and possessing small appendices. The flowers are either solitary or form a cyme or umbel at the extremity of a long peduncle.

A. maxima. (L. *maximus*, greatest.) A native of France, and in considerable repute as a diuretic.

Androsæmum officinale. The *Hypericum androsæmum*.

Androspore. (Ἀνρί; σπόρος, seed.) A term applied by Pringsheim to the zoospore which in *Edogonium* produces the male reproductive organs. It is in the first instance represented by the protoplasmic contents of one of the cells of the filaments of *Edogonium*, which contracts, becomes clothed with cilia, then causes the rupture of the mother-cell, and after being set free moves rapidly through the fluid. It soon becomes attached near the female organ or sporangium, loses its cilia, and obtains an investing membrane. It then divides into two or three cells, which remain attached to each other. These are collectively called in German the *Mannchen*, or little male. The two terminal cells become the antheridia. Their protoplasm condenses to form a large antherozoid, which, as soon as it becomes free, fecundates by fusing with the oospore.

ANDROSTYLIIUM—ANEMOMETER.

Androstylium. ('Ανρί; στύλος, a pillar.) A name given to an organ which, in the Orchids and in some Aclepiads, is formed by the fusion of the stamens and the style, so that the stigma is adherent to the anthers.

Androsymphysis. The same as *Androsymphysis*.

Androtomous. ('Ανρί; τήνω, to cut. F. *androtome*.) Applied by H. Cassini to *Synantherea*, because the filaments of their stamens are divided into two parts by a kind of articulation.

Androtomy. ('Ανρί; τήνω, to cut. F. *androtomie*.) Term for human anatomy; the dissection of man.

An'drous. ('Ανρί.) A term indicating the possession of stamens by a plant, the number being indicated by a prefix, as monandrous, triandrous.

An'drum. (G. *Wasserfleischbrück*.) A kind of oedema of the scrotum, associated with elephantiasis, and endemic in the south of Africa. According to some authors, the term is also applied to hydrocele.

Andsjudæen. Term used by Avicenna for assafoetida.

Anebion. The root of the *Anchusa tinctoria*, or alkanet plant.

Anebium. The same as *Anebion*.

Anebous. ('Ανβος; from *an*, neg.; *βη*, puberty. L. *impuber*; F. *anèbe*; G. *unmannbur*.) Immature; not come to man's estate.

Anecrosis. ('Αν, neg.; *εκρσις*, secretion. F. *anecrisis*.) The non-appearance of a critical secretion.

Anecpue'tous. ('Ανεκπίπτος; from *an*, neg.; *εκπίπτε*, to suppurate.) Not liable to suppurate.

Anecpyet'us. The same as *Anecpue'tous*.

Anec'tasis. ('Αν, neg.; *εκτασις*, extension. F. *anectase*.) The want of due extent of an organ.

An'egen. Arabic synonym of *Dictamnus cretica*.

Anegert'ics. ('Ανεγίρω, to rouse. F. *anegertique*; G. *Wiederbelebungs-kunst*.) The art of resuscitating asphyxiated and apparently dead persons.

Anelle'ma. A Genus of the Nat. Order *Commelinales*.

A. tubero'sum. (L. *tuberosus*, full of swellings.) The tubers of this Indian plant are employed by the natives in headaches and giddiness, in fevers, jaundice, and deafness; also, as an antidote to animal poisons.

Anelle'ma. ('Ανείλημα, a rolling up, flatulent colic. G. *Leibschmerzen*.) Term used by Hippocrates, *de Vet. Med.* xi, 16, for the rolling about or rising up of air in the intestines, and the termina thereby caused; flatulence.

Anello'sis. ('Ανείλησις.) Same as *Anelle'ma*.

Anel-noringie. Tamul name of *Pedicularis murex*, which is employed by the natives as a remedy in inflammation and in gonorrhœa.

Anel. A French surgeon, who wrote from 1707—1722.

A's sound. A very fine silver probe, awl-shaped at one end, used for insertion into the lachrymal puncta.

A's syringe. A syringe with a very fine nozzle for injecting fluids into the lachrymal sac through the puncta lachrymatia.

Anelas'ma squalic'ola. An Ectozone found on the *Squalus glacialis*.

Anelcodis'cus. A larval form of *Nematode* worm.

A. pella'cidus. Found in the intestine of *Stylaria fossularis*.

Anelect'ric. (G. *unelectrisch*.) Non-electric. Term applied to bodies like metals which, being good conductors, lose any electricity that may be developed in them quickly to surrounding bodies.

Formerly used to denote those bodies which do not become electric by friction; the term is disused in this sense, inasmuch as it is now known that all bodies may be electrified by friction.

Anelectrot'onus. ('Αν, neg.; *electro*, for electricity; *τόνος*, tension.) The state of depressed irritability which is produced in a nerve in the vicinity of the positive pole when a current of electricity is made to traverse a certain portion of its length.

Anella'ta. (L. *anellus*, a little ring.) A synonym of *Annelida*.

Anely'trous. ('Αν, neg.; *ελυτρον*, a covering. F. *anelytre*; G. *ohne Deckschilde*.) Applied by Lister and Charleton to insects with two or four membranous wings, naked, or covered only by hairs or scales.

Anemarrhi'na. A Genus of the Nat. Order *Liliaceæ*.

A. asphodele'ides. Hab. China. Used as an expectorant and diuretic instead of squills.

Anem'ea. An Order of the Section *Atricheæ*, of the Subdivision *Lamprospora*, Division *Endosporea*, of the Class *Myxomycetes*; or a Division of the Suborder *Endosporea*, Order *Myxomycetes*. The sporangium or æthelium is without capillitium or calcareous columella; wall of sporangium without net-like thickenings, now and then symmetrically perforated.

An'e'mia. See *Anæmia*.

An'e'mial. See *Anæmial*.

An'e'mic. See *Anæmic*.

Anem'ious. ('Ανίμος, windy. G. *windig*.) Windy. Applied to plants growing in windy and exposed situations.

Anemocym'eter. ('Ανεμος, wind; *κύβη*, swift; *μέτρον*, measure. F. *anémocymètre*; G. *Luftschwindigkeitemesser*.) A synonym of *Anemometer*.

Anemog'raphy. ('Ανεμος, the wind; *γράφω*, to write. F. *anémographie*; G. *Windbeschreibung*.) A description of the winds.

Anemol'ogy. ('Ανεμος, the wind; *λόγος*, an account. G. *Windlehre*.) An account of the winds.

Anemoman'tia. ('Ανεμος, the wind; *μαντήα*, divination.) The art of divination by the winds.

Anemom'eter. ('Ανεμος, wind; *μέτρον*, a measure. F. *anémomètre*; G. *Windmesser*.) An instrument serving to measure the velocity of the wind. The simplest form is a board of given area attached to a spring, the degree of compression of which, as shown by an index, measures the force, as in the ordinary spring balance. Lind's instrument is simple and accurate; it is a bent tube containing water, one arm is bent again at right angles, and its open mouth is presented to the wind. The depression in the level of the water in this arm affords the means of determining the force of the wind blowing on it. Thus, if the force is sufficient to cause a difference of level of one inch in the two branches of the tube this indicates a pressure equivalent to $\frac{1}{4}$ of $\frac{1}{16}$ of the whole weight of the atmosphere, and as this is

ANEMOMETROGRAPH—ANEMONY.

about 2000 pounds on the square foot, it would amount to 5-2 pounds to the square inch. Wind having a velocity of 3 miles an hour is just perceptible, of 6 miles is pleasant, of 10 is a brisk breeze, of 20-25 very brisk, 30-45 very high, of 60 miles is a storm, 80 a hurricane, and 100 a cyclone, tearing up everything. The greatest pressure registered at Glasgow was 55 lbs. per square foot.

Anemometrograph. (*Ἀνεμος*; *μέτρον*, γράφω) An instrument arranged so as to produce upon paper a drawing that indicates the duration and rapidity of the wind.

Anemometry. (*Ἀνεμος*; *μέτρον*, γράφω, to write.) A description of the anemometrograph, also, the operation of the Anemometrograph.

Anemometer. See *Anemometer*.

Anemometry. (*Ἀνεμος*; *μέτρον*, to measure. *F. anemometrie*; *G. Windmessung*) The art of measuring the rapidity and ascertaining the direction of the wind, anemometry.

Anemone. (*Ἀνεμώνη*; from *ἀνέμος*, wind; because it grows on exposed situations, or because its flower was supposed only to open in wind. *F. anemone*; *L. anemone*, *anemolo*; *S. anemone*; *G. Windblume*, *Kuchenschello*, *Windroschen*.) A Genus of the Nat. Order *Ranunculaceae*. Annual plants, having an involucre of 3-divided leaves, more or less remote from the flower; calyx petaloid, 5-9 sepals; corolla 0, acheneia soft, woolly, tailed or tailless. Properties acrid.

A. collina. (*L. collina*, growing on a hill.) The *A. pulsatilla*.

A. coronaria. (*L. coronaria*, belonging to a wreath.) A species which has acrid poisonous qualities, like the *A. pulsatilla*.

A. groenlandica. A synonym of the *Coptis trifoliata*.

A. hepatica. (*F. hepaticus*; *G. Leberkraut*) The *Hepatica triloba*. Herb trinity. The leaves of this plant were formerly used in the Austrian Ph. Said to be mildly astringent and corroborant, by infusion drank as tea, or powder of the dry leaves. The root is a vesicant, and was used as a detersive application to ulcers. When taken in large quantity an irritant poison.

A. hortensis. (*L. hortensis*, belonging to a garden.) A species which has poisonous properties like the *A. pulsatilla*.

A. intermedia. (*L. intermedia*, that which is between.) A synonym of *A. pulsatilla*.

A. Ludoviciana. An American plant, the properties of which have been particularly studied by Dr. W. H. Miller, who speaks highly of its value in chronic ophthalmic diseases, especially cataract, amaurosis, and opacity of the cornea, and in cutaneous eruptions. It may be employed in the form of a tea of the dried flowers and herb, or the juice of the plant may be given, preserved by the addition of one fourth of its bulk of alcohol, or evaporated to the consistence of extract.

A. nemorosa. (*L. nemorosa*, full of woods, full of foliage. *F. anemone des bois de sylvie*; *G. Waldanemone*, *iceine Windblume*.) Wood anemone. Rhizome creeping; leaves ternate; leaflets three-lobed, cut; flowers solitary, erect, white; sepals generally six, glabrous, spreading, stamens all perfect, acheneia with short styles. Quality acrid. Anemonin, a volatile camphor-like substance, convertible into anemonic acid by the action of alkalis, has been

obtained from it. Has been used successfully in tinea capitis, and is stated to produce hæmaturia in cattle.

A. patens. (*L. patens*, open, wide.) An American species. Hab. Illinois and Rocky Mountains. An acrid species.

A. pratensis. (*L. pratensis*, growing in meadows. *F. pulsatilla noir*, *anemone des prés*; *G. Wiesenanemone*.) Meadow anemone. Was recommended by Störck in secondary syphilis and cutaneous affections; it has also been recommended in whooping-cough.

A. pulsatilla. (*F. coquelourde*, *pasque-flour*, *pulsatille*, *G. Kuchenschellenkraut*, *Windkraut*, *Osterblume*.) Pasque flower. Sepals six, erect, silky; outer stamens transformed into glands, acheneia with long feathery styles. Used in cutaneous diseases, in catarrhal affections of the mucous membranes generally, in amenorrhoea, and in whooping-cough. Dose of the extract of the stem and leaves, one or two grains or more. This preparation and the tincture, given in large doses, produce nausea, vomiting, purging, and diuresis. See *Pulsatilla*.

A. rubra. (*L. ruber*, red.) The *A. pratensis*.

A. sylvestris. (*L. sylvestris*, belonging to a wood.) The *A. pratensis*.

Anemoniæ. (*F. anemoniæ*.) A Family of the Nat. Order *Ranunculaceae*. Calyx usually coloured, with imbricate aestivation, acheneia caudate, one-seeded, seed inverted.

Or, a Tribe of the Family *Ranunculaceae*, with monospermous indehiscent fruit and a simple perianth.

Anemoniac acid. An acid produced by the action of alkalis on anemonin.

Anemonin. (*F. anemonin*; *G. Pulsatillenkampher*) $C_{15}H_{12}O_6$. The active principle of the plants belonging to the Genus *Anemone*. It is volatile and crystallisable, of neutral reaction, soluble in hot water and hot alcohol, from which it is deposited on cooling in the form of colourless, shining, orthorhombic prisms, heavier than water. These are insoluble in cold, but slightly soluble in warm ether. They are more soluble in chloroform, and also in hot lavender and olive oils. Anemonin is acrid, and the melted crystals applied to the tongue produce a pricking and stinging sensation, and leave after them white spots, like those caused by escharotics. Clarus found that doses of 0.5 to 0.8 gramme (about 7 or 8 grains) cause death in rabbits. It paralyzes the medulla oblongata and spinal cord, and excites irritation of the digestive organs and kidneys. The dose is 1 mg (1-65th grain).

Anemony. The *Anemone hepatica*. Some of the varieties of anemony were known and employed in medicine in very early times, as by Galen, A.D. 175, Paulus Aegineta, A.D. 675, and Avicenna, A.D. 1050. From their writings it appears that anemony was esteemed in diseases of the eye and skin, in derangements of the menstrual function, and as a galactagogue. After falling into disuse, Störck revived it at the close of the last century, recommending it in melancholy, amenorrhoea, severe forms of syphilis, and in certain diseases of the eyes. Hahnemann regarded it as a polychrest, and recommended it in many diseases.

A., meadow. The *Anemone pratensis*.

A., rue-leaved. The *Thalictrum anemonoides*.

ANEMOPHILOUS—ANETHUM.

A. wood. The *Anemone nemorosa*.
Anemophilous. (ἄνεμος, wind; φίλος, loved.) Term applied to plants that are chiefly fertilized by the wind and not by insects.

Anemoscope. (ἄνεμος; σκοπεῖν, to examine.) An instrument which serves to make known the variations of the direction of the winds; a weathercock.

Anemy. See *Anomis*.

Anencephalia. (ἄν, neg.; ἐνκεφαλον, the brain. *P. anencephalus*; *I. anencephalus*.) Name by Broussais for a genus of organic deviation, or partial agnesia, characterized by absence of the brain.

Also, it has been made to include monstrosities which have no head.

Also, a term for the condition of insane or imbecile persons.

Anencephalic. (ἄν, neg.; ἐνκεφαλον, the brain.) Having no brain; applied to a monster-fetus, born without the brain.

Anencephalohemia. (ἄν; ἐνκεφαλον; αἷμα, blood.) Imperfect supply of blood to the brain; syncope.

Anencephaloid. (ἄν, neg.; ἐνκεφαλον, the brain; ὄμοιος, form.) Term applied to a fetus with partial defect of the brain.

Anencephalomenia. (ἄν; ἐνκεφαλον; μένος, a nerve.) Defective nervous action in the brain. (Dunlop.)

Anencephalotrophy. (ἄν; ἐνκεφαλον; τροφή, nourishment.) Defective nutrition of the brain. (Dunlop.)

Anencephalous. (ἄν, neg.; ἐνκεφαλον, that which is in the head.) A monster-fetus, born without a brain; having no brain. This condition is due to the gradual increase of the fluid occupying the cerebral vesicles at a certain period of fetal life. Hydranion is usually also present.

Applied by Galen, l. iii, *de Hipp. et Pl. Dor.* c. 4, to those who are foolish or mad.

Anemergia. (ἄνεργεια, inefficiency. *G. anergia.*) Debility.

Anemergia. (ἄν, neg.; ἐνέργεια, energy. *G. Kraftmangel, Kraftlosigkeit*.) Want or loss of strength or vigour.

Anentera. (ἄν, neg.; ἔντερον, an intestine.) Having no intestinal canal. Applied by C. G. Ehrenberg to a Section of *Polyspastria* without intestinal canal.

Anenterelminthia. (ἄν, neg.; ἔντερον, intestine; ἕλμινθ, a worm.) Intestinal worms without an intestinal canal.

Anenteroneuria saturnina. (ἄν, neg.; ἔντερον, an intestine; νεύρον, a nerve. *P. anenteroneurus saturninus*.) Saturnine or lead poisoning when it affects the intestines.

Anenterous. (ἄν, neg.; ἔντερον, intestine.) Destitute of an intestine.

Anepiploic. (ἄν, neg.; ἐπιπλόν, Having no epiploon.

Anepischemia. (ἄν, neg.; ἐνέργεια, a stoppage. *G. Urarrest.*) Incontinence, as of the urine.

Anepithymia. (ἄν, neg.; ἐνθουσία, desire.) Loss of any one or more of the natural appetites, as hunger or thirst.

A. chlorica. A synonym of *Chlorosis*.

Anerthisia. (ἄν, neg.; ἐνέργεια, to excite. *G. Reizlosigkeit*.) Want of incitement or lacerative.

Anergia. Similar to *Anemergia*.

Aneria. Old name for sulphur vivum.

Anerit. Same as *Aneria*.

Anerobla. See *Anerobia*.

Aneroid barometer. (ἄν, neg; αἶρας, moist; αἶδω, form.) Name given to an apparatus recently constructed to answer the purposes of the barometer. It consists of a flat circular metal box, having the top corrugated in concentric circles, and as thin and elastic as to yield to alterations in the atmospheric pressure. This box being exhausted of air, through a short tube, which is subsequently made airtight by soldering, constitutes a spring, which is affected by every variation of pressure in the atmosphere, the corrugations on its surface giving it greater elasticity. When atmospheric pressure increases, the top is pressed inward, when the pressure decreases, it rises; these changes are indicated by an index on a graduated dial, which is moved by a series of multiplying levers.

Anerponia. (ἄνερπον, to creep up.) Applied by Viollet and Ransani to a Family of *Passeres* having sharp claws that give the faculty of clinging to bodies, and of climbing along walls and trunks of trees.

Anerythroblepsy. (ἄν, neg; ἐρυθρός, red, βλέω, to see.) Inability to distinguish the various shades of red. This affection is usually congenital, but may be acquired. Its discovery is of great importance in engine drivers, railway guards, and others who have to act by coloured signals.

Anerythropia. (ἄν, neg; ἐρυθρός, red, ὄψις, sight. *G. Rothblindheit*.) The same as *Anerythroblepsy*.

Anerythropia. (ἄν, neg; ἐρυθρός, red.) Inability to see red colours.

Anesipoma. (ἄνεσις, a letting loose; νόμα, a lid.) Applied by Latreille to a Tribe of *Stenobothridae* having a mobile operculum.

Anesia. (ἄνεσις; from ἀνίστα, to slacken. *G. Nachlass, Anesthen.*) Term used by Galen, *de Temp. Tot. Morb.* c. 8, for the remission or diminution of the symptoms of a disease.

Also, relaxation or remission generally.

Anesom. (ἄνεσος.) Dill, *Anethum graveolens*.

Anesorrhiza. A Genus of the Nat. Order *Umbelliferae*.

A. capensis. Hab. Cape of Good Hope. An esculent plant.

Anesthetic. See *Anaesthesia*.

Anesum. *Anisum, Foeniculum anisum.*

Anet. Dill, *Anethum graveolens*.

Anethated. (*Anethum*, dill.) Prepared or mixed with dill.

Anethene. $C_{10}H_{16}$. The most volatile part of the essential oil of fennel; it boils at 190° C. (374° F.). It is isomeric with terebinthene.

Anethi fructus. B. P. (*L. fructus anethi*; *F. fructus anethi*; *G. Dillsamen*.) Dill fruit. The fruit of *Anethum graveolens*. They are oval and flat, about 1-8" long, with a pale membranous margin; odour aromatic, taste warm and somewhat bitter. Stomachic, carminative, and diuretic.

Anethol. $C_{15}H_{14}O$. A constituent of the oils of anise, star anise, tarragon, and fennel. It is deposited from them, at a low temperature, in the form of brilliant colourless laminae, fusible at 21° C. (69° F.), and boiling at 232° C. (449° F.).

Anethoxylon. (ἄνεθον, dill; ὄλον, wood.) The woody root of dill.

Anethum. (ἄνεθον. *G. Dill*.) A Genus of

ANEURISM—ANEURYSM.

the Nat. Order *Umbelliferae*. Umbels compound; involucres 0; calyx obsolete; fruit compressed from the back, with a broad dilated edge, ridges three, dorsal filiform, equidistant, lateral less in the margin, vittae one to each furrow, albumen thin, lentacular.

A. fœniculum. (G Fœnel.) The sweet-fennel, *Feniculum dulce*, and probably also the *F. vulgare*.

A. fœniculum fructibus ovalibus. (L. fructus, fruit.) A synonym of *Feniculum vulgare*.

A. graveolens. Linn. (L. *graveolens*, strong smelling; F. *aneth*; G. *Garten-dill*.) Common dill. Hab. South of Europe, near the coast. An annual, with an erect, striated, branching stem, flowers yellow, in large, flat, terminal umbels, without an involucre, leaves bi- or tripartite, glaucous leaflets linear and pointed. The fruit is aromatic, stimulant, carminative. It is used as a condiment to relieve flatulence and griping in infants.

Also, a synonym of *Pucedaneum*.

A. pastinaca. (L. *pastinaca*, the thing dug up, a parsnip.) The *Pastinaca sativa*.

A. piperitum. (L. *piperitum*, pepperwort.) A synonym of *Feniculum dulce*.

A. segetum. (L. *segetes*, the growing corn.) A synonym of *Carum Ridolfia*.

A. sowa. Roxb. Dill or Bishop's weed. Hab. India. Umbels terminal, without involucres, flowers yellow; petals roundish, entire, leaves decomposed, alternate, leaflets filiform. The fruit differs in no essential respect from that of the *A. graveolens*, and it is used for the same purposes. Probably only a variety of *A. graveolens*.

Aneti. (Ανετος, from ἀνιμι, to remit, or relax.) Relaxed; remittent; applied as a generic name for intermittent fevers, by Dr. Mason Good.

Anetic. (Ανετικός, relaxing, from ἀνιμι, to slacken.) Having power to assuage, or relax severity. Applied to soothing medicines.

Aneton. (Ανητον.) Dill, *Anethum graveolens*.

Anotures. (Ανετος, relaxed, ουρα, a tail.) A Family of Suborder *Platyrrhini*, Order *Primates*. Monkeys with long but not prehensile tails, which are fully hair clad, the vertebrae tapering to the end. It includes *Pithecia*, *Nyctipithecia*, *Callithrix*, and *Chrysotrux*.

Anetus. (Same etymon. as *Aneti*.) A term for intermittent fever.

A. quartanus. (L. *quartanus*, belonging to the fourth.) Quartan ague.

A. quotidianus. (L. *quotidianus*, daily.) Quotidian ague.

A. tertianus. (L. *tertianus*, belonging to the third.) Tertian ague.

Anuralgicon. (Α, neg., νευρον, a nerve; αλγος, pain.) Name given by Dr. Downing to an apparatus for applying warmth and sedative vapours to any part of the surface of the body, to reduce excess of obstinate neuralgia.

Aneuræ. See *Aneuridæ*.

Aneuria. (Α, neg., νευρον, a nerve.) Paralysis.

Aneuridæ. (Same etymon.) A Family of the Nat. Order *Juncaginaceæ*. Thallus leafless, with a midrib monostemonous or diocious; the antheridia embedded in the thallus, archegonia surrounded by a sheath, numerous trichomata, no perianth, capsule stalked, oval.

Aneurism. See *Aneurysm*.

Aneurismal. See *Aneurysmal*.

Aneurosis. (Α, neg., νευρον, a nerve.)

A term used to indicate absence of nerves, and, also, absence of tendons.

Aneurysis. Same as *Aneurysmus*.

Aneurysm. (Ανευρισμα, an aneurysm; from ἀνευρινω, to widen; F. *aneurysme*, G. *Pulsadergeschwulst*.) A dilatation of, or a sprouting from, an artery, varying in size from a poppy seed or less to that of the head, and affecting the whole or part of its circumference. In shape aneurysms may be fusiform, saciform, or sacculated. In true aneurysm the walls are always formed in the early stages by the diseased arterial coats, whilst in false or traumatic aneurysm the walls are formed by the adjoining tissues. The alterations in the walls of the vessel in true aneurysm are essentially the results of chronic inflammation, or other morbid change, of the tunica intima, producing thickening, hyperplasia of the connective tissue, atrophy, fatty degeneration, ulceration, and calcification of this coat with more or less complete absorption of the tunica media.

The contents of an aneurysm are usually a column of fluid blood, surrounded by a laminated coagulum, the inner layers of which are soft and reddish, the outer progressively denser and more yellow, and in old aneurysms becoming converted into fibrous tissue. By the increase of the coagulum the tube of the artery may become obliterated, supuration of the contents of the sac may occur, or, by the detachment of fragments, embolism on the distal side may be produced, leading to arrest of the flow of blood through the sac and the cure of the disease, or to serious results, according to the part supplied normally by the aneurysmal vessel.

The symptoms consist, in the early stage, of the presence of a tumour occupying the position of an artery, with expansive pulsation, accompanied by a peculiar thrill and a loud systolic sound at each beat. On arresting the flow of blood through the aneurysm, by pressure on the artery above it, the pulsation ceases, and the swelling lessens in size. The pain is usually slight. In the later stages the swelling is much harder and larger, does not pulsate so distinctly, is not emptied by pressure, and produces secondary troubles by pressure on veins, nerves, ducts of glands.

Aneurysms are most common in middle and advanced life, occur most frequently in men, and especially in those engaged in laborious occupations, and in those accustomed to drink in excess.

In the treatment, the following measures amongst others have been more or less successfully practised. Rest, simple and scanty diet, and strict regimen, bloodletting (Albertini and Vesalva); ligature of the artery immediately above the aneurysm (Anel and Desault); at a distance from the seat of disease (Hamber), below the disease (Brasdor), above and below, with opening of the sac (Antyllus); without opening the sac (Paequier); ligature applied to one of the branches into which the artery naturally divides (Wardrop), pressure, either digital or mechanical, after opening the sac (Gruithuis); on the aneurysm (Dubois, Dupuytren); on the vessel (Billingham, Signorini), by bending the joint if near one (E. Hart), by torsion, by kneading the tumour (Pergussen); by passing a thread or needle through the sac (Velpeau), by galvanic or electro-puncture (Praxel), by the injection of coagulating liquids, as solution of perchloride of iron (Maggi, Leroy d'Etholles, Bouchut); by

ANEURYSMA--ANGEIOCARDITIS.

A., spurious. The same as *A., false*.
A., traumatic. An aneurysm consequent on lesion of the arterial coats. If the injury have caused an extravasation of blood, which continues to be connected with the blood within the artery, and is surrounded by a kind of sac formed by the adjoining tissues, it is termed a *primitive traumatic aneurysm*. If, however, the original lesion have cicatrised, and the cicatrix yields after a longer or shorter period, it is termed a *consecutive traumatic aneurysm*.

A., true. (*G. wahres Aneurysma*.) That form in which there is no rupture, only dilatation of the arterial coats.

Formerly, the term was used in an opposite sense.

A., tubular. A term for *A., fusiform*.
A., varicose. (*F. aneurysma varicosum*.) An aneurysm lying between an artery and a vein and opening into both; it may be the result of disease or of injury. See *Aneurysmal varix*.

Aneurysma. See *Aneurysm*.

A. circoides. See *Aneurysm, circoid*.

A. cordis actiui. A synonym of *Hypertrophy of the heart*.

A. dissectans. (*L. dissecto*, to cut asunder.) See *Aneurysm, dissecting*.

A. ex vulnere. (*L. vulnus*, a wound.) A term for *Aneurysm, traumatic*.

A. hor'nam arterie sistens. A synonym of *Aneurysm, mixed internal*.

A. precordic'um. Aneurysm of the aorta close to the heart.

A. spurium. (*L. spurius*, false.) See *Aneurysm, false*.

A. varicosum. Varicose aneurysm. See *Aneurysmal varix*.

A. verminosum. (*L. verminosus*, full of worms.) An aneurysm containing hæmatozoa. Cases of this kind have been observed in the horse, ass, and mule; it usually occurs in the mesenteric artery or one of its branches. It is a fusiform or irregular dilatation of the vessel with much thickening of its walls. The hæmatozoa noticed have belonged to the Genus *Sclerostoma*. This form of aneurysm has also been noticed in the frog.

A. verum. (*L. verus*, true.) See *Aneurysm, true*.

Aneurysmal. (Same etymon.) Of, or pertaining to, an aneurysm.

A. cancer. Cancerous deposit in, or in connection with, a vascular tumour.

A. needle. A slender instrument, flattened and curved for about an inch near its point, at which there is a small hole, or eye, used for passing a ligature under an artery, for the purpose of tying it, and so named, because this is frequently done for the cure of aneurysm.

A. sac. The containing structure of an aneurysm.

A. varix. (*F. varix aneurysmale*; *G. das aneurysmatische Venengeschwulst*.) A tumour resulting from perforation of a contiguous artery and vein, and subsequent union of the two. If bloodletting at the bend of the arm be carelessly performed, the lancet may transfix the vein, the fascia of the biceps muscle, and enter the artery; in this case the blood from the artery accumulates under the aponeurosis, and forms a circumscribed false aneurysm, or a varicose aneurysm; but if the openings of the vein, fascia, and artery are united, the inflammation into one, through which it passes from the artery into the vein, which

becomes more or less dilated above and below the seat of injury and pulsates like an artery, this is called *aneurysmal varix*, the passage of the blood from the artery into the vein is accompanied with a whizzing noise like the bellows sound heard in certain diseases of the heart. The wearing of an elastic bandage is the only treatment advised, unless the tumour appears to be increasing, when the artery may be tied above and below the seat of damage.

Aneurysmatic. (Same etymon.) Of, or pertaining to, an aneurysm.

Aneurysmous. See *Aneurysm*.

An'ey. *Anac.*

Anfaka. Arabic for a coagulum.

Anfan. Arabic for opium. (Quincy.)

Also, a synonym of *Masilach*.

An fir-filus. Arabic for hydrargyrum, or mercury. (Quincy.)

Anfractuose. Same etymology and meaning as *Anfractuous*.

Anfractuosities. (Same etymology as *Anfractuosity*.) Furrows.

A., cerebral. (*L. cerebrum*, the brain. *F. anfractuosités cerebrales*; *G. Windungen des Gehirns*.) The furrows or sulci between the convolutions of the brain, they have an average depth of 5" to 1". See *Fissures*.

A., ethmoidal. A term for the *Ethmoidal cells*.

Anfractuosity. (*L. anfractus*, a turning, or bending round, from the obsolete *anfringo*. *F. anfractuosità*; *G. Furche, Krümmung*.) A winding or turning. Applied to the furrows, or sulci between the convolutions of the brain.

Anfractuous. (*Anfractus*, a turning. *G. Krummangang, gekrümmt, gebogen*.) Having or full of sinuities.

Anfractus. (*L. anfractus*.) See *Anfractuosity*.

A. cerebri. (*L. cerebrum*, the brain.) The cerebral fissures.

Angaria'ria. A tree of Congo, reputed to be efficacious in removing the pain occasioned by the passage of calculi. (Waring.)

Angiectasia. The same etymology and meaning as *Angiectasis*.

Angela. (*ἄγγιον*, a vessel, a blood-vessel.) A vessel.

A. pneumatica. (*L. pneumaticus*, belonging to air.) An old term for the arteries.

Angiect'mia. (*ἄγγιον*; *aima*, blood.) Congestion or fulness of the blood-vessels.

Angiecteraphro'sia. (*ἄγγιον*, *ἀφρ*, air, *ἀφρος*, foam.) Asphyxia by means of bronchial foam, a condition that causes the fatal termination in many cases of capillary bronchitis and other pulmonary diseases.

Angiect'al. (*ἄγγιον*, a blood-vessel.) Vascular.

Angiectasia. See *Angiectasis*.

A. venosa. (*L. venosus*, venous.) A varicose vein.

Angiectasis. (*ἄγγιον*, a blood-vessel; *ἵκταις*, dilatation. *G. Gefassauodehnung*.) Dilatation of the blood-vessels. The term has been added to many words to denote dilatation, as *cardiectasis*, *arteriectasis*, *phlebotectasis*, *lymphangiectasis*, and *teleangiectasis*.

A., capillaris. Capillary angiectasis. A synonym of *Telangiectasis*.

Angiectoma. Same as *Angiectasis*.

Angiectenchyma. See *Angiectenchyma*.

Angiectocarditis. (*ἄγγιον*; *car-*

ANGELICA BALSAM—ANGIENCHYMA.

kawurzel, Engeliourz.) Garden angelica is the only species used in medicine. It is a large, strongly aromatic plant with smooth-stemmed stem, with bipinnate leaves. General outline wanting; umbel large, many-rayed, spreading; umbellule dense, subspherical; involucres 5-leaved; calyx 5-toothed; fruit compressed from the back; ridges 5, winged, the lateral short of the edge and broader than the dorsal; vittae numerous, covering the plant-concealed beneath, which is loose. Grows in watery places in Europe. The root and fruit pungent, aromatic, stimulant, tonic. Dose 30 grains. It is made into a conserve, and employed in the manufacture of gin and of vespetro. The root contains a volatile oil, angelic acid, a crystallizable resin, angelicine, an amorphous resin, bitter matter, tannin, malates, pectic acid, gum, and starch.

A. atropurpurea. (*L. ater*, black; *purpureus*, purple.) Masterwort. Hab. United States. Leaves ternate; petioles large, inflated; leaflets ovate, acute, deeply serrate, somewhat lobed; flowers greenish-white; root purplish. The juice of the fresh root is astringent and is said to be poisonous; drying removes this. Formerly in U.S. Ph., and used as the *A. archangelica*.

A. grana. (*L. granum*, a grain.) A term applied to *Anderson's pills*.

A. levisticum. (*L. levisticum*, from Liguria.) A synonym of *Ligusticum levisticum*.

A. lucida. (*L. lucida*, shining.) A synonym of *Ligusticum actaeifolium*.

A. moschata. (*L. moschatus*, smelling of musk.) The name given at one time to the plant from which sumbul was believed to be obtained.

A. nen' do. A synonym of *Ligusticum actaeifolium*.

A. officinarum. (*L. officina*, a shop.) The *Imperatoria ostruthium*.

A. paludapifolia. A synonym of *Ligusticum levisticum*.

A. pratensis apifolia. (*L. pratensis*, of the meadow; *apium*, parsley; *f. lrum*, a leaf.) A synonym of *Athamanta oroselinum*, and also of *Prucedanum silaus*.

A. sativa. (*L. sativus*, that which is planted.) A synonym of *A. archangelica*.

A. sylvestris. (*L. sylvestris*, belonging to a wood. *Princeps alexipharmacorum*. *F. angelique sauvage*.) Wild angelica. Hab. Arabia. Glabrous; leaflets oblong, ovate, serrate, petioled obliquely; umbels large, pubescent; bracts deciduous; bractlets a few, subulate, persistent. Aromatic and carminative. The powdered seeds are applied to the hair to destroy pediculi.

Angelica balsam. A black-brown resinous matter found in angelica root.

A. oil. (*G. Angelicad.*) An oil found in angelica root; it is colourless when fresh, but soon becomes brown; it is lighter than water, has a camphorous odour, and a burning spicy taste.

A. tree. The *Aralia spinosa*.

A. wax. (*G. Angelicaucachs*.) A waxy substance found in angelica root.

Angeliceæ. A Group of the Subfamily *Orthospermeæ*, Family *Umbelliferae*. Fruit compressed from the back; the three dorsal ridges winged or filiform; lateral ridges broadly winged, the wings of each mericarp withdrawing from each other; receptacle bi-partite.

Angelic'ic acid. A synonym of *Angelic acid*.

Angel'icin. A crystallizable resinous sub-

stance obtained from *Angelica*. It is inodorous, at first almost tasteless, then pungent; soluble in alcohol and ether, from which it is crystallized.

Angel'icus pulvis. The angelic powder, a name given by Schroderus to the *Maracanthia* of the Alchemists of old chemists.

Angel'ic. $C_8H_5NO_2$. A weak base found in the resin of the albumen of *Ferraria spectabilis*. It occurs in slender, white, silky, tasteless, inodorous needles; very slightly soluble in alcohol and water. (Fehling.)

Angel'ic. (*G. angustifolia*.) The bark of the *Andira inermis*.

A. coco. The fruit of the *Andira stipularis*, which resembles that of the nut of certain Brazilian palms as *Diplothemum maritimum*.

A. resin. The product of the *Ferraria spectabilis*, and used in Brazil as a specific in intermittent fevers.

Angel'ina. The *Andira inermis*.

Angel'ic' cortex. The bark of the *Andira inermis*.

Angel'us. (*L. angulus*, an angle. *G. Myrsinech.* *Estolon*.) A small angle.

Angeloc'acos. A synonym of *Myrsinech' latus*.

Angelo'nia. A Genus of the Nat. Order *Scrophulariaceæ*, several species of which are used as emetics in South America.

Angemphraxis. See *Angiempfraxis*.

Angers. France: Dep. Maine et Loire; Arrond. d'Angers. Here are some ferruginous wells containing 0.017 of a gramme of iron sulphate, 0.317 of manganese sulphate, 0.250 of alum sulphate, and 0.233 of calcium bicarbonate, in one litre.

Anghar. A plant of Scindia; the root is astringent, and is used in dysentery.

Angi. Ancient term for buboes, or tumours in the groin.

Angiemia. (*Ἀγγίσιον*, a vessel; *αἷμα*, blood.) Term for plethora, or congestion of the blood-vessels.

Angica. The wood of this name is believed by v. Martius to form part of the *Ecore de jeunesse et de la virginité* of the Brazilians. It is the product of the *Acacia angica* and allied trees. The bark is called *Barbatimao*.

Angiectesia. (*Ἀγγίσιον*, a small vessel; *dim.* of *ἄγγιον*; *ἐκτασις*, extension.) Dilatation of the capillary vessels.

Angidiospon'gus. (*Ἀγγίσιον*; *σπογγία*, a sponge. *G. Gifusschicamm*.) A synonym of the disease formerly known as *Fungus hamatodes*.

Angiectasis. (*Ἀγγίσιον*, vessel; *ἐκτασις*, extension.) See *Angiectesia*.

Angiectopia. (*Ἀγγίσιον*; *ἐκτασις*, away from a place.) The state in which vessels are found out of their natural place.

Angielcosis. (*Ἀγγίσιον*; *ἔλκος*, an ulcer. *G. Gifusschicamm*.) Ulceration of the vessels.

Angiel'cus. (*Ἀγγίσιον*; *ἔλκος*, an ulcer. *F. angulicæ*; *G. Gifusschicamm*.) An ulcer of a vessel.

Angiempfraxis. (*Ἀγγίσιον*; *ἐμφραξις*, a stoppage.) An over-fullness and obstruction of the vessels.

Angien'chyma. (*Ἀγγίσιον*, a vessel; *ἐγχύμα*, an infusion; from *ἐγχύνω*, to pour in.) Vascular tissue. A term employed by C. Morren to designate a tissue or parenchyma composed exclusively of vessels.

ANGIEURYSMA—ANGINA.

Angieurysma. (Ἀγγείον; εὐρύς, to make wide. *F. angieurysme.*) Dilatation of a vessel.

Angitis. (Ἀγγίτις. *G. Gefässentzündung.*) Term by Piörri for inflammation of the vessels, originally and specially of the capillary vessels.

Angina. (*L. angina*, the quinsy; from *ango* or *ἀγγω*, to strangle; more or less of a suffocating sensation being experienced. *F. angine*; *L. strossatura*; *G. Bräune.*) A term for a sense of suffocation, and, so, applied to diseases in which this is a prominent symptom; also, to those attended by sore throat.

The term angina is applied to inflammatory affections of the pharynx, and these have been divided into the following forms:—simple, erythematous, glandular, tonsillitic, ulcerous, gangrenous, and diphtheritic. In the simple form there is dryness of and pain in the pharynx, pain during deglutition. It is commonly caused by sudden exposure to cold air, in a person otherwise debilitated or exhausted, is not dangerous, requires rest, warmth, and in general a stimulant and tonic plan of treatment. The tonsillar form, sometimes called *Amygdalitis*, is characterised by great swelling of those organs, and may be either acute, when it is accompanied by sharp febrile symptoms and considerable distress, or chronic, a state that is often seen in strumous children, in whom the swelling alters the voice, impedes the respiration, renders the breath offensive, and reacts on the general health. Acute cases require local depletion, hot poultices applied externally, emollient and astringent gargles internally, and a general sustentative plan of treatment. Chronic cases are best treated by change of air, especially to the sea coast or high inland regions; the administration of iron and iodine; the injection of a few drops of a solution (1 to 3) of iodine tincture in water into the gland, or its excision.

A. accessoria. (*L. accedo*, to approach.) A synonym of *Abcessus, retropharyngeal*.

A. acuta. (*L. acutus*, severe.) An ordinary sore throat, *A. simplex*, in which the fever is somewhat intense and the local symptoms marked.

A. angino'sa. A synonym of *Scarlatina anginosa*.

A. aphtho'sa. (*L. aphthæ*, the thrush.) Aphthous inflammation of the mouth or throat.

A. aquo'sa. (*L. aquosus*, watery.) (Edema of the glottis.

A. aquo'sa cedemato'sa. (*L. aquosus*; *οἰδήμα*, a swelling.) An old term for anasarca dependent on compression of a venous trunk.

A. bronchia'lis. (*G. Luftröhrenentzündung.*) A synonym of *Bronchitis*.

A. canina. (*L. caninus*, of, or belonging to, a dog.) A synonym of *Croup*.

A. cantato'rum. (*L. cantator*, a singer.) Singer's sore throat. A similar disorder to *A. clericorum*.

A. carbuncula'ris. (*L. carbunculus*, a small coal. *F. angine carboneuse*; *I. angina carbonesiosa*; *G. Anthraxbräune, Kehlbrand.*) Carbuncle in the throat.

A. catarrha'lis. (*G. Halsbräune.*) Catarrh of the throat. See *A. simplex*.

A. chronica. (*Χρονικός*, concerning time.) Chronic angina; it is usually dependent on some special cause, as in clergyman's sore throat, drunkard's sore throat.

A. clericorum. (*L. clericus*, a clergy-

man.) Clergyman's sore throat. A condition of relaxation of the faucial, laryngeal, and neighbouring mucous membrane caused by excessive or forced use of the voice. It is best relieved by rest, tonics, and astringent applications, such as glycerin of tannin.

A. cor'dis. (*L. cor*, the heart.) A synonym of *A. pectoris*.

A. croupo'sa. Croupose angina. A term applied to diphtheritic or membranous croup.

A. cum tumo're. (*L. cum*, with; *tumor*, a swelling.) A synonym of *Quinsy*.

A. diphtheritica. (*Διφθερία*, a prepared hide.) Diphtheritic inflammation of the throat.

A. epidem'ica. (*Επιδήμιος*, among the people.) A synonym of *Scarlatina anginosa*, and of *S. maligna*.

A. epiglottide'a. Epiglottidean angina. Term for an oedematous swelling of the glottis, consequent on chronic laryngitis.

A. erysipelato'sa. A synonym of *Scarlatina anginosa*.

Also, an erysipelatous inflammation of the fauces accompanying erysipelas of the face.

A. erythemato'sa. (*Ερύθημα*, a redness on the skin.) Erythematous angina. A synonym of *A. simplex*.

A. exanthemat'ica. (*Εξάνθημα*, an eruption.) A synonym of *Scarlatina anginosa*.

A. exsudato'ria. (*L. exsudatio*, a sweating out.) A synonym of *Croup*.

A. exter'na. (*L. externus*, outward.) A term for the disease *Parotitis*, or the mumps.

A. fau'cium. (*L. fauces*, the fauces.) Inflammation of the fauces.

A. fau'cium exsudati'va. (*L. fauces*; *exsudatio*, a sweating out.) Diphtheria especially affecting the fauces.

A. fau'cium maligna. (*L. fauces*; *malignus*, of an evil nature.) A synonym of *Cynanche maligna*.

A. folliculo'sa pharynge'a. (*L. folliculus*, a small bag.) Follicular inflammation of the pharynx. See *Pharyngitis, follicular*.

A. gangreno'sa. (*Γάγγραινα*, a gangrene. *G. brandige Halsentzündung.*) Gangrenous angina; a term applied to the sloughing which occurs in noma, and in some forms of scarlatina.

A. glandulo'sa. (*L. glandulosus*, full of kernels or glands.) A synonym of *Pharyngitis, follicular*.

A. herpet'ica. (*Έρπης*.) Herpes of the faucial mucous membrane; a not uncommon form of sore throat.

A. hu'mida. (*L. humidus*, moist.) A synonym of *Croup*.

A. inflammato'ria. (*L. inflammatio*, an inflammation.) A synonym of *Croup*.

A. inter'na. (*L. internus*, inward.) A synonym of *Croup*.

A. larynge'a. (*Λάρυγξ*, the larynx.) Laryngeal angina. See *Laryngitis*.

A. larynge'a cedemato'sa. (*Οἰδήμα*, a swelling.) (Edematous laryngeal angina. A synonym of *Edema of the glottis*.

A. lingua'ria. (*L. lingua*, the tongue.) Inflammation of the tongue. See *Glossitis*.

A. Ludovi'ci. (*G. Halszellgewebsentzündung.*) Called after Ludwig, of Stuttgart, who first described it. A phlegmonous inflammation of the mucous membrane, and of the intermuscular and subcutaneous connective tissue of the sublingual and submaxillary regions, sometimes

ANGINA.

terminating in gangrene. It is said to be at times epidemic.

A. ludwig'ii. The same as *A. ludovici*.

A. maligna. (*L. malignus*, of an evil nature.) Same as *Cynanche maligna*.

A. maxillaris. (*L. maxillaris*, belonging to the jaw.) A synonym of *Mumps*.

A. membranacea. (*L. membranaceus*, membranous.) Membranous angina. A term for *Croup*.

A. mitis. (*L. mitis*, mild.) Catarrh of the fauces.

A. morbillosa. (*L. morbilli*, measles.) The sore throat accompanying measles, when the rash appears on the faucial mucous membrane.

A. muco'sa. (*L. mucosus*, mucous.) A synonym of *Scarlatina anginosa*.

A. nasalis. (*L. nasalis*, belonging to the nose.) A synonym of *Nasal catarrh*, especially when attacking chiefly the posterior nares.

A. oedemato'sa. (*Οἰδηματώδης*, of the nature of a swelling.) A term for oedema of the glottis.

A. palatina. (*L. palatinus*, of the palate.) Catarrhal inflammation of the velum pendulum palati.

A. paralytica. (*Παραλυτικός*, affected with paralysis.) Paralysis of the pharynx or oesophagus.

A. parotid'ea. Parotid angina. A synonym of *Mumps*.

A. parotid'ea exte'na. (*L. externus*, outward.) A synonym of *Mumps*.

A. pecto'ris. (*L. pectus*, the breast. *F. angine de poitrine*; *I. angoscia*; *G. Herzbräune*.) A paroxysmal affection, characterised by severe pain amounting to anguish, and a sense of oppression in the region of the heart, with a feeling of impending death.

The pain is described as unbearable, and is usually felt about the left side of the lower end of the sternum; often it extends to both sides of the chest, strikes through to the shoulders and back, and while sometimes felt in the right arm, it generally shoots into the left arm, and often stops at the elbow; a certain degree of numbness and of pallor usually accompanies the pain.

During the attack the cardiac beats are modified in frequency, rhythm, and force, or are altogether arrested. The respiratory acts remain unaltered, or are slightly augmented in frequency. The attack is often brought on by such things as walking against the wind, or the presence of gas in the stomach. It lasts from a few minutes to an hour or two, and recurs at uncertain intervals, and not unfrequently ends in sudden death. It is most common in men, and in those of mature or advanced years.

Gout is a frequent accompaniment of angina pectoris.

The symptoms are due, according to Eulenburg, either to lesion of automatic excito-motor ganglia of the heart, whether within or outside of the heart; to excitation, direct or reflex, of the vagus nerve, causing it to exert its inhibitory influence on the heart; or to lesion of the vaso-motor sympathetic nerves.

After death, calcification of the coronary arteries and fatty degeneration of the muscular structure of the heart have been found, and called the cause of the disease; but in a great proportion of cases no organic lesion has been discovered.

The treatment should consist in giving nar-

cotics and diffusible stimuli during the attack, and pursuing a general tonic and sustentative plan in the intervals.

Of the many remedies recommended, the inhalation of amyl nitrite, in doses of three to ten minims, at present appears to be the most successful; opium and chloral hydrate have been used with some success; the inhalation of chloroform or, better, of ether, has given relief.

Zinc valerianate or sulphate, arsenic, quinine, phosphoric acid, silver nitrate, potassium and calcium bromide, hydrocyanic acid, digitalis, the insertion of issues and setons over the cardiac region, cutaneous faradisation of the breast and nipple, have been recommended.

A. pellicula'ris. (*L. pellicula*, a small skin.) Pellicular angina. Term for those inflammations of the fauces, pharynx, and larynx, in which false membranes form.

A. pemphig'o'sa. (*Πιμφίξ*, a vesicle.) Pemphigus of the fauces.

A. pernicio'sa. (*L. perniciosus*, destructive.) A synonym of *Croup*.

A. pestilentia'lis. (*L. pestilentia*, an infectious disease.) A synonym of *Diphtheria*.

A. pharynge'a. A synonym of *Pharyngitis*.

A. pharyngo-scrofulous. A form of ulcerative pharyngitis, characterised by erosions of the follicles at the back of the pharynx spreading to the neighbouring parts; they are yellow, rough, and covered with muco-purulent matter; in extreme cases yellow acuminated pustules are seen. Iodide of iron, tonics, cod-liver oil, and the local use of iodine, iodoform, and perchloride of iron, are recommended.

A. phlegmono'sa. (*Φλέγμα*, inflammation.) Phlegmonous angina. A term given to that form of *A. simplex* in which there is oedematous swelling of the mucous membrane with deep-seated inflammation, and, it may be, supuration of the submucous tissue.

A. polypo'sa. (*L. polypus*, having a polypus. *G. Hautige Bräune*.) Polypous angina. Another term for *croup*, because it is attended by the formation of a false membrane, somewhat like a polypus.

A. potato'rum. (*L. potator*, a drinker.) Drunkard's sore throat. A chronic inflammatory condition of the faucial and pharyngeal mucous membrane, produced by the excessive use of alcoholic stimulants, especially spirits.

A. pseudo-membranacea. (*Ψευδής*, false; *L. membrana*, a membrane.) A synonym of *Diphtheria*.

A. pulpo'sa. (*L. pulposus*, fleshy.) A synonym of *Croup*.

A. pu'tris. (*L. putris*, stinking, decaying.) Sloughing sore throat.

A. sanguinea. (*L. sanguineus*, bloody.) A synonym of *Quincy*.

A. scarlatino'sa. Scarlatinal sore throat.

A. scirrho'sa. (*Σκίρρος*, hard.) Scirrhus angina. A term for difficulty of swallowing caused by scirrhus of the pharynx or oesophagus.

A. sic'ca. (*L. sicca*, dry. *F. angine sèche*.) Dry angina. Term for chronic inflammation of the pharynx characterised by an uneasy sense of dryness and heat; it is symptomatic of chronic disease of the stomach or lungs.

A. simplex. (*L. simplex*, simple. *F. mal de gorge*; *I. angina della fauci*; *G. Hals-entzündung*, *Gaumencatarrh*.) Sore throat; catarrhal inflammation of the fauces. There is heat and

ANGINA, FOLLICULAR—ANGIOGRAPHIA.

dryness of the throat, pain in swallowing, perhaps hoarseness, some cough; fever varies in amount; the mucous membrane of the pharynx is swollen and red, occasionally with white patches, or partly covered with tenacious mucus. Suppuration under the mucous membrane is rare. An aperient, alkaline saline, then chlorate of potash and bark, or quinine and iron, with an astringent gargle, is the treatment generally adopted.

A. sine dolore. (L. *sine*, without; *dolor*, pain.) A term given by Dr. Gairdner to a specially indefinable and indescribable sensation, sometimes present in cardiac diseases, apart from cardiac asthma, dyspnea, or orthopnea, and not distinctly accompanied by local pain. It more frequently accompanies insufficiency of the aortic valves than other lesions. Anxiety and oppression, sleeplessness, cerebral disturbance, and irregularly sighing respiration, are the chief accompaniments of the characteristic cardiac anguish or indefinable distress.

A. spasmodica. (L. *spasmodicus*, spasmodic.) A synonym of *Laryngismus stridulus*.

A. spastica. (L. *spasticus*, spasmodic.) A synonym of *Laryngismus stridulus*.

A. squiro'sa. See *A. scirrhus*.

A. strangulatoria. (L. *strangulator*, a choker.) A synonym of *Croup*.

A. strepito'sa. (L. *strepito*, to make a great noise.) A synonym of *Croup*.

A. stridula. (L. *stridulus*, creaking.) A synonym of *Croup*.

A. suffocativa. (L. *suffoco*, to choke.) A synonym used by Bard, in 1789, for diphtheria.

A. suffocatoria. (L. *suffoco*, to choke.) A synonym of *Croup*.

A. superficialis. (L. *superficialis*, belonging to the surface.) Superficial sore throat. A synonym of *A. simplex*.

A. synocha'lis. (*Synocha*.) A synonym of *Quinsy*.

A. syphilitica. Syphilitic sore throat. This form may be acute or chronic, and may be a mere erythema of the mucous membrane, or may exhibit papules and gummata, or may result in great destruction of tissue from ulceration and sloughing.

A. thyroidea. Inflammation of the thyroid body.

A. tonsillaris. (L. *tonsilla*, the tonsils; G. *Mandelentzündung*.) A synonym of *Quinsy*.

A. trachealis. (L. *trachea*, the wind-pipe.) A term for *croup*.

Also, a variety of the malignant angina of old authors, described as an erysipelatous and not a phlegmonic inflammation, and probably allied to diphtheria.

A. ulcero'sa. (L. *ulcerosus*, ulcerous.) Ulcerous angina. A synonym of *Cynanche maligna*.

A. uvula'ris. (*Uvula*. G. *Zapfenbräune*.) Inflammation of the uvula.

A. variolo'sa. (L. *variola*, smallpox.) The sore throat accompanying smallpox, when pustules appear on the mucous membrane of the throat.

A. vera et legitima. (L. *verum*, true; *legitimus*, pertaining to law.) A synonym of *Quinsy*.

A. vesiculo'sa. (L. *vesiculosus*, full of bladders.) A synonym of *A. herpetica*.

Angina, follicular. A synonym of *Pharyngitis, follicular*.

A., gangrenous. See *Angina gangrenosa*.

A., glandular. A synonym of *Pharyngitis, follicular*.

A., hog'skin. A synonym of *Diphtheria*.

A., oedematous. A synonym of *Oedema of the glottis*.

A., ulcerated. A term for ulcerated sore throat.

A., ulcerative. A term given to cases in which ulcerative stomatitis spreads to the fauces.

Angina-lini. The name of the *Cuscuta* in the old formularies.

Anginal. (Same etymon as *Angina*.) Relating to angina.

Angi'non. The name of the hemlock in Dioscorides.

Anginose. (L. *angina*, the throttling thing; quinsy.) Of, or pertaining to, angina.

Anginosus. (Same etymon.) Of, or belonging to, angina; having, or accompanied by, angina.

Angiocarditis. See *Angiocarditis*.

Angiocarp. (Ἀγγίον, a vessel; καρπός, a fruit. G. *angiokarp*.) A fruit which is indurated.

Angiocarpus. (Same etymon.) Same as *Angiocarpus*.

Angiocarpia. (Same etymon.) A plant bearing an *Angiocarp*.

Angiocarpium. (Same etymon. G. *Huttenfrucht*.) Term applied by Kützing to the conceptacle of *Fucus*, that is, to the swelling of their frond which contains the reproductive organs.

Angiocarpous. (Same etymon. G. *schlicesfrüchtig*.) Term applied to a Group of Lichens, with globular or sub-globular apothecia, closed above by an epithecium, so that their ostiole is reduced to a punctiform perforation of the conceptacle.

Also to a Group of Fungi, in which the organs of fructification are enclosed in a common envelope, as in the Truffle, Lycoperdon, Geastrum, and Mucor.

Angioceratodentitis. (Ἀγγίον; *ceratodentitis*, inflammation of the cornea.) Inflammation of the vessels of the cornea.

Angiochhalasis. (Ἀγγίον; *chhalasis*, a slackening. F. *angiochhalase*; G. *Gefässverweiterung*.) Dilatation of the vessels.

Angio'des. (Ἀγγίον. F. *angieux*.) Having or full of vessels.

Angiodias'tasis. (Ἀγγίον; *diástasis*, a separation.) A separating from each other of vessels normally together.

Angiogastres. (Ἀγγίον; *gastér*, a stomach.) Term applied by Nees to Fungi, in which the reproductive organs are contained in special conceptacles, themselves enclosed in a common envelope.

Applied by Fries to Fungi (Gastromycetes), the spores of which are contained in thecae.

Angiogenia. (Ἀγγίον; *γεννάω*, to produce. F. *angiogénie*; G. *Gefässbildung*.) The formation of vessels.

Angiograph. (Ἀγγίον; *γράφω*, to engrave.) A form of sphygmograph, devised by Landois, the advantages of which are said to be that the amount of pressure can be accurately varied at will, that the style is constantly in contact with the registering surface, and that the movement is vertical.

Angiographia. (Ἀγγίον; *γράφω*, to

THE NATIONAL BUREAU OF CRIMINOLOGY & STATISTICS

ANGIOSPERMS—ANGLE.

of the Class *Dicotyledones*, Subkingdom *Phanerogamia*. Ovules enclosed in an ovary, indirectly fertilised by the action of the pollen on the stigma.

Angiosperma. (Same etymon.) The name as *Angiospermia*.

Angiosporus. (Ἀγγίον; σπόγγος, a sponge.) Same as *Angiospongus*; also similar to *Angiotasis*.

Angiosporus. (Ἀγγίον; σπόρος, seed.) Term applied to Fungi, the spores of which are contained either in theca, or on the basidia, in the interior of the tissue of the receptacle.

Angiosporous. (Ἀγγίον; σπόρος, seed. F. *angiospore*; G. *bedecktsporig*.) Applied by Meyer to sporocarpia of lichens; when contained in the utricle they are termed asci or thecae.

Angiostegnosia. (Ἀγγίον; στήνωσις, a making close. F. *angiostegnose*.) A contraction of the vessels.

Angiostegnotic. (Same etymon. F. *angiostegnotique*.) Belonging to *Angiostegnosis*. Applied to medicines that astringe the vessels.

Angiostenosis. (Ἀγγίον; στήνωσις, a being straitened.) Similar to *Angiostegnosis*.

Angiosteogenia. (Ἀγγίον; γενίω, a bone; γένημα, to produce. F. *angiosteogenie*; G. *Gefässverknöcherung*.) Ossification of the vessels; angiosteogeny.

Angiosteosis. (Ἀγγίον; osteosis. F. *angiosteose*; G. *Gefässverknöcherung*.) The progress of ossification of the vessels.

Angiostomata. A Suborder of the Order *Ophidia*, Class *Reptilia*. Gape small; quadrato fixed to the skull, as is the squamosal, when present. The post frontal is absent, and the teeth are never grooved. The skin covers the eyes and is thick, and a rudimental pelvic girdle is present. It includes *Tortrix*, *Typhlops*, and *Uropeltis*.

Angiostomus. (Ἀγγίον; στόμα, a mouth. F. *angiostome*; G. *gefässmündig*.) Applied to univalve shells the opening of which is narrow, i.e. of equal diameter throughout, and of the length of the shell, as in *Cypræa*.

Angios'tomum. A Genus of sexually-mature Nematoid Entozoa, of which the following species have been recognised.

A. ascaroides. (*Ascaris*; είδος, form.) Found in *Limax cinereus*.

A. entomelas. (Έντος, within; μέλας, black.) Found in the lung of *Anguis fragilis*.

A. Linstevil. See *A. macrostomum*.

A. macrostomum. (Μακρός, large; στόμα, a mouth.) Found in the pleural cavity of the *Anguis fragilis*.

Angios'trophe. (Ἀγγίον; στροφή, a turning. F. *angiotrophe*.) Torsion of the ends of divided vessels, as the arteries.

Angiosymphysis. (Ἀγγίον; σύμφυσις, a growing together. G. *Gefässverwachsung*.) Adhesion to or union of vessels with each other.

Angiosynize'sis. (Ἀγγίον; συνίησις, collapse.) Collapse of the vascular canals.

Angiotasis. (Ἀγγίον; τάσις, a stretching.) Tension of the vessels.

Angiotatic. (Same etymon.) Belonging to *Angiotasis*.

Angiotelectasia. (Ἀγγίον; τέλος, an extremity; έκτασις, extension. F. *angiotelectasia*.) Extension of vessels or the ends of vessels.

Angiotelectasis. Same as *Angiotelectasia*.

Angioten'io. (Ἀγγίον; τείνω, to stretch. F. *angiotenique*; I. and S. *angiotenico*; G. *Entzündungsfeber*.) The term angiotenic fever was substituted by Pinel for the inflammatory fever of Huxham, synocha of Cullen, and febris continua non putrida of Boerhaave, which Pinel thought was due to vascular irritation and tension.

Angiothecia. (Ἀγγίον; θήκη, a box.) Term applied by Nees v. Esenbeck as synonymous with *Angiocarpia*.

Also, applied to Fungi possessing theca, which are enclosed in the tissue of the receptacle, as in the truffles.

Angiothlipsis. (Ἀγγίον; θλίψις, pressure.) Pressure on one or more vessels.

Angiotitis. (Ἀγγίον; οὖς, the ear. G. *Ohrgefässentzündung*.) Inflammation of the vessels of the ear.

Angiotomy. (Ἀγγίον, a vessel containing liquor, or a vein; τέμνω, to cut. F. *angiotomie*, *angiotomie*; G. *Gefässergliederung*.) Term for the dissection of the blood-vessels and absorbents.

Angle. (L. *angulus*; from *angulus*, bent. F. *angle*; G. *Winkel*.) The space comprehended between the meeting of two lines at a point.

A., acromial. (Ἀκρωμία, the point of the shoulder.) Walsh's term for the angle formed by the clavicle and the head of the humerus.

A., auric'ular. (L. *auricula*, the external ear. F. *angle auriculaire*.) This term is applied to several angles formed by lines having their vertex on the binauricular vertex and extending to various points of the cranium, as to the alveolar point, the nasal, suborbital, bregmatic, lambdoid, inia, opisthion.

A., auric'ulo-cran'ial. (L. *auricula*, the outer ear; *cranium*, the skull. F. *angle auriculo-cranien*.) A synonym of *A., auricular*.

A., basifacial. (L. *basis*, the base; *facies*, the face.) The angle formed by a line drawn in the vertically divided skull from the basion to the middle of the anterior extremity of the cerebral surface of the sphenoid, i.e. the basi-cranial axis; and one drawn from the latter to the anterior margin of the alveolar border of the maxilla, the basifacial axis. The angle varies in man from 90° to 120°. In the higher mammals it is very obtuse, nearly 180°.

A., bas'ilar, of Bro'ca. (L. *basis*, the base.) The apex is at the basion, and of the two sides one corresponds to the plane of the occipital foramen, and the other extends from the basion to the naso-frontal articulation. It varies from + 14° to - 26°.

A., bior'bital. (L. *bis*, twice; *orbit*.) This angle represents the angle of divergence of the two visual axes. It varies from 40° to 54° in man.

A., condylar, of M'ker. (Κόνδυλος, a knob.) The obtuse angle, looking upwards and backwards, formed by the plane of the occipital foramen with the plane of the basilar groove or clivus. It varies from 100° to 125° in negroes, and from 117° to 140° in white men, the mean being 113.6° in the former, and 128.2° in the latter.

A., coronofacial, of Gra'tiolet. (L. *corona*, a crown; *facies*, the face.) This is formed at the point of junction of a plane passing through the coronal suture of the two sides, and the horizontal facial line of Camper.

ANGLE

A., costal. (*L. costa*, a rib.) The angle formed by the middle line of the body, and a line drawn along the lower border of the false ribs to the middle line of the body. That of the left side is slightly the more acute.

A., cranial. (*Κρανίον*, the skull. *F. angle cranien.*) The cranial angles are obtained in the same manner as the auricular angles, except that the apex is the anterior border of the occipital foramen.

A., critical. (*Κριτικός*, able to discern.) The angle beyond which a luminous ray, passing from a more to a less refracting medium, cannot emerge; from water to air the critical angle is $48^{\circ} 38'$; from glass to air $41^{\circ} 48'$. It is dependent on the fact that the angle of incidence of a luminous ray in passing from a more to a less refracting medium is less than the angle of refraction.

A., ephippial, of Welcker. (*Ἐπίπριος*, a saddle-cloth.) See *A. sphenoidal*.

A., ethmo-granial. (*Ethmoid*, bone; *κρανίον*, the skull.) The angle formed by the basiscranial axis and the plane of the cribriform plate of the ethmoid bone. This angle is about 140° in skulls of Western European races; it diminishes in the higher forms and increases in the lower forms of animals, until the lines become almost continuous in one plane.

A., facial. (*L. facies*, the face. *F. angle facial*; *I. angolo facial*; *G. Gesichtswinkel*.) Camper took this angle by drawing a horizontal line from the external auditory foramen to the lower border of the nostrils, and a facial line passing upwards from the incisor teeth to the glabella; the angle is formed in front of the upper jaw at the intersection of the two lines. It varies from 70° to 80° . Geoffrey St. Hilaire and Cuvier made the horizontal line of Camper oblique by commencing at the cutting edge of the incisor teeth. Cloquet made the apex of the angle at the alveolar border of the upper jaw. Jacquart made the apex of the angle at the nasal spine. Topinard and Broca, whose plan is probably the best, take Cloquet's apical point, i.e. the alveolar border of the upper jaw, and draw a nearly horizontal line through the external auditory meatus, and a facial or vertical one to the ophryon. It is usually from 75° to 80° .

A., frontal. (*L. frons*, the forehead.) The angle formed between a horizontal plane and a line representing the inclination of the forehead.

A., great, of eye. (*F. grande angle de l'œil*.) The inner canthus of the eye.

A., infofacial, of Deschamps. (*Ἰνίον*, the back of the head; *L. facies*, the face. *F. angle infofacial*.) The angle formed by a line drawn from the occiput to the most prominent point of the forehead and one drawn from the occiput to the symphysis of the chin. A line connecting these two in front completes the cephalic triangle.

A., internal. (*L. internus*, inner.) In Botany, the *A. of the loculi of the ovary*.

A., limiting, of resistance. The same as *A. of repose*.

A., mandibular, of Broca. (*L. mandibula*, a jaw.) The angle formed by two lines, one drawn along the lower border of the body of the lower jaw, the other along the posterior border of its ascending ramus.

A., metafacial, of Serres. (*Μετά*,

behind; *L. facies*, a face. *F. angle metafacial*.) The angle that the pterygoid processes make with the base of the cranium.

A., na'si-ma'tar, of Flower. (*L. nasus*, the nose; *mala*, the cheek bone.) A horizontal angle, the apex of which is at the root of the nose and the two sides on the outer margin of the orbits. It averages from 130° to 135° in European, and 140° to 145° in Mongolian races.

A., na'so-ba'sal, of Virchow and Welcker. (*L. nasus*; *basis*, the base. *F. angle nasal*.) The angle that the naso-basilar line makes with the naso-subnasal line, the apex being at the subnasal point. It is about 66° in the European, 71° in the negro.

A., occipital. (*L. occiput*, the back of the head.) The angle formed by the basiscranial axis (a line drawn in the vertically divided skull from the anterior margin of the foramen magnum of the occipital bone) and the occipital plane; it is very obtuse in man, but is almost a right angle in the lower vertebrata.

A., occipital, of Broca. (Same etymon.) The apex of this angle is at the opisthion, one side is formed by a line extending from the opisthion to the root of the nose and the other along the plane of the occipital foramen. In man it varies from 10° to -20° .

A., occipital, of Daubenton. (Same etymon. *F. angle occipital*.) The apex is at the opisthion; one side is the plane of the occipital foramen, and the other is a line extending from the opisthion to the suborbital point. In man it varies from -16° to $+19^{\circ}$.

A. of crystals. (*Κρύσταλλος*, clear ice.) The angles or summits formed by the incidence of the faces of crystals; the three-faced, four-faced, and so on, according to the number of faces by which they are formed.

A. of deviation. (*L. devio*, to go aside.) The angle formed, in the passage of an incident luminous ray through a prism, by the production of the lines of incidence and emergence; it expresses the deviation of light caused by the prism.

A. of divergence. (*L. divergium*, a point of separation. *F. angle de divergence*.) Term applied in Botany to the angle formed between two vertical planes, measured by the axis of the stem and by two consecutive leaves of the same spiral or verticil.

A. of eye. (*F. angle de l'œil*.) The angle formed by the junction of the upper and lower lids, either at their outer or at their inner extremity.

A. of incidence. (*L. incido*, to fall upon.) The angle that a ray of light or sound falling upon a plane surface makes with a line drawn at right angles to this surface.

A. of lips. (*F. angle des lèvres*.) The point of junction, on each side of the mouth, of the upper and lower lip.

A. of lower jaw. (*F. angle de la mâchoire*.) The angle formed between the horizontal and the ascending rami of the inferior maxillary bone. It amounts to 170° to 160° at birth, falls to 160° to 130° during the first dentition, and 115° at the second dentition, approaches a right angle in the adult, and returns to 130° to 140° in age.

A. of neck. (*F. angle de la nuque*.) The angle formed by the junction of the nape and the neck, lying between vertebra prominens and the occiput.

A. of neck of femur. The angle formed by the neck of the femur with the shaft. This

ANGLES, CEPHALIC—ANGLICUS SUDOR.

equals 116° to 138° , with an average of 125° , in man, and is nearly a right angle in woman. In advanced age it is 110° . It is relatively smaller in persons of short stature.

A. of nose. (*F. angle du nez.*) The angle formed by the junction of the nose and the cheek.

A. of polarisation. In polarisation of light by reflection, the angle of polarisation is the angle which the incident ray makes with the reflecting substance when the reflected ray and refracted ray are at right angles to each other. The angle of polarisation for glass is $64^{\circ} 35'$, for water $52^{\circ} 45'$, for diamond 68° .

A. of prognathism. (*Πρό*, forward; *γάθος*, the jaw.) The angle which, according to Topinard, is formed at the alveolar point by the horizontal plane and the line of the profile. It is nearly the same as *A., naso-basal*.

A. of pubis. (*F. angle du pubis.*) The point of junction of the anterior and inferior borders of the body of the pubis.

A. of reflection. (*L. reflecto*, to turn back.) The angle that a ray of light on reflection from any surface makes with a line drawn perpendicularly to this surface. The angle of incidence is always equal to the angle of reflection.

A. of refraction. (*L. refractio*, a breaking back. *F. angle réfringent.*) The angle that a ray of light in passing from a rarer to a denser medium, or *vice versa*, makes with a line drawn at right angles to the plane of junction of the two surfaces.

A. of repose. (*F. reposer*, to rest.) In the case of a body urged over a rough surface, that angle formed by the line of mutual action and the common perpendicular at which arrest of motion occurs.

A. of rib. (*F. angle de côte.*) The roughened line on the outer surface of the rib, between the tubercle and the most convex part, and corresponding to the outer border of the erector spinæ muscle.

A. of Se'cond. The apex is at the basion; the plane of the occipital foramen forms one side, and a line extending to the suborbital point indicates the separation of the cranium from the face, whilst another line, extending to the lower border of the superior maxillary bone, gives the total facial angle. The cerebral angle is about 159° , the facial angle 47° .

A. of supination of the hand. (*L. supinus*, lying on the back.) The extent to which the hand can be supinated after pronation, it amounts to about 180° .

A. of the loculi of the ovary. (*L. loculus*, a little place.) In Botany, the point of the ovarian cavity which corresponds to the line of adhesion of the borders of the carpellary leaf which forms each carpel. Whether the ovary is composed of one or of several carpels the angle of the single loculus, or of the several loculi, always looks to the centre of the flower. Hence its name of internal angle.

A. of the mouth. The point of junction of the upper and lower lip on each side of the mouth.

A. of torsion of femur. (*L. torqueo*, to twist.) The angle which the axes of rotation of the joints at the ends of the bone form with each other. It varies from $7^{\circ} 2'$ to $26^{\circ} 7'$; average $11^{\circ} 8'$.

A. of torsion of humerus. (*L. torqueo*.) The degree to which the humerus is twisted in its lower part, as represented by the

course of the musculo-spinal groove; it amounts to about 180° .

A. of torsion of tibia. (*L. torqueo*.) The angle which the axes of rotation of the joints at the ends of the bone form with each other. It varies from 2° to 32° ; average 19° .

A. of uterus. (*F. angle tubaire de l'utérus.*) The point of union of the lateral and upper sides of the uterus, with which the Fallopian tubes are connected.

A., olfactory. (*L. olfacto*, to smell.) Same as *A., ethmo-cranial*.

A., optic. (*Ὀπτικός*, of sight.) The angle formed by the principal optic axes when the two eyes are directed to the same point; the nearer the object looked at the larger the angle, and *vice versa*.

A., orbital. Same as *A., biorbital*.

A., orbito-occipital, of Broca. The angle formed by two lines, one in the biorbital plane, the other in that of the occipital foramen. See '*Revue d'Anthropologie*,' 1877.

A., parietal, of Quatrefages. (*F. angle pariétal.*) This angle is ascertained by drawing a line, which is more or less vertical, on each side of the head, through the extremities of the bizygomatic line, *i.e.* the horizontal line passing through the broadest part of the face, and the extremities of a line passing horizontally through the broadest part of the frontal bone. The lines usually meet above (forming the pyramidal angle of Prichard); sometimes the lines are parallel, and there is no angle, and occasionally the lines are divergent, and the angle is negative.

A., premaxillary, of Huxley. (*L. præ*, before; *maxilla*, the lower jaw.) Same as *A., basifacial*.

A., pyramidal, of Prichard. See *A., parietal, of Quatrefages*.

A., solid. A term applied to the angles of crystals.

A., sphenoidal, of Welck'er. (*Sphenoid* bone. *F. angle sphénoïdal.*) The apex is at the middle of the crest which separates the optic grooves from the pituitary fossa; one side extends from this point to the basion, and the other side is formed by a line extending from the above point to the naso-frontal suture. The angle looks downwards and forwards.

A., sternoclavicular. Walshe's term for the angle formed by the clavicle and sternum.

A., symphysian. (*Σύμφυσις*, a growing together.) The angle which the symphysian line or profile of the lower jaw makes with the plane of the inferior border of the body of the bone.

A., visual. (*L. visualis*, relating to sight.) The angle formed by the secondary optic axes, lines extending from the optic centre of the lens to the extremities of the object looked at. This angle is larger or smaller, according to the size of the object looked at; and decreases with increased distance if the same object be looked at. The smallest visual angle is about 30 seconds. The smallest perceptible object is calculated by Volkmann to be 0.00013 of a millimetre.

Angles, cephalic. (*Κεφαλή*, the head. *F. angle cephalique.*) The cephalic angles are measurements which have been adopted in Anthropology as bases of comparison of the skulls of different races. The different cephalic angles are described under the special headings, as *Angle, auricular, A., facial*.

Anglicus sudor. (*L. anglicus*, Eng-

ANGOGO—ANGUILLULA.

fish; *sudor*, sweat.) A name of the *Sweating sickness*.

Angogo. A twinfuge employed by the Abyssinians, the product of the *Silene macroulen*.

Angola seed. (G *Angolaerdse*.) The seed of the plant *Abrus precatorius*.

A. weed. A commercial term for the litmus, *Rocella tinctoria*, which is obtained from Angola.

Angolam. The *Alangium decapetalum*.

Angone. See *Anchone*.

Angophrasia. (Άγγος, to press tight the throat, *spasms*, speech.) A term suggested by Kusanani for hemming and hawing, i.e. halting in the speech, and introducing long-drawn or iterated vowels.

Angor. (L. *angor*, a strangling.) A synonym of *Angina*.

With some authors it differs from *angina* in its short duration, but expresses the same anxiety and oppression about the epigastrium.

A. faucium. (L. *fauces*, the upper part of the throat.) Catarrh of the fauces.

A. pectoris. (L. *pectus*, the breast.) A synonym of *Angina pectoris*.

Angora. Turkey; Galatia. Here are mineral waters, some of which are cold and ferruginous, and others, warm and sulphuretted.

Angos. (Άγγος, vessel.) This generally, in medical writings, signifying a blood-vessel, was employed by Hippocrates, vi, *Epid.* s. 5, t. 17, as a name for the uterus.

Angourion. (Άγγούριον, a watermelon.) The cucumber, *Cucumis sativus*.

Angrocum. (F. *angree*, from Madagascar name *Angurek*.) A Genus of the Nat. Order *Orchidaceae*. Hab. Madagascar, and Island of Bourbon.

A. carinatum. (L. *carinatus*, keeled.) The leaves of this plant are purgative and antelmintic.

A. fragrans. (L. *fragrans*, sweet-scented F. *fahane*, G. *Thee von Bourbon*.) The leaves of this plant are entire, coriaceous, and straight-nerved, they are highly fragrant, and have been introduced into Paris as a substitute for Chinese tea, under the name of Thé de Bourbon, or Thé de Fahane; they contain *Coumarin*.

Anguioïdus. (L. *anguis*, a snake; *cedo*, to kill G. *schlangenbittend*.) That which has, or seems to have, the property of killing serpents, as *Aristolochia anguicida*.

Anguidæ. Applied by J. E. Gray and Wagner to an Order of *Reptilia* having the *Anguis* for their type.

Anguiform. (L. *anguis*, a snake; *forma*, likeness. G. *schlangenformig*.) Snake-shaped. Applied to a Family of *Reptilia* having the body like a serpent, also to a Family of *Myriapoda* having the body for the most part linear.

Anguilla. (Akin to ἄγγιλος, an eel.) The eel. A Genus of the Family *Muraenidae*, Suborder *Physostomopodes*. Scales not visible; nostrils anterior or lateral, tan rounded, tongue free, dorsal fin arising somewhat behind the skull, gill openings very narrow, in front of the pectoral fin.

A. anguilla. A synonym of *A. vulgaris*.

A. pekinoensis. Hab. China, especially the river Ning Po. A species which supplies some part of the China tea-leaf.

A. vulgaris. (L. *vulgaris*, common. Έγγιλος. F. *anguille*; I. *anguilla*; S. *anguila*; G. *Aal*.) Hab. Europe. The common eel. Upper

jaw shorter than the lower; dorsal fin arising far behind the pectoral. In autumn the eel leaves the fresh waters for the mouths of rivers or the sea, where it attains sexual maturity and breeds; but the process of reproduction is still obscure; the ovaries are riband-like; the testicles have not been demonstrated. In spring the young fish ascend the rivers. The flesh is of good flavour but fat, and in consequence is, with some persons, difficult of digestion.

Anguilla'ra. Italy, near Lake Sabatino. A mineral water springing from the basaltic lava at a temperature of 21° C. (69·8° F.) It contains sodium chloride 4 grains, calcium chloride 2·5, sodium sulphate 3, magnesium sulphate 2, calcium carbonate 7·5, magnesium carbonate 3·5, and silica 1 grain, in 16 ounces. Used in paralysis and nervous weakness, in chronic rheumatism, and in urinary catarrhs from gravel.

Anguilliform. (L. *anguilla*, an eel; *forma*, resemblance.) Resembling an eel.

Anguill'oid. (L. *anguilla*, an eel; *oides*, form. G. *Ähnlich*.) Eel-like.

Anguilla'ia. Ehrenb. (Dim. of L. *anguilla*, an eel.) A Genus of the Family *Anguillidae*. Buccal cavity small, oesophagus with a posterior bulb, and a chitinous masticatory apparatus.

A. acet'i. (L. *acetum*, sour wine, vinegar.) No anal gland; mouth without lips, the two spicules strongly curved. Found in vinegar.

A. ag'ilis. (L. *agilis*, active.) Found by Leidy in the intestine of *Julius marginatus*.

A. appendicula'ta. (L. *appendicula*, a small appendage.) Found in the *Blatta orientalis*.

A. attenua'ta. (L. *attenuatus*, reduced, shortened.) Found by Leidy in the intestine of *Julius marginatus*.

A. hos'trychi typog'raphi. Found in the intestine of *Bostrichus typographus*.

A. brachy'ra. (Βραχυς, short, *οψά*, the tail.) Found in the caecum of the larva of *Rhacotragus apriinus*.

A. caloso'matis. Found in the ventriculus of *Calosoma sericeum*.

A. carabi clathra'ti. Found in the ventriculus of *Carabus clathratus*.

A. depres'sa. (L. *depressus*, pressed down.) Found in the caecum of the larva of *Cetonia marmorata*.

A. grac'ilis. (L. *gracilis*, slender.) Found in the large intestine of the larva of *Polyphylla fullo*.

Intestinalis. (L. *intestina*, the bowels.) A species often found accompanying the *A. stercoralis*. A synonym of *Leptodera stercoralis*.

A. labia'ta. (L. *labia*, a lip.) Found in the *Polydorus virginensis*.

A. laticol'lis. (L. *latus*, broad; *collum*, the neck.) Found in the *Oxythyrea stictica*.

A. lumbr'ici. (L. *lumbricus*, an earthworm.) Found in the trachea of the *Lumbricus terrestris*.

A. macrou'ra. (Μακρός, long; *οψά*, the tail.) Found in the *Blatta orientalis*.

A. mon'lis. (L. *monile*, a necklace.) Found in the small intestine of *Aphodius conspurcatus*.

A. rig'ida. (L. *rigidus*, hard.) Found in the ventriculus of *Passalus cornutus*.

A. robu'sta. (L. *robustus*, firm.) Found in the intestine of *Ligyra relictus*.

ANGUILLULIDÆ—ANGULICOLLINE.

A. satar'nis. Found in the abdomen of the larva of *Saturnia pyri*.

A. social'is. (L. *socialis*, companionable.) Found in the large intestine of *Acheta abbreviata*.

A. stercora'lis. (L. *stercora*, to dung.) A species found in the intestines of persons suffering from the diarrhoea of Cochinchina. It is a millimètre long, with a cylindrical smooth body, rather narrowed in front and pointed behind. A synonym of *Leptodera stercoralis*.

A. tritici. (L. *triticeum*, wheat.) The *Tylenchus tritici*.

Anguillulidæ. (G. *Aalchen*.) A Family of the Order Nematoda, Class Nematelmintha. The great majority non-parasitic, of medium size, generally with a double œsophageal enlargement, occasionally with caudal glands, never with a caudal sucker. The males possess two equal spicules, with or without accessory pieces. The genital opening ventral. They possess pigment spots or rudimentary eyes. Some live on plants, others in the products of putrefaction or fermentation, and others, again, in the earth or fresh water.

Angui'na. (L. *anguis*, a serpent or snake.) Of or belonging to the Anguis or snake. Applied to a Family of Ophidian reptiles.

Anguin'eous. (L. *anguis*, a snake. G. *schlangenartig*.) Resembling or belonging to a snake.

Anguin'idæ. (L. *anguis*, a serpent.) Name given to a Family of the Ophidia, having the Anguis for its type.

Anguinine. (Same etymon.) Similar to or belonging to a snake.

Anguinoid'æ. Applied by Fitzinger and Eichwald like *Anguinida*.

Anguinoid'eï. Same as *Anguinoidæ*.

Anguin'um. (L. *anguinus*, belonging to a snake.) A snake's egg; it was believed to possess supernatural powers.

Anguish. (L. *angustia*, narrowness, distress. F. *angoisse*; I. *angoscia*.) Distress; anxiety; agony; the distressing oppression generally referred to the epigastrium which accompanies dyspnoea.

A., fe'brile. The distress which often accompanies the outset of a fever.

Anguim seneo'tæ. (L. *anguis*, a snake; *senecta*, old age.) The exuvia or cast skins of snakes, a decoction of which was said to cure deafness and pains in the ears.

Anguiviperæ. Applied by Carus and Ficinus to a Tribe, by Latreille to a Family, of *Reptilia*, including venomous serpents that have the body anguilliform.

Angular. (L. *angulus*, an angle. F. *angulaire*, *angulé*, *anguleux*; G. *eckig*, *winkelig*, *kantig*.) Of or belonging to an angle; formed like an angle.

A. ap'erture. The angle formed by the most divergent rays which can enter the object glass of a microscope; the apex of the angle being the focal point.

A. artery. (L. *arteria angularis narium*; F. *artère angulaire*; G. *Winkelarterie*.) The terminal branch of the facial artery. The part included under this term is given differently by different anatomists. Thus Henle considers it to be all that portion of the facial which runs up by the side of the nose, beyond the origin of the compressor nasi muscle, and which, after sending numerous branches to the ala and dorsum of the nose, divides at the lower margin of the orbicularis

oculi, and anastomoses with the nasal branch of the frontal emerging from the orbit, which sometimes takes its place. Some of the older anatomists apply the term to the trunk of the facial, because it passes over the angle of the lower jaw-bone; and others, again, limit it to that branch only which supplies the inner canthus of the eye, and anastomoses with the frontal.

A. bone. One of the constituents of the mandible or inferior maxillary bone in Sauropsida, Ganoids, and osseous fishes. It lies under and behind the angle of the jaw and the os articulare.

A. convolu'tion. The same as *Gyrus angularis*.

A. cur'vature. See *Spine*, *angular curvature of*.

A. fore'head. (F. *front anguleux*.) A term applied to that form of cranial deformity in which the sides are flattened, and the forehead prominent and angular; according to Morel, such persons are wicked, cruel, and unmanageable.

A. gy'rus. (F. *pli courbe*; G. *zweite*, or *mittlere Scheitellappenwindung*.) See *Gyrus angularis*.

A. mo'tion. The movement of the bones of a joint by which they are placed at a greater or less angle with each other.

A. move'ment. The same as *A. motion*.

A. nerve. (F. *nerf angulaire*; G. *Nasenwinkelnerve*.) A branch of the inferior maxillary nerve distributed to the inner canthus of the eye.

A. pro'cess, exter'nal. (G. *Joehfortsatz*.) The outer termination of the orbital arch of the frontal bone; it articulates with the malar bone.

A. pro'cess, inter'nal. The inner termination of the orbital arch of the frontal bone; it articulates with the lachrymal bone.

A. pro'cessos. (F. *apophyses angulaires*.) The external and internal extremities of the orbital arch of the frontal bone.

A. vein. (F. *veine angulaire*; G. *Nasenwinkelblutader*.) This vein follows the course of the artery, and discharges its contents partly into the ophthalmic vein and partly into the facial vein. It is formed by the junction of the supra-orbital and frontal veins, and receives the nasal and superior palpebral veins.

Angular'is. (L. *angularis*, having angles. F. *angulaire*; G. *eckig*, *winkelig*.) That which belongs or appertains to an angle.

A. scapu'læ muscle. (F. *angulaire de l'omoplate*; G. *Schulterheber*.) A strong muscle situated in front of the shoulder of solipeds. It arises from the transverse processes of the five last cervical vertebrae, and is inserted by a thick and fleshy attachment into the internal face of the scapula. The inferior border is fused with the serratus magnus. It is covered by the cervical trapezius, the mastoido-humeralis, and the small pectoral muscle. It covers the splenius, the inferior branch of the ilio-spinalis, and the common intercostal muscle. Its action is to draw forward the superior extremity of the scapula. It is the *Levator anguli scapulae* of man.

Angulate. (L. *angulatus*, furnished with corners, or angles. F. *angulé*; S. *angulado*; G. *eckig*, *winkelig*.) Having many angles.

Angulicolline. (L. *angulus*, an angle; *collum*, the neck. G. *winkelhäutig*.) Having the neck or corselet angulate, as *Cnecorhinus angulicollis*.

ANGULIFERÆ—ANGUSTIPENNATE.

Anguliferæ. (*L. angulus*, an angle; *fero*, to bear.) A Tribe of the Family *Bacillariaceæ*, having polygonal valves.

Anguliferous. (*L. angulus*; *fero*, to bear. *G. winkelttragend.*) Bearing or presenting angles.

Anguliner'vius. (*L. angulus*; *nervus*, a sinew. *G. winkelnervig.*) Applied by Candolle to leaves in which the fibres that were joined together in the pedicle separate, forming, either with the base or its prolongation, an angle, as in *Dicotyledones*.

Anguliro'strate. (*L. angulus*; *rostrum*, a beak. *G. winkelschnabelig.*) Applied by Illiger, Goldfuss, and C. Bonaparte to a Family, by Savy to a Tribe, of *Passeres*, having the beak angulate.

Angulose. (*L. angulus*, an angle. *G. eckig.*) Having angles.

Angulus. (*L. angulus*; from *ἀγκύλος*, crooked, angular. *F. angle*; *I. angolo*; *S. angulo*; *G. Ecke*, *Winkel.*) An angle.

A. acut'us tib'isæ. (*L. acutus*, sharp.) The crest of the tibia.

A. cos'tæ. (*L. costa*, a rib. *F. angle de côte*; *G. Rippenwinkel.*) The point where each rib is twisted so that the two extremities will not rest on the same plane. The outer surface of the rib is marked at this point by an oblique rough line, which corresponds to the outer border of the erector spinæ muscle. The first and last ribs have no angle, and it is only faintly marked on the eleventh.

A. Ludovi'ci. (*L. Ludovicus*, Louis. *G. Louischewinkel.*) Louis' angle. An angle formed by the recession of the body of the sternum, and the tilting forward of the manubrium; it may be caused by contraction of the upper thoracic space; and also, in emphysema, by excessive expansive efforts which affect the lower and more movable portion of the sternum most.

A. mandib'isæ. (*L. mandibula*, a jaw. *F. angle de la mâchoire inférieure*; *G. Unterkieferwinkel.*) The angle formed between the body of the lower jaw and the ramus. In the adult it varies from 110° to 120°; in infancy it is as great as 140°; or more; and in age it undergoes increase.

A. maxill'isæ inferio'ris. (*L. maxilla*, the jaw-bone; *inferior*, lower.) The same as *A. mandibulæ*.

A. ocula'ris. (*L. oculus*, belonging to the eyes. *F. angle de l'œil*; *G. Augewinkel.*) The angle of the eyelids.

A. oculi exter'nus. (*L. oculus*, the eye; *externus*, outward. *G. äusserer Augewinkel.*) The angle formed by the junction of the outer ends of the eyelids. The outer canthus of the eye.

A. oculi inter'nus. (*L. internus*, inner. *G. innerer Augewinkel.*) The angle formed by the junction of the inner ends of the eyelids; the inner canthus of the eye. The internal is larger than the external angle.

A. op'ticus. The optic angle. See *Angle*, *visual*.

A. pu'bis. (*Pubis*, the bone of that name. *F. angle du pubis*; *G. Schamwinkel.*) The angle, which is nearly a right angle, formed between the anterior and superior borders of the body of the pubis.

A. subpub'icus. (*F. arcade pubienne*; *G. Schambogen*, *Schamwinkel.*) The subpubic arch. The angle formed by the inner borders of

the descending rami of the ossa pubis. It is wide in the female than in the male.

A. vestibula'ris. The angle of the vestibule; a slight projection on the upper part of the lamina spiralis of the cochlea which gives attachment to *Reissner's membrane*.

A. visor'ius. (*L. visor*, one who sees.) See *Angle*, *visual*.

Anguria. (*Ἀγγούριον*, a water melon. *G. Wassermelone.*) A Genus of the Nat. Order *Cucurbitaceæ*. Herbaceous or frutescent plants; flowers dioecious; males collected at the extremity of a long peduncle, in capitula, corymbæ, or umbels; receptacle, which is the tube of the calyx, elongated, cylindrical, ventricose; calyx terminating in five teeth, and corolla rotate; stamens two, short. Female flowers solitary or grouped, with two rudimentary stamens; ovary inferior, unilocular, with two parietal placentæ; ovules numerous; fruit oblong or ovoid; seeds oblong, compressed.

Also, the *Cucurbita citrullus*, or water-melon plant, which is called Angurier in Denmark, and Angurye in Bohemia.

The word Anguria is also used as the specific name of the *Cucumis anguria*.

A. peda'ta. The pedate anguria. *Hab. West Indies.* Fruit edible, with seeds; used for cataplasms and emollients.

A. trifolia'ta. (*L. trifolius*, three-leaved.) The fruit of this plant is eaten in St. Domingo, as a pickle or boiled.

A. triloba'ta. The three-lobed anguria. The fruit of this plant is eaten in the Antilles, preserved in vinegar or boiled.

Angus. The same as *Angos*.

Angustate. (*L. angusto*, to make narrow. *G. verengert*, *verschmälert.*) Made narrow; applied to a leaf which gradually runs out into a point.

Angusta'tio. (*L. angusto*, to make straight, or narrow. *F. angustation*; *G. Verengung.*) Term (*Gr. στενωπία*) used by Galen, *l. de Diff. Morb. c. 7*, for the morbid contraction of a vessel or canal; a straitening or narrowing; angustation.

A. cor'dis. (*L. cor*, the heart.) A term for the systole of the heart.

A. rec'ti. Stricture of the rectum.

Angus'tia. Anxiety; constriction.

A. abdomina'lis pelvis. The abdominal constriction or brim of the pelvis.

A. perine'a'lis pelvis. The perineal constriction or outlet of the pelvis.

A. præcordio'rum. (*L. præcordia*, the diaphragm, the heart. *G. Engbrüstigkeit.*) A synonym of *Asthma*.

Angusticol'line. (*L. angustus*, narrow; *collum*, the neck. *G. schmalhalsig.*) Having the neck or corselet narrow, as *Nebria angusticollis*.

Angustiden'tate. (*L. angustus*; *dens*, a tooth. *G. engezahnig.*) Having narrow teeth, as *Mastodon angustidens*.

Angustifolia planta'go. (*L. angustus*, narrow; *folium*, a leaf.) The *Plantago minor*.

Angustifoli'ate. (*L. angustus*; *folium*, a leaf. *G. schmalblättrig.*) Narrow-leaved.

Angustima'nous. (*L. angustus*; *manus*, a hand. *G. engehändig.*) Applied by A. H. Harvorth to *Crustacea Macroura* having narrow chelæ.

Angustipen'nate. (*L. angustus*;

ANGUSTIREMATOUS—ANHYDROHEMIA.

penna, a wing. *G. engelgelicht*.) Applied by Dumeril to a Family of *Coleoptera* having elytra narrowed at their free extremity.

Angustirematous. (*L. angustus*; *ramus*, an ear. *G. engelgelicht*.) Applied by Harvorth to certain Crustacea having the hind feet terminating in narrow fins.

Angustirostrate. (*L. angustus*; *rostrum*, a beak. *G. engelgelicht*.) Having a narrow beak.

Angustiseptate. The same as *Angustiseptous*.

Angustiseptous. (*L. angustus*; *septum*, a partition. *G. engelgelicht*, *schmaltwandig*.) Applied by Candolle to *Cruciferae* that have the partition of the fruit very narrow.

Angustisiliquous. (*L. angustus*; *siliqua*, a pod. *G. engelgelicht*.) Having the fruit linear, compressed, and narrow, as *Cassia siliqua*.

Angustistellæ. A synonym of *Cidaride*.

Angustura. (From Angustura, a town of South America, where Humboldt first found this substance.) See *A. bark*.

A. bark, false. (*F. angusture fausse*.) The bark, as at one time supposed, of the *Brucia antidysenterica*, but now believed to be that of *Strychnos nux vomica*.

A. bark, true. (*F. angusture vraie*. *G. Angusturarinde*.) Cusparia bark. This bark is the product of *Galipea officinalis* (Hancock) or *fibrifuga* (Baillon), which is found on the banks of the Orinoco, South America. The bark is imported in slightly curved pieces of various lengths, covered externally with a yellowish-grey or whitish wrinkled epidermis, fragile, with peculiar odour, and slightly aromatic bitter taste. The inner surface, touched with nitric acid, does not become blood-red, which distinguishes it from false angustura bark, containing brucia. It contains volatile oil ($C_{12}H_{16}O$), boiling at the high point of $266.1^{\circ}C$. ($511^{\circ}F$.), bitter extractive, resinous substances, caoutchouc gum, lignin, and various salts; also, according to Saladin, a crystallisable substance, *Cusparin*. It is a stimulant tonic, used in malignant bilious fevers, intermittent fevers, and dysentery. Dose, 10–40 grains. See *Cusparia cortex*.

A. ferrugineous. (*L. ferrugo*, iron rust.) The *Brucia antidysenterica*.

A. spuria. (*L. spurius*, false.) See *A. bark, false*.

Angustur'in. A synonym of *Brucin*. Also, the name of a bitter substance found in true angustura bark, which was at one time supposed to be an organic base.

Anguza. The native name of *Ferula alliacea*, and of the *Scorodoma fatidum*; plants, the latter especially, which furnish assafoetida.

Anhæmia. See *Anæmia*.

Anhaltina. (*L. anhelu*, to breathe with difficulty.) Medicines which facilitate respiration. (Parr.)

Anhaltina a'qua. Anhalt water. See *Eau d'Anhalt*.

Anaph'ia. (*Av*, neg.; $\alpha\phi\eta$, touch. *G. Gefühlslosigkeit*.) Diminution or loss of the sense of touch.

Anhelans. (*L. anhelu*, to breathe. *F. anhelans*.) Applied to *Spongia anhelans*, because the tubes which constitute it by their union continually appear to execute in water the movements of diastole and systole of the human chest in breathing.

Anhela'tion. (*L. anhelatio*, from *anhelu*, to pant. *F. anhelation*; *I. anelazione*; *S. anhelacion*; *G. Keichen*.) Shortness of breath, or difficulty of breathing; panting; dyspnea; asthma.

Anhelitus. (*L. anhelu*, to breathe with difficulty.) Irregular breathing; shortness of breath; anhelation.

Anhelous. (*L. anhelosus*, from *anhelu*. *F. anhelous*; *I. anelante*, *affanoso*; *S. anheloso*; *G. keichend*.) Breathing with difficulty.

A. respiration. (*F. respiration anhelouse*.) Quick and laborious breathing.

Anhemasia. (*Av*, neg.; $\alpha\eta\mu\alpha$, blood. *F. anhemase*.) A deficiency of blood.

A. epizootica. (*F. anhemase epizootique*.) A disease which has been noticed by Gelle, and which destroyed many mules a few days after birth. It was characterised by great prostration, a weak and quick pulse, quick breathing, dry and hard feces; it was generally fatal in six to twenty-four hours. The blood was found unclotted, pale rose colour, watery, and without fibrin.

Anhematosis. Piorry's term for *Anamiasis*.

Anhidrosis. (*Av*, neg.; $\lambda\delta\rho\omega\varsigma$, sweat. *F. anidrose*; *I. anidrosi*; *G. verminderte Schweisssecretion*, *Schweisslosigkeit*.) Deficiency or absence of perspiration.

A. localis. (*L. localis*, belonging to a place.) Partial anhidrosis, such as occurs in ichthyosis.

A. universa'lis. (*L. universalis*, belonging to a whole.) General anhidrosis, such as occurs in diabetes.

Anhidrot'ics. (*Av*, neg.; $\lambda\delta\rho\omega\varsigma$, perspiration.) Agents which check profuse perspiration, by their direct or indirect action on the sudoriparous glands. They are—sponging the surface of the body with cold mineral or vegetable acids, or with water as hot as can be borne, or with tepid aromatic vinegar and water; the internal administration of dilute phosphoric and other mineral acids; astringents, mineral and vegetable, as sulphate of copper, acetate of lead, tannin, or gallic acid; oxides, as the oxide of silver or oxide of zinc; tonics, as quinine; and some solanaceous plants, as belladonna and hyoscyamus.

Anhistous. (*Av*, neg.; $\lambda\eta\sigma\tau\acute{o}\varsigma$, a web. *F. anhiste*.) Applied to tissues which are absolutely transparent, and present no structure recognisable by the microscope.

A. membrane. (*F. membrana anhiste*.) The membrana decidua of the uterus.

Anhomom'eri. (*Av*, neg.; $\acute{\alpha}\mu\acute{o}\varsigma$, like; $\mu\acute{\iota}\rho\alpha\varsigma$, a part.) Applied by Blainville to an Order of *Chetopoda*, the bodies of which are formed of dissimilar articulations; anhomomericous.

Anhu'iba. The *Sassafras officinale*.

Anhydros'mia. See *Anhydrohæmia*.

Anhydric. (*Av*, neg.; $\acute{\alpha}\nu\omega\pi$, water. *F. anhydric*; *G. wasserfrei*.) Containing no water.

Anhydride. (Same etymon.) A chemical compound containing no water.

Anhydrides of organic acids may be obtained by distilling the potassium salt of the acid with the chloride of the radical of the acid.

Anhydrite. (*Av*, neg.; $\acute{\alpha}\nu\omega\pi$, water. *G. wasserfreier Gyps*, *Würfelspath*.) Anhydrous calcium sulphate; a transparent mineral occurring in clays with rock salt and gypsum.

Anhydrohæ'mia. (*Av*, neg.; $\acute{\alpha}\nu\omega\pi$,

ANHYDROMYELIA—ANILIN.

water; *αἷμα*, blood.) Piorry's term for deficiency of serum in the blood.

Anhydromyelia. (*Αν*, neg.; *ὕδωρ*, water; *μυελός*, marrow. *F. anhydromyelia.*) Defect or absence of the cerebrospinal fluid.

Anhydrotics. The same as *Anhidrotics*.

Anhydrous. (*Αν*, neg.; *ὕδωρ*, water. *F. anhydrous*; *l. anidro*; *S. anhidro*; *G. wasserlos*, *wasserfrei*.) Without any water; applied to various substances that contain no water in their constitution; without water of crystallisation.

A. alcohol. A synonym of *Alcohol*, *absolute*.

Anhysteria. (*Αν*, neg.; *ὑστέρια*, the womb.) Same as *Ametra*.

Aniba. A Genus of the Nat. Order *Amyrindaceae*.

A. guyanensis. A species supplying some of the caranna resin of commerce.

Aniceton. (*Ἀνικητόν*, from *ἀν*, neg., and *νικάω*, to conquer.) Name of a plaster described by Galen, *l. i, de C. M. sec. Loc. c. 8*, composed of litharge, alum, cerussa, frankincense, and white pepper, held by the ancients to be an unfailing remedy in achorea, or scald-head; it was also called mesianum.

Anicetum. Same as *Aniceton*.

Anicillo. The *Piper anisatum*.

Anidous. (*Αν*, neg.; *ἰδός*, form. *F. anidien*.) In Teratology, applied to monsters presenting general arrest of development. They are more or less globular in form, covered with normal skin, furnished with glands, and it may be hairs; they consist chiefly of adipose and connective tissue, of fragments of bones, and of rudiments of the vertebral column, and of blood-vessels in the neighbourhood of the insertion of the umbilical cord. The heart is imperfect or absent. The head and neural canal, if present, are rudimentary and malformed. The alimentary canal is always in an imperfect condition. Such monsters generally appear to be twins to perfect fetuses.

Anidrosis. (*Αν*, neg.; *ἰδρῶς*, sweat.) A deficiency or absence of perspiration. See *Anhidrosis*.

Also, used (*ἀνιδρωσις*, from *ἀνιδρῶς*, to get into a sweat) by Hippocrates for perspiration.

Anigozanthus. A Genus of the Nat. Order *Hamadoraceae*.

A. floridus. (*L. floridus*, full of flower.) Hab. N. America. A species the root of which, when roasted, is eaten by the natives of the Swan River, although it is acrid when fresh.

Animum. An old term for animé resin.

Anil. The *Indigofera anil*.

Also, a synonym of *Indigo*.

Anilein. A synonym of *Anilin blue* and *Anilin violet*, obtained by the action of alcohol and heat on rosanilin with excess of anilin.

Anileira. A synonym of *Indigo*.

Anilema. See *Anilema*.

Anilesis. See *Anileisis*.

Anilia. A synonym of *Anilin*.

Anilio. Of or belonging to *Anilin*.

A. acid. A synonym of *Nitro-salicylic acid*.

Anilides. A group of chemical compounds analogous to the amides, in which anilin plays the part of the ammonia of the amides; they may be regarded as amides which have their hydrogen more or less replaced by phenyl. They are formed by the action of acid chlorides on anilin, and by heating anilin salts with organic acids.

An'lin. $C_6H_5NH_2$. (*Anil*, the Portuguese name of indigo.) An amidobenzene. A colourless liquid, of burning taste and unpleasant odour, obtained from nitro-benzol by the action of reducing agents, such as the alcoholic solution of ammonium sulphide, zinc, and hydrochloric acid, or iron acetate, which last is that usually employed, or from the dry distillation of indigo, or by boiling indigo with potash ley. Anilin is insoluble in water and chloroform, but is freely soluble in alcohol, ether, and wood spirit. It produces a greasy stain if allowed to fall on paper, which, however, quickly vanishes. Exposed to air it absorbs oxygen, a resinoid mass being formed. The vapour is combustible, and burns with a smoky flame. It is a colourless oily liquid, with faint peculiar odour, density 1.036 at 0° C. (32° F.), boils at 182° (359.6° F.). It is a true base, combining, like ammonia, with acids, but it does not change the colour of litmus. Nearly all its salts are colourless, crystallise readily, and are soluble in water. It is largely employed in the manufacture of colouring matters, and used as a staining agent in microscopical investigations. Anilin is a powerful narcotic poison, whether administered in vapour or in a liquid form. Given to cats and dogs it causes rapid loss of voluntary power, tonic and clonic convulsions, dilated pupils, difficult breathing, tumultuous cardiac action, terminating in coma and death in from half an hour to thirty-two hours after administration. In doses of half a grain, gradually increased, it has been given in chorea with benefit. The salts of anilin appear to be almost inert, though they have been tried in various affections.

The tests for anilin, given by Woodman and Tidy, are—that it has a peculiar tarry smell; that it burns with a smoky flame; turns purple, and then black, with chloride of lime; precipitates gold in a metallic form from a solution of the chloride; produces a rich crimson dye when heated with corrosive sublimate; forms a beautiful violet colour with an aqueous solution of an alkaline hypochlorite.

A. dyes. When anilin is treated with solutions of chloride of lime or chromic acid, various colouring agents of a violet, red, yellow, green, or blue tint may be obtained; these have a special interest on account of the injurious effects that have been frequently observed from wearing articles of dress, as shirts, socks, waistcoats, and gloves, tinted by their means. In some instances arsenic, which is used in the manufacture of the dyes, has been found in the woollen or calico stuff, occasioning the mischief. The effects are most marked in hot weather, when the acid perspiration tends to dissolve out the dye. The symptoms consist in redness and staining of the part, followed by swelling, itching, and smarting, with the formation of little blisters or vesicles, which break and discharge their contents. There is usually well-marked constitutional disturbance, and the injurious effects persist for many months. Bad effects have also been seen from the use of magenta in colouring ices.

Workpeople in manufactories, when there is an atmosphere charged with anilin, are said to suffer from bronchial cough and ulcerations of the scrotum and extremities.

A. sul'phate. $(C_6H_5N)_2H_2SO_4$. Colourless crystals, slightly soluble in water, less so in alcohol. When administered, it may cause a blue colour of the lips, perhaps from the production of

ANILINUM SULPHURICUM—ANIMAL.

a blue dye from oxidation of the anilin in the blood. Used in epilepsy, chorea, and other nervous disorders, in doses of 1 to 2 grains three times a day.

Anil'num sulphur'icum. See *Anilin sulphate*.

Anil'itas. (*L. anus*, an old woman.) A synonym of *Dementia*.

Anillo'rae. A name given to certain Isopodous Crustacea that take up their abode on the surface of a fish, which they quit for another when external circumstances are not desirable; they frequently resemble their host in colour.

Ani'ma. (Akin to *ánuos*, wind. *G. Seele*.) The soul, spirit, or vital principle. Applied anciently to any simple and volatile substance; also, to the purest part of any substance.

Applied to any medicine believed to possess particular virtues or powers in curing the diseases of an organ, as if it were the soul of that organ; thus the hermodactyl was called the anima articularum, or soul of the joints, because esteemed efficacious in arthritic affections.

Applied to the rational soul or intellectual principle of man; also to the vital principle, whether of animals or vegetables; also, to an intelligent principle believed to preside over all the actions of life. See *Animus*.

A. al'ces. Refined aloes.

A. articulo'rum. (*L. articulus*, a joint.) See *Hermodactylus*.

A. dul'cis vini. (*L. dulcis*, sweet; *vinum*, wine. *G. Weinbouquet*.) The aroma of wine.

A. hep'atis. (*L. hepar*, the liver.) A term formerly applied to iron sulphate, because it was believed to be efficacious in liver-disease.

A. mun'di. (*L. mundus*, the world.) The supposed universal present and acting spirit of the universe.

A. pulmo'num. (*L. pulmo*, the lung.) The soul of the lungs; term formerly applied to saffron, from its use in asthma.

A. rhabar'bari. The soul of rhubarb, that is, its purer qualities; refined, or best rhubarb.

A. rhe'i. Infusion of rhubarb.

A. saturn'i. (*Saturnus*, an old name for lead.) Sugar of lead.

A. Stahlia'na. The intelligent principle which Stahl supposed to be the supervising and presiding agent of life; the vital principle which caused all the normal phenomena of healthy life, and also the abnormal manifestations of disease.

A. vegetati'va. (*L. vegeto*, to quicken.) Plastic force.

A. ven'eris. (*Venus*, an old name for copper.) An ancient preparation of copper.

An'ima. (*L. anima*, air.) The swim-bladders of herrings, so called on account of their lightness. They were supposed to be diuretic.

A. deliquat'um. (*L. anima*, life, the mind; *deliquisum*, defect.) Painting.

An'im'al. (*Anima*, the breath, spirit, or life. *F. animal*; *I. animale*; *S. animal*; *G. Thier*.) A living creature; an organised body, endowed with life and voluntary motion.

It was formerly thought that animals could be distinguished from plants by the complexity of their chemical composition, the intricacy and variety of their tissues, the possession of a stomach, the power of locomotion, and the presence of a nervous system, with the attributes of sensation and consciousness. These features are undoubtedly characteristic of the higher members of the animal kingdom, but recent

research has tended to show that in the lower forms of both animals and plants the distinctive features of each kingdom are softened down and the points of similarity so blended that it is impossible to draw any definite line of demarcation between them, and such forms have been collected into a common group or subkingdom, under the name of the "Protista," by Haeckel. The type and central figure of the Protista is the *Amœba*, and from it, as a starting-point, it is easy to pass through *Algæ* to the highest plants, and through sponges to the highest animals.

Putting aside these lowest forms, animals are found to contain a large proportion of compounds in their fluids and tissues, which, like albumen, are composed of carbon, hydrogen, oxygen, and nitrogen, frequently combined with sulphur and phosphorus. These compounds build up a great variety of tissues, as the connective, adipose, cartilaginous, osseous, glandular, muscular, and nervous, each of which is destined to discharge special functions. To nourish the tissues food, consisting of organic compounds already elaborated by plants or animals, is ingested into a stomach and alimentary tract, where it undergoes division and solution, and from which it is absorbed into the circulating fluids. These undergo aëration, absorbing oxygen, and giving off carbonic acid gas, either at the surface of the body, or in more specialised organs, as the gills, tracheæ, or lungs. Motor power, usually required for locomotion, as well as for the internal movements of the body, is effected by means of muscular tissue, the force of which is under the guidance and control of the nervous system. Tactile and visual impressions are perceived by the nervous system in animals of very low organisation. The powers of hearing, taste, and smell, subsequently appear, and along with the increase in the number and variety of these means of communication with the external world, the mind is gradually developed. Reproduction is generally sexual, the young springing from an ovum produced by the female, and fecundated by the male; but generation by fission and asexual generation are occasionally observed.

An'im'al. (*F. animal*; *I. animale*; *G. animalisch*, *thierisch*, *beleb*, *lebend*.) Having life; living; pertaining or belonging to life.

A. ac'id's. Acids existing free or combined in the animal body.

A. ac'tions. The functions and actions of the animal body.

A. arch. (*F. arc animal*.) The series of parts of an animal comprised between the two extremities of the galvanic pile.

A. bath. See *Bath, animal*.

A. char'coal. See *Carbo animalis*.

A. chem'istry. (*F. chimie animale*.) The chemistry which concerns itself with animal bodies, the composition of their tissues, the nature of the changes, both developmental and retrograde, that they undergo, and the processes by which food is assimilated.

A. econ'omy. The doctrine of all matters relating to animal life; physiology.

A. electric'ity. See *Electric organs* and *Electricity, animal*.

A. heat. See *Heat, animal*.

A. jelly. See *Gelatin*.

A. king'dom. (*F. regne animal*; *G. Thierreich*.) This term embraces all those objects the study of which is called zoölogy.

Attempts to classify the animal kingdom have

ANIMAL

been made from a very early period of history. Aristotle (350 B.C.) divided animals into those having red blood and those which in his view were either exsanguineous or possessed only white blood.

Linnaeus (1750) also took the circulatory system as the basis of his classification, and divided animals into those with warm red blood and quadrilocular heart, as mammalia and birds; those with cold red blood and bilocular hearts, as he believed, reptiles and fishes; those with cold white sanies and a heart with a single cavity, as worms and insects.

Hunter (1760), still taking the circulatory system as his basis, arranged all animals into five groups. Those with quadrilocular hearts, mammalia and birds; those with trilocular hearts, reptiles and amphibia; those with bilocular hearts, fishes and most mollusca; those with unilocular hearts, articulata; lastly, creatures in which the functions both of stomach and heart are performed by the same organ, as the medusæ.

Lamarck, considering the nervous system as a means of classification, proposed three divisions, the lowest of which comprised the animals he regarded as apathic or automatic, the next the sensitive, and the highest the intelligent.

Cuvier (1830), taking a wider and more general view of the structure and functions of animals, arranged them in four great divisions—Vertebrata, Mollusca, Articulata, and Radiata.

By Grant (1836) the following classification was advanced:—

I. Subkingdom.—CYCLONEURA, or RADIATA.

- Class 1.—Polygastrica. Class 3.—Polypifera.
" 2.—Porifera. " 4.—Acalephæ.
Class 5.—Echinodermata.

II. Subkingdom.—DIPLONEURA, or ARTICULATA.

- Class 6.—Entozoa. Class 10.—Myriapoda.
" 7.—Rotifera. " 11.—Insecta.
" 8.—Cirrhopoda. " 12.—Arachnida.
" 9.—Annelida. " 13.—Crustacea.

III. Subkingdom.—CYCLOGANGLIATA, or MOLLUSCA.

- Class 14.—Tunicata. Class 16.—Gasteropoda.
" 15.—Conchifera. " 17.—Pteropoda.
Class 18.—Cephalopoda.

IV. Subkingdom.—SPINICEREBRATA, or VERTEBRATA.

- Class 19.—Pisces. Class 21.—Reptilia.
" 20.—Amphibia. " 22.—Aves.
Class 23.—Mammalia.

Milne-Edwards' classification is as follows:

I. OSTEOTHOZOA.

A. Allantoidea.

- Class 1. Mammifera.
" a. Monodelphia. " b. Didelphia.
Class 2. Aves. Class 3. Reptilia.

B. Anallantoidea.

- Class 4. Batrachia.
" 5. Pisces.
" a. Ossei. " b. Chondropterygii.

II. ENTOMOZOARIA.

A. Arthropoda.

- Class 1. Insecta. Class 3. Arachnida.
" 2. Myriapoda. " 4. Crustacea.

B. Vermes.

- Class 1. Annelida. Class 4. Turbellaria.
" 2. Helmintha. " 5. Trematoda.
" 3. Rotatoria. " 6. Astoidea.

III. MALACOZOARIA.

A. Mollusca.

- Class 1. Cephalopoda. Class 3. Gasteropoda.
" 2. Pteropoda. " 4. Acephala.

B. Molluscoidea.

- Class 1. Tunicata. Class 2. Bryozoa.

IV. ZOOPHYTA.

A. Radiaria.

- Class 1. Echinodermata. Class 3. Polyphi.
" 2. Acalepha.

B. Sarcodaria.

- Class 1. Infusoria. Class 2. Spongia.

Huxley (1875) proposed the following:

A. PROTOZOA.

- I. MONERA.—Protamoebidæ, Protomonadidæ, Myxastridæ, &c.
II. ENDOPLASTICA.—Amoebidæ, Flagellata, Gregarinidæ, Acinetida, Ciliata, Radiolaria.

B. METAZOA.

A. GASTRÆÆ.

- i. Polystomata.
Porifera or Spongida.

ii. Monastomata.

A. Archæostomata.

- a. Scolicimorpha.
Rotifera. Nematodea. Hirudinca.
Turbellaria. Oligochaeta.
Nematoda.

β. Cœlenterata.

- Hydrozoa.
Actinozoa.

B. Deuterostomata.

a. Schizocœla.

- Annelida (Polychæta). Gephyrea. Brachiopoda?
Arthropoda. Mollusca. Polyzoa?

β. Enterocœla.

- Enteropneusta. Chaetogenatha. Echinodermata.
γ. Epicœla.

Tunicata. Vertebrata.

B. AGASTRÆÆ (provisional).

- Acanthocephala. Cestodea.

The phylogenetic classification of Hæckel, in which animals are grouped in the supposed order of their descent, is as follows:—

I. Subkingdom.—PROTOZOA.

Type
or phylon.

Principal
branches.

Classes.

A.
Protozoa

- I. Ovularia
II. Infusoria

- { 1. Monera.
2. Amœbina.
3. Gregarina.
4. Acinetæ.
5. Ciliatæ.

ANIMAL.

II. Subkingdom.—METAZOARIA.

Type or phylon.	Principal branches.	Classes.
<i>B.</i> Zoophyta	III. Spongiae	{ 6. Gastræada. 7. Porifera. 8. Coralla.
	IV. Acalephæ	{ 9. Hydromedusæ. 10. Ctenophora.
<i>C.</i> Vermes	V. Acœlomi	{ 11. Archelminthes. 12. Plathelminthes. 13. Nemathelminthes.
	VI. Cœlomati	{ 14. Rhynchocœla. 15. Enteropneusta. 16. Tunicata. 17. Bryozoa. 18. Rotatoria. 19. Gephyrea. 20. Annelida.
<i>D.</i> Mollusca	VII. Acephala	{ 21. Spirobranchia. 22. Lamellibranchia.
	VIII. Eucephala	{ 23. Cochlides. 24. Cephalopoda.
<i>E.</i> Echinoderma	IX. Colobranchia	{ 25. Asterida. 26. Crinoida.
	X. Lipobranchia	{ 27. Echinida. 28. Holothuriæ.
<i>F.</i> Arthropoda	XI. Carides	{ 29. Crustacea. 30. Arachnida.
	XII. Tracheata	{ 31. Myriapoda. 32. Insecta.
<i>G.</i> Vertebrata	XIII. Acrania	{ 33. Leptocardia. 34. Cyclostoma.
	XIV. Monorhina	{ 35. Pisces. 36. Dipneusta.
	XV. Anamnia.	{ 37. Amphibia. 38. Reptilia.
	XVI. Amniota.	{ 39. Aves. 40. Mammalia.

Prof. Ray Lankester's proposal is as follows :

Grade I.—PLASTIDOZOA (Homoblastica).

Phylum 1.—Protozoa.

Grade II.—ENTEROZOA.

A.—CœLENTERA (Diploblastica).

Phylum 1.—Porifera.

2.—Nematophora.

B (of the Enterozoa).—CœLOMATA (Triploblastica).

Phylum 1.—Echinodermæ.

" 2.—Platyelmia.

" 3.—Appendiculata (Parapoda).

" 4.—Gephyræa.

" 5.—Mollusca (Mesopoda).

" 6.—Enteropneusta.

" 7.—Vertebrata.

" 8.—Nematoides.

" 9.—Chætogantha.

A. layer. The serous layer of the blastoderm; it consists of what is now known as the epiblast and part of the mesoblast.

A. magnetism. (*F. magnétisme animal.*) Term for a theory propounded, or arranged into a kind of system, by Valentine Greatrick, in 1666; and revived by Anthony Mesmer, physician, at Vienna, in 1776 or 1778.

The following is his account of the agent which he supposed to exist, quoted from the 'Mémoire sur la Découverte du Magnétisme Animal,' par M. Mesmer, Paris, 1779, p. 74, *et seq.* *Ibid.* 'Avis au Lecteur,' p. 6, in the 'English Cyclo-

pædia:—“ Animal magnetism is a fluid universally diffused; it is the medium of a mutual influence between the heavenly bodies, the earth, and animated bodies; it is continuous, so as to leave no void; its subtilty admits of no comparison; it is capable of receiving, propagating, communicating all the impressions of motion; it is susceptible of flux and of reflux. The animal body experiences the effects of this agent; by insinuating itself into the substance of the nerves it affects them immediately. There are observed, particularly in the human body, properties analogous to those of the magnet; and in it are discerned poles equally different and opposite. The action and the virtues of animal magnetism may be communicated from one body to other bodies, animate and inanimate. This action takes place at a remote distance, without the aid of any intermediate body; it is increased, reflected by mirrors; communicated, propagated, augmented by sound; its virtues may be accumulated, concentrated, transported. Although this fluid is universal, all animal bodies are not equally susceptible of it; there are even some, though a very small number, which have properties so opposite, that their very presence destroys all the effects of this fluid on other bodies. Animal magnetism is capable of healing diseases of the nerves immediately, and others mediately. It perfects the action of medicines; it excites and directs salutary *crises* in such a manner that the physician may render himself master of them;

ANIMALCULA—ANIMÉ GUM.

by its means he knows the state of health of each individual, and judges with certainty of the origin, the nature, and the progress of the most complicated diseases; he prevents their increase, and succeeds in healing them, without at any time exposing his patient to dangerous effects or troublesome consequences, whatever be the age, the temperament, and the sex. In animal magnetism nature presents a universal method of healing and preserving mankind." See *Mesmerism*, *Electro biology*, and *Hypnotism*.

A. muscles. The voluntary muscles.

A. oil. An empyreumatic oil, obtained, along with bone spirit, from the destructive distillation of bone.

A. poisons. The poisons contained in animal bodies, whether natural products, as those of cantharides and the viper, or the result of decomposition, as in putrid meat.

A. quino'idine. See *Quinoidine*, *animal*.

A. starch. A synonym of *Glycogen*.

A. sugar. The sugar of diabetes.

A. temperature. The heat generated in an animal body.

A. vaccina'tion. Vaccination from the heifer.

Animal'cula. (Dim. of *L. animal*, a living being.) Animalcules.

A. semina'lia. (*L. seminalis*, of, or belonging to, seed.) The spermatozoa.

A. spermat'ica. (*L. spermaticus*, of, or relating to, seed.) The spermatozoa.

Animal'cule. (Dim. of *L. animal*. *F. animalcule*; *L. animalculo*; *S. animalillo*; *G. Thierchen*.) A little animal; one whose true figure cannot be ascertained without the aid of the microscope. The word has been used very loosely; microscopic organisms of the vegetable, as well as the animal, kingdom being included.

A. cage. An apparatus fitted for the stage of the microscope for the purpose of confining and limiting the movement of small animals. It consists of a short piece of wide brass tubing, fixed perpendicularly to the margins of a similar sized hole in a flat brass plate, and having the other end closed by a piece of glass; a cap, consisting of a brass tube, closed at one end by a piece of thin glass, slips on to it in such a manner that a drop of fluid placed on the glass of the first tube may be compressed to any required extent by the glass of the cap, and so small objects may be kept still.

A., infu'sory. See *Infusoria*.

A., sem'inal. (*L. seminalis*, belonging to seed.) The spermatozoa.

A., spermat'ic. (*F. animalcule spermaticus*.) The spermatozoa.

Animal'culism. The doctrine of the formation of the embryo from the spermatozoa.

Animal'culist. A term applied to one who attributes various physiological processes to the presence and activity of animalculæ.

Animalculo'vism. (*L. animal*, an animal; *ovum*, an egg.) The doctrine that the embryo is formed by the union of the spermatozoa with the ovum.

Animal'culum. (Dim. of *L. animal*, a living being.) An animalcule.

Animal'ia. (*L. animal*.) The animal kingdom.

Animaliferous. (*L. animal*; *fero*, to bear. *G. thiertragend*.) Bearing animals.

Animal'is. (*L. animalis*, animate.) Of, or belonging to, an animal.

A. facul'tas. (*L. facultas*, capability.) The power of exercising sensation, motion, and the other faculties of the animal body.

A. mo'tus. (*L. motus*, motion.) A synonym of *Muscular motion*.

A. spir'itus. (*L. spiritus*, a breathing, life.) The natural heat of living animals.

Animalisa'tus. (Same etymon.) Applied to inorganic or vegetable matter that has taken the character of animality; animalisate.

Animalised. Transformed into animal substance; become part of the structure of an animal.

Animalist. The same as *Animalculist*.

Animal'ity. (Same etymon. *F. animalité*; *L. animalita*; *S. animalidad*; *G. Thierheit*.) The assemblage of attributes or faculties that distinguish animal organic matter; animal nature; vital activity of an animal body considered as unity.

Animaliza'tion. (Same etymon. *F. animalisation*; *L. animalizzazione*; *S. animalization*; *G. Animalisirung*.) A term for the process by which the nutritious portion of the vegetable food is assimilated to the various substances composing the animal body.

Animalate. (*L. animo*, to give life to. *F. animer*.) To vivify, refresh, or enliven.

Animal'io. (*Lat.*) A quickening; animation.

A. fœtus. (*L. fœtus*, an offspring.) The first consciousness by the mother of fetal movements. See *Quickening*.

Animal'ation. (*L. animo*, to give being. *F. animation*; *L. animazione*; *G. Beecelung, Belebung*.) Term formerly employed for what was supposed to be the particular effect produced by the *vis vite*, by which life is begun and maintained, and by which the fœtus begins to act as a true animal, after the female that bears it has quickened.

A. suspen'ded. Asphyxia.

An'imé gum. (Some have supposed that this word had its primitive form in *εναμον*, a remedy used for arresting hæmorrhage. *F. anime vraie*; *G. Animeharz, Kourbarilharz*.) A substance believed to be produced from *Hymenæa courbaril*, a leguminous tree of South America. It is in small irregular pieces of a pale lemon-yellow or reddish colour, more or less transparent, covered with a whitish powder, brittle, with shining fracture, a feeble but agreeable odour, and a mild resinous taste. It consists of two resins, one soluble, the other insoluble, in cold alcohol, and a little volatile oil. Animé formerly entered into the composition of various ointments and plasters, or dissolved in alcohol or oil was employed as an embrocation, but it is now only used as incense, or for a varnish. The Brazilians use it internally in diseases of the lungs.

Another variety is obtained from the East Indies, and is supposed to be derived from *Vateria indica*.

A variety of copal gum is also known in commerce as animé; it is dug from the earth, and is the product of extinct forests. It has a finely pitted surface.

A. des Indes occidenta'les. The produce of *Hymenæa martiana*.

A. d'oc'cident. The produce of *Hymenæa stilbocarpa*.

A. du Brésil. The produce of *Hymenæa stilbocarpa*.

A. du Mexi'que. The produce of *Hymenæa stilbocarpa*.

ANIMELLÆ—ANISIC ACID.

Animellæ. (G. *Ohrdrüsen*.) Old name for the glands below the ears and lower jaw, according to Vesalius, *l. vi.* The parotid glands.

An'imi. A synonym of *Animæ gum*.

An'imi agita'tio. Agitation of the mind; anxiety.

A. ca'sus sub'itus. (L. *casus*, a falling down; *subitus*, sudden.) A term for fainting.

A. deliquium. (L. *deliquium*, a want.) Fainting.

A. pathe'mata. (Πάθημα, anything that befalls one, impressions.) The passions of the mind.

An'im'in. Name by Unverdorben for a salifiable base discovered in the animal oil of Dippel. It is probably impure *Lutidin*.

An'imisam. (F. *animisme*; S. *animismo*; G. *Animismus*.) Formerly used to denote the Stahlian theory of the soul as the vital principle, the cause of the phenomena of healthy life and of disease.

Now generally used, as by Dr. Tylor, to express the general doctrine of spiritual agency in the operations of nature.

An'imists. A term applied to those physiologists who believed that the anima, or soul, immediately actuated or influenced all the functions of the living body; also called *Stahlians*.

An'imus. (Akin to *Anima*. G. *Geistmuth*, *Gemüth*.) The soul or mind; applied both to the vital and the intellectual principle, but more frequently to the latter, denoting the mind or soul in the sense of a conscious and intelligent being, and so distinguished from anima, which usually indicates the soul in the sense of a living principle.

An'ion. (Ανά, up; ελμι, to go.) An electro-negative body. A term employed in electrochemical action for a body, when separated by electrolysis, which passes in the direction of the current of negative electricity to the positive pole, or anode.

Anirid'ia. (An, neg.; iris. F. *aniridie*; G. *Irisangel*.) Want or defect of the iris.

An'is acre. The *Cuminum cyminum*.

A. agre. The *Cuminum cyminum*.

A. bâlard. The *Carum carui*.

A. de Francoe. The *Anethum fœniculum*.

A. de la Chine. The *Illicium anisatum*.

A. de Paris. The *Anethum fœniculum*.

A. doux. The *Anethum fœniculum*.

A. etoflé. The *Illicium anisatum*.

A. faux. The *Cuminum cyminum*.

A. vert. The *Pimpinella anisum*.

An'isal. A synonym of *Anisaldehyde*.

Anisal'dehyde. $C_6H_4(OCH_3).CHO$.

Formed, along with anisic acid, by the oxidation of anisic alcohol in contact with platinum black; and by the oxidation of essential oils containing anethol by nitric acid. It is a colourless aromatic oil with a burning taste, insoluble in water, soluble in alcohol and ether. It boils at 248° C. (478.4° F.) It forms crystalline compounds with alkaline bisulphates.

Anisan'ctus. Italy, sixty miles from Naples. A sulphuretted and carbonated water.

Anisan'thous. (Ανθος, unequal; ανθος, a flower. G. *ungleichblumenhüllig*.) Applied by G. Allmann to plants having the perianths of different form.

An'isated. (G. *anishaltig*.) Mixed with or flavoured with aniseed.

Anisa'tum. Old name (*vinum*, being

understood) for a wine made of the wine of Ascalon with honey and aniseed.

Aniscalp'tor. (L. *anus*, the breech; *scalpo*, to scratch.) A term applied formerly to the latissimus dorsi muscle, because exerted in the act referred to, used by Bartholin, *Anat.* iv, 2, p. 561.

Anischur'ia. (An, neg.; ischuria. F. *anischurie*.) Incontinence of urine; enuresis; anischury.

An'ise. (F. *anis*; I. *anice*; S. *anis*; G. *gemeiner Anis*; Port. *herba doce*; Dut. *anys*; Arab. *anison*.) The plant *Pimpinella anisum*. Umbels compound; involucre usually absent; calyx obsolete; fruit contracted at the side, ovate; ridges 5, filiform, equal, the lateral on the edge; vittæ numerous; albumen concavo-convex; lower leaves are roundish, cordate, those of the stem pinnate, with wedge-shaped leaflets; fruit downy. Hab. Egypt and Syria; cultivated in France, Italy, and Spain. It contains a volatile, but solid oil, stearoptine of anise ($C_{20}H_{32}O_2$), a fixed oil, and a resin. The oil in use is obtained from the *P. anisum* and the *Illicium anisatum*, which is imported from China. It concretes at 50° F. Sp. gr. .980. It is stimulant, aromatic, and carminative in doses of 1—4 drops on sugar. Said to be galactagogue. It is used by the Arabians in sciatica.

A.-cam'phor. A synonym of *Anethol*.

A. star. (F. *anis étoilé*; G. *Sternanis*.) The *Illicium anisatum*.

A. tree of Flor'ida. The *Illicium Floridanum*.

A. yel'low flowered, tree. The *Illicium anisatum*.

An'iseed. The seeds of *Pimpinella anisum*, or anise.

Anisette de Bor'deaux. (G. *aniswasser*.) Star anise 1000, coriander seeds 60, fennel seeds 60, alcohol 6000, water 4000, grammes. Bruise the seeds, mix with the spirit and the water; distil 10 litres, which keep three or four months; add a sufficiency of gelatin, 6000 grammes of sugar, and 6000 of water; filter. A stomachic and stimulating liquor.

An'is cam'phora. Camphor of anise; a term for a concrete substance, into which and a thin liquid, the volatile oil of anise separates when exposed to a low temperature. See *Anethol*.

A. fruc'tus. (L. *fructus*, fruit.) Aniseed; the fruit of *Pimpinella anisum*. Fruit greenish grey, somewhat hairy, broadly ovate, didymous, the two carpels being nearly separated, crowned with the conical stylopodium and the short styles; each carpel has five low ridges with broad, shallow, intervening hollows; on transverse section 25 to 80 vittæ are seen; albumen grey, oily; odour aromatic; taste sweetish and aromatic. The fruit yields 3 per cent. of fixed oil, which exists in the albumen, and an equal quantity of colourless volatile oil. See *Anise* and *Oleum anisi*.

A. sem'ina. (L. *semen*, a seed.) Anise seed. See *Anisi fructus*.

A. stella'ti se'men. Belg. Ph. The seed of the star anise, *Illicium anisatum*.

A. vulga'ris se'men. Belg. Ph. The seed of the common anise, *Pimpinella anisum*.

An'isic acid. (F. *acide anisique*; G. *Anissäure*.) $C_6H_4(OCH_3).CO_2H$. Methyl-paraoxybenzoic acid. Formed by the oxidation of anisaldehyde and anethol with nitric acid. It crystallises from hot water in long needles, from alcohol in rhombic prisms. It melts at 183° C.

ANISOSTEMONOUS—ANKLE-JOINT.

Wachendorff to flowers in which the number of stamens has no relation with that of the free or adherent petals, as in many *Dipsacæ*.

Anisostemonous. (*Ἀνίστος; στήμων.* *F. anisostémone.*) Term applied to a flower in which the number of stamens is different from that of the petals.

Anisostemopetalous. (*Ἀνίστος; στήμων; πέταλον*, a petal. *F. anisostémopétale.*) Applied by Wachendorff to plants, the stamens of which are unequal in number to that of the divisions of the corol.

Anisosthenic. (*Ἀνίστος*, unequal; *σθίος*, strength.) Of unequal strength; as inequality in the contractile powers of muscles, or of sets of muscles.

Anisotachys. (*Ἀνισοταχίς*, unequally rapid; from *ἄνιστος*, unequal; *ταχύς*, quick.) An old epithet applied to the pulse when characterised by inequality with quickness.

Anisotomidae. (*Ἀνίστος; τομή*, a section.) A family of the Group *Pentamera*, Order *Coleoptera*.

Anisotomous. (*Ἀνίστος; τομή*, section. *F. anisotome.*) Term applied to a leaf, corolla, or calyx, the divisions of which are unequal; oblique.

Anisotropal. (*Ἀνίστος*, unequal; *τρέω*, to turn. *F. anistropale.*) Term applied to substances physically homogeneous, which have the power of doubly refracting a ray of light, like Iceland spar.

Anisotropous. Same as *Anisotropal*.

Anisotrophorous. (*ἄν*, neg.; *ιστρίον*, a nail; *φίρω*, to bear.) Applied by J. E. Gray and Spix to a family of *Chauve-souris* (bald mice) which have no appendage on the nose.

Anisum. (*ἄνισον*, anise. *F. anis*; *I. anice*; *S. anis*; *G. anis*.) The plant anise; also called aniseed.

The official name, U.S. Ph., of aniseed.

A. Africa-num frutescens. (*L. frutescens*; from *frutex*, a shrub.) A synonym of *Bubon galbanum*.

A. fruticosum galbaniferum. (*L. fruticosum*, bushy; *galbaniferus*, galbanum-bearing.) A synonym of *Bubon galbanum*.

A. indicum. (*L. indicus*, Indian.) A synonym of star anise, *Illicium anisatum*.

A. indicum stellatum. (*L. stellatus*, starry.) A synonym of star anise, *Illicium stellatum*.

A. officinale. (*L. officina*, a shop.) The *Pimpinella anisum*.

A. sinense. (*L. sinensis*, from China.) A synonym of the *Illicium anisatum*.

A. stellatum. (*L. stellatus*, starry.) A synonym of the *Illicium anisatum*.

A. vulgare. (*L. vulgaris*, common.) A synonym of the *Pimpinella anisum*.

Anisuric acid. $C_{10}H_{11}NO_4$. A substance formed during the passage of anisic acid through the body. It dissolves easily in alcohol, the solution yielding prismatic needles on evaporation, and in hot water, from which it may be obtained in leafy crystals. When heated it decomposes into anisic acid and glycol.

Anisyl. The hypothetical radical of anisic acid.

A. alcohol. $C_8H_{10}O_2$. Obtained from anisaldehyde by the action of nascent hydrogen, or by heating with alcoholic potash. It forms shining colourless prisms; has a faint odour and pungent taste; melts at 25° C. (77° F.), and

distills without decomposition at 258-8° C. (497-84° F.)

Anitersor. (*L. anus*, the fundament; *tergo*, to wipe.) The latissimus dorsi muscle.

Anjudan. The fruit of the assafœtida plant, *Ferula assafœtida*, which is imported into India from Persia and Afghanistan, and is used by the native physicians as a sudorific.

Ankle. (Possibly from *ἀγκών*, the elbow, which also means any similar curvature; or *Sax. ancleow.* *F. cheville du pied*; *G. Knöchel*.) That portion of the lower extremity where the leg and foot are united, distinguished by a well-known prominence, the malleolus, on each side.

A., amputation at. An operation specially recommended by Syme. The foot being held at a right angle, an incision is commenced immediately below the outer malleolus, and carried across the sole to a point exactly opposite, below the inner malleolus; the extremities of this incision are then joined by another running across the joint; the flap is dissected off the os calcis, the joint opened in front, the lateral ligaments and then the tendo Achillis divided, and the removal of the foot completed; the malleoli are then sawn off, sometimes with a thin slice of the tibia. Several modifications of this operation have been devised. The flaps have been formed from the sides, the hinder portion of the os calcis has been retained, as in Pirogoff's operation, and other minor alterations have been proposed.

A., dislocation of. This displacement seldom occurs without fracture of the fibula, or of the inner malleolus. It may occur outwards, inwards, backwards, or forwards.

In dislocation outwards, the fibula is fractured, and the internal lateral ligament is ruptured, or the inner malleolus fractured; a hollow exists at the seat of fracture, the tibia projects inwards, and the outer edge of foot is raised.

In dislocation inwards, a rare and somewhat severe accident, there is no fracture of the fibula, but the tibia is broken through the malleolus. There is great prominence of the outer malleolus, and the inner edge of the foot is raised.

In dislocation backwards, the capsular and deltoid ligaments are ruptured, the fibula is generally fractured above the malleolus, and the tibia pushed on to the navicular and cuneiform bones. The foot is shortened, the heel lengthened, and the toes point downwards.

In dislocation forwards, the tibia is displaced backwards on to the os calcis, and the inner malleolus may be fractured; the foot is lengthened and the heel shortened; it is a very rare accident.

Reduction is effected by flexing the knee and pulling the foot in a proper direction; leg splints with lateral pieces are then to be applied.

Ankle-joint. A ginglymus between the tibia and fibula above and on the sides, and the astragalus below with its two lateral facets, of which the external is much the larger. The ligaments are three in number, an anterior, an external, and an internal. The anterior is thin and membranous, attached above to the tibia, below to the astragalus. The internal or deltoid is composed of a superficial layer, the anterior fibres of which pass forwards from the inner malleolus to the scaphoid, the middle fibres descending vertically to the os calcis, and the posterior passing backwards to the astragalus. The deep layer consists of strong fibres passing between the inner malleolus and the astragalus.

ANKULĒ—ANKYLOSIS, BONY.

The external lateral ligament consists of three fasciculi extending from the external malleolus to the astragalus in front, to the outer side of the os calcis in the middle, and to the astragalus behind. The transverse ligament of the inferior tibio-fibular articulation takes the place of a posterior ligament. The synovial membrane sends a process upwards between the tibia and fibula. The joint is supplied by the malleolar branches of the anterior tibial and peroneal arteries, and by the branches of the anterior tibial nerves. The parts in relation with the joint from without inwards are the tibia, anterior, extensor proprius pollicis, anterior tibial vessels, anterior tibial nerve, extensor communis digitorum, and peroneus tertius. Behind from within outwards are tibia posterior, flexor longus digitorum, posterior tibial vessels, posterior tibial nerve, flexor longus pollicis, and in the groove behind the external malleolus, the tendons of the peroneus longus and brevis. (Gray)

Ankulē. (Ἀγκυλή, the bend of the arm.) A contracted joint, especially the knee.

Ankuroid. (Ἀγκυρῶν, an anchor; εἶδος, likeness) Hook-like or anchor-like.

A. cavity. A synonym of the middle or descending cornu of the lateral ventricle of the brain.

Ankus. See *Ancus*.

Ankyla. (Ἀγκυλή.) Term used by Galen, l. vii, de C. M. per Gen. c. 8, for the contraction or stiffening of a joint.

Ankyle. Same as *Ankyla*.

Ankyloenteria. (Ἀγκυλή, a loop; ἰντερων, the intestine. F. *ankyloenteris*.) Accidental adhesions between pieces of intestine.

Ankyloblepharon. (Ἀγκυλή, a thong, or loop, βλεφάρων, the eyelid. F. *ankyloblepharon*. G. *Ankyloblepharon, die Verwachsung der Augenlider*.) A term for adhesion of the eyelids to each other.

Ankylocheilia. (Ἀγκυλή, a noose; χείλος, a lip.) Adhesion of the lips.

Ankylochiha. See *Ankylocheilia*.

Ankylocolpus. (Ἀγκυλή, a noose, the womb. F. *ankylocolpus*, G. *die Verwachsung der Mutterscheide*.) Adhesion of the vulva, or walls of the vagina. Imperforate vagina.

Ankylocoré. (Ἀγκυλή, a noose, the pupil of the eye. F. *ankylocoré*.) Adhesion of the pupil.

Ankyloceiré. (Ἀγκυλός, crooked, δακτύλιος, the neck.) Crooked neck; torticollis.

Ankyloeré. (Ἀγκυλός, δέσμη, the neck.) Twisted neck, torticollis.

Ankyloeris. The same as *Ankyloceiré*.

Ankylodontia. (Ἀγκυλός, curved, δόντις, a tooth. F. *ankyodontia*.) A series of teeth irregularly attached to the jaw, bent inwards, or adherent to each other.

Ankyloglossia. (Ἀγκυλή, a noose; γλῶσσα, the tongue.) Adhesion of the margins of the tongue to the gums.

Also, the condition of tongue-tie from a short frenum.

Ankyloglossotome. (Ἀγκυλογλωσσότομος, τμήνω, to cut. F. *ankyloglossotome*, G. *Ankyloglossotom*.) An instrument used in the operation for ankyloglossum.

Ankyloglossum. (Ἀγκυλή, a noose, γλῶσσα, the tongue. F. *ankyloglossum*, l. *ankyloglossum*; S. *angyloglossum*; G. *Ankyloglossum*.)

A term for the condition of one that is tongue-tied.

Ankylomelē. (Ἀγκυλή, a bent joint; μέλος, a limb. F. *ankylo-melē*; G. *Gliederverwachsung*.) Adhesion of the limbs, as fingers, or toes with each other.

Ankylo-mele. (Ἀγκυλός, crooked or curved, μήλη, a probe.) Name used by Galen for a curved probe.

Ankylomerismus. (Ἀγκυλή, a noose, μέρος, a part. F. *ankylomerismus*.) Adhesion of parts naturally free, particularly the viscera.

Ankylopodia. (Ἀγκυλή, a noose, πούς, a foot. F. *ankylo-podia*.) Ankylosis of the instep.

Ankyloproctia. (Ἀγκυλός, crooked; πρωκτον, the anus. F. *ankyloproctis*.) Stricture or narrowing of the anus.

Ankylops. See *Anchylops*.

Ankylo-rhin'ia. (Ἀγκυλή, a noose; ριν, the nostril. F. *ankylo-rhinis*; G. *verwachsene Naselucher*.) Term for Nares coarctae, or adhesion of the nostrils.

Ankylosed. (Same etymon as *Ankylosis*.) Stiff from adhesion.

Ankylosis. (Ἀγκυλῶσις, from ἄγκυλος, curved, or ἄγκυλη, the bend of the arm, a joint bent and stiffened by disease. F. *ankylosis*, G. *Gelenkstetigkeit*.) The morbid consolidation of the articulating extremities of two or more bones, which previously formed a natural joint; a stiff joint.

A. capsula'ris. Capsular ankylosis. Stiffening of a joint from contraction or shriveling of the capsular ligament.

A. extracapsula'ris. Extracapsular ankylosis. Stiffening of a joint from disease of the tissues outside the proper joint structures.

A. intracapsula'ris. Intracapsular ankylosis. Stiffening of a joint from affection of bone, cartilage, or ligament.

A. muscula'ris. Muscular ankylosis. A form which is caused by contraction of muscles.

A. spu'ria. (L. *spurius*, false.) Ankylosis due to rigidity of the soft parts around a joint.

Ankylosis, bony. The form in which the connecting medium is bone, following the complete destruction of the cartilaginous structures of the joint. It is commonly the result of traumatic or pyemic arthritis. If the distortion of the limb or the stiffness renders it useless, the joint may be excised; or the bony structures may be broken through after partially sawing or boring them, or a wedge-shaped piece of bone may be sawn out, and the limb placed in the least inconvenient position.

A., comple'te. Ankylosis of a joint so extensive as to hinder motion altogether, the result of bony adhesion. See *A., bony*.

A., false. (F. *ankylose fausse*; G. *falsche Ankylose*.) Ankylosis due to rigidity of the soft parts around the joint.

A., fibrocel'lular. A synonym of *A., incomplete*.

A., incomple'te. The form in which there is some motion of the joint, in consequence of the connecting medium not being bony. It may be caused by capsular thickening, by fibrous adhesion of greater or less extent between the joint ends of the bones, or by contraction of ligaments and muscle. It is commonly caused by arthritis, but may be the result of lengthened disease. The treatment advised is passive motion,

ANKYLOSTOMUM—ANNI CLIMACTERICI.

alternate hot and cold douches, and, if these do not succeed, the forcible bending of the joint, and the consequent rupture of the adhesions, under ether.

A., ligamen'tous. The form in which the connecting medium is fibrous.

A., os'seous. (L. *osseus*, made of bone.) See **A., bony.**

A., spu'rious. Ankylosis due to rigidity of the soft parts around the joint.

A., true. (F. *ankylose vraie*; G. *wahre Ankylose*.) The form in which the connecting material is of bone.

Ankylostomum. (Ἀγκύλος, curved; στόμα, a mouth.) A species of Nematoid worm discovered by Dubini in the duodenum of man, hence called *A. duodenale*. He found it in five per cent. of the subjects examined at Milan, and it has also been seen in Egypt and Ireland. It is one eighth or one sixth of an inch in length, cylindrical, a little curved, transparent in the anterior fourth, reddish, yellowish, or brownish posteriorly, with a black spot opposite the commencement of the intestine; mouth dorsal, circular when open, 4 hooklets at the bottom of the mouth on the abdominal side. A number are attached to the mucous membrane of the intestine in the centre of a lenticular ecchymosis which they make. There is one male, with double penis, to about three females. (Littre.) Also called *Anchylostomum*, which see.

Ankylo'tia. (Ἀγκύλη, a noose; οὖς, the ear. F. *ancylotie*; G. *eine Verwachsung einer Ohröffnung*.) Atresia auris, or imperforation of the meatus auditorius.

Ankylo'tic. (*Ankylosis*. F. *ankylosique*.) Belonging to ankylosis.

Ankylo'tome. (Ἀγκύλη, a clasp; τέμνω, to cut. F. *ancylotome*.) An instrument for operation in adhesions or contractions, especially of the tongue.

Or (Ἀγκύλος, crooked or curved; τέμνω, to cut), a curved knife or bistoury.

Anky'lure'thria. (Ἀγκύλη, a noose; οὐρήθρα, the urethra. F. *ancylurèthre*.) Adhesion of the walls of the urethra.

Anky'ra. (ἄγκυρα, an anchor, a hook.) A hook.

Anky'risim. (Ἀγκυρίζω, to hook. F. *ankyrisime*.) A form of suture of the skull in which one bone is hooked on to another, as the palatine to the maxillary bone.

Ankyro'i'des. (ἄγκυρα, an anchor; εἶδος, form.) Resembling an anchor; anchor-shaped; ankyroid. Applied to the coracoid process of the scapula, from its resemblance to the beak of an anchor.

Ankyromelë. See *Ankylomelë*.

An'naberg. Germany; Saxony, about eight miles from Wolkstein. Here are mineral waters, the chief constituents of which are sodium, magnesium and calcium carbonate, sodium chloride and sulphate, and a moderate quantity of free carbonic acid gas.

Anna'le. The name in India of the fruit of the *Emblica officinalis*.

Annat'o. See *Annatto*.

Annealing. (Sax. *anelan*; from *elan*, to kindle, to heat, to bake.) The process by which substances naturally hard and brittle are rendered tough. Glass and iron are annealed by gradual cooling; brass and copper by heating and then suddenly plunging in cold water.

An'neau. (Fr.) A ring. See *Annulus*.

An'nee. Hindustani name of a tree said to

increase the appetite, relax the bowels, and remove flatulence. Described as effectual in jaundice and rheumatism. (Waring.)

Annela'ta. (L. *annellus*, a little ring.) A Suborder of the Order *Sauria*. Skin hard, non-scaly; body long, serpentine, divided into rings, which are subdivided by longitudinal furrows; sternum wanting; scapular arch generally rudimentary, as is also the pelvis; limbs usually absent; eyelids and tympanic membrane absent; facial bones united to each other. Inoffensive animals, living on insects and worms.

Annel'ida. (L. *annellus*. F. *annelides*, vers à sang rouge; G. *Rundwürmer*, Ringwürmer.) A Class of the Subkingdom *Annulosa*, or *Vermes*, possessing a cylindrical, more or less elongated body, sometimes unsegmented, but usually presenting a considerable number of rings. The dorsal and ventral surfaces are very similar. The anterior extremity of the body is provided with sensory organs, tactile papillae, eyes, and feelers, or with suckorial apparatus, which is usually of a chitinous character. Processes of chitine forming bristles play an important part in the lower forms. The bristles are arranged on lateral and symmetrical elevations of the body. Beneath the chitinous investment is a layer of longitudinally arranged muscular fibres, by which the undulating movements of the body are produced. The sexes are usually separate. In development there is more or less complete metamorphosis. Gemmation and alternation of generation occur. There is a bilobed supra-oesophageal or cerebral ganglion, from which a filament passes down on either side of the oesophagus, the oesophageal collar, to join a large suboesophageal mass, and from this a double gangliated cord extends beneath the intestine to the extremity of the body, giving off branches to the segments. The same ganglion gives off a long, slender stomatogastric branch distributed to the intestine. The leech and lob-worm are examples.

Annelid'aria. (L. *annellus*, a little ring.) Applied by Blainville to a class of animals with the body divided into rings, which he regarded as intermediate between *Articulata* and *Radiata*.

Annelid'eous. (Same etymon.) Ringed like the earth-worm.

Annel'ides. A synonym of *Annelida*.

Annel'e'a spino'sa. A synonym of *Buryale ferox*.

Annex'us. (L. *adnexus*; G. *verbunden*.) Attached to; fixed against.

An'ni climacter'ici. (L. *annus*, a year; κλιμακτηρικός, from κλιμακτήρ, the round of a ladder; a dangerous point in a man's life.) The *Climacteric years*.

A. crit'ici. (L. *criticus*, decisive.) The *Climacteric years*.

A. decretor'ii. (L. *decretorius*, decisive.) The *Climacteric years*.

A. fata'les. (L. *fatalis*, destined.) The *Climacteric years*.

A. genethli'aci. (Γενεθλιακός, belonging to a birthday.) The *Climacteric years*.

A. gradat'ii. (L. *gradarius*, going step by step.) The *Climacteric years*.

A. hebdomad'ici. (ἑβδομαδικός, belonging to seven.) The *Climacteric years*.

A. hero'ici. (ἥρωικός, heroic.) The *Climacteric years*.

A. natalit'ii. (L. *natalitius*, belonging to one's birth.) The *Climacteric years*.

ANNJANC—ANNULAR.

A. scala'res. (*L. scalaris*, belonging to a ladder.) The *Climacteric* years.

A. scans'iles. (*L. scanalis*, that which may be climbed.) The *Climacteric* years.

Ann'janc. The same as *Andjanc*.

An'non. The name in Egypt of the *Linum usitatissimum*.

Anno'ne. French name for a variety of the red wheat.

Anno'ra. Arabic term for calcined eggshells or quicklime. (Ruland and Johnson.)

Anno'sus. (*L. annuus*, full of years.) A term in Botany applied to plants that have lived many years.

Annota'tio. (*L. annotatio*, a noting down in writing. *Επισημια*.) Old term for the symptoms preceding an attack of ague, or the beginning itself of a febrile paroxysm, as shivering, chilliness, trembling, yawning, drowsiness, &c., according to Gaen (Cnatellus.)

Annot'inous. (*L. annotinus*, a year old.) The last year's shoot rendered visible by an interruption at the point of junction with the previous growth (Cooke)

Annot'o. A dye, obtained from the redish pulp surrounding the seeds of the *Bixa orellana*, or *Orellana*. It is obtained by bruising the fruit, mixing it with water, straining, and allowing the liquid to stand to deposit a sediment; this is dried and made into cakes or rolls. French annotto, called also flag annotto, is obtained from French Guiana, Spanish or Brazilian from Brazil. It is non-crystallisable, brownish-red in colour, with a dul. fracture, a sweetish smoll, and a rough, bitterish taste, it colours water yellow. Chevreul has shown that it contains two colouring principles, orelline or bixine, or bixéine, a white or colourless crystallisable substance, becoming yellow on exposure to the air; and orelléine, which is perhaps only a product of the decomposition of orelline by air and ammonia. The *Terra Orellana* of the shops. Used for colouring cheese and plasters. It has been used in medicine.

Annual. (*L. annuus*, a year *F. annual*; *I. annuale*, *S. annual*; *G. einjährig*; *Gr. ετήσιος*.) Applied to diseases that occur at the same time each year; and also to a plant that continues but a year, for the summer season, or only for a few months.

A. rings. The concentric rings seen in a section of the wood of a dicotyledonous plant, and which indicate the successive annual additions to the stem.

Annuens. (*L. annuus*, to nod.) Nodding; applied to the rectus anticus capitis, because it is employed in nodding or bending the head forward.

Annuen'tes mus'culi. (*L. annuus*, to nod.) The recti antici capitis muscles, from their action.

Annu'tio. (*L. annuus*, to nod.) Nodding, as in assent, and in doing in the sitting posture. Nodding is also an epileptoid condition.

Annular. (*L. annulus*, a ring. *F. annulaire*, *G. ringförmig*.) Pertaining to, or shaped like, a ring, ring-like.

A. bone. The ring of bone into which the membrana tympani is inserted.

A. calcifica'tion. The form of calcification of arteries, in which the deposit is more or less disposed in lines like rings around the vessel.

A. cartilage. A term for the cricoid cartilage.

A. cells. (*F. cellules annulaires*; *G. Ringfaszicellen*.) Cells of plants, of the variety called fibrous, in which the fibre assumes the form of rings on the inner surface of the cell-wall.

A. deformity of skull. A deformity of the skull produced by the pressure of a band put round the head in infancy; a custom adopted by some races of man.

A. em'bryo. An embryo that is curved like a ring around the albumen, as in *Mirabilis jalapa*.

A. finger. (*G. Goldfinger*.) The ring finger.

A. gan'gion. The outer part of the ciliary muscle, formerly called the ciliary ligament.

A. lig'ament of atlas. The transverse ligament of the atlas.

A. lig'ament of ra'dias. A band of fibrous tissue attached to the anterior and posterior edges of the lesser sigmoid cavity of the ulna. It surrounds the head of the radius, a synovial membrane continuous with that of the elbow-joint intervening. The upper border is wider than the lower.

A. lig'aments of ankle. Three in number, viz. an anterior, an internal, and an external one.

The *anterior* presents two parts, an upper and lower, the upper attached laterally to the tibia and fibula, and having one sheath, with synovial membrane, for the tibialis anticus, the lower attached externally to the os calcis, and internally to the plantar fascia and inner malleolus, having three sheaths, with separate synovial membranes, an inner one for the tibialis anticus, the next for the extensor pollicis, and an outer one for the extensor longus digitorum and peroneus tertius.

The *internal* is attached to the inner malleolus above and in front, and to the inner surface of the os calcis below. It has separate sheaths for the tibialis posticus, the flexor longus digitorum, and the flexor longus pollicis. Between the tendons of the two flexors are placed the tibial vessels and nerve.

The *external* is placed below the fibula and attached on the one side to the outer malleolus, and on the inside to the outer surface of the os calcis. It has one sheath, lined by synovial membrane, for the two peronei muscles.

A. lig'aments of carpus. See *A. ligaments of wrist*.

A. lig'aments of tarsus. See *A. ligaments of ankle*.

A. lig'aments of wrist. Two in number, an anterior and a posterior.

The *anterior* is attached externally to the front of the scaphoid bone, the anterior and internal parts, and ridge of the trapezium; and internally to the ulnar and pisiform bones. Above, it is continuous with the fascia of the forearm, and below, with the aponeurosis of the forearm. On the cutaneous surface lie the palmaris longus and the ulnar artery and nerve. The flexor carpi radialis tendon runs in a special sheath close to the ridge of the trapezium, and beneath the chief arch of the ligament pass the four tendons of the flexor sublimis digitorum, the four of the flexor profundus digitorum, the tendon of the flexor longus pollicis, and the median nerve.

The *posterior* consists of some transverse fibres thickening the general aponeurotic fascia investing the muscles of the back of the forearm. Externally it is connected to the outer part of the radius, and internally to the cuneiform and pi-

ANNULARIS—ANNULUS.

form bones. It presents six compartments, each lined by a synovial membrane, viz. from without inwards, one for the first two extensors of the thumb, one for the two radial extensors of the wrist, one for extensor secundi internodii pollicis, one for the common extensors of the fingers and for the extensor indicis, one for the extensor minimi digiti, and, lastly, one for the extensor carpi ulnaris.

A. muscle of Müller. The circular fibres of the ciliary muscle.

A. process. A synonym of the *Pons Varolii*; also called tuber annulare, and corpus annulare.

A. protuberance. A synonym of the *Pons Varolii*.

A. reflector. A synonym of *Lieberkühn's reflector*.

A. vessels. (*F. vaisseaux annulaires*; *G. Ringgefäße*.) A variety of the vascular tissue of plants, in which the fibre is arranged in the form of rings on the inner surface of the vessel.

Annularis. (*L. annularis*, relating to a signet ring.) The cricoid cartilage.

A. ani. The sphincter ani muscle.

A. cartilago. The cricoid cartilage; so called from its shape.

A. digitus. (*L. digitus*, a finger.) The ring or fourth finger.

A. musculus. A synonym of the sphincter ani muscle.

A. processus. The annular process; a synonym of the *Pons Varolii*.

A. vena. The annular vein, the vein between the little and the ring finger.

Annulata. (*L. annulatus*, furnished with rings.) A synonym of *Annelida*. They were divided into Turbellaria, Suctoria, or Apoda, and Chaetopoda, or Setigera.

Annulate. (*L. annulatus*, from *annulus*, a ring. *F. annulé*; *G. geringelt*, ringformig.) Having rings; ringed. Applied to a class of the Arthropoda, in which the body is divided into numerous rings.

In Botany, applied to Ferns in which the spore case is surrounded by a ring or *Annulus*.

Annulated. (Same etymon.) Ringed; applied to roots which have ring-like expansions on the roots, as the *ipeacuanha*.

A. ipeacuanha. The root of the *Cephaelis ipeacuanha*.

Annuli. (*L. annulus*, a ring.) Term applied in Botany to a circular thickening presented by cells and vessels.

A. cartilagin ei. A term applied to the incomplete cartilaginous rings of the trachea.

A. cartilaginei si tracheæ. The cartilaginous rings of the trachea.

A. fibrocartilagin ei. Tendinous rings surrounding the orifices of the ventricles of the heart.

A. of Mörtcher. Ring-like structures in the lamina reticularis of the ductus cochlearis.

A. superstitioni si. Superstitious rings, according to Heucheniuss, in *not. ad Seren.*, p. 66 et seq. Term for rings against colic and epilepsy, formed of various substances, some having gems engraved with mysterious figures and characters, to which marvellous magical and medicinal effects were attributed.

A. tendinophalangea. A name of the lumbricales muscles.

Annulicaudus. (*L. annulus*; *cauda*, a

tail. *F. annulicaudus*; *G. ringechwansig*.) Applied to *Histriionella annulicauda*, the tail of which seems formed of rings when it is contracted; annulicaudous.

Annulicornis. (*L. annulus*; *cornu*, a horn. *F. annulicornis*; *G. ringhörnig*.) Having annulated horns. Applied to *Pandulus annulicornis*, which has the lateral and inferior antennæ annulated with red; annulicornate.

Annuliferous. (*L. annulus*; *fero*, to bear. *F. annulifere*; *G. ringtragend*.) Having or bearing rings.

Annulipes. (*L. annulus*; *pes*, a foot. *F. annulipede*; *G. ringfüssig*.) Having the thighs surrounded by coloured rings, as *Myopa annulipes*; annulipede.

Annuloida. (*Annulosa*; *ειδος*, form.) A Subkingdom of animals according to Huxley; according to others, a section of the Subkingdom *Annulosa*. They have a distinct nervous system in the oral region, and an alimentary canal shut off from the general cavity of the body; a water-vascular system of ducts communicating with the exterior of the body is found in all, and in some there is a true blood-vascular system; the body is not segmented, neither are there bilaterally disposed successive pairs of appendages. This Subkingdom is divided into two Classes, *Echinodermata* and *Scolecida*.

Annulosa. (*L. annulus*, a ring.) A Subkingdom of animals. Body segmented on a longitudinal axis; nervous system consisting of a double series of ganglia connected by filaments, penetrated anteriorly by the œsophagus, and lying along the ventral side of the body; limbs, when present, turned towards the neural aspect of the body. This Subkingdom consists of two Divisions, *Anarthropoda* and *Arthropoda*.

Annulose. (*L. annulus*, a ring.) Ringed.

Annulus. (*L. annus*, a circle.) A ring; a circular opening, or part resembling a ring.

In Botany (*F. annéau*; *G. Ring*), a special organ connected with the sporangium of ferns. The marginal cells of the sporangium hypertrophy, their walls become thick and brown, and form a zone or ring. This annulus may be complete or incomplete, horizontal or vertical, in regard to the axis to which the sporangia are attached; its walls may be parallel or oblique in relation to the axis of the sporangium, median or apiculate, according as it is placed at the base or at the summit of the sporangium. It is complete and horizontal in the *Gleicheniaceæ* and *Hymenophylleæ*, complete and in the form of a band in *Loxosoma*, incomplete and elastic in the *Polypodiaceæ*, apiculate and formed of radiate cells in the *Acrogynateæ*, rudimentary in the *Osmundææ*, absent in the *Angiopteridaceæ*, *Marattiaceæ*, *Daneaceæ*, and the *Ophioglossineæ*. The dehiscence of the sporangium in the *Polypodiaceæ* is due to the elasticity of the annulus.

The term annulus (*F. annéau*; *G. Ring*) is also applied by mycologists to a kind of membrane or filamentous veil which is inserted around the pedicle or foot of the receptacle of a mushroom, and is also attached to the margin of the pileus. It may almost entirely wither up, or disappear, or remain fixed, variously altered into a thin, or rigid, or fenestrated membrane, or, lastly, it may become detached, as in some species of *Lepiota*, and be freely movable up and down the stem.

A synonym of *Dactylius*, and also of the *Vulva*.

A. abdominalis externus. (*L. abdominalis*, belonging to the belly; *externus*, outer.

ANNULUS.

G. vordere, or aussere Leisten- or Bauchring. (L. *abdominalis*.) The external abdominal ring.

A. abdominalis internus. (L. *abdominalis*; *internus*, inner. G. *innere* or *tiefe Leistenring*.) The internal abdominal ring.

A. abdominalis profundus. (L. *profundus*, deep. G. *tiefe Leistenring*.) The internal abdominal ring.

A. abdominalis superficialis. (L. *superficialis*, belonging to the surface. G. *aussere Leistenring*.) The external abdominal ring.

A. abdominis. (L. *abdomen*, the belly.) The inguinal ring. See *Abdominal ring*.

A. albidus. (L. *albidus*, white.) The outer part of the ciliary muscle, formerly called the ciliary ligament.

A. cellulosus. (L. *cellulosus*, full of cells.) The part of the ciliary muscle, formerly called the ciliary ligament.

A. chirurgicus. (L. *chirurgicus*, surgical.) The surgical ring, a name for a metal ring or similar instrument for fixing the eyeball in operations.

A. ciliaris. (L. *cilium*, an eyelash. F. *muscle ciliaire*, G. *Strahlenring*, *Strahlenband*.) The part of the ciliary muscle, formerly called the ciliary ligament.

A. conjunctivæ. (G. *Bindehautring*.) A slight elevation of the conjunctiva surrounding the cornea, especially observed in old people.

A. cruralis. (F. *anneau crural*; G. *Schenkelring*.) The crural ring.

A. cruralis externus. (G. *aussere Schenkelring*.) The external crural ring; the saphenous opening.

A. fibro-cartilagineus. The same as *Annulus fibrosus*.

A. fibrosus. (F. *lame annulaire*; G. *Faserring*.) The fibrous ring. The external laminar part of the intervertebral disc, which forms more than one half of each disc, and consists of concentric laminae of fibro-cartilage and fibrous tissue alternately one with another. Some of the laminae are composed essentially of elastic tissue.

In the tail of the bird the annulus fibrosus replaces the intervertebral disc, it fills up the whole space between the vertebra, and is pierced by the nucleus pulposus, a structure corresponding to the ligamentum suspensorium.

A. fibrosus atrioventricularis. (L. *atrium*, the fore-court of a house, *ventriculus*, a ventricle. F. *anneau or zone fibreuse du cœur*; G. *Faserringen der Atrioventrikularöffnungen*.) The fibrous or tendinous ring of the auriculo-ventricular opening on each side of the heart. It is composed of connective-tissue fibres, which run from the endocardium of the auricle and from the fascia-like subpericardial investment of the heart, near the coronal groove, into the auriculo-ventricular valves.

A. fossæ ovalis. The prominent border, deficient below, of the fossa ovalis of the heart.

A. gangliiformis. (L. *ganglion*, a swelling; *forma*, figure.) The outer surface of that part of the ciliary muscle formerly called the ciliary ligament.

A. gangliiformis tunica choroides. The same as *A. gangliiformis*.

A. inguinalis anterior. (L. *inguinalis*, belonging to the groin, *anterior*, foremost. F. *anneau inguinal inférieur*; G. *vordere Leistenring*.) The external or anterior abdominal or inguinal ring or opening in the external oblique

muscle of the abdomen, from which the inter-columnar fascia is given off.

A. inguinalis externus. (L. *inguinalis*; *externus*, outside.) The same as *A. inguinalis anterior*.

A. inguinalis internus. (L. *inguinalis*; *internus*, inward. F. *orifice abdominal du canal inguinal*, G. *innere Leistenring*.) The internal abdominal or inguinal ring.

A. inguinalis posterior. (L. *inguinalis*, *posterior*, hinder. G. *hintere Leistenring*.) The internal abdominal ring.

A. inguinalis profundus. (L. *inguinalis*; *profundus*, deep. F. *orifice abdominal du canal inguinal*, G. *tiefe Leistenring*.) The deep or internal inguinal or abdominal ring.

A. inguinalis superficialis. (L. *inguinalis*, *superficialis*, belonging to the surface. G. *oberflächliche Leistenring*.) The superficial or external inguinal or abdominal ring.

A. interauricularis. The interauricular ring. The thickened border of the fossa ovalis of the heart.

A. iridis ciliaris. (F. *grand cercle*, or *anneau colore externe de l'iris*; G. *äusserer Kreis*.) The ciliary ring of the iris; the external zone of the iris.

A. iridis externus. (F. *grand cercle*, or *anneau colore externe de l'iris*; G. *äusserer Kreis der Regenbogenhaut*.) The external ring or zone of the iris.

A. iridis internus. (F. *petit cercle*, or *anneau colore interne de l'iris*; G. *innerer Kreis der Regenbogenhaut*.) The internal ring or zone of the iris.

A. iridis major. (F. *grand cercle*, or *anneau colore externe de l'iris*; G. *äusserer Kreis der Regenbogenhaut*.) The larger outer or peripheral ring or zone of the iris.

A. iridis minor. (F. *petit cercle*, or *anneau colore interne de l'iris*; G. *innerer Kreis der Regenbogenhaut*.) The smaller inner or pupillary ring or zone of the iris.

A. iridis pupillaris. (F. *petit cercle*, or *anneau colore interne de l'iris*; G. *innerer Kreis der Regenbogenhaut*.) The inner or pupillary ring or zone of the iris.

A. ligamentosus. The ligamentous ring; a term for the part of the ciliary muscle formerly called the ciliary ligament.

A. membranae tympani. The ring of the tympanic membrane. See *A. tympanicus*.

A. ovalis. (L. *ovatus*, egg-shaped. F. *anneau de Valésiana*.) The oval ring; a prominent edge or border, deficient in the lower part, which bounds the upper part and sides of the fossa ovalis of the heart. The Eustachian valve is continuous with the anterior inferior extremity of the annulus ovalis.

A. purgatorius. (L. *purgatorius*, purgative.) A ring made of glass of antimony, supposed to have the power of purging.

A. repens. (L. *repens*, creeping.) A synonym of *Herpes circinatus*.

A. senilis. (L. *senilis*, belonging to old people.) A synonym of *Arcus senilis*.

A. tendineus. (F. *anneau fibro-cartilagineux de la membrane du tympan*; G. *Schneerring*, *Ringkist*.) The tendinous ring, the thick ring or border which forms the periphery of the membrana tympani.

A. tympanicus. (G. *Trommelfelling*.) The tympanic ring; the osseous ring to which the membrana tympani is attached.

ANNULUS OF THE LEG—ANODYNUM MARTIALE.

A. umbilicalis. (F. *anneau ombilical*.) The umbilical ring; a circular aperture in the median line and near the centre of the abdomen, which is bounded by two semicircular fasciculi of fibres, through which, in foetal life, passed the pedicle of the umbilical vesicle or the narrow canal of communication between the umbilical vesicle and the intestine; the omphalomesenteric vessels; the urachus or canal of communication between the allantois and the bladder; and, lastly, the umbilical veins and arteries.

A. ventriculi. (L. *ventriculus*, the belly.) The pyloric aperture of the stomach.

A. Vieussentii. Vieussens' ring. The thickened border of the fossa ovalis of the heart. It is composed of muscular fibre, and is most prominent above and to the inner side of the ring.

Annulus of the leg. A fibro-cellular, annular thickening, two or three inches wide, round the lower part of the leg, most common in women.

Annus climactericus. (L. *annus*, a year; *climactericus*, belonging to the critical epoch.) The climacteric year; applied to the 63rd, and also to the 81st year of man, because men were supposed more likely to die during these years; a notion, however, without foundation.

Anocarpeus. (Ἄνω, above; καρπός, fruit.) Term in Botany, applied to ferns that bear the fructification on the upper part of their frond.

Anocathartic. (Ἄνω, upwards; καθαίρω, to purge.) Having power to purge upwards, or cause vomiting; emetic.

Ano-cavernosus. (L. *anus*, the fundament; *cavernosus*, full of holes.) A synonym of the *Accelerator urinae*, so called because of its relation to the corpus cavernosum of the penis.

Anocchiatra. (G. *bösen Blick*.) The evil eye. A supposed malign or baneful influence exerted by one person on another through the eyes.

Anocheilon. (Ἄνω, upwards; χεῖλος, a lip. G. *Oberlippe*.) The upper lip. Also, a man with thick upper lip. Hoffmannus, *Idæ Machin. Human. v. 28*, § 1.

Anocheiloschisis. (Ἄνω; χεῖλος; σχίσμα, a cleaving.) Fissure of the upper lip; harelip.

Anocheilum. The same as *Anocheilon*.

Anocheilus. The same as *Anocheilon*.

Anochilon. The same as *Anocheilon*.

Anochilus. The same as *Anocheilon*.

Anochus. (Ἄνοχθι, a holding back, from ἀνίσχω, to hold up.) A stoppage of the intestinal action.

Anococcygeal. Pertaining to, or in the neighbourhood of, the anus and coccyx.

A. raphæ. (Ῥαφή, a seam.) A band of connective tissue extending from the posterior border of the anus to the coccyx, into which the fibres of the sphincter ani externus and those of the levator ani muscles are inserted.

Anocœlia. (Ἄνω, upwards; κοιλία, the belly. L. *venter superior*; F. *anocœlie*; G. *Oberleib*.) The upper portion of the belly. Also, the chest.

Anocœliadelphous. (Ἄνω, above; κοιλία, belly; ἀδελφός, brother.) In Teratology, monsters in which the upper parts of the two trunks are united.

Anode. (Ἀνά, up; ὁδός, a way. G.

Sauerstoffpol.) The positive pole of a Voltaic or galvanic battery, so called because from its surface the electric current enters the electrolyte.

Anodermel. (Ἀνά, without; δέρμα, a skin.) A Group of sessile *Polypora*, in which the pileus does not possess a hard woody surface.

Anodermeous. (Ἀνά, without; δέρμα, skin.) Term employed in Botany to designate the receptacles of certain Fungi, of which the external surface does not present the aspect of an epidermis.

Anodia. (Ἀνωδός, not singing, from ἀν, neg.; ᾠδή, a song.) A dissonant and unemphasised tone of speech.

Anod'ic. (Ἀνά, upwards; ὁδός, a way.) Proceeding upwards, or ascending; applied by Dr. Marshall Hall to the ascending action of the nervous influence.

Anodin'ia. (Ἄν, neg.; ὠδία, the pain of childbirth. F. *anodinie*; G. *Wehenmangel*.) Absence of pains in childbirth.

Anod'inous. (Same etymon. F. *anodine*; G. *ohne Geburtswehen*.) Having no labour pains.

Anod'mia. (Ἄν, neg.; ὀδμή, smell. G. *Geruchlosigkeit*.) Absence of the sense of smell.

Anod'mous. (Same etymon.) Having no smell.

Anodont. See *Anodontous*.

Anodon'tia. (Ἄν, neg.; ὀδοός, a tooth.) An anomaly occasionally observed in man, in which no teeth are developed.

Anodont'idæ. (Same etymon. F. *anodontides*.) Name by A. Smith for a Family of serpents having the *Anodon* for their type; and by Rafinesque for a Tribe of *Pedifera* having the *Anodontia* for their type.

Anodontid'ia. Same as *Anodontidæ*.

Anodontoph'ora. (Ἄν, neg.; ὀδοντοφ'ορε.) Having no odontophore or tooth-bearing structure; a term applied to some Mollusca.

Anodontous. (Ἄν, neg.; ὀδοός, a tooth. F. *anodonté*; G. *zahnlos*.) Having no teeth.

Anodous. Same as *Anodontous*.

Anodus. (Ἀνωδός, a way up; from ἀνά, up, ὁδός, a way.) That which is separated from the nutriment by the kidneys; the urine. (Dornæus.)

Anodyne. (Ἄν, neg.; ὀδύνη, pain. F. *anodyn*; G. *schmerzstillend*.) Driving away pain; applied to medicines which, by their soothing qualities, assuage pain.

A. Hoffman's. The *Spiritus ætheris sulphurici compositus*.

A. neck'lace. (G. *schmerzstillendes Halsband*.) A necklace made of the roots of henbane, of the seeds of the *Coix lachryma*, or Job's tears, of allspice steeped in brandy, and other substances, and supposed to induce sleep, lessen the sufferings of dentition, and such like.

Anodynes. (Same etymon. F. *anodins*; G. *schmerzstillende Arznei*.) Medicines which relieve pain. Such are opium, alcohol, chloroform, chloral, Indian hemp.

Anodyn'ia. (Ἀνωδυνία; from ἀν, neg.; ὀδύνη, pain. F. *anodynne*; G. *Gefühllosigkeit, Schmerzlosigkeit*.) A term used by Galen, Com. 2, in l. i. *Epid. t. 46*, for want or absence of pain; applied especially to such exemption in child-bearing, partial or total, and thus synonymous with anæsthesia.

Anodynum martiale. (Ἀνωδυνον, allaying pain; L. *Martialis*, belonging to Mars, an old name of iron.) Old term for the precipi-

ANODYNUS—ANOMIA.

tate formed by adding potash to a solution of the *Ferrum ammoniacum* in water.

A. minerale. (*Mineral.*) Old term for *Sai prunella*, also, for *Nitrum stibiatum*.

Anodyne. See *Anodyne*.

Anœa. (*Anœa*, want of understanding. *L. imbecillitas, dementia*, *F. anœie*; *G. Blödsinn, Verstandeschwäche, Verstandeslosigkeit.*) *Amen-tia*, or *idiotism*, also, *delirium*.

Idiotism; according to Dr. Mason Good, a variety of *Moria demens*, consisting in general obliteration of the mental powers and affections; paucity or destitution of ideas, obtuse sensibility, vacant countenance, imperfect or broken articulation, with occasionally transient and unmeaning gusts of passion.

Anœsia. (*Anœsia*, want of understanding. *F. anœsie*; *G. Sinnlosigkeit, Gedankten-sigkeit*.) Want of sense.

Anœia. Same as *Anœa*.

An'ol. $C_8H_{10}O$. Also called allyl-phenol. It is furnished along with paraoxybenzoic acid by heating anethol with potash at $200^{\circ} C$ to $230^{\circ} C$ ($392^{\circ} F$. to $446^{\circ} F$.) It crystallises in brilliant white shining plates, melting at $92.5^{\circ} C$. ($198.5^{\circ} F$.)

Anolea. (*An, neg., ωλίον*, the forearm. *F. anolea*.) Applied by Ranzani to a division of accephalus malformations, having no arms.

Anolis. A Genus of the Family *Iguanidae*. Pleurodont lizards, having the toes widened and united at the base; jugular sac very dilat-able.

A. bullaria. (*L. bulla*, a bubble. *F. roquet*.) A species used in the Antilles as a sudorific and antisyphilitic when eaten raw. A West Indian species is esteemed for its anticancerous properties.

Anoma morun'ga. Lour. A synonym of *Moranga pterygosperma*, Gaertn.

Anomæos. (*Ἀνόμοιος*, dissimilar.) A term employed by Hippocrates to designate viscid or unnatural humours.

Anomalia cia. See *Anomalacia*.

Anomalia. (*Ἀνωμαλία*, irregularity. *G. Ungleichmassigkeit, Regelwidrigkeit*.) Term applied to exceptional or unusual phenomena or conditions.

A. nervorum. (*L. nervus*, a nerve.) The nervous diathesis.

Anomaliflorous. (*L. anomalos*, irregular, *ἄνα*, a flower. *F. anomaliflora*; *G. an-glerhdlung*.) Applied by H. Cassini in Synantheræ to the calathidium of the discus and corolla when composed of flowers with anomalous corolla.

Anomalipede. (*L. anomalos*, *pes*, a foot. *F. anomalipede*; *G. an-gleichfußig*.) Having different feet, as *Oxyurus anomalipes*, because its feet are different coloured.

Anomalis. (*F. anomauz*.) Same as *Anomalous*.

Anomalocephalus. (*Ἀνώματος*, irregular, *κεφαλή*, the head.) One whose head is deformed.

Anomalo cia. (*Ἀνώματος*; *οἰκία*, a habitation. *F. anomalacia*; *G. anomalokia*.) Name by Richard for a Class having hermaphrodite and unisexual flowers on the same stem, or on different individuals.

Anomalogona'ti. (*Ἀνώματος*; *γονά-τιον*, the hip-joint.) A Group of Carnate Birds, founded by Prof. Garrod, to include woodpeckers, passerines, and swifts, characterized by

the absence of the rectus femoris muscle, which he calls the ambiens muscle.

Anomalolog'ia. (*Ἀνώματος*, irregular; *λόγος*, an account.) A discourse or treatise upon anomalies.

Anomalonomia. (*Ἀνώματος*; *νόμος*, a law. *F. and G. anomalonomie*.) The doctrine of the laws according to which irregularities or apparent anomalies occur.

Anomalonomy. (Same etymon.) The rules in accordance with which teratological deviations occur.

Anomalop'odes. (*L. anomalos*, irreg-ular; *pes*, a foot. *F. anomalopede*; *G. un-gleichfußig*.) Applied by Klein to a Family of *Mammifera* having the toes united by a mem-brane.

Anomalop'orous. (*Ἀνώματος*, irreg-ular; *πόρος*, a pore. *F. anomalopore*; *G. ungleichlöchig*.) Having cellules or pores of different size.

Anomalotes. (*Ἀνώματος*, irregu-larity.) An anomaly.

Anomalous. (*Ἀνώματος*; from *ἀν*, neg., *οματος*, equal. *F. anomal*; *G. anomalisch, abweichend, regelwidrig, ungleichmässig*.) Not according to rule, or regular course, irregular, out of rule. Applied to diseases, or to symptoms of disease, which do not appear in the usual form or in regular course.

Anomalur'idæ. (*Ἀνώματος*; *οἰρά*, the tail.) An African Family of Order *Rodentia*, with a single premolar in each side of the upper and lower jaw; molars not tuberculate, but with transverse enamel ridges, no postorbital processes; large, subovate, suborbital fossæ and palate deep, notched behind. There is a lateral patagium or flying membrane stretching from carpus to thigh, supported on a cartilaginous process attached to olecranon; ribs sixteen pairs; tail long and hairy.

Anom'alus mus'culus. (*L. anomalos*, irregular; *musculus*, a muscle.) The anomalous muscle. A slender muscle, described by Albinus, of an inch in length, lying upon the superior maxillary bone beneath the levator labii superioris alaque nasi; it is connected by its lower end with the origin of the compressor naris, and by the other is attached to the nasal process of the superior maxillary bone. It is supplied by the facial nerve.

Anomaly. (*Ἀνώματος*, irregular, from *ἀν*, neg., *οματος*, even, consistent. *F. anomalie*; *G. Abweichung, Unregelmässigkeit, Regelwidrig-keit*.) An exception to the ordinary course of rule; deviation from specific type. Applied to a monster. An anomaly may occur from varia-tion, as where a walnut presents three carpels instead of two, from duplicity, as where a single culm of wheat, dividing, bears two ears, from hypergenesis, or excess of growth, which may either be in point of number, as where an extra digit is developed on the hand, or in point of size, as in a giant, from ageneia, or arrest of growth, as in a dwarf; from arrest of development, as where the eye is not completely formed; from excess of development, as where the mamma is developed in a man, or from displace-ment.

Anom'ia. (*A. neg*; *νόμος*, a law. *F. anomalie*; *G. Gesetzlosigkeit, Gesetzwidrigkeit*.) Lawlessness, abnormality.

Anomia. A Genus of the Family *Osireidæ*. Shell suborbicular; right valve sessile, perforated

ANOMIDES—ANOPHTHALMIA.

for the passage of a delicate byssus; left valve with four distinct depressions for muscles.

A. ephippium. (Ἐφίππιος, for putting on a horse, as a saddle-cloth. *F. pelure d'oignon*.) A species found on the shores of the Mediterranean Sea, and which is eaten.

Anomides. (Ἀνομος, without law; εἶδος, resemblance. *F. anomides*.) Applied by Duméril to a Family of *Orthoptera* having an odd appearance.

Anommatous. (Ἄν, neg.; ὄμμα, an eye.) In Teratology, a monster destitute of an eye.

Anomocarpous. (Ἀνομος, without law; καρπός, fruit. *F. anomalocarpe*; *G. anglichfruchtig*.) Having anomalous fruit.

Anomocephala. (Ἄ, neg.; νόμος, law; κεφαλή, head.) All animals presenting some deformity of the head.

Anomocephalia. (Ἀνομος, without law; κεφαλή, the head. *F. anomocephalia*.) The state of one that is anomocephalous.

Anomocephalous. (Same etymon. *F. anomocephale*.) Applied by Geoffroy-Saint-Hilaire to animals, the head of which accidentally presents some deformity.

Anomodonta. (Ἀνομος, without law, irregular; ὀδούς, a tooth.) An Order of extinct reptiles having the mouth beak-like, as in the turtle; jaws toothless, or bearing two tusk-like teeth; vertebrae biconcave; anterior trunk-ribs with bifurcate heads; pectoral and pelvic arches strong; limbs specially fitted for walking; no exoskeleton. Chiefly found in Triassic deposits.

Anomomeria. (Ἀνομοιομερής, consisting of unlike parts. *F. anomomeria*.) A combination or conjunction of anomalous parts.

Anomous. (Ἀνόμοιος, unequal.) A term formerly applied to fluids of the body abnormally viscid or irregular in character.

Anomolodiperianthus. (Ἀνόμοιος, unlike; δίσ, two; περί, about; ἄνθος, a flower.) Applied by Wachendorf to plants having the number of divisions of the calyx different from that of the segments of the corolla.

Anomophyllous. (Ἄ, neg.; νόμος, law; φύλλον, a leaf.) Term applied in Botany to plants the leaves of which are irregularly disposed.

Anomopteris. (Ἀνομος, without law; πτερίς, fern. *F. anomopteris*.) A species of fern found in the new red sandstone, which differs from all other recent and fossil ferns.

Anomoura. The same as *Anomura*.

-Anomous. (Ἀνωμος, without shoulders. *L. anomus*.) Without shoulders, or destitute of a humerus.

Anomphalous. (Ἄν, neg.; ὀμφαλός, navel. *F. anomphale*; *G. ohne Nabel*.) Having no navel; "quales fuerunt Adam et Eva, utpote creati non per vasa umbilicalia nutriti;" as gravely recorded by P. Ammannus, *Irenic*, p. 102.

Applied erroneously to children born with extroversion of the bladder, as if they had no umbilicus or navel, it not being distinctly seen in the confusion of parts.

Anomura. (Ἀνομος, without law; οὐρά, the tail.) A Tribe of the Order *Decapoda*, differing in the termination of the abdomen from the other Tribes, *Macrura* and *Brachyura*, being neither so large as that of the former nor so imperfect as that of the latter. The Hermit-crab is the type.

An'omus. (Ἄ, neg.; νόμος, custom. *G. gesetzlos, gesetzwidrig*.) Lawless, not according to rule.

An'ona. (A native Banda word.) A Genus of the Nat. Order *Anonaceæ*.

A. cherimolia. Mill. The cherimolier of Peru; esculent.

A. muricata. (L. *muricatus*, pointed like a murex shell. *F. anone hirsuta, cachiman, pomme cannelle*.) Sour sop. A plant growing in French Guiana; the leaves are used as an antispasmodic, and the seeds as an emetic.

A. odoratissima. (L. *odoratissimus*, very fragrant.) Ylang-ylang. A species yielding a very fragrant essential oil.

A. palustris. (L. *paluster*, marshy.) Hab. West Indies. The fruit is called the alligator pear, but as it contains a narcotic principle it is not eaten. The wood, called West Indian corkwood, is very light.

A. reticulata. (L. *reticulatus*, net-like.) Custard apple, sweet sop, or bullock's heart. Used as *A. squamosa*.

A. squamosa. (L. *squamosus*, scaly. *F. anone écailleuse*; Mal. *Atta marum*; Duk. *Seetaphut*; Hind. *Ata*; Beng. *Loona Meba*; Tam. *Sita-pullum*.) Custard apple. A small Indian tree; leaves oblong, glabrous, with pellucid dots; sepals three; petals six in a double row. The leaves, gently bruised and mixed with salt, are applied to malignant tumours. The bark is a powerful astringent and tonic. The seeds contain a highly acrid principle fatal to insects; hence in India, mixed with grain and used as a powder for the hair. The fruit is succulent and delicious.

A. triloba. (Τρίς, thrice; λοβός, a lobe.) The three-lobed anona. A synonym of *Carica papaya*.

A. tripetala. (Τρίς; πέταλον, a leaf.) A synonym of *A. cherimolia*.

Anona'ceæ. An Order of the Thalamifloral Dicotyledons allied to the *Ranunculaceæ*, with distinct carpels, no stipules, a valvate corolla, and ruminate albumen. The custard apples of the E. and W. Indies and the cherimoyer fruit of Peru belong to it.

Anona'ceous. (F. *anonacé*.) Having the characters of the *Anonaceæ*.

Ano'neous. Same as *Anonaceous*.

Ano'nis. (Ἀνώνις, or ὀνώνις.) The root was employed by the ancients as a calefacient, and the bark macerated in wine as a diuretic and lithontriptic. It is the *Anonis antiquorum*.

Anonych'ia. (Ἄν, neg.; ὄνυξ, the nail. *F. anonychic*.) Defect of the nails of the fingers or toes.

Anon'ymos. (Ἄν, neg.; ὄνομα, a name.) A plant of Seythia, anciently in request as a vulnerary, probably the *Ajuga pyramidalis*, or *A. iva*. (Waring.)

Also, applied to a species of wild madder.

Also, applied to a species of *Polygala*.

Also, applied to a species of *Spiræa*.

Also, applied to the cricoid cartilage.

Anon'ymous. (Same etymon. *G. namenlos, unbenannt*.) Nameless.

Anopet'alus. (Ἀνώ, upwards; πέταλον, a leaf. *F. anopetale*.) Having erect petals, as *Sedum anopetalum*.

Anophr'esia. The same as *Anophrasia*.

Anopht'al'mia. (Ἄν, neg.; ὀφθαλμός, the eye. *F. anophtalmis*; *G. Augenlosigkeit*.) Want or absence of eyes.

ANOSIA—ANSÆ CERVICALES.

straighten. *F. anorthose*; *G. Aufrichtung*.) Term for erection.

Also (*av*, neg.; *ὀρθός*. *G. mangelnde Aufrichtung*.) Deficient erectility; want of erection.

Anos'ia. (*A*, neg.; *νόσος*, disease. *F. anosie*; *G. Krankheitslosigkeit*.) Absence of disease, therefore the condition of health, the end and aim of medicine.

Anos'mia. (*Av*, neg.; *ὀσμή*, smell. *F. anosmie*; *G. Geruchlosigkeit, Geruchsmangel*.) Loss of the sense of smell.

A. aton'ica. (*Atrovia*, relaxation, from *ἐ*, neg.; *τείνω*, to stretch.) Loss of smell from defective nerve power.

A. organ'ica. (*Ὀργανον*, an instrument.) Organic anosmia. Loss of smell from apparent physical change in the parts subservient to that sense.

Anosmo'sia. The same as *Anosmia*.

Anos'mous. (*Ἀνοσμος*.) Having defect of smell.

Anosphra'sia. (*Av*, neg.; *ὀσφραγία*, smell.) The absence or loss of smell.

Anosphre'sia. (*Av*, priv.; *ὀσφρησις*, the sense of smell. *F. anosphresie*.) The absence or loss of the sense of smell.

Anosteoph'ora. (*Av*, neg.; *ὀστίον*, a bone; *φορέω*, to bear. *F. anosteophore*.) Applied by J. E. Gray to an Order of *Antliobrachiophora* having no hard mass in the body.

Anosteozoa. Same as *Anosteozoa*.

Anosteozoa'ria. (*Av*; *ὀστίον*; *ζῴιον*, dim. of *ζῶον*, an animal. *F. anosteozoaire*.) Applied by Blainville to animals which have no bone, properly so called, as Crustacea and Insecta.

Anostomous. (*Avos*, above; *στόμα*, a mouth. *G. aufmundig*.) Having the mouth above the snout, as *Salmo anostomus*.

Anosto'sia. (*Av*, neg.; *ὀστίον*, a bone. *G. Knochenatrophie*.) Want of development or atrophy of bone.

A. interstitia'lis. (*L. interstitium*, a space between.) Term applied by Bruns to senile atrophy of bone.

Anotasier. (Arab.) Name for *Sal ammoniacum*.

Ano'tous. (*Av*, neg.; *ὄτις*, the ear.) Without an ear.

Anou'ra. (*Av*, neg.; *ὀυρά*, a tail.) An Order of the Class *Amphibia*, including the frogs and toads. Skin naked; body thick set, having neither tail nor gills in the adult state; two pairs of limbs well developed; dorsal vertebrae procelious, having long transverse processes, which take the place of the rudimentary ribs; bones of forearm and leg united into one bone; hind limbs usually fitted for swimming. This Order is also called *Batrachia*.

Anou'rous. (*Av*, neg.; *ὀυρά*, a tail. *G. Schwanzlos*.) Tailless. Having the characters of the *Anou'ra*.

Anoxe'mia. (*Av*, neg.; *ὀξύς*, acid; or *ox*, for oxygen; *αἷμα*, blood. *F. anoxyhemie*.) A term introduced by Jourdanet to indicate the diminished quantity of oxygen contained in the blood of those living in high altitudes, where the tension of the oxygen in the surrounding air is considerably decreased.

Anoxid'ic. (*Av*, neg.; *oxide*.) One of a series of terms devised to describe the condition of the mineral constituents of organic substances, and signifying unoxidised; it is a condition of the mineral material which has not yet been observed. See *Meroxidic* and *Telooxidic*.

Anoxol'u'in. (*Av*; *ὀξύς*, acid; *λύω*, to dissolve.) A term applied by Leconte to that portion of any proteid which is insoluble in glacial acetic acid.

Anoxycau'sis. (*Av*, neg.; *ox*, for oxygen; *καύσις*, a burning.) Combustion without oxygen, as, for example, by the alkalies.

Anoxyd'ic. (*Av*, neg.; *ὀξύς*, acid; or *oxide*.) Incapable of undergoing oxidation.

Anoxyhae'mia. Same as *Anoxemia*.

An-pater. Sulphur. (Quincy.)

An'sa. (*L. ansa*, a handle, a loop on the edge of a sandal through which the shoe-tie was drawn. *F. anse*; *I. ansa*; *G. Griff, Henkel, Handhabe*.) A loop.

Also, in Botany (*G. Schnittstiel*) the stalk of one of the segments of a divided leaf.

A. atlan'tis. (*Atlas*, the first cervical vertebra.) A loop formed between the anterior branch of the first and second cervical nerve in front of the transverse process of the atlas. The branch of the first nerve receives a small branch from the sympathetic nerve.

A. cap'itis. (*L. caput*, the head; *I. ansa del capo*.) A synonym of the *Zygomatic arch*.

A. dello ster'no. (*It*.) The same as *fourchette* of the sternum.

A. galvano-caust'ica. (*Galvani causticus*, burning; *I. ansa tagliente*.) A loop of wire which can be rendered white hot by electricity; used in surgery for the division or removal of parts, which it accomplishes with little or no pain or hæmorrhage.

A. intestina'lis. (*L. intestina*, the entrails.) A loop of intestine supported in a curve by its portion of mesentery.

A. memorabil'is Wrisberg'ii. (*L. memorabilis*, remarkable.) See *A. Wrisbergi*.

A. nervi hypogloss'al. The loop formed in the neck between the descending branch of the hypoglossal nerve and one, or sometimes two, branches from the anterior branch of the second, or second and third, cervical nerves.

A. of Hen'le. The looped tubes of Henle. The loops formed by the urinary tubes in the pyramid, immediately below the first convolutions which are found just after their origin in the Malpighian tuft. The epithelial lining becomes in them thin and flattened, and the nuclei prominent.

A. of Zell. The internal fibres of the superior peduncle of the cerebellum which are directed inwards across the middle line beneath the corpora quadrigemina, and through the fasciculus prolonged upwards from the fasciculus teres.

A. peduncula'ris. The pedunculated loop; a synonym of the *Substantia innominata*.

A. Wrisberg'ii. A loop formed by the junction of the right great splanchnic nerve with the right pneumogastric; the concavity embraces the larger part of the right pillar of the diaphragm.

An'sæ cervica'les. (*L. cervix*, the neck. *G. Halsschlingen*.) The communicating branches connecting the anterior branches of the cervical nerves.

A. lumbar'es. (*L. lumbaris*, pertaining to the loins.) The branches of communication between the anterior branches of the lumbar nerves.

A. sacra'les. (*Sacrum*, the bone of that name.) The loops formed between the anterior branches of the sacral nerves.

ANSATUS—ANTANACLASTIC.

A. subclaviales. The subclavian loops. One or two branches of the sympathetic nerve which run before and behind the subclavian artery, passing from the inferior cervical to the first dorsal ganglion.

A. Vieussensii. Vieussens' loops. Two or three branches given off from the lower convex border of the inferior cervical ganglion, which pass down in front of the subclavian artery, and surrounding it in the form of loops, joins one the superior cervical ganglion, and another the recurrent laryngeal nerve.

Ansa'tus. (L. *ansatus*, having a handle; G. *gestielt*.) Having a pedicle.

Anser. (L. *anser*, a goose; akin to Sansk. *Hansa*; F. *ois*; I. *oca*; G. *Gans*.) The goose or gander; a Genus of the Order *Anseres*. Beak as long as the head, high at its origin, narrow in front, and terminated by a horny plate; transverse lamellae incomplete; feet moderately long, placed somewhat back. The domestic goose is much used as food; its fat is emetic, and was used in hydrophobia; its flesh also had a reputation for the same purpose, and was said to be aphrodisiac and to promote longevity.

Anseres. (L. *anser*, a goose. F. *ansérider*.) An Order of the Class *Aves*, with short legs, placed behind the centre of gravity; anterior toes webbed; bill sometimes flat, sometimes laterally compressed, sometimes provided with a pouch.

Anseridae. (L. *anser*.) A Family of the Order *Chenomorpha*, Subclass *Carinata*, Class *Aves*. The geese. Beak higher at the base, smaller towards the tip, which is horny; neck long.

Anserides. Same as *Anseres*.

Anseriformes. (L. *anser*, a goose; *forma*, shape.) An Order of the Subclass *Homologomati*, Class *Aves*, according to Garrod, including the geese, ducks, penguins.

Anserina. (L. *anser*, a goose.) Silver weed, or wild tansy. The *Potentilla anserina*.

Anserinæ. (Same etymon.) A Group of the Family *Lamellirostres*, Order *Natatores*, Class *Aves*. The geese. They differ from the *Anatida* or ducks in that they have shorter wings, and longer and stronger legs.

Anserine disease. (F. *maladie anserine*.) A peculiar emaciating of the extremities observed in old cases of pellagra, producing such great projection of the tendons of hand in particular as to cause it to resemble the foot of the goose.

Anserinus. (L. *anser*, a goose. F. *anserine*.) Of or belonging to a goose.

Applied to the skin (F. *chair de poule*; G. *Ganzhaut*; I. *pelle d'oca*) when contracted and rough from cold. See *Cutis anserina*.

A. pes. See *Pes anserinus*.

An-sir arto-spiritus. Sal. (Ruland.)

An-sir filius. Mercury.

An'sjuden. A synonym of *Assafetida*.

An'sula. (L. dim. of *ansa*; G. *Henkelchen*.) A little handle, ear, or loop.

Ant. (Sax. *Emet*. F. *fourmi*; I. *formicola*, *formica*; G. *Ameise*.) The *Formica* and other Genera of the Order *Formicidae*; the emmet or pismire.

Antachates. Name for Succinum, or a bituminous stone of another colour, which, when burned, gives the odour of myrrh.

Antacid. (Avri, against; *acidus*, acid. F. *antacide*, *anti-acide*; G. *säuretilgend*, *säurewidrig*.) A medicine which chemically destroys

or counteracts acidity, or sourness, by combining with the acid, and so neutralising it; as soda, ammonia, magnesia.

Antacid. (Avri, against; L. *acer*, sharp, acid.) Medicines which have power to correct an acid condition of the secretions.

Antaeneasmus. The same as *Antoneasmus*.

Antaërophthora. The same as *Antaërophthoron*.

Antaërophthoron. (Avri, against; *anp*, air; *φθορά*, corruption. G. *Luftverderungsmittel*.) A means of purifying the air.

Antagonism. (Avri, against; *ἀγωνίζω*, to contend. G. *Wechselkampf*, *Gegenwirkung*.) A term for actions which are opposed to each other in their office. Thus, the flexor muscles are the antagonists of, or antagonistic to, the extensors; and antagonism of disease is said to exist when the prevalence of certain diseases seems to exclude the occurrence of others. The word antagonism when applied to the action of drugs is usually confined to their physiological action on the body, and does not include the mutually destructive chemical action on each other; and drugs are said to be in antagonism when, as in the case of atropin and muscarin, one accelerates and the other slows the heart, or appear otherwise to have an opposite influence on the system.

Antagonist. (Ἀνταγωνιστής; from *ἀνταγωνίζωμαι*, to repel, or fight back. F. *antagoniste*; G. *Gegenkämpfer*, *Widerstreber*.) Applied by Bartholin to muscles whose function is opposed to that of others, as the abductors and adductors, the extensors and flexors.

Antagonistopathicus. (Ἀνταγώνιστος, contending as an adversary; *πάθος*, disease.) Term employed by Ploucquet to indicate the condition of a person suffering from too much or too little antagonism, or from disturbances of the natural antagonising forces in the body. (Kraus.)

Antagonopath'icus. The same as *Antagonistopathicus*.

Antal. Arabic for a pure lotion. (Ruland and Johnson.)

Antale. A synonym of *Antalium*.

Antalgic. (Avri, against; *άλγος*, pain. F. *antalgique*, *anti-algique*; G. *schmerzstillend*.) Term applied to that which can assuage pain.

Antalium. (Avra, over against; *ἄλς*, the sea.) An old term for the calcareous tubes or shells of some animal living in sand on the sea shore; probably one of the *Tubicola*. Formerly used as a substitute for oyster shells.

Antal'kaline. (Avri, against; *alkali*.) Having the power of neutralising alkalies; such are all the acids.

Antambula'eral. (L. *anti*, opposite; *ambulacrum*.) Applied to the surface, in the star-fishes, opposite to that which bears the ambulacra.

Antamul. The Hindu name of the *Tylophora asthmatica*.

Antanac'lasis. (Ἀντανάκλασις, reflection. G. *Zurückwerfen*.) Term applied to the reflection of a ray of light or a wave of sound to the point from which it emanated; sometimes applied to simple reflection at any angle.

Antanaclasmus. (Ἀντανάκλασμός, reflection.) The same as *Antanac'lasis*.

Antanaclastic. (Ἀντανάκλαστικός, belonging to reflection. G. *zurückwerfend*, *zurückbiegend*.) Reflecting.

ANTAPHRODISIAC—ANTENEASMUS.

Antaphrodisiac. (Ἀντι, against; ἀφροδισιακός, sexual; or ἀφροδισία, venereal desire. *F. antaphrodisiaque.*) Opposed to what is venereal; anti-venereal; the Latin analogue applied by Wedelius, *Amen. Med.* ii, 2, c. 18, p. 456 seqq., to medicines which subdue the venereal appetite; also, to those employed against syphilis.

Antaphroditic. Same as *Antaphrodisiac*.

Antapodosis. (Ἀνταπόδοσις; from ἀνταποδίδωμι, to render again, or restore. *G. Zurückgabe, Rückkehr, Wiederkehr.*) A term, applied by Hippocrates, *Dieter. n.* 68, to the recurrence or succession of the paroxysms in fever.

Antapodotic. (Same etymon.) A remedy apodictic or inducing a recurrence of a paroxysm.

Antapoplectic. (Ἀντι, against; ἀποπληξία, striking down. *F. antapoplectique.*) Opposed to or relieving apoplexy.

Antarctic. (Ἀντι, against; ἀρκτικός, north pole.) Southern; opposed to, or opposite to, the north.

Antaris. Arabic for mercury.

Antarthritic. (Ἀντι, against; ἀρθρίτις, the gout. *F. antarthritique*; *G. gichtheilend, Gichtmittel.*) Term applied to medicines employed for the relief of gout.

Antasphyctic. (Ἀντι; asphyxia. *F. antasphyctique.*) Opposed to, or overcoming, asphyxia.

Antasthenic. (Ἀντι, against; ἀσθένεια, weakness. *F. antasthénique.*) Term applied to remedies that increase the tone and strength of the body.

Antasthmatic. (Ἀντι, against; ἀσθμα, short-drawn breath. *F. antasthmaticque.*) Term applied to remedies employed for the relief of asthma.

Antatrophic. (Ἀντι, against; ἀτροφία, a defect of aliment, an atrophy; *F. antatrophique.*) Applied to medicines opposed to, or overcoming, a state of atrophy or wasting.

Antelix. See *Antihelix*.

Ante partum. (L. ante, before; *partus*, birth.) Before delivery; as of hæmorrhage.

Antebra'chial. The same as *Antibrachial*.

Antebra'chium. (L. ante, before; *brachium*, the arm.) The forearm.

Antecæ'na. (L. antecæna. *G. Vormahl, Vesperbrod.*) A meal before supper.

Antecedent. (L. antecedo, to go before. *G. vorhergehend, übertreffend.*) Preceding; that which goes before or precedes.

Applied to the exciting cause (*causa antecedens*), or that which actually produces the disease; also, to the signs (*signa antecedentia*) or precursory symptoms of a disease. See *Causa* and *Signa*.

In Logic, the first or basic categorical proposition in a conditional proposition is called the antecedent.

Ante'cuius. (Ἀντι, against; οὐκίως, to inhabit. *F. antécien*; *G. gegenüberbewohnend.*) Applied to people placed under the same meridian and at the same distance from the equator, but in two opposite hemispheres; antipodean.

Antecurvature. (L. ante, before; *curvo*, to bend.) A bending forward.

A. of uterus. A bending forward of the body of the uterus on itself, or on the cervix, in less degree than occurs in ante'flexion.

Antediluv'ian. (L. ante, before; *dilu-*

vium, the deluge. *F. antédiluvien*; *G. vorrind-Authlich.*) Applied by Brongniart to the soils of trass and alluvium anterior to the animal period; applied also to some fossil shells, as *Conus antediluvianus*, the living analogues of which are not known.

Ante'don rosa'cea. *Comatula rosacea.* One of the Crinoid Echinodermata.

Antefixus. (L. ante, before; *figo*, to fix. *G. angenagelt.*) Attached in front.

Anteflexion. (L. ante, before; *flecto*, to bend, or bow.) A bending or bowing forward.

A. of the uterus. (L. *inflexio uteri anterior*; *F. anteflexion de l'utérus*; *I. anteflexione dell' utero*; *G. vordere Knickung, or Vorbiegung des uterus.*) A bending forwards of the uterus, or cervix, the fundus sinking down between the cervix and the neck of the bladder.

Anteflexion in its lesser degrees may produce no symptoms; when extreme, there may be pain in the back or groins, increased by exercise or sexual intercourse, dysmenorrhœa, and, it may be, sterility, menorrhagia, leucorrhœa, irritable bladder. The organ may sometimes be replaced in its proper position by the sound and retained there by a suitable pessary, the recumbent position, the bladder kept as full as possible of urine, and an abdominal belt. In more severe and chronic cases the use of an intra-uterine stem has been advised; the cervix has been incised so as, by a new channel, to relieve the constriction at the point of flexion.

Antefur'ca. (L. ante, in front; *furca*, a fork.) The double or forked apodeme which projects from the sternal wall of the anterior somite of the thorax, in the cockroach, into its cavity, and so helps to support the nervous cord.

The forked projections on the ventral surface of each somite in some Arthropoda are also so called.

Antela'bium. (L. ante, before; *labium*, a lip.) The extremity of the lip.

Antelmintic. The same as *Anthelmintic*.

Antelope. See *Antilopus*.

Antemballom'enum. (Ἀντεμβάλλω, to put in instead.) A succedaneum. (*Dunglison.*)

Antem'basis. (Ἀντίμυσις; from ἀντεμύσις, to enter reciprocally.) Used by Galen, *l. de Ossid.* in *proœm.*, for the introduction or insertion of bones into each other; mutual insertions.

Antome'diary. (L. ante, before; *medius*, the middle. *F. antémédiaire.*) Applied by Mirbel to petals opposite the sepals of the calyx.

Antemerid'ialis. (L. ante; *meridies*, midday; from *medius*, middle; *dies*, day. *G. vormittägig.*) Before noon.

Antemerid'ian. (Same etymon.) Before noon.

Antemet'ic. (Ἀντι, against; ἐμετικός, provoking sickness; from ἐμεω, to vomit.) Applied by Willis, *Pharm. Rat.* i, 2, c. 3, to medicines used to allay sickness or prevent vomiting.

Antendeir'is. (Ἀντινδείξις; from ἀντι, against; ἰνδείξις, a demonstration. *G. Gegenanzeige.*) A term synonymous with contra-indication; according to Galen, *Meth. Med.* ix, 17.

Antendix'is. The same as *Antendeixis*.

Anteneas'mus. (Ἀντιέναις, to rise up, to resist.) Term used by P. Zacchias, *Quæst. Medico-leg.* i, ii, t. i, q. 18, n. 31, seqq.,

ANTENERGIA—ANTESTERNUM.

for a disease characterised by the furious dancing of the patients, and a disposition to lay violent hands on themselves; also called *Bullianismus*, probably a species of the *Chorea Sancti Fiti*.

Antenergia. (*Anterigia*, *antagonism*. G. *Gegensitzung*, *Widerstandung*.) Resistance.

Antenna. (L. *antenna*, a sail-yard; akin to *driveline*, to stretch up. F. *antenne*; G. *Fühlhorn*, *Taster*.) Applied to two or four articulated filaments, varying greatly in form, and often according to sex, inserted in the heads of the Crustacea, Myriapoda, and Insecta, and appearing to be peculiarly devoted to a delicate sense of touch or smell, or, as some have thought, another and as yet unrecognised sense. The basal joint is called the *scapus*; it is connected by means of a ball-and-socket-joint with the *torulus*, the part of the head on which the antenna moves; the second joint is the *pedicella*, generally small and spherical so as to allow of free motion, and the remainder is the *clavus*.

In the pupa form of Rhisopoda and Cirripedia, and in the Cladocera, the antennae are modified so as to form organs of adhesion; in the Arachnida the mandibles of males are believed to be homologues of the antennae.

The term is also applied by Quatrefages to the filiform or fleshy palpi attached to the cephalic segment, or prostomium of Chelatepoda.

A. prehensile. (L. *prehendo*, to lay hold of.) A term given to the foremost pair of limbs of the pupae of Rhisoccephala and Cirripedia, inasmuch as they are modified for the purpose of attachment to rocks or other bodies.

Antennariol. In some arrangements a Tribe of Phycomyces Fungi, consisting of downy diffuse patches on leaves or bark; they appear to be stages of growth of other forms.

Antennaria. (*Antenna*; so called from the resemblance of the male pappus to the antennae of a butterfly. G. *Hänkepfüchen*.) A Genus of the Nat. Order *Compositae*. Heads dioecious; flowers tubular, female filiform, 5-toothed; style slender, funnel-shaped; male tubular; anthers partly exerted; style undivided; fruit nearly terete; pappus of female filiform, of male thickened towards tip and serrate.

A. dioica, Br. (F. *gud-luch*; G. *Seydlich*.) Dwarfish antennaria; cat's foot. Hab. Europe, Northern Asia, and E. and N.-W. America. Stems densely tufted; leaves obliely radiate, spatulate, silky beneath; scapes slender, cottony, with linear bracts; male heads subglobose, small; stamens exerted; female heads much longer than male; fruit papillose; pappus-hairs silky. A mild astringent and expectorant.

A. margaritacea. (L. *margarita*, a pearl. F. *immortelle blanche*.) Life everlasting. An indigenous American plant. Perennial, stoloniferous; leaves beneath and corymb densely clothed with white or buff cottony tomentum; leaves lanceolate, acuminate, sessile, glabrous above. The flowers are of a pearly whiteness, and slightly fragrant. The leaves are said to be somewhat astringent and expectorant.

A. plantaginifolia. (L. *plantago*, a plantain; *folium*, a leaf.) Probably a variety of *A. dioica*, and having similar properties.

Antennariaceae. F. *Antennaria*. Applied by Lessing to a Section of the Tribe *Senecioideae*, Nat. Order *Compositae*, having the *Antennaria* for their type, with distinct multiflorous dioecious or monoecious capitula receptacle without scales.

Antenna'ria. (*Antenna*. F. *antennaire*.) Pertaining to the antennae; applied by Robineau-Desvoidy, in the Myodaria, to two small pieces adherent together, on which the antennae are implanted.

Antennata. (*Antenna*.) An Order of Vermes, synonymous with *Chelatepoda*.

Antenna-tracheales. (F. *antennae-tracheales*.) Name by Lamarck for an Order of *Arachnides* having two antennae, and respiring by tracheae.

Antennate. (F. *antenné*; G. *Fühlhornartig*, *Fühlhornartig*.) Having antennae.

Antenniferous. (*Antenna*; *ferre*, to bear. F. *antennifère*; G. *Fühlhorntragend*.) Bearing or having antennae.

Antenniform. (*Antenna*; *forma*, likeness. F. *antenniforme*; G. *Fühlhornformig*.) Resembling antennae.

Antennule. (Dim. of *antenna*. F. *antenne*; G. *Fühlhornchen*.) A small antenna. Applied to the maxillary palpi, because of their likeness to small antennae.

Antepectoralia. (L. *ante*, before; *pectus*, the breast. F. *antepectoral*.) Applied by Kirby to the anterior feet of insects, or those fixed to the antepectra.

Antepectus. (L. *ante*, before; *pectus*, the breast.) The anterior area or segment of the pectus of certain insects, or superior surface of the trunk.

Antepes. (L. *ante*, before; *pes*, foot. G. *Vorfüß*.) The first foot or paw.

Antephialtic. (*Anti*, against; *ephalia*, the nightmare.) Applied by F. Hoffmann, in *Arch. Med. Waisena*, i, 19, p. 288, to medicines opposed to, or curative of, the affection epiphiasis, or nightmare.

Antepileptic. (*Anti*, against; *epilepsia*, epilepsy. F. *antipileptique*, *anti-épileptique*.) Opposed to, or curative of, epilepsy.

Anteponea. (L. *ante*, before; *pono*, to place.) Antipating.

Antera. See *Anthers*.

Anterolis. (*Anterioris*.) The resistance or fulcrum, as in the setting of a bone.

Anterethic. (*Anti*, against; *ethos*, to excite. G. *erregend*.) Having the power to quit excitement or exultation.

Anterior. (L. *anterior*, foremost. F. *anterior*; G. *vorderhend*.) Applied to that which is situated before some other object of the same kind; it may mean towards the head, or towards the ventral surface.

A. auris. (L. *auris*, the ear. I. *anterioris del auris*.) A synonym of the *Auricularis anterior muscle*.

A. mallei. (*Malleus*, the tympanic bone of that name. I. *anterioris del mallei*.) A synonym of the *Lacunar tympani muscle*.

Anteriores nasi. (L. *anterior*, front; *nasus*, the nose.) A synonym of the *Pyramidealis nasi*.

Anterit. Arabic for mercury.

Anteros. The amethyst, according to Germans.

Anterotie. (*Anti*, lower, desire. F. *antérotye*; G. *schlechtetrichmindernd*.) Remedy applied to, or overcoming, desire or sexual passion.

Antes. (L. *ante*, rows. G. *Reihen*.) Rows of flowers or of vines. The borders of a garden.

Antesternum. (L. *ante*, before; *ster-*

ANTEUPHORBIIUM—ANTHEMIS.

num, the breast-bone.) The first or anterior division of the sternum.

Anteuphorbium. ('Αντί, against; euphorbium, a gum-resin.) See *Cacalia anteuphorbium*.

Anteversión. (L. ante, before; verso, to turn. F. *antiversion*; G. *Vorwärtsbeugung*, *Umbengung nach vorn*.) A turning forwards.

A. of the uterus. (L. *uterus*, the womb. F. *antiversion*.) A falling forward of the body of the womb, so that the fundus is towards the symphysis pubis, with consequent tilting upwards and backwards of the cervix into the concavity of the sacrum. It is not so common as ante flexion, and is usually accompanied by enlargement of the organ. Occasionally there are no symptoms; often there is dysmenorrhœa, and not unfrequently irritation of the bladder, and sometimes of the rectum; the symptoms depend on the degree of anteversion. The organ is advised to be replaced by pressing upwards the fundus by two fingers in the vagina, and the abdominal viscera by the hand over the lower part of the abdomen at the end of a period of forced expiration; the retention of the organ *in situ* may be attempted by lying on the back, by prolonged retention of urine, by an abdominal pad, or by a properly adjusted pessary. Many cases do not need treatment.

Anthemioptylus. ('Αντί, against; *Hæmoptylus*. F. *anthémioptique*.) Opposed to, or controlling, hæmoptysis, or spitting of blood.

Anthemorragicus. ('Αντί, against; *αιμορραγία*, hæmorrhage. F. *anthémorrhagique*.) Applied to medicines opposed to, or checking, hæmorrhage.

Anthectic. ('Αντί; *Hectic*. F. *anthectique*.) Opposed to, or overcoming, phthisis or consumption.

Anthela. ('Ανθήλη, a blossom, especially the downy plume of the reed. G. *Spirre*.) A cymose inflorescence in which the pedicels of the lower flowers are so long that they project above those of the upper ones; as in some species of *Juncus*.

Anthelitrageus. ('Αντί; ἰλιξ, the outer border of the external ear; *τράγος*, the tragus.) A synonym of the *Antitragicus muscle*.

Anthelitrageus. (Same etymon. F. *anthelitrageus*; I. *antelitrageo*.) A synonym of the *Antitragicus muscle*.

Anthelix. ('Αντί, against, opposite; ἰλιξ, the outer border of the external ear.) See *Antihelix*.

Anthelmia. ('Αντί, against; ἔλμιν, a worm.) The *Spigelia marylandica* or worm grass, or the *Spigelia anthelmia*.

Anthelminthic. See *Anthelmintic*.

Anthelmin'tic. ('Αντί, against; ἔλμιν, a worm. F. *anthelmintique*; G. *wurmbtreibend*.) Applied to a medicine which expels worms from the intestinal canal; vermifuge.

Anthelmin'tica. (Same etymon; G. *Wurmmittel*.) Worm expelling medicines.

A. cathartica. (Καθαρτικός, cleansing.) Anthelmintics which act by their purgative properties, as scammony, aloes.

A. lubricantia. (L. *lubrico*, to render slippery.) Anthelmintics which act by their lubricating property, as olive oil.

A. tonica. (Τόνος, tone.) Anthelmintics which have a supposed tonic action, as savin.

A. venenosa. (L. *venenosus*, very poison-

ous.) Anthelmintics which act by destroying the worm, as powdered tin, male fern.

Anthelmin'tics. (Same etymon.) Anthelmintics have been divided into those which kill the entozoon and those which simply procure its expulsion. Anthelmintics are usually best given on an empty stomach and, if the drug itself be not purgative, followed in a few hours by an aperient.

A., mechanical. Those which act by means of their physical properties, as cowhage, powdered tin.

A., poisonous. Those which act by killing the worm, as male fern, santonin.

Anthe'ma. ('Ανθημα, probably only found in composition, as ἱανθημα. G. *Blühen*, *Blüthe*.) An exanthematous blush.

Anthematoscheticus. See *Ecanthematoscheticus*.

Anthem'ic acid. An acid said to exist in *Anthemis nobilis*.

Anthemid'ese. (F. *anthémidié*.) A Tribe of the Family *Compositæ*, having the capitula heterogamous or homogamous; receptacle naked or paleaceous; anthers without an appendage.

Anthem'idis flores. B. Ph. (F. *fleurs de camomille*; G. *Römische kamillen*.) Chamomile flowers. The dried single and double heads of the *Anthemis nobilis*, wild and cultivated. The single variety consists of both yellow tubular and white strap-shaped florets; the double, of white strap-shaped florets only; all arising from a conical scaly receptacle. They have a fragrant odour and a warmish, bitter aromatic taste. They contain a terpene, a camphorous ethereal oil, a bitter principle, anthemín, and a small quantity of a doubtful acid, anthémic, similar to valeric acid. A hot infusion of chamomile flowers given freely is a good emetic; in moderate doses, and especially when made with cold water, it is a stomachic in enfeebled conditions of stomach with flatulence.

An'themín. An alkaloid obtained from the flowers of the *Anthemis nobilis*, in the form of shining prismatic crystals, inodorous and tasteless, insoluble in ether and alcohol, slightly soluble in water.

An'themis. ('Ανθεμís.) A Genus of the Nat. Order *Compositæ*. Leaves alternate, bipinnatifid; pappus none; florets of the ray seldom absent, ♀ in one row, of the disc ♂; bracts imbricated; receptacle conical, scaly; achænia obscurely 4-cornered.

A. arvensis. (L. *arvensis*, of the fields. G. *Ackerkamille*, *wilde Kamille*.) Corn chamomile. Annual; scales of receptacle mucronate; flowers of ray female, white; flowers of disc winged. A native of Europe and America, the flowers of which have an acrid bitter taste, and resemble in their qualities those of common chamomile.

A. cotula. (Κοτύλη, anything hollow. F. *camomille puante*, *maroute*; I. *antemide puzzolente*; S. *manzanilla loca*; Port. *contusa bastarda*; G. *Hundskamille*, *stinkende Kamille*.) The plant May-weed, or stinking chamomile. Annual; erect; leaves alternate, sessile, flat, doubly pinnate; scales of receptacle setaceous; flowers of ray generally neuter, white; flowers of disc winged. It is official in the U. S. Ph. See *Cotula*.

A. foetida. (L. *foetidus*, stinking.) A synonym of *A. cotula*.

A. nobilis. (L. *nobilis*, celebrated. F. *camomille romaine*; I. *camomille romana*; S.

ANTHEMIUM—ANTHERA.

manzanilla romana; *G. Römische Kamilla*, or *R. camille*.) The chamomile. Perennial; prostrate; leaves pinnate, downy; the lobes pinnatifid; receptacle long, conical; scales of receptacle lanceolate, obtuse; flowers of ray female, white; flowers of disc cylindrical. Hab. Pastures or gravel. Aromatic, bitter, tonic, and emetic. Is used in intermittents, dyspepsia, flatulence, colic, and eructation. See *Anthemidis flores*.

A. noreboracensis. A synonym of *A. cotula*.

A. odora'ta. (*L. odoratus*, fragrant.) A synonym of *A. nobilis*.

A. partheno'ides. A synonym of *Pyrethrum parthenium*.

A. pyre'thrum. The pellitory of Spain. Hab. Barbary, Spain, Levant. It is a powerful local irritant and sialogogue. A synonym of *Anacyclus pyrethrum*.

A. tinctoria. (*L. tinctorius*, belonging to a dyer. *F. camomille des teinturiers*, *ail de bœufs*; *G. Färber-Kamille*.) Dyers' chamomile. Hab. Europe. A plant occasionally employed as a tonic and vermifuge in Europe.

A. vulga'ris. (*L. vulgaris*, common.) A synonym of *Matricaria chamomilla*.

Anthem'ium. (Ἀνθίμου. *G. gehäuf-ter Blütenstand*, *Blüte*.) A term applied to the inflorescence of Compositæ.

Anthemor'rhagic. (Ἀντί, against; *αἱμορραγικός*, liable to hæmorrhage. *F. anthémorrhagique*.) Applied to remedies against hæmorrhage.

Ant'her. (Ἀνθήρ, in full bloom. *F. anthers*; *G. Staubbeutel*.) The anther is the essential part of the stamen, and is formed by the union of a variable number of small sacs, which contain the pollen. The stamen, as a whole, represents a modified leaf, and the two lobes—the anther usually present—are formed by the two labial halves of the lamina, united by the midrib, which is here named the connective. The part of the midrib below the anther is named the filament. The anther is the first part of the stamen to appear in the development of the flower, immediately following the growth of the divisions of the calyx and corolla. They form in the first instance small bud-like processes, which grow rapidly, become flattened from without inwards, and then present a longitudinal groove on their two faces, the lateral parts swelling to form the lobes of the anther, the pedicle or filament in the meanwhile gradually developing. The lobes at this time constitute two solid cellular cylinders, united by the connective, but soon they also present a longitudinal fissure on one of their faces, and the whole anther is divided into four semicylindrical columns. A process of differentiation now takes place in each of the lobes, the central cells enlarging and dividing, and ultimately forming the mother-cells of the pollen or male ovules. The grains of pollen are formed by the genesis of nuclei, and then by the endogenous segmentation of the protoplasm of the male ovules. The mother-cells of the pollen grains are irregularly polyhedral, and have at first a thin investing membrane homologous with the vitelline membrane, but this subsequently thickens and presents concentric lamination. The contents consist of protoplasm homologous with the vitellus of the female ovum, and a large strongly refracting nucleus homologous with the germinal vesicle. Whilst the pollen grains are maturing, the septum between the two halves of each lobe of the anther

breaks down, and the anther then presents two loculi. Each loculus is lined by delicate cells, forming an endothelial zone, external to which is one or many layers of fibrous cells, forming a kind of network—the mesothelial zone. The most external cells have thicker and more consistent walls, and form an epidermis. The young anther then is quadrilocular, a condition that is occasionally, as in the Lauraceæ, persistent, but usually the adult is bilocular. Occasionally, however, as in *Malva* and *Zostera*, it is unilocular. At a certain period of their development the anthers dehisce and allow the pollen grains to escape. In most plants the dehiscence takes place by a longitudinal slit running in the direction of the septum, which originally divided the young anther into four loculi. When this slit looks inwards or towards the axis, the anther is said to be *introrse*, when outwards *extrorse*, when at the sides the dehiscence is said to be *lateral*. Sometimes the dehiscence takes place by a *fissure* or *pore* at the apex of each lobule, or by a single pore common to both loculi. Occasionally it is transverse, as in *Garcinia*, *Morella*, and *Lavandula*; and sometimes by one valve, as in *Berberis*, or by two valves, as in *Lindera*, or by four valves, as in *Cinnamomum zeylanicum*, and *Nectandra*. The anthers usually dehisce after the expansion of the flower, but sometimes it occurs in the bud. The movements that have been observed will be described under the word *stamens*. In form the anthers vary much, being oblong, lanceolate, elliptical, globular, ovate, sagittate, reniform, sinuate, or peltate. The bilocular anther is termed *didymous* when the two lobes are rounded and only attached to the connective by a single point, as in *Euphorbia* and *Excoecaria*. Anthers often have appendages either at their upper or their lower extremity. The connective is usually linear, but does not quite reach to the apex of the anther, which is then said to be *bifid* at the summit; but the anthers are sometimes attached at one point only, and are then said to be *versatile* (see *Connective*). The colour of anthers is usually yellow.

A. lobes. (*F. loges de l'anthère*; *G. Antherenhülfe*.) The parts, usually two, of the anther lying on each side of the insertion of the filament.

Ant'hera. (Ἀνθήρ, flowery, florid.) Applied by Galen, *l. iv*, *v*, *de C.M. sec. Loc.*, to a medicinal preparation, of a bright red colour, used in form of a powder, liniment, electuary, or collyrium, formed of myrrh, sandarach, alum, rose leaves, and saffron.

Also, a medicine extracted from the hyacinth.

Also, a yellow fluid obtained from lilies. (*Ruland*.)

Also, an *Ant'her*.

A. adna'ta. (*L. adnatus*, for *agnatus*, from *agnascor*, to grow on.) Term applied to an anther the back of which is attached throughout its whole length to the filament, or to its continuation, the connective, as in the *magnolia* and *water lily*.

A. agglutina'ta. (*L. agglutino*, to fasten to.) Term applied when the anthers of adjoining stamens are firmly adherent to each other, as in some of the *Rutaceæ*.

A. anti'ca. (*L. anticus*, in front.) The same as *A. introrsa*.

A. ap'ice affix'a. (*L. apex*, the summit; *affixus*, from *affigo*, to fasten to.) Term applied to an anther which is attached to the connective by its summit only.

ANTHERA.

A. a'pice bicor'nis. (L. *bicornis*, two-horned.) Term applied to an anther, which is prolonged above into two horns.

A. a'pice bicuspidat'a. (L. *bis*, twice; *cuspis*, a point.) Term applied to an anther each of the upper extremities of which is prolonged into a point.

A. a'pice bif'id'a. (L. *bifidus*, cleft.) Term applied to an anther in which the two lobes are prolonged beyond the connective.

A. a'pice biporo'sa. (L. *bis*, twice; *porus*, a passage.) An anther in which each of the two loculi opens at the upper extremity by a pore.

A. a'pice biporo'sa dehis'cens. (L. *dehisco*, to split open. F. *dehiscence poricide*.) A term applied to an anther the two lobes of which open by separate pores at the apex, as in *Pyrola rotundifolia*.

A. a'pice biseto'sa. (L. *bis*, twice; *seta*, a thick hair.) Term applied to an anther which is prolonged above into two bristles.

A. a'pice dehis'cens. (L. *dehisco*, to split open.) A term applied to an anther dehiscing by a fissure beginning at the apex and extending to a variable point on one of its faces.

A. a'pice emargina'ta. (L. *emargino*, to deprive of its edge.) Term applied to an anther in which the connective does not quite reach to the extremity of the lobes.

A. a'pice quadriporo'sa dehis'cens. (L. *quadri*, for quatuor, four; *porus*, a passage; *dehisco*, to split open.) Term applied to an anther possessing four loculi, each of which opens by a pore at the apex, as in *Poranthera*.

A. a'pice uniporo'sa dehis'cens. (L. *unus*, one; *porus*, a passage; *dehisco*.) Term applied to an anther in which the upper ends of the cavities of the loculi fuse together to form a kind of funnel, which opens at the apex of the anther by a single pore, as in *Tetralthea juncea*.

A. apicinat'a. (L. *apex*, the summit; *cingo*, to gird.) The same as *A. apice affixa*.

A. apicula'ta. (L. *apiculum*, a pointed piece of wood and wool worn on the cap by the flammens.) Term applied to an anther in which the connective is prolonged into a point beyond the lobes.

A. appendicula'ta. (L. *appendicula*, a small appendage.) Term applied to an anther in which the connective is prolonged beyond the lobes in various ways, forming spurs, as in heartsease, or a feather, as in oleander, or a knob, as in magnolia.

A. bas'i bicor'nis. (L. *basis*, the base; *bicornis*, two-horned.) Term applied to an anther the inferior extremity of each of the lobes of which is prolonged into a horn.

A. bas'i bicuspidat'a. (L. *bis*, twice; *cuspis*, a point.) An anther in which the inferior extremity of each lobe is prolonged into a point.

A. basifix'a. (L. *basis*; *fixus*, fixed.) The same as *A. innata*.

A. bilocula'ris. (L. *bis*, twice; *locularis*, belonging to a box. G. *Zweifachrig*.) Term applied to an anther in which the four loculi, originally present, have united to form two.

A. calcarat'um. (L. *calcar*, a spur. F. *anthère éperonnée*.) Term applied to an anther in which the connective is prolonged into a spur or other appendage, as in *Viola odorata*.

A. connivens. (L. *connivoo*, to shut together.) Term for the anthers of separate

stamens which are simply applied to one another, as in the anthers of *Solanum*.

A. contin'ua. (L. *continuuus*, joining, uninterrupted.) The same as *A. adnata*.

A. cordifor'mis. (L. *cor*, the heart; *forma*, shape.) Term applied to an anther in which the lobes, taken together with the connective, present the form of a heart.

A. did'yma. (*Δίδυμος*, double) Term applied to an anther in which the two rounded or ovate lobes are only attached by their apex, diverging to some extent below.

A. distract'ilis. (L. *distraho*, to draw asunder.) Term applied to an anther in which the connective is prolonged into a kind of stalk, separating the lobes from one another.

A. ditheca'lis. (*Δίς*, twice; *θήκη*, a case.) Term applied to an anther in which the septum, originally present in each lobe, dividing it into two loculi, has been absorbed, so that the anther has only two cells.

A. divergens. (L. *dis*, apart; *vergo*, to bend, to turn.) Term applied to an anther in which the lobes separate from each other at their inferior extremity, as in many Scrofulariaceæ, Labiatae, and Euphorbiaceæ.

A. dorsifixa. (L. *dorsum*, the back; *fixus*, fast.) The same as *A. adnata*.

A. ellip'tica. (*Ελλειπτικός*, elliptic.) Term applied to an anther in which the two lobes together present an elliptical form.

A. extror'sa. (Perhaps analogous to *introrsus*; as *extrorsus*, from *extraversus*, turned outwards.) Term applied to anthers in which the suture indicating the line of dehiscence looks outwards, or is turned away from the axis.

A. globos'a. (L. *globosus*, round like a ball.) Term applied to an anther the lobes of which are of a rounded or spheroidal form.

A. immob'ilis. (L. *immobilis*, immovable.) The same as *A. adnata*.

A. inna'ta. (L. *innatus*, part. of *innascor*, to grow up in.) Term applied to an anther in which the filament runs directly, without interruption, into the base of the connective, like the stalk of an ordinary leaf, as in *Carex*.

A. intror'sa. (L. *introrsus*, toward the inside.) Term applied to an anther when the suture indicating the line of dehiscence looks inwards, or is turned towards the axis of the flower.

A. lanceola'ta. (L. *lanceolatus*, armed with a little point.) Term applied to an anther in which the lobes, together with the connective, are of a lanceolate form.

A. latera'lis. (L. *lateralis*, belonging to the side.) Term applied to an anther in which the suture indicating the line of dehiscence is situated at the side of the lobe, or at right angles to the axis of the flower.

A. linea'ris. (L. *linearis*, linear.) Term applied to an anther the two lobes of which are narrow and long.

A. luna'ta. (L. *lunatus*, halfmoon-shaped.) Term applied to an anther in which each lobe presents the form of a crescent.

A. meandriform'nis. (L. *mæandrius*, a winding; from *Μαίανδρος*, a river rising in Phrygia, remarkable for its windings; *forma*, shape.) Term applied to an anther the lobes of which are tortuous or convoluted.

A. mob'ilis. (L. *mobilis*, easily moved.) The same as *A. versatilis*.

A. oblong'a. (L. *oblongus*, oblong.) Term

ANTHERÆ LILII ALBI—ANTHEROZOIDS.

applied to an anther the lobes of which, together with the connective, are of an oblong shape.

A. ova'ta. (*L. ovatus*, egg-shaped.) Term applied to an anther the lobes of which present the form of an egg.

A. pelta'ta. (*L. peltatus*, provided with a shield.) Term applied to an anther in which the connective is expanded over the lobes which are concealed beneath it, as in *Cupressus juniperus* and *Thuja*.

A. pendulo'sa. (*L. pendulus*, hanging.) Term applied to an anther which is attached to the connective by its summit only.

A. post'ica. (*L. posticus*, hinder.) The same as *A. extrorsa*.

A. quadrilocula'ris. (*L. quadri*, from *quatuor*, four; *locularis*, belonging to a box. *G. vierfachrig.*) The same as *A. tetrathecalis*.

A. renifor'mis. (*L. ren*, the kidney; *forma*, shape.) Term applied to an anther the lobes of which, either with or without the connective, present the form of a kidney.

A. rima longitudinalina'li dehis'cens. (*L. rima*, a cleft; *longitudo*, length; *dehisco*, to split open.) A term applied to an anther dehiscing by a longitudinal fissure.

A. sagitta'ta. (*L. sagittatus*, provided with arrows; shaped like an arrow-head.) Term applied to an anther in which the base of each lobe is prolonged, giving it the aspect of an arrow-head.

A. ses'silis. (*L. sessilis*, belonging to sitting.) Term applied to an anther in which the filament is aborted.

A. sinuo'sa. (*L. sinuosus*, full of bendings.) Term applied to an anther in which each lobe is curved or twisted upon itself, as in the Cucurbitaceæ.

A. subglobo'sa. (*L. sub*, under; *globosus*, round like a ball.) Term applied to an anther in which the lobes, with the connective, are nearly round or spheroidal.

A. tetrathecalis. (*Τετράς*, four; *θήκη*, a case.) Term applied to an anther in which the septum, originally present and dividing each lobe into two loculi, is persistent in the mature state, so that the anther has four cavities, as in *Bu'tomus*.

A. unilocula'ris. (*L. unus*, one; *locularis*, belonging to a box.) Term applied to an anther in which not only the septum separating the two loculi of each lobe is absorbed, but also that separating the cavities of the two lobes, so that there is only one cavity in the anther, as in *Malva*, *Polygala*, and *Alchemilla*.

A. unilocula'ris dimidia'ta. (*L. unus*, one; *locularis*, belonging to a box; *dimidiatus*, halved. *G. einfachrig.*) Term applied to anthers in which only one lobe is abortive or suppressed, whilst only one half of the remaining lobe is developed, as in *Gomphrena* and *Salvia*.

A. versat'ilis. (*L. versatilis*, that which turns round, revolving.) Term applied to an anther in which the filament is attached by a slender apex to about the middle of its back, so that the anther swings upon it, as in grasses and *Oenothera*.

Antheræ lil'i al'bi. (*F. antheres de lis blancæ*; *G. Liliensaffran.*) The anthers of the white lily, *Lilium candidum*. Used as saffron.

Antherea. The same as *Anthora*.

Anthe'ron. (*Ἀνθεῖον*.) The chin, or the place under the chin, which is covered by the beard, according to Hippocrates.

Anther'ethrin. See *Antherythrin*.

Antheric'ess. (*F. anthéric.*) Applied, by Bartling, to a Group of *Asphodels*.

Also, a Group of the Nat. Order *Liliaceæ*, having a tubular perianth narrowing into a straight tube; epispem black, brittle.

Anther'icos. (*Ἀνθίικος*.) The stalk and also the flower of *Asphodel*.

Anther'icous. (*Anthera*. *F. anthérique*; *G. staubbeutelig*.) Belonging to anthers.

Anther'icum. (*Ἀνθίικος*, the asphodel. *G. Zaunlihe*, *Graslihe*, *Zaunblume*.) A Genus of the Nat. Order *Liliaceæ*, differing from *Asphodela* in having thread-like filaments.

A. lili'ago. Leaves upright, with a linear furrow; style bent down. The plant, the flowers, and the seeds, were formerly used in medicine.

A. lili'astrum. A synonym of *A. liliago*. Formerly said to be alexipharmic and purgative.

A. ramo'sum. (*L. ramosus*, branching.) Used as a diuretic and emetic.

Antheridan'gium. (*Antheridium*; and *ἀγγίσιον*, a vessel, a capsule. *G. Antheridienbehälter*.) A capsule containing antheridia.

Anther'idium. (*Anther*; *είδος*, likeness.) In Mycology, a cellular organ filled with protoplasm growing from a mycelial cell, or from the cell which serves as a pedicle to the oogonium or female organ. At the time of fecundation it applies itself to the oogonium, and produces a tubular process, which traverses the wall of the oogonium, and discharges its contents, often in the form of very actively moving corpuscles. In other groups of Cryptogams the name is applied to the organ that produces antherozoid. (Baillon.)

Antheriferous. (*Anthera*; *fero*, to bear. *F. anthérifère*; *G. staubbeuteltragend*.) Bearing anthers; applied to the tube or body produced by the union of filaments of stamens in monodelphous and diadelphous plants.

Anther'iform. (*Anthera*; *forma*, likeness. *F. anthériforme*; *G. staubbeutelformig*.) Having the form of an anther.

Antherogenous. (*Anther*; *γεννάν*, to produce. *F. anthérogène*; *G. Anthersenzeugend*.) Forming or producing anthers.

Also, applied by Candolle to organs developed from anthers, or to double flowers resulting from the transformation of anthers into corniculated petals.

Antheroid. (*Anther*; *είδος*, form.) Resembling an anther.

Antheros. (*Ἀνθρός*, blossoming.) Blossoming; belonging to the process of blooming.

Antherosym'phyia. Same as *Symphysandria*.

Antherotes. (*Ἀνθρότης*, blossoming.) The state of blossoming.

Antherozoids. (*Anther*; *ζῶον*, a living being; *είδος*, form.) A term applied to the male reproductive cells of Cryptogams. These usually possess the power of spontaneous movement, which is due to the presence of one or two vibratile cilia. They resemble, therefore, the spermatozoa of animals. Many antherozoids are developed in the interior of a single cell; just as many blastodermic cells result from the segmentation of the contents of the ovum. In Fungi, well-marked antherozoids are only found in the Saprolegniæ; in the Monoblepharidæ, the protoplasm of certain cells of the growing filament divides at a certain period into five or six small

ANTHERYTHRIN—ANTHOCEROTÆ.

ovoid masses, each of which, representing an antherozoid, presents a large granular extremity, attached to which is a long vibratile cilium and a small hyaline and colourless portion named the rostrum. The cells, whose protoplasm thus divides, are named *Antheridia*.

In the Algae, antherozoids are only found in a small number of groups, and their development is usually simple. In *Vaucheria*, for instance, they are produced by the segmentation of the contents of a special cell termed the corniculum. They are here very small, and formed of a colourless, naked, elliptical mass of protoplasm, and possess a very delicate vibratile cilium at each extremity. After their escape they flow in great numbers towards the oogonium, into which they penetrate, and fuse with the superior hyaline part of the oosphere. In the Fuci large numbers of antherozoids are also formed by the segmentation of an ovoid cell, termed the antheridium. On the rupture of the antheridium the antherozoids press towards and impregnate the oosphere. In *Edogonium*, antheridia are represented by the cells of the growing filament, ordinarily shorter and less rich in chlorophyll than others. At a certain period the antheridian cell divides into two mother-cells; the protoplasm of each of these last is transformed into an ovoid antherozoid, the small extremity of which, named the rostrum, is hyaline, and presents a complete crown of vibratile cilia. In *Edogonium diplandrum* two antherozoids are formed in each mother-cell.

In Characeæ there are antheridia producing numerous mother-cells, each of which develops into a single antherozoid. These are elongated and twisted into a spiral form. The anterior extremity, very slender, has two cilia; the posterior is enlarged.

In Hepaticæ and Mosses there are well-developed antheridia, which contain numerous mother-cells, each of which produces one antherozoid. These have a spiral form, with two cilia in front and a protoplasmic mass behind, composed of from six to twelve granules, which present active Brownian movements.

In the Equisetaceæ the antherozoids are formed, as in the last group, in mother-cells contained in an antheridium. They are spirally coiled, the sides of the anterior part possessing many cilia, and the posterior part presenting a protoplasmic mass.

In the Ferns the antherozoids are flattened and twisted, with numerous cilia, often arranged in groups, attached to its fore part, and ending in a vesicle behind.

According to some, the ciliated portion of the antherozoids is only a locomotive organ, the true fecundating organ being the protoplasmic vesicle. Others, however, believe the actively moving ciliated part to be the real agent in fecundation, the other part being the unaltered and unused-up portion of the mother-cell.

Antherythrin. (*Ἀνθος*, flower; *ἰρυθρός*, red.) The red colouring matter of plants, of which little is at present known.

Anthesis. (*Ἀνθσις*, the blossoming of a flower. *G. die Blüthezeit, du Blüthenstand.*) The blossoming of a flower. The act of dehiscence of an anther.

Anthiarin. (*F. anthiarine*; *G. Anthicin.*) See *Antiarin*.

Anthicides. (*F. anthicidæ.*) Applied by Latreille to a Tribe of *Coleoptera trachelides*, having the *Anthicus* for their type. They are

now regarded as a Genus of the Family *Pyrochroidæ*, Order *Coleoptera*.

Anthidulæ. (*F. anthidulæ.*) Applied by Robineau-Desvoidy to a Tribe of *Myodaria micromydes*.

Anthine. (*Ἀνθος*, a flower. *F. anthin*; *G. blumig.*) Belonging to a flower.

Anthines. (*Ἀνθινος*, of flowers.) A name given to certain medicated oils and wines, because of their red colour.

Anthobothrium. (*Ἀνθος*, a flower; *βοθρίον*, a groove.) A sexually mature form of Cestoid worm, of the Family *Tetraphyllida*.

A. auriculatum. (*L. auricula*, an ear.) Found in the intestine of *Prionodon glaucus*.

A. cornucopiosum. (*L. cornu*, a horn; *copiæ*, plenty.) Found in the intestine of *Galeus canis*.

A. giganteum. (*L. giganteus*, belonging to the giants.) Found in the intestine of *Galeus canis*.

Anthobranchiata. (*Ἀνθος*, a flower; *βράχχια*, the branchiæ. *F. anthobranche*; *G. Aferkiermer.*) A Family of Order *Notobranchiata*, Class *Gastropoda*. Gills dendritic, placed in a circle round the dorsally situated anus. The mantle contains calcareous spicules.

Anthocarpous. (*Ἀνθος*, a flower; *καρπός*, fruit.) Term applied in Botany to some fruits formed by the coalescence of the floral organs, or part of these organs, with the true fruit, as in the case of the pine, fig, and others.

Anthocephalous. (*Ἀνθος*; *κεφαλή*, a head. *F. anthocephale*; *G. blumenkopfig.*) Having a head in the form of a flower. The *Tenia anthocephala* has a very large head with four obtuse lobes that are longer than it.

Anthocephalus. (Same etymon.) The Cysticeroid form of *Tetrarhynchus*, which undergoes development in osseous fishes, and then migrates to Elasmobranchs.

A. elongatus. (*L. elongo*, to lengthen.) Found encapsuled in the liver of *Orthogoriscus nasus*.

A. giganteus. (*L. giganteus*, belonging to the giants.) Found in the frontal cavities of *Chorinemos saliens*.

A. hippoglossi vulgaris. Found in the abdomen of *Hippoglossus maximus*.

A. merlangi. (*F. merlan*, the whiting.) Found encapsuled in the abdomen of *Gadus eglifinus*.

A. paradoxus. (*L. paradoxus*, strange.) Found encapsuled in the ventriculus of *Merlangus carbonarius*.

A. reptans. (*L. reptans*, from *repto*, to creep.) Found encapsuled in the peritonæum, intestinal walls, and liver, and between the muscles of *Pogonias chromis*.

A. rudicornis. (*L. rudis*, rough; *cornu*, a horn.) Found encapsuled in the walls of the intestine, and in the liver and intestine of *Hippoglossus gigas*.

A. trigæ. Found encapsuled in the abdomen of *Trigla gurnardus*.

Anthoceros. (*Ἀνθος*, flower; *κίρας*, horn.) Hornflower. A species of Alga. (Quincy.)

Anthocerotæ. (*Ἀνθος*, a flower; *κίρας*, horn. *F. anthoceries.*) An Order of the Class *Hepaticæ*, Subkingdom *Muscinæ*. Small mosses with a thallus having no median nervure; antheridium developed under the epidermis of the upper side of the thallus; archegonia sunk in the upper surface of the foliage. The sporan-

ANTHOCHRONOLOGIUM—ANTHOS.

gium solitary, elongated, with two upright valves, central columella and sporogonium furnished with elaters projecting from the archegonium.

Anthochronologium. (ἄνθος, a flower; χρόνος, time; λόγος, a discourse. G. *Blumenkalender, Blumenuhr.*) The determination of the time of day or the season of the year by means of the blossoming or opening of flowers.

Anthocoma. A synonym of *Anthrax*.

Anthocorynium. (ἄνθος, a flower; κόρυς, a club. F. *anthocorynion*; G. *Blüthenknoxe*.) Applied by Meyer to a kind of claviform, bifurcated bract, placed horizontally, and in some sort *à cheval* on the peduncle of *Surubaea guianensis*.

Anthocyanin. (ἄνθος, a flower; κύανος, blue. G. *Anthocyan*.) The colouring matter of red, pink, or blue flowers, according to whether the juice of the flowers is acid or neuter. It is solid, uncrystallisable, soluble in water and alcohol, insoluble in ether; it is rendered green by alkalies. It exists in an isolated state in some red flowers, as the red poppy, which become blue by the action of alkalies.

Anthocyanum. The same as *Anthocyanin*.

Anthodes. (Ἀνθώδης, flowery. F. *anthoux*; G. *blümig, voll Blumen*.) Having or full of flowers.

Anthodiate. (F. *anthodîe*; G. *mit blumenkörbchen versehen*.) Having an *Anthodium*.

Anthodium. (ἄνθος, a flower. F. *anthode*; G. *Blüthenkörbchen*.) In Botany, the capitulum of Compositæ.

Anthofes. (Fr.) A synonym in some Pharmacopœias for *Cloves*.

Anthography. (ἄνθος; γράφω, to write. F. and G. *anthographie*.) A description or history of flowers.

Anthoid. (ἄνθος; εἶδος, likeness. F. *anthoide*; G. *blumenähnlich*.) Resembling a flower.

Antholite. (ἄνθος; λίθος, a stone. F. *antholithe*.) The fossil impression of the flowers in the shales of coal measures, and more frequently in tertiary strata.

Anthology. (ἄνθος, a flower; λόγος, a discourse. F. *anthologie*; G. *Blumenlese*.) Term for a treatise on, or history of, flowers, their nature, qualities, appearance.

Antholysis. (ἄνθος, a flower; λύω, to loose. G. *Blüthenauflösungen*.) Term applied in Botany to the regressive metamorphosis of floral organs, the carpels, for example, becoming converted into stamens, the stamens into petals, then into sepals, and the sepals into leaves.

Anthomydes. (ἄνθος; μυῖα, a fly. F. *anthomydes*.) Applied by Robineau-Desvoidy to a Tribe of *Myodaria mesomydes* living generally on flowers.

Anthomyia. (ἄνθος; μυῖα, a fly.) A Genus of Family *Muscidae*, Suborder *Brachycera*, Order *Diptera*, Class *Insecta*.

A. brassicæ. (L. *brassica*, cabbage. G. *Kohlmade*.) A species the larvæ of which live in the stalk of the cabbage.

A. canicularis. (L. *canicularis*, pertaining to the dog star.) A species the larvæ of which are found in and cause certain boils. The larvæ have been seen by Cobbold to be discharged

by the bowels in man, the ova having been probably ingested with the food.

A. meteorica. (G. *Gewitterfliege*.) A species which bites horses and cattle, drawing blood.

Anthomyzæ. (ἄνθος; μυζάω, to suck. F. *anthomyse*.) Applied by Vieillot, Ranzani, and C. Bonaparte, to a Family of *Passeres* that suck the saccharine juice of flowers.

Anthonec'tar. (ἄνθος; νίctw, drink or food of the gods.) Same as *Phytonectar*.

Anthonomus. (ἄνθος, a flower; νομός, pasture. G. *Apfelrüselkäfer*.) A Genus of the Family *Curculionidae*, Order *Coleoptera*. The species are very destructive to the buds, leaves, and fruits of apple and pear trees.

Anthonor. See *Athanor*.

Anthony's fire, St. The popular term for erysipelas, because St. Anthony of Padua was supposed to cure it by miracle; also, popularly called the rose.

A's, St., nut. The *Bunium flexuosum*.

A's, St., rape. The *Ranunculus bulbosus*.

Anthophagous. (ἄνθος, a flower; φάγειν, to eat. F. *anthophage*; G. *blumenfressend*.) Eating flowers; living on flowers.

Anthop'ila. (ἄνθος, a flower; φίλος, a friend.) A synonym of *Apide*.

Anthophore. (ἄνθος, flower; φέρω, to carry. G. *Blüthenträger*.) A term applied in Botany to that part of the receptacle which in some flowers undergoes great elongation above and beyond the calyx, and supports the corolla and reproductive organs, which are thus, as in the Lychnis, much higher than the calyx.

Anthophorium. Same as *Anthophore*.

Anthophorous. (ἄνθος, a flower; φέρω, to bear. F. *anthopore*; G. *blumentragend*.) Bearing many flowers.

Anthophylli. (ἄνθος, flower; φύλλον, leaf. F. *meris des girofles*; G. *Mutternelken*.) Cloves. The fruit of the *Caryophyllus aromaticus*.

Anthophyllite. (*Anthophyllus*, a clove; so-called from its likeness to a clove in colour. F. *anthophyllite*.) A kind of hornblende. It consists of silicic acid, in combination with varying proportions of calcium, magnesium, and iron.

Anthora. (As if *antithora*, or *antiphthora*, from *avri*, against; *phorâ*, corruption. G. *Giftheit*.) A species of *aconitum*, erroneously supposed to be not poisonous, and recommended as alexipharmic and anthelmintic. See *Aconitum anthora*.

A. sylvestris. (L. *sylvestris*, belonging to woods.) A synonym of *Ledum palustre*.

A. vulgaris. (L. *vulgaris*, common.) The *Aconitum anthora*.

Anthorisma. (ἄνθι; ὄρισμα, a boundary. F. *anthorisme*.) A diffused swelling.

Anthorrhiza. (ἄνθος; ῥίζα, a root. F. *anthorric*; G. *Blumenwurzel*.) Term applied in Botany to those plants in which the flower rises directly from an underground stem; formerly mistaken for a root, as in *Convallaria* and *Primula*.

Anthos. (ἄνθος, a flower of any kind.) Applied particularly to the flower of rosemary. The quintessence of gold, according to the alchemists.

Also, a term for *Flos æris*.

A. philosophorum. Old term for a mode

ANTHOSATUM—ANTHRACOMETRY.

of transmuting metals by means of vitriol, according to Labavius, *S. A. Ch. l. vii. s. 7.*

Anthosatum. (Ἀνθος, a flower.) The flower of rosemary. See *Anthos*.

Anthosperm. (Ἀνθος; σπέρμα, a seed. *F. anthosperme*; *G. Blumensame*.) Name by Gailion for an agglomeration of small coloured globules which, in certain *Thalassiphytes symphysiata*, always precede the development of tubercles or conceptacles, because in those more simple organisms they present some analogy with the floral state of phanerogamous plants.

Anthospermæ. (Same etymon. *F. anthospermæ*; *G. blumensamig*.) Applied by De Candolle and A. Richard to a Tribe of *Rubiaceæ*, having the *Anthospermum* for their type.

Anthospermic. (Ἀνθος; σπέρμα, seed. *F. anthospermicæ*; *G. blumensamig*.) Having an *Anthosperm*.

Anthos'tomous. (Ἀνθος; στόμα, a mouth. *F. anthostome*; *G. blumenmundig*.) Applied to a Family of *Helminthoprocta*, having four proboscides, or four prominent suckers, auriciform or petaloid, giving to their head the appearance of a flower.

Anthotaxis. (Ἀνθος; τάξις, order.) The manner of disposal of the parts of a flower.

Anth'us. (Ἀνθος.) A term anciently applied to the plant rosemary, but afterwards transferred to metals, and then signifying the fifth essence or elixir of gold.

Anthoxanthess. (Ἀνθος; ξανθός, yellow. *F. anthoxanthé*.) Applied by Link to a Tribe of *Gramineæ*, having the *Anthoxanthum* for their type.

Anthoxanth'in. (Ἀνθος; ξανθός, yellow.) One of the two colouring principles of yellow flowers, which have been separated by MM. Frémy and Cloéz. An amorphous mass, soluble in water, alcohol, and ether, and turned brown by alkalis.

Anthoxanth'in. (Ἀνθος; ξανθός, yellow. *F. anthoxanthine*; *G. Anthoxanthin*.) A name given by MM. Frémy and Cloéz to one of two colouring matters found in yellow flowers. It abounds in certain fruits, especially those of the *Cucurbitacæ*. It is an amorphous resinous substance, of a beautiful yellow colour, insoluble in water. According to M. Filhol, it is turned green by hydrochloric acid, becoming blue on the subsequent addition of nitric acid. Ether then separates a yellow matter soluble in this menstruum, and a blue matter soluble in alcohol.

Anthoxanthum. (Same etymon.) Spikelets in a spike-like panicle, one-flowered, with a large, bifid, awned glume on each side of the flowering one; empty glumes two, unequal, membranous; lower one-nerved, upper three-nerved; floral glume glabrous, awnless; paleæ one-nerved; scales absent; stamens two; anthers linear, yellow; styles long, stigma feathery; fruit terete, enclosed in the brown shining floral glume and palea. It derives its name from its yellow anthers.

A. odoratum. (L. *odoratus*, sweet smelling. *G. Riechgras*.) Nat. Order *Gramineæ*. Sweet vernal grass. Perennial; panicle pubescent, interrupted below; awn short, scarcely exerted; anthers purple or yellow. It gives the characteristic odour to hay, and it is thought by some that the pollen of this plant is the cause of hay asthma.

Anthoz'a. (Ἀνθος, a flower; ξῶν, a

living being, an animal.) A Class of the Subkingdom *Cœlenterata*. Polypes provided with a gastric tube and mesenteric folds, and with internal sexual organs; frequently assembled in colonies which deposit coral. See *Actinozoa*.

Anthoz'sia. (Ἀνθος; δίζουσαι, to branch out. *F. anthozusie*.) Name by Link for a kind of anamorphosis of leaves when they assume the character of petala.

Anthraceuticalum. (Ἀνθραξ, coal, carbon; *azotum*, nitrogen; ὑδρῶν, water. *G. Blausäure*.) Old term for hydrocyanic acid.

Anthrac'ia. (Ἀνθραξ, a coal.) A synonym of *Carbuncle*.

A Genus of Dr. Mason Good's *Exanthematica*, consisting of foul imperfectly sloughing tumours.

A. pestis. (L. *pestis*, a plague.) Dr. Good's term for the *Plague*.

A. rubula. (L. dim. of *rubus*, a bramble.) Dr. Good's term for the yaws. See *Frambæsia*.

Anthraco'idus. (Ἀνθραξ, a coal. *F. anthracide*.) Applied by C. F. Naumann to a Class, by Beudant to a Family, that contains carbon, either pure or combined with other bodies.

Anthracificerous. (Ἀνθραξ; *fero*, to bear. *F. anthracifere*; *G. kohlentragend*.) Containing carbon.

Anthraco'iform. (Ἀνθραξ; *forma*, likeness. *F. anthraciforme*.) Having the form or appearance of the Anthrax, as *Sesia anthraciformis*.

Anthrac'ia. (F. *anthracien*.) Applied by Latreille to a Tribe of *Diptera tanystoma*, having the Anthrax for their type.

Anthraccine. (Ἀνθραξ, coal.) A form of cancer characterised by blackness of the diseased part, or the presence of melanosis.

Anthrac'ion. (Ἀνθράκιον, dim. of ἄνθραξ, a carbuncle.) A synonym of *Malignant pustule*.

Anthracite. (Ἀνθραξ, coal or charcoal. *G. Steinkohle*.) A coal which contains very little bitumen, and is found in the oldest of the Carboniferous deposits. It has a more or less metallic lustre, a greyish-black or iron-black colour, and is frequently iridescent; its fracture is conchoidal; it is a good conductor of electricity, and burns with very little flame. It has been given powdered in heartburn, in scorbutic conditions, and for intestinal worms.

Anthracoid. (Ἀνθραξ; εἶδος, likeness. *F. anthracoides*; *G. kohlenähnlich*.) Resembling carbon, or the gem carbuncle, or the disease carbuncle.

Anthracolith'us. (Ἀνθραξ; λίθος, a stone.) Same as *Anthracite*.

Anthraco'olomus. (Ἀνθραξ; λοιμός, a pestilence. *F. peste anthracique*; *G. die Schwarze Blatter*; *Milchbrand-Carbunkel*.) The *Pestis anthracis* of Pinel, or black plague.

Anthracom'eter. (Ἀνθραξ; μέτρον, a measure. *F. anthracomètre*; *G. Kohlensäure-messer*.) An instrument to determine the quantity of carbonic acid existing in a gaseous mixture; an anthracometer.

Anthracom'etry. (Ἀνθραξ, carbon; μέτρον, a measure.) A means of testing the purity of air intended for respiration, by determining the amount of carbonic acid gas it contains. Pettenkofer has suggested two methods, one of which consists in ascertaining the amount of carbonic acid in a particular sample of the air,

ANTHRACONECROSIS—ANTHRISCUS.

and the other its average amount throughout the whole period of observation.

Anthracoecrosis. (Ἀνθραξ; νέκρωσις, deadness.) Senile gangrene.

Anthracoönite. (Ἀνθραξ. *F. anthracoonite*.) A variety of marble which has a coal black lustre when polished, as Kilkenny anthracoonite.

Anthracophlyctis. (Ἀνθραξ; φλυκτίς, a blister. *F. anthracophlyctis*; *G. Brandblatter*.) Carbunculous or malignant pustule.

Anthracoporphyrtyphus. (*Anthrax*; *porphyrotypus*. *F. anthracoporphyrtyphus*.) Carbunculous porphyrotypus.

Anthraco'sis. (Ἀνθραξ, a coal.) A carbuncular disease.

Also, a deposit of black material in the body.

A. oculi. (*L. oculus*, the eye.) A term used by Paulus Ægineta for a red or livid, burning, sloughy and very painful tumour, occurring on the eyeball or eyelids.

A. pulmonum. (*L. pulmo*, a lung. *F. fausse melanome du poulmon, pseudo-melanose pulmonaire, matier noir des poulmons, carbon pulmonaire*; *G. Kohlenstaub-inhalationskrankheit*.) Miners' or colliers' phthisis. A disease characterised by carbonaceous sputa and the deposit of carbon, in a finely granular condition, in the tissue of the lungs. It is common in those working in coal mines or other places where there is much carbon dust in the atmosphere, and is essentially a fibroid phthisis. The affected parts of the lungs are more or less consolidated, slate-coloured or black, and projecting; on section they present a smooth, firm surface; the bronchial tubes contain blackish mucopurulent matter; the interalveolar septa are thickened; black molecules are deposited along the course of the vessels, in the walls of the air cells, and amongst the connective tissue; and are also found in the mucus-corpuscles and in the ciliated epithelium. At a later stage, cavities form.

A deposit of carbon, recognised by its resistance to the action of acids and chlorine, is seen in man and in the dog as age advances. It produces no symptoms unless in great excess. The bronchial glands are frequently the seat of a similar deposit.

Anthracothe'rium. (Ἀνθραξ, coal; θηρίον, an animal. *F. anthracotherion*; *G. Kohlenthier*.) A fossil animal in coal, also in sandstone.

Anthracotyphus. (*L. anthrax*; *typhus*. *F. anthracotyphus*; *G. Typhus mit Carbunkelbildung*.) Carbunculous typhus.

Anthrakokali simplex. (Ἀνθραξ, a coal; *kali*. *G. Steinkohlenkali*.) Five parts of powdered anthracite mixed with seven parts of caustic potash are fused in an iron vessel. It is black, bituminous-smelling, strongly alkaline, and not entirely soluble in water. It was introduced by Dr. Polya, of Pesth, and used in scrofula, chronic rheumatism, and chronic eczema. Dose 1—5 grains in water, or mixed with powdered liquorice; externally as an ointment, in the proportion of one part to twenty of lard.

A. sulfuratum. (*L. sulfuratus*, impregnated with sulphur. *F. anthrakokali sulfureux*; *G. geschwefeltes Anthrakokali*.) A sulphuretted form made by mixing 16 parts of sulphur with 160 parts of pulverised anthracite, and adding these to 192 parts of a concentrated and boiling solution of caustic potash contained in an iron vessel;

or by fusing together 7 parts of caustic potash, 6 of anthracite, and 4 of flowers of sulphur. It is used for the same purposes and in the same dose and manner as *A. simplex*.

Anthrax. (Ἀνθραξ, a coal, or carbuncle. *G. Kohle, böartiges Geschwür, Milbrand des Rindviehs*.) Old term applied to the hydrargyri sulphuretum rubrum.

The term has also been used to describe the carbuncular disease caused by infection from an animal suffering from splenic apoplexy, for which see *Malignant pustula*.

Also, a synonym of *Carbuncle*.

Also, it has been applied to splenic apoplexy in domestic animals.

A. intestinalis. (*L. intestina*, the bowels.) A term given to poisoning by eating the flesh of animals suffering from splenic apoplexy or anthrax; violent vomiting, diarrhoea, cyanosis, and collapse speedily set in. The gastrointestinal mucous membrane is found intensely injected, with oedematous and hæmorrhagic projecting infiltrations, having discoloured, acuminate centres. Bacteria are numerous.

A. malignus. (*L. malignus*, of an evil nature.) A synonym of *Malignant pustula*.

A. pulmonum. (*L. pulmo*, the lung.) A term for gangrene of the lung.

Anthraxiferous. Same as *Anthraciferous*.

Anthrazothion'ic. (Ἀνθραξ, coal, azotum, nitrogen; θίον, sulphur. *G. Schwefelcyanwasserstoffäure*.) Same as *Sulphocyanic*.

Anthrazothion'uret. (Same etymol.) Same as *Sulphocyanuret*.

Anthrazothium. (Ἀνθραξ; azotum; θίον, sulphur. *F. anthrazothion*.) Name by Grotthaus for sulphocyanogen, as expressing that it contains carbon, nitrogen, and sulphur.

Anthre'us. (Ἀνθρήν, a hornet. *F. anthrene*.) A Genus of *Coleoptera*, the *Byrrhus* of Linnæus. Forehead with a simple ocellus; antennæ eleven-jointed, ending in a three-jointed club; or eight-jointed, with a two-jointed club; or five-jointed, with a single terminal club; upper maxillæ crenulated; prothorax deeply channelled for the antennæ.

A. destructor. (*L. destructor*, a destroyer. *F. anthrene destructeur, a. du boucage*.) A species the larvæ of which commit great depredations on camphor, cantharides, musk, and on other dried animal substances, as anatomical preparations.

A. pimpinell'æ. The same as *A. destructor*.

Anthrib'ides. (*F. anthribides*.) Name by Latreille for a Tribe of *Rhynchophora*, by Schönherr, a Group of *Curculionides*, having the *Anthribus* for their type.

Anthric'inæ. A Subfamily of the Family *Pyrochroidæ*, having the thighs of the anterior and middle legs somewhat distant, leaving free the mesothorax.

Anthris'cum. A plant, probably the *A. odoratus*, Linn., used by the ancients as a stimulant and cure for leucorrhœa.

Anthris'cus. (Ἀνθρίσκος. *G. Kerkel, Klettenkerbel*.) A Genus of Nat. Order *Umbellifera*. Beaked parsley. Annual or biennial hairy herbs. Leaves deltoid, pinnately or ternately decomposed; umbels compound; bracts one, two, or none; bracteoles many, entire; calyx obsolete; petals with an inflexed point; fruit ovoid, beaked, contracted at the side; ridges confined to the

ANTHROPE—ANTHROPOHISTOGRAPHY.

beak; vittæ solitary or none; seed furrowed next the commissure.

A. cœrofolium, Hoffm. (L.; or *cœrifolium*, Latinized by Pliny, from *χαίριφυλλον*; from *χαίρη*, to rejoice; *φύλλον*, a leaf. F. *cerfeuil cultivé*, c. *officinal*; G. *Gartenkerbel*.) Chervil. Hab. Europe. Stem hairy above the joints; umbels sessile, lateral, opposite a leaf; fruit glabrous, twice as long as the beak. The plant has a pleasant aromatic odour, and is cultivated as a pot herb. It is said to be deobstruent, diuretic, and emmenagogue. It has been used in consumption, scrofula, dropsy, cutaneous and scorbutic affections, and as an application to swollen breasts, bruises, and other local affections. The fresh juice is official in the Fr. Codex.

A. humilis. (L. *humilis*, low.) The *A. sylvestris*.

A. procœrus. (L. *procœrus*, tall.) The *A. sylvestris*.

A. sylvestris, Hoffm. (L. *sylvestris*, belonging to the woods. F. *cerfeuil sauvage*; G. *wilder Kerbel*.) Hab. Europe. Stem hairy below; umbels peduncled, terminal; fruit glabrous. The plant has a strong disagreeable odour and a bitter taste. Has been used as an aromatic, and is said to be poisonous.

A. vulgaris, Pers. (L. *vulgaris*, common.) Stem smooth; umbels peduncled, opposite a leaf; fruit ovate, hispid. An indigenous herbaceous plant; reputed to occasion stupor, delirium, palsy, and asphyxia.

Anthrope. (Ἀνθρωπίνη, a man's skin.) Ancient term for the human cutis, or true skin; used by Herodotus, l. v, c. 23, where Julius Pollux appears to have read *ἀνθρώπην* (see *Onomast.* l. ii, c. i, § 5), but no good modern editions contain this reading.

Anthropendypocœusis. (Ἀνθρωποειδής, man; *endypocœusis*. F. *anthropendypocœusis*.) Internal heat, or burning of the human body.

Anthropēpiphyte. (Ἀνθρωπος; *epiphyta*. F. *anthropēpiphylon*; G. *Hautgewächs*.) A parasite, or fungous growth on the human skin.

Anthropiatrika. (Ἀνθρωπος; *iatritikós*, belonging to medicine. F. *anthropiatrique*; G. *Anthropiatrik*, *Menschenheilkunde*.) The consideration of medicine in reference to man; the art of treating human diseases.

Anthropic. (Ἀνθρωπος.) Belonging, or relating, to man.

Anthropidæ. (Ἀνθρωπος.) A Sub-order of the Order *Primates*, of which man is the only genus and species. Lower limbs devoted to progression, anterior to prehension; sacrum as broad as long; hands prehensile, wide, short; thumb opposable; ilia wide; ischiatic tuberosities everted; pelvic cavity and outlet broader than long; foot broad; hallux not opposable; teeth without a diastema; brain very large, convolutions large and complex, sulci deep.

Anthropinæ. (Ἀνθρωπος.) Belonging, or relating, to man.

Anthropism. (Ἀνθρωπισμός, humanity. F. *anthropisme*; G. *Menschenhum*.) The character or condition of a human being.

Anthropistoria. (Ἀνθρωπος, man; *istoria*, information. F. *anthropistorie*; G. *Menschenbeschreibung*.) A description or history of man.

Anthropocentric. (Ἀνθρωπος; *κέντρον*, any sharp point, the stationary leg of a

pair of compasses.) A term applied to that theory of the universe which regards man as centre or chief object of its existence.

Anthropochemia. (Ἀνθρωπος; *χημία*, chemistry. F. *anthropochimie*; I. *anthropochimie*; G. *Anthropochemie*, *Menschenstoffkunde*.) The chemical analysis of the human body.

Anthropochimia. Same as *Anthropochemia*.

Anthropoc'tony. (Ἀνθρωποκτονία; *ἀνθρωπος*, man; *κτείνω*, to kill. F. *anthropoc-tonie*; G. *Menschenmord*.) Manslaughter; the destruction of man.

Anthropodectus. (Ἀνθρωποδότης; *ἀνθρωπος*, man; *δάκνω*, to bite. F. *anthropodecte*.) Bitten by man.

Anthropoform. (Ἀνθρωπος; L. *forma*, shape.) Having the appearance or qualities of man.

Anthropogen'esis. Same as *Anthropogeny*.

Anthropogen'ia. (Ἀνθρωπος, a man; *γεννάω*, to produce. F. *anthropogénie*; G. *Erzeugung des Menschen*.) See *Anthropogeny*.

Anthropogen'y. (Ἀνθρωπος, man; *γένος*, a race.) The doctrine of the descent of man. An endeavour to trace, on the theory of evolution, the successive stages by which the lowest forms of animal life have developed into the highest or human life. The evidence is deduced partly from geological considerations, necessarily very imperfect, since not only has the opportunity of examination by competent observers of large areas and numerous strata been wanting, but there can be little doubt that many groups of soft-bodied animals have died and left no recognisable trace behind them; partly from embryological considerations, for ontogenesis or the development of the individual represents, according to Haeckel, abbreviated phylogenesis, or the development of the race; partly from a comparison of the structure and functions of the various groups of living animals; partly from a study of atrophied organs, such, for example, as the Wolffian bodies, which in certain animals possess active functions, but which have fallen into disuse in man, being supplanted by organs of higher type; partly from the phenomena of Teratology, which often indicate reversion to lower types; and partly from pathological considerations.

The genealogical tree of the human race, as given by Haeckel, who is supported generally by Huxley, is as follows:—The lowest forms of animal life which represent the first formed creatures are the Monera. These, in the lapse of time, developed into solitary Amœbæ, and these again clustering together formed the Synamœbæ, these the Planædæ, and these, through the Gastrodæ, Vermes, Archelminthæ, Scolecidæ, Chordoniæ, Acrania, Cyclostoma, Selachii, Dipneusti, Amphibia, Promammalia, Marsupialia, Prosimian Apes, Anthropoid Apes, to Man. The doctrine is ably supported by Haeckel, Darwin, and a host of writers. It has been combated by Agassiz, St. George Mivart, Bree, and others.

Anthropography. (Ἀνθρωπος, a man; *γράφω*, to write.) A history of, or treatise on, the structure of man.

Also, that branch of Physical Geography which treats of the distribution, language, manners, and customs of man.

Anthropohistography. (Ἀνθρω-

ANTHROPOID—ANTHROPOMETRY.

πος; ιστός, a web; γράφω, to write.) A description of the tissues of the human body.

Anthropoid. (Ἀνθρωπος; εἶδος, form. *F. anthropoide; G. Menschenähnlich.*) Resembling man.

A. apes. The higher or man-like apes. See *Anthropomorpha*.

Anthropoides. (Ἀνθρωπος, man. *F. anthropus; G. menschenartig.*) Pertaining to, or resembling, man.

Anthropolite. (Ἀνθρωπος; λίθος, a stone. *F. anthropolite.*) A human petrification; applied to the petrified human bones from Guadaloupe.

Also, a term for concretions in the human body.

Anthropolith'ic. (Ἀνθρωπος; λίθος.) Term applied by Haeckel to indicate the quaternary period or age when man, fully formed, appeared on the earth.

Anthropological. Pertaining to *Anthropology*.

Anthropology. (Ἀνθρωπος; λόγος, a discourse. *G. Menschenkunde.*) The study of man as a whole and in the widest sense of the term; both from a physical and a psychological point of view.

A., descriptive. One of Broca's divisions; being the study of the human group considered in its individual relations.

A., general. One of Broca's divisions; being the study of the human group considered as a whole.

A., morbid. The study of man in relation to the diseases which affect him as a being that lives in a society.

A., pathological. The same as *A., morbid*.

A., zoological. One of Broca's divisions; being the study of the human group considered in its relations with the rest of organised nature.

Anthropomagnetism. (Ἀνθρωπος; μαγνητισμός.) Term for *Animal magnetism*.

Anthropoman'cy. (Ἀνθρωπος; μαντεία, divination.) Divination by means of inspection of the entrails of a dead man.

Anthropometallism. (Ἀνθρωπος; metallum, a metal. *F. anthropométabisme.*) Term by Spindler for one of the principal forms of animal magnetism, that in which somnambulism and other phenomena are said to result from looking at a metal plate or point.

Anthropometry. (Ἀνθρωπος; μέτρον, a measure. *F. anthropométrie; G. Menschenmasslehre.*) This term is applied to the determination of the physical proportions of the body and of its weight and strength. The instruments required are a weighing machine, a dynamometer, handrule, measuring staff and measuring-tape, a pair of callipers, and a chart. An anthropometric chart has been constructed by Charles Roberts, which consists of an outline figure of a man in a standing position, the heels in contact, and the arms hanging down, the forearm of one in the prone, the other in the supine position, and having lines drawn from a vertical median line horizontally to a line at the side, on which the length of the face, chest, abdomen, and other parts, can be written down. The chart contains other smaller tables, on which circular measurements can be made. Mr. Roberts gives minute rules and directions for taking and inserting the measurements.

The measurements of the different organs of

the body will be found under their appropriate headings. A few general observations on the bulk and stature of the body may here be made. It is by no means easy to estimate the height exactly. It varies with the period of the day and the length of time that the standing or recumbent posture has been maintained, and with the action of the extensor muscles of the trunk, neck, and limbs. Trunk: The Americans, in their measurements made during the War of Secession upon a million individuals, chose as boundaries the spinous process of the seventh cervical vertebra and the perineum, and found the length to be from 362—394 thousandths of the stature. Quételet took from the clavicles above to the perineum below, and found a mean of 354 thousandths of the stature. In Serisiat's and Topinard's method the distance between the biacromial and the biischiatric line was taken; the mean was 362 thousandths. The length of the trunk is, therefore, more than one third and less than two fifths of the stature.

The distance between the tips of the middle fingers, when the arms are as widely extended as possible, termed by the French the *grande envergure*, may be equal to the stature, or may exceed it by varying proportion up to 89 parts in a 1000. In a series of 10,876 American soldiers the mean was 1.043 to 1.000.

Of the two extremities the upper, minus the hand, is shorter than the vertebral column from the atlas to the point of the sacrum in the proportion of 79 to 100; whilst the lower extremity, less the foot, is longer in the proportion of 113 to 100 (Huxley); or if the femur and tibia together be taken as 100, the humerus and radius together represent 68.1 (Humphry); or 68.9 (Topinard and Broca). The length of the radius is 75.1 (H.), 76.1 (T. and B.), if the femur be taken as 100, the tibia 82.6 (H.), 80.6 (T. and B.), these observers excluding the internal malleolus. The relation of the hand to the stature is as 11.82:100, of foot as 16.96:100.

At birth man's height is 56 centimètres; at five years of age about 1 metre; at fifteen 1.50 m.; at nineteen he wants 15 mm. to complete his full height, which is reached generally at or about thirty years of age, though this varies. From fifty to sixty years the height always diminishes, and at ninety years is less by 7 centimètres.

The woman is shorter than the man by 12 centimètres, i.e. she is 7 per cent. less in height.

The average stature of adult Englishmen is stated by Dr. Beddoe to be between 5 ft. 6 in. and 5 ft. 7 in. (1.676 and 1.702 mètres). Topinard gives it at 1.708 mètres. Of—

Anthropomorpha. (Ἀνθρωπος; μορφή, form.) A Family of the Suborder <i>Catarrhina</i> , Order <i>Primates</i> . Arboreal, hair-covered animals, which habitually assume a semi-erect posture; tail rudimentary; anterior limbs long; dorsolumbar vertebrae seventeen or eighteen in number, the spines of which do not point towards a common centre; thorax broad; sternum wide; callosities and cheek pouches absent.	
Anthropomorphism. (Ἀνθρωπόμορφος, of human shape. F. <i>anthropomorphisme</i> ; G. <i>Vermenschlichung</i> .) Same as <i>Anthropomorphosis</i> .	
The term is also used to express the conception of God as a being possessed of human properties and attributes.	
Anthropomorphite. (Ἀνθρωπος, man; μορφή, form.) A plant, or part of a plant, resembling the human body.	
Anthropomorphology. (Ἀνθρωπος; μορφή; λόγος, a discourse. F. and G. <i>anthropomorphologie</i> .) A treatise on the form of different parts of the human body. Synonymous with <i>Descriptive Anatomy</i> .	
Anthropomorphos. (Ἀνθρωπόμορφος, of human form.) A synonym of the <i>Atropa mendragora</i> .	
Anthropomorphosis. (Ἀνθρωπος; μορφή. F. <i>anthropomorphose</i> ; G. <i>Menschenge-staltenbildung</i> .) The formation of the human form.	
Anthropomorphous. (Ἀνθρωπος, man; μορφή, form.) Formed like man; resembling man's outward appearance; man-shaped. A name given by the old botanists to plants, or parts of plants, in which they saw some resemblance to the human body. The roots of <i>Mandragora</i> , certain Fungi, and the labellum of some Orchids, constitute examples.	

Anthroponomy. (Ἀνθρωπος; νόμος, a law. F. and G. *anthroponomie*.) The science which treats of the laws that regulate the formation of man, or that regulate the functions of his organs. Synonymous, in the latter sense, with *Physiology*.

Anthroponosology. (Ἀνθρωπος; νόσος, disease; λόγος, a description. F. and G. *anthroponosologie*.) The doctrine of human diseases.

Anthropopathy. (Ἀνθρωποπάθεια, humanity. F. and G. *anthropopathie*.) Humanity.

Anthrophagus. (Ἀνθρωπος; φαγεῖν, to eat. G. *Menschenfresser*.) Term for an eater of human flesh; a man-eater; a cannibal.

Anthrophagy. (Ἀνθρωπος; φαγεῖν, to eat. F. *anthrophagie*; G. *Menschenfressen*.) The act, or custom, of eating human flesh.

Anthropharmacology. (Ἀνθρωπος; φάρμακον, a drug; λόγος, an account; pharmacology. F. *anthropharmacologie*; G. *Anthropharmakologie*.) An account of the action of medicines on man.

Anthrophobia. (Ἀνθρωπος; φόβος, fear. F. *anthrophobie*; G. *Menschenheu*.) A fear or dread of man.

Anthrophorus. (Ἀνθρωπος; φέρω, to bear. F. *anthrophore*; G. *menschentragend*.) Applied to *Loroglossum anthropophorum*, because of a supposed resemblance between the labellum and a man suspended by the arm.

Anthrophthorous. (Ἀνθρωποφθόρος, from ἄνθρωπος; φθίρω, to destroy. F. *anthrophthore*; G. *menschenverderbend*.) Destroying men.

Anthropiatria. (Ἀνθρωπος; ιατρικός, medical. G. *Menschenheilkunde*.) The medical art applied to man.

Anthroposcatina. (Ἀνθρωπος; σκαύω, dung. F. *anthroposcatine*; G. *Menschenkotstoff*.) Human ordure.

Anthroposcopy. (Ἀνθρωπος; σκοπέω, to explore, or observe.) The act of forming a judgment of a man's character and disposition, from an inspection of the lineaments of his body; physiognomy.

Anthroposcorina. Same as *Anthroposcatina*.

Anthroposomatology. (Ἀνθρωπος; σῶμα, the body; λόγος, a discourse. F. *anthroposomatologie*.) A treatise, dissertation, or description of the structure of the human body.

Anthroposophy. (Ἀνθρωπος; σοφία, wisdom, or knowledge.) The knowledge of the nature and general character of man, according to Charlton, (*Econ. Anim. Exerc.* iii, § 10).

Anthropotherapy. (Ἀνθρωπος; θεραπεία, attendance, medical treatment. F. *anthropothérapie*; G. *Menschenheilkunde*.) The medical treatment of human beings.

Anthropotomist. (Ἀνθρωπος; τομή, a cutting. F. *anthropotomiste*; G. *Anthropotom, Menschenzergliederer*.) A dissector of man; a human anatomist.

Anthropotomy. (Ἀνθρωπος; τομή. F. *anthropotomie*; G. *Menschenzergliederungskunde*.) Term for the cutting up, or dissecting, of man; human anatomy. At present it implies the ordinary dissection of the human body for the acquirement of medical knowledge, as opposed to the dissection of the comparative anatomist. The word in its strict etymological sense has long been represented by *anatomist*.

ANTHROPOUS—ANTIARIS.

simply; which, when the question was one of zootomy, became comparative anatomist.

Anthropous. (Ἀνθρωπος.) Relating to man.

Anthropozoic. (Ἀνθρωπος, man; ζῶον, a living being.) Term applied by Haeckel to the age when man fully formed appeared on the earth. It is synonymous with the quaternary period.

Anthumon. (Ἀντι, one against another; θυμόν, thyme.) A synonym of the dodder which grows on thyme, *Cuscuta epithymum*.

Anthuridae. A Family of the Tribe *Anisopoda*, Suborder *Isopoda*, Order *Edriophthalma*. Antennæ short; the first thoracic segment free and bearing a pair of prehensile limbs; abdomen with two-oared limbs and a strong swimming tail.

Anthurus. (Ἀνθος, a flower; οὐρά, a tail. F. *anthure*; G. *Blüthenschweif*.) A term applied in Botany to the inflorescence of Chenopodiaceæ and Amarantaceæ. These consist of small contracted cymes, which in the *Amarantus*, for example, are very numerous, and situated in the axillæ of more or less modified females.

Name by Link for elongated peduncles that bear flowers in bundles.

Anthus. (Ἀνθος, a flower. G. *Blume*.) A flower; especially that of rosemary.

Anthydrasis. (Ἀντι, against; *hydryasis*. F. *anthydrasie*.) The opposite of *Hydrasis*, or hydropathy.

Anthydropic. (Ἀντι; ὑδρῶς, dropsy. F. *anthydropique*.) Opposed to, or relieving from, dropsy; applied to remedies of this character.

Anthyllidæ. A Group of the Tribe *Lotææ*, Nat. Order *Leguminosæ*. Calyx 5-cleft, or 5-toothed, or 2-lipped; wings of flowers not folded or wrinkled; stamens coherent; pod unilocular.

Anthyllis. (Ἀνθυλλίς.) Under this name the ancients included two plants, one of which is now generally referred to *Cressa cretica*, though some regard it as the *Anthyllis vulneraria*; whilst the other was probably the *Ajuga reptans*. It was employed in dysuria, epilepsy, affections of the uterus and spleen. Dioscorides, liii, c. 143; Paulus Ægineta, lvii, § 3; Pliny, lxxi, c. 104. (Waring.)

Anthyllis. (Ἀνθυλλίς.) A Genus of the Group *Anthyllidæ*, Tribe *Lotææ*, Nat. Order *Leguminosæ*. Herbs or shrubs; leaves pinnate, with a terminal leaflet; stipules small or none; calyx inflated, mouth oblique; petals with long claws; keel incurved; pod enclosed in the calyx, obliquely ovoid.

A. cretica. (L. *creticus*, belonging to Crete.) A plant believed to possess laxative virtues.

A. Hermaniæ. The root is said to be diuretic.

A. vulneraria. Linn. (L. *vulnerarius*, belonging to wounds. F. *anthyllide, vulnenaire, triolet jaune*; G. *Wundklee*.) Stem herbaceous, silky; radicle leaves pinnate, unequal; leaflets 2-6 pairs; heads in pairs, rarely solitary; flowers yellow. A plant common in England, France, &c., used as an application to wounds, burns, &c., by the peasantry.

Anthyllum. (Ἀνθύλλιον, a floweret. G. *Blümchen*.) A little flower.

Antyptic. (Ἀντι, against; ὑπνος, sleep. G. *schlafvertreibend*.) Medicines having

power to hinder sleep, as strong coffee and tea taken before going to bed.

Antyphochondriac. (Ἀντι, against; ὑποχονδριακός, hypochondriac.) Medicines having power to remove or to overcome hypochondriasis.

Antyphocophosic. (Ἀντι; ὑπάκουος, rather deaf.) Having power to relieve deafness.

Antyphoric. (Ἀντι, against; *hysteria*.) Applied to medicines having power to remove or overcome hysteria.

Antiacid. See *Antacid*.

Antiadies. (Ἀντιάς, a tonsil.) A name for the tonsils. Also, inflamed tonsils; used by Nic. Piso de Morb. *Cognosc. et Curand.* ii, 2.

Antiaditis. (Ἀντιάς, a tonsil. F. *antidiadite*; G. *Mandelnentzündung*.) A term for tonsillitis, or inflammation of the tonsils.

Antiadoncus. (Ἀντιάς, a tonsil; δγκος, mass, an enlargement. F. *antiadoncus*; G. *Mandelngeschwulst*.) Term for a swelling of the tonsils.

A. inflammatorius. (L. *inflammatio*, inflammation.) Inflammation of the tonsils.

Antiaërophthora. See *Antiaërophthoron*.

Antiaëgra. (Ἀντιάς, a tonsil; ἀγρᾶ, a seizure.) Term for swelling of the tonsils, *Riolanus*, *Enchirid.* *Anatom.* iv, 7.

Antialbumin. A body into which, in conjunction with *Hemialbumin*, Kühne describes albumen as being decomposed by the action of pepsin or, the pancreatic ferment, trypsin.

Antialbuminose. The same as *Antialbumin*.

Antialkaline. See *Antalkaline*.

Antiphrodisiac. See *Antaphrodisiac*.

Antipoplectic. (Ἀντι, against; ἀποπληξία, apoplexy.) A remedy for apoplexy.

Antiar. See *Upas antiar*.

Antiar resin. $C_{16}H_{24}O$. Obtained from the dry juice of the *Upas antiar* by extraction with ether or benzol. On evaporation of the ether it is deposited in feathery crystals of silky lustre. It is not poisonous.

Antiarin. $C_{11}H_{20}O_3 + 2H_2O$. The poisonous principle of the *Upas antiar*. It is probably a glucoside. It appears in the form of silvery laminae, which dissolve in 254 parts of water, at 22° C. (71.6° F.), and in 27.4 parts of boiling water, in 70 parts of alcohol, and in 2800 of ether; it melts at 220° (428° F.); reaction neutral; it dissolves in dilute acids and alkalies without combining with them. It reduces an ammoniacal solution of silver. It is highly poisonous, two milligrammes (less than 100th of a grain) proving rapidly fatal to a rabbit when subcutaneously injected; unlike curare, it diminishes in frogs the absorption of oxygen. The addition of a little sugar increases its solubility.

Antiaris. (*Antiar*, or *anteschar*, its native Javanese name. G. *Upasbaum*, *Pf.-sigiftbaum*.) A Genus of the Nat. Order *Ulmaceæ*, Series *Artocarpææ*. Trees or shrubs inhabiting the warm regions of India and Australia. Leaves alternate, stipulate; flowers monœcious, irregular; corolla absent. Males, forming a capitulum, surrounded at their base by many bracts; perianth 4-partite, with four stamens; anthers extrorse. Female flower, receptacle concave, with a variable number of caducous sepals attached to its border; ovary unilocular, uniovulated; style with two

ANTIARTHRITIC—ANTICLINANTHUS.

stigmata; ovule anatropal; fruit a drupe; seeds exalbuminous.

A. saccolora, Dalz. (Σάκος, a bag; δαπέω, to give. Tam. *nettil-vil-marum*; Mal. *araya-angeli*.) A large tree inhabiting Malabar, so called because its bark is used for making sacks. Leaves alternate, ovate, oblong, pointed, entire, glabrous above, slightly villous beneath; capitulum axillary; drupe with a purple down. The nuts are intensely bitter.

A. toxicaria. (Τοξικον, poison for smearing arrows with.) Leaves oval-oblong, acute, hairy on both sides, specially along the chief veins, slightly serrated; male receptacles stalked. It yields the poison called *Upas antiar*, and which is named by the Javanese *Antiar*, or *Antiar*; also called *Ipo toxicaria*, and *Ipo, Hypo*, and *Pohun upas*.

Antiarthritic. See *Antarthritic*.

Antias. (Gr.) One of the tonsils.

Antiasphyctic. See *Antasphyctic*.

Antiasthenic. See *Antasthenic*.

Antiasthmatic. See *Antasthmatic*.

Antiatrophic. See *Antatrophic*.

Antiballomemon. (Ἀντιβάλλω, to throw against; or rather, ἀντιμβάλλω, to put in place of another, to substitute.) Coming in place of another. Applied to a medicine employed as a substitute for another, or a succedaneum.

Antiballomemonum. (Same etymon.) A succedaneum.

Antibdelia. (Ἀντί, like; βδέλλα, a leech. F. *antibdelles*.) An artificial or mechanical leech, an instrument by means of which incisions are made like the bites of leeches, and from these blood is extracted by a suction-pump.

Antibechic. (Ἀντί, against; βήξ, a cough.) Expectorant.

Antibrachial. (L. *antibrachium*, the forearm.) Of, or belonging to, the antibrachium or forearm.

A. aponeurosis. See *Fascia of forearm*.

Antibrachium. (Ἀντί, against; βραχίον, the arm.) A term for the forearm, because opposed to, when bent upon, the proper arm.

Antibromic. (Ἀντί; βρώμος, a stench.) Deodorant.

Anticachectic. (Ἀντί, against; καχεξία, a bad habit of body. F. *anticachectique*; G. *antikakektisch*.) Applied to medicines opposed to what is cachectic.

Anticachecticum Ludovici. See *Ludovici, anticachecticum*.

Anticacochymic. (Ἀντί; κακός, bad; χυμός, juice.) Anticachectic. (Dunglison.)

Anticancerous. (L. *anti*, against; *cancer*. F. *anticancereux*; G. *krebucidrig*.) Remedies employed for the relief or cure of cancer.

Anticancerous. The same as *Anticancerous*.

Anticar. (Arab.) Term for borax. (Ruland.)

Anticarcinomatous. (Ἀντί; *carcinoma*. F. *anticarcinomatus*.) Opposed to, or palliating, carcinoma.

Anticardiom. (Ἀντί, against, or opposite to; καρδιά, the heart. F. *anticarde*; G. *Herzruhe*.) The hollow below the sternum; the scrobiculus cordis, or pit of the stomach.

Anticardium. Same as *Anticardiom*.

Anticarious. (Ἀντί; caries. F. *anticarieux*.) Opposed to, or acting against, caries.

Anticatarhal. (Ἀντί, against; κатарρῶς, a catarrh.) Applied to medicines employed for the relief of catarrh.

Anticatarrhoic. (Ἀντί; κатарρῶς.) Having power to relieve catarrh.

Anticausotic. (Ἀντί, against; καύσος, an ardent fever.) Applied to a medicine used to remove or moderate an ardent fever.

Anticaustic. (Ἀντί; καυστικός, capable of burning. F. *anticaustique*.) Opposed to, or relieving from the burning sensation produced by, caustic; applied to remedies of this quality.

Anticephalalgic. (Ἀντί; κεφαλαλγία, headache.) Having power to relieve headache.

Antichamber. (F. *antichambre*; G. *Vorhof*.) A term applied in Botany, by H. v. Mohl, to that part of stomata which is outside the aperture or ostiole.

Anticheir. (Ἀντίχειρ; from ἀντί, against; χείρ, the hand. F. *antichir*.) A term for the thumb, as being against or opposite the hand or fingers. (Galen.)

Antichimelium. (Ἀντί; χίμελον, a chilblain. F. *antichimelium*.) A medicine against chilblains.

Antichirotonus. (Ἀντίχειρ, the thumb; τόμος, contraction.) Applied to epileptics in whom the forcible or spasmodic inflection of the thumb is one of the precursory or predominant symptoms of the attack.

Antichlore. (Ἀντί, against; chlorine. F. *antichlore*.) A term applied to substances capable of neutralising or eliminating the excess of chlorine liberated in the act of bleaching; such are the alkaline sulphites, calcium sulphite, and dichloride of tin, or hydrated stannous chloride.

Antichloristic. (Ἀντί; chloristic. F. *antichloristique*.) Applied to a hypothesis admitted into the creation of pneumatic chemistry, strongly urged, in 1809, by Gay-Lussac and Thénard, and finally rejected, in 1810, by Sir Humphry Davy, according to which chlorine, in place of being a simple body, was held to result from a combination of oxygen and an unknown radical.

Antichlorotic. (Ἀντί; chlorosis.) Having power to relieve chlorosis; applied to such remedies as iron.

Antichæradic. (Ἀντί; χοιράδες, scrofulous glands of the neck. F. *antichæradique*.) Opposed to, or healing, suppurating or scrofulous glands; applied to remedies.

Anticholeric. (Ἀντί, against; cholera.) Applied to medicinal plants which were believed to cure cholera.

Anticipating. (L. *anticipo*, to anticipate, or take before. F. *anticipant*; G. *vorgreifend*.) Term applied to the occurrence of certain phenomena in the human body before their customary period; as the catamenia, or the paroxysm of ague.

Anticipation. (L. *anticipo*, to anticipate or take before.) Term for the occurrence of certain phenomena, morbid or natural, before the customary period.

Anticlinal. (Ἀντί, against; κλίω, to bend, to slope.) Bending against or in opposite directions.

A. line. The ridge where anticlinal strata meet.

A. strata. (L. *stratum*, the thing spread, a layer.) A term applied to strata which slope in opposite directions downwards from a common meeting line.

Anticlinanthus. (Ἀντί; κλίνη, a bed;

ANTIDROMAL—ANTILEPSIS.

The antidotal stone, a term for the philosopher's stone.

Antid'romal. (Ἀντί, against; δρόμος, course.) A term in Botany, applied to a spiral which runs in the opposite direction to the antecedent spiral.

Antidynam'ica. (Ἀντί; δύναμις, power. *F. antidynamique*; *G. schwächend.*) Reducing, depressing, debilitating remedies.

Antidynous. (Ἀντί; δόυνη, pain.) Anodyne. (Dunlison.)

Antidyscratic. (Ἀντί; δυσκρασία, bad temperament.) Medicines which are supposed to ameliorate or destroy the dyscratic conditions of the body. See *Dyscrasia*.

Antidysenteric. (Ἀντί, against; *δυσεντερία*, a dysentery. *G. ruhrwidrig.*) Term applied to medicines having power to relieve dysentery.

Antimet'ic. See *Antemet'ic*.

Antienneahe'drus. (Ἀντί; ἐννία, nine; ἰδρα, a base. *F. antienneaédre.*) Applied by Haüy to a prism with 12 planes, terminated by 2 summits with 9 faces.

Antiephial'tic. See *Antiephial'tic*.

Antiepid'osis. (Gr.) Term applied by Hippocrates to the connection of successive febrile attacks, or to their concordance.

Antiepilep'tic. See *Antiepileptic*.

Antierotic. See *Anterotic*.

Antifar'cinous. (Ἀντί; farcy.) A term for remedies against farcy.

Antifebrile. (Ἀντί, against; *L. febris*, a fever. *G. fiebervertreibend, fieberwidrig.*) Having power to repel fever; applied to medicines against fevers; febrifuge.

Antifidos. Old term for the calx of metals.

Antigalactagogue. (Ἀντί; γάλα, milk; ἀγωγοί, leading, from αγω, to lead, to convey.) Medicines which restrain the secretion of milk.

Antigalactica. (Ἀντί, against; γάλα, milk. *F. antigalactique*; *G. milchvertreibend.*) Applied to medicines having power to lessen the secretion of milk.

Antig'oni collyrium nigrum. Black collyrium of Antigonus, composed of cadmia, antimony, copper acetate, pepper, gum arabic, and water. (Dunlison.)

Antig'ua. West Indies; one of the islands of the British Leeward group. The climate is fairly healthy and the soil fertile; but it suffers often from scarcity of water, and hurricanes have been severe. Residence here has been found useful in threatened, but injurious in confirmed, phthisis.

Antihæmopt'yes. (Ἀντί; αἷμα, blood; πτύες, to spit.) Term applied to remedies arresting pulmonary hæmorrhage.

Antihæmorrhag'ic. (Ἀντί; αἷμα, blood; ῥήγνυμι, to break forth.) Term applied to remedies arresting hæmorrhage.

Antihæmorrhoid'al. (Ἀντί; αἰμορροΐδες, hæmorrhoids.) Term applied to remedies for piles.

Antihæc'tic. (Ἀντί, against; ἐκτικός, hectic.) Having power to remove, or assuage, hectic fever; applied to medicines used for this purpose.

Antihæc'ticum Poterii. Pothier's antihæc'tic; prepared as *Antimonium diaphoreticum*, with the addition of tin; it is probably a double salt, composed of potassium antimonate and stannate. It was formerly used in hæmorrhage, spermatorrhœa, and colliquative perspiration.

Antihæc'ticus. (Ἀντί; ἰδρα, a base. *F. antihæc'tique.*) Applied by Haüy to a crystal composed of two rhomboids, each of which has its faces turned contrariwise to those of the other.

Antihelix. (Ἀντί, against; helix.) The inner curved ridge on the pinna; it begins below at the antitragus, curves round and forms the posterior margin of the concha, and divides above into two branches, one of which runs transversely forward, and the other continues upwards to the superior margin of the pinna.

Anthelmint'ic. See *Anthelmintic*.

Antiherpetic. (Ἀντί; ἕρπης, herpes. *F. antiherpétique*; *G. gegenherpetisch.*) Applied to remedies against herpetic diathesis.

These are sulphur, mercury, antimony, arsenic, cantharides, saraparilla, hydrocotyle, elm bark, hop, taraxacum, and others.

Antihydri'asis. (Ἀντί; ὕδωρ, water.) The doctrine which opposes the use of water in disease. (Littre and Robin.)

Antihydrophob'ic. (Ἀντί; hydrophobia. *F. antihydrophobique*; *G. gegenhydrophobisch.*) Applied to remedies against hydrophobia.

Antihydroptic. (Ἀντί, against; ὑδρωψ, dropsy.) Against, or curative of, dropsy; applied to medicines believed to be so qualified.

Antihydropic. (Ἀντί, against; ὕδωρ, water.) A crystalline compound, obtained by Bogomolow (1876) from the cockroach (*Blattia orientalis*). Supposed to be the active principle which, when the powder of the bodies of these insects is administered in nephritis, causes increase of the renal and cutaneous secretions, and disappearance of dropsy and of albumen in the urine; unlike cantharides, it has no stimulant action on the urinary organs.

Antihypnotic. See *Anthypnotic*.

Antihypocho'ndriac. See *Anthypocho'ndriac*.

Antihyster'ic. See *Anthyster'ic*.

Antiletor'ic. (Ἀντί, against; ἰκτερος, the jaundice.) Against, or curative of, icterus, or jaundice; applied to medicines believed to possess such power.

A. spir'it. The product of the distillation of half an ounce of spirit of turpentine with half a pint of spirit of wine. It was proposed to be administered to dissolve gall-stones.

Antimpetig'enes, Solomon's. The *Liquor hydrargyri perchloridi*.

Antikard'ium. See *Anticardium*.

Antikont'osis. (Ἀντί; κοντός, a pole.) The supporting of a weak or lame person by a crutch or staff.

Antilab'ium. (Ἀντί; *L. labium*, a lip.) The same as *Antelabium*.

Antilact'ea. (Ἀντί; *L. lac*, milk.) Medicines which arrest the secretion of milk.

Antilactes'cent. (Ἀντί, against; *L. lactesco*, to yield milk.) Having the power to arrest or diminish the secretion of milk.

Antilact'ics. (Ἀντί, against; *L. lac*, milk.) Remedies which diminish or arrest the secretion of milk; the chief of these is belladonna.

Antilambani. (Ἀντιλαβάνω, to seize. *F. antilambane.*) Applied by Ranzani to a Family of *Scansores*, whose toes serve to seize their food and carry it to their beak.

Antileps'is. (Ἀντιληψις, a receiving in

ANTILEPTIC—ANTIMONIATED HYDROGEN.

turb. *F. antilepsis*.) The application of a remedy to a part away from that affected.

Derivative or revulsive treatment.

The application of a bandage or support to a diseased part by fixing it to a healthy part.

Antileptic. (Same etymon.) A term for a revulsive or derivative remedy.

Antilethargic. (Ἀντί; ληθάργία, lethargy. *F. antilethargique*; *G. gegenlethargisch*.) Opposed to, or overcoming, lethargy; applied to remedies.

Antilithic. (Ἀντί, against; λίθος, a stone. *F. antilithique*.) Having the power of preventing or impeding the formation of urinary concretions; such are large quantities of water, especially when containing potash, soda, or lithia, sodium phosphate and biphosphate, ammonium benzoate and other salts, mineral and vegetable acids, depending on the nature of the concretion.

Antilles. A name given to the West Indian Islands, with the exception of the Bahamas. Many of the islands, which are of volcanic origin, possess sulphuretted saline springs, both hot and cold. See *Cuba, Hayti, Jamaica*, and others.

A. rhatany. Two forms, black and brown, of rhatany, identical with Para rhatany.

Antilobium. (Ἀντιλόβιον; from ἀντί, against or opposite; λοβός, the lobe of the ear. *F. antilobe*; *I. antilobo*; *S. antilobo*; *G. Gegenlappchen*.) Name for the tragus, or that part of the external ear opposite the lobe.

Antilocapridæ. (*L. antilocapra*, an antelope; *capra*, a goat.) A Family of *Cavicornia*, which has been proposed for the reception of the *Antelope furcifer* or Prong-buck, in that the outer sheath of the horn is deciduous.

Antiloem'ic. See *Antiloemic*.

Antilogia. (Ἀντιλογία, or ἀντιλέγω, to speak against.) A contradiction in the symptoms of a disease so as to render its diagnosis difficult.

Antilogous. (Ἀντιλογος, contradictory; from ἀντιλέγω or ἀντιλέγω, to speak against.) Contradictory; reverse.

A. pole. A term given to that end of a crystal in a pyroelectric condition, which is negative when heated, and becomes positive when cooled. See *Pyroelectricity*.

Antiloim'ic. (Ἀντί, against; λοιμός, the plague or pestilence. *F. antilémique*; *G. pestwidrig*.) Against, or curative of, the plague or pestilence of any kind; applied to medicines so accounted.

Antilop'æ. (Ἀνθόλου; from ἄνθος, a flower; ὤψ, the eye; that is, flower-eye, because of its soft expression, and great beauty, in this genus of animals.) The antelope. A Genus of the *Ruminantia*, the various species of which inhabit India and Africa; their horns and hoofs were formerly believed to possess antispasmodic properties, and were used in hysteria and epilepsy. Some of the species furnished varieties of *Bezoar*.

Antilopidæ. A Subfamily of the Family *Cavicornia*. Body slim; legs long, slender; horns cylindrical, straight or curved, annulated or twisted, sometimes seen only in the males; they possess lacrymal sinuses, or tear pits, beneath the eyes, which secrete a yellow waxy substance.

Antilys'sus. (Ἀντί, against; λύσσα, rabies. *F. antilyssé*.) Applied to medicines supposed to be curative of hydrophobia.

Antimelancholic. (Ἀντί, against; μελαγχολία, melancholia. *F. antimelancholique*.) Against, or capable of dispelling, melancholy; applied to medicines used with this view.

Antimephit'ic. (Ἀντί; mephitic. *F. antiméphitique*; *G. lufstreinigend, lufteverbesserndmittel*.) Opposed to, or corrective of, foul exhalations.

Antimere. (Ἀντί, against; μέρος, a part.) A term applied to those segments, or groups of organ systems, each built upon the same plan, which are placed radially round a centre. An example of antimeric segmentation is to be found in the starfish.

Antimetrop'ia. (Ἀντί; μέτρον, measure; ὤψ, the eye.) In Ophthalmic Surgery, a term applied to a condition in which the refraction of the two eyes is of an opposite kind, one, for example, being myopic, and the other hypermetropic.

Antimetrop'ic. (Same etymon.) Of, or pertaining to, antimetropia.

Antimiasmatic. (Ἀντί; miasm.) A remedy against malaria and malarial diseases.

Antimonate. Term for a combination of antimonious acid, or antimony pentoxide, with a base.

Antimonetted hydrogen. A synonym of *Antimonious hydride*.

Antimonia'l. (*L. antimonium*, antimony. *G. antimonhaltig, spieessglanzhaltig*.) Of, or belonging to, antimony. Applied to any compound medicine having antimony as its chief component.

A. caustic. A synonym of *Antimonious chloride*.

A. o'chre. A term for antimony found in the state of an oxide.

A. oint'ment. A synonym of the *Unguentum antimonii*, U.S. Ph.

A. powder. A synonym of the *Pulvis antimonialis*, B. Ph.

Also, of *James's powder*.

Antimoniale causticum. (Καυστικός, capable of burning.) A synonym of *Antimonious chloride*.

Antimoniales pil'ule Ward'ii. Ward's antimonial pills; they consisted of about a grain of glass of antimony.

Antimonia'ised. Prepared with, or containing, antimony.

Also, under the influence of antimony.

Antimonias potassæ, Belg. Ph. (*F. antimoine diaphoretique lavé*.) Pure antimony, 1 part; nitrate of potassium, 2 parts; mix, deflagrate, and keep at a red heat for an hour and a half; allow to cool, wash for some hours in water, dry, and reduce to a fine powder.

Antimonia'te. A salt of antimonious acid.

A. of qu'ina. This salt has been recommended as a febrifuge, especially applicable to cases of doubtful periodicity. Dose, 2 or 3 grains, four times a day.

Antimonia'ted hydrogen. A gas, prepared at the time when it is required for inhalation, by acting on an alloy of a drachm of antimony, and two drachms of zinc, and a drachm of tartrate or chloride of antimony, with hydrochloric acid. The hydrochloric acid gas evolved simultaneously with the antimoniated hydrogen is arrested by a sponge dipped in an alkaline solution. The respiration of air impregnated with this gas for five minutes every hour, is said to be very useful in pneumonia and capillary bronchitis with fever. The pulse diminishes in frequency and force, without the occurrence of nausea or vomiting, and expectoration is facilitated.

A synonym of *Antimonious hydride*.

ANTIMONIATUS—ANTIMONII BUTYRUM.

Antimoniat'us. Prepared with, or containing, antimony.

Antimon'ic. (*Antimonium*, antimony.) Of, or belonging to, antimony.

A. ac'id. (*F. acide antimonique.*) Sb_2O_3 . Hydrated antimonious oxide. A monobasic acid obtained by digesting metallic antimony in strong nitric acid; it produces normal salts of the form $M_2O.Sb_2O_3$, or $MSbO_3$, and acid salts containing $M_2O.2Sb_2O_3$, or $2MSbO_3.Sb_2O_3$. It is a lemon-coloured powder, insoluble in water and acids.

A. chlor'id. $SbCl_3$. Antimony pentachloride. A mobile, colourless liquid, obtained by passing a stream of chlorine gas over antimonious chloride or slightly heated metallic antimony. It forms a crystalline compound with water when in small quantity; a large amount decomposes it into antimonious and hydrochloric acids.

A. ox'id. Sb_2O_3 . Antimony pentoxide. A pale, straw-coloured powder, obtained by acting on metallic antimony with strong nitric acid and heating the precipitated hydrate. It is monobasic. Before heating, when hydrated, is called *A. acid*.

The hydrated oxide may be obtained also by decomposing antimonious chloride with water; this is called metantimonious acid. It is bibasic.

A. sul'phide. Sb_2O_3 . Antimony pentasulphide. Formed along with calcium carbonate, sodium antimonate, and sodium sulphide, by boiling for some hours in water 18 parts of powdered antimonious sulphide, 17 of dry sodium carbonate, 13 of lime, and $\frac{3}{4}$ of sulphur; it unites with the sodium sulphide to form sodium sulphantimonate, which crystallises on evaporation; this salt, when dissolved in water and treated with dilute sulphuric acid, deposits the pentasulphide as a golden-yellow flocculent precipitate. It forms salts with basic sulphides called sulphantimonates.

Antimon'ico-potas'sicus. (*F. antimonico-potassique.*) Applied by Berzelius to a double salt resulting from combination of an antimonious with a potassic salt.

Antimonif'erous. (*Antimonium*; *fero*, to bear. *F. antimonifere*; *G. spießglanztragend*.) Applied to a substance that accidentally contains antimony.

Antimon'ii buty'rum. (*L. butyrum*, butter.) Butter of antimony; a synonym of *Antimonious chloride*.

A. calx. (*L. calx*, lime.) A synonym of *Antimonium diaphoreticum*.

Also, a term for *Antimony*, ash of.

A. calx lo'ta. (*L. lotus*, washed.) A synonym of *Antimonium diaphoreticum ablutum*.

A. calx sulphura'ta. Sulphuretted calx of antimony. Calcined oyster-shells 10 parts, sulphur 4 parts, and crude antimony 3 parts. Powder, mix, and calcine. Used as an emetic and alterative, in doses of 1–6 grains.

A. cerussa. (*L. cerussa*, white lead.) A synonym of *Antimonium diaphoreticum*.

A. cerussa sola'ris. (*L. solaris*, belonging to the sun.) A similar preparation to the *Antimonium diaphoreticum*, but made by heating in the sun by means of a lens.

A. chlor'idum. See *Antimonious chloride*.

A. cum sulphu're vitrifac'tum. (*L. vitrum*, glass; *factus*, made.) A synonym of *Antimony*, glass of.

A. diaphoret'icum elo'tum. (*L. elaco*,

to wash clean.) A synonym of *Antimonium diaphoreticum ablutum*.

A. diaphoret'icum vulgare. (*L. vulgaris*, common.) A synonym of *Antimonium diaphoreticum ablutum*.

A. et potas'se tar'tras. A synonym of *Antimonium tartaratum*, B. Ph.

U.S. Ph. Tartar emetic, prepared in the same way as the *Antimonium tartaratum*, B. Ph.

A. et potas'sii tar'tras. A synonym of *Antimonium tartaratum*.

A. Helmon'tii flores. See *Helmontii flores antimonii*.

A. he'par. (*Ἡπαρ*, the liver.) Liver of antimony. Antimonious sulphide 1 part, dried sodium or potassium carbonate 2 parts; melt, heat till it is a proper colour, allow to cool, and powder. It consists of antimonious oxide and undecomposed sulphide and sodium, or potassium sulphide and carbonate. It is now chiefly used in veterinary medicine as an alterative and purgative.

A. iodi'dum. SbI_3 . A salt prepared by gently heating in a Florence flask metallic antimony and iodine. It is a crystalline foliated mass, which, when pulverised, yields a deep orange-red powder. It has been used as an alterative, in doses varying from a quarter of a grain to one grain, in form of pill.

A. mur'ias. A synonym of *Antimonious chloride*.

A. oleum. (*L. oleum*, oil.) A synonym of *Antimonious chloride*.

A. oxid'ulum hydrosulphura'tum auranti'acum. Orange oxidulated hydrosulphuret of antimony; a synonym of *Antimonium sulphuratum*, B. Ph.

A. oxidum. B. Ph. Sb_2O_3 . Oxide of antimony, or *Antimonious oxide*. The directions for preparing this substance are—Pour 16 fluid ounces of solution of chloride of antimony into 2 gallons of water, collect the precipitate, and wash it well with distilled water; then add to it 6 os. of carbonate of soda, previously dissolved in 2 pints of distilled water, filter, collect the deposit, and wash with distilled water till the washings give no precipitate with a solution of silver nitrate acidulated with nitric acid; lastly, dry the product at a temperature below $100^{\circ}C$. ($212^{\circ}F$.) It is a greyish-white powder, fusible at a low red heat, insoluble in water, but soluble in hydrochloric acid. The solution dropped into distilled water gives a white deposit, at once changed to orange by H_2S . It dissolves entirely when boiled with an excess of the acid tartrate of potash. It is somewhat irregular in its actions, which is that of tartar emetic, but probably milder. Dose, 1–4 grains.

A. oxidum aurat'um. (*L. auratus*, gold coloured.) A synonym of *Antimonium sulphuratum*, B. Ph.

A. oxidum nitromuriat'icum. A synonym of *Algaroth's powder*.

A. oxidum sulphure'tum vitrifac'tum. (*L. vitrum*, glass; *factus*, made.) A synonym of *Antimony*, glass of.

A. oxy'sulphure'tum. U.S. Ph. Kermes mineral. Sulphuret of antimony a troy ounce, sodium carbonate 23 troy ounces, water 16 pints. Boil the water, dissolve the soda in it, add the antimony, and then boil for an hour. Filter, cool slowly, decant, drain the precipitate on a filter, wash it with boiled water, dry without heat, preserve in a well-stoppered bottle out of the light. It is an insipid, inodorous powder, of a

ANTIMONIOUS ACID—ANTIMONITE

purplish-brown colour, on exposure to air and light it loses colour and becomes yellowish white. It is antiseptic, caustrophic, and emetic. Dose, 2-4 grains.

A. trisulphuretum of *Antimonium sulphuratum*.
A. potas-sio-tar-tras. A synonym of *Antimonium tartaratum*. L. Pl.

A. regulus. See *Antimony, regulus* of.
A. regulus medicinale Ha. *L. regulus*. A rust; medicinal. Bucholz. A synonym of *Antimonium medicinale*.

A. rubrum. A synonym of *Antimony, rubry* of.

A. sal. (*L. sal. sal.*) A synonym of *Antimonium tartaratum*. L. Pl.

A. sulphur aurum. (*L. aurum, golden*.) A synonym of *Antimonium sulphuratum*. L. Pl.

A. sulphur precipitatum. A synonym of *Antimonium sulphuratum*. L. Pl.

A. sulphuratum. A synonym of *Antimonium sulphuratum*.

A. sulphuratum, U. S. Pl. Sulphure of antimony, or antimonious sulphide. Native sulphure of antimony purified by fusion. The *Antimonium nigrum*, L. Pl.

A. sulphuratum aurum. (*L. aurum, golden*.) A synonym of *Antimonium sulphuratum*.

A. sulphuratum precipitatum. (*L. precipitatum, to throw down*.) A synonym of *Antimonium sulphuratum*.

A. sulphuratum rubrum. (*L. ruber, red*.) *G. Mineralthermas*. See *Kermes mineral*.

A. tartar. The *Antimonium tartaratum*, B. Ph.

A. terchloridum. A synonym of *Antimonious chloride*.

A. teroxidum. See *A. oxidum*.

A. tersulphuretum. A synonym of *Antimonious sulphide*.

A. vitrum. (*L. vitrum, glass*.) See *Antimony, glass* of.

A. vitrum cera-tum. (*L. vitrum; ceratum, a wax salve*.) Glass of antimony, in very fine powder, 1 oz., yellow wax, 1 drachm; melt in an iron ladle, and expose to a gentle heat until it is snuff-coloured; powder when cold. Formerly used in dysentery. Dose, 2-10 grains.

A. vitrum hyacin-thinum. (*L. vitrum, glass; hyacinthinus, violet-coloured*.) A synonym of *Antimony, glass* of.

Antimonious acid. (*F. acide antimonique*.) A synonym of *A. oxide*.

A. chloride. SbCl₃. Butter of antimony. Obtained as a heavy buttery mass by passing chlorine gas over metallic antimony, or by adding strong hydrochloric acid to antimonious sulphide; in the latter case the resulting liquid is distilled until each drop of the distillate on falling into water produces a copious white precipitate; afterwards the chloride comes over pure, and on cooling solidifies to a white crystalline mass. It is very deliquescent; dissolves in strong hydrochloric acid without decomposition, and the solution when poured into water throws down a white precipitate of powder of Algaroth. A caustic. See *Liquor antimonii chloridi*.

A. hydride. SbH₃. Formed along with hydrogen when a salt of antimony or antimonious oxide is brought into contact with zinc and sulphuric acid. The mixture burns with a bluish-green flame, and deposits metallic anti-

mony when a solid porcelain surface is put into the flame. See *Antimoniated hydrogen*.

A. oxide. Sb₂O₃. Obtained in a crystalline form by burning metallic antimony at the bottom of a large red-hot crucible; also by passing solution of antimonious chloride into water, and digesting the resulting precipitate with a solution of sodium carbonate. It is dimorphic; occurring native in tetrahedral and in octahedral crystals. An impure trioxide has long been named glass of antimony, or vitrum antimonii. It occurs as a pale buff-coloured anhydrous powder, fusible at a red heat. It acts as a feebly acid.

A. oxychloride. A synonym of *Algaroth powder* of.

A. sulphide. (*F. sulphure d'antimoine; G. arsenurum Schwefelantimonium*.) Sb₂S₃. A black, grey, crystalline substance occurring native. It may be prepared by melting antimony and sulphur, or as an amorphous brick-red precipitate by treating a solution of potassium-tartrate of antimony with hydrogen sulphide; when heated the precipitate loses water, becomes crystalline, and is of a grey colour. It forms compounds with basic sulphides, which are called sulphantimonates. See *Antimonium sulphuratum* and *Kermes mineral*.

Antimonite. Term for a combination of antimonious acid and an alkaline base. Antimonites are very unstable salts. Also applied to the salts of antimonous-antimonic acid.

Antimonium. See *Antimony*.

A. album. (*L. album, white*.) A synonym of *Bismuth*.

A. album calcinatium. Calcined white antimony. A synonym of *A. diaphoreticum*.

A. album precipitatum. (*L. precipitatum, to throw down*.) See *Algaroth powder* of.

A. aurum. (*L. aurum, golden*.) A synonym of *Antimonium sulphuratum*.

A. bisulphuratum precipitatum. Precipitated bisulphure of antimony. A synonym of *A. sulphuratum aurantiacum*.

A. calcinatium. Calcined antimony. A synonym of *A. diaphoreticum*.

A. chloratum. A synonym of the *Stibium chloratum*, Aust. Ph.; and also of *Chlorurum antimonii*, Belg. Ph.

A. chloratum liq'idum. A synonym of *Liquor stibii chlorati*, Helv. Ph.

A. chlorurum. A synonym of the *Stibium chloratum*, Aust. Ph.

A. crudum. (*L. crudus, raw, unprepared*.) *G. roher Spiesglanz*. A synonym of the *Stibium sulphuratum nigrum*, Aust. and Helv. Ph.

Also, a synonym of the metal antimony.

Also (*G. Grauspieglerz*), a term for native antimonious sulphide.

Also, a synonym of *Stibium sulphuratum crudum*, G. Ph.

A. crudum alcoholisatum. A term applied to *Stibium sulphuratum nigrum preparatum* when alcohol has been used in the process of washing.

A. crudum preparatum. (*L. crudus, raw; preparatus, prepared*.) A synonym of *Sulphuratum antimonii nigrum depuratum*, Belg. Ph.

A. depuratum, Belg. Ph. (*L. depure, to purify*.) Purified antimony. Antimony of commerce 16 parts, antimonious sulphide 1 part, dried sodium carbonate 2 parts, ferrous sulphide 1.6 parts. Mix, fuse, separate the product from the

ANTIMONIUM.

scoria, powder and mix with dry sodium carbonate 1·5 parts; proceed as before, and also for a third time.

A. diaphoreticum. (G. *schweiestrie-bende Spiessglanz*.) Diaphoretic antimony; a term for an old preparation made by deflagrating in a crucible one part of grey antimony with three of nitre. It is a mixture of antimoniate, sulphate, and nitrate of potash. Esteemed formerly as gently diaphoretic and laxative, and called an antimoniate of potash; also called the Calx antimonii anglorum, and mineral diaphoretic. Dose, gr. 10—30.

In the Fr. Codex the proportion is 1 part of antimony to 2 of potassium nitrate; and the composition is given as antimony 79·99 parts, potash 10·70, and water 12·31 parts.

A. diaphoreticum ablu'tum. Helv. Ph. (L. *ablutus*, from *abluo*, to wash off.) Fifty parts of pure metallic antimony, mixed with 100 parts of potassium nitrate, are put by degrees into a red-hot crucible, and kept at that temperature for half an hour; the resulting mass is powdered and washed with water until there is no taste.

Also, a synonym of *Antimonias potasse*, Belg. Ph.

A. diaphoreticum al'bum. (L. *albus*, white.) A synonym of *A. diaphoreticum ablu'tum*.

A. diaphoreticum dul'ce. (L. *dulcis*, sweet.) A synonym of *A. diaphoreticum ablu'tum*.

A. diaphoreticum edulcora'tum. (L. *edulce*, to sweeten.) A synonym of *A. diaphoreticum ablu'tum*.

A. diaphoreticum jovia'le. (L. *jovialis*, belonging to Jupiter; a name given by the alchemists to tin.) A synonym of *Antihæcticum Poterii*.

A. diaphoreticum lo'tum. (L. *lotum*, part. of *lovo*, to wash.) The Antimoine diaphorétique lavé, Fr. Codex. See *Antimonias potasse*.

A. diaphoreticum martia'le. (L. *martialis*, belonging to Mars; a name given by the alchemists to iron.) An old medicine made by fusing together equal weights of powdered sulphuret of antimony and iron filings, reducing them when cool to powder, deflagrating them with three times their weight of nitre, and dissolving the product in water; the yellowish-brown precipitate thus produced is the martial diaphoretic antimony; also called *Antihæcticum Ludovici*.

A. diaphoreticum nitra'tum. A term given to *A. diaphoreticum*, inasmuch as it contains potassium nitrate, which is removed by washing.

A. diaphoreticum non ablu'tum. (L. *ablutus*, from *abluo*, to wash off.) A synonym of *A. diaphoreticum*.

A. diaphoreticum regul'num. (L. *regulus*, a ruler.) A synonym of *A. diaphoreticum ablu'tum*.

A. diaphoreticum ru'brum. (L. *ruber*, red.) A synonym of *Regulus antimonii medicinalis*.

A. diaphoreticum sim'plex. (L. *simplex*, simple.) A synonym of *A. diaphoreticum ablu'tum*.

A. emet'icum. (L. *emeticus*, provoking vomiting.) A synonym of *A. tartaratum*.

A. et calca'tum sulphura'tum. (F. *sulfure d'antimoine calcuire*; G. *spiessglanzhal-*

tiger Schwefelkalk.) Sulphuret of antimony and calcium. Made by heating together antimonious sulphide 12 parts, sulphur 16, and lime 60, the upper part being rejected. Formerly used as a resolvent, emetic, and antiarthritic.

A. fu'sum. (L. *fusus*, spread out.) A synonym of *Sulphuretum antimonii nigrum depuratum*.

A. gry'scum calcina'tum. (G. *grau-spiessglanzasyd*.) Grey calcined antimony. A synonym of *Antimonii oxidum*.

A. hyacin'tinum. (Yaxidivov, belonging to the hyacinth, of a violet-blue colour.) A synonym of *Antimony, glass of*.

A. incinera'tum. (L. *in*, into; *cinis*, ashes.) A synonym of *Antimonii oxidum*.

A. martia'le cacoe'ticum. (L. *martialis*, belonging to Mars, an old term for iron; καχεκτικός, in a bad habit of body.) A synonym of *Ludovici antihæcticum*.

A. medica'le. (L. *medicinalis*, pertaining to medicine.) Sulphuret of antimony 5 parts, potassium carbonate 1 part, sodium chloride 4 parts; mix and melt. When cold remove the impurities from the top, powder the remainder, and wash. Used formerly as a diaphoretic and alterative.

A. muriat'icum. A synonym of *Antimonious chloride*.

A. muriat'icum oxida'tum. An old term for a solution of antimonious chloride.

A. muria'tum. A synonym of *Antimonious chloride*.

A. nigrum. B. Ph. Sb₂S₃. (F. *antimoine sulfuré*; I. *solfuro d'antimonio*; S. *antimonio crudo*; G. *Schwefelspiessglanz*.) Prepared sulphuret of antimony. Native sulphide of antimony, purified from siliceous matter by fusion, and afterwards reduced to fine powder. It is a greyish-black crystalline powder, which dissolves almost entirely in boiling hydrochloric acid, evolving hydrogen sulphide gas.

A. oxida'tum. A synonym of *A. diaphoreticum*.

A. perfec'te oxida'tum. (L. *perfecte*, fully.) A synonym of *A. diaphoreticum ablu'tum*.

A. precipita'tum al'bum. (L. *precipito*, to throw down; *albus*, white.) A synonym of *Algaroth, powder of*.

A. regul'num. (L. *regulus*, a ruler.) A synonym of pure antimony.

A. sal'tum. (L. *salitus*, salted.) A synonym of *Antimonious chloride*.

A. subchiora'tum. A synonym of *Algaroth, powder of*.

A. sublima'tum. (L. *sublimo*, to lift on high.) Sublimed antimony. A synonym of *Antimony, Argentine flowers of*.

A. submuriat'icum oxida'tum. A synonym of *Algaroth, powder of*.

A. succin'eum. (L. *succineus*, of amber.) A synonym of *Antimony, glass of*.

A. sulphura'tum. B. Ph. SbS₂ with SbO₂. Kermes mineral. Sulphurated antimony. Sulphide of antimony, with a small and variable amount of oxide of antimony. It is thus made—ten ounces of black antimony are boiled for two hours with 4½ pints of solution of soda, the mixture being stirred frequently, and distilled water added to maintain the same volume. The liquid is then strained, and dilute sulphuric acid added to slight excess. The precipitate is collected on a calico filter, and washed with distilled water

ANTIMONIURET—ANTIMONY.

till the washings no longer precipitate with chloride of barium; it is then dried at 100° C. (212° F.), or less. It is an orange-red powder, soluble in caustic soda, and also in hydrochloric acid, with evolution of sulphuretted hydrogen, and the separation of a little sulphur. Boiled in water, with acid tartrate of potash, the resulting solution is precipitated orange-red, with sulphuretted hydrogen. Sixty grains, dissolved in hydrochloric acid, and dropped into water, give a precipitate, which, when washed and dried, weighs about 53 grains. Dose, 1—5 grains.

A. sulphura'tum auranti'acum. (G. *Goldschwefel, Fünffach-Schwefelantimon.*) Orange-coloured sulphuret of antimony. A synonym of *Antimonii sulphuretum precipitatum*; and of *Sulphur auratum antimonii*, Belg. Ph., and of *Stibium sulfuratum aurantiacum*, G. Ph.

A. sulphura'tum fuscum. (L. *fuscus*, dark.) A synonym of *Sulphuretum antimonii nigrum depuratum*.

A. sulphura'tum nigrum. (L. *niger*, black.) A synonym of *Antimony sulphide*.

A. sulphura'tum præcipita'tum. (L. *præcipito*, to throw down.) A synonym of *A. sulfuratum aurantiacum*, and also, of *A. sulphuratum rubrum*.

A. sulphura'tum præpara'tum. (L. *preparatus*, prepared.) A synonym of *A. sulphuratum*.

A. sulphura'tum rubrum. (L. *ruber*, red.) A synonym of *Kermes mineral*.

A. tartara'tum. B. Ph. (F. *tartrate de potasse et d'antimoine*; G. *Brechweinstein, Spiesglanzhaltiges weinsteinsäures Kali, Spiesglanzweinstein.*) $KO, SbO_3, C_2H_4O_{10} + 2H_2O$. Tartarated antimony. A tartrate of potash and antimony. The directions for making this are—mix 5 oz. of antimony oxide, with 6 oz. of finely powdered acid tartrate of potash, with a little distilled water, sufficient to form a paste; set aside for 24 hours; then add water to 2 pints, boil for 15 minutes, stirring frequently; filter, and set aside the filtrate to crystallise, dry the crystals at temperature of air. The salt forms colourless, transparent crystals, with triangular facets, soluble in water, less so in proof spirit. It decrepitates and blackens when heated. Its watery solution gives a white precipitate with hydrochloric acid, soluble in excess of the acid, but not formed if tartaric acid be previously added. Twenty grains dissolve, without residue, in fl. 3j at 60°, and the solution gives with SH_2 an orange precipitate, which, when washed and dried at 100° C. (212° F.), weighs 9.91 grains.

Tartar emetic applied locally, in the form of ointment, excites irritation, leading at first to a papular, then to a vesicular, and finally to a pustular eruption, hence it has been used as a powerful derivative and counter-irritant, but its action is capricious and painful. In small doses it excites a sensation of soreness in the stomach. In somewhat larger (1-6th to 1 gr.) it causes increased secretion of mucus in the intestinal canal, and diarrhoea may be induced. It also excites secretion from the bronchial mucous membrane. In still larger doses (1—2 grains) it produces in the course of half an hour nausea and vomiting, accompanied by much straining. It acts in the same way if injected into the veins, and is hence thought by some to act on the centric, as well as on the peripheric extremities of the nerves. The toxic effects of antimony are indicated by consi-

derable paralysis of both the sensory and motor nerves, with loss of reflex action. It weakens and paralyzes the heart. It increases both the sensible and insensible transpiration through the skin, and the discharge of watery vapour by the lungs. It also increases the elimination of carbonic acid and of urea. It does not lower the temperature of the body. It has been largely used as an emetic, and as a depressant of arterial action, in the early stages of fever, in various forms of acute local inflammation, in catarrh, bronchitis, laryngitis and croup, and pneumonia, in mania, and in strumous ophthalmia. It was formerly used as a depressant in delirium tremens, and as an aid in the reduction of dislocations and hernia. Dose, as a diaphoretic, 1-16th to 1-6th of a grain; as an emetic, 1—2 grains.

In acute poisoning, the symptoms are that the patient complains of an intensely metallic taste, of thirst, severe pain in throat and belly, vomiting, and purging. The cardiac action is depressed, the skin cold and clammy, respiration laborious, there is dysuria, cramps affect the limbs, and death is often preceded by convulsions of a tetanic character. One and a half grains have proved fatal, but a much larger quantity may be got rid of by vomiting and purging, without serious results. In one case death occurred in 7 hours. The treatment consists in provoking vomiting, if this be not present, and in the administration of tannin, or the infusion of any astringent bark, afterwards strong coffee and opiates.

In cases of chronic poisoning, nausea and vomiting, with great depression, constipation or watery purging, and death resulting from exhaustion, have been observed.

A. tartaria'tum. A synonym of *Antimonium tartaratum*, B. Ph.

A. trichlora'tum. A synonym of *Antimonious chloride*.

A. us'tum. (L. *ustus*, part. of *uro*, to burn.) A synonym of grey oxide of antimony.

A. us'tum cum ni'tro. A synonym of *A. diaphoreticum*, inasmuch as it contained nitre.

A. us'tum median'te ni'tro confec'tum. (L. *medians*, being in the middle; *confectus*, part. of *conficio*, to prepare.) A synonym of *A. diaphoreticum*, in that it is prepared with nitre.

A. us'tum vit'reum. (L. *vitreus*, of glass.) A synonym of *Antimony, glass of*.

A. vitrifac'tum. (L. *vitrum*, glass; *factus*, made.) A synonym of *Antimony, glass of*.

A. vitrificac'tum. (L. *vitrum*, glass; *factus*, made.) See *Antimony, glass of*.

Antimoniuret. (*Antimony. F. antimoniuere.*) Name by Beudant for an alloy of antimony with another metal.

Antimoniuretted hy'drogen. A synonym of *Antimonious hydride*.

Antimono'so-antimonio's oxide. Sb_2O_3 , or Sb_2O_5, Sb_2O_3 . It occurs native as antimony ochre; it is obtained by heating the metal or the pentoxide in the air. It is a greyish-white, infusible, and non-volatile powder, insoluble in water and acids. It is probably a compound of antimonious and antimonioic oxides; but some believe it to be a distinct oxide forming salts, antimonites.

Antimony. (A'nti, against; *μοναχός*, a monk. F. *antimonio*; I. and S. *antimoine*; G. *Spiesglanzmetall*; Dut. *spiesglas*; Dan. *spide-*

ANTIMONY.

glands; Arab. *Ismud*, or *Aitmat*.) The story is told that Basil Valentine, a German monk, observed that when the sulphite was given to pigs, it first purged and then fattened them; on attempting to feed his brother monks in the same way he killed them all. Sb (Stibium). A metal, atomic weight 122. Chiefly found in the state of black sulphide, rarely native as a metal. Isolated by Basil Valentine at close of 16th century. It has a bluish-white colour and strong lustre; it is extremely brittle. Sp. gr. 6.8; sp. heat 0.06077; it melts at 450° C. (842° F.), and boils and volatilises at a white heat. It has a crystalline structure, and can be obtained in rhombohedral crystals. It is reduced by heating the sulphide with half its weight of metallic iron. It undergoes no oxidation in the air at ordinary temperatures, but oxidises when melted in the air; and when heated more strongly it burns with a white flame, giving off white fumes of antimonious oxide. It forms two classes of compounds, the antimonious compounds, in which it is trivalent, and the antimonim compounds, in which it is quinquevalent. In combination with lead it forms type metal; with tin and a little copper, zinc or bismuth, Britannia metal and pewter. Antimonious salts have the following reactions—Water renders their solutions milky, but hydrochloric acid redissolves the precipitate; sulphuretted hydrogen gives an orange-red precipitate, or an orange-red tint if the solution is very dilute; ammonium monosulphide gives an orange-red precipitate, soluble in excess of the reagent, especially if the reagent is impure and contains an excess of sulphur; potash gives a voluminous white precipitate of hydrate, soluble in great excess of the reagent; when boiled the precipitate becomes crystalline (oxide); ammonium and ammonium carbonate give a voluminous white precipitate, insoluble in excess of the reagent; potassium carbonate gives a voluminous white precipitate of hydrate, soluble when warmed, in great excess of the reagent; sodium phosphate gives a voluminous white precipitate; oxalic acid gives a voluminous white precipitate, and, if sufficient time be allowed, causes complete precipitation; potassium ferrocyanide gives a white precipitate, insoluble in hydrochloric acid; potassium ferricyanide clouds the solution in hydrochloric acid (due to the action of the water of the reagent); tannic acid gives a yellowish-white precipitate; metallic zinc gives a black precipitate of antimony, if in a platinum capsule a black spot; potassium permanganate is decolorised by it; the potassic solution of antimony oxide, after the lapse of some time, or by heat, precipitates the metallic silver of ammoniacal nitrate of silver. Antimonates have the following reactions—Hydrochloric acid gives a white precipitate, soluble in excess; nitric and sulphuric acids give a white precipitate, insoluble whilst cold, soluble by heat; sulphuretted hydrogen gives an orange-red precipitate if there be no free potash present; nitrate of silver gives a grey precipitate, but metallic silver is not deposited. See *Reinach's test* and *Marsh's test*. Antimony colours flame a pale greenish-blue. Antimony, like arsenic, appears to be a protoplasmic poison.

A., w/thiops of. See *Ethiops antimonialis*.

A. and potas'sa, tar'trate of. The *Antimonium tartaratum*, B. Ph.

A. and potas'sium tar'trate. The *Antimonium tartaratum*, B. Ph.

A., argentine flowers of. (L. *argen-*

tum, silver.) An old term for antimonious oxide when prepared by heating metallic antimony and providing a cool surface, on which the flowers, of silvery whiteness, are deposited.

A., arseniate of. A heavy white powder, containing 56 parts of antimony and 44 of arsenic acid in 100. It has been used in skin diseases and fever. Dose, .0012 grammes three or four times a day.

A., ash. A dull grey powder, resulting from the roasting in a reverberatory furnace of the antimony of commerce, antimonious sulphide. It consists of antimonious oxide, some antimonim oxide, and a portion of unburnt sulphide. It is emetic, and is used by some in the manufacture of tartarised antimony.

A., bases. A term given to certain compounds of antimony, such as stibethyl, analogous to the antimonium salts.

A., black. The *Antimonium nigrum*, B. Ph.

A., black sulphuret of. A synonym of *Antimonious sulphide*.

A., but'ter of. Antimony chloride; a white, highly crystalline mass, very deliquescent, soluble in hydrochloric acid, the solution when added to water throwing down a white, subsequently becoming fawn-coloured, precipitate, composed of trichloride and trioxide of antimony—the old powder of Algaroth—which is soft, dissolves with a gentle heat, and crystallises on cooling. See *Antimonious chloride*.

A., ce'rated glass of. See *Antimonii vitrum ceratum*.

A., chlo'ride of. A synonym of *Antimonious chloride*.

A., chloru'ret of. A synonym of *Antimonious chloride*.

A., com'mon. A synonym of *Antimonious sulphide*.

A., cro'cus of. A saffron-brown, insoluble powder; made by deflagrating equal parts of antimonious sulphide and potassium nitrate with a little hydrochloric acid, and then powdering the fused mass; sometimes sodium chloride was added. It is a variable mixture of sulphide and oxide of antimony, sulphate and antimonate of potassium and chloride of potassium. It was used for the same purposes as *Antimonium diaphoreticum*.

A., crude. A synonym of native *Antimonious sulphide*.

A., dentox'ide of. A synonym of *Antimonium diaphoreticum*.

A., diaphoret'ic. See *Antimonium diaphoreticum*.

A., flow'ers of. A synonym of *Algaroth, powder of*.

A., glass of. Term for a preparation made by carefully roasting antimony sulphide in powder, and raising the heat at the end of the process so as to fuse the product into a clear glass, which should be transparent and of a brownish-red or hyacinthine colour. It is a mixture of antimonious oxide and sulphide with a little silica and iron. It is a violent emetic.

A., golden sul'phur of. A synonym of *Antimonii sulphuretum precipitatum*.

A., i'odide of. See *Antimonii iodidum*.

A., liver of. See *Antimonii hepar*.

A., medic'inal regulus of. A synonym of *Antimonium medicinale*.

A., mu'riate of. A synonym of *Antimonious chloride*.

ANTIMONYL—ANTI DONTALGIC.

antimonie acid, when occurring native in acicular crystals or in a crust or powder.

A., oil of. Antimony chloride, or butter of antimony.

A., oxide of. See *Antimonii oxidum*.

Also, a synonym of *Algaroth, powder of*.

Also, of *A., glass of*.

A. oxides. The oxides of antimony are three: a basic oxide, antimony trioxide, Sb_2O_3 ; a neutral oxide, antimony tetroxide, Sb_2O_4 ; and an acid oxide, antimony pentoxide, Sb_2O_5 . These are also called respectively antimonious oxide, antimonoso-antimonic oxide, and antimonic oxide.

A. oxychloride. A synonym of *Algaroth, powder of*.

A., oxysulphide of. Occurs native as *Kermesite*.

A., oxysulphuret of. See *Antimonii oxysulphuretum*.

A. pentachloride. A synonym of *Antimonic chloride*.

A., pentasulphide of. A synonym of *Antimonious sulphide*.

A., pentoxide of. A synonym of *Antimonic oxide*.

A., peroxide of. A synonym of *Antimonium diaphoreticum*.

A., potassio-tartrate of. The *Antimonium tartaratum*, B. Ph.

A., prepared sulphuret of. A synonym of the *Antimonium nigrum*, B. Ph., and of the *A. sulphuretum*, U.S. Ph.

A., red. A synonym of *Kermesite*.

A., red flowers of. An old preparation made by subliming a mixture of sulphuret of antimony and sal ammoniac. It is a violent emetic.

A., red sulphuret of. See *Antimonii sulphuretum rubrum*.

A., regulus of. Old term for the metal antimony obtained by fusion.

A., ruby of. Antimonious sulphide 5 parts, potassium carbonate 1 part; fuse and separate the scoriae. A similar preparation to *A., liver of*.

A., saffron of. A synonym of *A., crocus of*.

A., sesquichloride of. A synonym of *Antimonious chloride*.

A., sesquisulphuret of. A synonym of *Antimonious sulphide*.

A., snow of. A synonym of *A., argentine flowers of*.

A., suboxide of. A synonym of *Antimonious oxide*.

A. sulphide. A synonym of *Antimonious sulphide*.

A., sulphurated. A synonym of the *Antimonium sulphuratum*, B. Ph. and U.S. Ph.

A., sulphuret of. A synonym of the *Antimonium nigrum*, B. Ph., and of the *Antimonii sulphuretum*, U.S. Ph. See also *Antimonious sulphide*.

A., tartrized. A synonym of the *Antimonium tartaratum*, B. Ph., and of the *Antimonii et potassæ tartras*, U.S. Ph.

A., tartrated. A synonym of the *Antimonium tartaratum*, B. Ph., and of the *Antimonii et potassæ tartras*, U.S. Ph.

A., terchloride of. A synonym of *Antimonious chloride*.

A., teriodide. A synonym of *Antimonii iodidum*.

A., teroxide. A synonym of *Antimonii oxidum*, B. Ph. and U.S. Ph.

And, also, of *Antimonious oxide*.

A., tersulphide of. A synonym of *Antimonious sulphide*.

A., tersulphuret. A synonym of the *Antimonii nigrum*, B. Ph., and of the *Antimonii sulphuretum*, U.S. Ph.

A., tetroxide of. A synonym of *Antimonoso-antimonic oxide*.

A., trichloride of. A synonym of *Antimonious chloride*.

A., trioxide of. A synonym of *Antimonious oxide*.

A., trisulphide of. A synonym of *Antimonious sulphide*.

A., vegetable. A synonym of the *Eupatorium perfoliatum*.

A., wine of. The *Vinum antimoniale*, B. P.

Antimonyl. A hypothetical radicle, SbO , supposed by some to be needed to explain the composition of the salts of antimony.

Antimoria. (*Ἀντί, against; μόρος, death.*) A medicine to prolong life.

Antimycetic. (*Ἀντί; μύκης, a mushroom or fungus.*) Having power to destroy the minute vegetable growths, such as *Bacterium* and *Vibrio*, which some believe to be the origin of certain diseases.

Antinarcotic. (*Ἀντί; νάρκωσις, a benumbing.*) Applied to remedies for narcotic poisoning.

Antinephritic. (*Ἀντί, against; νεφρίτις, disease of the kidneys. F. antinephrétique.*) Applied to medicines believed to be curative of diseases of the kidneys.

Antineuralgic. (*Ἀντί, against; νῆρον, a nerve; ἄλγος, pain.*) Term applied to remedies which relieve pain, especially periodically recurring pain.

Antineuritic. (*Ἀντί; νῆρον, a nerve.*) Term applied to remedies that prevent inflammation in nerves.

Antineuropathic. (*Ἀντί; νῆρον, a nerve; πάθος, a disease.*) A corroborator or nerve remedy.

Antinial. (*Ἀντί, against; νίον, the occiput.*) A term used adverbially by Dr. Barclay, and meaning towards the *Antinial* aspect; also, termed *Glabellad*.

Antinial. (Same etymon.) Applied by Dr. Barclay, of Edinburgh, in his proposed nomenclature, to the aspect opposite the occiput.

Antiobesic. (*Ἀντί; L. obesus, corpulent. F. antiobésique.*) Applied to agents preventing or removing obesity.

Antiochallina. (*Ἀντίος, opposite; χαλινός, fangs. F. antiochalin.*) Applied by Muller to a Family of ophidian reptiles having the anterior teeth venomous.

Antiochi h'era. (*Ἱερά, a name of many celebrated medicines or antidotes used by the Greeks.*) The antidote of Antiochus. An ancient preparation, composed of germander, agaric, colocynth, Arabian stœchas, opopanax, sagapenum, parsley, aristolochia, white pepper, cinnamon, lavender, myrrh, and honey. Used in melancholy, hydrophobia, and epilepsy. (Dunglison.)

A. theriac. (*Θηριακός, an antidote.*) The theriacum of Antiochus. An antidote to every kind of poison, consisting of thyme, opopanax, millet, trefoil, fennel, aniseed, nigella sativa, and other herbs. (Dunglison.)

Antiodontalgic. See *Antodontalgic*.

ANTIORGASTIC—ANTIPHLOGISTIC.

Antiorgas'tic. ('Αντί, against; ὀργάνω, to desire vehemently.) Term applied to medicines used for allaying excitement; and so, synonymous with the term sedative.

Antipalu'dean. ('Αντί; *L. palus*, a swamp. *F. antipaludien.*) Applied to remedies that are opposed to, preventive, or curative of, the diseases of marshy districts.

Antiparalytic. ('Αντί, against; παράλυσις, a loosening by the side, paralysis. *F. antiparalytique*; *G. antiparalytisch.*) Term applied to medicines, internally or externally employed, believed to be curative of paralysis.

Antiparasitic. ('Αντί, against; παράσιτος, one who lives at another's expense, a parasite.) Remedies against parasites; insecticide.

Antiparas'tata. ('Αντί; *L. parastata*, the prostate gland.) An old term for the glands of Cowper.

Antiparastati'tis. ('Αντί; *parastata*, the prostate gland. *F. antiparastatit.*) Inflammation of Cowper's glands.

Antipatharia. A Suborder of the Order *Zoantharia*, Class *Anthozoa*. Lowly-developed polypes in colonies, with a soft non-calcareous skin, sometimes containing spicules, and covered with vibratile cilia.

Antipathes. ('Αντιπάθεις, a remedy for suffering.) The *Coralium nigrum*, which was used as an astringent and refrigerant.

Antipathia. ('Αντιπάθεια, from αντί, against; πάθος, affection. *F. antipathie*; *I. antipatia*; *G. Widerwille, Abneigung.*) Antipathy. Term for any opposite properties or affections in matter.

Also, an old term for an aversion to particular objects or things, with great restlessness or delirium.

A. insensilis. (*L. insensilis*, insensible.) Insensile antipathy; antipathy produced through some unknown medium, as in the case of a person experiencing a kind of horror in the presence of something, be it a cat or other object, when it is concealed and unknown, and not perceptible to any of the senses.

A. sensilis. (*L. sensilis*, sensitive.) Sensile antipathy; antipathy produced through the medium of the external senses, as antipathy to the smell of certain flowers, fruits, or herbs, and to the sight of certain animals, as vermin, reptiles.

Antipath'ic. (Same etymon as *Antipathia*. *F. antipathique*; *G. antipathisch.*) Having the quality of antipathy; opposed to.

Also, applied to palliative medicines.

Also, applied to the treatment of disease by medicines which are supposed to produce symptoms of an opposite character to those of the disease.

Antipath'idæ. A Family of the Suborder *Antipatharia*. Polypes with six short, non-retractile tentacles. Of the six radiating septa, four are atrophied, the other two, which correspond to the commissures of the mouth, are fully developed, and furnished with mesenteries; axis horny.

Antipath'ion. ('Αντιπάθιον.) According to Dioscorides, v. 140, a species of black coral, said to be moderately astringent and refrigerant; supposed to be black hematite.

Antipathy. See *Antipathia*.

Antipatri theri'aca. A composition used against snake-bites. (Dunglison.)

Antipediculo'sa. ('Αντί; *L. pediculus*, a louse. *F. antipediculoux.*) Opposed to, or corrective of, pediculous disease; remedies which kill pediculi.

Antipediculous. (Same etymon. *F. antipediculoux.*) Having power to destroy lice.

Antipep'ton. A term applied by Kühne to a body which results from the continued action of pepsin upon albumin after antialbumin has been formed. It does not undergo conversion into peptone by the further action of the gastric or pancreatic ferment.

Antiperiod'ic. ('Αντί; περίοδος, a period.) Applied to remedies which destroy periodicity of diseases running a typical course.

Antiperistalt'ic. ('Αντί; περισταλτικός, clapping and compressing, from περιστρέλλω, to clothe.) The inverted peristaltic or vermicular action of the intestines.

Antiperistalt'ic. (Same etymon.) Term applied to the inverted peristaltic motion of the bowels, by which their contents are forced backwards or upwards to the stomach.

Antiperistaltic action follows on obstruction, and is probably effected through the vagus nerve. Some have doubted the existence of a true antiperistaltic action, believing that the regurgitation of the contents of the intestine, which occurs in complete obstruction, is the result of the ordinary peristaltic action which, pressing downwards the outer part of the intestinal contents, forces upwards the central part.

Antiperist'asis. ('Αντιπερίστασις, reaction of the surrounding parts; from αντί; περιστήμι, to stand round about.) Old term for the antagonism of those powers which are naturally opposed to each other, as light and darkness, heat and cold.

Antipestilential. ('Αντί, against; *L. pestilential*, pestilence. *F. antipestilentiel*; *G. wider die Pest.*) Having remedial powers against the plague.

Antipharm'macum. ('Αντί; φάρμακον, a drug, a poison. *F. antipharmaque*; *G. Gegen-gift.*) An antidote against poison.

Antipharm'ic. ('Αντί, against; φάρμακον, a drug, a poison. *F. antipharmaque*; *G. gegen die Gift.*) Having the powers of an antidote.

Antiphate. Black coral; probably only a varied spelling of *Antipathes*, which see.

Antiphlogis'tic. ('Αντί, against; φλόγωσις, burning heat, as that of inflammation. *F. antiphlogistique*; *G. antiphlogistisch, entzündungwidrige Mittel.*) Opposed to inflammation. Applied to that medical treatment which is intended to subdue inflammation, or the excited state of the system in inflammatory complaints.

A. the'ory. (*F. chimie antiphlogistique.*) A term given to the chemical philosophy originated by Lavoisier, to denote its opposition to the phlogistic doctrines previously prevalent. It was essentially expressed in his proposition that all chemical change, including combustion, consists in a rearrangement of the elements of the bodies undergoing change; from this the doctrine of the indestructibility of matter followed. See *Phlogistic theory*.

A. treatment. The antiphlogistic treatment of olden time consisted in low diet; blood-letting, general and local; alteratives, such as calomel and tartar emetic; salines, such as nitrate of potash; diuretics, such as digitalis and acetate of potash; sudorifics and confinement to bed.

ANTIPHLOGOSIS—ANTIRRHINUM.

Antiphlogosis. (Ἀντί, against; φλόγσις, *F. antiphlogos.*) The action of antiphlogistics.

Antiphtheiri'aca. (Ἀντί; φθειρίασις, louse disease. *F. antiphthirique*; *L. antiphthirico.*) Remedies which destroy lice.

Antiphthiri'aca. The same as *Antiphtheiriaca*.

Antiphthis'ic. (Ἀντί, against; φθίσις, consumption. *F. antiphthisique.*) Term applied to medicines employed to check pulmonary consumption.

Antiphtho'ra. See *Anthora*.

Antiphy'sa'ic. (Ἀντί; φυσάω, to blow up.) A term for medicines which relieve flatulence.

Antiphyset'ic. (Ἀντί, against; φυσήτικός, for blowing up, flatulent.) Term applied to medicines used for dispelling flatulence.

Antiphy'sical. (Ἀντί, against; φύσις, nature.) That which is contrary to nature.

Also (ἄντι; φυσάω, to blow up), a term for medicines which relieve flatulence.

Antiphy'son. (Same etymon.) Old name for the magnet or loadstone. (Quincy.)

Antiplas'tic. (Ἀντί, against; πλαστικός, fit for moulding; from πλάσσω, to form. *F. antiplastique.*) Unfavorable to the process of healing, or of granulation; disorganising.

Also, applied to medicines which impoverish the blood.

Antipleuritic. (Ἀντί, against; πλευρίτις, pleurisy. *F. antipleurétique.*) Term applied to medicines against, or curative of, pleurisy.

Antipneumon'ic. (Ἀντί; πνευμονία, a disease of the lungs. *F. antipneumonique.*) Opposed to, or curative of, pneumonia.

Antipodag'ric. (Ἀντί, against; ποδάγρα, the gout. *F. antipodagrique.*) Term applied to medicines curative of gout.

Antipodal. (Ἀντί; πόσις, a foot. *G. gegenfüsslerisch.*) Having the feet opposite to each other.

A. cells. (*G. gegenfüsslere Zellen.*) One or more cells found at the lower part of the embryo sac of the ovule in plants. Their function is unknown.

Antipodes. (Ἀντί; πόσις, a foot. *F. antipodes*; *G. Gegenfüssler.*) Applied to the people who live in parts diametrically opposed to each other; those who dwell on the parallels of the equator equally distant from the circle, the one on the south, the other on the north, having the same meridian, and separated by 180 degrees of longitude.

Antipraxia. (Ἀντίπραξις, counteraction; from ἄντι, against; πράσσω, to act or do.) Term for a contrariety of functions and temperaments existing at the same time in different parts; used by the ancients to express the variety of concurring yet often opposite symptoms, as spasms of the muscles of one limb, and paralysis of those of another.

Antipros'tatæ gland'ulæ. (Ἀντί; prostate, the gland of that name.) The antiprostate glands; *Cowper's glands*.

Antiprostatic. (Ἀντί, against; prostate, the gland of that name. *F. antiprostatique.*) Against, or opposite, the prostate gland.

Antipruritic. (Ἀντί; *L. pruritus*, itching. *F. antipruritique.*) Term applied to remedies that relieve itching.

Antipsoric. (Ἀντί, against; ψώρα, the

itch. *F. antipsorique.*) Term applied to medicines against, or curative of, the itch.

Antipus. (Ἀντί; πόσις, a foot.) An antipode. See *Antipodes*.

Antiputredinous. (Ἀντί; *L. putredo*, putrescence. *F. antiputrescent*; *G. faulniswidrig.*) Opposed to, or corrective of, putrescence; applied to remedies.

Antipy'ic. (Ἀντί, against; πῖσις, pus. *F. antipyique*; *G. gegen Eiterung.*) Term applied to medicines or other applications to prevent suppuration.

Antipyra'ctic. (Ἀντί; πυρακτία, to burn, to char. *G. unterbrennlich.*) Not able to be burned.

Antipyret'ic. (Ἀντί, against; πυρετός, fever. *F. antipyrétique*; *G. Fieberwidrig.*) Against, or curative of, fevers; applied to medicines so reputed; antifebrile; febrifuge.

A. treatment. The treatment of fever by means of cold baths.

Antipyrotic. (Ἀντί, against; πύρωσις, a burning. *F. antipyrotique*; *G. gegen Verbrennungen.*) Term applied to medicinal preparations used against, or curative of, burns.

Also (ἄντι; pyrosis), applied to medicines which relieve water-brash or pyrosis.

Antiquartana'rium. (Ἀντί, against; quartana febris, a quartan fever or ague.) Against, or curative of, quartan ague; applied to medicines so reputed.

Antiquar'tium. A synonym of *Calomel*. Also, the same as *Antiquarianarium*.

A. Peruvia'num. Old name for *Cinchona*, or Peruvian bark, as mentioned by Wedelius, *Ph. I. A. F. R. I. ii, s. 2, c. 8*, from its powers in the cure of quartan ague.

Antiqui morbi. (*L. antiquus*, old; *morbis*, a disease.) Old term for chronic diseases.

Antirachit'ic. (Ἀντί, against; rachitis, rickets. *F. antirachitique.*) Against, or corrective of, rachitis, applied to medicines exhibited with this view.

Antirheumat'ic. (Ἀντί; rheumatism. *F. antirheumatismal*; *G. antirheumatische.*) Opposed to, or curative of, rheumatism.

Antirrhin'æ. (*F. antirrhine.*) Applied to a Family of *Scrophulariæ*; by Bartling to a Tribe of that Family represented by the *Antirrhinum*.

Also, a synonym of *Scrophulariæ*.

Antirrhin'ic. (*Antirrhinum.*) Of, or pertaining to, the *Antirrhinum*.

A. acid. A colourless, volatile, and nauseous acid, found in the leaves of the *Digitalis purpurea*; it resembles valerician acid.

Antirrhin'idæ. A Tribe of the Nat. Order *Scrophulariaceæ*. Corolla with two lips, the posterior covering the anterior; inflorescence centripetal or composed of partial cymes.

Antirrhini'n. A yellow colouring matter, obtained by Rigel from the flowers of some species of *Linaria*.

Antirrhinum. (Ἀντίρρινον, the snapdragon; from ἄντι, like; ρίσις, the nose; so called from the resemblance of its flowers.) Snapdragon, calve's snout, lion's snap. A Genus of the Nat. Order *Scrophulariaceæ*. Leaves entire, lower opposite, upper alternate; flowers solitary and axillary, or racemose and bracteate; calyx 5-partite; corolla perianthate; stamens 4, fertile; one rudimentary, or absent; capsule 2-celled.

A. acutan'gulum. (*L. acutus*, pointed,

ANTISIALAGOGUE—ANTITHESIS.

sublimata, and sulphur, and quinine, seem to be inimical to the growth of any of the lower organisms; whilst tannic acid appears to form chemical combinations that are less unstable, and therefore less likely to undergo putrefactive decomposition. According to Baierlacher, sulphurous acid is the best yeast poison, a quantity not exceeding 0.33 per cent. sufficing to arrest germination, and next to this in efficacy stands salicylic acid, carbolic acid retards but does not altogether prevent germination; the action of chlorine is insignificant.

Antisialagogue. (Avti; sialos, spittle. *Agon*, to lead.) Remedies which check salivation.

Antisialic. (Avti; sialos, spittle.) Having power to check the flow of saliva.

Antisialous. (Avti; sialos, spittle.) A remedy which checks the flow of saliva.

Antisideric. (Avti; sidar, iron.) A term applied to medicines, like mercury and alkalies, and to such foods, as fat and muciilage, which were supposed to be antagonistic to iron, hence also antisidic.

Antispasie. (Avti; *spasie*; from *spas*, against, *spas*, to draw. *F. antispasie*; *I. antispasie*; *G. Gegenwirkung, Abkantung*.) Traction into a contrary part. Term used by Galen, *I. de Hærud. Rerum. c. 3*, and Hippocrates, *I. vi. Epid. c. 2, i. 8*, and Celsus *l. 10*, for a revulsion, the turning of the flowing humours into a different course.

Antispasmodic. (Avti, against; *spasmodic*, a convulsion or spasm; from *spas*, to draw. *F. antispasmodic*; *G. krampfstillend*.) Having power to allay spasmodic pains, applied to certain medicines of this character.

Antispasmodica. (Same etymon. *F. antispasmodica*, *G. krampfstillende Mittel*.) An ill-defined section of medicines which includes remedies that are used to relieve non-inflammatory pain or spasm, they partake of the nature of stimulants and narcotics. Such are ether, hydrocyanic acid, chloral, chloroform, and the bromides, which have in some sort a sedative action, and the fetid gums, musk, castor, valerian, camphor, ammonia, and such like, which approach in action to the stimulants.

Antispasitic. (Avti, against; *spasitic*, drawing away, from *spas*, to draw. *F. antispasitic*.) Drawing against, or counteracting a state of, tension, or spasm, and so, synonymous with *Antispasmodic*; applied to medicines of this character; also, derivative.

Antispasition. A term used by Galen, *I. xiii. Meth. Med. c. ii*, for any medicine acting by way of revulsion.

Antispodium. (Avti; *spodium*, *G. Pflanzensasse*.) A term applied by the ancients to the ashes of the fig, myrtle, olive, quince, privet, and other trees, which were considered as a substitute for spodos or spodium, which consisted of the ashes or residuum of metallic substances after combustion. Its uses were similar to those of the spodos (Dioscorides, *I. v. c. 86*, Pliny, *I. xxi. c. 33*.) (Waring.)

Antispasmodic. (Avti; *L. spasmodic*, a spasm.) A remedy for the cure of skin diseases.

Antistasis. (Avti; *stasis*, opposition; from *anti*, against, *stas*, to stand.) Opposition; antagonism.

Antistathmisis. (Avti; *stathmisis*, from *stathmizo*, to counterpoise.) A reducing to an equilibrium.

Antistatikon. (Avti; *statikon*, to stand. *G. gegenstehend*.) Antagonistic. Applied by Haly to a crystal in which certain additional facets have symmetrical figures, others, irregular.

Antistorigma. (Avti; *storigma*, a prop, a support.) A support for a weak part; a fulcrum or crutch.

Antisternon. Same as *Antisternum*.

Antisternum. (Avti, against, or opposite, *sternon*, the sternum. *G. Oberbrust*.) Old term for the sternum or breast, because it is opposite the sternum or breast-bone. (Gurwen.)

Antistrophe. (Avti; *strophe*, a row. *F. antistrophe*; *G. gegenstehend*.) Applied by Haly to a crystal in which the facets of different rows are turned inversely one from the other.

Antistrophe. (Avti, *strophe*, a row. *F. antistrophe*; *G. gegenstehend*.) The substitution of one letter for another of the same fundamental character, as in the *p* for *k* in the conversion of the Greek *λαος* into the Latin *lupus*.

In Chemistry, the word was used to describe the conversion of one compound into others, as of ammonia into hydrogen and nitrogen. (Kraus.)

Antistrophe. (Avti; *strophe*, to turn.) An old term applied to the first two ribs, because they were regarded as acting in opposition to the other ribs.

Antistrophe. (Avti; *L. struma*, *acrophila*.) Term applied to remedies for the cure of acrophila.

Antistrophe. Same etymon and meaning as *Antistrophe*.

Antistrophe. (Avti; *L. sudor*, sweat. *F. antistrophe*.) Term applied to remedies diminishing perspiration, anhydrotic remedies.

Antistrophe. (Avti, against; *L. syphilis*, the venereal disease. *F. antistrophe*; *I. antistrophe*; *G. antistrophe*.) Against, corrective, or curative of syphilis.

Antistrophe. (Avti; *strophe*, from *anti*, against, *strophe*, to extend. *G. Gegenstehung*.) A term used by Galen, *I. vi. Meth. Med. c. 5*, for counter-extension.

Antistrophe. A synonym in Dioscorides of one or several species of *Xanthium*.

Antistrophe. (Avti, against, *strophe*, the hollow of the hand or foot. *L. antistrophe*; *G. Gegenklopf*.) Opposing the palm or sole, as in the action of a muscle.

Also, opposite the thenar.

A. antistrophe. The outer prominent border of the palm of the hand extending from the base of the little finger to the wrist.

A. muscle of great toe. (*F. antistrophe du gros orteil*.) The adductor pollicis pedis.

Winlow describes a muscle in the foot, which is evidently the muscle now called the *flexor pollicis pedis*.

A. muscle of thumb. (*F. antistrophe du pouce, de l'index du pouce*.) That portion of the *flexor brevis pollicis manus*, according to Winlow, which arises by the deep head; the whole of this muscle, according to Riolanus.

Antistrophe. (Avti; *strophe*, hot.) Term applied to refrigerating remedies.

Antistrophe. (Same etymon. *F. antistrophe*, *G. Hatzmittel*.) A medicine against heat, a refrigerating medicine.

Antistrophe. (Avti; *strophe*, opposition; from *anti*, against, *strophe*, to set against. *G. Gegenst.*.) A term used in rhetoric to signify a form of

ANTITHETIC—ANTONIENTHAL.

words in which the opposition of meaning conveyed is marked by the contrast of the words themselves.

Mr. Darwin has used this expression to denote one of the principles which explain the involuntary gestures and expressions used by man and other animals when under the influence of emotions; that tendency, namely, to effect movements, even though they be useless, of an exactly opposite nature to those prompted by an exactly opposite frame of mind, and which in that condition are useful.

Antithetic. (Same etymon. *G. gegen-sätzlich.*) Opposite in words or meaning; in contrast.

A. formula. A mode of writing the formulas of chemical compounds in two lines, one of which contains the negative and the other the positive element.

Antithora. The *Aconitum anthora*.

Antitimosia. (*Avri*; *τιμωσία*, help.) The sympathy between different organs, which is the foundation of the idea of *Consensus* as a medical term.

Antitoxics. (*Avri*; *τοξικόν*, poison for smearing arrows with. *F. antitoxique.*) Antidotes; remedies against poison.

Antitoxium. (Same etymon. *G. Gengst.*) An antidote.

Antitragicus. (*L. antitragus*, an eminence of the external ear. *F. antitragien.*) A muscle arising from the outer part of the antitragus, and passing upwards to be inserted into the pointed extremity of the antihelix.

Antitragus. (*Avri*, against; *τράγος*, a he-goat; the cartilaginous prominence in front of the meatus auditorius. *L. antitrago*; *G. Gengst.*) Term for an eminence on the external ear. The thicker part of the antihelix, opposite the tragus, as described by Ruffus.

Antitismus. (*Avri*, against; *trismus*.) A tetanic condition opposed to trismus, in which the mouth is open and cannot be closed.

Antitrochanter. (*Avri*, against; *trochanter*.) A process of the brim of the acetabulum in birds which articulates with the great trochanter.

Antitropal. Same etymon and meaning as *Antitropous*.

Antitropous. (*Avri*, against; *τρόπος*, a turn, way, or manner. *F. antitrope*; *G. verkehrthiegend.*) Applied to the embryo when the radicle is distant from the hilum, the cotyledons being next to the latter; so that the embryo is inverted in relation to the seed.

Antitypia. (*Avri*; *τυπία*, the resistance of a hard body.) Hardness; resistance to blows, and also to the causes of disease.

Antitypical. (*Avri*; *τυπικός*, conformable.) Antiperiodic in being opposed to the type of ague, namely, its periodicity.

Also, contrary to the typical form.

Antivariculous. (*Avri*; *L. variola*, smallpox. *F. antivariolique.*) Term for remedies against smallpox.

Antiveneraeal. (*Avri*, against; *venereae* disease; from *Venus*, the goddess of love. *F. antivénérien.*) Against, or curative of, the venereal disease; applied to certain medicines of this character; also, to such as had power to control or destroy the venereal appetite.

Antivermicular. (*Avri*; *vermicular* movements of the intestines.) Opposed to the peristaltic or vermicular action of the intestines.

Antiverminous. (*Avri*; *L. vermis*, a worm. *F. antivermineux.*) Anthelmintic.

Antivestibulum Bojaní. The inner of the two chambers into which the tympanic cavity is divided in *Chelonia* by a process of the quadrate bone which forms part of the floor. The mastoid cells open into this chamber.

Antizootic. (*Avri*; *ζῷον*, a living being. *F. antizootique*; *G. theirtodend.*) Operating against animal life.

Antizymic. (*Avri*, against; *ζυμός*, to ferment. *F. antizymique.*) Against, or preventive of, fermentation.

Antizymotic. (*Avri*, against; *ζυμωτικός*, causing to ferment; from *ζύμη*, ferment.) Against, or preventive of, fermentation or syrmosis.

Antizymotics. Remedies which oppose zymosis; such are sulphurous acid, carbolic acid, and most disinfectants. The exact mode of action, whether it be purely chemical, or solely destructive of the organisms which occur in or accompany the processes of fermentation and putrefaction, is yet unsettled.

Antjar. The name in Java of the *Upas antiar*.

Antler. (*F. andouiller.*) The branches of the horns of a deer.

Antlia. (*L. antlia*, a pump. *G. Schöpfmaschine, Pumpe.*) A syringe, a pump.

Also (*F. trompe*; *G. Saugrüssel*), the proboscis of the *Lepidoptera*, which consists of the elongated, united, and spirally-rolled maxillæ.

A. gastrica. (*Avri*, the belly.) A stomach-pump.

A. lactea. (*L. lacteus*, relating to milk.) Same as *A. mammaria*.

A. mammaria. (*L. mamma*, mother, the breast. *G. Milchpumpe.*) Term for an instrument for drawing milk from the breast, a milk-pump; a mammary, or breast-pump.

A. pneumatica. (*L. pneumaticus*, belonging to air. *F. pompe pneumatique*; *G. Luftpumpe.*) An air-pump.

A. sanguinea. (*L. sanguis*, blood; *sugo*, to suck. *G. Blutpumpe.*) The exhausting syringe used in cupping.

Antlia'ta. (Same etymon. *G. Schöpf-russelmäuler.*) Applied by Fabricius to an Order of insects provided with an haustorium.

Also, a synonym of *Diptera*.

Antliobrachiophora. (*Avri*; *αντλίον*, a bucket; *βραχίον*, an arm; *φορέω*, to bear.) Applied by J. E. Gray to a Class of *Mollusca*, comprising *Cephalopoda*, because they have arms furnished with haustoria.

Antodontalgic. (*Avri*, against; *ὀδονταλγία*, toothache. *F. antodontalgique.*) Against, or curative of, odontalgia or toothache; applied to medicines of this kind.

Antodyne. (*Avri*; *ὀδύνη*, pain. *F. antodyn*; *G. Schmerzstillend.*) Subduing pain.

Antogast. Germany, in Baden, near Griesbach im Meissachthale. Three saline chalybeate springs, having the same composition, and having a temperature of 12° C. (53.6° F.) The water contains calcium, magnesium, and sodium carbonate, sodium sulphate, some iron, traces of arsenic, and free carbonic acid. The climate is mild and the scenery beautiful; the bath is 1600 feet above sea level.

Antonienthal. Switzerland; Canton Graubünden. In this valley, about 3000 feet above sea level, are found Badried and Scheri,

ANTONII, IGNIS SANCTI—ANURA.

iron carbonated springs; Aschuel, an alkaline spring; and Gailenbad, one containing sulphur.

Antonii, Ignis Sancti. Saint Anthony's fire. A synonym of *Erysipelas*.

Antophthalmic. ('Αντι, against; ὀφθαλμία, inflammation of the eye.) Applied to remedies against ophthalmia.

Antophylli. The same as *Anthophylli*.

Antophyllus. See *Anthophylli*.

Antorbital process. (L. *ante*, in front of; *orbit*.) A process also called the ethmo-palatine process; it is the antero-external angle of the basilar plate in the dog-fish, which, during development, is loosely connected with the palatine cartilage of its own side.

Antorgastic. See *Antiorgastic*.

Antothesis. ('Αντίθεσις, a thrusting against; from ἀντί; ὄθις, to push.) A synonym of *Endosmosis*.

Antothismus. ('Ανταθισμός, a thrusting against. G. *Wechseldurchdringen*.) A synonym of *Osmosis*.

Antozenic. ('Αντι; ὀζένα.) Applied to remedies against ozæna.

Antoxone. ('Αντι, against; *ozone*.) A term given by Schönbein to a modification of oxygen, which, on combination with ozone, formed oxygen. It is now known to be hydrogen dioxide.

Antozonides. A term given by Schönbein to the peroxides of barium, strontium, and calcium, because when treated with hydrochloric acid they give off no chlorine, but form a protochloride and hydrogen dioxide. See *Ozonides*.

Antozostomatic. ('Αντι; ὀζόστομος, with bad breath.) Having power to correct a bad breath, or a bad taste in the mouth.

Antral. (L. *antrum*, a cave. F. *antral*.) Term applied to objects pertaining to cavities in bones, and especially to those of the antrum of the superior maxillary bone.

Antra'sia. An erroneous reading of *atrophia*.

An'trax. Same as *Anthrax*.

Antriades. ('Αντριάς, belonging to a cavern. F. *antriades*.) Applied by Vieillot to a Family of *Syloicole* that dwell in caverns.

Antritis. (L. *antrum*, a cave or hollow place.) Term for inflammation of any cavity of the body, or specially of the antrum Highmorianum.

An'tron. (Same etymon.) Term applied by Moench to fruits of which the apple is the type.

An'trope. Same as *Anatrope*.

Antrophlogosis. (L. *antrum*; *phlogosis*.) Same as *Antritis*.

Antrorrhoncus. (L. *antrum*; *rhonchus*. F. *gargouillement, rôle caveux*; G. *Gluckengeräusch, Höhlengeräusch*.) Term for cavernous rhonchus.

Antroversion. (L. *antrorsum*, a modern manufacture, signifying forward; *verto*, to turn.) Same as *Anteversion*.

An'trum. ('Αντρον, a den, cave, or lurking place. F. *antre*; I. and S. *antro*; G. *Höhle*.) A cavity or hollow place, especially in a bone, in which the opening is comparatively small.

A. auris. (L. *auris*, the ear.) The tympanum.

A. buccino'sum. (L. *buccina*, a crooked horn, or trumpet. F. *antre buccineux*.) The trumpet or horn-like cavity; a term used by

Bartholin, *Anat.* iv, 6, *fin.* for the cochlea of the ear.

A. denta'le. (L. *dentalis*, belonging to the teeth.) The pulp cavity of a tooth.

A. ethmoida'le. (*Ethmoid*, the bone of that name. F. *antre ethmoidal*.) The ethmoidal sinuses or cells.

A. ge'næ. (L. *gena*, the cheeks.) The cavity of the cheek; a term for the antrum Highmorianum.

A. Highmo'ri. The same as *A. Highmorianum*.

A. Highmoria'num. (G. *Kinnbackenhöhle*.) The antrum of Highmore. A name applied to the cavity in the superior maxillary bone; it is lined by mucous membrane, and communicates with the middle meatus of the nose. It is also called the maxillary sinus.

A. mastoid'e'um. (F. *antre mastoïdien*.) The cells of the mastoid process of the temporal bone.

A. maxill'æ. (L. *maxilla*, the jaw.) A term for the antrum Highmorianum, given to this cavity by Casserius, before Highmore discovered it, according to Quincy.

A. maxilla're. (L. *maxillaris*.) A synonym of *Antrum maxilla*.

A. olfacti'vum. (L. *olfacto*, to smell at. F. *antre olfactif*.) The ethmoidal cells or sinuses.

A. pylori. (Πυλωρός, a gatekeeper; the lower orifice of the stomach.) The cavity of the pylorus; a term for the bulging of the small extremity of the stomach near the pylorus.

A. pylori'um. See *A. pylori*.

Ants, ac'id of. A synonym of *Formic acid*.

A., artifi'cial oil of. A synonym of *Furfuröl*.

Ants'jar. A synonym of *Upas antiar*.

Ant'y. Rumphius applies this name to an emollient herb.

Antyl'ion. ('Αντύλιον.) Old name used by Paulus Ægineta for an astringent malagma or cataplasm. (Görreus.)

Antyllus. An Italian surgeon, believed to have lived about the fourth century, as he is quoted by Oribasius. He wrote on phlebotomy and arteriotomy, ectropion, cataract, and tracheotomy.

A., meth'od of. A mode of treatment of aneurysm by extirpation, now disused. The artery above was compressed, the aneurysm was opened, the clots removed, the vessel tied above and below the aneurysm, and the cavity left to fill up by granulation.

Anu'bia. The Brazilian name of the *Laurus sassafras*.

A. ucar. Arabic name for borax. (Quincy.)

Anu'dron. A term applied by the ancient Greek physicians to a plant that is believed to be stramonium.

An'ulus. (Dim. of *anus*, the fundament.) A small depression.

Also, the anus itself.

Also, a term for a small deep ulcer of the cornea.

Anu'ra. ('Αν, neg.; οὐρά, a tail.) An Order of *Amphibia*, including the Frog and Toad, so named because in the adult state the tail present in the larvæ or tadpole is atrophied. See *Anoura*.

Also, a Division of *Chiroptera*, including *Glossophaga* and *Monophyllus*.

ANURESIS—ANXIETAS.

Also, a Group of the *Podurida*, Order *Thysanura*.

Anuresis. (*Av*, neg.; *οὔρησις*, a making water. *G. Harnmangel*.) Retention of urine.

Also, suppression of urine.

Anuria. (*Av*, neg.; *οὔρον*, urine. *G. Harnmangel*.) Absence, or deficiency of, the urine.

Anuric. (*Av*, neg.; *οὔρον*, urine.) Suffering from deficiency of urine.

Also (*av*, neg.; *οὐρά*, a tail), destitute of a tail.

Anurididae. (*Av*, neg.; *οὐρά*, a tail.) A Family of the Order *Collembola*, Class *Insecta*.

Anurous. (*Av*, neg.; *οὐρά*, a tail. *F. anurs*; *G. Schwanslos*.) Wanting the tail.

Anus. (*L. anus*, the sitting thing, the fundament; akin to Sanscrit root *ās*, to sit. *F. anus*, *siège*, *fondement*; *G. After*, *Hintere*.) Term for the extremity of the rectum; the lower opening of the alimentary canal; the fundament.

It is an expansible aperture, covered externally by skin, which is here continuous with the intestinal mucous membrane. Its muscles are the internal and external sphincters, the levator ani, and the coccygeus.

Also, the anterior opening of the aqueduct of Sylvius in the brain.

In Botany, the inferior aperture of a monopetalous flower.

A., abnormal. See *A. artificial*.

A., artificial. The formation of a new outlet for the passage of fecal matter from the intestine when the natural outlet is congenitally absent, or when obstruction of the intestinal canal occurs from disease. An artificial anus is sometimes the result of sloughing of the gut in operation for strangulated hernia, or as the result of wounds or ulceration. See *Colotomy*.

A., atresia of. (*A*, neg.; *τράω*, to perforate.) Imperforation, which may be either complete or incomplete, ano-rectal, recto-urinary, or recto-vaginal. See *A. imperforate*.

A. cerebri. (*L. cerebrum*, the brain.) The anterior opening of the aqueduct of Sylvius in the third ventricle of the brain.

A., fissure of. One or more small cracks of the skin at the edge of the anus, generally due to constipation and passage of hardened feces. Symptoms at first slight, but after some days each evacuation of the bowels is attended with severe cutting pain and bleeding, followed by distressing aching, which lasts several hours. The lesion is trifling, but it seriously interferes with either bodily or mental work. The treatment consists in injecting a pint of warm water an hour before going to stool, so that the feces may be softened; the application of belladonna ointment, of solid nitrate of silver, forcible rupture. The most effective treatment consists in the division of the fibres of the sphincter ani.

A., fistula of. (*L. fistula*, a tubular vessel.) A sinus which is the result of an abscess in the connective tissue around the lower part of the rectum, which has either burst into the intestine, or through the integument, or in both places. In the last and most common case it is termed complete, in the two former incomplete. The symptoms are, in the first instance, those of an ordinary abscess, which, bursting or being opened, discharges pus of a peculiarly disgusting odour. Brodie thought the abscess was always preceded by ulceration of the mucous membrane, but on this point there is a

difference of opinion. The cavity of the abscess contracts to a sinus, the internal opening of which is never more than an inch and a quarter from the anus (Ribes), whilst the external, when present, opens in the perineum, and discharges either continuously or at intervals a thin sero- or sanguino-purulent fluid and flatus, or even feculent matter. Fistula in ano rarely heals without operation. In the treatment, the bowel being cleared out with castor oil and an injection of salt and water, the forefinger of one hand should be introduced into the rectum, and a probe carefully passed into the external orifice of the fistula; as a rule, the internal orifice can be discovered. The probe may now be replaced by a grooved director, the point of which, having entered the cavity of the gut, may be brought down with the forefinger in contact with it, and the whole of the tissues, akin, connective tissue, sphincter muscle, and coats of the intestine divided at once with a curved sharp-pointed bistoury; the wound should be dressed with lint steeped in carbolic oil, and generally quickly heals by granulation. When great dread of cutting instruments exists, a ligature is sometimes employed to cut through the tissues between the two orifices. Severe hemorrhage sometimes occurs after section, which must be checked by ice, turpentine, compresses, Ruspini's styptic, and manual pressure. The operation is contra-indicated in tuberculous patients.

A., fun'nel-sha'ped. An exaggeration of the natural depression of the anus in relation to the nares, with a smoothing out of the rugae, seen in those who have subjected themselves to sodomy.

A., imperforate. (*L. im*, neg.; *perforatus*, from *perforo*, to pierce through.) The closure of the canal of the anus by a membranous septum, or the complete absence of more or less of the lower end of the rectum, its place being taken by a mass of dense areolar tissue. Crucial division of the septum is to be adopted in the first case; in the latter a deep, carefully made dissection in the perineum, to reach the rectal cul de sac; or lumbar or inguinal colotomy will be necessary.

A. no'thus. (*Nóthos*, spurious, counterfeit.) An artificial anus.

A., preternatural. (*L. præter*, beyond; *natura*, nature.) A condition in which an opening, not the natural anus, into the intestine gives exit to the whole or part of the feces; it may be the result of a wound or of abscess.

A., pro'lapse of. See *Prolapse of anus*.

A., pruritus of. (*L. pruritus*, an itching.) A distressing itching, which occurs in children as a result of threadworms (*Oxyuris*); in adults, from hæmorrhoids; in old age, as a special form of cutaneous disease. In the two former cases, the treatment will be found under their respective headings. In the latter, carbolic lotions and ointments may be tried, also mercurial and zinc ointments, lotions of hydrocyanic acid, tobacco, chloroform, borax.

A., tram'pet-sha'ped. The same as *A. funnel-shaped*.

An'wul. Hindustani name of a tree, esteemed in asthma, affections of the chest, ophthalmia, leprosy affections of the skin, and as a means of allaying bilious vomiting. (Waring.)

Anxi'etas. (*L. anxietas*, solicitude, fear. *G. Angst*, *Beängstigung*.) Anxiety.

A. præcordia'rum. (*L. præcordia*, the parts before the heart.) A sense of oppression

ANXIETY—AORTA.

and distress about the epigastrium, with general restlessness.

A. tibiae. (L. *tibia*, the shin bone. F. *agacement des nerfs*.) Restlessness and distressing sensations in the limbs, especially in the legs; usually called fidgets.

Anxiety. (Ἀγχω, to grieve the mind. F. *anxiété, adémionie*; I. *ansietà*; S. *ansiedad*; G. *Angstlichkeit, Sorgfalt*.) A condition of agitation and depression, with a sensation of tightness and distress in the præcordial region. This feeling, or rather its marked expression in the features, forms a dangerous symptom in acute diseases.

Anxia. (Ἀγξία. G. *Einklemmung, Beklemmung, Einschnürung*.) Constriction.

Anxy. The common name in Amboyna of the *Pangium edule*.

Anydramia. (Ἄν, neg.; ὕδωρ, water; αἷμα, blood.) Defective amount of serum in the blood.

Anydria. (Ἄν, neg.; ὕδωρ, water. G. *Trockenheit, Wassermangel*.) Want of moisture, dryness.

Anydron. (Ἄν, neg.; ὕδωρ, water.) Name for a species of nightshade, because when eaten it creates thirst; mad or raging nightshade. (Blancardus.)

Anydrous. Same as *Anhydrous*.

Anylos. (Ἄνυλος, without wood. G. *holzleer*.) Immaterial; destitute of solid substance.

Anymphious. Applied by G. Allmann to plants deprived of the *Nymphium*.

Anypnia. (Ἄν, neg.; ὕπνος, sleep.) Sleeplessness.

Anysis. (Ἄνωσις, accomplishment; from ἄνω, to complete. G. *Vollendung, Mannbarwerden*.) Adolescence.

Anysteria. (Ἄν, neg.; ὕστια, the womb.) Absence of the womb.

Aochle'sia. (Ἀοχλησία; from ἄ, neg.; ὀχλησις, disturbance. G. *Indolenz*.) Quiescence; catalepsy.

Aocnia. (Ἀοκία, indefatigableness.) Freedom from lassitude or weariness.

Aoinous. (Ἀοινος, without wine.) Abstemious.

Aooncon. (Ἀογκος, without swelling.) A bruise or sore in which there is no swelling.

Aooncos. (Ἀογκος, not bulky. G. *dünn, mager*.) Thin, lean, emaciated.

Aonychophorous. (Ἄ, priv.; ὄνυξ, a nail; φορέω, to bear.) Applied by J. A. Ritgen to Ophidian reptiles without nail-like tubercles at the posterior part of the body.

Aoonk. An Indian plant. The stems are said to be bitter and tonic. (W.)

Aornous. (Ἀορνος, without birds; from α, neg.; ὄρνις, a bird.) Applied to a place so pestilential that birds will not live in it.

Aorta. (Ἀορτή; from ἀείρω, to lift; the word ἀορτή originally meant the lower extremities of the windpipe, what are now called the bronchi, and probably indicated the mode of suspension of the lungs; it subsequently came to have the same signification as at present. Some have considered it as probably allied to ἀράω, to suspend; and others have, with little probability, derived it from ἀήρ, air; τηρίω, to guard. F. *aorte*; G. *Aorta, grosse Pulsader, Schlagader, Hauptschlagader*.) The aorta is the main trunk of the vessels containing oxygenated blood. Springing from the left ventricle in front

of the left auriculo-ventricular orifice, it forms an arch over the root of the left lung, and then descends in front of the vertebral column nearly vertically, but with a slight inclination to the right, to the level and in front of the body of the fourth lumbar vertebra, where it divides into the right and left common iliac arteries. For convenience of description it is divided into three parts, the *arch of the aorta*, the *thoracic aorta*, and the *abdominal aorta*. Near the base of the heart the aorta presents three small bulgings, named the sinuses of Valsalva, corresponding in position with the segments of the semilunar valve, immediately above which they are placed. Two of these sinuses are situated anteriorly and one posteriorly, and in the two anterior sinuses are seen the orifices of the two coronary arteries of the heart, the first branches given off by the aorta. The sp. gr. of the walls of the aorta varies from 1.065 to 1.068.

A., abdominal. (L. *abdominalis*, of, or belonging to, the belly. F. *aorte abdominale*; G. *Bauchorta, Unterleibsarta*.) The abdominal aorta commences at the aortic opening of the diaphragm in front of the body of the last dorsal vertebra, and terminates on the body of the fourth lumbar vertebra, a little to the left of the median line, by dividing into the two common iliac arteries. It has in front the lesser omentum and stomach, the solar plexus surrounding the celiac axis, the splenic vein, pancreas, left renal vein, transverse duodenum and mesentery, the aortic plexus of nerves, and numerous lymphatics; on the right, the right crus of the diaphragm, inferior vena cava, vena azygos, thoracic duct, and right semilunar ganglion; on the left, the sympathetic nerve and left semilunar ganglion; and behind, the left lumbar veins, receptaculum chyli, thoracic duct, and vertebral column. The branches are divided into two sets, parietal and visceral; the former are the phrenic, lumbar, and sacra media; the latter the celiac axis, superior and inferior mesenteric, suprarenal, renal, and spermatic.

A., aneurysm of the abdominal. A dilatation, general or partial, of a part of the abdominal aorta, usually to be felt as a pulsatile tumour, with some thrill, and in which a rough bruit may be heard. The treatment advised is similar to that for thoracic aneurysm; pressure by means of a tourniquet for several hours, so as to arrest the circulation and procure the consolidation of the aneurysm, has latterly been in several cases successfully applied.

A., aneurysm of the thoracic. A dilatation, either general or circumscribed, of the thoracic aorta. Aneurysm affecting that part of the vessel immediately above the sinuses is seldom to be recognised during life; it terminates fatally most usually by rupture into the pericardium or the right side of the heart, occasionally from the conditions accompanying valvular disease. The symptoms of aneurysm of that part of the vessel beyond the valves vary considerably with the exact locality of the disease and with the size of the tumour; they consist, in varying degrees and combinations, of the results of impediment to the arterial or venous circulation and of pressure on nerves, air-tubes, or œsophagus, such as pain, dyspnoea, cough, change of tone or loss of voice, noisy breathing, hæmoptysis, dysphagia, disturbances of special senses, headache, loss of power in, or paralysis of, lower limbs; often the disease proceeds until there is an unmistakable pulsat-

AORTÆ, PRIMITIVE—AORTIC.

ing external tumour; on auscultation there is usually to be heard and felt an increased impulse, generally a rough systolic bruit, and sometimes a diastolic bruit, or an abrupt, smart shock may accompany the second sound. Death usually occurs from rupture, occasionally from exhaustion. The treatment advised is the recumbent posture, a nutritive diet fairly dry and in a small compass, anodynes for the relief of pain, the local use of ice, acetate of lead, iodide of potassium, ergot, galvano-puncture, ligature of one or more of the large vessels on the distal side of the aneurysm, the introduction of fine iron wire into the sac; but the disease is almost always fatal.

A., arch of. (*L. arcus aortæ*. *G. Aortenbogen*.) That part of the aorta which extends from the left ventricle of the heart to the left side of the third dorsal vertebra. It is formed by the persistence of the fourth embryonic arterial or aortic arch of the left side. It is divided into three parts, an ascending, a transverse, and a descending portion. The length of the arch is from 5–6.5 cm.

A., ascend'ing portion of arch of. (*F. aorta ascendens*; *G. aufsteigende Aorta*.) The intrapericardiac portion of the arch of the aorta; it extends from the base of the heart, opposite the lower border of the third left costal cartilage, to the upper border of the second costal cartilage of the right side, or, according to Heale, to the point where the innominate is given off. It is about two inches in length (5–6 cm.), and is situated about a quarter of an inch behind the posterior surface of the sternum. In front are the right pulmonary artery, the right appendix auricularis, the pericardium, and the remains of the thymus gland. Behind are the right pulmonary vessels and the root of the right lung. On the right side are the superior cava and the right auricle, and on the left side the pulmonary artery. The length of this part of the arch is from 2.5–3 cm.

A., cross of. A synonym of *A., arch of*.

A., descend'ing. That portion of the aorta which extends from the lower part of the body of the third or fourth dorsal vertebra to the left side of the body of the fourth lumbar vertebra; it is divided into the thoracic and the abdominal aorta.

A., descend'ing abdom'in'al. The same as *A., abdominal*.

A., descend'ing portion of arch of. This is nearly straight in direction, and lies on the left side of the bodies of the third, and sometimes of the fourth, dorsal vertebra, where it receives the name of thoracic aorta. In front of it is the pleura and root of the left lung; on the right side, the œsophagus and thoracic duct; on the left, the pleura; and behind, the vertebrae.

A., descend'ing thorac'ic. A synonym of *A., thoracic*.

A., dor'sal. (*L. dorsum*, the back.) The common trunk formed by the junction of the three pairs of aortic arches seen in the third day of development of the chick; it runs a short course along the back, under the notochord, and divides into two branches, which pass down on each side of the notochord.

A., great s'inus of. (*L. sinus quartus*, or *maximus*.) The enlargement observable in the upper part of the ascending portion of the arch of the aorta. It projects to the right, and is opposite the second costal cartilage of the right side.

A., or'ifice of. See *Aortic orifices*.

A., pec'toral. (*L. pectoralis*, belonging to the breast.) A synonym of *A., thoracic*.

A., root of. The enlarged commencement of the aorta, including the orifice, valve, and sinuses.

A., thorac'ic. (*Θώραξ*, a breast-plate, the chest. *F. aorta thoracique*; *G. Brustorta*.) The upper division of the descending aorta; it extends from the lower margin of the third or fourth dorsal vertebra on the left side to the opening between the crura of the diaphragm in front of the last dorsal vertebra. It lies in the posterior mediastinum; in front are the root of the left lung and the pericardium; behind, the vertebral column; on the right, the vena azygos, the thoracic duct, and the œsophagus; and on the left, the left pleura and lung.

A., transverse portion of arch of. Commences at the upper border of the second costal cartilage of the right side, and terminates on the left side of the body of the second or third (fourth, Wood) dorsal vertebra. It runs from the right side and in front, backwards and to the left. Its relations are above, the left innominate vein; in front, the left pleura and lung, the left vagus and phrenic nerves, and the cardiac nerves; behind, the trachea, deep cardiac plexus, œsophagus, thoracic duct, and left recurrent nerve; below, the bifurcation of the pulmonary artery, the remains of the ductus arteriosus, the left recurrent nerve, and the left bronchus.

Aortæ, primit'ive. (*L. primitivus*, earliest of its kind.) Two vessels which, in the course of the second day in the development of vertebrates, proceed from the bifurcation of the single tube of the heart. Each primitive aorta lies in the mesoblast and bends round the front end of the foregut, passing from its lower to its upper surface, and then runs backwards on either side of the notochord immediately beneath the protovertebrae. The primitive aortæ coalesce for a short distance behind the head into a single trunk, the dorsal aorta, which again divides into two branches, and these, after giving off at the close of the second day the omphalomesaria arteries, are continued to the tail. From the fore part of the primitive aortæ the aortic arches are successively given off.

A. ra'dix. (*L. radix*, a root. *G. Aorten-zwiebel*.) The enlargement at the commencement of the aorta due to the projections of the sinuses of Valsalva.

Aortarc'tia. (*Ἀορτή*, the aorta; *L. arcto*, to contract. *F. aortarctie*.) Contraction or narrowing of the aorta.

Aortecta'sia. (*Ἀορτή*, the aorta; *ἐκτασις*, extension. *G. Aortenausdehnung*.) Dilatation of the aorta.

Aortect'asis. See *Aortectasia*.

Aorteurys'ma. (*Ἀορτή*, the aorta; *εὐρύς*, to dilate. *F. aortéurysme*; *G. Aorten-erweiterung*.) Term for an aneurysm of the aorta.

Aortic. (*Aorta*, the large artery of that name. *F. aortique*.) Of, or belonging to, the aorta.

A. ap'erture of the di'aphragm. (*F. ouverture aortique du diaphragme*; *G. Aortenschlitz des Zwerchfelles*.) See *A. foramen*.

A. arch'es. In the development of the blood vascular system of Vertebrata, the part that subsequently becomes the heart is continuous with a single vessel, the aorta, or truncus

The **mitral** or **bicuspid** valve is situated between the left atrium and the left ventricle. It consists of two leaflets or cusps, each of which is attached to the ventricular wall by a chorda tendineae. The chorda tendineae are composed of fibrous tissue and are attached to the papillary muscles. The mitral valve is closed during systole and open during diastole.

1. The tricle. (F. *tricle*)

It was tibial. A sharp, upward-pointing process, the tip of which was the point of the tibia. The process was rigid and unyielding, and it was the only point under even the most violent pressure. It was the only point that was not the interval between the tibia and the femur.

Aortitis. *Aortitis* is a general term for inflammation of the aorta. It is a rare disease, and is usually fatal. It is characterized by a thickening of the aortic wall, and by the formation of an aneurysm. The disease is usually caused by a bacterial infection, and is often associated with other conditions, such as rheumatism and syphilis. The symptoms of aortitis are usually pain in the chest, and a swelling of the aorta. The disease is usually diagnosed by X-ray examination, and is treated with antibiotics and surgery.

A., acute. In this disease, with the action of the heart, the thrill and murmur observed in the aorta, main, and main branches, vessel, and in the circulation, as in the

constitute the usual recommendations for treatment.

A., chron'ic. In its chronic form aortitis does not appear to be recognisable, except, after death, in the shape of thickening of the coats and white patches of old exudation, with roughness and puckering of the inner coat, generally accompanied by dilatation of the vessel following some narrowing in the early stage. Salts may be deposited in the white patches.

Aort'ra. ('*Αείρω*, to raise or suspend.) Old term for the suspended portion of the lung on either side; consequently the lung itself.

Aoshba mugrabee. A root sold in the Indian bazaars, resembling sarsaparilla. (Waring.)

Aosmic. ('*Α*, neg.; '*ὀσμή*, a smell. *G. germaklos*.) Having no smell.

Aotus. ('*Α*, neg.; '*ὄτε*, an ear.) In Teratology, a monster destitute of ears.

Aoura'ra. The same as *Aouira*.

Aoura'ra. The native name in French Guiana of the root of *Astrocyum vulgare*, which is used as an antisyphilitic remedy.

Aourou'chi. The native name in Guiana of the fruit of the *Virola* or *Myristica sebifera*.

Aoté. ('*Αοτίζω*, to ripen; from *Aoté*, August.) Mature; ripe.

Aowaze. A spice employed in Abyssinia, composed of pimento, salt, ginger, zegakebia (a kind of thyme), and cloves. It is used as a condiment with raw beef or brondo. (R. and L.)

Apa Bad. One of the springs of *Algyogy*.

Apae'riton. ('*Απαίρω*, to drive away.)

A name given by Apuleius to the chamomile.

Apag'ma. ('*Απαγμα*, a fracture at a joint.) According to Galen, this word signifies the superficial division of bone (fissure), or a fracture on the opposite side to the lesion (counter-fracture).

Also, simple fracture near a joint.
Also, abduction.

Apag'ge. ('*Απαγωγή*, a leading away. *G. Wegföhren, Abföhren*.) Abduction; purgation.

Apag'ynas. ('*Απαξ*, once only; '*γυνή*, woman.) Denotes those plants that fructify once only in their life. A term proposed by Desvauz to replace that of monocarpic.

Apag'ynous. ('*Απαξ*, once; '*γυνή*, a woman. *G. einmahlfraug*.) Applied by Desvauz to plants that fructify but once.

Apalach'ine. ('*Ε. thé des apalaches, t. de la mer du sud*; *G. Apallachenthee*.) A kind of tea obtained from the *Ilex vomitoria*. The Indians take it in infusion for the purpose of intoxication.

A. gal'lis. Another name for the plant *Ilex cassini*, or *I. vomitoria*.

Apallage. ('*Απαλλάγη*, deliverance. *G. Befreiung*.) A term used by Hippocrates for recovery from a serious disease, or in the case of an incurable disease applied to death.

Apallax'is. ('*Απάλλαξις*, deliverance.) The same as *Apallage*.

Apalotica. ('*Απαλότης*, softness, tenderness.) Lesions or deformities affecting the soft parts.

Apal'to sen'na. A synonym of *Alexandrian senna*.

Apaly'tri. ('*Απαλόν*, soft; '*ελυτρον*, an elytrum. *G. weichflügeldeckig*.) Applied by Dumeril to a Family of *Coleoptera* having soft elytra.

Apa'ma. A Bragantia belonging to the

Nat. Order *Aristolochiaceae*; said to be an anti-paralytic.

Apanaste'ma. ('*Απανίστημι*, to rise and go away.) A nodulated excrescence of the conjunctival membrane of the eye.

Apanchom'enos. ('*Απαγχόμενος*; from '*ἀπαγγω*, to strangle.) Ancient term used by Hippocrates, *Ap. ii*, 43, for one who is strangled or suffocated by hanging.

Apante'ma. ('*Απάντημα*, a meeting.) The same as *Apantesis*.

Apante'sis. ('*Απάντησις*, the act of going to meet.) Opposition, antagonism.

An event or consequence of disease.

Apanthe'sis. ('*Απάνθησις*, a fading.) The same meaning as *Apantismos*.

Apantismos. ('*Απανθισμός*, a plucking of flowers.) A term signifying the termination of the period of blooming; the period of withering; hence the withering or falling off, or closing up, of parts belonging to the child which are necessary to it before birth, as the closure of the ductus Botalli, the shrivelling of the umbilicus, the atrophy of the thymus.

Also, the act of plucking the bloom, hence the act of defloration.

Also, an ancient term used by Galen, *de Ven. et Art. Diss. c. viii*, for an extremely minute blood vessel.

Apantismos. Same as *Hapanthismos*.

Apanthro'pia. ('*Απανθρωπία*; '*ἀπό*, away; '*ἄνθρωπος*, a man. *F. apanthropie*; *G. Trübsinn mit Menschenchen*.) Old term used by Hippocrates, *Coac. Prenot. t. 482*, for a kind of melancholia, characterised by a dislike of society. Also, inhumanity, cruelty.

Apanthropi'smus. The same as *Apanthropia*.

Apanthro'pon. Ancient name of staphisagria.

Apanxalo'a. The Mexican name of a Species of *Lytium*, employed as an astringent and vulnerary. (Waring.)

Apaphris'mus. ('*Απαφρίσω*, to skim off the froth.) Despumation.

Aparach'ytum. ('*Απαράχυντος*, olivus, being understood, pure wine.) Old name used by Galen, *l. iv, de C. M. sec. Gen. c. 7*, for the purest wine, unmixed with water.

Aparyn'mphius. ('*Α*, neg.; '*paranymphium*.) Without a paranympium.

Apapetaloid'eous. ('*Α*, neg.; '*parapetalum*.) Without a parapetalum.

Aparscoeus'sia. ('*Απαρσκευασία*; from '*ἀ*, neg.; '*παρασκευάζω*, to prepare.) A defect in the preparation of medicines or medical apparatus.

Apar'ine. ('*Απαρίνη*.) Old name for goose-grass, *Galium aparine*; for a Species of *Xanthium*; and for the woodruff, *Asperula odorata*.

Apar'tes. ('*Απαρτίς*, fitted straight.) Penis, hanging downwards, as some of the muscles.

Aparthro'sis. ('*Απαρθρόσμις*, to be jointed. *F. aparthrose*; '*G. Abgliederung*.) Dismemberment; disarticulation. The removal of a limb at a joint.

Also, a synonym of *Diarthrosis*.

Apart'is. ('*Απάρτισις*, a fitting completely.) Entire connection.

Apary'sis. ('*Απαρίω*, to draw off.) Exhaustion of impure humours.

Apas'tia. ('*Απαστία*. *G. Nüchternheit*.) Abstinence from food.

APASTUS—APERITIVES.

Apas'tus. (Ἀπαστος, from *d*, neg.; πατομαι, to feed.) Unfed, fasting.

Apatecphlogiō'sis. (Ἀπάτη, illusion; ephlogiōsis. *G. trugeriache varioloide.*) False or deceptive variola.

Apath'es. (Ἀ, neg.; πάθος, affection.) A sect of philosophers who pretended to have no affections.

Apathetic. (Same etymon as *Apathy*.) Having apathy; indifferent; wanting in feeling.

A. insanity. A form of insanity very similar to dementia, in which the memory is not really impaired, but the mind is torpid.

Apath'icus. (Ἀ, neg.; πάθος, a passion. *F. apathique; G. gefühllos.*) Pertaining to apathy; apathic. Without passion.

Applied by Lamarck to one of his three divisions, containing animals that have no special organ for their sensations, and which, he supposed, do not even feel their existence.

Apathy. (Ἀ, priv.; πάθος, a passion. *F. apathie; I. apatia; G. Gefühllosigkeit, Unempfindlichkeit.*) Term for the absence or privation of all passion, emotion, or excitement.

Ap'atite. (Ἀπατάω, to deceive; so called from its liability to be mistaken for other minerals. *G. Trugstein, Trügeling.*) $3\text{Ca}(\text{PO}_4)_2 + \text{CaCl}_2$. A mineral consisting chiefly of calcium phosphate, varying much in colour and in appearance.

Apeche'ma. (Ἀπήχημα, echo; from ἀπήχων, to sound back. *F. apicéme; G. Gegenpall, Gegenbruck.*) Old term for a fracture of the skull called *Counter-fracture*.

Apectoceph'alus. (L. *a*, neg.; pectus, the breast; κεφαλή, the head.) A monstrosity having neither head nor thorax.

Ape'ria. (*G. Unerfahrenheit, Erfahrunglosigkeit.*) Inexperience.

Apel. A plant of Guinea; the leaves are used in affections of the throat.

Apelain'ic acid. (Ἀπό, from; ἔλαιον, oil.) A synonym of *Elaidic acid*.

Apella. (The proper name of a Jew—Judeus Apella, mentioned by Horace, and probably well known at Rome in his time. It has also been supposed to be derived from *a*, neg.; pellis, the skin, and so to have been used by Horace to indicate any Jew as being circumcised. This, again, has been set aside as incorrect, and the derivation above given, referring merely to this particular Jew's name, and his being circumcised, like all others, is held to be more just. *F. apelle; G. Beschnittener.*) This word has been applied to one whose prepuce does not cover the glans penis, whether this be caused by circumcision, or is congenital, or accidental.

Apell'ous. (L. *a*, neg.; pellis, skin.) Having no skin.

Apelos. (Ἀπελος; from *a*, neg.; πέλος, skin.) A wound not yet skinned over.

Apen'salus. A vessel with a narrow neck to hold oil.

Apeps'ia. (Ἀ, neg.; πίπτω, to digest. *F. apesie; G. Nichtverdauung, Verdauungslosigkeit.*) Old term for indigestion, now expressed by the word *dyspepsia*.

Apep'ta. (Same etymon.) Indigestible foods.

Apep'tic. (Same etymon. *F. apeptique; G. apeptisch, unverdaulich.*) Having bad digestion; dyspeptic.

Apept'ous. (Ἀπίπτως, uncooked; from *a*, neg.; πίπτω, to cook. *G. ungekocht, unverdaut.*) Uncooked, undigested, unripe, indigestible.

A'per. (Lat. akin to κάπρος, wild swine of both sexes. *G. Eber.*) The wild boar, or sow.

Aperception. (*F. apercevoir*, to perceive one's self. *G. Anschauung.*) That operation of the mind which consists in considering itself as the subject which perceives, or feels any impression. See also *Apperception*.

Ape'ria. The same as *Aperia*.

Aperiantha'ceous. (L. *a*, neg.; perianth. *F. apérianthacé; G. ohne Blütendecke.*) Without a perianth; applied by Mirbel to *Cycadææ*.

Aperian'thous. (Ἀ, neg.; περί, around; ἄθος, a flower.) A term applied to a flower having no perianth. An achlamydeous or naked flower.

Ape'riens palpebra'rum rec'tus. (L. *aperio*, to uncover, to open; palpebra, the eyelid; rectus, straight.) A synonym of the *Levator palpebræ superioris*.

Aper'ient. (L. *aperio*, to open. *F. aperitif; G. abführend, öffnend, eröffnend.*) Opening; applied to a medicine which gently opens, or effects a discharge from, the bowels; a laxative.

The term was anciently used to describe the power which certain remedies were supposed to possess of opening the natural pores or apertures of the different organs and blood-vessels.

Ape'rients. (Same etymon. *G. Öffnungsmittel.*) Medicines which have a relaxing effect on the bowels, but which do not produce watery evacuations; such are castor oil, rhubarb, senna, and the like.

Aper'inous. (Ἀ, neg.; περί, the scrotum.) Without scrotum or genitals; castrated.

Aperisper'matous. (L. *a*, neg.; perisperm. *F. apérispermé.*) Applied to a seed or vegetable embryo without a perisperm, as that of *Salsola tragus*.

Aperisper'mic. (Same etymon.) Having no perisperm or albumen.

Aperisper'mous. (Ἀ, neg.; περί, around; σπέρμα, a seed. *F. apérispermé.*) An embryo or seed destitute of albumen. Same as *Aperispermatous*.

Aperis'taton. (Ἀπερίστατος, solitary; from *a*, neg.; περίστημα, to surround.) Term applied by Galen, *l. ii, de C. M. sec. Gen. c. i*, to a small ulcer unattended by any serious mischief, and not surrounded by inflammation.

Aperis'tatum. Same as *Aperistaton*.

Aperisto'mati. (L. *a*, neg.; peristoma.) Applied by Bridel to a Class of *Musci*, deprived of the peristome by absence of the opercule.

Aperiti'va reme'dia. (L. *aperio*, to open; remedium, a remedy.) Medicines relaxing the bowels; purgatives.

Aper'itive. (L. *aperio*, to open. *F. apéritif; G. öffnend, abführend.*) Term applied to purgative, laxative, or aperient remedies.

A. saff'ron of Mars. A synonym of *Ferri subcarbonas*, U.S. Ph.

Aper'itives. (Same etymon.) Medicines which produce relaxation of the bowels or the biliary or urinary passages.

Some authors use the term as synonymous only with diuretics.

Other authorities, as Fonssagrives, describe aperitives as stimulants of the appetite, and divide them into hygienic and medicinal aperitives.

A., hygien'ic. (*F. apéritifs hygiéniques.*) Under this title Fonssagrives includes the thorough cleansing of the mouth and teeth by a tongue-scraper, tooth-brush, or rough towel,

APERITROPAL—APETALIA-ELEUTHEROGYNIA.

with or without dilute Eau de Cologne or tincture of pyrethrum, or simply cold water. Change of air, exercise, and hydrotherapeutics.

A., medicinal. (*F. apéritifs médicaux.*) Under this term Fossagives includes condiments, and such drugs as quinine, gentian, centaury, chamomile, and the like.

A., major. (*L. major*, greater. *F. apéritifs majeurs.*) Some French authors class under this heading the roots of smallage, fennel, parsnip, asparagus, and butcher's broom.

A., minor. (*L. minor*, less. *F. apéritifs mineurs.*) Some French authors class under this heading the roots of maidenhair, dandelion, eryngium campestre, rest-harrow and wild strawberry.

Aperitropal. (*A. neg.*; *περιτροπή*, revolution. *F. apéritrope.*) That which does not undergo the usual successive changes in the normal evolution of the organs. (*R. and L.*)

Aperitropé. (*A. neg.*; *περιτροπή*.) Defective metabolism; imperfect performance of the healthy actions of the system.

Aperittos. Same as *Aperittus*.

Aperittus. (*Ἀπεριττός*, simple, plain; from *a*, neg.; *περιττός*, redundant.) Old term applied to those kinds of food which have the least excrementitious matter, as the flesh of wild animals, and those which feed in dry places.

Aperition. (*L. apertio*, an opening. *G. Eröffnung.*) The making of an opening, as the perforation of an imperforate anus or closed meatus auditorius, or the opening of an abscess.

Aperitive. Same as *Aperitive*.

Aperitor. (*L. apertor*, one who discharges; from *apertio*, to open.) An opener.

A. oculi. (*L. oculus*, the eye.) A synonym of the *Levator palpebra superioris*.

Aperitorium. (*L. apertio*, to open.) Name of an instrument formerly used for dilating the os uteri during labour.

Apertura. (*L. apertura*, an opening; from *apertio*, to open. *F. ouverture*; *G. Öffnung*, *Loch*, *Mündung*.) An opening, either natural or made with an instrument; an aperture.

In Botany, Tode has given this name to the opening through which the spores are discharged in Sphaericeous Fungi.

A. anterior ventriculi tertii cerebri. (*L. anterior*, front; *ventriculus*, a ventricle of the brain; *tertius*, third; *cerebrum*, the brain.) The foramen commune anterius, or channel of communication between the third and the two lateral ventricles of the brain.

A. canalis chordæ tympani. (*L. canalis*, a channel; *chorda*, a string; *tympanum*, a drum.) The opening situated in the posterior part of the tympanum between the pyramid and the groove for the membrana tympani, by which the chorda tympani enters the tympanum.

A. canalis facialis spuria. (*L. canalis*; *facies*, the face; *spurius*, false.) The hiatus Fallopii.

A. exterior canalis inguinalis. (*L. exterior*, outer; *canalis*, a channel; *inguinalis*, belonging to the groin.) The external abdominal ring.

A. inferior canaliculi tympanici. (*L. inferior*, lower; *canaliculus*, a small pipe; *tympanum*.) A small foramen at the bottom of a depression situated between the jugular fossa and the carotid foramen in the petrous portion of the temporal bone.

A. interior canalis inguinalis. (*L.*

interior, inner; *canalis*; *inguinalis*, belonging to the groin.) The internal abdominal ring.

A. narium anterior. (*L. naris*, a nostril; *anterior*, front. *G. vorderen* or *äusseren Nasenlöcher*.) The anterior opening of the nares on each side.

A. narium externa. (*L. naris*; *externus*, outward.) The same as *A. narium anterior*.

A. narium interna. (*L. naris*; *internus*, inner.) The same as *A. narium posterior*.

A. narium posterior. (*L. naris*; *posterior*, hinder. *G. hinteren Nasenöffnung*.) The posterior opening of the nares.

A. pelvis inferior. (*L. pelvis*, a basin; *inferior*, lower. *G. Beckenausgang*.) The inferior opening of the pelvis.

A. pelvis perinealis. (*L. pelvis*; *perineum*.) The inferior opening of the pelvis.

A. pelvis superior. (*L. pelvis*; *superior*, upper. *G. Beckeneingang*.) The upper opening of the pelvis.

A. pyriformis. (*L. pyrum*, a pear; *forma*, shape.) The anterior opening of the nose in the skeleton, formed by the nasal bones above and the superior maxillary bones laterally and below.

A. scalæ vestibuli. (*L. scala*, a ladder; *vestibule*.) The opening by which the scala vestibuli communicates with the scala tympani; it is situated at the lower and fore part of the vestibule.

A. spuria canalis facialis. (*L. spurius*, false; *canalis*, a channel; *facies*, the face.) The hiatus Fallopii on the upper surface of the petrous portion of the temporal bone.

A. superior canaliculi tympanici. (*L. superior*, upper; *canaliculus*, a little channel; *tympanum*.) A small opening in the groove leading to the hiatus Fallopii in the upper part of the petrous portion of the temporal bone.

A. uterina. (*L. uterinus*, belonging to the womb.) The opening of the Fallopian tube into the uterus.

A. uterina tubæ. (*L. uterinus*, belonging to the womb; *tuba*, a straight trumpet. *G. Gebärmutteröffnung*.) The opening by which the cavity of the uterus communicates with that of the Fallopian tube.

Aperture. (Same etymon.) An opening.

A., angle of. See *Angular aperture*.

Apertus. (*L. apertio*, to uncover, to open.) Open. Formerly used for *exulceratus*, as *cancer apertus*, an open or ulcerated cancer; also, applied by Scribonius Largus, n. 81, to ulcers. See Rhodius, in *not.* and *Lex. Scribon.*

In Botany *G. unbedeckt*, *offen*, *geöffnet*, applied to an expanded flower.

Also, to a floral whorl which does not completely embrace the receptacle.

Apetalæ. (*A. neg.*; *petal.* *F. apétales*; *G. Perigonblühige*.) One of the three groups into which A. de Jussieu divided Dicotyledons. It included all Dicotyledonous plants possessing only a single floral envelope, and was divided into three Sections—*Epigyna*, *Perigyna*, and *Hypogyna*.

In other classifications the Division *Apetalæ* is described as containing Dicotyledons having a perianth consisting of a single whorl of leaves, or it is entirely absent; only occasionally is it composed of a double whorl of sepaloid leaves.

Apetalia-eleutherogynia. (*A. neg.*; *petal.*; *ἐλευθερον*, free; *γυνή*, the female.) Applied by A. Richard to a Class comprising

APETALIFLOROUS—APHACE.

apetalous Dicotyledons, the ovary of which is free.

A.-symphyogyn'ia. (Σύμφυσις, a growing together; γυνή, the female.) Applied by A. Richard to a Class comprising apetalous Dicotyledons, the ovary of which is adherent.

Apetaliflorous. (L. *a*, neg.; *petal*; *flor*, a flower. *F. apetaliflora*; *G. blumenblatlos-blumig*.) Applied by H. Cassini to the calathidium and corona of Synantheres when the flowers which form them are without a corolla.

Also, a term applied to plants destitute of a corolla.

Apetalus. Same as *Apetalous*.

Apetaloid. ('A, neg.; *πτάλον*, a leaf.) A term in Botany applied to flowers which have only one whorl of floral envelopes, which is considered to be the calyx.

Apetalostemonous. ('A, neg.; *πτάλον*, a leaf, a petal; *στήμων*, a thread.) Applied by G. Allmann to plants the stamens of which are free from all adherence to the petals.

Apetalous. ('A, priv.; *πτάλον*, a leaf, a petal. *F. apétale*; *G. blumenblatlos*.) Having no petals; without petals.

Apetaly. (Same etymon.) Absence of corolla.

Apeterebi-tupi. A name of *Sassafras*.

Apeth'isis. (Ἀπεθίσις, to disuse. *G. Entwohnung*.) The giving up of a habit.

Apethis'tic. (Same etymon.) Having relation to the giving up of a good or bad habit.

Apeuthysmenos. Same as *Apeuthysmenus*.

Apeuthys'menus. (Ἀπευθυσιμινον; from *απευθύνω*, to make straight again.) Name applied by the Greeks to the rectum, or straight gut. (*Gorrius*.)

A'pex. (L. *apex*, the extreme end of a thing. *F. sommité, sommet*; *G. Auserate, Spitze, Buckel, Scheitel, Wirbel, Schnabel*.) The top, summit, or extremity of any body or part.

In Conchology, the limbs of a shell or the most projecting part of the valve near the upper or lower border of the hinge.

In Botany, this term was applied by Tournefort to the male organ of the flower or stamen; it is now used exclusively to designate the summit of a plant or part of a plant most remote from its base.

Also, the opening at the summit of Spheriaceous Fungi, by which the spores escape.

A. beat. The impulse of the contraction of the heart, felt and seen in the fifth intercostal space, about half way between the left edge of the sternum and a line drawn vertically downwards from the nipple. The point is lower when the heart is enlarged; higher when the heart's cavities are small, and when there is pericardial effusion. It is destroyed or much lessened in pericardial effusion and adhesion, and in cases where a piece of emphysematous lung protrudes in front of the heart; it is increased in force in hypertrophy of the heart; enlargement of other viscera, or effusion into neighbouring cavities, may displace it.

A., cardio. (Καρδία, the heart.) The lower end of the heart as felt in the *A. beat*.

A. catarrh'. The same as *A. congestion*.

A. coch'leæ. (Κοχλίας, a spiral.) The point or extremity of the cochlea of the ear; it is directed outwards, and a little downwards and forwards.

A. columel'ise. (L. *columella*, a small

column.) The upper narrowed extremity of the modiolus of the cochlea.

A. congest'ion. A term given to a condition of congestion of the apex of the lung, continuing for an indefinite period, giving rise to physical signs of consolidation, affecting the general health, as in tubercular deposit, and liable to take on disintegrating processes, so as to be one mode of origin of phthisis. This condition is not admitted by all observers.

A. cor'dis. (L. *cor*, the heart.) The point or inferior extremity of the heart; it is formed by the left ventricle, projects towards the left side and forwards, and lies between the fifth and sixth ribs.

A. geomet'ricus. (Γεωμετρικός, relating to geometry, geometrical.) *F. sommet glomé-trique*.) A term applied in Botany to the uppermost point of a fruit when, in developing, one of the sides of the ovary has grown to a greater extent than the others, so that the style, instead of being terminal, is lateral, and more or less approximated to the base of the fruit. In this case a vertical raised on this base would not traverse the style or organic apex of the fruit, but would pass out at a higher point, which then receives the name of the geometrical apex, as in *Anacardium occidentale*.

A. ling'uae. (L. *lingua*, the tongue. *G. Zungenspitze*.) The free extremity of the tongue which is directed forwards.

A. mur'mur. A murmur heard over the apex of the heart; when audible near the ensiform cartilage it is believed to depend on tricuspid regurgitation; when at the cardiac apex and at the back also it indicates mitral regurgitation; a murmur indicating the latter condition, if slight, may not be heard at the back near the inferior angle of the left scapula; some observers teach that a systolic apex murmur may be caused by dilatation of the left ventricle.

A. na'si. (L. *nasus*, the nose. *G. Nasenspitze*.) The free extremity of the nose.

A. organ'icus. (Ὀργανικός, organic. *F. sommet organique*.) A term applied in Botany to indicate in a fruit the point which corresponds to the insertion of the style, or, in a seed, to the extremity of the Cotyledons. In the greater number of fruits and seeds the organic apex is identical with the prolongation of the axis of the fruit or seed, and then corresponds to the geometrical apex, but in many growth is unequal, and the point of attachment of the style or the micropyle of the seed then becomes lateral, and the organic apex and the geometrical apex do not correspond.

A. patel'ise. (L. *patella*, a small pan, the knee-pan.) The pointed inferior angle of the patella.

A. pneum'onia. The same as *A. congest'ion*.

A. pulmo'nis. (L. *pulmo*, the lung.) The upper rounded extremity of the lung; it projects above the border of the first rib. It is grooved by the subclavian artery, from which it is separated by the pleura.

Aph'ace. (Ἀφάκη.) A plant in use amongst the ancients as an astringent in diarrhoea (*Dioscorides*, l. ii, c. 177; *Galen, de simp.* l. v; *Paul. Ægineta*, l. vii, § iii; *Pliny*, l. xxvii, c. 21.) It has been referred to *Vicia sepium* by Fuchsianus and Matthioli, to *V. angustifolia* by Dalechamp, to *V. cracca* by Litré, and by Sprengel to either *V. bithynica*, *V. lutea*, or *V. hybrida*. (Waring.)

APHACIA—APHASIA.

Apha'cia. Same as *Aphakia*.

Aphas'esis. ('Αφαίρεσις; from ἀφαίρειν, to take away, to separate. F. *aphérese*; G. *Wegnahme*.) Old term, used by Hippocrates, *Coac. prænot.* t. 360, for the amputation or removal of any diseased or preternatural part of the body.

Also, formerly used for large and injurious extraction of blood.

Apha'gia. ('Α, neg.; φαγῖν, to eat. F. *aphagie*.) Inability to swallow.

Apha'kia. ('Α, neg.; φακός, a lentil, anything shaped like a lentil, and so the crystalline lens. F. *aphakie*.) The condition of an eye when the crystalline lens is absent. The absence of the lens may be either congenital, or the result of accident, or of operation; it renders the eye highly hypermetropic, and abolishes the power of accommodation. In order to obtain good vision it is requisite to place a lens of from 2½ to 3½ inches or lower power before the eye; a stronger power being required for near than for distant objects. The anterior chamber is usually very deep, and the iris funnel-shaped and tremulous.

Apha'kous. (Same etymon. F. *aphake*.) Deprived of the crystalline lens, whether congenitally, by displacement, or by operation.

Aphalang'iasis. ('Α, neg.; φάλαγξ, a line of battle, a bone of the finger.) The fourth stage of Oriental leprosy, in which gangrene of the fingers occurs.

Aphanes. ('Αφανής, unseen.) A Section of the Genus *Alchemilla*, characterised by the number of the stamens and carpels being reduced to one or two.

A. arvensis. (F. *perceperre, petit pied-de-lion des champs*.) Leaves palmipartite, with three lobes, which are cuneiform, 3—5 fid, with leafy incised connivent stipules. A tincture is made from it which is recommended as an astringent and antilithic; now usually called *Alchemilla arvensis*.

Aphanip'tera. ('Αφανής; from ἀφανίζω, to remove from sight, to conceal; πτερον, a wing. F. *puces*; G. *Flohe*.) A Suborder of the Order *Diptera*, Class *Insecta* (Ametabolica). The fleas; animal-sucking insects, having the body laterally compressed; thorax imperfectly distinguished from the abdomen; two scales, abortive wings, on each side of thorax; eyes simple, small, round; feelers short, in a groove; no upper lip; mandibles converted into long saws, between them is an asyngous pricking organ; maxillæ short and broad; maxillary palpi elongated, with four segments; lower lip split, segmented like a palpus; hind legs adapted for leaping; metamorphosis complete; larva destitute of feet, worm-like, hairy.

Aphanip'terous. (Same etymon.) Having no apparent wings.

Aphan'isis. ('Αφάνισις, a getting rid of.) Disappearance; extinction; fainting.

Aph'ante. ('Αφανής, unseen, obscure; from ἀ, neg.; φαίνωμαι, to be seen.) A species of rock, consisting of quartz, hornblende and felspar, so combined that they are severally indistinguishable, hence the name; also called cornean.

Aphanitic. (Same etymon.) Containing aphanite; applied to a rock of this nature.

Aphanocnido'sis. ('Αφανής, obscure; κνίδωσις, a stinging sensation.) Urticaria evanida; rapidly recurring and disappearing nettle rash.

Aphanocy'clis. ('Αφανής, unseen;

κύκλος, a circle.) A Series of the Subclass *Chori-petalæ* of angiospermous dicotyledonous plants. Spirally-built hemicyclio or acyclic flowers, with the segments mostly free, or only those of the gynœcium coherent; perianth generally separable into calyx and corolla; the parts variable in number; stamens usually more numerous than the perianth leaves; carpels generally forming several monocarpous ovaries.

Aphanophle'bious. ('Αφανής, hidden; φλέψ, veins.) A term in Botany applied to leaves in which the veins or nervures are indistinct.

Aphanop'terous. ('Αφανής; πτερον, a wing.) Wingless; applied to the fleas.

Aphar'ca. ('Αφάρκη.) A plant, so named by Theophrastus, which has been variously identified with *Rhamnus alaternus*, with *Arbutus unedo*, and also with *Phillyrea angustifolia*.

Apha'sia. ('Αφασία, speechlessness, from ἀ, neg.; φάσις, speech. G. *Sprachlosigkeit*.) Loss of the faculty of intelligent speech; not caused by any impairment of structure of the vocal organs, but by damage of the cerebral centre or centres for speech; it thus includes inability to speak depending on affection of the co-ordinating centre for the muscles producing articulate speech—*aphemia*; as well as that which depends on the loss of the memory of words—*amnesia*; it may or may not be attended by inability to write, not depending on paralysis of the limb—*agraphia*; and it excludes inability to speak from deaf-mutism, general paralysis, glosso-pharyngeal paralysis, chorea, and such like. Aphasia is very commonly associated with right hemiplegia and lesion of some portion of the third frontal convolution, the island of Reil, and the subjacent part of the corpus striatum on the left side. A form of aphasia, which has been called functional, may be the result of fright or general disease.

Some authors include under this head defect or loss of speech from whatever cause.

A. amnemonica. ('Αμνημονία, to be unmindful.) Aphasia in which neither spoken nor written words can be remembered. The idea is present, but does not suggest the proper symbol, hence no word, or an incorrect expression, is employed. The appropriate word to express an idea cannot be recalled when required, though it is readily pronounced when heard.

A. amnesia. ('Αμνησία, forgetfulness.) The same as *A. amnemonica*.

A. amnesia. Same in etymon and meaning as *A. amnesia*.

A. aneu'ral. ('Α, neg.; νῆρον, a nerve.) A synonym of *A. atactica*.

A. associate'ria. (L. *associa*, to associate.) Same as *A. atactica*.

A. atact'ica. ('Α, neg.; τάξις, order.) Aphasia is termed atactic when a word, though still retained as a sensory image and as a symbol of thought, can no longer be enunciated as a motor combination of articulate sounds, though the sounds themselves may still continue to be correctly formed when occurring in some other word.

A. atax'ic. The same as *A. atactica*.

A. func'tional. A form of aphasia which may occur in hysterical persons as a result of great emotion, or of severe febrile or other disease, and as a congenital condition. It is not associated with hemiplegia, does not appear to be accompanied by manifest cerebral lesion, and may be recovered from.

A., letholog'ical. (Ἀθήνη, a forgetting; Ἀθύνω, a word.) A synonym of *A. amnesia*.

Apha'sio. (Same etymon. *F. aphasique*.) Term applied to one affected with aphasia.

Aphasom'enos. (Ἀφάσσω, to feel.) Anciently used to denote the tactual examination of the female organs of generation as a means of diagnosing vaginal and uterine disease.

Aphob'riok. Arabic for sulphur. (Ruland.)

Aph'edra. (Ἀφεδρών, a privy; from ἀπό, from; ἔδρα, a seat. *G. Nachtsuhl*.) A night-stool.

Aphedri'a. (Ἀφεδρία, a sitting apart.) The catamenia.

Aph'edron. (Ἀφεδρών, a privy.) A privy; a night stool; the anus.

Aphedron'ius. (Same etymon.) Pertaining to a night-stool, or a privy.

Aph'edros. (Ἀφεδρος, a sitting apart.) The same as *Aphedron*.

Also, in the Septuagint, used as a term for menstruation, because the women amongst the Jews sat apart at that time.

Also, a synonym of *Curthamus lanatus*.

Apheli'a. (Ἀφίλια, simplicity.) The simple manners adopted by the sect of Methodists in teaching and practising medicine. (Dunglison.)

Apheliot'eros. (Ἀπό, away from; ἥλιος, youth.) Past the flower of youth. Hippocrates, *Epid.* 4, 7.

Aphel'ion. (Ἀπό, from; ἥλιος, the sun.) Term for that point of a planet's orbit when it is at the farthest distance from the sun.

Aphel'ia. (Ἀφίλιος, to draw away. *G. Zerstreuung*.) A term for absence of mind; reverie.

A. inten'ta. (L. *intentus*, intense.) Abstraction of mind, in which the attention, at the instigation of the will, is riveted to some special subject, with conscient emotion of the general appearance.

A. ot'iosa. (L. *otiosa*, unoccupied.) The condition called brown-study, in which the attention is voluntarily obedient to the imagination; the muscles are quiescent.

A. so'cra. (L. *severa*, narrow-minded, thoughtless.) Absence of mind, in which the attention wanders, and does not readily yield obedience to the will.

Aphemet'ric. A wrong spelling of *Hypomet'ric*.

Aphemia. (Ἀφῆμι, to speak. *F. aphémie*.) Loss or defect of the faculty of speech. By some authors used synonymously with aphasia in its widest sense. By others, restricted to those cases in which the power of speaking is lost, although the vocal organs are in no degree paralyzed, and although the mental faculty of speech, as evidenced by the understanding of words spoken and by the possession of the power of expressing thoughts by written, is still retained.

Aphemic. (Same etymon. *F. aphémique*.) Suffering from the defect of *Aphemia*.

Aphop'se ma. (Ἀφῶσε μα, from ἔφασι, saying; ἔμα, and ἔμα, *F. éphémé*.) The term used for a fever by those who believe in the four humors.

Aphop'sis. (Ἀφῶσε, a saying of. *A. leucopneumonia*.)

Aphore'ia. The same as *Aphasia*.

Aph'asia. (Ἀφῆσις, a saying; ἄσις, from ἄσις, and ἄσις, *F. aphasie*.) A term used by Hippocrates, later by French and English

remission or resolution of a disease; also for certain or all the members of the body.

Aph'ides. Same as *Aphidida*.

Aphid'ian. (*Aphis*.) Relating to the aphid, or plant-louse.

Aphid'ida. (*F. aphidiens, pucerons; G. Blattläuse*.) A Family of the Suborder Homoptera, of the Order Rhynchota, of the Class Insecta (Ametabolica) (Schmarda). By Latreille they are included under the Hemiptera. The antennæ have from five to seven segments, and are often longer than the body; the wings four, thin, membranous, but often absent; legs thin, with two tarsal segments; no salivary glands or Malpighian vessels. Many species have two horns at the posterior extremity of the abdomen (cornicula), from which a honey-like fluid is excreted, eagerly sought after by some kinds of ants. Some species propagate by parthenogenesis. The *Phylloxera vastatrix*, so destructive to vines, belongs to this Family.

Aphidiph'aga. (*Aphis; pháγνις*, to eat.) A Group of the Suborder Trimera, Order Coleoptera, having the last joint of the maxillary palpi scutiform, and the antennæ short, the three terminal joints forming a club.

Aphidivorous. (*Aphis; L. voro*, to devour. *F. aphidivore*.) Devouring or eating aphides.

Aphid'rus. Same as *Aphedron*.

Aphilanthro'pia. (Ἀ, priv.; φιλανθρωπία, love of mankind. *G. Menschenhetze*.) Old term used by D. D. Wedelius, *Pathol.*, *Dogm.* s. iii, c. 9, 596, for the first symptoms of melancholia, consisting in the shunning of society and amusements.

A'phis. (*F. puceron; G. Blattlaus*.) A Genus of the Family Aphides, or Aphidida. Antennæ longer than the body, nine-segmented; subcostal nervure tririd; abdomen with two honey tubes.

A. chinensis. (*Chinensis*, belonging to China.) The insect believed to produce Chinese galls, which are used as an astringent, by puncturing with its ovipositor the upper surface of the leaves of the *Distylium racemosum* or *Rhus semialata*.

A. pista'cie. (*Hæstia*, the pistachio tree.) A Species of *Aphis*, the galls, *Ceroberis*, produced by which in the *Pinus teretifolia*, are employed as a mastatory, as an application in many diseases of the chest, and for the production of a red colour (Schmarda). The galls are elongated, pointed at the free end, with large internal cavity. There is also a smaller rounded variety known in commerce as *Rose-apple*.

A. ulmi. (*Ulmus*, the elm tree.) The elm aphid. The gall produced in the galls produced by this aphid is employed by the peasants in France and Italy as an ingredient in ophthalmic diseases.

A. vasta'tor. (*L. vastator*, a devastator.) A destructive species of aphid. See *Phylloxera*.

Aphiste'ia. (Ἀφίστημι, to remove.) An aphid.

Aphleb'ious. (Ἀφλέβιος, a vessel.) A term in Botany, signifying structure of veins or nerves.

Aphlegman'tous. (Ἀφλέγμων, a burning.) A term in Botany, signifying structure of veins or nerves.

Aphle'id em. (Ἀφλέγμων, without heat.)

Applied to an Order of *Thalassiphytæ symphysiæ*, the endochromes of which are not covered by a continued tissue, cellular or parenchymatous.

Aphlœous. (Same etymon.) Applied to plants without bark.

Aphlogistic. ('A, neg.; φλόξ, a flame. *F. aphlogisticus*.) Burning without flame.

A.lamp. Term applied to a lamp suggested by Davy, consisting simply of a thread of incandescent platina, so that it gives no flame.

Aphloïa. A Genus of the Nat. Order *Flacourtiaceæ* or *Bizaceæ*. Trees or shrubs, with alternate, articulated, entire, dentate leaves, and axillary or solitary flowers; calyx strongly imbricated; ovary consisting of one carpel; placenta parietal; ovules horizontal and subcampylotropal; fruit a berry.

A. theaeformis. (*Thea*, the tea plant; *forma*, shape.) A shrub indigenous in the Isle of France, where it is named Bois sans écorce. The bark is a good emetic.

Aphodœu'ma. ('Αφόδευμα. *G. Koth, Stuhlgang*.) Excrement.

Aphodœusis. ('Αφόδευσις.) The act of defecation.

Aphodi'ineæ. A Subfamily of the Family *Meloidæ* of pentamerous beetles. Median femora approximate; two terminal spines on the posterior tibiae.

Aphodœs. ('Αφόδος; from ἀπό, from; ὁδός, a way.) Used by Hippocrates, ii. *de R. V.* in A. i. 24, and Galen, in. *Comm. ad. A. l.*, for a secretion of the feces; the feces or excrement discharged from the intestines.

Aphœna. ('A, neg.; φωνή, a sound.) Explosives or mute consonants; divided into hard—*k, t, p*; soft—*g, d, b*; and nasal—*ng, n, m*.

Aphnetic. ('A, neg.; φωνητικός, belonging to speaking.) Same as *Aphnetic*.

Aphœni. ('A, neg.; φωνή, the voice.) A term applied to comatose persons.

Aphœnia. ('A, neg.; φωνή, the voice. *F. aphœnia*; I. and S. *afonia*; *G. Stimmlosigkeit, Heiserkeit*.) Term for dumbness; inability to speak; loss of voice; due to paralysis of the adductor of the vocal cords, and may be of functional or organic origin.

Also, a term for catalepsy.

A. albuminuria. A term given to a form of aphonia, which Fauvel first described as a white œdema of the vestibule of the larynx, preceding or following albuminuria.

A. aton'ica. ('A, neg.; τόνος, tone.) Loss of voice depending on injury to, pressure on, or other disturbance of, the laryngeal nerves.

A. aton'ica obliæsa. (*L. obliæsus*, injured.) Speechlessness from injury to the lingual or glottidean nerves.

A. aton'ica solu'ta. (*L. solutus*, loose.) Speechlessness produced suddenly, by emotion or shock, from total exhaustion of nervous power in the vocal organs, and without any recognisable organic lesion.

A. clerico'rum. (Κληρικός, belonging to the clergy; from κληρος, a lot, the clergy.) A form of chronic laryngitis occurring in those who have occasion to use the voice much, and especially in the clergy; it may arise from over-exertion or unwise use of the voice, and it may follow on catarrh. There is a feeling of dryness in, and inclination to clear, the throat; hoarseness.

A. eling'u'm. (*L. elinguis*, without the tongue.) Dumbness from loss of the tongue.

A. eling'u'm congen'ita. (*L. elinguis*; *congenitus*, born together.) Dumbness resulting from absence of the tongue from birth.

A. eling'u'm obliæsa. (*L. elinguis*; *obliæsus*, injured.) Dumbness produced by loss of the tongue from disease or injury.

A. guttural'is. (*L. guttur*, the gullet, the throat.) Loss of voice depending upon inflammation or other disease of the fauces or glottis.

A. hyster'ical. Loss of voice, without any notable change of structure in the larynx, occurring in hysterical persons, and continuing for an indefinite period. Sudden recovery under strong excitement is not unusual.

A. paraly'tica. (Παραλυτικός, afflicted with paralysis.) Aphonia depending upon some lesion of the nerves or muscles of the vocal organs.

A. surdo'rum. (*L. surdus*, deaf.) The dumbness of a deaf mute.

A. trachea'lis. (*Trachea*.) Loss of voice depending upon compression of the trachea.

Aphonic. (Same etymon. *F. aphone*; *G. stimmlos*.) Term applied to one who has lost his voice.

Aph'onus. (Same etymon.) Without voice.

Aph'ony. (Same etymon.) Same as *Aphonia*.

Aphora'ma. (Etymon uncertain.) Having projecting eyes, so that there is a wide field of vision.

Aphœria. ('Αφορία, from ἀ, neg.; φορέω, for φέρω, to bear. *F. aphoria*; *G. Unfruchtbarkeit*.) Barrenness or sterility in the female.

A. imperfec'ta. (*L. im*, neg.; *percito*, to excite thoroughly.) Barrenness of irresponsibility; sterility produced by personal aversion, or want of appetency. (Mason Good.)

A. impotens. (*L. impotens*, powerless.) The barrenness of impotency; it may be atonic or organic, caused by intemperance of any kind, leucorrhœa, and such like, or by structural defect, as imperforate hymen, or absence of ovaries.

A. incongrua. (*L. incongruus*, unsuitable.) Barrenness of incongruity; the conceptive power being inaccordant with the constituent principles of the seminal fluid received on the part of the male. (Mason Good.)

A. paramen'ica. (Παρά, amiss; μήν, a month, used here for the menses.) Barrenness from menses, according to Mason Good; the catamenial discharge morbidly retained, secreted with difficulty or in profusion.

Aph'orism. ('Αφορισμός; from ἀφορίζω, to define. *F. aphorisme*; I. and S. *aforismo*; *G. Lehrspruch, Gedankenspäne*.) A short proposition; a maxim or precept contracted into a short sentence; a terse and definite statement of a principle or doctrine in science or philosophy.

Aphorme. ('Αφορμή, a starting point.) The obvious cause of anything; the cause of a disease.

Aph'orous. ('Αφορος, not bearing.) Barren; sterile.

Aphras'onus. ('Αφραλυν, to be silly.) Insane; having lost reason.

Aphra'sia. ('A, neg.; φράζω, to speak. *F. aphrasie*.) Broca's term for *Aphasia*.

A. parano'ica. (Παράνοια, madness.) A term applied to lunatics who, after remaining persistently dumb for a long period, unexpectedly begin to speak.

A. superstitio'sa endem'ica. (*L. su-*

APHRENIA—APHTHA.

perstitious, full of superstition; *in*, among; *dēmos*, a people.) The intentional avoidance of certain words, the use of which is held to be forbidden on religious grounds or for the sake of propriety.

Aphrēnia. (A, neg.; *φρήν*, the mind.) Obliteration of the moral and intellectual acts; dementia.

Aph'rite. (Aφρός, foam. G. *Schaumrode*, *Schieferspath*.) A scaly variety of carbonate of lime, or calcareous spar, of a pearly lustre, and greasy to the touch.

Aphro'des. (Aφρώδες, frothy; from *ἀφρός*, foam.) A name applied by the ancients to *Papaver glaucum* and Euphorbia plants having a milky juice.

Also, applied to the blood and excrements.

Aphrodisia. (Aφροδίσια, venery; from Aφροδίτη, Venus. F. *aphrodisie*, *vénerie*.) Venery. A term for the morbid, or immoderate, desire of venery.

Also, the generative act.

Formerly used for the age of puberty, or the venereal age.

A. phren'itis. (G. *Liebesmuth*.) Phrensy or insanity from disappointment in love.

Aphrodis'iac. (Same etymon. F. *aphrodisiaque*; I. and S. *afrodisiaco*; G. *Geschlechtsreizend*.) Of, or belonging to, venery. Applied to certain medicines which improve the functional condition of the generative organs.

Aphrodis'iacs. (Same etymon.) Medicines which stimulate sexual desire. A large number of aromatics and other substances have been credited with this faculty; such are musk, civet, canella oil, rocket seeds, fennel, opium, amber, phosphorus, cantharides, nux vomica, and many others.

Aphrodis'iasm. (Aφροδισιασμός, sexual intercourse. G. *Liebesgenuss*.) The immoderate desire of sexual intercourse; also, the venereal act.

Aphrodisias'ticon clid'ion. Name of a troche which was formerly given in dysenteries, according to Galen. It was made of balaustringes, opium, rhubarb, and other astringents.

Aphrodisias'ticus. Same etymon and meaning as *Aphrodisiac*.

Aphrodisiography. (Aφροδίσια, venery; *γράφω*, to write.) An account of the pleasures of natural, and of the pains of inordinate, love.

Also, a description of syphilis.

Aphrodis'ius. Same etymon and meaning as *Aphrodisiac*.

A. morbus. (L. *morbus*, a disease.) A former term for the venereal disease, or syphilis.

Aphrodita'rium. (Aφροδίτη, sexual love.) Name of a powder or dry medicine, consisting of scales of copper, incense, lesser pomegranate, ceruse, and starch, in equal portions, used by the ancients. The same name was likewise applied to a certain collyrium.

Aphroditic. (Same etymon.) Venereal.

Aphroditidæ. A Family of the Sub-order *Nereidæ*, or *Errantia*, Order *Vermes*. Back covered with membranous plates, and cirrhi, for respiration; peritoneum lined with vibratile epithelium; pharynx capable of eversion, like a proboscis.

Aphroditinæ. A Subfamily of the Family *Aphroditidæ*. Cephalic lobe rounded; no lateral frontal tentacles.

Aphrog'ala. (Aφρός, foam; *γάλα*, milk. G. *Schaummilch*.) Milk rendered frothy by agitation; used to relieve heartburn.

Aphrolit'rum. The same as *Aphronitrum*.

Aphrom'eter. (Aφρός, foam; *μέτρον*, G. *Schaummesser*.) A kind of manometer for determining the pressure exerted by gases in artificial waters, champagne, and other sparkling wines.

Aph'ron. (A, neg.; *φρήν*, the mind. G. *Sinnlos*, *unkhy*, *wahninnig*.) A name given to the wild poppy, *Papaver rhæas*, in consequence of its intoxicating and narcotic properties.

Also, the name of a cephalic plaster prescribed by Actius. (Parr.)

Aphro'nia. (A, neg.; *φρήν*, the mind.) Apoplexy. (Dunglison.)

Aphronit'rum. (Aφρός, foam; *νίτρον*, nitre. L. *natrum murorum*; G. *Schaumnatron*, *Mauersalpeter*.) The spume or foam of nitre; an ancient term for salts formed of sulphuric acid and various alkalies. It is the fungus-like growth that appears on recently built walls; and then consists of soda sulphate or carbonate, sometimes of magnesian sulphate, and occasionally, though rarely, of potash nitrate.

Also, a name for the natron, or nitre, of the ancients.

Aphrosele'nos. (Aφρός, foam; *σελήνη*, the moon.) Old term for a precious stone which represents the image of the moon as if in a mirror; otherwise called *Selenite*.

Aphros'yne. (Aφροσύνη, folly. F. *aphrosyne*; G. *Irreden*, *Unvernunft*, *Wahn-sinn*.) Old term for the state now termed *Amentia*; also, delirium.

Aph'scious. (A, neg.; *φύσκη*, a blister.) Without bladders.

Aph'tha. (Aφθα, mostly in plural, *ἀφθαι*; from *ἀπταω*, to set on fire. L. *oscedo*, *ignis sacer*; F. *muguet*, *aphthe*; I. *afsta*; G. *Fasch*, *Mehlhund*, *Mundschwammchen*, *Mundsohrreiss*, *Sandross*, *Kurross*, *Soor*.) Aphthæ constitute the characteristic symptoms of the disease of infancy, popularly termed "thrush," and are also apt to occur in other diseases of the adult. They consist in small, roundish, white specks, resembling minute portions of curd scattered on the tongue, the lining membrane of the mouth and fauces, angles of the lips, palate, cheeks; they frequently coalesce to form patches of greater or less size, which often become detached, leaving a red excoriating surface, which sometimes ulcerates. In a large number of cases the patches consist in great measure of the spores and mycelium of the *Oidium albicans*. The relationship of the fungoid growth to the disease is not yet settled; some believe it to be an accidental condition, many that it is the cause of aphthæ. Similar spots occur in adults in feeble conditions of system, and towards the fatal termination of febrile and other exhausting diseases. The general health is to be attended to, the mouth kept scrupulously clean, and glycerin of tannin, honey of borax, chlorate of potash, or sulphurous acid, applied to the spots.

A. adultor'um. (L. *adultus*, grown up.) Stomatitis in the adult, accompanied by aphthæ.

A. angino'sa. (L. *angina*, the quinsy.) Aphthæ accompanied by angina.

A. epizootica. (Επί, upon; *ζῷον*, an animal. G. *Maul- und Klauensuche*.) Foot-and-mouth disease of cattle occurring in man.

APHTHAPHYTE—APICILAR.

This disease, there seems no doubt, can be propagated to the human being by drinking the unboiled milk of a diseased animal, or by direct contact with its saliva or the serous discharge from the eruption; the eruption appears chiefly about the lips and throat, spreads downwards, producing gastric and intestinal disturbance, and occasionally appears on the hands and feet.

A. figurata. (L. *figuratus*, formed, shaped.) A form of disease of the tongue which is described as passing through three stages: first, as variously-shaped, white, opaque, slightly raised, red-edged patches; second, as a shallow, red, angry-looking, white-margined erosion; third, as a smooth, glassy depression. All sources of local irritation are to be removed, nitrate of silver or chlorinated soda solution to be applied to the patches, and iodide and chloride of potassium, or iodide of mercury, given internally.

A. lactantium. (L. *lacto*, to suckle, to suck.) A synonym of *Thrush*.

A. parasitica. (Παράσιτος, a parasite.) A synonym of *Thrush*.

A. praeputii. (L. *praeputium*, the foreskin.) Herpes of the prepuce.

A. serpens. (L. *serpens*, part. of *serpo*, to creep.) A synonym of *Cancrum oris*.

Aphthaphyte. (Ἀφθα; φυτόν, a plant.) The *Odium albicans*.

Aphthenxia. (Ἀφθεγκτία, to be speechless.) Loss of the faculty of speech from central nervous disturbance.

Aphthenxis. Same etymon and meaning as *Aphthenxia*.

Aphtherythropyra. (Ἀφθα; erythropyra.) Erythropyra with aphthae in the mouth.

Aphthocacostomia. (Ἀφθα; κακός, bad; στόμα, the mouth. G. *Schwämmchen*, *Mundfüule*.) Gangrenous stomatitis, or cancrum oris, accompanied by aphthae.

Aphthoid. (Ἀφθα; εἶδος, form. F. *aphthoide*.) Aphthous-like.

Aphthongia. (Ἀ, neg.; φθόγγος, any clear distinct sound, especially the voice of man.) A reflex aphasia, occurring but rarely, in which, at every attempt to speak, spasm of the muscles supplied by the hypoglossal nerve comes on, and speaking is rendered impossible.

Aphthophyton. See *Aphthaphyte*.

Aphthous. (*Aphtha*, the disease thrush. F. *aphteux*; G. *aphthos*.) Belonging to, or of the appearance or nature of, aphthae; having, or full of, aphthae.

A. stomatitis. See *Stomatitis*, *aphthous*.

Aphya. (Ἀφύη.) An old term for the anchovy, *Engraulis encrasicolus*. The original Greek word is by some supposed to mean, not the anchovy, but the sardine, *Clupea sardinia*; by Yarrell, the mackerel-midge, *Motella glauca*.

Aphyllanthes. Applied by Bartling to a Tribe of the Nat. Order *Liliaceae*, with the *Lilianthus* for its type, having a rush-like appearance and membranous imbricated bracts.

Aphyllous. (Ἀ, neg.; φύλλον, a leaf. L. *aphyllus*; F. *aphylle*; G. *blattlos*.) In Botany, applied to plants, like *Cactuses*, destitute of leaves. Many plants appear to be destitute of leaves, because, like *Cucuta*, these are reduced to scales; or because, like *Opuntia Dillenii*, they fall off early; or because, like *Indigofera juncea* and *Lebeckia nuda*, the petioles of the leaves have no laminae.

Aphyll. (Same etymon.) The condition of having no leaves.

Aphyostomata. (Ἀφύσσω, to draw liquids; στόμα, a mouth. F. *aphyostome*.) Applied by Dumeril to a Family of Fishes having the snout very prolonged, presenting a small mouth at its extremity.

Aphyscious. (Ἀ, neg.; φύσκη, a sausage, a blister. G. *blasenlos*.) Without bladders.

Aphysidae. (Ἀφύσσω, to draw liquids.) A Family of the Section *Pleurobranchia*, Order *Opiathobranchia*. Branchiae situated on the right side of the back under a fold of the mantle; usually a thin internal shell, covered by two lobes of the foot; stomach with hard dentary plates; penis somewhat removed from the common genital aperture.

Api. Italy; near Rome. A mineral water, containing much carbonic acid gas and a very small proportion of iron.

Apia cas. A group of South American Indians, occupying territory between the rivers Paraguay and Parana.

Apia cem. (L. *apium*, parsley.) A synonym of *Umbellifera*.

According to Lindley, an Order of the Alliance *Umbellates*, distinguished by their didymous fruit and double epigynous disc.

Apia ceous. (Same etymon.) Resembling parsley.

Apia ria. (L. *apiarius*, relating to bees.) Applied by Dumeril to a Family, by Lamarck to a Division, by Goldfuss and Latreille to a Tribe, of *Hymenoptera*, having the *Apis* for their type.

Apiary. (L. *apiarium*; from *apis*, a bee. G. *Bienenstock*.) A place for keeping bees.

Apiastrum. (L. *apiastrum*; from *apis*, a bee.) Name for the *Melittia meliastrophillum*, or mountain-balm, which bees light upon with evident preference; or, according to some, the *Melissa officinalis*.

Also, a poisonous plant of Sardinia (Pliny, l. xx, c. 45), probably *Ranunculus sceleratus*.

Apical. (L. *apicalis*; from *apex*, the summit.) That which forms or occupies the summit.

A. cell. (G. *Scheitelzelle*.) The cell which remains at the summit in the growth of the higher flowerless plants, and which retains the functions of division which distinguish the mother-cell from which the plant sprung.

Apica'tous. (L. *apicatus*, provided with an apex. F. *apicé*; G. *spitzig*.) Terminated by a conspicuous summit.

Apices. (L. plural of *apex*, a summit.) Summits, terminations.

A. corporum cavernosum penis. (L. *corpus*, a body; *cavernosus*, full of hollows; *penis*, the male organ.) The anterior terminations, covered by the glans, of the corpora cavernosa of the penis.

Apicocurved. (L. *apex*; *curvus*, crooked, bent.) Curved at the summit.

Apicifixed. (L. *apex*, a summit; *fixus*, attached. F. *apicifixe*.) A term in Botany, applied to anthers when they are attached to the filament by a point near their summit.

Apiciflorous. (L. *apex*; *flos*, a flower. G. *spitzblumig*.) Having flowers disposed in very small terminal capitula.

Apiciform. (L. *apex*; *forma*, shape. G. *spitzformig*.) Applied to crystals which, being very thin, resemble small tufts in the mode of their arrangement.

Apicilar. (L. *apex*, the summit. F.

apiculaire; G. *spitzig*.) Springing from, forming, or connected with, the summit of an organ.

A. dehiscence. (L. *dehisco*, to split open.)

Term applied in Botany to anthers which open at their summit to discharge the pollen, as in Solanum.

A. embryo. (Εμβρυον, the embryo.) An embryo situated near the summit of the seed.

Apicula. (L. dim. of *apex*. G. *Spitzchen*.) In Botany, applied to a small, sharp and short point, the consistence of which is not very great.

In Zoology, applied by C. G. Ehrenberg to prolongations of the body of Infusoria when very small and pointed.

Apiculate. (L. *apiculum*, a pointed piece of wood worn on the top of the cap of the flamen; from *apex*, the summit. F. *apiculé*; G. *spitztragend*, *bespitzt*.) Term applied in Botany to organs ending in a short and sharp point. It is employed in describing the connective of anthers when this is prolonged into a sharp point.

A. fruit. A fruit in which the style still remains as a point at the apex.

Apiculture. (L. *apis*, a bee; *cultura*, cultivation.) Bee breeding.

Apiculum. (Same etymon as *Apiculate*. G. *Spitzchen*.) Terminal point of an organ.

Apiculous. (L. *apex*; *curvus*, bent. F. *apicourbe*; G. *Spitzgekrümmt*.) Bent at the summit or extremity.

Apidae. (L. *apis*, a bee.) A Family of the Group *Alutifera*, Order *Hymenoptera*. Bees. Tibiæ and tarsi enlarged throughout in the posterior limbs; first tarsal joint ciliated; anterior wings do not fold; lower lip and maxilla often very long, the latter forming a sort of sheath round the tongue.

Apiferus. (L. *apis*, a bee; *fero*, to bear. G. *bienetragend*.) Applied to *Ophrys apifera*, from some resemblance of its flowers to bees.

Apiform. (L. *apis*; *forma*, shape. F. *apiforme*; G. *bieneformig*.) Formed like a bee, as *Sesia apiformis*.

Apigenin. C₁₅H₁₀O₅. A substance, obtained from parsley, crystallising in iridescent laminae, which are soluble with difficulty in hot water, insoluble in ether, readily soluble in alcohol. Its solution does not gelatinise.

Apitin. C₂₄H₁₁O₁₃, or C₂₇H₂₂O₁₆. A delicate white powder, crystallising in silky needles, without taste or smell, obtained from *Apium graveolens* and *Carum petroselinum*. It fuses at 180° C. (356° F.), dissolves readily in hot water, the solution gelatinising on cooling. It dissolves in 390 parts of cold alcohol. The aqueous solution gives a blood-red colour with protosulphate of iron. It yields sugar when boiled with dilute acids. It rotates a ray of polarised light to the right more powerfully than any other substance.

Apilepsia. (Ἀπολαμπάνω, to cut off.) A seizure; apoplexy.

Apillary. (A. neg.; πῆλος, a felt cap.) In Botany, applied to a flower which has no upper lip.

Apinæ. (L. *apis*, a bee.) A Subfamily of the Family *Apidae*. Social bees. Tongue long; body heavy, villous; external border of posterior tibiae enlarged; posterior tarsi covered with thick hair.

Apínages. An isolated tribe of South American Indians, living on the banks of the lower Tocantim, Brazil.

Apinel. A Mexican plant, the root of which is employed by the natives in cases of snake bite. It is believed to be the *Aristolochia anguicida*.

Ap'inoide. (Ἀπινός, free from dirt; ἰδος, form.) A term applied to scirrhus, from the cleanness of its section.

Apin'thion. (Gr.) Same as *Absointhium*.

Apínus, J. L. Born at Oehringen, in Franconia, Nov. 20, 1668. He wrote on epidemic fever, syncope, and flatulency.

Aploceri'nidæ. A fossil Family of the Order *Crinoidea*, found in the chalk and oolite. Pear-shaped animals, fixed to a support by a dilated base and a long, articulated column, which expands at the upper end, where it joins the base of the calyx, which contains the soft parts of the animal, and is crowned by a circle of bifid pinnate arms.

Aploceri'nites. (Ἀπιον, a pear; κρινον, a lily.) Pear-encrinites.

Ap'iol. (G. *Petersilienöl*.) Parsley camphor. A peculiar non-nitrogenous principle obtained from the seeds of common parsley by treating them with ether at about 71° C. (159.8° F.). It is a yellowish, oily, non-saponifiable, inflammable, non-volatile liquid, which also forms long, white, brittle needles, melting at 30° C. (86° F.), and boiling at 300° C. (572° F.); taste piquant and acid; soluble in alcohol, ether, and chloroform, but insoluble in either hot or cold water. It was proposed in 1853 as an antiperiodic of great power. Taken in doses of from 7—15 drops it occasions slight cerebral excitement, with epigastric warmth and a sense of strength and comfort. In doses of 30—60 drops it causes vertigo, scintillations, noises in the ears, and headache. Occasionally its use is followed by nausea, colic, and bilious diarrhoea. Tonic and emmenagogue properties are also assigned to it. It has been used with advantage as a substitute for quinine in intermittent fevers, in doses of 15 drops; also, in intermittent neuralgia and in the night sweats of phthisis. It has been highly praised as a remedy in amenorrhœa and dysmenorrhœa.

Ap'iolum. Same as *Ap'iol*.

Ap'ion. (Ἀπιον, a pear.) The fruit of *Pyrus communis*, or pear (Dioscorides, l. i, c. 167; Paulus Aegineta, l. viii, § 3). Used as a cataplasm.

Ap'ionia. (A. neg.; πῖον, fat. G. *Fettmangel*.) Absence of fat; leanness.

Ap'ion'ta. (Ἀπειμι, to go away. L. *egesta*, excreta; G. *Ausscheidungen*.) Term applied to the excretions generally, and also to the semen.

Ap'ios. (Ἀπιον, a pear.) Name given by the Greeks to the *Euphorbia apios*, or spurge, the root of which is pear-shaped; also, to a Species of *Glycyne*; and by the moderns to the *Bunium bulbocastanum*, and *Lathyrus tuberosus*.

A Genus of the Nat. Order *Leguminosæ*.

A. tubero'sa. (L. *tuberosus*, full of lumps.) Hab. North America. A plant that the French have tried to acclimatise for the sake of its feculent tubers, which resemble those of the potato.

Ap'iria. (Ἀπειρία, inexperience. L. *imperitia*; G. *Unerfahrenheit*, *Erfahrungslosigkeit*.) Want of skill; absence of experience.

Ap'iro'podous. (Ἀπειρος, without end; πους, a foot.) In Entomology, having numerous feet.

Ap'is. (L. *apis*, the bee. F. *abeille*; I. *ape*; G. *Biene*.) A Genus of the Subfamily *Apina*, Family *Apidae*; or of the Family *Anthophila*, Order *Hymenoptera*, Class *Insecta*, Subkingdom *Arthropoda*. Mandibles spoon-shaped; maxillary palpi small; anterior wings with three cubital cellules; posterior tibiae with no terminal spines.

APITES VINUM—APIUM.

A. acraerthis. A bee that, according to Fabricius, might be cultivated with greater advantage than even the *A. mellifica*.

A. adansonii. A bee domesticated in Senegal.

A. amalthea. (Ἀμάθεια, a nymph, daughter of Melissus, king of Crete, who fed pupiles with goats' milk.) A bee which furnishes the greater part of the honey of Central Africa.

A. bicolor. (L. *bicolor*, two-coloured.) An Indian honey-supplying species.

A. ceraea. A species living in China.

A. cerifera. (L. *cera*, wax; *fero*, to bear.) A synonym of *A. mellifica*.

A. dorsata. An Indian species of bee.

A. fasciata. (L. *fascio*, to envelope with bands.) A honey-producing bee which has been long extensively cultivated in Egypt for its honey.

A. indica. A bee cultivated in India, at Pondicherry and in Bengal.

A. laboriosa. (L. *laboriosus*, laborious.) A bee that, according to Fabricius, might be cultivated with greater advantage even than the *A. mellifica*.

A. ligustica. (L. *ligusticus*, from Liguria, a country of Gallia Cisalpina.) A species of bee cultivated, for the sake of the honey it produces, in Italy, and probably also in the Morea and the Isles of the Archipelago.

A. mellifica. (L. *mellificus*, honey making; *mel*, *facio*. F. *abeille mellifique*; I. *ape pechia*; S. *abya comun* *strabajador*; G. *Honigbiene*; Russ. *Pchela*; Port. *abetha*.) The hive or honey bee. An insect living either singly or in great colonies. The males, named drones, have atrophied oral apparatus and smooth hind legs, as they collect nothing. The females have smooth hind legs and a long abdomen. In both the drones and the females the salivary glands are feebly developed. The workers have divided eyes, a large hairy ligula, and single-jointed maxillary palp. The outside of the posterior dilated tibiae is smooth, and hollowed into a shining plate for the reception and carrying of the pollen, which has been accumulated by means of the pollen brushes upon the basal joint of the metatarsus of this pair of legs. A colony or swarm consists of one queen bee or completely developed female, a few hundred drones, and from eight to twenty thousand workers.

The honey bee is common in the wild state in the forests of Russia and in different parts of India, but is rare in Britain. The bee is chiefly valued as being the source of honey and wax. In former times the bee itself was employed in medicine, the dried and powdered insect being used as a diuretic in dropsy and other diseases. Its use has lately been revived in America for cases of stranguary consequent on inflammation of the bladder and the administration of cantharides. It has also been used with advantage in cases of retention of urine. The infusion or "bee tea" is made by pouring a gill of boiling water on 40–60 bees, and after twenty minutes giving the whole of the fluid as a draught. For the relief of the sting of the bee the application of Liq. Ammoniac or of the Sp. Ammon. Aromaticus, after sucking the wound, is usually successful.

A. nigripennis. (L. *niger*, black; *penna*, a feather, a wing.) An Indian species which supplies honey.

A. nigrita'rum. (L. *Nigritæ*; the people living near the Niger.) An African species.

A. socialis. (L. *socialis*, companionable.) An Indian species which furnishes honey.

A. unicolor. (L. *unus*, one; *color*, colour.) A black bee cultivated in Madagascar for the sake of the honey it produces.

Apites vinum. (Ἀπίτης, perry; from *ἄπιον*, a pear.) An old name for perry.

Apium. (Sanskrit *apya*, that which grows in the water; also, *ἄπιον*, a pear.) This word was anciently employed to designate aquatic plants, as the parsley and celery; also, mint, the *Apium silvestre* of Pliny. The various plants named Apium by the Latins are called Σάμιον by the Greeks, from the Sanskrit *Sala*, water. (Baillon.)

Apium. (F. *ache*; G. *Eppich*.) A Genus of the Nat. Order Umbelliferae. Annual or perennial glabrous herbs. Leaves pinnate or ternately compound; umbels conformed with or without involucre and involucrels; flowers white; calyx almost obsolete, forming a ring; petals oval, rounded, entire, or slightly margined, incurved; fruit broadly ovate, laterally compressed; commissure constricted; carpophore simple; carpels 5-angled; primary ridges equal, prominent, obtuse; vittae solitary in the vallicule; seed subterete.

A. ammi. Crantz. The *Ammi majus*.

A. anisum. Crantz. The *Pimpinella anisum*.

A. carui. The *Carum carui*.

A. dulce. (L. *dulcis*, sweet. F. *ache cultivée*, *apéri ordinaire*; G. *Sellerie*.) The cultivated variety of *A. graveolens* called Celery.

A. graveolens. L. (L. *gravis*, heavy; *oleo*, to smell. F. *ache*, *ache des marais*; I. *apio*; S. *apio*; G. *Eppich*, *Wassereppich*; Dut. *eppie*; Turk. *Kervis*.) Smallage, celery. An annual or perennial glabrous herb. Leaves pinnate or ternately compound; umbels compound; bracts few or 0; bracteoles 0; flowers white; calyx teeth 0; petals entire, much incurved; fruit broadly ovoid, laterally compressed; commissure constricted; carpophore simple; carpels 5-angled; primary ridges equal, prominent, obtuse; vittae solitary in the interstices; seed subterete. Hab. Marshes all over Europe, the Caucasus, Mexico. Cultivated in India and elsewhere. When wild, growing in wet meadows and in ditches, it is acrid and poisonous; but when cultivated in dry ground and partially blanched, it is the celery used as a salad. In former times the whole plant was employed medicinally, the root as aperient, the seeds as carminative, the juice as sudorific and emmenagogue. The juice of the leaves, in doses of six ounces, taken at the commencement of the cold stage, is stated to be an excellent febrifuge, and to increase the efficacy of quinine.

A. hortense. (L. *hortensis*, belonging to a garden.) A name for the *Apium petroselinum*, or *A. graveolens*, var. *dulce*.

A. inundatum. Reich. (L. part. of *inundo*, to overflow.) A decumbent or floating plant. Submerged leaves; 2–3 pinnate leaflets; capillary rarely linear; floating leaves pinnate; lower leaflets deeply 3-lobed; bracts 0; bracteoles 4–6, lanceolate, 3-nerved.

A. involucratum. (Involucra.) A synonym of *Carum Rozburghianum*, and also of *Pimpinella involucreatum*.

A. macedonium. The *Athamanta macedonica*.

A. montanum. (L. *montanus*, belonging to a mountain.) The *Athamanta oreoselinum*.

A. nodiflorum. Reich. (L. *nodus*, a knot;

APIVOROUS—APLYSIA.

flos, a flower.) A prostrate or creeping plant. Leaves pinnate, or 3-foliate; leaflets slightly lobed, serrate; involucre 0; involucre composed of numerous oblong, scarious bracteoles. Hab. Marshy places.

A. paludarium. (*L. palus*, a swamp; *apium*, parsley.) The *A. graveolens*.

A. palustre. (*L. paluster*, marshy.) The *Sium angustifolium*.

A. peregrinum. (*L. peregrinus*, foreign.) A variety of *A. petroselinum*.

A. Petraeum. (*L. Petraea*, from *Petra*, the name of a city in Arabia.) A name for the *Bubon Macedonicum*.

A. petroselinum. (*Πέτρος*, a rock; *σίλινον*, parsley. *F. ache persil*; *G. Petersilie*.) Common parsley, *Carum petroselinum*.

A. rapaceum. (*L. rapa*, turnip. *F. celeri-rave*.) A cultivated variety of the *Apium graveolens*, with a rapiform root.

A. rusticum. (*L. rusticum*, rural.) A synonym in Apuleius of the *Ranunculus sceleratus*.

A. sativum. (*L. sativus*, that which is sown or planted, in opposition to wild.) The cultivated or garden celery.

A. sium. The *Sium angustifolium*.

A. sylvestre. (*L. sylvestris*, belonging to a wood.) The *Anthriscus vulgaris*.

A. sylvestre lacteo succo turgens. (*L. sylvestris*; *lacteus*, milky; *succus*, juice; *turgens*, to swell out.) A synonym of the *Pucedanum palustre*.

A. vulgare. Lam. (*L. vulgare*, common.) The *A. graveolens*, var. *sativum*.

Apivorous. (*L. apis*, a bee; *voro*, to devour. *G. bienfressend.*) Devouring or eating bees.

Aplacentalia. (*L. a*, neg.; *placenta*, a cake, the placenta. *F. aplacentaires*.) A Group of Mammals in Owen's classification, which includes the *Didelphia* and *Ornithodelphia* of Blainville's classification, the *Monotremata* and *Marsupialia* of Geoffroy St. Hilaire. They are characterised by the absence of a placenta.

Aplacentaria. Same etymon and meaning as *Aplacentalia*.

Aplanatic. (*A*, neg.; *πλανάς*, to wander.) Not wandering; not aberrant.

A. lens. (*F. lentille aplanatique*.) This term is applied to the combination of lenses by which aberration, both spherical and chromatic, is avoided. It is impossible to effect this completely; in the best arrangement of crown and flint glass, however, two points exist, in one of which the aberration of sphericity is neutralised, and in the other that of colour.

A. searcher. An apparatus devised by Dr. Royston-Piggot to correct the false images seen on each side of the best focal point when any well-defined structure is viewed by a good microscope. It consists of a pair of slightly corrected achromatic lenses, admitting of further correction by a separating adjustment, mounted midway between a low eyepiece and the objective, so as to admit of a traverse of two or three inches, by means of a milled head. These lenses are conveniently traversed within the draw-tube, and can be brought to bear at from four to ten inches from the objective; the focal length of the combination may vary from 1'5" to 7'5".

Aplanatism. (Same etymon. *F. aplanetisme*.) In Optics, the absence of spherical aberration.

Apla'sia. (*A*, neg.; *πλάσις*, a moulding.) Defective or arrested development of a tissue or an organ.

Apas'tic. (*A*, neg.; *πλάσσω*, to form. *F. aplastique*.) Without form or regular structure; applied to morbid deposits that have no true organisation.

A. element. A substance incapable of organisation.

A. lymph. See *Lymph*, *aplastic*.

Aples'tia. (*Ἀπληστία*, insatiate desire. *F. aplesie*; *G. Unerättlichkeit*.) Old term, used by Galen, *i. de dign. et cur. an. morb. c. 9*, for insatiability or greediness.

Apleu'ria. (*A*, neg.; *πλευρά*, a rib. *F. apleurie*; *G. rippenlos*.) Term by Broussier for a kind of organic deviation, or partial agenesis, characterised by the absence of ribs.

Apleuros. (Same etymon.) An ancient term applied by Galen to one wanting ribs.

Apleurous. Same as *Apleuros*.

Aploc'eros. (*Ἀπλόος*, simple; *κέρας*, a horn.) Term applied to insects the antennæ of which do not bear lateral, isolated hairs.

Aploadontia. The same as *Haplodontia*.

Aplopap'pus. (*Ἀπλόος*, single; *pappus*.) See *Haplarpappus*.

A. discoidens. (*L. discoides*, in the form of a discus.) A Mexican species used in hyteria.

Aploperisto'matous. (*Ἀπλόος*; *περιστόμα*.) Applied by Bridel to mosses which have the peristome simple, or composed of only one row of teeth.

Aploperis'tomous. Same etymon and meaning as *Aploperistomatous*.

Aplospori'ae. (*Ἀπλόος*, single, simple; *σπόρος*, seed.) A Suborder of the Order *Alga*. Spores green or brown, developed singly in the utricle, not motile, but generally having filaments at the base. It contains the sea-weeds. The word is better spelt *Haplosporeae*.

Aplostachyous. (*Ἀπλόος*; *στάχυς*, an ear or spike. *G. einfachhöhrig*.) Term applied in Botany to flowers arranged in simple spikes.

Aplostega. (*Ἀπλόος*; *στίγη*, a chamber. *G. einfachkammerig*.) Applied by Orbigny to a Section of *Foraminifera*, because they have only one cavity for habitation.

Aploste'monous. (*Ἀπλόος*; *στήμων*, a thread.) A flower having one row only of stamens.

Aplostomous. (*Ἀπλόος*; *στόμα*, a mouth.) Having the lip simple; applied to a Species of *Helix*.

Aplo'taris. (*Ἀπλόος*; *τάξις*, order.) A Genus of the Nat. Order *Compositae*.

A. auricula'ta. (*L. auricula*, the external ear.) The root of this plant is a native Indian remedy for asthma, and is named *Kut*. It is the source of the Arabian costus, a cosmetic and reputed aphrodisiac. It is also smoked as a stimulant and narcotic.

A. costus. (*Κόστος*, a root used as a spice.) A Species supposed to be a source of the *Costus*.

Aplo'tomy. (*Ἀπλόος*, simple; *τομή*, a cut.) A simple cut. (*Dunglison*.)

Aplu'da. (*L.*; from *ab*, from, and *pluo*, to flow away. *G. Spreu, Kleie*.) Bran, chaff.

Aplysia. (*Ἀπλυσία*, filthiness.) A Genus of the Family *Aplysiidae*, Order *Opisthobranchia*. Marine mollusca having a pointed posterior ex-

APNEUMATIC—APNŒA.

tremity, an oval shell, and lateral lobes serving for swimming.

A. depilans. (L. *depilo*, to pluck out the hairs. F. *lièvre de mer*.) When disturbed this mollusc emits from the inner face of the mantle a violet liquid, which has been supposed to be poisonous, but which in reality is inoffensive; the animal itself is in some places eaten.

Apneumatic. (A, neg.; *πνῆμα*, air.) Having no air.

A. treatment. The treatment of wounds by means of an apparatus which excludes the air.

Apneumatocœlia. (A, neg.; *πνῆμα*, air; *κοίλος*, hollow.) A Division of the Subclass *Amphirrhina*, Subdivision *Holocrania*, Class *Pisces*, in Prof. Huxley's schematic arrangement of the Amphibia and Fishes; applied to those fishes which possess neither lung nor air-bladder.

Apneumatosis. (A, neg.; *πνεύματις*, an inflating.) Defined by Graily Hewitt as that condition of lung-tissue characterised by the return of air-cells to a quasi-fœtal state. The portions of lung so affected having once been physiologically active have ceased to be so. Physically it is hardly to be distinguished from *atelectasia*, which is congenital apneumatosis; it consists of irregular polygonal depressions scattered over the surface of the lung, which, on being cut into, are found extending more or less deeply, and to be of a dark violet colour, tough, and empty of air; if there be no great amount of congestion they can be restored nearly to their natural appearance by inflation; there is often *emphysema*. The collapse of the air-cells depends on the blocking of a bronchial tubule by mucus or other material, so that, whilst they can be partially emptied by expiration, the plug prevents the return of air during inspiration. This condition occurs in bronchitis or similar affections of the lung, leading to blocking of the minute bronchial tubes; it is not uncommon in hooping-cough in weakly children. The symptoms induced by apneumatosis are great prostration, with shallowness of respiration and an increase of the interval following inspiration; there is an ineffectual cough and dyspnoea. If the disease be extensive there is dulness on percussion and bronchial breathing, with coarse, rough rhonchi; there is also generally retraction of the lower half of the chest-walls, and in advanced cases bulging, it may be, of the upper part. The treatment recommended is restorative and stimulant. Good easily digested diet, dilute alcohol, ammonia, and ipecacuanha; when the patient is strong, emetics to remove mucus.

Apneumia. (A, neg.; *πνεύμων*, the lung. F. and G. *apneumie*.) In Teratology, partial agenesis, characterised by absence of lungs.

Apneumonia. (Same etymon.) An Order of the Class *Holothuroidea*. Hermaphrodite Echinoderms having no special organ of respiration, and furnished with funnel-shaped ciliated organs, and simply-pennate or digitate tentacles.

Apneumonœria. (A, neg.; *πνεύμων*, lung; *νῆρον*, nerve.) Impaired power of performing the acts of respiration from want of nerve force.

Apneusta. (Ἀπνευστος, breathless.) A synonym of *Abranchia*.

Apneustia. (Ἀπνευστία, a holding of the breath; from *ἀ*, neg.; *πνῆμι*, to breathe. F.

apneustic; G. *Athemlosigkeit*.) Want of breath. Same as *Apnœa*.

Apneustous. (Ἀπνευστος, breathless. G. *athemlos*.) Breathless; applied to one breathing so slowly and slightly as hardly to be perceived.

Apnœa. (A, neg.; *πνῆσι*, or *πνῆσις*, a blowing; from *πνῆμι*, to breathe. F. *apnœe*; G. *Athemlosigkeit*, *Erstickung*.) Term used by Galen for the partial privation or suspension of breath, which may arise from various causes, and is generally but improperly expressed by the word *asphyxia*.

In Physiology, the condition of an animal when the blood is saturated with oxygen, which leads to arrest of the movements of respiration, the vago-phrenic nerve centres being no longer excited by the presence of carbonic acid in the blood or in the air in the lungs.

In Medicine, the word is not infrequently used instead of *asphyxia*, as being more accurate, to denote the condition which exists in death by suffocation, as from drowning, choking, hanging, and such like, and from bronchitis; in strychnia poisoning and tetanus, death often occurs from this cause by fixation of the respiratory muscles; the essential cause of death is retention of carbonic acid in the blood. At first, in acute apnœa, there is great struggling for breath, then vertigo, unconsciousness, generally convulsions, then relaxation of muscles, lastly, cessation of heart's action. After death the right heart, the pulmonary arteries, and the systemic veins, are gorged with dark blood, while the left heart and the pulmonary veins contain very little, this being a result of contraction of the minute arteries of the lungs. In chronic apnœa, as it occurs in bronchitis, the surface slowly becomes dusky, the veins distended, the pulse rapid, the breathing quick and anxious, then drowsiness comes on, growing into coma, and ending in death.

A. cardiac. (Καρδιακός, belonging to the heart.) Walshe applies this term to forms of failure in the breathing act: first, where after a series of inspirations, gradually increasing in rapidity, the breathing becomes slower and slower until it quite ceases for a definite period—twenty or thirty seconds—the pulse continuing; this form occurs in its most perfect development in cases of fatty degeneration of heart, and is attributed by him to defect in the special nervous excitant of the respiratory act; the second form occurs in rare cases of cardiac disease—a tendency to complete stoppage of breathing on going to sleep, and may perhaps be to a certain extent remedied by a gentle galvanic current passing from the nucha to the epigastrium.

A. infantum. (L. *infans*, a little child.) A term for spasm of the glottis in children.

A. neonatorum. (Νέος, young, new; L. *natus*; from *nascor*, to be born.) Want of respiration in the new-born child. It occurs, in feeble children, from compression of the umbilical cord, from long-continued and severe uterine contraction, from pressure induced by pelvic deformity, from separation of the placenta before birth. Mucus should be removed from the mouth, the chest or buttocks slapped with a cold wet towel, a few drops of blood, when the child is not anæmic, may be allowed to run from the cord; if these measures are not speedily successful, artificial respiration should be resorted to.

A. nervous. A term for non-hysterical infrequency of respiration, sometimes amounting

APNŒASPHYXIA—APOCLASMA.

to as few as six in a minute, and accompanied by somewhat exaggerated, but in other respects, normal breath sounds. It would appear to depend on deficient nerve force.

A., sec'ondary. A term applied to cases of sudden death after apparent recovery from drowning or other form of suffocation. The patient may appear to be going on well for some hours or days, and then suddenly die without apparent cause.

Apnœasphyx'ia. (*Ἀπνᾶα, asphyxia.* F. *apnœasphyxie.*) Apparent death, with cessation of breathing or of the pulse.

According to Swediaur, synonymous with *Asphyxia*.

Apnœolo'gia. (*Ἀπνᾶα; λόγος, a discourse.*) A treatise on the various kinds of apnœa.

Apnœious. (*Ἀπνᾶα, a want of breath.*) Belonging to apnœa; breathless.

Ap'nœus. Same as *Apnœious*.

Ap'nus. (*Ἀπνᾶος.*) One whose respiration is so slow and slight that the breath seems to have altogether ceased.

Apobam'ma. (*Ἀπόβαμμα, a tincture.*) Old term, used by Cardanus, *de Subtil. Rer. l. v.*, for water in which hot iron has been quenched.

Apobio'sis. (*Ἀποβίωσις, departure from life.* G. *Tod, Ableben.*) Death; cessation of life.

Apoblaste'ma. (*Ἀποβλάστημα, a germ or shoot.* G. *Seitentrieb, Nebenzpross.*) A shoot or scion.

Apoble'ma. (*Ἀπόβλημα, anything cast away; from ἀπό, from; βάλλω, to throw off.* G. *Weggeworfene.*) The product of abortion.

Apoble. (*Ἀποβολή, a throwing away.* G. *Wegwerfen, Fehlgebären.*) An abortion.

Apobras'ma. (*Ἀποβρασμα, that which is thrown off, scum.*) Bran; also, the foam of the sea.

Apobreg'ma. (*Ἀπόβρεγμα.* G. *Aufguss.*) An infusion.

Apobrochis'mus. (*Ἀποβροχίζω, to bind tight. L. subligatio; G. Unterbindung.*) A binding or constriction of an organic part.

Apocal'basum. A gum resin used to poison arrows, believed to be obtained from a species of *Euphorbium*. (Borey.)

Apocapnis'mus. (*Ἀποκαπνισμός. L. Fumigatio; F. apocapnisme; G. Räucherung.*) Ancient term for a fumigation.

Ap'ocapouc. A poisonous tree of Madagascar. The natives extract an oil from the seed, which they use to anoint the hair.

Apocarpason. See *Opocarpason*.

Apocarp'hology. Similar to *Carp'hology*.

Apocarpous. (*Ἀπό, separate; καρπός, fruit.*) Lindley includes under this name fruits that are composed of separate and free carpels, like those of the Ranunculaceæ, or which are formed of a single carpel, like those of the Leguminosæ.

Apocartere'sis. (*Ἀποκαρτίρησις. G. Selbstmord durch Hunger.*) Suicide by hunger.

Apocatas'tasis. (*Ἀποκατάστασις, complete restoration; from ἀποκαθίστημι, to re-establish.*) The subsidence of a tumour, or the re-establishment of an exudation or secretion.

Apocatharsis. (*Ἀποκάθαρσις, a thorough cleansing.*) Term for a complete purging, whether upwards or downwards.

Apocathartic. (*Ἀποκαθαρτικός,*

cleansing; from ἀπό, from; καθαίρω, to purge.) Having power to purge freely.

Apocaul'isis. (*Ἀπό, from; καυλός, a stem.*) The snapping or breaking off of stems. Applied to the breaking across of bones.

Also, the abscission, tearing off, or amputation of the penis.

Apocœacaulis'menon. (*Ἀπό, asunder; καίω, to split; καυλός, a stalk.*) The snapping across of a bone near a joint, as if it were a stalk.

Apoceno'ses. (*Ἀποκενῶσις, to drain.*) An Order of the Class *Locales*, of Cullen's Nosology, being an unusual flux of blood, or other humours, without pyrexia or increased impetus of the fluids.

Apoceno'sis. (Same etymon. F. *apocenoose; G. Entleerung.*) A term for an increased discharge, flux, or evacuation, attendant on disease, as of blood, or other fluid.

A. diab'etes mell'itus. A synonym of *Diabetes*.

A. ptyalis'mus mell'itus. (L. *mellitus*, like honey.) A form of ptyalism in which the saliva is sweet.

A. vom'itus pyro'sis. A synonym of *Pyrosis*.

Apoceno't'ic. (Same etymon.) Causing, or belonging to, increased evacuation or discharge from the vessels.

Apocery'gma. (*Ἀποκήρυγμα, a thing publicly proclaimed. G. das Vielbesprochene.*) An old term for a declaration made to a patient as to his dangerous condition.

Also, used by Hippocrates to signify an unusual disease about which there is much discourse.

Apochin'amin. C₁₀H₁₂N₂O. A white amorphous alkaloid, isomeric with homochinonidin, obtained by the action of concentrated hydrochloric acid on chinamin and conchinamin through the abstraction of H₂O. It is slightly soluble in ether, alcohol, and dilute hydrochloric acid.

Apochore'ma. Same as *Apochoreon*.

Apochore'on. (*Ἀποχωρίω, to pass off.*) Old term for the fæces or excrements; applied also by Hippocrates, *Aph. vii. 69*, to the urine.

Apochrem'ma. (*Ἀπόχρημα; from ἀποχρίπτωμαι, to cough up.*) Old term, used by Hippocrates, *de R. V. in Acut. t. 27*, for sputum, or expectoration.

Apochremp'sis. (*Ἀπόχρηψις; from ἀποχρίπτωμαι, to spit out with retching.*) Old term, used by Hippocrates, *Coac. Prænot. c. 242*, for the act of spitting or hawking up the sputum.

Apochrœo'sis. (*Ἀποχρωσις, discoloration. L. decoloratio; G. Entfärbung.*) Discoloration; etiology.

Apochylis'ma. (*Ἀποχύλισμα; from ἀποχυλίζω, to extract the juice.*) Term for juice extracted from vegetables and inspissated, corresponding to the official term *Rob*; the same as what is now called an extract.

Apochylis'mus. (Same etymon.) The expressed juice of vegetables.

Apoch'yma. (*Ἀπόχυμα, that which is poured out. L. Zopissa; F. poix navale; G. Schiffpech.*) Old name for the pitch obtained from ships' bottoms, being impregnated with sea-salt, and formerly esteemed in medicine.

Apoch'ysis. (*Ἀπόχυσις, a pouring out; from ἀποχίω, to pour out.*) An old term for cataract.

Apoclas'ma. (*Ἀπόκλασμα, a fracture*

APOCLEISIS—APOCYNUM.

of the extremity.) A term formerly used, synonymous with *Apagmas*.

Apocleisis. (Ἀποκλείσις; from ἀποκλείω, to shut out.) Absence of desire for, or disgust with, food.

Apocodema. The same as *Apocodema*.

Apocodema. $C_{12}H_{19}NO_2$. A product of the action of chloride of zinc on codeine. It is amorphous, and has emetic properties.

Apocope. (Ἀποκοπή; from ἀποκόπτω, to cut off. *F. apocope*; *G. Ablösung, Wegschneiden*.) A term for abscission, or amputation.

It has also been used to describe a wound with loss of substance, and a fracture with loss of bone.

Apocopus. (Ἀπόκοπος; from ἀποκόπτω, to cut off.) Castrated.

Apocrenate. A combination of apocrenic acid with a base.

Apocrenic. (Ἀπό, from; κρήνη, a well. *G. Quellwasser*.) $C_{24}H_{42}O_{12}$, a doubtful formula of Mulder. An organic, nitrogenous acid, contained in the mineral waters of Porla, in Sweden, and in the earth and ochreous deposits of chalybeate waters. It is obtained by boiling the ochreous mud with potash, filtering, neutralising by acetic acid, and then precipitating by cupric acetate; the precipitate, which is cupric apocrenate, is decomposed by hydrogen sulphide, which deposits a brown, somewhat astringent-tasting powder, slightly soluble in water, and soluble in alcohol. See *Humic acid*.

Apocrisis. (Ἀποκρίσις; from ἀποκρίνω, to secrete, or separate. *F. apocrisis*; *G. Ausleerung*.) A term used for expulsion; also, for faeces or excrement, and whatever is cast out from the body as redundant or superfluous; the same as *Excrisis*.

A. morboſa. (*L. morboſus*, diseased.) A term formerly used for contagious effluvia or miasmata.

Apocrouſtic. (Ἀποκρουστικός; from ἀπορῶ, to repel. *G. Austreibend*.) Having the power of repelling and astringing. Used by Galen, *Med. l. ii*, 15, to a medicine which was much esteemed.

Apocrouſtic. The same as *Apocrouſtic*.

Apocyeſis. (Ἀποκύησις; from ἀποκύω, to bring forth, or beget. *F. apocyesis*; *G. Gebären*.) Ancient term, used by Galen, *de Caus. Morb. l. i*, c. 7, for parturition or childbirth.

Apocyma. The same as *Apocyma*.

Apocynaſce. (Ἀπόκυνον, the name of a plant in Dioscorides; from ἀπό, from; κύων, a dog, because thought to be poisonous to dogs.) Dog's-bane. A Natural Order of plants characterised by Lindley as Gentianal Exogens, with no stipules. The stigmas collected into a massive head, expanded at the base in the form of a ring or membrane, and contracted in the middle. They are trees or shrubs, usually milky. Leaves opposite, entire; calyx free, 5-partite, persistent; corolla monopetalous, hypogynous, 5-lobed, with contorted aestivation, deciduous; stamens 5, arising from the corolla; filaments distinct; anthers adhering firmly to the stigma, 2-celled, opening lengthwise; pollen globose or 3-celled, opening lengthwise; ovules 2 or 1-celled, polyspermous; ovules 00, amphitropal, or anatropal; fruit a follicle, capsule, drupe, or berry, double or single; seeds with fleshy or cartilaginous albumen. The plants of this Order are often very poisonous. Amongst those are the *Tungania venenifera*, *Cerbera manghas*, *Oleander*, and *Echites*. It is only represented in

Britain by the *Vinca major* and *minor*, neither of which are undoubtedly native.

Apocynaſce. (Same etymon.) Resembling the *Apocynaſce*.

Apocynaſce. (Same etymon.) A synonym of *Apocynaſce*.

Apocynin. A bitter substance, obtained from the *Apocynum cannabinum*, which is considered to be diaphoretic, diuretic, and antisyphilitic; it has been employed with success in dropsy.

Apocynon. (Ἀπό, from; κύων, a dog.) A small bone in the left side of a frog, formerly worn round the neck to keep off surly dogs. (Parr.)

Apocynum. (*G. Hundstod*.) A Genus of the Nat. Order *Apocynaſce*. Calyx small, 5-cleft, persistent; corolla campanulate, half 5-cleft; lobes revolute, with five basal glands; anthers connivent, sagittate; style obsolete; follicles long, linear; seeds comose. A deleterious plant mentioned by ancient writers. It has been referred to *Periploca Græca* and to *Cynanchium erectum*, Dioscorides, *l. iv*, c. 81; *P. Ægineta*, *l. vii*, § 3; Pliny, *l. iv*, c. 68. (Waring.)

A. androseamifolium. Linn. U.S. Ph. (*Androsema*, the plant of that name; *folium*, a leaf. *G. Augenfängenden Hundskohl*.) Dog's-bane. Hab. North America. Stem erect, smooth, abounding in a milky juice; leaves opposite, petiolate, ovate, acute, entire; flowers in loose cymes; fruit a pair of long, linear, acute follicles; seeds numerous, each with a long seed-down. This plant is an emetic, diaphoretic, and diuretic, and in small doses tonic. Dose, as emetic, 30 grains, as a tonic, 10 grains.

A. cannabifolium. Linn. U.S. Ph. (*Καννάβιος*, hempen. *G. hanfartiger Hundskohl*.) Called Indian hemp in America, but not to be confounded with the *Cannabis sativa*, var. *indica*. Leaves opposite, oblong-ovate, somewhat downy beneath; cymes paniculate, many-flowered, pubescent; corolla small, greenish externally. The root is officinal in the U.S. Ph.; it is 6–8 feet long, 3 inches thick, of a strong odour, and nauseous, acrid, bitter taste; it contains an active principle called *apocynin*; it is used in powder as an emetic, and in decoction, ʒiv to ʒj of water, as a hydragogue purgative, and as an antiperiodic in doses of a wine-glassful. Some observers speak highly of it as a diuretic, and advise that it should be so administered as not to produce vomiting or diarrhoea.

A. fatidum. Burm. (*L. fatidus*, stinking.) A synonym of *Pederia fatida*.

A. frutescens. Linn. (*L. frutes*, a fruit.) The *Ichnocarpus frutescens*.

A. hypericifolium. (*L. hypericum*, the plant of that name; *folium*, a leaf.) A variety of the *A. androseamifolium*. Its milky juice, when applied to the skin, produces an eruption much like flea-bites.

A. indicum. A species the young shoots of which are eaten.

A. juvenſas. (*L. juvenſas*, youth.) The systematic name for a plant given by the natives of India to old persons as a cordial.

A. maritimum. (*L. maritimus*, of the sea.) The systematic name for the plant Venetian dog's-bane. The leaves are used in China to poison dogs.

A. novæ anglie hirsutum. (*L. hirsutus*, hairy.) The hairy apocynum of New England; a synonym of *Asclepias tuberosa*.

APOCYRTUMENA—APOLEXIS.

A., orange. The *Asclepias tuberosa*.
A. scandens. (L. *scando*, to climb.) The *Allamanda cathartica*.

A. sibiricum, Pall. A synonym of *A. maritimum*.

A. Syriacum. (L. *Syriacus*, belonging to Syria.) A name for the *Asclepias Syriaca*, or Syrian dog's-bane, and also of *Calotropis procera*.

A. tiliaefolium. (L. *tilia*, the lime tree; *folium*, a leaf.) A synonym of *Hoya viridiflora*.

A. Venetum, Linn. (L. *Venetus*, Venetian.) Same as *A. maritimum*.

Apocyrta'mena. (Ἀποκυρτόμαι, to rise to a convex shape.) A term applied to a suppurating tumour, when cone-shaped and ready to discharge.

Apoda. (Ἄ, neg.; ποῦς, a foot.) A Suborder of the Order *Cirripedia*. Carapace reduced to two separate threads, with antenniform organs serving for attachment; mouth suctorial; body without cirri; no thoracic or abdominal limbs; parasitic in the mantle of other Cirripedes.

Also, a synonym of *Ophiomorpha*.

Also, a Division of Physostomous and of Anacanthinous fishes, in which the abdominal fins are absent.

Also, an Order of the Class *Holothuroidea* having no ambulacral tubes, with or without respiratory organs, and hermaphrodite.

Also, a footless Group of *Amphibia*, including the *Cecilia*.

Apodacrytica. (Ἀποδακρύνω, to shed tears.) Substances which first excite, and then evacuate, the tears, as onions, hellebore. According to some, remedies which arrest the flow of tears.

Apodal. (Ἄ, neg.; ποῦς, a foot.) Having no feet, or the analogues of feet, as fins.

Apodanth'ese. A Tribe of the Genus *Rafflesiaceae*, or a Tribe of *Cytinaceae*. Flowers solitary or aggregated, unisexual; perianth dichlamydeous; anthers disposed in one or several series along the summit of the column, sessile, unilocular, confluent; ovary inferior, unilocular; ovules anatropal or orthotropal; fruit superior or semi-superior. Parasites on various Dicotyledons.

Apodeme. (Ἀπό, from; δέμας, the body; or ἄπό; δέμα, a band.) Name, by Andouin, for the peculiar pieces that grow from some portions of the body of Articulata, which are fixed, and of which those (apodeme insertionis) situated at the interior of the thorax often give attachment to muscles, whilst the others (apodeme articulationis) frequently form a projection on the exterior of the thorax, and serve chiefly for articulation of some appendices of the body, particularly wings.

Apodemial'gia. (Ἀποδηλία, a going abroad; ἄλγος, pain. G. *Reiselust*.) The longing to return home from foreign lands, according to some; according to others, and more probably, the longing for foreign travel.

Apodes. (Ἄ, neg.; ποῦς, a foot.) Without feet, or without the use of feet. Without ventrals, or those fins which correspond to the legs and feet in man.

Apodia. (Ἄ, neg.; ποῦς, a foot. F. *apodie*; G. *Fusslosigkeit*.) In Teratology, partial agenesia, characterised by the absence of feet.

Apodictic. (Ἀποδεικτικός; from ἀποδεικνύμι, to demonstrate. F. *apodictique*.) Axiomatic, evident beyond contradiction. Term employed by Kant, who borrowed it from Aristotle.

The Greek philosopher established a distinction between propositions capable of being contradicted, or which might form the basis of a dialectic discussion, and those which are the base or result of demonstration. Kant, wishing to introduce an analogous distinction into our judgments, applied the term apodictic to those which are above and beyond all contradiction. (Frank.)

Apodiposis. (Ἀπό, away; ἀδεψ, fat. G. *Verfettung*.) A morbid conversion into fat, as of the flesh or bones.

Apodous. (Ἄ, neg.; ποῦς, a foot. F. *apode*; G. *fusslos*.) Without feet.

Apodyterium. (Ἀποδυτήριον, from ἀποδύνω, to strip one's self.) Ancient name for the ante-room in which the bathers stripped for the bath.

Also, the room where a patient is undressed before an operation.

Apogae'ous. (Ἀπογαίος, from land.) Coming from the land.

Apogalactis'mus. (Ἀπογαλακτίζω, to wean; from ἀπό, away; γάλα, milk. F. *sevrage*; G. *Entmilchung*.) Old term for the weaning of a child.

Apogalactos. (Same etymon.) A child that has been weaned.

Apogalactus. Same etymon and meaning as *Apogalactos*.

Apogast'ria. (Ἄ, neg.; ποῦς, a foot; γαστήρ, the belly. F. *apogastre*.) Applied by Latreille to a Section of *Mollusca*, in which the belly is without feet, i.e. the Cephalopoda and Pteropoda, which he names also Pterygia.

Apogeusis. (Ἀπογεύομαι, to take a taste.) A term formerly used for the loss, or the various disorders, of taste.

Apogeusia. Same etymon and meaning as *Apogeusia*.

Apoglaucosis. (Ἀπογλαύκωσις.) Old term, used by Dioscorides, i, 64, signifying the growing of a glaucoma.

Apogon'es. (Ἄ, neg.; πόγων, a beard. G. *bartlos*.) Applied by Palisot-Beauvois to a Section of *Musci*, the urn of which is deprived of teeth at its orifice.

Apogonus. (Ἀπόγονος, sprung from.) Old term, used by Hippocrates, *Epid.* i. ii, s. 3, for a living fœtus.

Apohyal. (Ἀπό, from; ὑγρόν, the bone of that name.) Applied by Geoffroy Saint-Hilaire to the first pieces of the anterior or styloid cornua of the hyoid bone.

Apoious. (Ἀποιος, without quality.) Having no sensible attribute of astringency or acrimony, as water, starch.

Apokathars'is. See *Apocatharsis*.

Apolar. (Ἄ, neg.; πόλος, the end of an axis.) Having no pole.

A. cells. Nerve cells that are spherical and have no processes.

Apolem'idæ. A Family of the Suborder *Physophora*, Order *Siphonophora*, Class *Hydro-medusæ*. Stem very long; swimming bladders in two rows.

Apolepism'us. (Ἀπολέπισμα, a husk; from ἀπολεπίζω, to peel off. F. *apolepisme*; G. *Abschulferung*, *Abschuppung*.) Desquamation.

Apolepsis. (Ἀποληψις, a stopping; from ἀπολαμβάνω, to take back. G. *Unterbrechung*, *Hemmung*.) Old term, used by Hippocrates, *Coac.* *Prænot.* t. 603, for retention, interception, or suppression, of any of the natural evacuations.

Apolexis. (Ἀποληξίς, cessation.) Old

APOLINOSIS—APONEUROSES.

term, used by Hippocrates, in *Præcept.* xl, ii, for age receding from vigour, and advancing to the termination of life; declining old age.

Apolinosia. (Ἀπολίνωσις; from ἀπολύνω, to tie up with a thread. F. *apolinoses*.) Old term, used by Paulus Ægineta, for the cure of a fistula by the application of a ligature of raw thread, &c. Hippocrates, *l. de Fist.* ii, 13.

Apolipsis. (Ἀπολείψις, a failing; from ἀπολείπω, to leave behind. G. *Austlassen*, *Verlassen*.) A failing or deficiency, as of the voice.

Apollina'ris altercum. (Ἀπόλλυνμι, to destroy; L. *altercum*, henbane.) Hyoscyamus niger. Pliny lxxv, c. 17.

Apollina'ris water. Obtained from the Apollinaris-brunnen, Neuenahr, Rhenish Prussia. Altitude 225 feet; temp. 21° C. (69·8° F.) Contains, in 16 oz., sodium carbonate 9·66 grains, magnesium carbonate 3·39, calcium carbonate ·45, sodium chloride 3·67, sodium sulphate 2·30, oxides of iron and alumina 0·16, silica 0·6, carbonic acid 47·04. Scenery of neighbourhood picturesque. Employed in gout and rheumatism, scrofula, chronic bronchial catarrh, tendency to gall-stones, and uric acid diathesis. It is extensively used as a table water.

Apollo, Bag'ni d'. Italy; in the former States of the Church; it was called by the Romans Balnea clusina. A chalybeate spring, temp. 35° C. (95° F.), containing, in 16 ounces, sodium chloride 2·1 grains, magnesium chloride 1, calcium chloride ·5, calcium carbonate 8·6, and iron carbonate ·26, with carbonic acid and some oxygen and nitrogen. It is used in liver affections, enlargement of spleen, and chronic gastric and intestinal catarrh; in anæmia and chlorosis.

Apolysis. (Ἀπολύσις; from ἀπολύω, to loose or free.) The term is used by Hippocrates, *Epid.* v, 6, 9, for expulsion of a foetus, or of the after-birth. Also, applied by Hippocrates, *Choc. Prænot.* t. 384, to the solution or termination of a disease; also, to a weak condition of the limbs. The loosening, or slacking, of a bandage, according to Erotianus.

Apomagma. (Ἀπομάγμα, anything to wipe with; from ἀπομάσσω, to wipe off.) Lint or a sponge used to clean an ulcer, or to wipe off sores.

Apomathe'ma. (Ἀπομάθημα; from ἀπομαθάνω, to unlearn.) Loss of memory.

Apomatos'toma. (Ἀ, priv.; πῶμα, a tid; στόμα, a mouth. F. *apomatostome*.) Applied by Menke to a Suborder of *Gasteropoda stenobranchia*, the shell of which has no operculum.

Apomeli. (Ἀπόμηλι; from ἀπό, from; μέλι, honey.) Term used by Galen, *Metb. Med.* viii, 4, for a kind of decoction of honey, or honeycomb, mixed with vinegar; said to have been something between sweet wine and oxymel; also, oxymel itself.

Apomesos'tomi. (Ἀπό, away; μέσος, the middle; στόμα, a mouth.) Applied by Klein to a Section of *Echini*, not having a central mouth.

Apomorphia. (Ἀπό, from; morphia.) $C_{17}H_{17}O_2N$, or morphia, minus H_2O ; it is formed when morphia is heated in a sealed tube with strong hydrochloric acid, or when it is treated with a solution of zinc chloride at 120° C. (248° F.) The hydrochlorate thus produced is dissolved, and the apomorphia precipitated by the careful addition of ammonia. It is a white crystalline powder, which turns green on contact with air. It differs from morphia in being soluble

in alcohol, ether, and chloroform. Potassium bichromate gives a deep orange-yellow coloration; potassium bichromate and strong sulphuric acid give a dark red; iron perchloride an amethyst colour. Its physiological action resembles that of tartar emetic, affecting the central nervous system. When injected, in doses of from 1-20th of a grain to 2 grains, subcutaneously, it produces in the course of a few minutes a sensation of weight in the stomach, followed by slight pain in the head, salivation, perspiration, and retching. At the third or fourth effort vomiting occurs, and is repeated several times, after which comes a period of calm, lasting for five minutes; vomiting then recurs, to be again followed by calm, till, in the course of half an hour, very quiet sleep sets in, lasting for an hour or less. Alarming effects follow the injection of an over-dose. In one case a fifteenth of a grain produced great prostration. It may be given whenever it is desired simply to empty the stomach; it has been used to prevent an epileptic fit, and as an expectorant.

A. hydrochlorate. (G. *salcaures Apomorphin*.) A salt of apomorphia having similar properties to the base. Its mode of production is described under *Apomorphia*. It is a greyish powder, consisting of very minute six-sided prisms, slightly soluble in alcohol, readily in water; nitric acid and potassium bichromate, with strong sulphuric acid, turn it chestnut colour, and warm iron perchloride a bluish black.

Apomorphin. Same as *Apomorphia*.

Apomorphosis. (Ἀπό, from; μορφή, form.) A peculiar kind of organic metamorphosis in which a substance, in combining with another, takes something away. Thus oxidizing agents, in attacking an organic substance, form water or carbonic acid gas; chlorine, bromine, the chlorides, and bromides, take up hydrogen to form hydrochloric or hydrobromic acids. (Gerhardt.)

Apomyi'inas. (Ἀπομυλλαίνω, to make a wry face.) One who shoots his lips forwards, pressing them against each other. An occasional symptom in fever. (Dunglison.)

Apomytosis. (Ἀπομύσσω, to blow the nose.) A kind of spasm, which consists in trembling of the head and sonorous respiration and agitation of the trunk, with the object of expelling mucus or other irritating objects from the nose. It differs from sneezing in the stertorous respiration with which it is accompanied. (Sauvages.)

Aponecrosis. (Ἀπονέκρωσις; from ἀπονέκρω, to kill utterly.) Absolute death.

Aponeurography. (Aponeurosis; γράφω, to write. F. *aponeurographie*.) A treatise on the aponeuroses.

Aponeurology. (Aponeurosis; λόγος, a discourse. F. *aponeurologie*.) A description of the aponeuroses.

Aponeuroses. See *Aponeurosis*.

A., general. (F. *aponeuroses générales*.) Aponeuroses which cover a considerable surface, as of a limb; they lie beneath the skin; cover muscles, between which they send processes; their inner surface gives origin to muscular fibres; their edges arise from tendons, or unite with the periosteum; and they close in and support the muscles.

A. of insertion. (F. *aponeuroses d'insertion*; I. *aponeurosi di inserzione*.) A term applied to tendons which, at their insertion, become broad and flattened.

A. of intersection. (F. *aponeuroses*

APONEUROSIS.

d'intersection.) Short tendinous or aponeurotic fibres forming a line across the belly of a muscle, as in the rectus abdominalis.

A., partial. (*F. aponevroses partielles.*) The same as *A. of intersection.*

Aponeurosiology. Same etymon and meaning as *Aponeurology.*

Aponeurosis. (*Ἀπονέυρωσις*; from *ἀπό*, from; *νέυρον*, a tendon. *F. aponevrose*; *I. aponeurosa, fascia*; *G. Fleckenhaut, Flechse.*) A fibrous membrane enclosing or binding down muscles; also, an expansion of a tendon, or of tendons, into a fibrous membrane.

A., coronal. (*L. corona, a crown. F. aponevrose coronale.*) The *A. cranii.*

A., epicranial. (*Ἐπί, upon; κρᾶνιον, the upper part of the head.*) The *A. cranii.*

A., infra-spinous. A strong fascia attached to the edges of the infra-spinous fossa of the scapula and enclosing the infra-spinous muscle; it is continuous with the aponeurosis of the arm, and gives off processes from its inner surface to divide the muscle from the teres minor, and this from the teres major.

A., lumbar. See *Fascia, lumbar.*

A., occipito-frontal. The *A. cranii.*

A. of arm. An aponeurotic investment of the upper arm, composed mainly of transverse fibres; it is thickest behind and at its attachments to the condyles of the humerus and its shaft by means of the intermuscular septa. It is perforated below the middle of the inner side of the arm by the basilic vein and the internal cutaneous nerve.

A. of deltoid muscle. The deep fascia covering the deltoid muscle, into which it sends fibrous offshoots; it is continuous in front with the fascia covering the pectoralis major, and behind with the infra-spinous aponeurosis; above, it is attached with the deltoid itself.

A. of diaphragm. The central tendon of the diaphragm.

A. of external oblique muscle. A thin membranous aponeurosis covering the abdominal muscles, extending downwards and inwards from the pectoralis major to the middle line of the body; externally it has attachments to the deep layer of the superficial abdominal fascia; it forms part of the anterior layer of the sheath of the rectus; and at its lower border it is thickened and is attached to the spinous process of the ilium, the spine of the pubis, the pectineal line, and the body of the pubis. Above and to the outer side of the crest of the pubis is an oblique opening—the external abdominal ring. The part between the iliac and pubic spines is Poupart's ligament; the part attached to the pectineal line is Gimbernat's ligament.

A. of forearm. The fibrous investment of the forearm. It consists chiefly of circular fibres, with longitudinal and oblique additions from the condyles of the humerus, the olecranon, and the semilunar fascia of the biceps; it is attached along the subcutaneous margin of the ulna. The posterior part is the stronger; the anterior part is stronger at the lower end, where it joins the annular ligament of the wrist and forms a sheath for the palmaris longus muscle; from its under surface, at the inner and upper end, it affords attachment to fibres of the pronator radii teres, the flexor carpi radialis, and the flexor digitorum sublimis, and it sends septa between the muscles, which also give origin to muscular fibres.

A. of internal oblique muscle. A term for the tendon of the internal oblique muscle.

A. of leg. The subcutaneous fibrous investment of the leg. It is attached to the head and spine of the tibia, the head of the fibula, the posterior margin of the tibia, and the inner malleolus. It is strongest in its upper and fore part and over the popliteal space, at the lower part of which it gives passage to the external saphena vein; by the upper part of its under surface it gives origin to muscular fibres, and it supplies septa between the external and the anterior leg muscles.

A. of transversalis abdominis muscle, anterior. The flat tendon of the transversalis abdominis muscle, or fibrous insertion into the linea alba; except at the upper part, where the muscular fibre encroaches on it, and at the lower end, where it passes in front of the rectus, it commences on the outer border of the rectus abdominis, and unites with the aponeurosis of the internal oblique to form the posterior wall of the sheath of the rectus.

A. of transversalis abdominis muscle, posterior. The fascial origin of the transversalis abdominis, extending from the last rib to the iliac crest at the outer border of the erector spine; and running backwards to join the lumbar fascia.

A., subscapular. (*L. sub, under; scapula.*) A thin fibrous structure attached to the edge of the subscapular fossa, and enclosing the subscapularis muscle; its inner surface gives origin to muscular fibres.

A., supra-spinous. A dense fascia attached to the edge of the supra-spinous fossa of the scapula, giving origin by its under surface to some fibres of the supra-spinous muscle and binding it down.

A., vertebral. A thin sheet of fascia attached to the spinous processes of the dorsal vertebrae on the one side, and to the angles of the ribs on the other, thus enclosing an angular space for the erector muscles of the back; it joins the tendons of the latissimus dorsi and the serratus posticus inferior muscles. See also *Fascia lumbaris.*

Aponeurosis bicipitis. (*L. biceps, having two heads.*) The bicipital fascia; a process of tendinous tissue given off from the outer border of the biceps tendon just above the elbow-joint. The fibres run downwards and inwards to join the fascia of the forearm, where this covers the pronator radii teres muscle.

A. cranii. (*Κρᾶνιον, the vertex of the head. F. calotte aponevrotique; G. Sehnenhaube, Schadelhaube.*) A dense fascia covering the vault of the cranium, the fibres running for the most part longitudinally from before backwards. Posteriorly it is connected with the occipital portions of the occipito-frontalis muscle, and is attached to the posterior occipital protuberance and superior semicircular lines; anteriorly it is connected with the anterior bellies of the occipito-frontalis muscle; and laterally it becomes thinner and less defined, and is connected with the auricular muscles. It is covered by the skin, and is itself continuous by its deep surface with the periosteum of the cranial bones.

A. cru'ris. (*L. crus, the leg.*) The *Fascia lata.*

A. dorsalis. (*L. dorsalis, of, or on, the back. G. Rückenbinde.*) See *Fascia dorsalis.*

APONEUROSITIS—APOPHYLOUS.

A. eptera'nia. (Ἐπί, upon; κρανίον, the top of the head.) The *A. cranii*.

A. femora'lis. (L. *femur*, the thigh.) The *Fascia lata*.

A. fem'oris. (L. *femur*, the thigh.) The *Fascia lata*.

A. ilia'ca. (*Ilium*, the bone of that name.) The *Fascia iliaca*.

A. latissimi dor'si. (L. *latissimus*, very broad; *dorsum*, the back.) The superficial layer of the *Fascia lumbaris*.

A. lumba'ris. (L. *lumbus*, the loin.) The *Fascia lumbaris*.

A. occip'ito-fronta'lis. (L. *occiput*, the back part of the head; *frons*, the forehead.) See *A. cranii*.

A. palma'ris. (L. *palmaris*, belonging to the palm of the hand.) See *Fascia palmaris*.

A. pharyng'is. (Φάρυγξ, the throat.) See *Fascia pharyngis*.

A. planta'ris. (L. *plantaris*, of, or belonging to, the sole of the foot.) See *Fascia plantaris*.

A. tempora'lis. (L. *temporalis*, of, or belonging to, the temple.) See *Fascia temporalis*.

A. vertebra'lis. (L. *vertebra*, a joint, a bone of the spine.) See *Fascia lumbaris*, and *Aponeurosis, vertebral*.

A. vola'ris. (L. *vola*, the hollow of the hand.) Same as *Fascia palmaris*.

Aponeurosis'is. (Ἀπονέυρωσις.) Inflammation of a fascia or tendon.

Aponeurotic. (Ἀπονέυρωσις. F. *aponeurotique*; G. *flechtig*.) Of, or pertaining to, a fascia or aponeurosis.

A. bone. Any ossification of aponeurotic tissue; extremely common in birds, as in the tendons of the leg and back, and in some of the smaller ruminants, as in the bony dorsal shield of *Tragulus kanchil*, and in the lumbar region of some armadillos.

A. cen'tre. (F. *centre aponeurotique*.) The central tendon of the diaphragm.

A. mus'cle. (F. *muscle aponeurotique*.) The tensor vaginae femoris.

Aponeurotome. (Ἀπονέυρωσις; τομή, an incision. F. *aponeurotome*.) An instrument employed to divide the abdominal aponeurosis in the operation of suprapubic cystotomy.

Aponeurotomy. (Same etymon. F. *aponeurotomie*.) In Anatomy, the dissection of aponeuroses.

In Surgery, section of aponeurotic parts.

Apon'ia. (A. neg.; πόνος, suffering. G. *Schmerzlosigkeit, Wohlbefinden*.) A state of painlessness.

Aponip'sis. (Ἀπονίψις, a washing off; from ἀπό, away; νίπτω, to wash.) Ablution.

Aponoge'ton. (A corruption of ποταμογείτων, pond-weed; from ποταμός, a river; γείτων, a neighbour.) A Genus of the Nat. Order *Juncaginaceae*. Calyx and corolla absent; stamens 6—25; carpels 3—8, unilocular; placenta basilar, with from 3—50 anatropal ovules; seeds exalbuminous.

A. monostach'yon. (Μόνος, solitary; στάχυς, an ear of corn. Hind. *Ghechoo*.) Perennial aquatic; roots tuberous; leaves radical, linear-oblong, entire; spikes single; capsules 3, smooth, 1-celled, 4—8 seeded. An aquatic Indian plant. The small tubers are consumed by the natives as potatoes.

Apon'ous. (A. neg.; πόνος, labour or

suffering.) Causing no pain; applied to medicines which excite no suffering or uneasiness.

Apoc'oder. Ahanatee name for a Species of *Leucas*, the bruised leaves of which, with lime juice, are applied to inflamed parts. (Waring.)

Apopales'is. (Ἀποπάλλειν; from ἀποπάλλω, to hurl.) Old term, used by Hippocrates, for expulsion or extrusion, as of the fetus in abortion. (Castellus.)

Apopal'is. Same etymon and meaning as *Apopalesis*.

Apopate'ma. (Ἀποπάτημα.) Term for ordure.

Apopatus. Same as *Apopatema*.

Apopetalous. (Ἀπό, away from; πέταλον, a leaf. F. *apopétale*; G. *getrenntblättrig*.) Term applied to the flower of an Angiosperm when the leaves of the perianth whorl are free from any adhesion to each other.

Apophlegmatic. (Ἀπό, from; φλέγμα, phlegm. F. *apophlegmatisant*; I. *apoflemmatizzante*; G. *schleimausleerend, schleimabführend*.) Old term applied to medicines which excite a discharge of mucus from any of the cavities of the head, as the nose, mouth, and larynx, including errhines, gargles, and masticatories.

Apophlegmatism'us. (Ἀποφλεγματισμός; from ἀποφλεγματίζω, to purge of phlegm. F. *apophlegmatisme*; G. *Schleimabführung*.) Old term, used by Galen, *de San. Tu. vi*, 10, for the action of an apophlegmatic medicine.

Apophlegmatison. Same as *Apophlegmatizans*.

Apophlegmatizans. (Ἀποφλεγματίζω, to cleanse from phlegm. F. *apophlegmatisant*; I. *apoflemmatizzante*; G. *schleimausleerend*.) Same as *Apophlegmatic*.

A. per na'res. (L. *nares*, the nostrils.) An errhine.

A. per os. (L. *os*, the mouth.) A sialogogue.

Apoph'rades. (Ἀπόφρας, not to be mentioned, unfortunate; from ἀπό, away; φράζω, to declare; ἀποφράδες ἡμέρας, were unlucky days, on which no causes were heard.) A term used by And. Laurentius, *de Cris. ii*, 1, and applied to days which were not critical, or on which no favorable change in a disease was expected to take place.

Apophrax'is. (Ἀπόφραξις, a blocking up; from ἀποφράσσω, to obstruct.) Amenorrhœa.

Apophthar'ma. (Ἀπόφθαρμα.) Old term for a medicine to induce abortion.

Apoph'thora. (Ἀποφθορά; from ἀποφθίρω, to corrupt or destroy, to miscarry. F. *apophthore*.) Old term for abortion; the expulsion of a corrupted fetus.

Apophthor'ious. (Same etymon.) Relating to, or producing, abortion.

Apophy'ades. (Ἀποφύας, an off-shoot.) The branches of the veins.

Apophy'as. (Ἀποφύας, to send forth shoots.) An appendix or continuation; a branch, as of a vein, in Hippocrates, *de Ven. xvii*, 8.

Apophyllite. (Ἀποφυλλίτις, to strip a plant of its leaves.) A mineral of the zeolite family, so called from its exfoliation in leaf-like lamellæ when heated; it contains silica 52.7, lime 26, potash 4.4, water 16.7. Also called ichthyophthalmite.

Apophyllous. (Ἀπό, away from; φύλλον, a leaf. G. *getrenntblättrig*.) Term applied

APOPHYSAR—APOPLEXIA.

to the flowers of Angiosperms when the perianth whorl is single, and consists of separate leaves.

Apophysar. (Same etymon as *Apophysis*.) Of, or pertaining to, an apophysis.

Apophysate. (Same etymon as *Apophysis*. F. *apophysé*; G. *mit Ansatz*.) Having an apophysis.

Apophysial. (Same etymon as *Apophysis*.) Of, or belonging to, an apophysis.

A. point. (F. *point apophysaire*; G. *apophysen Punkt*.) The tender point over a vertebral spinous process which is next to the place of exit of a painful spinal nerve.

Apophysiform. (F. *apophysiforme*.) Applied by Bridel to a swelling in the form of a receptacle which the extremity of the fructiferous branches of the Sphagnum presents, performing the office of a pedicle which does not exist in those mosses.

Apophysis. (Ἀποφύω, to put forth. F. *apophyse*; I. *apofise*; G. *Fortatz, Auswuchs*.) Anything attached to, or growing from, another.

In Anatomy, a natural process or protuberance of bone. Apophyses receive various names according to their shape, as articular, spinous, coracoid; they are most frequently called processes.

Applied to a dilatation of the base of the sporangium found in certain of the Musci.

Also, applied to any irregular swelling.

A. gracilis. (L. *gracilis*, slender.) The long process, processus gracilis, of the malleus.

A. mamillaris. (L. *mamillaris*, belonging to a breast.) The mastoid process of the temporal bone.

A. mastoidea. (Μαστός, the breast; εἶδος, form.) The mastoid process of the temporal bone.

A. of Inguis. The small wing of the sphenoid bone.

A. of Bau. The processus gracilis of the malleus.

A. zygomatic. (F. *apophyse zygomaticque*; G. *Wangenfortatz*.) The zygomatic process of the temporal bone.

Apopiesma. (Ἀποπίσσω; from ἀποπίσω, to press out.) Old term, used by Hippocrates, *de Fract.* iii, 31, for the pressing out of humours, by the use of bandages, in cases of wounds and fractures.

Apoplanesis. (Ἀποπλανάω, to lead astray. F. *apoplanese*.) Same as *Error loci*.

Apoplectic vena. (L. *apoplecticus*, apoplectic; *vena*, a vein.) An old name for the internal jugular vein, according to Bartholin.

Apoplectic. (Ἀποπληκτικός, apoplectic. F. *apoplectique*; I. and S. *apoplectico*; G. *apoplektisch, schlagflussartig*.) Of, or belonging to, apoplexy.

Also, used substantively to denote a person attacked, or likely to be attacked, by apoplexy.

A. clot. (F. *caillot apoplectique*.) The mass of blood clot, in an organ, constituting the disease.

A. constitution. (F. *constitution apoplectique*.) A term used to describe the habit and manner of persons predisposed to apoplexy; they are those of stout, plethoric build, with short neck, rosy face, and large head; but apoplexy occurs in far other persons also.

A. cyst. A term applied to the organised membrane found around the clot of blood in cases of hæmorrhage into the brain-substance or into the arachnoid; it is sometimes developed as early as a fortnight after the seizure; it is the result of

a slow inflammatory process in the neuroglia; during the absorption of the blood-clot, the cyst contracts and shrivels, and in time may be completely absorbed. Apoplectic cysts are not found in the cortical substance.

A. focus. (F. *foyer apoplectique*; G. *apoplektische Herde*.) The extravasated blood in the interior of organs which is the centre of change; or, according to some, the circumscribed cavity produced in an organ by the effusion of blood which clots.

A. habit. Same as *A. constitution*.

A. veins. (F. *veines apoplectiques*.) An old name for the jugular veins.

Apoplectic. (Same etymon.) Medicines against apoplexy.

Also, an old term for fever following an apoplectic attack.

Apoplecticæ venæ. (L. *apoplecticus; vena*, a vein.) Old term for the jugular veins.

Apoplectiform. (L. *apoplexia*, apoplexy; *forma*, likeness. F. *apoplectiforme*.) Term applied to seizures resembling apoplexy.

Apoplectoid. (Ἀποπληξία, apoplexy; εἶδος, form.) Term applied by Marshall Hall to paralysis consequent on congestion of the nervous centres, with symptoms resembling those of apoplexy.

Apoplexia. (Ἀποπληξία.) See *Apoplexy*.

A. atrophia. (L. *ater*, black; *bilis*, bile.) Apoplexy in persons of a melancholic tendency.

A. capillaris. See *Apoplexy, capillary*.

A. cataleptica. (Κατάληψις, a grasping catalepsy.) Cataleptic apoplexy. A term for catalepsy.

A. cerebrales. (L. *cerebrum*, the brain. F. *apoplexie cerebrale*.) Cerebral apoplexy, depending on extravasation of blood, or great congestion of blood-vessels, within the cranium.

A. cerebr. (L. *cerebrum*, the brain.) Effusion of blood into the substance of the brain.

A. choroidæ. (Choroid, the optic tunic of that name.) Effusion of blood between the retina and the choroid from the vessels of the latter structure.

A. cordis. (L. *cor*, the heart.) Effusion of blood into the muscular structure of the heart.

A. exsanguinea. (L. *exsanguis*, bloodless, powerless.) Apoplexy from exhaustion.

A. fortissima. (L. sup. of *fortis*, strong.) The same as *A. fulminans*.

A. fulminans. (L. *fulmino*, to lighten. F. *apoplexie foudroyante*.) Apoplexy of a severe and sudden character, extinguishing life at once or very rapidly.

A. hæmorrhagica. (Ἀιμορραγικός, liable to hæmorrhage.) Apoplexy depending on rupture of blood-vessel and consequent escape of blood.

A. hepatica. (L. *hepaticus*, one diseased in the liver.) Hæmorrhage into the liver substance.

A. hydrocephalica. (Ὑδωρ, water; κεφαλή, head.) A term for acute hydrocephalus; hydrocephalic apoplexy.

A. infantum. (L. *infans*, an infant.) Term for a form of apoplexy occurring in children from teething, worms, or other cause.

A. interarachnoidea. (L. *inter*, between; *arachnoid*, the cerebral membrane of that name.) Apoplexy resulting from effusion of blood into the cavity of the arachnoid.

APOPLEXY.

A. intermeningealis. (L. *inter*; *μήρυξ*, a membrane.) Apoplexy depending on hæmorrhage among the membranes of the brain.

A. medullaris. (L. *medulla*, the spinal marrow.) Apoplexy of the spinal cord.

A. meningea. (Μήνιγξ, a membrane.) Apoplexy depending on hæmorrhage into the membranes of the brain. See *Apoplexy, meningæal*.

A. meningealis. Same etymon and meaning as *A. meningea*.

A. mentalis. (L. *mens*, the mind.) Apoplexy produced by the passions or emotions of the mind.

A. myelitica. (Μυελός, marrow, the spinal marrow.) Hæmorrhage into, or around, the spinal cord.

A. neonatorum. (Νιός, young. L. *natus*, part. of *nascor*, to be born; F. *apoplexie des nouveau-nés*; I. *apoplexia dei neonati*.) Apoplexy of new-born children; an effusion of blood generally on the surface of the brain, caused by pressure during birth, whether of maternal structures or of forceps, and generally accompanied by a cephalhæmatoma. It may be caused by severe labour pains, either spontaneous or excited by ergot.

Also, applied to the condition of a child still-born, in which the circulation has been impeded from any cause, and so cerebral congestion has been produced, with general surface-redness and swelling and violet colour of the face; under these circumstances it is well to let a little blood flow from the umbilical cord.

A. nervosa. (L. *nervosus*, nervous. F. *apoplexie nerveuse*; I. *apoplexia nervosa*; G. *Nervenschlag*.) A term for apoplexy, in which the cerebral congestion, which had evidently been present during life, leaves no appreciable lesion after death.

By some authors nervous apoplexy is described as the effect of sudden æmæmia, the result of fright or shock. In these cases it is supposed that the effect on the vaso-motor nerves is such as to cause great and long-continued contraction of the minute vessels, and so vertigo, faintness, unconsciousness, and, if the contraction does not quickly relax, death.

A. nervosa traumatica. (L. *nervosus*; *traumaticus*, pertaining to wounds.) A synonym of *Concussion of the brain*.

A. oculi. (L. *oculus*, the eye.) Effusion of blood into some of the structures or cavities of the eye.

A. pituitosa. (L. *pituitosus*, phlegmatic.) A synonym of *Apoplexy, serous*.

A. pulmonalis. (L. *pulmo*, a lung.) See *Pulmonary apoplexy*.

A. pulmonum vascularis. (L. *pulmo*, a lung; *vasculum*, a small vessel.) See *Pulmonary apoplexy*.

A. rachialis. (Ράχis, the spine.) Spinal apoplexy; hæmorrhage into, or around, the spinal cord.

A. renalis. (L. *renalis*, belonging to the kidneys.) Hæmorrhage into the substance of the kidney.

A. sanguinea. (L. *sanguineus*, of blood. F. *apoplexie sanguine*; I. *apoplexia sanguinea*; G. *Gehirnblutschlag*.) Apoplexy caused by effusion of blood into, or on, some part of the cerebral structures.

A. serosa. (L. *serum*, the watery part of blood. F. *apoplexie serous*; I. *apoplexia serosa*;

G. *Gehirnwasserguss*.) Apoplexy from effusion of serum into, or around, some part of the cerebral structures. See *Apoplexy, serous*.

Also, applied to the coma of hydrocephalus.

A. simplex. (L. *simplex*, simple.) Apoplexy in which, after death, no manifest change of structure or congestion is perceptible. See *Apoplexy, simple*.

A. spasmodica. (Σπασμός, a spasm.) A synonym of *A. simplex*.

A. spinalis. (L. *spinalis*, of, or belonging to, the spine. F. *apoplexie spinale*; I. *apoplexia spinale*; G. *Rückenmarkblutschlag*.) Hæmorrhage or sudden effusion into, or around, the spinal cord, producing paralysis or anæsthesia.

A. suffocata. (L. *suffoco*, to choke.) Apoplexy from hanging, drowning, and such like.

A. temulentia. (L. *temulentia*, drunkenness.) The coma of drunkenness.

A. traumatica. (Τραυματικός, of wounds. F. *apoplexie traumatique*.) Apoplexy depending on external injury to the head.

A. venenata. (L. *venenatus*, poisoned.) Apoplexy caused by strong external or internal sedatives, as sunstroke, coma from opium.

Apoplexy. (Ἀποπληξία; from ἀποπλῆσσω, to cripple by a stroke; because persons seized with apoplexy fall suddenly, as if struck down. F. *apoplexie*; I. *apoplexia*; S. *apoplegia*; G. *Schlagfluss*, *Hirnschlag*, *Hirnschlagfluss*.) The term apoplexy is disused by some modern authors, and the disease is described, in accordance with the morbid appearances seen after death, as cerebral hæmorrhage, cerebral effusion, and such like. But many consider that the series of well-marked symptoms which accompany certain lesions of the brain are better described under the old name; which furnishes also, in its adjectival form, a convenient heading under which to group the earlier symptoms which tell of the probable coming mischief. It is the sudden, more or less complete, arrest of the powers of sense and motion, the person lying as if asleep, respiration and the heart's action continuing, and dependent on intracranial mischief, such as congestion, serous effusion, or hæmorrhage. These several conditions have given rise to the division of apoplexy into several varieties; but the symptoms of each are so similar to those of the others that the diagnosis of the morbid condition causing the disease is by no means easy. An apoplectic seizure is very often preceded by premonitory symptoms, such as giddiness, loss of memory, headaches, deficient sensibility, or tingling of some part of the body, or some local loss of muscular power. The attack itself is more or less sudden in its approach and more or less complete in its manifestation; the patient may fall down suddenly utterly motionless and unconscious, or he may feel slowly creeping over him powerlessness and lethargy; the muscles may be paralysed and flaccid, or they may be stiff or convulsed; the blow may fall chiefly on the mental faculties, or the main stroke may be felt in the muscles and the nerves of sensation; he may die at once, or he may more or less slowly recover with a lamed limb or damaged faculties; or the symptoms may entirely pass away, leaving only a shadow of evil to come. The cause of the attack is to be found within the cranium, and consists of hyperæmia, which in the milder cases is doubtless only temporary, or serous effusion into the ventricles or on the periphery; but chiefly, and to this some confine the word, it

APOPLEXY.

is to be found in hæmorrhage into some part of the cerebral structure. Other causes, such as sunstroke, uræmia, poisoning by alcohol and some narcotics, may result in symptoms very similar to those of an apoplectic attack.

The term apoplexy is given to effusions of blood into other organs, and in these cases has reference to the rupture of a blood-vessel only, and not to the symptoms.

A., arthritic. (*F. apoplexie arthritique.*) Same as *A., rheumatic.*

A., asthenic. (*Ἀσθενικός*, weakly.) Term formerly employed to designate apoplexy resulting from depression, exhaustion, or abolition of the vital influence bestowed on the encephalic organs, occasionally giving rise to hæmorrhage or to congestion of the cerebral vessels, and effusion of serum. (Copland.)

A., capillary. (*Capillary*, the blood-vessels of that name; *G. capillären Apoplexie.*) Minute clots of blood, resulting from rupture of, and very slight hæmorrhagic effusion from, the capillaries of the brain substance. A condition of this kind has been supposed to be the cause of certain forms of chorea.

A., choroid. (*Choroid*, the membrane of the eye of that name.) Hæmorrhage from the choroidal vessels. It may be the result of a wound or blow, or of congestion of the choroidal vessels from intraocular disease, or from severe use of the eye; and it may occur on either side of the choroid; if at all extensive from the inner surface, it may produce detachment or destruction of the retina; in process of time the blood is absorbed. At first the extravasated patches are seen by the ophthalmoscope as reddish unstriated patches, with non-serrated edges, which become paler as they undergo absorption, and surrounded by pigment granules. The treatment advised is rest and quiet.

A., choroidal. (*F. apoplexie choroidienne.*) Effusion of blood into, or on the surface of, the choroid membrane of the eye. Same as *A., choroid.*

A., complicated. (*L. complicatus*, part of *complicis*, to fold together.) Apoplexy supervening at the period of invasion, or during the advanced stages, of febrile diseases, of an asthenic or adynamic type. (Copland.)

A., congestive. (*L. congestio*, a heaping up; from *congero*, to bring together.) Term formerly employed to designate apoplexy resulting from obstructed return of blood from the head, and frequently from the metastasis of gout, rheumatism, or eruptive diseases.

A., consecutive. (*L. consecutio*, a consequence; from *consequor*, to follow after.) Apoplexy caused by other diseases, as when it follows suppressed hæmorrhoids or epistaxis, the healing up of chronic ulcers, unusual continence and suppression of the menses or lochia.

A., cutaneous. (*L. cutis*, the skin. *F. apoplexie cutanée.*) A term employed by certain French writers for a great and sudden determination of blood to the skin and adjacent cellular membrane.

A., embolic. (*Εμβόλισμα*, a patch; *embolism*.) Apoplexy resulting from plugging of the cerebral arteries by a portion of detached blood clot.

A., gouty. Apoplectic symptoms arising from a gouty condition of body.

A., heat. A synonym of *Sunstroke*.

A., hepatic. (*L. hepaticus*, one diseased

in the liver.) Circumscribed effusion of blood into the substance of the liver.

A., interlobular. A form of *Pulmonary apoplexy*.

A., intrameningeal. (*L. intra*, within; *μήνιν*, a membrane.) Apoplexy depending on a clot of blood, or on serous effusion, between the membranes of the brain.

A., meningeal. (*Μήνινξ*, a membrane. *F. apoplexie méningée.*) Apoplexy resulting from a clot of blood, or serous effusion, in the membranes of the brain. It may be the result of external injury. See *Cerebral hæmorrhage*.

A., metastatic. (*Μετάστασις*, a removal; from *μετίστημι*, to set loose.) Apoplexy occurring as the result of a sudden shifting of the congestion accompanying a gouty attack.

A., nervous. (*F. apoplexie nervus.*) A synonym of *A., simple*. See *Apoplexia nervosa* and *A., asthenic*.

A. of heart. Hæmorrhage into the muscular structure of the heart.

A. of liver. Extravasation of blood into the substance, or under the capsule, of the liver.

A. of lung. See *Pulmonary apoplexy*.

A. of retina. See *A., retinal*.

A. of spinal cord. Hæmorrhage into the substance of the spinal cord, producing paralysis and anæsthesia of the parts supplied by nerves arising from the cord below the injured spot. It is a rare occurrence, except as a result of injury.

A. of spinal meninges. Hæmorrhage into the membranes of the spinal cord, producing violent convulsions; a very rare condition, except as a result of injury.

A., ovarian. Effusion, more or less rapid, of blood into the ovarian tissue, from rupture of a blood-vessel; sometimes the amount is so large that the tunica albuginea is ruptured, and pelvic hæmatocoele results. The symptoms are very obscure; there is usually local pain, great exhaustion or collapse, and vomiting; peritonitis is not an uncommon sequel.

It has also been used as a synonym of *Hæmatocoele, pelvic*.

A., placental. (*F. apoplexie placentaire.*) A term employed by Cruveilhier to indicate hæmorrhage into the substance of the placenta. It may result from syphilitic disease, or from torsion of the umbilical cord, or from uterine congestion, or from violence.

A., pulmonary. (*L. pulmonarius*, belonging to the lungs. *F. apoplexie pulmonaire*; *G. Apoplexie der Lungen.*) A term for extravasation of blood in the lungs from the rupture of vessels. See *Pulmonary apoplexy*.

A., renal. (*L. renalis*, belonging to *ren*, the kidney.) A term formerly used to signify hæmorrhage into the substance of the kidney.

A., retinal. (*Retina*, the membrane of the eye so called.) Effusion of blood into the retina from rupture of its vessels. The clots are usually striated with irregular edges; which form is determined by the course of the nerve-fibres, between which the blood runs. It is generally accompanied by, or is the result of, disease of the coats of the blood-vessels, and is regarded as often a premonitory sign of cerebral hæmorrhage. It is a disease specially of advanced life.

A., rheumatic. (*F. apoplexie rheumaticale.*) The stupor or coma resulting from meningitis occurring during the course of acute rheumatism.

APOPNUEBIS—APOKEPIDIN.

A., sanguineous. (L. *sanguineus*, of blood. *F. apoplexie sanguine*.) Apoplexy resulting from extravasation of blood in some part within the cranium. See *Cerebral hemorrhage*.

A., serous. (L. *serum*, the watery part of anything, especially of the blood. *F. apoplexie serena*.) A term given to those cases of apoplexy in which there is considerable serous effusion into the ventricles of the brain. Some authors deny the existence of such a disease, and there seems no reason to doubt that a large number of cases thus described are cases of aramie coma.

A., simple. Apoplexy resulting, doubtless, from hyperemia, but which, if it destroy life, leaves no visible morbid change. These cases are said to be distinguished by the general slowness of onset, by the absence of rigidity of muscles and convulsion, by the quickness of the pulse, and by the steady rise of temperature from the commencement of the attack.

A., splenic. (*F. apoplexie de la rate*.) A term signifying hemorrhage into the tissue of the spleen. See *Splenic apoplexy*.

A., subconjunctival. Subconjunctival effusion of blood from rupture of a blood-vessel, produced by a blow or straining, as in coughing or labour, or apparently spontaneously. Cold lotions, or dilute arsenic solution, or black bryony poultices, are recommended.

A., subretinal. (*F. apoplexie sous-retinienne*.) Effusion of blood under the retina.

A., toxic. (*Toxide*, belonging to a bow, and so the poison for smearing arrows with.) Apoplexy resulting from the action of narcotic poisons or mephitic gases. (Copland.)

A., traumatic. (*Tpaumatiás*, belonging to wounds.) Apoplexy resulting from external injury.

Apnoea. (*Ἀπνοία*, to breathe forth. *G. Ausathmen*.) A breathing out, expiration.

Apnoxia. (*Ἀπνομία*; from *ἀπνο*, to strangle or suffocate. *F. apnoxiæ*; *G. Erstickung*.) The term is used by Moschion, *de Morb. Mul.* c. 127, with the epithet *τῆς μήτρας*, for suffocation of the womb.

Apnoë. (*Ἀπνοή*, from *ἀπνέω*, away; *πνέω*, to breathe.) Expiration.

Apnoea. Same as *Apnoë*.

Apnochia. (*Ἀπνοχία*; from *ἀπνέω*, from; *ψυχή*, breath, the soul. *F. apnochia*; *G. tiefs Ohnmacht*.) Old term, used by Galen, iii, in i, *Præf.* 20, for complete syncope; also spells *Apnochia*.

Apoptosis. (*Ἀποπτις*, to fall down.) A relaxation of bandages. (Dunglison.)

Aporé. (*Ἀπόρῃ*, from *ἀπορίω*, resin.) A black resinous body obtained, together with phaeoretin and erythoretin, by precipitating alcoholic solution of extract of rhubarb with ether.

Aporia. (*Ἀ, neg*; *πόρος*, a passage.) Indisposition or uneasiness, caused by arrest of perspiration or other natural secretion. (Parr.)

A., a doubtful disease.

Aporobrachia. (*Ἀπορος*, without passage; *ἀπρύχια*, gills.) Applied by Blainville to an Order of *Pteropoda* having the organs of respiration slightly evident. Synonymous with *Pteropoda*.

Aporobrachium. (Same etymon.) Applied by Latreille to an Order of *Arachnides*, having no apparent stigmata on the surface of the body.

Aporocephala. (*Ἀπορος*; *κεφαλή*, the

head.) Applied by Blainville to an Order of *Subannulidaria*, the head of which is not always distinct or separate from the body.

Aporosa. (*Ἀ, neg*; *πόρος*, a passage, a pore.) A Suborder or Group of the Order *Sclerodermata*, Subclass *Zootharia*. Corals having the corallum imperforate; septa constituting solid plates; these generally without apertures. It includes the higher living corals. Fossil members of the group are found most freely in the mesozoic and kainozoic deposits.

By some described as a Group of the Suborder *Madreporaria*, Order *Zootharia*.

Aporrhæia. (*Ἀπορρηία*, a kind of Murex, from *ἀπρῃ*, from; *ῥία*, to flow.) Spout shells. A Family of the Group *Teniochæa*, Section *Ctenobranchia*, Order *Proconchæa*. Molluscs with a simple triangular foot, an enlarged external border, and a short canal.

Aporrhætin. The same as *Aporrin*.

Aporrhinosis. (*Ἀπόρρησις*, from; *ῥίσις*, the nose. *F. aporrhinosis*; *L. aporrhinosis*; *G. Nasenfluss*.) An effluvia or discharge from the nostrils.

Aporrhipsis. (*Ἀπορρηψις*, a throwing off.) A precipitate throwing off the clothes, as in a state of delirium. *Hippoc. de Rat. Vir.*

Aporrhoe. (*Ἀπορροή*, an exhalation.) Same meaning as *Aporrhæia*.

Aporrhæa. (*Ἀπορρηία*, an exhalation; from *ἀπρῃ*, to flow from. *G. Ausfluss, Abfluss*.) Term for a merbid expulsion, as of the faeces or excrements; also, for contagion, effluvia, or miasm.

Old term for *Defluvium capillorum*, or falling of the hair, according to Moschion.

Aporrhæia. (*Ἀπόρρησις*, *G. Fortwähnung*.) A passing into serum.

Aporrhæia. (*Ἀπορρησις*.) Same as *Aporrhæia*.

Aporry. Same etymon and meaning as *Aporia*.

Apocoma. (*Ἀποκόμα*; from *ἀποκύνω*, to recline upon, to settle.) Term used by Galen, *ad Glauco* ii, 7, for a translation of the humours from one part to another.

The transmutation or transit of a disease by metastasis.

Term formerly used for the excrements or waste matters of the body, which are deposited in the belly or in the body generally.

Apocoma. Same as *Apocoma*.

Apoccephalus. (*Ἀποκεφαλή*, a hewing off with a hatchet. *G. Abhiel*.) Old term for a wound or fracture of the cranium or of any other bone, from which a fragment has been struck off by some sharp instrument. (Gerrens.)

Apoccephalus. (*Ἀποκεφαλή*, to fall down upon, to settle.) Old term, nearly synonymous with *Apocoma*; also, an eruption.

Apoccephalus. (*Ἀποκεφαλή*, a slight cutting, from *ἀποκεῖν*, to scarify.) Old term employed by Hippocrates, *Epist.* xvi, 12, xvi, 1, &c., for scarification, or slight incision, of the skin; also, for resection.

Apoccephalus. (*F. apoccephalus*; *G. Schuppen, Aderlaase*.) Same derivation and meaning as *Apoccephalus*.

Apoccephalus. (*Ἀπόρρησις*, away from; *apal*.) Term applied to the flower of an *Angiosperm* when the leaves of the perianth whorl are not coherent.

Apocephid. (*Ἀπόρρησις*, from; *κεφαλή*, the

APOSEPSIA—APOSTEMATOUS.

putridity. G. *Käsefäulnisstoff*.) Impure leucine obtained from the putrefaction of cheese.

Aposepsia. (Ἀπόσῃσις, a rotting. F. *aposepsis*.) Putrefaction; fermentation.

Aposia. (A, neg.; πόσις, a drinking; from πῖσις, to drink. F. *aposis*; G. *Durstmangel*, *Durstlosigkeit*.) Term for the want or absence of thirst.

Apositia. (Ἀποσιτία; from ἀπό, from; σῖτος, food. F. *apositie*; I. *apozitia*; G. *Widerwillen für Speisen*.) Old term, used by Galen, C. i, in. i, *Epid.* t. 29, for abstinence from, or a loathing of, food, and so to be distinguished from anorexia, which is rather a distaste for food, or want of appetite, without necessarily involving any degree of loathing.

Apositic. (Same etymon. F. *apositique*.) Of, or belonging to, apositia; applied to medicines, or other substances, which cause a loathing for food.

Aposmilena'sia. (Ἀποσμιλέω, to plane or shave off. G. *Abmeiseln*.) The chiselling off, as the joint end of a bone.

Aposorbic acid. (F. *acide aposorbique*; G. *Aposorbinsäure*.) $C_5H_8O_7$. A dibasic pentatomic acid of the methane derivatives; the only one known. It is produced, along with tartaric and paratartaric acids, by oxidizing *Sorbin* by means of nitric acid; it crystallises in colourless, acute rhombohedral laminae, easily soluble in water; it decomposes at 110° C. (230° F.)

Apospasma. (Ἀπόσπασμα; from ἀποσπάω, to draw from.) Term used by Galen, *de Constit. Art.* c. vi, *de Diff. Morb.* c. ii, for a solution of continuity, particularly in divided tendons, the separated parts of which recede from each other.

Also, applied to metallic products, such as Tutia, Misyr.

Apospas'mus. (Ἀποσπάω, to draw from. G. *Abtrennung*, *Losreissung*.) Tearing away or severing.

Apospastic. (Same etymon. F. *apospastique*; G. *wegreisend*, *wegziehend*.) Having the power of drawing from; derivative; revulsory; applied to remedies.

Aposphacel'isis. (Ἀποσφακέλισις; from ἀποσφακέλιζω, to have one's limbs frost-bitten or mortified. G. *Brandigwerden*.) Term used by Hippocrates, *de Artic.* iv, 35, for the mortification of flesh in cases of wounds or fractures, induced by too tight bandaging.

Aposphacelis'mus. Same etymon and meaning as *Aposphacelisis*.

Aposphag'ma. (Ἀποσφάγω, to cut the throat.) The blood of an animal when mixed with other ingredients for food.

Also, a term for the faeces when strained through the anus. (Parr.)

Aposphinx'is. (Ἀποσφίγγις, constriction.) The action of a tight bandage.

Also (ἀπό, neg.; σφίγγω, to bind), the easing of a bandage. (Crabb.)

Aposphongis'mus. (Ἀποσπογγισμός, a wiping away, as with a sponge; from ἀπό, away; σφόνγγος, a spongy substance.) Cleansing a wound or ulcer with a fungus, or sponge.

Apospongis'mus. (Same etymon.) Wiping off with a sponge, or fungus.

Apostacie'æ. The same as *Apostasiaceæ*.

Apostag'ma. (Ἀπόσταγμα, that which trickles down.) The must of the grape before fermentation.

Apostalag'ma. (Ἀποστάλαγμα, that which trickles down, from ἀπό, away; σταλάσσω, to drop.) Must; the unfermented juice of the grape.

Apostasis'ceæ. (Ἀπόστασις, a standing away from.) An Order of Subclass *Petaloides epigynæ*, Class *Monocotyledones*. Perennial herbaceous plants, with regular hermaphrodite flowers in simple or compound terminal racemes; calyx and corolla each consisting of three similar pieces; stamens 2 or 3, sessile on a short column, consisting of the lower part of the style and the filaments; ovary inferior, 3-celled; placenta axile; capsule 3-celled, 3-valved.

Apostasis. (Ἀπόστασις; from ἀφίστημι, to put away. F. *apostase*; I. *apostasi*.) Term used by Hippocrates, *de Fract.* iii, 17, 20, for the resolution of a disease by excretion, that is, in modern phrase, by a critical discharge. Applied generally to an abscess; also, more specially to an abscess arising from metastasis without previous inflammation in the part where it forms; it was likewise applied to the separation of a fragment of bone.

In Botany, used to denote the separation from each other of whorls by the increased size of internodes.

Apostar'is. (Ἀπόστασις; from ἀποσάω, to let fall drop by drop.) Ancient term for a distillation or dropping, small and inconsiderable, of blood from the nostrils.

Also, a distillation or defluxion of humours.

Apostema. (Ἀπόστημα; from ἀφίστημι, to put away. F. *apostème*; G. *Apostem*, *Geschwür*, *Eiterbeule*, *Eitergeschwür*.) Ancient term for an abscess, or any considerable swelling caused by an afflux of humours of whatever kind; now, however, it is limited to the former.

A. cerebri. (L. *cerebrum*, the brain.) Abscess in the brain.

A. empye'ma. (Ἐμπύημα, suppuration, especially internal.) A synonym of *Empyoma*.

A. paralis. (Παροῦλις, a gumboil.) An abscess of the gums.

A. phalan'gum. (Φάλαγξ, a line of battle, a finger-bone.) A small abscess forming on the finger.

A. psost'icum. (Ψόαι, the muscles of the loins.) Psoas abscess.

Apostema'cion. The same etymon and meaning as *Apostematium*.

Apost'ematē. (Same etymon.) To form an aposteme; to suppurate.

Apostema'tiæ. (Ἀποστηματίαι.) Those who discharge pus by the rectum.

Apostemat'ic. (Ἀπόστημα, a large, deep-seated abscess. F. *apostématique*.) Relating to an *apostema*.

A. pharyng'itis. (F. *pharyngite apostématique*.) A synonym of *Abscess, retropharyngeal*.

Apostema'tion. (Ἀπόστημα, an abscess.) The process of formation of an aposteme or abscess.

Apostema'tium. (Ἀποστημάτιον, dim. of ἀπόστημα.) A little abscess.

Apostematoid'es. (Ἀποστηματοειδές, of the nature of an abscess. F. *apostematoides*; G. *eiterbeulenartig*.) Resembling an *apostema*. Having, or full of, abscesses.

Apostematophth'isis. (Ἀποστημα φθίσις.) Term for tabes or consumption arising from apostems or abscesses.

Apostem'atous. (Ἀπόστημα, an ab-

APOSTEME—APOTHECIUM.

acosa.) Pertaining to, or resembling, an aposteme or abscess.

Aposteme. An *Apostema*.

Apostergma. (Ἀποστέρημα, a support, a determination, as of humours; from ἀποστέρω, to fix firmly, to settle. *F. apostèrigma.*) A fulcrum or prop. A term used by Galen, *Comm. iii. de iis qua in Medic. 36*, for a cushion, pad, or other soft support for a diseased limb or part; also used by some for pains in the bowels and for a fixed and inveterate disease.

Apos'thia. (Ἀ, neg.; πόσθη, the penis, the prepuce.) The state of a man without a penis, or without prepuce.

Apo'sthume. Same etymon and meaning as *Apostema*.

Apos'tola. (*F. apostolè.*) Generic name of extracts.

Apostolorum unguen'tum. (Ἀπόστολος, a messenger; *L. unguentum*, ointment.) The Ointment of the Apostles; a term for a preparation consisting of twelve ingredients and a little oil and vinegar; formerly used as detergent; otherwise called *Dodecapharmicum*.

One formula was Venice turpentine, yellow resin, yellow wax, ammoniacum, of each 3xiv; aristolochia root, olibanum, bdellium, of each 3vj; myrrh, galbanum, of each 3iv; oporonax, 3iij; verdigris, 3ij; litharge, 3ix; olive oil, lb.ij; vinegar, a sufficient quantity.

Apos'tracos. (Ἀποστρακόσαι, to become dry.) An epithet applied to a thoroughly dry bone.

Apos'trophe. (Ἀποστροφή; from ἀποστρίφω, to turn from. *F. apostrophe*; *Ekel vor Speisen.*) A term used by Paulus Ægineta, iii, 31, for an aversion to, or loathing of, food.

Also, in Botany, the crowding together of granules on the adjoining walls of cells.

Apo'stume. Same etymon and meaning as *Apostema*.

Also, used as a verb.

Aposu'ra. (Ἀπό, away; ποῦς, a foot; οὐρά, a tail. *F. aposura.*) Applied by Cuvier to a Tribe of *Lepidoptera*, the caterpillars of which have no anal pro-legs.

Aposyring'esis. (Ἀπό, from; σύριγξ, a pipe. *F. aposyringose*; *G. Fistelbildung.*) The formation or progress of fistula.

Aposyr'ma. (Ἀπόσυρμα; from ἀποσῶ, to lay bare. *F. aposyrma*; *I. aposirma*; *G. Abgeschabte.*) Term used by Hippocrates, *de Hum. us. V. 20*, for an abrasion and laceration of the cutis, according to Castellus.

Apot'ecary. An old spelling of *Apothecary*.

Apoteles'ma. (Ἀποτελεσμα, completion. *G. Vollendung.*) The result or termination of a disease.

Apotex'is. (Ἀποτήξις, a melting away; from ἀποτίκω, to pine away. *G. Wegschmelzen, Auszehrung.*) A melting away; used for phthisis and tabes.

Apothana'sia. (Ἀποθνήσκειν, to be ready to die. *G. collige Absterben, unzweifelhafte Tod.*) Actual death.

Apothe'ca. (Ἀποθήκη a storehouse. *G. Arzneiladen, Apotheke.*) A shop where medicines are sold.

Apothecaries' Company. This Company obtained its Charter of Incorporation in the 16th year of James I. Their arms are—*argent*, Apollo, armed with a bow and arrow, bestriding a Python; their supporters two Uni-

corns; and the crest a Rhinoceros, surmounting a torse and helmet. The motto, "Opiferque per orbem deor."

A. mea'sure. m60 = f51; m480 = f38 = f31; m7680 = f3128 = f316 = 01; m61,440 = f31024 = f3128 = 08 = Cong. 1; 31 = '2256 cubic inch.

A. weight. Gr. 20 = 31; gr. 60 = 93 = 31; gr. 480 = 924 = 38 = 31; gr. 5760 = 9288 = 396 = 312 = lb 1.

Apoth'ecary. (Ἀποθήκη, a repository, shop, or store. *F. apothicaire*; *G. Apotheker, Arznei-bereiter.*) A compounder and dispenser of drugs; also one who dispenses drugs for patients whom he himself visits; in this sense the word has very generally been replaced by the term General Practitioner, although this latter by no means necessarily implies the supply of drugs to his own patients; a member of the Apothecaries' Society of London. The word *Apotheca* was first received, it is believed, into the medical language of the continent, as indicating a shop, warehouse, or cellar where medicines, simple and compound, were prepared and kept for sale, from whence the possessors of these shops came to be called *Apothecarii*, although previously the name *Apotheca* signified a wine-cellar. Its original signification was simply a store, magazine, or warehouse of any kind, and the proprietors of such were styled *Apothecarii*, without particular reference to the *Pigmentarii* (sellers of paints), *Seplasiarii* (sellers of powders and ointments), *Pharmacopole* (quacks, or mountebanks), or the *Medicamentarii* (sellers of medicines), of the Romans.

Apothe'cium. (Ἀποθήκη, a store, a case. *F. apothécie*; *G. Sporenlager.*) Term applied to the fructification of those Lichens which develop their spores in the interior of thecae; as a rule, the apothecia are situated on the upper surface of the thallus, but occasionally on the lower surface, or more or less embedded in its substance, the ostiole or epithecium then traversing and opening on the surface. Apothecia present themselves under two principal forms—discs in the *Lichenes discocarpi*, and spheroidal bodies in the *Lichenes pyrenocarpi*. Apothecia present three parts—the conceptacle, which either constitutes the inferior layer, when it is known as the hypothecium, or surrounds the organ, when it is termed the margo proprius, or perithecium; the thalamium, which constitutes the middle layer, and is generally formed of distinct paraphyses; and the thecae, asci, or sporangia, which are small sacs or cysts, situated in the thalamium between the paraphyses, and which contain the spores. The term epithecium is applied to the superficial layer of the apothecium, not always visible; that of thecium, or hymenium, to the middle layer of paraphyses and thecae together; and hypothecium, to the inferior or conceptacula layer.

A. lecanor'ium. Also called *Scutellum*. A form of discoid apothecium which is enclosed in a border formed by the thallus, as in *Lecanora*. The thallus sometimes, as in *Parmelia*, projects from the surface and forms a kind of capsule, named the receptaculum, for the apothecium.

A. lecid'e'num. A form of discoid apothecium of which the border is formed by the peripheric part or perithecium of the conceptacle, and which is not surrounded by a thalline border.

A. lirell'i'num. A form of discoid apothecium resembling the *A. lecid'e'num*, but of irregular form, usually elongated or branched.

APOZEME—APPARATUS.

Codex. (*L. cortex, bark; radix, root.* *F. apozème d'écorce de racine de grenadier.*) Apozema of the bark of pomegranate root. Dry bruised pomegranate-root bark 60 parts, water 750; macerate for two hours, then boil down to two thirds; strain.

A. de couso. *Fr. Codex.* (*F. apozème de couso.*) Apozema of kouso. Kouso in coarse powder 20 grms., boiling water 150; mix the powder in the boiling water, and administer without straining. Used in tape-worm.

A. helvetica. (*L. helveticus, belonging to Switzerland. F. apozème Suisse.*) Fennel water 50 grms., fresh urine of the cow 700. Even now used in dropsy and liver diseases.

A. laxativum. *Fr. Codex.* (*F. tisane royale.*) Laxative apozema. Senna leaves 15 parts, sulphate of soda 15, aniseed 5, coriander seed 5, fresh leaves of parsley 15, one sliced lemon, water 1000; macerate for twenty-four hours, strain with expression, and filter.

A. purgans. *Fr. Codex.* (*L. purgo, to purge. F. apozème purgatif, médecine noire.*) Purgative apozema. Senna leaves 10 parts, sulphate of soda 15, rhubarb 5, manna 60, boiling water 120. Infuse the senna and rhubarb in the water for half an hour; strain and express; dissolve the soda and manna, leave to settle, and decant.

A. sarsaparillæ compos'itum. *Fr. Codex. (F. tisane de Feltz.)* Compound apozema of sarsaparilla. Sliced sarsaparilla 60 grms.,isinglass 10, sulphuret of antimony 80, water 1000. Boil the antimony in a bag for an hour in two litres of water; reject the liquid; put the bag containing the sulphuret with the sarsaparilla and the isinglass into two other litres of water; boil gently till it is reduced to one half, strain, leave to settle, and decant. Dose, 6—8 oz. daily.

A. sudatorium. *Fr. Codex.* (*L. sudatorium, serving for sweating. F. apozème sudorifique.*) Sudorific apozema. Guaiacum wood, rasped, 60 grms., sliced sarsaparilla 30, sassafras root 10, liquorice root 20. Boil the guaiacum and sarsaparilla in sufficient water for an hour; add the sassafras and liquorice, infuse for two hours, strain, leave to settle, and decant. The resultant should amount to one litre.

A. Sydenham'i. See *Decoctum album Sydenhami.*

A. vermifugum. (*L. vermis, a worm; fuge, to put to flight. F. apozème vermifuge.*) A synonym of *A. de cortice radice punice.*

Apozeme. (Same etymon.) A decoction.

Apozësis. (Same etymon.) A decoction.

Apozymus. (*Ἀπόζυμος, in a state of fermentation.*) Swelling by fermentation; used by Hippocrates.

Apparatus. (*L. apparatus; from appare, to arrange, or prepare. F. appareil; G. Gerüthchaft, Zurüstung.*) A term for the instruments, utensils, and mechanical arrangements used in experimenting or operating in any of the branches of science or art.

The word is also used in the sense of the manner of operating, especially in regard to lithotomy.

It is also applied to the system of organs which are combined to effect a common purpose, or by the combined and consecutive agency of which a special result is produced, as the digestive apparatus.

A., Amesbury's. See *Amesbury's apparatus.*

A., Bartruff's. An apparatus for charging water with carbonic acid gas by the intermittent or interrupted method.

A., Baudouin's. This was the same as *A., Seutin's*, except that he substituted a solution of gum arabic for starch paste.

A., Bérat's. An apparatus used in Pharmacy for effecting lixiviation, consisting of a cylinder terminating below in a cone, the narrow part of which has a stopcock, by which the flow of fluid through any substance placed on a diaphragm in the cylinder can be regulated. The passage of the fluid is aided by a force-pump.

A., Beyer's. An apparatus for the reduction of fractures of the humerus. Extension being made, a roller bandage was first applied as far as the axilla. Four splints were then adjusted to the arm, the internal one being sometimes omitted in thin people, on account of the pain given by its pressure on the nerves and vessels, and these were kept in position by a spiral bandage.

A., Bo'sman's. A framework having a support for the shoulders and head, and splints for the leg and thigh, whereby a female may be kept in what is called the knee-elbow position for the performance of operations through the vagina.

A., Bra'mah's. An apparatus for charging water with carbonic acid gas by the continuous method.

A., Burg'grave's. The same as that of Seutin, except that a thick uniform layer of wool was placed round the limb before the application of the starched roller.

A., Carro's. A machine for making ice by the evaporation of ether.

A., Casan'bon's. An apparatus for charging water with carbonic acid gas by the intermittent method.

A., continuous extension. Apparatus with this end in view is adopted in the treatment of fractures and deformities, and must vary both in the material employed and in the mode of application in every instance. The most common means are, the firm application of a splint to one part of a limb, which is then extended and kept in position by counter-extension from some other part of the body, as in Desault's method of treating fractures of the thigh; the application of a weight attached to a cord passing over a pulley, and firmly connected with a bandage surrounding the limb; india-rubber bands attached, on the one hand, to some fixed point, and on the other, to the bandage around the limb; and lastly, the pressure which can be exerted by screws acting on splints accurately adapted to the limb.

A., filamentous. (*Low L. filamentum; from L. filum, a thread.*) A term applied in Botany to a peculiar formation of frequent, but not constant, occurrence in Monocotyledons, which develops at the upper extremity of the embryonic vesicle a short time before fecundation occurs. When this organ is about to appear, the contents of the upper part of the vesicle become granular, and the granules assume a radiated disposition and filamentous aspect. They do not contract when treated with calcium chloride, like protoplasm, but become blue with odine.

A., Gens'ves. An apparatus for charging water with carbonic acid gas by the interrupted or intermittent method.

A., immovable. A term for a plaster-of-

APPARATUS ALTUS.

Paris, starch, or gum bandage, or any similar application.

A., Langier's. In this apparatus the rollers employed by Seutin are replaced by strips of brown paper impregnated with starch paste.

A., Larrey's. This was the first attempt to treat injuries, such as fractures, with an immovable apparatus. The bandages were moistened with extract of lead, camphorated alcohol, and white of egg, and this was repeated for several days consecutively.

A., Mathysen Van de Loo's. This is almost identical with that of Seutin, except that liquid plaster of Paris is substituted for starch paste.

A. of Nooth. See *Nooth, apparatus of.*

A. of Woolfe. See *Woolfe, apparatus of.*

A., O'zouf's. An apparatus for charging water with carbonic acid gas by the intermittent method.

A., pneumatic. See *Pneumatic apparatus.*

A., Romershausen's. An apparatus used in pharmacy for lixiviation, and essentially resembling that of Bérall's, except that a displacement cylinder replaces the force-pump.

A., Savarosse's. An apparatus for charging water with carbonic acid gas by the intermittent method.

A., Scultetus's. This apparatus for the treatment of fractures consisted of splints of wood or cardboard, flat or hollowed to suit the conformation of the part, lined by pads to equalise the pressure, with compresses carefully adapted to the limb at the seat of the fracture, a number of strips of linen long enough to pass one and a half times round the limb and applied in an imbricated manner, and the whole invested by a piece of sheeting kept in place by a few threads or narrow ribbon.

A., Seutin's. This apparatus, which Seutin termed *amovo-inamovible*, consisted of a compress, cardboard splints softened in hot water, and bandages impregnated with solution of starch in boiling water. This rapidly hardens and forms a very perfect mould of the limb. After from one to four days, according to the amount of swelling, the apparatus is split from top to bottom, or a window can be made, and the wound be thus inspected. The edges of the mould generally require to be cut away, and the application of another roller impregnated with starch paste renders the whole again solid.

A., urinary. The organs concerned in the secretion and excretion of the urine.

A., Velpeau's. This apparatus resembles Seutin's, except that Velpeau employed dextrin instead of starch. The solution of dextrin is made by mixing 100 parts of dextrin with 60 parts of camphorated brandy to the consistence of honey. To this is added 40 parts of hot water, drop by drop, the mixture being at the same time well shaken.

A., Vernaut's. An apparatus for charging water with carbonic acid gas by the intermittent method.

A., Viel-Cazal's. An apparatus for making aerated waters by what is termed the continuous process.

A., Zenneck's. An apparatus used in pharmacy for lixiviation, and essentially resembling the apparatus of Bérall, except that the

force-pump is replaced by a displacement cylinder.

Apparatus altus. (*L. altus*, high.) A method of performing lithotomy suggested by Peter Francus, a French surgeon, hence sometimes called *Methodus Franconica*. It was performed successfully by Bonetus, and also by Mr. Proby ('*Phil. Trans.*; 1700, p. 455). The instruments required were only a scalpel, a dilator, and forceps. The incision was made in the middle line of the abdomen, just above the pubes; after the bladder had been filled with water, the lips of the wound were separated with a dilator, and the stone removed with forceps.

A. chylicatio'nis. (*L. chyli*, juice, the chyle; *facio*, to make. *G. Verdauungsapparat.*) The alimentary canal with the glands and other organs in immediate connection with it.

A. digestio'nis. (*L. digestio*, the dissolving of food.) The same as *A. chylicatio'nis*.

A. lateralis. (*L. lateralis*, belonging to the side.) The lateral operation of lithotomy.

A. ligamento'sus colli. (*L. ligamentum*, a band; *collum*, the neck.) The occipito-axial ligament.

A. ma'jor. (*L. major*, greater.) A method of performing lithotomy. The following instruments were required:—First, a set of catheters, both cylindrical and grooved; a double-edged lancet-shaped scalpel; two ensiform directors or conductors, one having a beak, and called male, the other being termed female, or a gorgeret, which was a concave or canulated conductor with a beak; forceps of various sizes and forms, straight and curved; a hook; a kind of oblong spoon, furnished with a button, to be used as a probe as well as an extractor; this was sometimes termed a lapidillum or vericulum; lastly, a dilator. The apparatus for dressing was the same as in the apparatus minor. The patient was placed as in the modern operation of lithotomy, a grooved catheter introduced, and a median incision made, of from three to four fingers' breadth, with a scalpel, through all the tissues to the groove in the catheter. The beak of the male conductor was now placed in the groove and pushed into the bladder, followed by the female conductor. The handles of these instruments were separated, and room thus afforded for the extraction of the stone with the aid of the forceps. Some, instead of using the two conductors, employed the gorgeret. The extent of the internal wound differed much with different operators, some, as Tolet, only dividing the urethra, others, as Falconet, Noel, Rosa, and Schaefferus, opening the bladder rather freely.

A. mi'nor. (*L. minor*, less.) A method of performing lithotomy. The instruments required were—a strong, double-edged, lancet-shaped, straight scalpel, the blade about two inches long and one broad, or a razor, a hook resembling a vectis, or a pair of pliers, and a pair of forceps, bent needles and thread; in addition, a T-bandage, a thick and square compress, some scraped lint and styptic powder, or rectified spirit, were kept at hand. The patient was placed in the ordinary position. The oiled forefinger of one hand of the surgeon was introduced into the anus, whilst with the other hand pressure was made on the lower part of the belly. The stone being felt, it was pushed with the finger to the left side of the perinæum till it formed a visible

APPENDICES EPIPLOICÆ—APPENDIX.

tumour, when an incision was made and its removal effected.

Appendices epiploicæ. (L. *appendix*, appendage; *επιπλοον*, the membrane enclosing the intestine, the omentum.) Small projections of the serous or peritoneal covering of the large intestine, which enclose a certain amount of fat.

A. coli adipo-sæ. (L. *colon*, the large intestine of that name; *adeps*, fat.) The *A. epiploica*.

A. pinguedino-sæ. (L. *pinguedo*, fatness.) A synonym of the *A. epiploica*.

A. pylor'icæ. Certain cæcal appendages to the pyloric orifices of fishes. See *Cæca*, *pyloric*.

Appendic'iform. (L. *appendix*; *forma*, likeness. G. *anhangformig*.) Having the appearance of an appendage.

Appendic'ula. (L. *appendicula*, dim. of *appendix*, an appendage.) A little appendage.

A. cer'ebr'i. (L. *cerebrum*, the brain.) The pituitary body.

A. vermiformis cæci. (L. *vermis*, a worm; *forma*, shape; *cæcum*, the intestine of that name.) The *Appendix cæci vermiformis*.

Appendic'ulæ. (Same etymon.) A small appendage. Term applied to the teeth or needles situated at the inferior part of the pileus of Hydnum, and which are covered by the hymenium.

A. epiplo'icæ. (*Επιπλοον*, the omentum.) The *Appendices epiploicæ*.

A. pinguedino-sæ. (L. *pinguedo*, fatness.) The *Appendices epiploicæ*.

Appendic'ular. (Same etymon.) Pertaining to, or of the nature of, an appendage. In Botany, this term is applied to organs growing from, or supported by, axile organs.

A. mus'cles. The muscles of the limbs.

A. skele'ton. The bones of the limbs or appendages, as distinguished from those of the trunk; the axial skeleton.

Appendicula'ria. (L. *appendicula*, a small appendage.) An Order of the Class *Tunicata* or *Ascidioidea*. They are very simple, minute pelagic organisms, which are found in all latitudes, and are propelled, like tadpoles, by the flapping of a long caudal appendage at the surface of the sea. They are oval in form, having a rudimentary branchial sac, a nervous ganglion divisible into three parts, and surmounted by an auditory vesicle; testicles and ovaries, believed by some to be both present in the same individual, have no excretory tube; development unknown. These animals possess the faculty of excreting from the surface of the ectoderm a transparent gelatinous investment.

Appendic'ulate. (Same etymon. G. *beanhangsekt*.) Having little appendages, or appendices. In Botany, a term applied to an organ projecting from the surface of any part, whether this part be axile or appendicular.

Appendic'uli. (Same etymon.) Term employed in Botany to designate the simple or ramified filaments which develop at the base of the conceptacle of Erysiphe.

Appendic'ulum. (Same etymon.) A small appendage, or slightly developed prolongation of any organ.

Appendic'ulus. (Same etymon.) In Botany, this term is applied, in the department of pteridography to the nervure which penetrates into the interior of the areola, and stops at this

point without rejoining the walls. It may either be sterile or fertile.

Appendigaster. (L. *appendix*, an appendage; *γάστηρ*, the belly.) Applied to an insect, because of its long and slender pedicle, which joins the abdomen or corselet, and forms an appendage to the latter.

Append'ix. A thorny plant, probably the *Berberis vulgaris*, or Barberry (Fée), mentioned by Pliny (l. xxiv, c. 70), the red berries of which were used to arrest diarrhoea, and dispel flatulent colic. (Waring.)

Append'ix. (L. *appendix*; from *appendo*, to hang up, to suspend. F. *appendice*; G. *Anhang*, *Anhängel*, *Zusatz*, *Beilage*.) Term for a part of, or addition to, a thing; an appendage.

In Botany, the term is applied to any organ growing from, or supported by, the parts termed axile. Also, to any accessory and projecting part of an organ.

A. ad cer'ebrum. (L. *cerebrum*, the brain.) A term given to the cerebellum.

A. auric'ulæ. The same as *A. auricularis*.

A. auricula'ris. (L. *auricularis*, from *auricula*, the pavilion of the ear. F. *oreillette*; G. *Herzohr*.) The auricular appendage. This is a tongue-shaped process of each auricle of the heart, and is, indeed, itself the true auricle. The right auricular appendage projects from the anterior and upper angle of the right atrium, and passes to the left over the root of the aorta. The left extends forward from the left side of the left atrium, and curves towards the right side, resting on the pulmonary artery; it is longer and narrower than the right. Both present musculi pectinati in their interior.

A. cæci. (L. *cæcum*, the intestine thus named; from *cæcus*, blind.) A synonym of the *Appendix cæci vermiformis*.

A. cæci vermiformis. (L. *cæcum*; *vermis*, a worm; *forma*, shape. F. *appendice vermiforme*; G. *Wurmfortsatz*, *Wurmanhang*.) A slender, round, tapering process given off from the inner and back part of the cæcum. It is usually as thick as a large quill, and varies from three to six inches in length. It runs upwards and inwards between the cæcum, and is retained in position by a small process of the mesentery. It is hollow, and the aperture by which its cavity communicates with the cæcum is narrow, and is sometimes guarded by one, or even two, valvular folds of mucous membrane, which are most distinct in the young. The surface is smooth, the walls are thick, the glands large and compound. It contains meconium in the mature fetus. It is supplied by the ilio-colic artery. It is a rudimentary organ. It is found in man, the anthropoid apes, and some lemurs. Foreign bodies occasionally find entrance there, and setting up inflammation in the appendix and the surrounding connective tissue, frequently produce suppuration, and sometimes death.

A. cer'ebr'i. (L. *cerebrum*, the brain.) The pituitary body.

A. cutanea sep'ti na'rium. (L. *cutis*, the skin; *septum*, a wall; *na'ris*, a nostril.) The cutaneous covering of the lower end of the septum of the nose.

A. ensif'ormis. (L. *ensis*, a sword; *forma*, shape.) The metasternum or ensiform process of the sternum.

A. epidid'y'mis. (*Επιδιδυμίς*, the epi-

APPENZELL—APPLE.

didymis; from *ἐπι*, upon; *διδυμοί*, the testicles.) A synonym of the *Vas aberrans*.

A. glandulæ thyroïdæ. The slender conical process which often rises from the upper surface of the isthmus, or from the neighbouring part of one or other lobe of the thyroid gland.

A. ventriculi. (L. *ventriculus*, the stomach.) A synonym of the *Duodenum*.

A. vermicularis. (L. *vermiculus*, a little worm.) A synonym of the *A. cæci vermiformis*.

A. vermiformis. (L. *vermis*, worm; *forma*, shape. G. *Wurmfortsatz*.) A synonym of the *Appendix cæci vermiformis*.

A. vesicæ. (L. *vesica*, a bladder.) A hernia or protrusion of the mucous lining of the bladder through any weak spot between the muscular bundles; when such protrusions are numerous, the bladder is said to be sacculated.

A. xyphoid. (*Ξίφος*, a sword. F. *appendice xyphoïde*; G. *Schwertfortsatz*.) The sixth segment and lowest part of the sternum. It is cartilaginous up to the age of puberty, but undergoes more or less complete ossification with the advance of age, uniting with the body of the bone at about the 50th year.

Appenzell. Switzerland; a chief town of the Canton of that name; 2400 feet above sea-level. Near by is a mineral water, springing from the marl, and containing calcium and magnesium carbonate, with carbonic acid. It is generally drunk with milk or whey. There is a whey-cure establishment here.

Apperception. (L. *ad*, to; *percipio*, to perceive. F. *apperception*; G. *Anschauung*, *Auffassung*, *Innewerden*.) An effort of the mind by which it considers itself as the subject which perceives or feels any impression. Term, suggested by Leibnitz, to designate perception conjoined with consciousness or with reflection. Perception, he says, is the internal condition of the mind representing external things, and apperception is the reflexive knowledge of this internal state which is not given to all minds, nor to the same mind at all times. It constitutes the essence of thought. Kant accepted the term with the same interpretation. According to him, our various representations, the intentions, or different impressions, made upon our sensibility would not exist for us without another element, which gives them unity and makes them an object of understanding. This element, which we express by the term "I think," is apperception. When this faculty is exerted on the impressions received by the sensory nerves, it is termed empirical apperception; when it is directed to the processes of thought without external excitation, it is termed pure apperception. There is a great difference, however, between Leibnitz and Kant in regard to the nature and origin of apperception. The former does not hold it to be any special faculty, but only perception in its most perfect and exalted state, illuminating at one and the same time the ego and external objects. The latter considers it to be completely distinct from sensibility, and to be the fundamental act of thought only representing itself, and leaving us in complete ignorance of the reality of the ego and of external objects considered as substances. Maine de Beron terms the conscience immediate internal apperception. (Franck.)

Appetence. (L. *appeto*, to desire. F. *appetence*; I. *appetenza*; S. *apetencia*; G. *Natur-*

trieb.) A desire leading to the fulfilment or gratification of a natural function. The natural desire of organised beings to obtain sustenance.

Appetency. (L. *appeto*, to desire. G. *Begierde*, *Naturtrieb*.) Ardent and passionate desire for some object.

Appetite. (L. *appetitus*; from *appeto*, to desire. F. *appétit*; G. *Gelüst*, *Esslust*.) The natural desire for food at the proper time, and in moderate quantity.

Also, any natural inclination, or affection, of the mind by which we are incited to act; inordinate desire; lust.

A., caninæ. (L. *canis*, a dog.) A term for the disease *Bulimia*.

A., depraved. (F. *appétit dépravé*.) A term applied to the disease *Pica*.

A., insatiable. (F. *appétit insatiable*.) A term for the disease *Bulimia*.

A., loss of. See *Anepithymia*.

A., morbid. Term for any deviation from the natural appetite caused by a diseased condition of the digestive organs.

A., venereal. (L. *venereus*, of, or belonging to, Venus.) The natural desire for sexual intercourse.

A., voracious. Another term for the disease *Bulimia*.

Appetitive. (Same etymon; G. *begehrend*.) Causing desire.

Appétits. (Fr.) In authors of the Renaissance period this name was sometimes given to shallots, because they sharpen the appetite.

Appétitus. (L. *appetitus*; from *appeto*, to desire.) A passionate longing; an eager desire; an appetite.

A. caninus. (L. *caninus*, belonging to a dog.) A term for *Bulimia*.

A. deficiens. (L. *deficio*, to fail.) Bad appetite for food.

Appanate. (L. *ad*, to; *plano*, to make level.) An organ which is flattened on the surface; extended horizontally.

Apple. (Sax. *æpl*, *apl*, probably from the root of ball. G. *Apfel*; *μήλον*; L. *malum*; F. *pomme*; I. *mela*, *pomo*; S. *manzana*, *pomo*.) The fruit of the *Pyrus malus* and its varieties. According to Fresenius, 100 parts contain 85 of water, 7.58 of sugar, 2.7 of pectous substances, and 1.04 of free acid. Apples are used raw and cooked, and the fermented juice furnishes cider. Roasted apples are slightly laxative.

A., Adam's. The *Pomum Adami* of the thyroid cartilage.

A., alligator. An austere, narcotic fruit, yielded by the *Anona palustris*.

A., amorous. The fruit of the tomato, *Lycopersicon esculentum*.

A., balsam. The fruit of *Momordica balsamina*.

A., bitter. The *Citrullus colocynthis*.

A., curassoa. Immature oranges, the fruit of *Citrus aurantium*, or *C. bigaradia*; either plucked when they are of the size of a cherry or less, or having fallen off the tree when about that size. A stomachic tincture is made from them, and they are used, when small, as issue peas.

A., custard, netted. The succulent and edible fruit of *Anona reticulata*.

A., Dead Sea. The galls of the *Quercus infectoria*; also called Mecca galls.

A., egg. The succulent fruit of *Solanum melongena*, the aubergine.

APPLES, ACID OF—APRICOT.

A. essence. An alcoholic solution of valerianate of amylic ether; used as a flavouring.

A. eye. A term for *Exophthalmia*.

A., golden. The fruit of the tomato, *Lycopersicum esculentum*.

A., Indian elephant. The edible fruit of *Feronia elephantum*.

A., Kan. The edible fruit of the *Euclea ovata*.

A., kangaroo. The edible fruit of *Solanum laciniatum*.

A., love. The tomato; the fruit of the *Lycopersicum esculentum*.

A., mad. The fruit of *Solanum melongena*. Also, a term for Mecca galls.

A., Malay. The edible fruit of *Jambosa malaccensis*.

A., marvellous. The edible fruit of *Luffa acutangula*.

A., May. The *Podophyllum peltatum*.

A. of eye. A term for the pupil of the eye.

A. of Peru. The *Datura stramonium*.

A. of Sodom. A name of Mecca galls.

A., Otahetite. The edible fruit of *Spondias dulcis*.

A., rage. The edible fruit of *Solanum melongena*; the egg apple.

A. root. The *Euphorbia corollata*.

A., service. The fruit of the *Pyrus domestica*.

A. tea. Two or three apples sliced and infused for an hour in boiling water. A pleasant refreshing drink in febrile conditions, with or without a little sugar.

A. tree. The *Pyrus malus* and its cultivated varieties.

A. whisky. A spirit distilled from cider.

Apples, acid of. Malic acid.

Applicate. (L. *applico*, to apply to. F. *appliqué*; G. *aneinandergelehnt, anliegend*.) Applied to parts placed one against another, but without adhering together.

In Botany, applied to leaves which, in growing, remain in contact with the stem.

Application. (L. *applicatio*; from *ap- plico*, to lay unto. F. *application*; G. *Auflegung*.) Used as a term for remedial agents employed externally, as poultices and fomentations.

Used also to describe the act of applying external remedies.

In Botany (G. *Auschluss*), the close approximation of parts.

Applicative. (Same etymon. G. *aneinandergefügt*.) Applied to prefoliation when the leaves are placed face to face, one against the other, without bending in any manner, as those of *Aloe linguiformis*.

Opposite. (L. *appono*, to lay beside. F. *opposé*; G. *nebeneinanderstehend*.) A term in Botany, applied to an organ when it rests against or in contact with another. Thus it is applied to divisions of the anther when dehiscence occurs on the opposite surfaces.

Apposition. (Same etymon.) The act of supplying parts that are wanting, as a wooden leg.

In Botany (G. *Auflagerung*), used to describe growth of cellulose by deposit from without.

Appositional. (Same etymon.) Having nearness of position; used to describe two branches, as of an alga, lying side by side and partially united, so as to look like a compound branch.

Apprehensio. (L. *apprehensio*; from *apprehendo*, to take hold of. F. *apprehension*.) A kind of bandage for securing a part. Also, a therapeutical indication.

A former term for catalepsy, used by P. Zachias, *Quæst. Medico-Leg.* ii, i, q. 15, n. 9, 10.

Appressed. (L. *apprimo*, to press to. G. *angedrückt*.) Near to; pressed close to, but not adherent; approximate.

Appressus. (F. *apprimé*.) A term applied in Botany to hairs which lie at length and in contact with the epidermis from which they grow. Also, to leaves which grow up in contact with the stem.

Approximate. (L. *ad, to*; *proximo*, to approach close to. G. *genähert*.) Near or close to each other, but not united.

A. measurement. See *Measurement, approximate*.

Approximation. (Same etymon.) A name given by Ettmüller to a method of curing disease by bringing the sick person into actual contact with an animal or vegetable, into which the disease passed.

Apractus. (Ἀπρακτος, ineffectual; from ἀπρακτός, to do nothing.) Having no action; applied to the genitals when incapable of generation.

Aprasides. A Family of the Suborder *Cionocrania*, Order *Lacertilia*. Lizards inhabiting Australia, having large fronto-nasal shields, no limbs, and no pre-anal pores; nostrils between the nasal and first labial shields.

Apraxia. (Ἀ, neg.; πρᾶξις, a doing; from πράσσω, to achieve. F. *apraxie*.) A loss of knowledge of the use of things; the mistaking of objects.

Aprication. (L. *apricatio*; from *apricor*, to bask one's self in the sun.) The treatment of sick persons by exposure to the direct rays of the sun.

Apricot. (The whole history of this word points to either Persia or Armenia as the original country of this fruit. The Persian name was equivalent to *yellow plum*. In Greek and Latin it was the *Armenian apple*, i.e. μήλον Ἀρμενίανον and *Malum Armeniacum*. The Latins also called the apricot *præcocia*, early or premature. Besides this, the Arabic name for the plum was *barkuk*, and, with the definite article prefixed, *abbarkuk*. Sometimes it was called, in French, *avant-perse*, the forerunner of the peach, which agrees with the meaning of the Latin *præcocia*. The middle and modern Greek names are πραικόκκια, βρικόκκια, and πρικόκκια; and then, in Italian we get *Albircocca*, and in Spanish *Albaricogue*. The older English form ended in *k*, as *apricock*. The newer form, in *t*, is from the French *abricot*. The Dutch and German forms are *aprikos*, *aprikose*; Norse, *aprikos*. All this shows that the true meaning of the word has never been clearly understood; and whether the Arabic *abbarkuk*, or the Latin *præcocia*, give the best origin is disputed. The present writer is decidedly in favour of the Arabic, of which he believes the Latin and Greek forms, *præcocia* and πρικόκκια, are themselves corruptions; the notion that *præcocia* meant *avant-perse* being a mere fancy.) (Latham.)

The fruit of the *Prunus armeniaca*, or *Armeniaca vulgaris*; used fresh, cooked, and preserved. According to Fresenius, 100 parts contain 82—84 per cent. of water, 2—6 per cent. of sugar, 1 of free acid, and 6—11 of pectous substances.

A., Brian'gon. The fruit of the *Armeniaca brigantia*; the seeds furnish a sweet oil, having a pleasant flavour of bitter almonds, known in Dauphiny, where the tree grows, as huile de marmotte.

Apricus. (L. *apricus*, contraction of *apricus*, uncovered; exposed to the sun.) A place much exposed to the sun and suitable to certain plants, hence called planta aprica.

Apoc'ta. (A, neg.; *πρωκτός*, the anus.) A Group of the Order *Turbellaria*, Class *Scolecida*, in which there is no anal aperture.

Aprocthelmin'thes. (A, neg.; *πρωκτός*, the anus; *ἔλμινς*, a worm. F. *aprocthelminthes*.) Applied to a kind of intestinal worms without anus.

Apoc'tia. (A, neg.; *πρωκτός*, the anus. F. *apoc'tie*; G. *Hinterloisigkeit*.) Defect or absence of the anus.

Aprocto'sis. (Same etymon.) Progress or formation of the condition termed Apoc'tia.

Aproctous. (Same etymon.) Destitute of an anus.

Apronia. The *Tamus communis*, or black bryony.

Aprosop'ia. (A, neg.; *πρόσωπον*, the face. F. *aprosopie*; G. *Gesichtlosigkeit*.) Partial agenesis, characterised by absence or extreme abnormality of the face, generally accompanied by absence of the organs of taste, smell, and sight.

Aprosop'sous. (A, neg.; *πρόσωπον*, the aspect.) Destitute of a face.

Aspelaph'e'sia. (A, neg.; *ψηλάφησις*, a feeling, touching; from *ψηλάφω*, to feel about.) Loss or diminution of the sense of touch, and of the painful sensations produced by burning, but the retention of the power of feeling those caused by pinching, pricking, and cutting.

Apsin'tha'tum. (L. *absinthium*, wormwood.) Old term, used by Aëtius, for a kind of potion suited to the stomach, so called because composed in great part of Absinthium. (Goræus.)

Apsin'thites. (Aψινθίτης.) Wine in which wormwood has been soaked; same as *Ab-sinthites*.

Apsithu'ria. (A, neg.; *ψιθυρίζω*, to whisper.) Incapability of whispering. A term, suggested by Cohen, in opposition to aphonia. The patient, who is usually hysterical, is unable to produce the feeblest audible sound. It is generally accompanied by double paralysis of the vocal cords, but there is no paralysis of the tongue, lips, or expiratory muscles.

Apsych'ia. (Aψυχία; from *α*, neg.; *ψυχή*, breath, life, soul. F. *apsychie*; I. *apsichia*; G. *Beicusstlosigkeit*.) Old term, used by Hippocrates, l. i, de *Morb. V.* ix; *Coac. Prænot.* 226, for complete fainting; the same as *Apopsychia*.

Apsyx'ia. (Same etymon.) Syncope.

Aptera. (A, neg.; *πτερόν*, a wing. F. *aptères*.) A Suborder of the Order *Hemiptera*. Small wingless insects, with a short, fleshy, retractile proboscis, having large cutting setæ; sometimes with the buccal pieces of the masticatory type; thorax only indistinctly articulated; abdomen usually composed of nine rings; parasites on warm-blooded animals.

Apteria. A Genus of the Nat. Order *Burmanniaceæ*. Flowers trimerous; perianth tubular, campanulate; anthers inserted near the middle; filaments short, with a large orbicular membrane behind; ovary unilocular, with three

bifid and multiovulated parietal placentæ; fruit a capsule, with many ovoid seeds.

A. seta'cea. (L. *seta*, a bristle.) Hab. Asia; is slightly bitter and very astringent.

Apte'ria. (A, neg.; *πτερόν*, a feather.) The spaces on the skin of a bird on which no strong or contour feathers grow, and which are naked or covered only with down.

Apterich'thys. (A, neg.; *πτερυξ*, a fin; *ἰχθύς*, a fish.) Name by Dumeril for a fish without fins.

Apterodic'erous. (Aπτερος, without wings; *δίσ*, twice; *κίρας*, a horn. F. *apterodictère*; G. *ungeflügelhörnig*.) Applied by Latreille to insects without wings and with two antennæ.

Apterolo'gia. (Aπτερος; λόγος, a discourse.) A treatise on wingless insects.

Apt'erous. (Aπτερος; from *α*, neg.; *πτερόν*, a wing. F. *aptère*; G. *flugellos*.) Wingless. A term applied in Botany to organs, such as stems, fruits, and seeds, that are wingless.

Aptery'gia. (A, neg.; *πτερυξ*, a fin. F. *aptérygien*; G. *ohne Flossen*.) Applied by Latreille to a Section of *Mollusca* *Phanerogama* having no special organs for natation.

Apteryg'idæ. (A, neg.; *πτερυξ*, a wing.) A Family of the Subclass *Ratidae*, Class *Aves*. They are small wingless birds of New Zealand, with long beaks, obtuse at the tip, where the nostrils are placed; feathers hair-like; prefrontals long, spongy; vomer unites with the short and broad palatines and the pterygoids; no clavicles; a rudimentary humerus; one ungual phalanx; thirty-two precaudal vertebrae.

Apt'itude. (L. *aptitudo*, fitness; from *apto*, to adapt. F. *aptitude*; I. *attitudine*; G. *Aulage*.) Fitness; tendency; suitability. The natural disposition of an animal or race to the performance of certain acts, to the modification of organic structure or function, according to the influence of certain agents, or the facility with which they become subjected to certain noxious influences.

Aptya'lia. (A, neg.; *πτύαλον*, spittle. F. *aptyalie*; G. *Speichelmangel*.) Defect of saliva.

Apt'ychus. (A, neg.; *πτυχή*, for *πτύξ*, a fold.) A name given to the shell-like substance found in the last chamber of some species of Ammonites, and supposed by Keferstein to support the nidamental glands. They are triangular, blunt-angled, and applied together by their straightest sides, so as to resemble bivalve shells; they consist of two layers, the outer laminated and traversed by pores, the inner presenting lines of growth concentric with the angles of the side of attachment.

Aptys'tia. Same etymon and meaning as *Aptystos*.

Aptys'tos. (Aπυστος; from *α*, neg.; *πτύω*, to spit.) Term applied by Hippocrates, *Coac. Prænot.* 381, to pleuritis in which there was no expectoration.

Aptys'tus. Same as *Aptystos*.

Apule'ius. A botanist who wrote on medicinal herbs; the time when he lived is uncertain, but it was probably about the ninth century.

Apulo'sis. (Aπούλωσις; from *ἀπουλόω*, to make to scar over.) Cicatrisation.

Apulotic. (Aπουλωτικός, from *ἀπουλόω*, to make to scar over.) See *Epylotic*.

Apulot'ica. (Same etymon.) Remedies which promote cicatrisation.

Apusides. A Family of the Suborder *Branchiopoda*. Body with a clypeiform carapace, on which are placed the eyes; fifty or sixty pairs of feet, of which all but the first pair are foliaceous; the eleventh pair in the female carry an ocreiferous capsule.

Apussey. Native name of an Ashantee plant, of the Nat. Order *Leguminosæ*, probably allied to Robinia. The bark, pounded with cardamom, is applied to the head in headache. (Waring.)

Aputtasy. A plant of Guinea, employed in the form of decoction for scurvy of the mouth. (Waring.)

Apyletos. (A, neg.; πύλον, pus.) Term by Pechlinius, *Obs. Phys. Med.* 67, p. 174, applied to any external disease, or humour which did not suppurate.

Apyltos. (Uncertain; probably a misprint for *Apylites*; a, from; *pyrum*, a pear.) The liquor obtained from pears, commonly called perry.

Apysus. (A, neg.; πύον, pus.) That which does not afford pus.

Aporetic. (A, neg.; πυρίσσω, to be feverish.) Same as *Aporetic*.

Aprenesmata. (A, neg.; πυρήν, the stone or seed of fruit; αἷμα, blood.) Term applied by Mr. Gulliver to the Mammalia, because their red blood-corpuscles are destitute of a nucleus.

Aprenom'ele. (A, neg.; πυρήν, the round head of a probe; μέλη, a sound.) A sound without a button.

Aprenous. (A, neg.; πυρήν, seed of a fruit. F. *apryène*; G. *kernlos*.) Applied to a fruit that does not contain grains or kernel.

Also, without nucleus.

Aporetic. (A, neg.; πυρετός, fever. F. *apryétique*; L. *apiretico*; G. *feberlos*, *feberfrei*.) Term applied to the days of an intermission in ague.

Also, to local and other diseases which do not induce febrile excitement.

Aporetia. (A, neg.; πυρίσσω, to have a fever, or paroxysm of fever. F. *apryézie*; L. *apirensia*.) The condition in which there is no fever; applied to conditions of defervescence or recovery in acute disease; but more especially used to describe the bodily state of a person suffering from intermittent fever, or the days when no paroxysm occurs.

Aprrin. A kind of starch obtained from the nuts of *Cocos lapidea*, or *Attalea funifera*. It is soluble in hot water, but is precipitated on cooling. It is without smell or taste, and is by some regarded as an alkaloid.

Aprom'ele. (A, neg.; πυρήν, stone of a fruit; a nut; μέλη, a probe.) Old name for a probe having no bulb or rounded head at its extremity.

Aprron. (A, neg.; πῦρ, fire.) Old term, used by Dioscorides, v, 124, for Sulphur vivum.

Also, for *Æthiops mineral*, when prepared without fire.

Aprrorithum. (A, priv.; πῦρ, fire; θίος, sulphur.) Old name for Sulphur vivum, or native sulphur which has not been subjected to fire.

Aprroti. (A, neg.; πῦρ, fire.) Ancient name for the carbuncle, because without heat, though fiery in appearance. (Quincy.)

Aprrous. (A, neg.; πῦρ, fire. F. *apryre*; L. *aprrus*; G. *feuerfest*.) Applied to bodies which

sustain a strong degree of heat without any alteration, as *Mica*, *Talc*, *Asbestos*, which were anciently so termed; also, to bodies which have not been exposed to the action of fire.

Aprrum. Same as *Aprron*.

Aq. An abbreviation of the word *Aque*, of water, occurring in prescriptions.

Aqua. (L. *aqua*, water, akin to Sanscr. *ap*. *Ydop*; F. *eau*; I. *acqua*; S. *agua*; G. *Wasser*.) The pharmacopœial name (L.) for spring water; (U.S.A.) for natural water in the purest attainable state. Water, being a colourless transparent fluid without taste or smell when pure. See *Water*.

Also, a term for the urine.

A. abanth'ii destilla'ta. Wormwood water, distilled from the tops of the *Artemisia abanthium*. Used as a stomachic and as a vehicle.

A. aceta'tis ammo'ni. A synonym of *Liquor ammonia acetatis*.

A. aceta'tis plum'bi crystalliza'ti. A synonym of *Liquor plumbi subacetatis*.

A. ac'idi carbo'lici. U.S. Ph. Glycerite of carbonic acid 10 drs.; distilled water to make a pint. Strength a grain to a drachm. Dose, one to two teaspoonfuls.

A. ac'idi carbon'ici. U.S. Ph. Carbonic acid water. The directions are—with a proper apparatus impregnate water contained in a suitable receiver with a quantity of carbonic acid equal to five times the bulk of the water. Carbonic acid may be obtained from bicarbonate of soda, or from marble by means of dilute sulphuric acid. A sparkling fluid, with pungent, acidulous taste. It is a diaphoretic, diuretic, and anti-emetic; a convenient vehicle for the administration of magnesia, the alkaline carbonates, sulphate of magnesia, and the saline cathartics generally.

A. ac'ido carbon'ico satura'ta. (L. *saturatus*, part. of *saturro*, to fill, to saturate.) Aerated water; water impregnated with carbonic anhydride, often called soda water, or mineral water.

A. ac'ido carbon'ico supersatura'ta. (L. *super*, above; *saturatus*.) Aqua acidi carbonici containing an extra amount of carbonic acid.

A. acid'ula cum bicarbona'te magne'sico. The *A. magnesia aërata*, Belg. Ph.

A. acid'ula cum na'tro-bicarbon'ico. (L. *acidulus*, a little sour. F. *eau de soude carbonatée*; G. *Sodawasser*.) Carbonic acid water containing sodium bicarbonate.

A. acid'ula hydrosulphura'ta. (L. *acidulus*.) Naples water. See *A. Neapolitana*.

A. acid'ula simplex. (L. *acidulus*; *simplex*, simple.) A synonym of *Aqua acidi carbonici*.

A. acid'ula simplic'ior. (L. *acidulus*; *simplex*, simple. Fr. *Codez*, *eau gazeuse simple*.) Water charged with carbonic acid gas under a pressure of seven atmospheres. It is frequently used under the name of *Eau de Seltz*, and administered when the stimulant action of the gas is alone required.

A. acid'ulo-sal'sa. (L. *acidulus*; *salsus*, salted. Fr. *Codez*, *eau acidule saline*.) Calcium chloride, 0.33 gramme; magnesium chloride, 0.27; sodium chloride, 1.10; crystals of sodium carbonate, 0.90; sodium sulphate, 0.10; aq. acidula simplicior, 650.0. This gaseous water may be used in the same cases as the *Eaux de Seltz*, Condillac, Renaison, St. Galmier, Schwalheim, and Soultz-matt.

AQUA.

A. acustica of *Ludwig*. (*Ἀκουστικός*, belonging to the sense of hearing.) This is composed of a camphorated alcoholic infusion of valerian, rosemary, lavender, laurel berries, castoreum, to which is added liquor ammoniac and essence of juniper. A remedy in repute for deafness.

A. aëria. (*L. aër*, air. *F. eau gazeuse simple*.) A synonym of *Aqua acidi carbonici*.

A. aëria hydrogenii hydrosulphurica. A synonym of *Aqua hydrosulphurica*.

A. aëris fixi. (*L. aër*, the air; *fixus*, fixed.) Water of fixed air. An old name for carbonic acid. A synonym of *A. acidi carbonici*.

A. ætheria. Ether water. A water made by adding 1 part of pure ether to 20 parts of cold distilled water.

A. ætheria camphorata. Camphorated ether water. This is made by mixing 1 part of camphor with 10 of ether, and, after allowing the mixture to stand for half an hour, adding 200 parts of distilled water.

A. Africa. A solution of nitrate of silver; employed for dyeing the hair.

A. albumina. (*Fr. Codex, eau albumineuse*.) Albuminous water; prepared by beating up the whites of four eggs in 100 grammes (about three ounces) of cold water, and adding a little orange-flower water. It is used in cases of poisoning by the salts of mercury and copper.

A. alcalina carbonica. (*F. eau alcaline gazeuse*.) Effervescing potash water. It contains 1 part of potassium carbonate dissolved in 150 parts of distilled water, and impregnated by means of a suitable apparatus with 4 or 5 times its volume of carbonic acid gas.

A. alexeteria. (*Ἀλεξήριον*, a remedy.) Old term for water distilled from leaves of spearmint, fresh tops of sea wormwood, and fresh angelica leaves; formerly used as a vehicle for alexipharmic medicines.

A. alexeteria oxygena. A synonym of *A. chlori*.

A. alexeteria spirituos. Old name for the *A. alexeteria*, with a little proof spirit added.

A. alexeteria spirituos cum aceto. (*L. acetum*, vinegar.) Old name for the *A. alexeteria*, having vinegar in addition.

A. Alibon. (*F. eau d'Alibon*.) A collyrium containing zinc sulphate, 3 parts; copper sulphate, 1-5 part; camphor contused, 0-5 part; powdered saffron, 0-3 part; warm water, 150 parts; digest for 24 hours and strain.

A. alkalina carbonica. Alkaline carbonate water. A synonym of *Potash water, effervescing*.

A. alkali effervescent. (*L. effervesco*, to boil up. *Fr. Codex, eau alcaline gazeuse*.) Sodium bicarbonate, 3-12 grammes; potassium bicarbonate, 0-23; magnesium sulphate, 0-35; sodium chloride, 0-08; aqua acidula simplicior, 650. This alkaline water may be employed in the same cases as those in which Vichy and Vals waters are found useful.

A. alkali oxymuriatica. A name for the *Eau de Javelle*, or bleaching liquid; a solution of chlorinated soda.

A. alumina. (*L. alumen*, alum.) A solution of 1 part of alum in 50 parts of aqua rose.

A. aluminosa. (*L. alumen*, alum.) A solution of 10 parts of alum sulphate in 1000 parts of water.

A. aluminosa Bates. (*F. eau styptique*.) Bates's alum water. Alum sulphate, 15; zinc sulphate, 12; boiling water, 1000 parts. Used as an astringent injection, lotion, or collyrium.

A. aluminosa composita. Compound alum water. A styptic composed of 1 part of zinc sulphate, 1½ parts of alum, dissolved in 100 parts of distilled water. Used as an injection, lotion, or collyrium.

Another formula is—alum and iron sulphate, of each 30 parts; boiling water 1500 parts.

A. aluminosa Fallopi. Fallopius's alum water. This is composed of corrosive sublimate, 1 part; alum, 1 part; rose water, 100 parts; dissolve. Used as a detergent for purulent and syphilitic sores.

A. amara. (*L. amarus*, bitter; *G. künstliches Bitterwasser*.) Artificial bitter water. Magnesium sulphate 35 parts; common salt, 1 part; sodium bicarbonate, 2-5 parts; spring water, 500 parts; dissolve, filter, and add dilute sulphuric acid, 8 parts, then tightly cork the vessel.

Also, a water containing 25 grammes of magnesium sulphate in 200 grammes of sweetened water. Employed as a purgative.

A. amara Meyer. (*G. Meyerisches Bitterwasser*.) This is composed of magnesium sulphate, 32 parts; sodium bicarbonate, 4 parts; sodium sulphate 8 parts; dissolve in 500 parts of water, and impregnate the liquid with 3 volumes of carbonic anhydride.

A. ammoni bicarbonici. A synonym of *A. ammoni carbonica*.

A. ammoni carbonica. This is composed of ammonium carbonate which has effloresced 1 part, water superaturated with carbonic anhydride 1000 parts; mix, and keep in well-stoppered vessels.

A. ammoniacalis. Ammoniacal water. A synonym of *Liquor ammoniac carbonatis*.

A. ammoniaco caustica. (*Καυστικός*, capable of burning.) A synonym of *Liquor ammoniac*.

A. ammoniac, U.S. Ph. Ammonia water. Chloride of ammonium in small pieces, lime, of each 12 oz. troy; water Ovj; distilled water a sufficiency; slake the lime with the water, make a smooth paste, and add the rest of the water; decant from the gritty sediment, and add the chloride of ammonium to the milky fluid; distil into the bottom of a cooled receiver containing a pint of distilled water; add to the distillate enough distilled water to raise the sp. gr. to 0-960; 100 grains saturate 30 grains of official sulphuric acid, and contain nearly 10 grains of ammonia. A stimulant, sudorific, antacid, and rubefacient. Dose, 10—30 drops.

Also, a synonym of *Liquor ammoniac carbonatis*.

A. ammoniac acetata. A synonym of *Liquor ammoniac acetatis*.

A. ammoniac acetatis. The *Liquor ammoniac acetatis*.

A. ammoniac carbonatis. Ammonium carbonate 4 oz., distilled water 1 pint; dissolve and filter through paper.

A. ammoniac caustica. (*Καυστικός*, capable of burning.) Water of caustic ammonia. A synonym of *Liquor ammoniac*.

A. ammoniac fortior. The *Liquor ammoniac fortior*.

AQUA.

A. ammo'nise puræ. (*L. purus*, pure.) A synonym of *Liquor ammonia*.

A. am'mil. See *Liquor annisi*.

A. amygd'alæ amarae. U.S. Ph. Bitter-almond water. The directions are—Take of oil of bitter almonds 16 minima, carbonate of magnesia 60 grains, water 2 pints; rub the oil first with the carbonate of magnesia, then with the water, gradually added, and filter through paper. Given in nervous coughs and spasmodic affections.

A. amygd'alæ rum amara'rum. (*F. eau distillée d'amandes amères*.) Bitter-almond water. In the old French Codex, 1 kilogramme of bitter-almond paste was directed to be mingled with a sufficiency of water, and after maceration for 24 hours to be distilled at steam heat till 2 kilogrammes are obtained. Filter to separate the undissolved volatile oil. The Danish and Prussian Ph. add a little alcohol. Dose 10—30 grammes.

Ger. Ph. (*G. Bittermandelwasser*.) Bitter almonds, freed, by pressure at a low temperature, as far as possible from fixed oil, 12 parts, spring water 80 parts; mix thoroughly and add 2 parts of spirits of wine; then distil 10 parts, or so much that 1000 parts treated with ammoniacal silver oxide, and then with nitric acid, yield 5 parts of dry silver cyanide.

A. amygd'alæ rum amara'rum dilu'ta. **G. Ph.** (*G. Kirschwasser*.) Dilute bitter-almond water. This is directed to be prepared by mixing 1 part of the *Aqua amygdalarum amararum* (*G. Ph.*) with 19 parts of water.

Aust. Ph. (*G. verdünntes Bittermandelwasser*.) This is made of *aq. amygdal. amararum concentrata* 25 grammes, *aq. destillatæ* 275 grammes. To be prepared when required.

A. amygd'alæ rum concentra'ta. **Aust. Ph.** (*G. concentrirtes Bittermandelwasser*.) Concentrated bitter-almond water. Bitter almonds, freed from oil by pressure and reduced to a powder, 1000 grammes; divide into 12 parts; 11 of these parts are placed in a retort with 10,000 grammes of distilled water and boiled for a few minutes; the heat is then removed, and when the fluid is quite cold the remaining twelfth part is added to it; the mixture is allowed to stand for a night, and distilled till 2000 parts have passed over.

A. amy'li. **Belg. Ph.** (*L. amyllum*, starch.) Potato starch boiled with a hundred parts of distilled water for a quarter of an hour and filtered.

A. an'e'thi. **B. Ph.** Dill water. One pound of bruised dill fruit, water 2 gallons; mix and distil one gallon.

A. angel'ica. (*Ἄγγελικός*, belonging to a messenger, angelic.) Contains cream of tartar 8 grms., manna 60, water 250, lemon juice 15. The fluid is clarified with the white of an egg, and a little orange peel is added. A purgative in much repute.

A. angel'ica Viennen'sis. (*F. potion purgative végétale*.) Vienna angelic water. Manna 60 parts, tartate of potash 6, the juice of one lime, boiling water q. s.; infuse with the rind of lemon peel, and clarify with white of egg. Used as a purgative.

A. Anhalt'na. (*F. eau d'Anhalt*.) Water of Anhalt. This is composed of oils of rosemary, fennel, mace, cloves, and cinnamon, of each 5 parts, tincture of musk 2 parts, rectified spirit of wine 600; mix, set aside for one day, and filter.

A. an'isi. U.S. Ph. Anise water. Oil of anise $\frac{1}{2}$ dr., magnesium carbonate 60 grs., distilled water 2 pints; mix the oil with the magnesia and then with the water, and distil 8 pints. An aromatic vehicle.

A. an'isi stella'ti. Star anise water. Made in the same way as *A. cascariilla*.

A. anod'ina. See *A. anodyna*.

A. anod'yna. (*Ἄν. neg.*; ὀδύνη, pain.) Strong solution of ammonia, highly rectified spirit of wine, of each 20 parts, camphorated spirit 10, tincture of opium 3; an antidontalgic, and an external application in neuralgia.

A. antiarthrit'ica efferves'cens. Effervescent antiarthritic water. A synonym of *A. lithii carbonici*.

A. antiblenorrhoe'ica. (*Ἀντί, against*; βλεννόε, mucus; ροία, a flux.) A remedy employed, both externally and internally, in the later stages of gonorrhoea and blennorrhoea. Made of the leaves of mint, of dittany of Crete, and of the Florentine iris, of the seeds of rue and of lettuce, of each 7 parts, turpentine 100 parts, white wine 650; distillation is continued till three quarters of the fluid have passed over. It is a clear fluid of unpleasant odour, and possessing a vinous, styptic taste.

A. anticonesmat'ica. (*Ἀντί, against*; κνησμός, an itching.) This is composed of pure carbolic acid 10 drops, dilute acetic acid 10 parts, alum sulphate 2 parts, rose water 120 parts. A remedy employed to relieve irritation and pruritus about the perineum, scrotum, and vulvæ.

A. antiepilep'tica de Lang'io. (*Ἀντί; ἐπιληψία*, epilepsy.) A remedy used, both externally and internally, in epilepsy. It contains (the numbers representing grammes) flowers of the lime tree (*Tilia*) 70, of the lily 140, seeds of the peony 30, good white wine 200. An infusion of the ingredients is made in the wine, and after some days it is distilled, and there are then added cutaneous canella bark 10, nutmegs 20, cardamoms, cubebs, and long pepper, of each 2, flowers of lavender 30, of rosemary, mistletoe of the oak, peony root, and dittany, of each 15. Infuse the whole, and distil again.

A. antiherp'etica de Luynes. (*Ἀντί; ἑρπης*, herpes.) See *Acqua del Cardinale di Luynes*.

A. antihyster'ica fo'e'tida. (*Ἀντί; hysteria; fatidus*, stinking.) A synonym of *A. fatida antihysterica*.

A. antihyster'ica Pragen'sis. (*Ἀντί; hysteria*.) The antihysterical water of Prague. A synonym of the *A. fatida antihysterica*, *G. Ph.*

A. antimiasmat'ica. (*Ἀντί; miasm*.) A solution of ammonio-chloride of copper.

A. antimiasmat'ica Beis'seri. (*Ἀντί, against; miasm*.) A synonym of *A. antimiasmatica Koechlini*.

A. antimiasmat'ica Koechlin'i. (*Ἀντί, against; miasm*.) A liquid of which 120 parts contain 1 part of metallic copper in combination with chlorine and 25 parts of ammonium chloride. It is used, diluted with 80 parts of distilled water, a teaspoonful being given for a dose.

A. antiophthal'mica de Leche. A remedy used in chronic ophthalmia and epiphora. It contains aqua melliloti 80 grms., distilled water 60, alcohol 2.5, alum and sulphate of zinc 0.80, tincture of aloes 12 drops.

A. antiput'rida. (*Ἀντί, against; putridus*, rotten.) A solution of 1 part of potassium permanganate in 200 of water.

AQUA.

A. antiscorbutica Sydenham'i. (*Avri*, against; *scorbutus*.) This contains—of oil of mentha crissa, oil of orange rind, oil of sage, and oil of mace, of each 5 drops, spirit of mustard 2 parts, spirit of horseradish and spirit of wine, of each 100 parts.

A. apoplectica. A synonym of *Liquor ammoniac*.

A. aquigranensis. (*L. Aquigranum*, the Roman name for Aix-la-Chapelle.) Fictitious Aix-la-Chapelle water. Hydrosulphuretted water 4 oz., sodium carbonate 20 grs., sodium chloride 9 grs., water 17½ oz.; mix.

A. ardens. (*L. ardens*, fiery. *I. acqua ardente*.) Brandy or spirit of wine.

A. argentea. (*L. argenteus*, of silver.) A synonym of *Mercury*.

A. armoricæ radialis. (*L. radix*, a root. *F. eau de rayfort*.) Horseradish water. This is made by macerating 20 parts of fresh recent root of horseradish in 40 parts of water, and adding 3 parts of rectified spirit; distil 20 parts.

A. arnicae. Arnica water. This is prepared by adding 1 part of the oil of arnica flowers to 1000 of water, and distilling.

A. aromatica, Ger. Ph. (*L. aromaticus*, composed of spices. *G. Schlagwasser*.) Sage leaves 4 parts, of the leaves of rosemary and of peppermint, of each 2 parts, of lavender flowers 2 parts, fennel seeds and cinnamon, of each 1 part, spirit of wine 26 parts, and water 130 parts. The ingredients are to be macerated for 24 hours, and 72 parts are to be distilled.

A. aromatica spirituosæ, Aust. Ph. (*G. geistig aromatisches Wasser*.) Spirituous aromatic water. Lavender flowers, leaves of sage, mentha crissa, and balm, of each 100 grammes, of nutmeg, cloves, cinnamon, mace, ginger, fennel, of each 50 grammes; cut up, and pound, and add of spirit of wine (90 per cent.) 1000 grammes, water 8000 grammes; macerate for 12 hours, and distil 5000 parts. Dose, a teaspoonful as a carminative and stimulant; externally as an embrocation to the abdomen in flatulent colic.

A. arsenicalis antipedicularis, Clater. (*L. pediculus*, a louse.) Contains of arsenious acid 100 grms., green soap 2 kilogramms, water 15 litres. Used to kill lice in sheep.

A. arsenicalis Pearsonii. Pearson's arsenical water. This contains of sodium arseniate 0.25 parts, distilled water 120 parts.

A. asafœtidae composita. (*F. eau fétide antihystérique*.) Compound asafœtida water. A synonym of the *A. fœtida antihystérica*, G. Ph.

A. Atheniensis. (*F. eau Athenienne*.) This is composed of balsamum vitæ hoffmanniensis, aqua coloniensis, essentia iridis florentina, of each 200 parts, essentia moschæ, essentia ambre, of each 1 part, tinctura quillajæ 25 parts, glycerinum optimum 150 parts; mix, set aside, and filter. Used as a detergent.

A. auditoria. (*L. auditorius*, relating to hearing.) The *Liquor cotunnii*.

A. aurantiarum florum, Aust. Ph. (*G. Orangenblüthenwasser*.) The Austrian official name of orange-flower water.

A. aurantii, Helv. Ph. Orange-flower water. The same as *A. aurantii floris*.

A. aurantii floris, B. Ph. Orange-flower water. The distilled water of the flowers of the *Citrus bigaradia* and *C. aurantium*, prepared

mostly in France. A flavouring agent and, as some say, a nerve sedative.

A. aurantii florum, U.S. Ph. Orange-flower water. The directions given are—Take of orange flowers 43 troy ounces, water 16 pints; mix, and distil 8 pints. This preparation is made in France and Italy chiefly from the bigarade or bitter orange; but in England and the United States from either the bitter or the sweet orange. In France the oil of neroli, which distils over, is removed.

A. aurantiolum. A synonym of *Aqua aurantii*.

A. aurata. (*L. auratus*, golden. *F. eau d'or*; *G. Danziger Goldwasser*.) This is composed of oleum citri, oleum macidia, oleum cassie, tinctura croci, of each gtt. 10, spiritus vini rectificatus, aqua roseæ, syrupus flor. aurantii, of each 1000 parts; mix and add a few cullings of leaf gold.

A. aurea divina Fernelii. The divine golden water of Fernelius. This is composed of 1 part of corrosive sublimate dissolved in 100 parts of lime water.

A. azotica oxygenata. Water impregnated with nitrous oxide. A diuretic and stimulant.

A. balsami Tolutani. Water of tolu balsam. One part of balsam of tolu is digested for two hours in two parts of water, and filtered. Expectoant and aromatic.

A. balsamica arterialis. A synonym of *A. Binellii*.

A. balsamica of Fuller. Is composed of ivy, horehound, hyssop, pennyroyal, of each three handfuls, of the roots of mint and of the iris 8 grms. each, turpentine 160, milk 2000, alcohol 160. A remedy believed to be useful in chronic catarrhs and in pulmonary phthisis.

A. balsamica of Jackson. An alcoholated dentifrice, into the composition of which pellitory of Spain, balsam of tolu, and other aromatic substances, enter.

A. balsamica of Le'mery. Contains of the roots of symphytum officinale, salvia, hypericum, mint, and hyssop, of each one handful, rose water 400 grms. It is clear, of aromatic odour, and is used, both externally and internally, as an excitant and stomachic.

A. balsamum copaivæ. Copaiba water. A water made in the same way as the *A. cascarilla*.

A. Bareginensis. (*F. eau sulfurée*.) Artificial Barèges water. Sodium carbonate 6 grs., sodium chloride 10 grs., hydrosulphuretted water 4 oz., water 17½ oz.; mix.

A. barytæ. Baryta water. This is made by dissolving 1 part of caustic baryta in 20 parts of hot distilled water.

A. barytæ murialis. The *Liquor barrii chloridi*.

A. Batesiana. Bates's water. This contains 1 part of zinc sulphate and 1.5 parts of alum dissolved in 100 parts of water. Used as an astringent.

A. Beisseri. Beisser's water. A synonym of *Aqua antimiasmatica Koechlini*.

A. belladonnae, Belg. Ph. Belladonna leaves 500, water sufficient. Distil 1000 parts.

A. Belluana. Artificial Balaruc water. Sodium chloride 1½ dr., calcium chloride 18 grs., magnesium chloride 56 grs., magnesium carbonate 1 gr., carbonic acid water, containing twice its bulk of carbonic acid, 20½ oz.

AQUA.

A. benedicta. (*L. benedictus*, blessed.) A synonym of *Liquor calcis*.

A. benedicta composita. (*L. benedictus*; *compositus*, put together.) This is made by macerating saffron wood 10 parts, guaiacum wood 100 parts, liquorice root 20 parts, coriander seeds 5 parts, in 1600 parts of lime water for some days and filtering. Recommended in scrofulous complaints. Dose, a tablespoonful three or four times a day.

A. benedicta Ruland's. Ruland's blessed water. A synonym of *Vinum antimoniale*.

A. Bineff's. (*G. Blutstillendeswasser*.) Binelli's styptic. An Italian nostrum, named after a physician of Turin, which at one time enjoyed great reputation in Europe as a styptic. It is believed to contain a little creasote.

A synonym of the *Aqua creasoti*.

A. Borbonica. Artificial Bourbonne water. Sodium chloride 1 dr.; calcium chloride 10 grs., carbonic acid water 20½ oz.

A. borraginis. Belg. Ph. Borage 500 parts, water sufficient. Distil 1000 parts.

A. Bredfeld's. Bredfeld's water. This is composed of eau de Cologne 1600 parts, rose water 250 parts, compound tincture of musk 5 parts.

A. Bristolien'sis. A name of the Bristol hot well at Clifton.

A. Brocchieri's. Brocchieri's styptic. An empiric remedy, vaunted as a styptic; supposed to be distilled water of pine wood.

A. bromata. Bromine water. Bromine 5 drops, distilled water 1000 parts; mix and agitate. Used in diphtheritic croup.

A. bromi. The same as *A. bromata*.

A. bryonia composita. A synonym of *Alcoolatum bryoniae compositum*.

A. buco. Buchu water. A distilled water from buchu leaves; used as an injection in gonorrhoea.

A. calami. Aromatic-reed water. It is made in the same way as the *A. caecarilla*.

A. calcaria. Ger. Ph. (*L. calcarius*, pertaining to lime. *G. Kalkwasser*.) Lime water. Lime 1 part, water, added gradually, 50 parts; allow the mixture to stand for a few hours, and decant and filter the supernatant fluid.

Also, a synonym of *A. calcis*, of the Aust. Ph.

A. calcaria carbonica. (*L. calcarius*.) A synonym of the so-called Carrara water; aerated water said to be made with carbonic acid obtained from Carrara marble.

A. calcaria ustae. Ger. Ph. (*L. calcarius*; *ustus*, burnt.) A synonym of *A. calcaria*.

A. calcis. Aust. Ph. (*G. Kalkwasser*.) Lime water. Recently burnt lime 100 grammes, sprinkle in an earthenware vessel, with 50 grammes of common water, and then mix with 10,000 grammes of water; keep in an air-tight vessel.

Also, a synonym of *A. calcaria*, Ger. Ph.

Also, a synonym of *Liquor calcii oxydati*, Helv. Ph.

A. calcis composita Carmichael's. A synonym of *A. benedicta composita*.

A. camphora. B. Ph. Camphor water. Half an ounce of camphor in a muslin bag is suspended in a jug containing a gallon of distilled water, and macerated for at least two days.

U.S. Ph. Camphor 120 grains, alcohol 40

minims, carbonate of magnesia ½ a troy ounce, distilled water 2 pints; rub the camphor first with the alcohol, then with the carbonate of magnesia, and lastly with the water, gradually added, then filter through paper. This preparation contains from 2 to 3 grains of camphor in each ounce of water.

A. camphora'ta. Fr. Codex. Helv. Ph. (*F. eau camphrée*; *G. Kampherwasser*.) Camphor 10 parts, distilled water 1000 parts, add a little alcohol, pulverise and macerate for 48 hours, filter; 100 parts of this fluid contain 0.33 of camphor.

A. camphora'ta aetherea. Ethereal camphor water. This is composed of camphor 10 parts, dissolved in 25 parts of ether, and mixed with 475 parts water; the mixture is agitated and filtered.

A. carbolica. Water of carbolic acid; consisting of one part to a hundred.

A. carbona'tis ammoniac pyrooleo'si. Water of pyrooleous carbonate of ammonia. A synonym of the *Liquor volatilis cornu cervi*.

A. carbona'tis magnesia's. Solution of carbonate of magnesia. A synonym of *A. magnesia aërata*.

A. carbona'tis sodae acid'ula. Acidulous water of carbonate of soda. A synonym of *Soda water*, containing some sodium carbonate.

A. carbon'ica. (*F. eau gazeuse simple*.) Aerated or carbonic water. Water impregnated with carbonic anhydride by means of a suitable apparatus.

A. carbon'ica alcali'na. A synonym of *A. alcalina carbonica*.

A. carbon'ica oxygena'ta. A synonym of *A. oxygenata carbonica*.

A. Cardina'lis. See *Acqua del Cardinale di Luynes*.

A. carmelita'na. (*F. eau de melisse des carmes*; *I. acqua di melissa*; *G. Karmelitergeist*.) Carmelite water. Oils of melissa, of lemon peel, of each 3 parts, oils of mace, cloves, and cinnamon, of each 2 parts, rectified spirit 1000 parts. It is often coloured with a little tincture of saffron. Dose, 20–50 drops; also, used as an embrocation, and to the nostrils.

A. carmelita'rum. A synonym of *A. carmelitana*.

A. Carmichael's. Carmichael's water. A synonym of *A. benedicta composita*.

A. carminati'va. Aust. Ph. (*G. Windwasser*.) Carminative water. Chamomile 100 grammes, orange rind, lemon rind, leaves of curled mint, caraway, coriander, and fennel seeds, of each 30 grammes, bruise, add 4000 grammes of water, and after 24 hours' maceration distil 2000 grammes.

The directions, G. Ph., for preparing this are—Take of ol. aurant. cort., ol. carui, ol. fœniculi, ol. coriandri, ol. citri cort., ol. menth. crisp., of each 1 part, sp. vin. rectif. 100 parts, aqua chamomillæ 900 parts; mix and filter. Dose, a tablespoonful, as stomachic and carminative.

A. carminati'va regia. (*L. regius*, royal.) This is composed of aq. carminativa 250 parts, aq. aromatica 100, sugar 50, cochineal 1 part. Dose, a teaspoonful.

A. carra'rica. Carrara water. A synonym of *A. calcaria carbonica*.

A. carui. B. Ph. Caraway water. One pound of bruised caraway seed is mixed with 2 gallons of water, and 1 gallon distilled. A carminative in one or two ounce doses.

AQUA.

It is made, Aust. Ph., in the same way as the *A. cascarilla*.

A. car'vi. The same as *A. carui*.

A. caryophyllo'rum. Clove water. It is made in the same way as *A. cascarilla*.

A. cascarill'ae. Cascarilla water. One part of ethereal oil of cascarilla is shaken with 1000 parts of warm distilled water, and when cold filtered through lint or blotting-paper.

It is also made by agitating 3 drops of cascarilla oil with 100 of distilled water, and filtering.

A. cassi'ae. Cassia water. A distilled water made with the flower-buds of the *Cinnamomum cassia*.

A. casto'rei. Castor water. One part of *A. castorei concentrata* mixed with 5 parts of distilled water.

Belg. Ph. Canada castor 4 parts, water q. s.; distil 1000 parts.

A. casto'rei concentra'ta. Concentrated castor water. One part of finely divided castor is digested in 1 part of rectified spirit, and 12 parts of distilled water, for 12 hours, and distilled till 6 parts have passed over.

A. casto'rei Rademach'eri. Rademacher's castor water. A synonym of *A. castorei concentrata*.

A. catapulta'rum. (*L. catapulta*, an engine of war for throwing arrows and stones.) A synonym of *Eau vulneraire*.

A. centaure'ae cy'ani du'plex. (*L. duplex*, double.) Double corn-flower water. A water made in the same way as the *Aq. lactuca duplex*.

A. cephal'ica. (*Κεφαλῆ*, the head. *G. Schlagwasser*.) A synonym of the *A. aromatica*, Ger. Ph.

A. ceraso'rum. (*L. cerasus*, the cherry.) A synonym of the *A. amygdalarum amararum diluta*, Ger. Ph.

Also, Helv. Ph., aqua laurocerasi one part to 19 of distilled water.

A. ceraso'rum amygdala'ta. (*L. cerasus*; amygdala, the almond.) A synonym of *A. amygdalarum amararum diluta*, Ger. Ph.

A. chamomil'lae. Ger. Ph. (*G. Kamillenwasser*.) Chamomile water. Chamomile 1 part, of water a sufficiency, distil 10 parts; or, add 10 parts of water to 1 part of the *A. chamomillae concentrata*.

Aust. Ph. (*Chamillenwasser*.) Dried matricaria 2000 grammes, water 6000; distil 2000 grammes.

A. chamomil'lae concentra'ta. Ger. Ph. (*G. concentrirtes Kamillenwasser*.) Concentrated chamomile water. Chamomile 10 parts, distil by steam heat 100 parts, add of spirit of wine 2 parts, and of this distil over 10 parts.

A. chlora'ta. Ger. Ph. (*G. Chlorwasser*.) Chlorine water. It contains 0.4 per cent. of chlorine.

A. chlo'ri. Aust. Ph. (*G. Chlorwasser*.) Chlorine water. Manganese peroxide, crude muriatic acid diluted with one third of its weight of water, as much as may be sufficient; place in a retort connected with a Woulff's bottle, pass the gas, after washing with water, into distilled water to saturation.

A synonym of *A. chlorata*, G. Ph.

A. chlorin'i. Chlorine water. See *A. chlori*.

A. chlorin'ica. A synonym of *Acidum hydrochloricum*, and also of *A. chlori*.

A. chlorin'i. U.S. Ph. Chlorine water. Black oxide of manganese in fine powder $\frac{1}{2}$ a troy

ounce, muriatic acid 3 troy ounces, water 4 fluid ounces, distilled water 20 fluid ounces; introduce the oxide into a flask, add the acid, previously diluted with 2 fluid ounces of the water, and apply a gentle heat, conduct the generated chlorine by suitable tubes through the remainder of the water contained in a small intermediate vessel to the bottom of a 4-pint bottle containing the distilled water, and loosely stopped with cotton; when the air has been entirely displaced by the gas disconnect the bottle from the apparatus, and, having inserted the stopper, agitate the contents, loosening the stopper from time to time until the gas ceases to be absorbed; lastly, pour the chlorine water into a bottle of just sufficient capacity to hold it, stop it securely, and keep it in a cool dark place.

A. chloroform'a'ta. Chloroform water. It is made by agitating 1 part of chloroform with 250 of water.

A. chrysu'lea. (*Χρυσῆ*, to make golden.) A synonym of *Acidum nitro-hydrochloricum*.

A. cinnamo'mi. B. Ph. Cinnamon water. Twenty ounces of bruised cinnamon bark is mixed with 2 gallons of water, and 1 gallon distilled. Carminative and somewhat astringent.

Ger. Ph. (*G. einfaches Zimmtwasser*.) Cinnamon 1 part, water a sufficiency; distil 10 parts.

U.S. Ph. Oil of cinnamon $\frac{1}{2}$ a fluid drachm, carbonate of magnesia 60 grains, distilled water 2 pints; rub the oil first with the carbonate of magnesia, then with the water, gradually added, and filter through paper. Cinnamon water may also be prepared by mixing 18 troy ounces of cinnamon in coarse powder with 16 pints of water, and distilling 8 pints.

A. cinnamo'mi for'tis. (*L. fortis*, strong.) A synonym of *Spiritus cinnamomi*.

A. cinnamo'mi simp'lex. Aust. Ph. (*G. einfaches Zimmtwasser*.) Simple cinnamon water. Cinnamon 200, water 4000 grammes; macerate for 12 hours, distil 2000 grammes.

A. cinnamo'mi spirituo'sa. Ger. Ph. (*G. weingeistiges Zimmtwasser*.) Spirituous cinnamon water. Cinnamon 1 part, diluted spirit (sp. gr. 0.892) 1 part, water 10 parts; distil 5 parts.

Aust. Ph. (*G. geistiges Zimmtwasser*.) Cinnamon 200, water 4000, spirit of wine (70 per cent.) 250 grammes; macerate for 12 hours, and distil 1000 grammes.

A. cinnamo'mi vino'sa. Belg. Ph. (*L. vinosus*, full of wine.) Spirit of cinnamon 225 parts, water of cinnamon 775. Also, called *Alcoholatum cinnamomi aquosum*.

Also, a synonym of *A. cinnamomi spiritiosa*, G. Ph.

A. cit'ri. Citron water. A water prepared in the same way as the *A. cascarilla*.

A. coohlea'rise. Horseradish water. Horseradish root 10 parts, cold water 50 parts; set aside for a night and add sp. vin. rectif. 1 part; distil 5 parts.

A. coeru'lea. (*L. caruleus*, dark blue.) Copper sulphate 5 parts, distilled water 120–150 parts, ammonia liquor 10 parts; dissolve and mix.

A. Colonien'sis. (*F. eau de Cologne*; *G. Kolnischewasser*.) Cologne water. Several receipts for this are given by Hager, one of those for true Eau de Cologne is ol. lavand. opt., ol. rosmarini, of each 1 part, ol. aurantii flor. 5 parts, ol. citri cort. 15 parts, ol. bergamottae 50

AQUA.

parts, sp. vin. rectif. 1000 parts; mix for a month, and then filter. One of those for an inferior quality of Eau de Cologne, ol. lavandulæ opt., ol. rosmarini, ol. thymi, of each 1-5 part, ol. caryophyllorum 5 parts, ol. citri cort. 10 parts, ol. bergamottæ 20 parts, ol. menth. pip. 0-3 part, tinct. moschi 0-6 part, sp. rectif. 760 parts; mix, set aside for a month, and filter.

A. Colonien'sis medicinalis, Belg. Ph. Medicinal Eau de Cologne. Oil of bergamot and lemon peel, of each 10 parts, of neroli 7, of lavender 4, of rosemary 1, alcohol 968. Mix. Also, called *Alcoholatum aromaticum de citreis*.

A. colorata. (L. *coloratus*, coloured.) Water coloured with caramel, or other matter, for dispensing purposes.

A. communis, Ger. Ph. (L. *communis*, common. G. *gemeines Wasser*, *Wasser*.) Ordinary rain, spring, or river water.

A. communis stillatitia. (L. *stillaticus*, dropping.) Common distilled water.

A. Conradi. Conrad's water. This contains of corrosive sublimate 0-03 part, distilled water 120 parts, tinct. anodynæ gtt. 10, mucilago cydoniorum 4 parts; mix. Employed as a collyrium.

A. contra alopeciam. (L. *contra*, against; *alopecia*, mange in foxes, baldness.) The directions for one wash are—Take of tincture of galls 5 parts, tincture of cantharides 1 part, aqua coloniensis 15 parts, aqua rosæ 50 parts; mix, set aside for some days, and filter. For another—Take of mistura oleobalsamica, and of glycerine, each 20 parts, tincture of cantharides 1 part, spirit of wine 60 parts, tannic acid 2 parts; mix, set aside for some days, and filter.

A. copaliva. Copaiba water. A water made in the same way as the *A. cascarilla*.

A. coriandri, Aust. Ph. Coriander water. A carminative water, made in the same way as the *A. cascarilla*.

A. cosmetica Lubini. (F. *eau de toilette*.) This is composed of sp. vin. rectif. 175 parts, tr. iris florentin. 70, tr. balsami tolutani 35, tr. moschi gtt. 25, ol. lavandulæ gtt. 30, ol. bergamottæ 2-5, ol. caryophyllorum gtt. 2, ol. unonæ odoratiss. (Ylang Ylang) gtt. 2; mix, set aside for some time, and filter.

A. creasoti, U.S. Ph. Creasote water. The directions are—Take of creasote a fluid drachm, distilled water a pint; mix them, and agitate the mixture until the creasote is dissolved. This preparation contains 3-72 minims of creasote in each fluid ounce. The dose is from 1 to 4 fluid drachms. It may be used as a gargle, or lotion, or be mixed with cataplasms to correct fætor, and gently stimulate indolent ulcers.

A. crystallina. (L. *crystallinus*, made of crystal. F. *tisane de crème de tartre*.) Potassium bitartrate 10 parts, white sugar 40 parts, dissolved with the aid of heat in 600 parts of warm water; filter whilst warm. Used as a drink.

A. cupri ammoniata. Water of ammoniated copper. See *Liquor cupri ammoniata*.

A. cupri vitriolati composita. See *Liquor cupri sulphatis composita*.

A. de floribus auranti. Orange-flower water. A synonym of *A. aurantii*.

A. de floribus citri auranti. Orange-flower water. A synonym of *A. aurantii*.

A. de mæte con vino. The name given, according to Dr. A. Smith, by the Peruvians to a

mixture of the water of boiled maize and wine, used for the cure of *Verrugas*. (Waring.)

A. destill. An abbreviation, occurring in prescriptions, of the words *Aqua destillata*, of distilled water.

A. destilla'ta, B. Ph. (L. *destillo*, to trickle down.) Distilled water. A fluid ounce evaporated in a clean glass capsule leaves scarcely a visible residue; it is not affected by hydrogen sulphide, ammonium oxalate, silver nitrate, barium chloride, or lime water.

A. destilla'ta laurocerasi. (L. *destillatus*, distilled.) A synonym of *A. laurocerasi*.

A. destilla'ta simplex, Aust. Ph. (L. *destillatus*; *simplex*, simple. G. *einfaches destillirtes Wasser*.) Distilled water.

A. Dippelii. Dippel's animal oil. This is composed of distilled water 1000 parts, oleum animalis æthereum 15 parts; shake vigorously, set aside, and filter. Recommended in the convulsions of children.

A. divina. (L. *divinus*, belonging to a deity. F. *eau divine*.) Alumen cupricum 2 parts, distilled water 400 parts; filter. An astringent.

Also, a solution of corrosive sublimate in water.

A. divi'na Ferneli. Fernellus' divine water. The same as *A. divina*.

A. lacu. (L. *lacus*, a lake.) Lake water.

A. embryonum. (Εμβρυον, the foetus.) A synonym of the *A. aromatica*, Ger. Ph.

A. epidemica. (Επιδήμιος, among the people.) The roots of imperatoria, angelica seeds, and elder flowers distilled from French brandy.

A. ethiopica. A solution of nitrate of silver; used for dyeing the hair.

A. ex pu'teo. (L. *ex*, out of; *puteus*, a well.) Well water.

A. fabro'rum. (L. *faber*, a smith.) Blacksmith's water. Water in which red-hot iron has been quenched; it contains a little iron.

A. ferruginea aëra'ta, Belg. Ph. Aerated ferruginous water. Iron chloride .06 part, sodium bicarbonate 8 parts, citric acid 6, water 986.

A. flo'rum auranti, Ger. Ph. (G. *Orangenblüthenwasser*.) The directions are—Take of the orange-flower water of commerce and of distilled water equal parts; mix, and attend to the absence of metallic impregnation.

A. flo'rum aurantio'rum. A synonym of *Aqua aurantii*.

A. flo'rum citri auranti. A synonym of *A. aurantii*.

A. flo'rum na'phæ. (Napha, the orange flower.) A synonym of *A. flo'rum aurantii*, Ger. Ph.

A. fluvia'lis. (L. *fluvialis*, belonging to a river.) River water.

A. fluviatilis. (L. *fluvialis*, belonging to a river.) River water.

A. foeniculi, B. Ph. Fennel water. One pound of bruised fennel seed is mixed with two gallons of water, and one gallon distilled. Carminative.

U.S. Ph. Oil of fennel $\frac{1}{2}$ a fluid drachm, carbonate of magnesia 60 grains, distilled water 2 pints; rub the oil first with the carbonate of magnesia, then with the water, gradually added, and filter through paper. It may also be prepared by mixing 18 troy ounces of fennel in coarse powder with 16 pints of water, and distilling 8 pints.

AQUA.

Aust. Ph. Fennel seeds 100, water 4000 grammes; macerate for 12 hours, and distil 2000 grammes.

Ger. Ph. (*G. Fenchelwasser.*) Bruised fennel seeds 1 part, of water a sufficiency; distil 30 parts.

A. foetida antihysterica. **Ger. Ph.** (*L. foetida*, stinking. *G. zusammengeestetes stinkasantwasser, Prager Wasser.*) Galbanum 8 parts, asafoetida 12 parts, myrrh 6 parts, valerian root and zedoary root, of each 16 parts, angelica root 4 parts, peppermint 12 parts, thyme flowers 8 parts, Roman chamomile flowers 8 parts, castoreum 1 part; cut up and pound these ingredients, and add 150 parts of spirit of wine; allow the mixture to stand for 20 hours, and add water 300 parts; distil 300 parts. Dose, 1 teaspoonful. Also, as an enema, in 10 to 60 grammes doses; also administered in the form of spray. Prescribed in chronic bronchitis with obstructed secretion, and in asthma.

A. font. An abbreviation, used in prescriptions, of the words *Aque fontis*, of water of the fountain, or of *Aque fontane*, of fountain or spring water.

A. foetida Pragensis. Prague fetid water. A synonym of the *A. foetida antihysterica*, **Ger. Ph.**

A. fontana. (*L. fontanus*, from a spring.) Spring water.

A. fortis. (*L. fortis*, strong. *G. Scheidecasser.*) A common term for nitric acid.

A. fortis diluta. (*L. dilutus*, weak.) A synonym of *Acidum nitricum dilutum*.

A. fortis duplex. (*L. duplex*, double.) A synonym of *Acidum nitricum*.

A. fortis secunda'ria. (*L. secundarius*, of the second class.) A synonym of *Acidum nitricum dilutum*.

A. fortis simplex. (*L. fortis*; *simplex*, simple.) A synonym of *Acidum nitricum dilutum*.

A. gingiva'lis. **Belg. Ph.** (*L. gingiva*, the gum.) A synonym of *Tinctura laccæ composita*.

A. glandium quercus. **Belg. Ph.** (*L. glands*, an acorn; *quercus*, an oak.) Decorticated recent acorns 666 parts, alcohol 166, water a sufficiency. Distil 1000 parts.

A. Goulard'i. A synonym of *Liquor plumbi subacetatis*, **B. Ph.**

Also, a synonym of the *A. vegeto-mineralis Goulard'i*, **Aust. Ph.**

Also, of *A. plumbi*, **Helv. Ph.**

Also, of *A. plumbi Goulard'i*, **Ger. Ph.**

A. Graeca. Greek water. Name for a weak solution of nitrate of silver, sold by quacks and nostrum vendors to turn red hair black.

A. gris'ea Gohl'i. **Gohl'i.** Gohl's grey water. A synonym of *Liquor hydrargyri nitrici oxydati*.

A. gry's'ea. Grey water. Name for an aqueous solution of nitrate of mercury mixed with a decoction of various plants.

A. hæmostatica. **Belg. Ph.** (*Αἱμοστατικός*, a mode of stopping bleeding.) Benzoin 1 part, potassium alum 2, water 20. Boil for six hours with frequent agitation; supply the loss by evaporation.

A. hæmostatica Freppel'i. (*Αἱμοστατικός*, a mode of stopping bleeding.) Freppel's hæmostatic water. Folia matricæ, resina alba, resina benzoe, fuligo splendens, secale cornu, alumen, of each 25 parts; pulverise, and

add terebinthina larinica 25 parts, aqua 500 parts, boil and filter 300 parts; add to these tinct. arnicae florum, tinct. vulnerariae, of each 100 parts.

A. hæmostatica Monsel'i. (*Αἱμοστατικός*.) Monsel's hæmostatic water. This is made of tannic acid 1·5 part, pure alum 3 parts, rose water 100 parts; dissolve and mix.

A. halogena'ta. (*Ἁλς*, salt; *γεννάω*, to produce.) A synonym of *A. chlori*.

A. hepatica. (*Ἡπατ*, the liver. Some sulphur compounds are called hepatic, from their colour.) A synonym of *A. hydrosulphurica*.

A. hepatica acidula'ta. (*L. acidulus*, sourish.) A synonym of *A. hydrosulphurata acidula*.

A. hepatica fortior. (*L. fortis*, strong.) A synonym of *A. hydrosulphurata acidula*.

A. hordea'ta. (*L. hordeatus*, from *hordeum*, barley.) A synonym of *Decoctum hordei*, **B. Ph.**

A. Hungar'ica. A synonym of *Spiritus rosmarini compositus*, so-called because supposed to have been originally made by Elizabeth, of Hungary, in the 13th century.

A. hydrarg'yr. (*Υδράργυρος*, quick-silver artificially prepared. *F. eau de mercure*, or *eau de négres*; *G. Quecksilberwasser.*) Water boiled with mercury.

A. hydrarg'yr. sa'va calca'ria. (*L. hydrargyrus*, mercury; *sa'vus*, yellow; *calca'rius*, of lime.) A synonym of *A. phagedenica*.

A. hydrogena'to-sulphura'ta. A solution of hydrogen sulphide in water.

A. hydrosulfura'ta. **Aust. Ph.** (*G. Schwefelwasserstoffwasser.*) Water through which hydrogen sulphide has been transmitted to saturation.

A. hydrosulphura'ta. The same as *A. hydrosulfurata*.

A. hydrosulphura'ta acid'ula. A strong solution of hydrogen sulphide in water.

A. hydrosulphurica. Same as *A. hydrosulfurata*.

A. hydrothion'ica. (*Υδρωπ*, water; *θειον*, sulphur.) A synonym of *A. hydrosulphurica*.

A. hydrothion'ica acid'ula. (*Υδρωπ*; *θειον*; *L. acidulus*, sourish.) A strong solution of hydrogen sulphide.

A. hys'sopi. **Belg. Ph.** Hyssop water. Prepared with oil of hyssop, as *A. anisi extemporanea*.

A. im'brum. (*L. imber*, a shower of rain, rain water.) Rain water.

A. inter cutem. (*L. inter*, between; *cutis*, the skin.) A synonym of *Anasarca*.

A. inter'cus. (*L. intercus*, under the skin.) A synonym of *Anasarca*.

A. Javelli. Javelli's water. A solution of hypochlorite of potash or soda.

A. Javellen'sis. Same as *A. Javelli*.

A. ka'li. (*L. kali*, potash.) A synonym of *Liquor potassæ carbonatis*.

A. ka'li carbon'ici. A synonym of *Liquor potassæ carbonatis*.

A. ka'li caust'ici. (*Καυστικός*, burning.) A synonym of *Liquor potassæ carbonatis*.

A. ka'li præpara'ti. (*L. preparatus*; from *parare*, to make ready beforehand.) A synonym of *Liquor potassæ carbonatis*.

A. ka'li pu'ri. (*L. purus*, pure.) A synonym of *Liquor potassæ*.

A. ka'li subcarbona'tis. A synonym of *Liquor potassa carbonatis*.

A. kreoso'ti, Aust. Ph. and Ger. Ph. (G. *Kreosotwasser*.) The directions are—Take of kreosote 1 part, distilled water 100 parts; mix thoroughly by shaking.

A. labyrinth'i. The water of the labyrinth of the ear. The perilymph or liquor otunnii.

A. labyrinth'i membrana'celi. (L. *membranaceus*, of skin or membrane.) The fluid of the membranous labyrinth; the endolymph.

A. lac'tis. (L. *lac*, milk.) The serum of milk, whey.

A. lactu'ce du'plex. (F. *eau de laitue double*.) This is made by macerating 20 parts of finely divided fresh lettuces with 2 parts of sp. vin. rect. and 100 parts of distilled water for one night, and then distilling till 10 parts have passed over.

A. lactu'ce sat'i'væ, Belg. Ph. Lettuce water. The fresh plant and flowering tops of lettuce 1000 parts, water a sufficiency. Distil 1000 parts.

A. laurocera'si, Ger. Ph. (G. *Kirschlorbeerwasser*.) Cherry laurel water. Fresh cherry-laurel leaves 12 parts, cut up and pound with a wooden pestle in a stone mortar, and add of water 36 parts, spirit of wine 1 part, and distil 10 parts into a well-cooled receptacle.

The Aust. Ph. directs that 1000 parts must contain 0.6 parts of hydrocyanic acid.

A. laxati'va Viennen'sis. (L. *laxativus*, alleviating, laxative; *Viennensis*, of Vienna.) A synonym of the *Infusum laxativum*, Aust. Ph.

A. lithar'gyri. Litharge water. A synonym of *Liq. plumbi subacetatis*.

A. lithar'gyri aceta'ti compos'ita. A synonym of *Liquor plumbi subacetatis*.

A. lith'ice efferves'cens. See *Liquor lithis effervesens*.

A. lixiv'ice caust'ice. (L. *lixivium*, lye; *causticus*, burning.) A synonym of *Liquor potassæ*.

A. Lu'cis. (F. *eau de luce*.) A synonym of *Liquor ammonii succinici*.

A. magnesi'ce aera'ta, Belg. Ph. Aerated magnesia water. Sulphate of magnesia 63 parts, carbonate of soda 80; dissolve them separately in five times their weight of boiling water; mix, carefully wash the precipitate of carbonate of magnesia which forms; whilst moist add a sufficiency of distilled water; pass through the mixture carbonic acid gas until solution occurs; the result should be 1000 parts.

A. mari'na. (L. *marinus*, belonging to the sea.) Sea water.

A. medica'ta. (L. *medicatus*, healing.) A mineral water.

A. medicina'lis Husson'i. (L. *medicinalis*, pertaining to medicine.) Husson's medicinal water. A name for the *Eau medicinale*.

A. melis'se, Aust. Ph. (G. *Melissenwasser*.) Balm water. Dry balm leaves 400, water 6000, grammes; distil 2000 grammes.

The Ger. Ph. directs that it is to be prepared in the same way as the *A. chamomilla*, Ger. Ph.

A. melis'se carmelita'rum. Balm water of the Carmelites. Eau des Carmes. The *Alcoholatum melissæ compositum*.

A. melis'se citra'tæ. A synonym of the *Aqua melissa*, Ger. Ph.

A. melis'se compos'ita. Compound balm water. A name for the *Eau des Carmes*, or Carmelite water.

A. melis'se concentra'ta, Ger. Ph. (G. *concentrirtes Melissenwasser*.) Concentrated balm water. This is directed to be prepared in the same way as the *Aq. chamomilla concentrata* Ger. Ph.

A. melis'se quad'ruplex, Helvet. Ph. (L. *quadruplex*, fourfold.) The same as *A. melissa concentrata*.

A. menth'æ cris'pæ, Belg. Ph. Oil of curled mint. Prepared as *A. anisi extemporanea*.

Ger. Ph. (G. *Krauseminzwasser*.) Curled mint leaves 1 part, water a sufficiency; distil 10 parts.

A. menth'æ piperi'tæ, Aust. Ph. (G. *Pfefferminzwasser*.) Peppermint water. This is directed to be made from the dry leaves of the *mentha piperita* in the same way as the *A. melissa*.

Ger. Ph. (G. *Pfefferminzwasser*.) This is directed to be prepared in the same way as the *A. mentha crispa*, Ger. Ph.

U.S. Ph. Peppermint water. Oil of peppermint $\frac{1}{2}$ fluid drachm, carbonate of magnesia 60 grains, distilled water 2 pints; rub the oil first with the carbonate of magnesia, then with the water, gradually added, and filter through paper.

Peppermint water may also be prepared by mixing 18 troy ounces with 16 pints of water, and distilling 8 pints.

A. menth'æ piperi'tæ vino'sa. Vinous peppermint water. A synonym of the *A. mentha spirituosa*, Ger. Ph.

A. menth'æ piperi'tidis spirituo'sa. A synonym of *Spiritus mentha piperite*.

A. menth'æ pule'gii. Pennyroyal water; prepared as *A. mentha viridis*.

A. menth'æ spirituo'sa, Ger. Ph. (G. *weingeistiges Pfefferminzwasser*.) Spirituous peppermint water. This is directed to be prepared in the same way as the *Aq. cinnamoni spirituosa*, Ger. Ph.

A. menth'æ vir'idis, U.S. Ph. Spearmint water. The directions to prepare this water are the same as those for the *Aqua mentha piperite*.

A. menth'æ vulga'ris spirituo'sa. A synonym of *Spiritus mentha viridis*.

A. mercuria'lis. Another term for the *Acetum philosophicum*.

A. mercuria'lis Char'ras. A synonym of *Liquor hydrargyri nitrici oxydati*.

A. mercuria'lis ni'gra. (L. *niger*, black.) A synonym of the *Aq. phagedanica nigra*, Ger. Ph.

A. metallo'rum. (L. *metallum*, a metal.) A synonym of *Mercury*.

A. minera'lis. A mineral water.

A. mirab'ilis. (L. *mirabilis*, marvellous.) This contains acetum vini 200 parts, cuprum sulphuricum 25 parts, kali carbonicum crudum 8 parts, ammonium chloratum, 10 parts, oxalium 2 parts, sp. vini gallici 100 parts; digest for three days and distil to dryness. Used as cordial and carminative.

Also, a synonym of *Spiritus pimentæ*.

A. Monteros'sii. A similar preparation to *A. Binellii*.

A. Morga'gni. See *Liquor Morgagni*.

A. mul'sa. (L. *mulsus*, mixed with honey.) Water in which honey has been dissolved.

Also (*G. Meth*), a term for mead.

A. na'pæ. (G. *napp*, a bowl.) A synonym of *A. aurantii*.

AQUA.

A. na'tri oxy muriat'ici. Solution of oxymuriate of soda; a synonym of *Liquor sodæ chlorinatæ*.

A. Neapolita'na. Naples water; artificially made. It consists of magnesium carbonate 10 grs., sodium carbonate 8 grs., aqua hydrosulphurica 9 drs., carbonic acid water 15½ oz.

A. nephritica. (Νεφριτικός, affected with nephritis.) A synonym of *Spiritus myristica*.

A. nicotia'na. Tobacco water. Made by adding alcohol and water to fresh leaves and distilling. It is said to be sedative and diaphoretic, without possessing the dangerous qualities of other preparations of tobacco.

A. nigra. (L. *niger*, black.) A synonym of the *A. phagedænica nigra*, Ger. Ph.

A. nitrogen'i protoxi'di. Water impregnated with nitrous oxide gas. It is said to be a nervine tonic, and has been used in cholera, dyspepsia, and chronic alcoholism.

A. niva'ta. (L. *nivatus*, provided with snow.) Water from melting snow.

A. nu'cis moscha'ta. A synonym of *Spiritus myristica*.

A. nu'cis vom'icæ. Belg. Ph. Nux vomica water. Nux vomica, bruised, 666 parts, alcohol 34, water a sufficiency. Distil 1000 parts.

A. obscu'ra. (L. *obscurus*, covered over, dark.) Old term for cataract.

A. odorife'ra. (L. *odorifer*, fragrant.) Honey water. Prepared from honey, coriander seeds, vanilla, cloves, nutmegs, lemon peel, storax, and benzoin, distilled from spirit of wine, mixed with spirit of roses and orange-flower water.

A. ophthal'mica. (Ὠφθαλμικός, for the eyes.) A synonym of *Liquor zinci sulphatis cum camphorâ*.

A. ophthal'mica al'ba. Dan. Ph. White collyrium. Zinc sulphate 6 parts, acetate of lead 3 parts, camphor 2 parts, rose water 576 parts; dissolve the salts of zinc and lead separately in the rose water, filter and mix, then add the camphor rubbed up with a little spirit of wine.

A. ophthal'mica brillia'na. (G. *Brilliantenwasser*.) This is composed of zinc sulphate, sodium chloride, camphor powdered, of each 1 part, distilled water 200 parts; mix and put aside for a day in a warm place, then cool, and filter.

A. ophthal'mica Bru'nii. This is composed of aloes 10 parts, tincture of saffron 3-7, rose water, white wine, of each 80 parts; macerate and filter.

A. ophthal'mica carita'tis Berolin'ensis. (L. *caritas*, love.) This is composed of zinc oxide 1 part, fennel water and rose water, of each 100 parts.

A. ophthal'mica coe'ru'lea. (L. *cæruleus*, dark blue.) This contains verdigris 10 parts, ammonium carbonate 20 parts, distilled water 5000 parts; dissolve and filter. Used as a collyrium.

A. ophthal'mica Conra'di. The same as the *Aqua ophthalmica mercurialis*, Dan. Ph.

A. ophthal'mica fœnicula'ta. This contains compound tincture of fennel 1 part, distilled water 6 parts; mix. Used as a collyrium.

A. ophthal'mica Hoffman'ni. This contains crystals of iron sulphate 1 part, distilled water 6 parts; mix.

A. ophthal'mica Lanfranc'i. The directions to prepare this are—Arsenicum sulfuratum 1-5 part, ærugo 1, myrrha, aloes, of each 0-5;

mix, then add aq. rosæ 40, vinum album 100. Recommended, mingled with water, in cases of purulent ophthalmia. (Hager.)

A. ophthal'mica Loeche'stli. Alumen crudum, zincum sulfuricum, tinct. aloes, of each 1 part, sp. vin. rect. 5 parts, aqua rosæ 200; mix. (Hager.)

A. ophthal'mica mercuria'lis. Dan. Ph. Bichloride of mercury .05, tinct. opii croc. 1-5, rose water 150, grammes.

A. ophthal'mica nigra Grae'ci. This contains extract. hyoscyam. 1 part, aqua rosæ 30 parts, aqua calcaria 90 parts, calomel 0-6 part; dissolve and agitate.

A. ophthal'mica Parisi'rum. The formula for this collyrium, which is much used in France, is—Zinc. sulph., rad. irid. florent., pulv. sacch., of each 5 parts, aqua 1000 parts. Macerate and filter.

A. ophthal'mica Fragen'sis. The formula for this collyrium is—Zinc. sulph. 1 part, aq. ros., aq. sambuc., of each 30 parts, mucilag. gum arab. 1 part. Solve and mix.

A. ophthal'mica Romershaus'eni. A synonym of the *A. ophthalmica fœniculata*.

A. ophthal'mica saturn'i. This collyrium contains acet. plumb. 7½ parts, mucilag. cydon. 60 parts, aq. ros. 2000 parts. Mix.

A. ophthal'mica Strofniakia'na. This collyrium contains zinc. sulph. 2 parts, aq. patchouli 1 part, and aq. destil. 640 parts.

A. ophthal'mica Taman'ti. This collyrium contains cup. aluminat. 1 part, aq. ros. 500 parts, sp. æther., tinct. opii crocati, of each 2 parts. Mix.

A. ophthal'mica Whit'el. This collyrium contains caryophylli 10 parts, cassia 5, mel 10, aq. rosæ, aq. font., of each 50, acetum crudum, tinct. arnicae, of each 25. Digest for one day and filter; then add 2½ parts of sulphate of zinc to every 150 parts of the strained fluid.

A. op'ii. Ger. Ph. (G. *Opiumwasser*.) Opium water. Coarsely powdered opium 1 part, water 10 parts; distil 5 parts.

A. ora'nium. A synonym of *A. aurantii*.

A. oxygena'ta. Oxygenated water. An old synonym of *Aqua chlori*.

A. oxy'geno-muriat'ica. A synonym of *A. chlori*.

A. oxymuriat'ica. A synonym of the *A. chlorata*, G. Ph.; and of the *A. chlori*, Aust. Ph.

A. Paglia'ri. See *Pagliari's hæmostatic*.

A. paludo'sa. (L. *palus*, a marsh.) Water from a marsh.

A. parietari'æ. Belg. Ph. Pellitory water. Pellitory 500 parts, water sufficient. Distil 1000 parts.

A. patchouli. This is prepared by agitating one part of oil of patchouli with 2000 parts of water.

A. pe'dum. A term for urine.

A. pericard'i. The fluid which is found in the pericardial sac.

A. Petroselin'ni. Ger. Ph. (G. *Petersilienwasser*.) The directions are—Take of parsley seeds 1 part, water a sufficiency; distil 20 parts.

A. phagedæ'nica. Ger. Ph. (Φαγέδαινα, a cancerous sore. G. *phagedænisches Wasser*.) Yellow wash. The directions are—Take of finely powdered corrosive sublimate 1 part, and add 300 parts of lime water.

A. phagedæ'nica nigra. Ger. Ph. (G. *Schwarzes Wasser*.) Black wash. The direc-

AQUA.

tions are—Take of calomel 1 part, lime water 60 parts; mix.

A. picea. Fr. Codex. (L. *piceus*, of pitch. *F. ess. de goudron*.) Tar water. One hundred parts of tar are macerated with distilled or rain water, and the water is rejected. A second quantity of water is then added, and the mixture allowed to stand for eight or ten days. It is finally decanted and filtered.

A. picea. Ger. Ph. (L. *picea*, tar. G. *Therwasser*.) Tar 1 part, and agitate with 10 parts of distilled water.

A. picea liquida. A synonym of the *Infusum picea liquida* of the U.S. Ph.

A. pimento. B. Ph. Pimento water. Bruised pimento 14 oz., water 2 gallons; distil one gallon.

A. plumbi. Ger. Ph. (G. *Bleiwasser*.) The directions are—Take of liquor plumbi subacetici 1 part, distilled water 49 parts; mix.

A. plumbi acetosi. A synonym of *Liquor plumbi subacetici*.

A. plumbi Goulardi. Ger. Ph. (G. *Goulard's Bleiwasser*.) The directions are—Take of liquor plumbi subacetici 1 part, dilute spirit (sp. gr. 0.92) 4 parts, water 45 parts; mix.

A. plumbi spirituosus. A synonym of the *A. plumbi Goulardi*, Ger. Ph.

A. plumbica. A synonym of the *Aqua plumbi*, Ger. Ph.

Aust. Ph. (G. *Bleiwasser*.) Solution of basic acetate of lead 1 gramme, distilled water 60 grammes; mix.

A. pluvialis. (L. *pluvialis*, belonging to rain.) Rain water.

A. potassae. A synonym of *Liquor potassae*.

A. potassae effervescentes. The *Liquor potassae effervescentes*.

A. psychoctis. Ind. Ph. Ajwain or omum water. Ajwain fruit, bruised, 20 oz., water 2 gallons; distil a gallon. Carminative; used to disguise disagreeable drugs, and prevent griping and nausea. Dose, one to two ounces.

A. pugilum. A synonym of *Acidum nitro-hydrochloricum*.

A. pulv. gil. Pennyroyal water. Made as *A. mentha viridis*.

A. pulv. gil spirituosus. The *Spiritus mentha pulegii*.

A. pur. An abbreviation, employed in prescriptions, of the words *Aqua pura*, of pure water.

A. pura. (L. *purus*, pure.) Pure water.

A. putcalis. (L. *putealis*, belonging to a well.) Well water.

A. quassiae. Belg. Ph. Quassia water. Quassia wood 468 parts, alcohol 125, water sufficient to distil 1000 parts.

A. Rabelii. A synonym of *Acidum sulphuricum alcoholisatum*, or the *Acid elixir of Haller*.

A. raphani composita. (Páphavos, a radish.) A synonym of *Spiritus armoracea compositus*.

A. regalis. (L. *regalis*, royal.) A term for *Acidum nitro-muriaticum*.

A. regia. (L. *regius*, royal.) Royal water; a mixture of nitric and hydrochloric acids, which was supposed to be the only acid able to dissolve gold. A synonym of *Acidum nitro-hydrochloricum*.

A. reginae. (L. *regina*, a queen.) A synonym of *Acidum sulphurico-nitricum*.

A. reginae Hungariae. Queen of Hungary's water; the *Spiritus rosmarini*.

A. regia. (L. *rex*, a king.) A synonym of *Acidum nitro-hydrochloricum*.

A. roseae. B. Ph. Rose water. Fresh petals of the hundred-leaved rose 10 pounds (or an equivalent quantity of the petals preserved while fresh with common salt), water 2 gallons; distil one gallon.

U.S. Ph. Take of pale rose 48 troy ounces, water 16 pints; mix them and distil 8 pints. When it is desirable to keep the rose for some time before distilling, it may be preserved by being well mixed with half its weight of chloride of sodium.

Ger. Ph. (G. *Rosenwasser*.) Fresh roses 2 parts, or 3 parts of salted roses, with a $\frac{1}{2}$ part of sodium chloride, water a sufficiency; distil 10 parts.

A. rosarum. Aust. Ph. (G. *Rosenwasser*.) Oil of roses 0.1 gramme, distilled water 400 grammes; shake together and filter.

A. rubi idaei. Aust. Ph. (G. *Himbeerwasser*.) Raspberry water. Ripe raspberries 400, water 4000, grammes; distil 2000 grammes.

Ger. Ph. Fresh raspberry fruit, after expression of the juice, 100 parts, water a sufficiency, distil 200 parts; or, take of concentrated raspberry water 1 part, distilled water 9 parts; mix.

A. rubi idaei concentra'ta. Ger. Ph. (G. *concentrirtes Himbeerwasser*.) Concentrated raspberry water. Fresh raspberries, after expression of the juice, 100 parts, spirit of wine 4 parts, warm water a sufficiency; macerate for a night, and distil 20 parts.

A. rutae. Belg. Ph. Rue water. Made like *A. anisi extemporanea*.

A. Sald'schütz facticia. Helv. Ph. Magnesium sulphate 70 grms., sodium bicarbonate 5 grms., dissolved in distilled water 700 grms., are put into a strong vessel; and before tightly closing 15 grms. of dilute sulphuric acid are added.

A. salicylica. (G. *Salicylwasser*.) Salicylic acid one part, distilled water 300 parts.

A. salubris. (L. *salubris*, health-bringing.) A mineral water.

A. salviae. Ger. Ph. (G. *Salbeiwasser*.) Sage water. This is directed to be made in the same way as the *A. chamomilla*, Ger. Ph.

A. salviae concentra'ta. Ger. Ph. (G. *concentrirtes Salbeiwasser*.) Concentrated sage water. This is directed to be made in the same way as the *A. chamomilla concentra'ta*, Ger. Ph.

A. sambuci. B. Ph. Elder-flower water. Fresh elder flowers, separated from the stalks (or an equivalent quantity of the flowers preserved while fresh with common salt), 10 pounds, water 2 gallons; distil one gallon.

Ger. Ph. (G. *Fliederblumenwasser*, *Hollunderblüthenwasser*.) This is directed to be made in the same way as the *A. chamomilla*, Ger. Ph.

A. sambuci concentra'ta. Ger. Ph. (G. *concentrirtes Fliederblumenwasser*.) Concentrated elder-flower water. This is directed to be made in the same way as the *A. chamomilla concentra'ta*, Ger. Ph.

A. Sanctae Luciae. St. Luke's water. A synonym of *Spiritus ammoniac succinatus*, or *Liquor ammoniac succinici*.

A. sapphirina. (L. *sapphirinus*, sapphire in colour.) The rich deep blue solution formed when an excess of ammonia is added to a solution of sulphate of copper.

Subacetate of copper -1, chloride of ammonium 1·0, lime water 50 grms.; digest and filter. A stimulant and astringent application to be dropped into the eye once a day.

A. saturni. (L. *Saturnus*, Saturn, a name given to lead. G. *bleihaltiges wasser*.) The *Liquor plumbi subacetatis dilutus*.

A. saturnina. (Same etymon.) A synonym of the *A. plumbi*, Aust. and Ger. Ph.

A. sclopeta'ria. (Mod. Lat. *sclopetum*, a gun.) A synonym of the *Aq. vulneraria acida*, Ger. Ph.

A. sedati'va (*Egg's pall*), Belg. Ph. Sedative water. Camphor 2 parts, alcohol 5, water 875, sodium chloride 20, solution of ammonia 100.

A. seidlitz'en'sis. Seidlitz water. A synonym of *Eau saline purgatif*, Fr Codex.

A. seidlitz'en'sis extempora'nea. Belg. Ph. Extemporaneous or artificial seidlitz water. Magnesium sulphate 60 parts, water 930, sodium bicarbonate 5, tartaric acid 5.

Or, magnesium sulphate 30 parts, dissolved in 650 parts of soda water.

A. sem'inum anisi compos'ita. Compound water of anise seeds. The *Spiritus anisi*.

A. sem'inum carui for'tis. Strong water of caraway seeds. The *Spiritus anisi*.

A. sere'na. (L. *serenus*, clear.) Old term for *Amaurosis*.

A. serpy'lli. Thyme water. Prepared as *A. anisi extemporanea*.

A. sic'ca. (L. *siccus*, dry.) A synonym of *Mercury*.

A. sina'pis. Mustard water. Oil of mustard 3 drops, shaken vigorously with 5 grms. of water. A rubefacient.

A. so'dæ efferves'cens. Effervescent soda water. The *A. acidi carbonici*.

A. soto'ria. (Σωτηρία, a saving.) A mineral water.

A. spada'na. A synonym of *A. ferruginosa aërata*.

A. stibia'ta. Stibiated or antimonial water. Tartar emetic 0·2 grm., water 50 grms. An emetic, of which half is given to begin with.

A. stillati'la. (L. *stillitius*, dropping.) Distilled water.

A. sty'gia. (L. *stygius*, deadly; from στυγ, a river of the nether regions.) A term for nitro-muriatic acid.

A. sty'ptica. (Στυπτικός, of astringent quality.) The *Liquor cupri sulphatis compos'itus*.

A. sty'ptica villa'ti. Acetate of lead 5 parts, dissolved in vinegar 45, to which are added sulphate of zinc and sulphate of copper, of each 2·5 parts.

A. subaceta'tis plum'bici. A synonym of *Liquor plumbi subacetatis*.

A. subcarbona'tis ka'li. The *Liquor potassæ carbonatis*.

A. sulfura'ta. (G. *Schwefelwasser*.) Sodium sulphide, sodium chloride, of each 0·13 grm., distilled water deprived of air by boiling 650 grms. Dose, two or more glasses in the day.

A. sulfuro'sa. Sulphurous water. Water impregnated with 20 per cent. of hydrogen sulphide.

A. sulphura'ta simplex. Simple sulphurated water. A term for a solution of hydrogen sulphide.

A. sulphure'ti ammo'nice. Water of sulphuret of ammonia. A term for *Liquor fumans Boylei*.

A. supercarbona'tis potas'sæ. The *Liquor potassæ effervescens*.

A. supercarbona'tis so'dæ. The *Liquor soda effervescens*.

A. superoxi'di muriato'si. A synonym of *Chlorine water*.

A. Theden'i. A vulnerary composed of 630 parts of alcohol (of 80°), 210 of concentrated sulphuric acid, 420 of honey, and 1260 of water. It is regarded as an antiseptic and detergent.

A. Thedia'na. Same as *A. Theden'i*.

A. theriaca'tis bozoard'ica. Bozoard theriacal water. An old alexipharmic compounded of bezoar, theriaca, and other materials.

A. til'ice. Ger. Ph. (G. *Lindenblüthenwasser*.) Lime-flower water. This is directed to be made in the same way as the *A. chamomilla*, Ger. Ph.

A. til'ice concentra'ta. Ger. Ph. (G. *concentrirtes Lindenblüthenwasser*.) This is directed to be prepared in the same way as the *A. chamomilla concentra'ta*, Ger. Ph.

A. Tofa'ni. See *Aqua Tofana*.

A. Toffa'nia. See *Aqua Tuffana*.

A. tos'ti pa'nis. (L. *tosus*; from *torreo*, to toast; *panis*, bread.) Toast water; made by putting a slice of well-toasted bread into water.

A. traumati'ca veg'eto-minera'lis Theden'i. (Τραυματικός, pertaining to wounds.) A synonym of *A. Theden'i*.

A. valeria'nae. Ger. Ph. (G. *Baldrianwasser*.) This is directed to be prepared in the same way as the *A. mentha crispæ*, Ger. P.

A. veg'eto-minera'lis. (F. *eau végétominérale*.) A synonym of *Liquor plumbi subacetatis*.

A. veg'eto-minera'lis Goulard'i. Aust. Ph. (G. *Goulard'sches wasser*.) Solution of basic acetate of lead 2, water 100, spirit of wine (70 per cent.) 5 grammes; make when required.

Also, a synonym of the *A. plumbi Goulard'i*, Ger. Ph.

A. Vicien'sis artifi'cia'lis. Artificial Vichy water. Sodium bicarbonate 600 centigras, sodium chloride 30, calcium chloride 30, sodium sulphate 60, magnesium sulphate 26, crystallised sulphate of iron 1·5 centigras; dissolve in water saturated with carbonic acid gas 1000 grms.

A. vi'tæ. (L. *vita*, life.) Water of life; a name applied to ardent spirits of the first distillation.

A. vi'tæ camphora'ta. Camphorated water of life. Camphor 25 parts, dilute alcohol 975. Also called *Alcoholatum camphoræ debile*.

A. vi'tæ German'ica. German water of life. A synonym of *Tinctura jalapæ composita*, Belg. Ph.

A. vitrioli'ca camphora'ta. Camphorated vitriolic water. A term for *A. zinci sulphatis cum camphora*.

A. vitrioli'ca coerule'a. (L. *cæruleus*, dark blue.) Blue vitriolic water. A synonym of *Solutio sulphatis cupri composita*.

A. vulnera'ria. (L. *vulnerarius*, belonging to wounds.) A remedy in repute in Italy as an application to wounds. The "rossa" or red "acqua" contains lavender, the leaves of angelica, and of basil, sage, absinthium, fennel, hyssop, rue, marjoram, and several other labiate plants, with a little alkanet and cochineal. In the "bianca" or "white" form the colouring ingredients are omitted.

A. vulnera'ria acida Theden'i. Ger. Ph. (G. *Theden's Schusswasser*, or *Wundwasser*.)

AQUE—AQUAPUNCTURE.

Theden's acid vulnerary water. This contains acetum 6 parts, sp. vin. dil. 3 parts, acid. sulph. dil. 1 part, mel 1 part.

A. vulneraria Laudri'ni. Laudrin's vulnerary water. The same as *A. vulneraria*, with the addition of a little common salt and cream of tartar.

A. vulneraria Roma'na. Roman vulnerary water. The same as *A. vulneraria Laudri'ni*.

A. vulneraria rubra. Red vulnerary water. A synonym of *Tinctura vulneraria rubra*, Helv. Ph. Also, see *A. vulneraria*.

A. vulneraria spirituos'a. Ger. Ph. (*G. weisse Arquebusade*.) Spirituous vulnerary water. Leaves of peppermint, rosemary, rue, sage, wormwood, and flowers of lavender, of each 1 part; macerate, after fine division, for two days, in 18 parts of dilute spirit (0.892) and 50 parts of water; distil 36 parts.

A. vulneraria vino'sa. (*L. vinosus*, full of wine.) A synonym of *A. vulneraria spirituos'a*.

A. zinci sulphatis cum camphora. Water of sulphate of zinc with camphor. Sulphate of zinc $\frac{1}{2}$ oz, camphor 2 drs., boiling water 2 lbs. Mix and filter.

A. quæ. (*L. aqua*, water. *G. Gesundbrunnen*, *Heilquellen*.) Mineral waters.

A. acidulæ. (*L. acidulus*, sourish.) Mineral waters containing sufficient carbonic acid gas to give a distinct taste.

A. Ba'dis. The mineral waters of Bath.

A. Ba'dig'ne. The mineral waters of Bath.

A. Ba'tho'niæ. The mineral waters of Bath.

A. Burxtonien'sis. The mineral waters of Buxton.

A. cal'idæ. (*L. calidus*, hot.) The mineral waters of *Eaux-chaudes*.

A. chalybeat'æ. (*Xάλυψ*, steel.) Mineral waters containing iron.

A. destilla'tæ. (*L. destillo*, to trickle down, to distil. *G. destillirte Wassers*.) Waters distilled from various substances, of which, as a rule, they possess the smell and taste; opium water, however, constitutes an exception.

A. ferro'sæ. (*L. ferrum*, iron.) Mineral waters containing iron.

A. martia'les. (*L. martialis*, belonging to Mars, an old name of iron.) Mineral waters containing iron.

A. medica'tæ. (*L. medicatus*, healing.) Medicated waters. All preparations consisting of water holding volatile or gaseous substances in solution, many of which were formerly obtained by distillation, and some still continue to be so.

A. me'tus. (*L. metus*, fear.) A synonym of hydrophobia from a prominent symptom, dread of water.

A. minera'les acid'ulæ. Acidulous mineral waters; those which contain a notable amount of carbonic acid gas.

A. minera'les ferrugine'sæ. Ferruginous mineral waters; those containing iron.

A. minera'les sulphu'reæ. Sulphurous mineral waters; those containing hydrogen sulphide.

A. pa'vor. (*L. paror*, fear.) Dread of water. A synonym of *Hydrophobia*.

A. so'lis. (*L. sol*, the sun.) An old term for the mineral waters of Bath.

A. stillatit'æ. (*L. stillatitius*, dropping.) Distilled medicinal waters.

A. stillatit'æ simp'lices. (*L. stillatitius*, dropping; *simples*, simple.) Simple distilled water, now called *A. destillata*.

A. stillatit'æ spirituos'a. (*L. stillatitius*; *spiritus*, spirit.) Distillations of drugs in which spirit of wine is the menstruum, now called *Spiritus*.

A. subve'ni hom'ni. Italy; between Puzzuoli and Naples. Also called *Acqua di suppa d'uomini*. A mineral water, of 35° C. (95° F.), springing from the foot of Monte Olibano; it contains carbonic acid, calcium and magnesium carbonate, iron carbonate, calcium and sodium sulphate, and sodium and potassium chloride. It is used in nervous diseases, in anæmia, amenorrhæa, and in chronic mucous discharges.

Aqueduct'us. (*L. aqua*, water; *ductus*, a leading. *F. aqueduc*; *G. Wasserleitung*.) A canal, or duct, for conveying water; an aqueduct. Applied to several canals in different parts of the body, though not always containing fluid.

A. cerebri. (*L. cerebrum*, the brain.) The infundibulum; a hollow conical process of the tuber cinereum, to which is attached the pituitary body; it communicates with and forms part of the floor of the third ventricle.

A. coch'leæ. (*F. aqueduc du limaçon*; *I. acquedotto della chiacchiale*; *G. Wasserleitung der Schnecke*.) The aqueduct of the cochlea; a small canal extending downwards and inwards from near the commencement of the scala tympani of the cochlea, through the petrous bone to a point near the jugular fossa and just below the internal auditory foramen; it transmits a small vein.

A. Cotun'ni. The aqueduct of Cotunnus; a term for the *A. vestibuli*.

A. Fallo'pii. (*F. aqueduc de Fallope*, canal spiroïde de l'os temporal; *I. acquedotto di Fallopio*; *G. Wasserleitung des Fallopius*.) A canal in the petrous portion of the temporal bone, commencing at the upper part of the lamina cribrosa of the meatus auditorius internus, running outwards and backwards over the labyrinth, and then downwards to the stylo-mastoid foramen. It transmits the facial nerve.

A. Syl'vii. (*F. aqueduc du Sylvius*, canal intermédiaire des ventricules; *I. acquedotto di Silvio*; *G. Sylvius'sche Wasserleitung*.) The aqueduct of Sylvius; a narrow canal extending downwards and backwards from the hinder part of the third ventricle to the fourth ventricle. The floor consists of a prolongation of the fasciculi teretes to the cerebral peduncles, the lateral walls of the superior peduncles of the cerebellum, and the roof of the corpora quadrigemina and valve of Vieussens.

A. vestib'uli. (*F. aqueduc du vestibule*; *I. acquedotto di vestibolo*; *G. Wasserleitung des Forhofes*.) The aqueduct of the vestibule; a small canal arising from the inner wall of the vestibule of the ear behind the eminentia pyramidalis, and running to the posterior surface of the petrous bone. It transmits a small vein.

Aqu'ala. An old term for arsenic and for sulphur.

Aqualic'ulus. (*L. aqualiculus*, a small water vessel, the lower part of the belly.) Old term for the lower part of the belly or abdomen; also, for the pubes.

Aquapuncture. (*L. aqua*, water; *punctura*, a prick.) A revulsive method of treatment,

AQUARACINNA-ACU—AQUILA.

obtained by means of a force-pump apparatus, which propels a hair-like stream of water on to the skin with sufficient intensity to perforate the epidermis. Sharp pain is felt for a few moments and swelling occurs, both of which, however, soon disappear. The swelling is a whitish elevation, containing in its centre a small drop of blood. It has been used in cases of neuralgia, sciatica, lumbago, and muscular rheumatism.

Aquaracinnha-acu. The name of a Species of *Borago*, probably a heliotrope figured by Piso ('Bras,' p. 109), and by Marcgrave. The leaves are used in Brazil as an application to wounds and ulcers.

Aquara-ibi. A name applied in Paraguay to trees of the Nat. Order *Terebinthaceæ*. The fruit of all the species used contain a resinous, aromatic juice, from which is prepared the much esteemed mission balsam, of which the Jesuits send annually a present to the Spanish court. The balsam is an inspissated vinous extract. It is employed to relieve rheumatic pain and for the cure of severe ulcers, and is said to be useful in hæmoptysis and bronchial fluxes. Dose, 6—8 grains frequently repeated.

Aquarium. (L. *aquarium*, a vessel for water.) A chamber with one or more glass sides for the observation of the habits of aquatic animals.

Aquarius. An old term for *Ferrum*, or iron. (Ruland and Johnson.)

Aguas de Veruga. The Peruvian name of certain springs supposed to be endowed with deleterious properties, producing the disease termed veruga. This commences with sore throat and febrile symptoms, followed by an eruption of pimples or boils, from which great bleeding occurs, reducing the strength of the patient and leading often to consumption. It attacks mules and horses (see Tschudi). Sudorifics, purgatives, and excision of the verugas is the treatment adopted by the Peruvians.

Aquaster. A term employed by Paracelsus to express the visions or hallucinations of patients. (Dunglison.)

Aquatic. (L. *aquaticus*, living in the water. F. *aquatique*; I. *acquatico*; S. *acuatico*; G. *Wasserlebens*.) Of, or belonging to, water. Growing in the water; applied to certain plants of this nature. By some authors its application is restricted to fresh water.

A. box. A term for *Animalcule cage*.

A. respiration. Breathing by gills or other provision for effecting respiratory changes in the body by means of the oxygen dissolved in water.

A. roots. The roots of plants growing in the water, and which have no attachment to the earth.

Aquatilis. (L. *aquatilis*; from *aqua*, water; G. *im wasser lebend*.) Living in water.

Aqueduct. See *Aqueductus*.

Aqueducus. (L. *aqua*, water; *duco*, to conduct.) Same as *Aqueductus*.

Aqueola. Old name for a species of *Hordeolum*, or sty.

Aqueous. (L. *aqua*, water. F. *aqueux*; G. *wässrig*.) Of the nature, or quality, of water; watery. Used to denote definite combinations of water.

A. can'cer. A name given to gangrene of the mouth in infants, or noma.

A. cham'ber of eye. The space between the crystalline lens and the cornea, divided by

the iris into the anterior and the posterior chamber.

A. extract. (L. *extraho*, to draw out. F. *extrait aqueux*; G. *wässriges extract*.) A term applied in Pharmacy to solid preparations of drugs made chiefly or entirely with water.

A. forma'tions. The stratified or sedimentary rocks which have been formed by deposit from water.

A. fu'sion. See *Fusion, watery*.

A. hu'mour. (L. *humor aqueus*. F. *humour aqueuse*.) Term for the eight or ten drops of colourless fluid filling the anterior and posterior chambers of the eye. It is a clear liquid, of alkaline reaction and sp. gr. 1.003—1.009; it contains 1—1.5 per cent. of solids. In the aqueous humour of the calf there were found water 986.87, sodium albuminate 1.223, extractive 4.21, sodium chloride 6.59, potassium chloride .113, potassium sulphate .221, earthy phosphate .214, and lime .259.

A. va'pour. The steam or vapour which is given off from water at all temperatures. Its radiating and absorbing power for heat is very great, being more than 16,000 times that of air.

Aquet'ta. The *Aqua Toffana*.

Aquidu'ca. (L. *aqua*, water; *duco*, to lead.) Medicines that produce watery evacuations; hydragogues; cathartics.

Aquidu'cous. (L. *aqua*, water; *duco*, to lead.) Drawing or leading water; draining off water. Used by Cæsar Aurelianus, *de Tard. Pass.* iii, 3, synonymously with *Hydragogue*.

Aquiferous. (L. *aqua*; *fero*, to bear. G. *wassertragend*.) Containing or carrying water.

A. canal's. Small canals in the foot of some molluscs having an external opening.

A. sys'tem. See *Water-vascular system*.

Aquifolia'ceæ. (L. *acus*, a needle; *folium*, a leaf. F. *aquifoliacées*.) The hollies. An Order of epipetalous corollifloral *Exogens*. Evergreens. Leaves coriaceous, simple, exstipulate, smooth, sometimes with spiny teeth; flowers small, solitary, axillary; sepals distinct, 4—6; corolla imbricated; stamens alternate with the petals; anthers 2-celled, adnate, opening longitudinally; ovary 2—6 or more celled, free, truncate, uniovular; ovule pendulous; placenta axile; fruit fleshy, indehiscent.

Aquifolious. (L. *acus*, a needle; *folium*, a leaf.) Having sharp-pointed leaves.

Aquifo'lium. (L. *acus*, a needle; *folium*, a leaf; because its leaves are prickly.) The holly tree. See *Ilex aquifolium*.

Aquiform. (L. *aqua*; *forma*, appearance.) Having the semblance of water.

Auqig'enous. (L. *aqua*; *gigno*, to produce.) Living in water.

Aquila, Briss. (L. *aquila*. F. *aigle*; I. *aquila*; G. *Adler*.) The eagle. Beak long, straight at the base, not indented; legs feathered to the origin of the toes. The several commoner varieties of eagle were formerly much esteemed in medicine; the bones were given in headache, the brain in jaundice, and the tongue in incontinence of urine; the dried bill was used as a sternutatory, and the wings were put under the feet to facilitate labour.

Also, an alchemical term for sal ammoniac, mercury, arsenic, sulphur, and the philosopher's stone.

A. al'ba. (L. *albus*, white.) Old term for calomel and for sal ammoniac.

AQUILA—AQUOMEMBRANITIS.

A. coelestis. (L. *coelestis*, heavenly.) A synonym of *White precipitate*, thought to be the cure for all diseases.

A. Ganymede. (L. *Ganymedes*, Gany-mede, son of Laomedon, taken up to heaven by Jupiter's eagle to be his cup-bearer.) A term for sublimed sal ammoniac.

A. mitiga'ta. (L. *mitigo*, to render gentle.) A synonym of *Calomel*.

A. n'gra. (L. *niger*, black.) Old term for a preparation of cobalt.

A. philosopho'rum. (Φιλόσοφος, a lover of wisdom.) An old term for hydrargyrum, or mercury.

A. terres'tris. (L. *terrestris*, belonging to the earth.) A synonym of *Antimony oxychloride*.

A. ven'eri. (L. *Venus*, the goddess of love.) Old term for a preparation of verdigris sublimed with sal ammoniac.

Aquila, Giovanni d'. An Italian physician of the fifteenth century. He wrote, amongst other books, a treatise on bloodletting in pleurisy.

Aquiles. (L. *aquila*, an eagle.) The temporal veins, for it was said that these were prominent in the eagle.

A. lachrymæ. (L. *lachryma*, a tear.) Eagles' tears. Old term for a certain preparation, of which calomel was an ingredient.

A. la'pis. (L. *lapis*, a stone.) Ancient name for the ætites, or eagle-stone.

A. lignum. (L. *lignum*, wood.) Eagle-wood. Former term for agallochum, or *Lignum aloës*.

A. venæ. (L. *vena*, a vein.) Eagles' veins. An old term for the temporal veins.

Aquila'no, Sebastien d'. Professor of medicine at Padua; died 1643. He wrote two treatises: one, entitled *Interpretatio morbi gallici et curæ*; and another, *Quæstio de febre sanguinea*.

Aquila'ria. A Genus of the Nat. Order *Aquilariaceæ*.

A. agallocha. Roxb. Also called *Aloes-lym agallochum*. A plant producing a resinous wood, formerly generally valued for incense, and named the Lignum or Lign aloës. It is considered in some parts of Asia as a cordial, and has been prescribed in Europe in gout and rheumatism. In Assam, where it is known under the name of Hansi, the bark was formerly used for paper, and in Silhet a fragrant oil is distilled from the wood. (Waring.) See *Aloes-wood*.

A. chinensis. Spreng. A South China species, with undulate, lanceolate leaves, and terminal, solitary, hexamerous flowers. It also supplies eagle-wood.

A. malaccensis. Lam. Eagle wood. A perfume, known in Cochin-China as "tram-toc" is prepared from the nodosities that form on the base of the broken branches of this tree. Its wood is often substituted for aloes-wood.

A. ovata. (L. *ovatus*, egg-shaped.) A species said also to supply aloes-wood.

A. secundaria. De Cand. (*A. secundarius*, second-rate, inferior.) A species also supplying eagle-wood; a substitute for aloes-wood.

Aquilaria'ceæ. An Order of the Subclass *Monochlamydeæ*, of angiospermous Dicotyledons. Trees with entire, exstipulate leaves; flowers apetalous; calyx tubular, 4—5-lobed, imbricate, persistent; stamens 10, 8, or 6, opposite the divisions of the calyx when equal to them in

number; ovary composed of two carpels, superior; ovules 2, suspended; seeds exalbuminous.

Aquila'riads. Plants of the Order *Aquilariaceæ*.

Aquilarin'ceæ. The same as *Aquilariaceæ*.

Aquile'gia. (L. *aquila*, an eagle; the nectaries resembling claws; according to some *aquileus*, a water drawer.) A Genus of the Nat. Order *Ranunculaceæ*. Calyx with 5 deciduous coloured sepals; petals 5, terminating in a horn-shaped spur.

A. alp'ina. (L. *alpinus*, belonging to the Alps.) A synonym of *A. vulgaris*.

A. canadensis. Canadian or wild columbine. Hab. North America. The seeds are said to be tonic.

A. sylvestris. (L. *sylvestris*, belonging to the woods.) A synonym of *A. vulgaris*.

A. vulgaris. (L. *vulgaris*, common. F. *arcolie vulgaire*; S. *pazarilla*; I. *aquilgia*; G. *Akelei*; Dut. *akeley*.) Columbine; culverwort. Spur of petals incurved; capsules hairy; leaves glabrous; stem leafy, many flowered; styles as long as stamens. Hab. Most part of Europe and Japan. The whole plant was formerly employed medicinally, and was regarded as a diuretic, diaphoretic, and antiscorbutic. It was especially valued in scurvy; it was also used in jaundice and in smallpox to promote the eruption. Linnaeus placed the dose at from 30—60 grains of the powdered seeds. The tincture of the blue flowers has been used as a test for acids.

Aquile'ia. (L. *aqua*, water; *scio*, to draw out.) A Genus of the Nat. Order *Vitaceæ*, also called *Leca*.

A. sambuc'ina. (L. *sambucus*, the elder.) The systematic name of a plant, native of Java, the Moluccas, &c. A decoction of its root is used against heartburn, and of its wood, to allay thirst.

Aquili'na. The *Aquila vulgaris*.

Aquili'næ. The eagles. A Subfamily of the Family *Falconideæ*, Order *Raptoreæ*. Large, powerful birds, with completely feathered heads, high toothless beaks, with sinuous margins, feathered legs, and strong claws.

Aquiline. (L. *aquila*, an eagle. F. *aquilino*; G. *aderähnlich*.) Bent like the beak of an eagle. The *Pteris aquilina* is so called because a transverse division of its root presents the rude image of an eagle with two heads.

Aquiparia. (L. *aqua*, water; *pario*, to bring forth. F. *aquipars*.) Applied by Blainville to an Order of *Reptilia Batracis* which deposit their progeny in water.

Aquiparous. (L. *aqua*, water; *pario*, to produce.) Producing or secreting water. Also, laying eggs, or bringing forth, in water.

A. glands. A term applied to such glands as the parotid, the secretion of which is very watery.

Aquocapsuli'tis. (L. *aqua*, water; *capsula*, a small box.) Inflammation of the membrane supposed to line the anterior and posterior chambers of the eye. Applied to a condition in which, with the signs of iritis, the posterior surface of the cornea and the anterior capsule of the lens exhibit numerous white discrete spots. See *Iritis, serous*.

Aquomembrani'tis. (L. *aqua*; *membrana*, a skin or membrane.) The same as *Aquocapsulitis*.

AQUOSITAS—ARABIS.

Aquositas. (L. *aquosus*, watery.) The state of that which is aqueous.

Aquosus. (L. *aquosus*, watery. G. *was-serig*.) Belonging to, resembling, or full of, water; watery, aqueous. A term for the lining membrane of the anterior chamber of the eye; and also, for the fluid contained in it, the aqueous humour.

Aquila. (L. *aquila*, a little water; dim. of *aqua*.) A small collection of water.

Also, a synonym of hernia of the cornea, or keratocoele.

Also, applied to some hydatids.

Also, a synonym of *Hydra*.

A. acoustica. (Ἀκουστικός, belonging to the sense of hearing.) Term for the fluid which fills the cavity of the vestibule of the internal ear.

A. auditiva. (L. *auditus*, the hearing.) The perilymph and the endolymph of the internal ear.

A. Cotonii. The perilymph, or aqua Cotonii.

A. labyrinthi externa. The external water of the labyrinth. The perilymph.

A. labyrinthi interna. The internal water of the labyrinth. The endolymph.

A. labyrinthi membranaea. The water of the membranous labyrinth. The endolymph.

A. Morgagni. See *Liquor Morgagni*.

A. vitrea auditiva. (L. *vitreus*, of glass; *auditus*, the hearing.) The endolymph.

A. vitrina auditoria. (L. *vitrum*, glass; *auditorius*, relating to hearing.) The glass-like auditory water. The endolymph.

Ara parva. Name (Gr. *Βραχὺς μικρὸς*) used by Galen, *de Fasciis*, n. 26, for a certain kind of bandage, like the corners of an altar, attributed to Sostratus.

Arabia digitata. The *Paratropia venulosa*.

Arabian coffee. The fruit of *Coffea arabica*.

A. manna. The saccharine exudation of *Tamarix indica*.

A. senna. The leaves of the *Cassia lanceolata*.

Arabic acid. (G. *Arabinsäure*.) $C_{12}H_{20}O_{11}$. An acid obtained by dissolving gum arabic in cold water and slightly acidulating with hydrochloric acid; the addition of alcohol produces in it a precipitate of the acid in question. Arabic acid gives up H_2O when united with bases; it has a great tendency to form salts containing several equivalents of acid to one of base. Natural pure gum may be regarded as the potassium and calcium salts of arabic acid having a large excess of acid.

A., gum. The *Acacia gummi*.

A. treatment. The treatment of cutaneous diseases by arsenic sulphide, as is usual with the Arabians.

Arabica. (L. *Arabicus*, Arabian.) Arabian stone. A mineral substance, white, ivory-like; a product used by the ancients locally in hæmorrhoids, and as a dentifrice. (Waring.) Theoph. on *Stones*, c. 35; Dioscor. l. v, c. 148; Paul. Æg. l. vii, § 3; Pliny, l. xxxvi, c. 54.

Also, called *A. lapis*.

A. antidotus hepatica. (L. *antidotus*, a remedy; *hepaticus*, affected in the liver.) Term for a powder formed of cassia leaves, white pepper, myrrh, and costus, in former use.

A. faba. (L. *faba*, a bean.) The coffee berry.

A. lapis. (L. *lapis*, a stone.) Old name for a kind of white marble, formerly used in powder as absorbent, and applied to hæmorrhoids.

Arabicum gummi. (L. *Arabicus*, Arabian; *gummi*, gum.) Gum arabic. See *Acacia gummi*.

Arabidæe. A Tribe of pleurorrhizal *Cruciferae*, the fruit of which is a straight, elongated silique, and the seeds generally biserial, with accumbent cotyledons.

Arabin. The same as *Arabic acid*.

Also, applied to the soluble portion of gum arabic and gum of Senegal, as well as soluble gum of Acajou.

Arabinic acid. The same as *Arabic acid*.

Arabinose. (F. *sucré de gomme*.) $C_6H_{12}O_6$. A non-fermentable sugar obtained from arabic acid, the chief constituent of gum arabic, by treatment with dilute sulphuric acid. It occurs in large, colourless, rhombic prisms, of a sweet taste, and fusible at $160^{\circ} C.$ ($320^{\circ} F.$) It is easily soluble in water; the solution is reduced by copper, and turns the plane of polarisation to the right.

Arabis. (*Arabia*, the habitat of many species.) A Genus of the Nat. Order *Cruciferae*. Annual or perennial herbs; root leaves spatulate, stem leaves sessile; sepals short; petals entire, usually clawed; pods linear, compressed; valves flat, keeled, veined, or ribbed; seeds usually one-rowed, compressed, often winged; cotyledons accumbent.

Ancient name for a species of nasturtium, not now known, used in pickle.

A. arenosa. Scop. (L. *arenosus*, sandy.) A species covered with bifurcate hairs, with the radical leaves lyrate, pinnatifid, and the cauline incised. Grows in shady, moist elevations in Middle Europe. Used as *A. turrita*.

A. barbaræa. (St. Barbara. G. *Barbarakraut*.) A synonym of *Sisymbrium officinale*.

A. chinensis. Rottl. (F. *alivérie de l'Inde*.) The seeds of this plant are prescribed by Indian native doctors as a stomachic and gentle stimulant.

A. ciliata. Br. (L. *cilium*, an eyelash.) Plant ciliate; radical leaves subsessile, obovate-oblong, obtuse, slightly toothed; cauline leaves sessile; pods erect. Properties as *A. turrita*.

A. glabra. Bernh. (L. *glaber*, without hair, smooth.) A synonym of *A. perfoliata*.

A. hirsuta. (L. *hirsutus*, shaggy.) A hispid plant, with the radical leaves shortly petiolate, toothed; cauline leaves sessile; petals spreading; pods numerous, slender, erect. Used for the same purposes as *A. turrita*.

A. malagma. (Μάλαγμα, any emollient.) An antiscrofulous remedy, containing myrrh, olibanum, wax, sal ammoniac, iron pyrites, and other materials.

A. maliana. A synonym of *Sisymbrium maliana*.

A. perfoliata. Lam. (See *Perfoliate*.) Glabrous, glaucous; radical leaves obovate, sinuate, or lobed; cauline leaves amplexicaul; petals erect, yellow; pods erect, numerous. Used as *A. turrita*.

A. sagittata. De Cand. (L. *sagitta*, an arrow.) A synonym of *A. hirsuta*.

ARABISTS—ARACHNE

A. terrestris, Linn. (*A. terrestris*, tower-shaped, lofty.) Pubescent, with stellate hairs; leaves remotely toothed, stem leaves amplexicauline, flowers bracteate, petals spreading, pods long, decurved, with thick, veined valves. Seeds oblong, winged. This small plant is common on old walls and rocky places in Europe and America. Its juice is said to kill worms, and it is locally applied to cure aphthae.

Arabists. (*Arabis*.) The followers of the Arabian school of medicine.

Arabs. People of the Semitic branch of the Mediterranean or Caucasian race. The skull, seen from above, and the face are oval; the hair is black and glossy, eyes black, openings of eyelids almond-shaped; eyelashes long and black; forehead not high, nose equiline, chin receding; stature about the average, body lean. The skull is highly mesocephalic, almost dolichocephalic.

A. medicine of. Towards the eighth and ninth centuries of the Christian era, the Arabs, having founded a great and flourishing empire, took a fancy for the science of the Greeks, of which they translated, through precedent Syriac versions, a great number of books, thence arose Arabian medicine. At that time the Christian Empire produced nothing but compilations, which gradually became more and more dry and curtailed, it was the same with the Latins. The Arabs, without renewing medicine, it is true, revived the great works, and published important encyclopedias. Essentially they followed Galen, nevertheless they introduced ideas taken from Indian medicine, they made also new observations and new descriptions, and enriched pharmacy. To them is owing the first description of variola. In truth they deserve, during the medical torpor of the earlier middle age, to hold the sceptre, and posterity ought to recognize their services. (Lattre and Robin.)

Arabus. (*Arabus*.) Term for grinding of the tooth.

Arac. See *Arach*.

Araccha mesochaeta. The Chinese mancherin.

Araceae. A Nat. Order of petaloid monocotyledonous plants, including the Arums. They are herbs or shrubs with an acid juice and subcutaneous tubers, corms, or rhizomes. Leaves petiolated, sheathing, usually with reticulate veins, simple, lobed, sagittate, cordiform, or rarely compound, sometimes petiolate; flowers monocious, arranged on a spadix within a spathe; perianth absent. Male flower—Stamens few or numerous, anthers extrorse, sessile, or upon very short filaments. Female flower—Ovary 1-celled, or rarely 3- or more celled; fruit osculent, seeds 2-8, pulpy, with fleshy or fleshy albumen, or rarely exalbuminous, embryo axial, set on one side. The species abound in tropical countries, but a few are also found in cold and temperate regions. They are all more or less acrid.

Arach. (Fr.) See *Arach*.

Also an old spelling of *Arach*.

Arachichu. (*S. yerva mora*.) The name given in Paraguay to a species of *Solanum* which possesses sedative and narcotic properties.

A. poetea. The native name in Paraguay of a species of *Styracis*, the juice and seeds of which are poisonous. (Waring.)

Arachidion. A Subtribe of the Tribe *Hesperis*, Nat. Order *Leguminosae*.

Arachidic acid. $C_{21}H_{42}O_2$ (*G. Arachidinsäure*.) A monobasic acid obtained by the saponification of the oil of the seeds of *Arachis hypogaea*. It is found also in the fatty acids of butter and olive oil, and in the tallow of *Arphaxanth hypogaea*. It crystallizes in small shining scales, melts at 76° C. (167° F.), and behaves like stearine with glycerin, forming three classes of compounds—monarachin, diarachin, and triarachin. It is but slightly soluble in cold alcohol, but dissolves readily in hot.

Arachidina hypogaea. A synonym of *Arachis hypogaea*.

Arachis. The glycerin-ether of *Arachidic acid*.

Arachis. (*A. neg.*; *Arachis*, the spine.) A Genus of the Nat. Order *Leguminosae*.

A. Africana. The African variety of *A. hypogaea*.

A. Americana. The American variety of *A. hypogaea*.

A. hypogaea. (*Yrdyane*, underground; from *tra*, under, *ya*, the earth. *F. pistache de terre*, Tam *Veyer* or *Nalay-Cadaley*, Tel. *Nela-Sonopala*, Duk. *Vekatu moong*; Hind. *Moong-phullee*.) Earth nut, Manilla nut. Hab. S. America; growing wild in Florida, Peru, and Brazil, but cultivated in the southern countries of Europe and India. A diffuse herbaceous annual plant, having stems a foot or more in length, and solitary axillary yellowish flowers, with an extremely long filiform calyx tube, the anterior sepal free, petals very unequal, vexillum thickened, gibbous at the base, stamens forming a close tube, sometimes reduced to 0; ovary almost sessile, but, after the flower withers the torus becomes much elongated, and bending towards the ground forces into it the young pod, which matures its seeds some inches below the surface. The ripe pod is oblong, cylindrical, about an inch in length, reticulated, and contains one or two irregularly ovoid seeds. The plant is cultivated, for the sake of its nutritious oily seeds, in all tropical and subtropical countries, but especially on the West Coast of Africa. The large embryo is eaten roasted, and is regarded as analeptic, tonic, aphrodisiac, and highly nutritious. It contains sugar, casein, milk, cellulose, and a large quantity of oil. It is mixed with the inferior qualities of chocolate, and has been proposed as a substitute for coffee. It has been erroneously said to be poisonous.

A. oil. (*F. Huile d'arachide*, or *de pistache de terre*; *G. Erdnussöl*.) The fat oil of *Arachis hypogaea* obtained by pressure without heat. It is almost colourless, of an agreeable faint odour and a bland taste, resembling olive oil, sp. gr. 0.918. It becomes turbid at 3° C. (37.4° F.), converts at -3° C. to -4° C. (26° F. to 24.8° F.), and hardens at -7° C. (19.4° F.) On exposure to air it slowly alters and becomes rancid. A considerable commerce is carried on in it, and it is employed to a great extent in the manufacture of soap. Used as a substitute for olive oil.

Arachne. (*Arachne*, a spider. *L. aranea*; *F. araignée*; *G. Spinne*.) A spider. Under this name the ancients described two species of spiders, which Sprengel identifies with *Aranea domestica* and *A. aranea*. The web was used as a styptic and as a local remedy in discharges of the eye, and the spiders themselves, beaten into a plaster, were applied to the temples and forehead for the cure of periodical headaches. Dioscor. 1.

ARACHNIDA—ARADOS.

iii, c. 68; Paul. *Æg. l. vii, § 3*; Pliny, *l. xxix, c. 38.* (Waring.)

Also, the arachnoid membrane.

Arachnida. (Same etymon. G. *Spinnen*.)

A Class of the Subkingdom *Arthropoda* or of *Condylopoda*. Articulated animals. Head and thorax usually fused into one mass, to which the eight legs are attached; mandibles absent. They have only one pair of jaw-like palpi. They breathe by tracheæ or by pulmonary cavities, or, in some of the lower forms, through the skin. With the exception of the Tardigrada, the sexes are separate. The eyes, 2—12, not very definitely localised.

Of the larger Arachnida the scorpions have a poison-sting at the end of the tail; some of the larger spiders, as *Mygale*, are credited with venomous properties; of the smaller arachnids the ticks and mites attach themselves to the skin in a troublesome fashion, and the *Demodex* is found in the follicles of the skin.

Arachnid'ium. ('*Ἀράχνη*.) The gland which secretes the substance forming the web of the spider.

Arachni'tis. (*Arachnoid membrane*.) Inflammation of the arachnoid membrane of the brain.

In olden medical books the symptoms and morbid anatomy of arachnitis were related at length; but later authors contend that inflammation of the arachnoid is not seen without concomitant affections of the pia mater. Arachnitis of the cerebral ventricles has also been described. See *Meningitis*.

A., chron'ic. A term applied to opacity and thickening of the arachnoid membrane, usually occurring along the longitudinal sinus.

A., diffu'se. A term applied to a form of meningitis, occasionally resulting from injuries to the head, or facial erysipelas.

A., erysipe'latous. The same as *A., diffu'se*.

A., sup'purative. Meningitis with purulent deposit in the arachnoid cavity.

Arachnoder'mous. ('*Ἀράχνη*; *δέρμα*, the skin.) Having an extremely fine or scarcely perceptible skin.

Arach'noid. ('*Ἀράχνη*, a spider's web; *αἶδος*, form. F. *arachnoide*; G. *spinnenwebeförmig*, *spinnwebartig*.) Resembling a spider's web.

Term applied to a plant or organ covered with long, fine, soft, and entangled hairs.

A. apoph'yses. ('*Ἀρόφωσις*, an offshoot.) An old term applied to the interlacement of nerve-filaments.

A. canal'. A name for the canal of Bichat. See *Bichat, canal of*.

A. cavity. The space between the arachnoid membrane and the dura mater.

A. cysts. Cysts found on the surface of the brain, depending, in all probability, on extravasation of blood on the surface of the arachnoid from a vessel of the pia mater, or, according to some, of the dura mater, or from a vessel developed in a false membrane. They are more frequent on the left side and in males.

A. hydroceph'alus. Hydrocephalus in which the effusion is in the arachnoid cavity.

A. mem'brane. (F. *arachnoide*, *lamme externe de la meningine*; I. *aracnoide*; G. *Spinnenwebhaut*.) The arachnoid is a delicate serous membrane investing the brain and spinal cord; the outer or parietal layer is closely adherent to the

dura mater; the inner or visceral layer is more loosely connected with the pia mater, and covers the brain and cord. It separates the hemispheres of the brain, but does not dip into the sulci of the brain nor into the fissures of the cord. It penetrates into the interior of the brain through the great transverse fissure, and lines the ventricles and central canal. It is composed of connective, mingled with some elastic, tissue, and is lined by a layer of pavement epithelium. The cavity of the arachnoid contains a little fluid, permitting the opposed surfaces to glide upon one another in the movements of the brain associated with respiration, circulation, and locomotion. The existence of the parietal layer of the arachnoid has been much questioned. Many late observers regard the epithelium lining the dura mater as being a part of that membrane, and not belonging to the arachnoid.

Also, applied by Galen to the retina, to the hyaloid capsule of the vitreous body, or to the capsule of the crystalline lens.

A. pulse. A term anciently given to a tremulous and small pulse, as unsteady as a cobweb.

Arachno'idea. (Same etymon.) A synonym of *Arachnida*.

A. cerebri. (L. *cerebrum*, the brain. G. *Spinnwebhaut des Gehirns*.) The arachnoid membrane of the brain.

A. medullæ spin'al'is. (L. *medulla*, the marrow; *spinalis*, belonging to the spine. G. *Spinnwebhaut des Rückenmarkes*.) The arachnoid membrane investing the spinal cord.

A. oc'uli. (L. *oculus*, the eye. G. *Oberaderhaut*.) The *lamina fusca*, or outer layer of the choroid coat of the eye.

Arachno'ideus. Same etymon and meaning as *Arachnoid*.

Arachnoid'i'tis. (F. *arachnoïdite*.) Same in etymon and meaning as *Arachnitis*.

Arachnology. ('*Ἀράχνη*; *λόγος*, a discourse.) A treatise on spiders.

Arachnoph'ilius. ('*Ἀράχνη*; *φίλος*, to love.) A term applied to fungi which grow on the dead bodies of spiders.

Arachnop'oda. ('*Ἀράχνη*; *πούς*, a foot.) A synonym of *Podosomata*, so called from their spider-like appearance.

Araci aromat'ici. A synonym of *Vanilla*.

Arac'ium alp'inum, Monn. A synonym of *Mulgedium alpinum*, Less.

Arack. (Ind.) Name for a spirituous liquor common in India, prepared from rice; also from sugar fermented with cocoa-nut juice; often from the juice which exudes from incisions in the cocoa-nut tree, and called toddy; it is used like other strong spirits, but seems more heating in its nature.

Also, and more commonly, spelt *Arrack*.

Aracka. A spirit distilled by the Tartars from koumiss, fermented mare's milk.

Arac'on. (Arab.) An alchemical name for the metal Cuprum, or copper.

Aracouch'ini. See *Leica aracouchini*.

Aracus. Same as *Arabus*.

A. aromaticus. (L. *aromaticus*, fragrant.) An old name of *Vanilla*, the pod of *Vanilla planifolia*.

Arad. The Guzerat name of *Phaseolus mungo*.

Arados. ('*Ἀραδός*.) Used by Hippocrates,

de R. V. in *Acut.* i, 18, for perturbation of the humours, or the disturbance excited in the stomach from the digestive process acting on several kinds of food; likewise to that caused by the milder purgatives; also to disturbance in any part of the body, especially of the heart after violent exertion.

Arads. Plants of the Nat. Order *Ara-*
ceae.

Aræ'a. (*Ἀραιά*; from *ἀραιός*, thin. G. *Unterleib*.) The lower portion of the belly; the flanks.

Aræo'ma. (*Ἀραιόμα*, from *ἀραιός*, to make spongy, porous.) An interstice.

Aræom'eter. (*Ἀραιός*, light, rare, thin; *μέτρον*, a measure. G. *Senkwaage*.) An apparatus for determining the specific gravity of fluids; usually called a *Hydrometer*.

Aræometric. (Same etymon.) Relating to areometry.

Aræometry. (*Ἀραιός*, thin; *μετρίω*, to measure.) The knowledge of measuring the density of fluids. See *Hydrometry*.

Aræotica. (*Ἀραιός*, to make thin. F. *arétique*.) Making thin; reducing. Applied to medicines which formerly were supposed to rarefy the fluids of the body. (Quincy.)

Arag'mos. (*Ἀραγμός*, noise from concussion. G. *Zusammenstoßen*, *Rauseln*, *Klirren*, *Knirschen*.) Noise, rattling, bruit, groaning, gnashing.

Arago, François. A celebrated French physicist; born 1786, died 1863. His optical investigations, especially in regard to the undulatory theory and the polarisation of light, are of the highest value.

Aragoa'ceae. A term proposed for a Section of the *Scrophulariaceae*.

Ar'alraj. A tree of Bengal the bark of which, with the addition of black pepper, is employed by the natives to procure abortion. (Waring.)

Araki. A spirit distilled by the Egyptians from dates.

Ar'alda. A term for digitalis.

Arales. The Aral Alliance, according to Lindley. Unisexual, petaloid, or naked-flowered Endogens, with a simple naked spadix, and an embryo in the axis of mealy or fleshy albumen. It contains the Natural Orders *Pistiaceae*, *Zygophaneae*, *Araceae*, and *Pandanaceae*.

Arali. The Tamil name of *Nerium odoratum*.

Aralia. A Genus of the Nat. Order *Ara-*
ceae, or, according to some, of the *Umbelliferae*, which last it closely resembles in its general character, except that the ovary contains 2-5 loculi, and the fruit is often a fleshy drupe. The plants belonging to the Genus are herbs or shrubs, chiefly found in the warm and temperate regions of America and Asia.

A. edulis. (*L. edulis*, eatable.) This plant is used in China as a sudorific; its young shoots are a delicate vegetable. The root, which is bitter and pleasant to the taste, is employed by the Japanese in the winter as food.

A. hispida. (*L. hispida*, rough.) Dwarf elder. A small shrub of North America, where it is known as the wild or dwarf elder. The root is regarded as diuretic, and has been used with advantage in the form of decoction in dropsy, and as a substitute for sarsaparilla.

A. humilis. (*L. humilis*, low.) A synonym of *Panax ginseng*.

A. Mühlenbergia'na. A synonym of *A. hispida*.

A. nudicaulis. (*L. nudus*, bare; *caulis*, stem. F. *aralie à tige nue*, *petit nard*.) False or wild sarsaparilla; small spikenard. A native of the United States. The root is horizontal, creeping, sometimes several feet in length, about as thick as the little finger, twisted, yellowish brown externally, fragrant, and with a warm aromatic taste. It is reputed to be a gentle stimulant and diaphoretic. It is employed in rheumatic, syphilitic, and cutaneous affections, in the same manner and dose as genuine sarsaparilla. A strong decoction has proved useful as a stimulant to old ulcers. The Crees employ it, under the name of war-poos-ootechepeh (rabbit root), in venereal disease, and as an application to recent wounds.

A. papyrifera. (*L. papyrus*, paper; *fero*, to bear.) A native of China, and believed to be the plant, or one of the plants, from which the rice paper of that country is manufactured.

A. quinquefolia. (*L. quinque*, five; *folium*, a leaf.) A synonym of *Panax quinquefolium*.

A. racemo'sa. (*L. racemosus*, full of clusters.) A plant common in the United States, where it is known as American spikenard. It is used for the same purposes as *A. nudicaulis*. The root boiled and made into a cataplasm is a useful application to obstinate ulcers.

A. spinosa. (*L. spinosus*, thorny.) Angelica tree; toothache tree; prickly ash. A native of the United States. The bark, root, and berries are medicinal. The bark is usually in small quills or half quills, from one sixth to half an inch in diameter, thin, fibrous, grey externally, and armed with prickles, yellowish within, slightly aromatic, bitter, and slightly acid in taste. It is a stimulant and diaphoretic; an infusion of the recent bark is emetic and cathartic. It is used in chronic rheumatism and in cutaneous eruptions, and in some parts of the south in syphilis. The bark is most conveniently administered in decoction; the tincture of the berries is pungent, and has been used in toothache.

A. umbellifera. (*L. umbella*, a sunshade, an umbel; *fero*, to bear.) The systematic name of a species affording an aromatic gum resin, which exudes from the bark.

Aralia'ceae. Ivy worts. By Lindley regarded as a separate order of plants; but by Baillon only as a Subdivision of the *Umbelliferae*, characterised by having a three or more celled fruit, without a double epigynous disc, pentamerous flowers, a valvate corolla, alternate leaves without stipules, and anthers turned inwards, opening lengthwise, fruit fleshy and generally drupaceous. The more important plants belonging to it are the Ivy (*Hedera*), Ginseng (*Panax*), and *Aralia*.

Aralia'ceous. Having the characters of the *Aralia*.

Aralias'trum. Name for the plant *Panax quinquefolium*, or ginseng.

Araloo. The name in Ceylon of *Terminalia chebula*.

Aramai'ans. (*Aram*, the youngest son of Shem.) The inhabitants of the old geographical division Aram, which included Mesopotamia and the countries south-west of the Euphrates, as far as Palestine. They were a division of the

northern Semitic branch of the Mediterranean or Caucasian race of men.

Aramayo'na. Spain, Prov. of Alaya. There are two springs, sulphurous and chalybeate. The sulphur spring, of a temp. 14° C. (57.2° F.), in addition to hydrogen sulphide, contains carbonate of lime, and some sulphate. It is given internally for skin diseases; also in catarrh of pharynx and bronchi, and in rheumatism. Baths are also used. Season, June to September.

The iron water has a temperature of 13.8° C. (56.8° F.), and is used in anæmia and chlorosis.

Aram'sheetul. An article of the Indian Materia Medica, described as useful in bilious and catarrhal affections. (Waring.)

A'ran. The Arabic name of the *Capparis spinosa*.

A'ran, François. A French physician; born at Bordeaux 1817, died 1861. He wrote on diseases of the heart and uterus.

Aranea. (L. *aranea*, a spider, or spider's web; from ἀράχνη. F. *araignée*; G. *Spinne*.) A Genus of the Subfamily *Agelenina*, Family *Tubularia*, Suborder *Dipneumones*. Spiders with eight equal sized eyes in two curved rows; third pair of legs shorted. The spider was formerly supposed to be poisonous, as well as very efficacious in medicine, from the volatile salt which it contained.

Also, a name for the herb *Paris quadrifolia*.

A. diadema. (L. *diadema*, a royal head-dress. F. *araignée à croix papale*.) This species has been used in medicine.

A. domestica. (L. *domesticus*, belonging to the house.) The *Tegenaria domestica*.

A. tarantula. See *Tarantula*.

A. tunica. (L. *tunica*, a tunic, a membrane.) The spider's web-like tunic. A term which is understood to have been applied by the ancient anatomists to the capsule of the crystalline lens.

Araneæ tela. (L. *aranea*, a spider; *tela*, a web.) Spider's web. It has been vaunted as a febrifuge, and was externally and internally administered; it was only recently recommended in India as an antiperiodic, and is used as a popular remedy in ague; also, as a styptic in hæmorrhage from cuts and leech-bites. Dose, 6—10 grains in pill.

Araneida. (L. *aranea*, a spider.) An Order of the Class *Arachnida*. The cephalothorax and abdomen are unsegmented and joined by a constricted portion. The skin is usually soft; the mouth mandibulate. Respiration pulmonary, or exceptionally pulmo-tracheal. The mandibular palps perforated by the duct of a poison gland. Eyes 6—8, except in Nops, which has two.

Araneidæ. A Family of Suborder *Dipneumones*, Order *Arachnida*, Class *Arachnida*. The animals included in this Family are sedentary web spinners, with ocelli in two transverse rows. Some are tube or flask spinners. Examples:—*Argyroneta*, the waterspider; *Tegenaria*, the house spider.

Araneiferus. (L. *aranea*; *fero*, to bear.) Applied to *Ophrys araneiferus*, from a supposed resemblance between its flower and a spider.

Araneiform. (L. *aranea*; *forma*, likeness.) Applied by Kirby to carnivorous, hexapodous larvæ, the body of which is very short, which have long mandibles proper for suction,

perform a retrograde movement, and resemble in some respects the spiders, as those of *Cicindela*, *Myrmecleon*.

Araneiformia. (L. *aranea*; *forma*, shape.) A synonym of *Podosomata*.

Araneina. (L. *aranea*.) An Order of the Class *Arachnoidea*. Spiders. They have an unjointed cephalothorax and a saccular abdomen, which are united by a narrow peduncle, breathing by tracheal lungs and tracheæ; mouth masticatory, rarely with no labium; antennary jaws pierced by the poison duct; eyes 6—8; spinning warts posterior, rarely only two; stomach annular, surrounded by the voluminous liver. There are usually two tracheæ behind the tracheal lungs, and the six openings are between the lung stigmata; the nonchela palpi are simple in the female, but in the male they are swollen at the tip and grooved beneath, and have several hook-like appendages; by these the spermatophores are placed in the female vulva. They are predaceous, with often comb-like paired claws, and undergo no metamorphosis, but moult frequently. (Macalister.)

Araneoid. (L. *aranea*; *ειδος*, form) Spider-like.

Araneology. (L. *aranea*; *λόγος*, a discourse. F. and G. *araneologie*.) A treatise on spiders.

Araneos'a urina. Term (Gr. ἀραχνιῶδες οὐρὸν), used by Hippocrates, *Coac. Prænot.* 582, for urine which presents an appearance as if mixed with spider's web.

Araneosus. (L. *araneosus*, like a spider's web. F. *araigné*.) Having, or being full of, spider's web.

A. pulsus. (L. *pulsus*, a beating.) A term for the pulse when so small that it moves as if agitated by a gentle breeze, as a spider's web.

Araneous. (L. *aranea*, a spider. F. *araigné*.) Term applied to a surface which is covered with long, fine, and soft hairs, decussating like the web of the spider.

Also, in Mycology, applied to that state of the annulus in which, instead of forming a membrane, it is composed of separate filaments.

Araneum. (L. *araneum*.) A spider's web. See *Aranea tela*.

A. ulcus. (L. *ulcus*, an ulcer.) Paracelsian term for a gangrenous ulcer. Same as *Astchachilos*.

Araneus. The same as *Aranea*.

Also, old term, the same as *Astchachilos*.

Aranjuez. Spain; Province of Madrid; 1640 feet above sea-level. A mineral water containing sodium sulphate. Used in constipation, jaundice, urinary deposits, gout, and asthma.

Aran'til corpora. (Because first described by Aranzi or Arantius. L. *nodulus Arantii* seu *Morgagni*; F. *nodule d'Aranze*, or *de Morgagni*; I. *nodulo di Aranzi*; G. *Arantische Knotchen*.) The bodies of Arantius; applied to small tubercles, one in the centre of the free edge of each segment of the semilunar valves of the aorta, and pulmonary arteries; otherwise termed the corpora sesamoidæa.

A. ductus. (L. *ductus*, a passage; *ductus venosus Arantii*. I. *aranzio condotto venosodi*.) A venous trunk which, in foetal life, forms the communication between the umbilical vein with the vena cava inferior.

Arantius. See *Aranzi*.

ARANZETTI—ARBOR.

Aranzetti. A synonym of *Fructus aurantiorum immaturi*.

Aranzi. An Italian anatomist; born at Bologna 1530, died 1589. The tubercles of Arantius, or corpora Arantii, are named after him.

Arapaba'ca. A synonym of *Herba spigelia anthelmica*.

Arapa'tak. Austria-Hungary; Siebenbürgen. Altitude 1970 feet. The springs contain 1000 c. cm. of gas in a litre, with a little bicarbonate of iron.

Also, called Elöpaták.

Arar-tree. The tree supplying sandarach, the *Callitris quadrivalvis*.

Arara. The *Myrobalanus citrina*.

Ararabin. A non-nitrogenous, crystallisable alkaloid, obtained from the bark of the *Arariba rubra*.

Arariba. The name of a tree believed by M. Riedel to be a *Pterocarpus*. The wood is whitish, but is used for dyeing.

A. rosa. (*L. rosa*, a rose.) This plant produces a wood which, according to M. Guibourt, is identical with the Bois de Diababul.

A. rubra. (*L. ruber*, red.) A tree of Eastern Brazil, the bark of which, red internally, is employed by the Indians to stain wool of a red colour.

Araroba powder. A synonym of *Goa powder*.

Araru'ta. The Brazilian name of the Maranta; a corruption of the English word arrowroot.

Aras'con. A synonym of *Nymphomania*.

Arasum-marum. The Tamil name of *Urostigma religiosum*.

Aratrum. (*L. aratrum*, a plough.) The vomer.

Araucanians. A people of the southwestern part of South America.

Araucaria. (From the Chilian name *Araucanos*.) A Genus of the Family *Abietaceæ*, Nat. Order *Coniferae*. The inflorescence is terminal. Male flowers in cylindrical spikes. The fruit large and globular, each scale bearing a single seed. The branches are verticillate and spreading, with stiff pointed leaves.

A. Bidwillii. A species on the seeds of which, called *Bunya-bunya*, the natives of Moreton Bay feed.

A. Brasilia'na. This plant is a native of South America, and yields a resin resembling dammar resin, and having a pleasant odour.

A. Dombeyi, Richard. A synonym of *Dombeyi excelsa*.

A. imbricata. (*L. imbricatus*; from *imbrico*, to cover with gutter tiles.) The Chilian pine, which supplies a white resin. The seeds are the chief food of the inhabitants of Chili and Patagonia. The produce of one large tree will, it is said, maintain eighteen persons for one year.

Araxos. A synonym of *Fuligo*, or *Soot*.

Aray-Koray. The Tamil name of *Amarantus tristis*.

Araya-augely. The Malay name of *Antiaris saccidora*.

Arbaci'ades. A Family of the Order *Regularia*, Class *Echinoidea*. Ambulacra narrow, with a small number of rows of tubercles; four large triangular anal plates.

Arbol a bre'a. (Sp.) The Spanish name of the tree growing in the Province of Batangas, in the island of Luzon, which yields

elemi. The name signifies pitch tree, from the circumstance that its resin is used in the caulking of boats.

Arbol-a-brea res'in. This resin is the product of the *Canarium album*, a native of the Philippine Islands. It is greyish yellow, soft, glutinous, and has a strong and agreeable odour. It contains amyrin, breidin, brein, and bryöidin.

Arbor. (*L. arbor*, a tree.) In Chemistry, term applied to any crystallisation which ramifies like a tree.

A. Africa'na. (*L. Africanus*, African.) A synonym of *Ochna* (*Diporidium*) *atropurpurea*.

A. alba. (*L. albus*, white.) A synonym of *Melaleuca*.

A. alba m'nor. (*L. albus*; minor, less.) The *Melaleuca cajuputi*.

A. ben'i'l. The benzoin tree, *Styraz benzoin*.

A. camphorif'era. (*L. camphor*; *fero*, to bear.) The camphor tree, *Camphora officinarum*.

A. cæ'l'i. (*L. cælum*, heaven.) A synonym of *Ailantus moluccana*.

A. de Leche. The *Galactodendron utile*.

A. Dian'ce. (*G. Dianenbaum*.) The tree of Diana; a term for the beautiful arborescent precipitate produced by throwing mercury into a dilute solution of nitrate of silver.

A. exco'cans. (*L. excoeco*, to blind.) A synonym of *Excoecaria agallocha*.

A. farinif'era. (*L. farina*, flour; *fero*, to bear.) The sago palm, several species of *Sagus*, and the *Sagnerus saccharifer*.

A. febrifuga Peruvia'na. (*L. febris*, fever; *fugo*, to put to flight.) The cinchona tree of different species.

A. inca'na sil'iquis toro'sis. (*L. incanus*, hoary; *siliqua*, a pod; *torosus*, fleshy.) A leguminous plant whose leaves were used in hæmorrhoids; probably a species of *Cajanus*.

A. india. (*L. Indicus*, Indian.) The cassia tree, *Cinnamomum cassia*, and other species.

A. india fructu cono'f'de. (*L. fructus*, fruit; *conus*, a pine-cone; *idos*, form.) The cashew-nut tree, *Anacardium orientale*.

A. insa'nia. (*L. insania*, madness.) A synonym of *Caragna nuncupata*.

A. lacta'ria. (*L. lactarius*, milky.) A synonym of *Cerbera*.

A. lanig'era spinosa. (*L. laniger*, wool-bearing; *spinosus*, full of thorns.) The silk-cotton tree, *Bombax ceiba*.

A. malabar'ica lactes'cens. (*L. lactesco*, to become milky.) The conessal-bark tree, *Wrightia antidysenterica*.

A. ma'ris. (*L. mare*, the sea.) The tree of the sea. A name given to coral.

A. medulla'ris cerebell'i. (*L. medulla*, the marrow; *cerebellum*.) The same as *A. vite cerebelli*.

A. Mexica'na. The annotto tree, *Bixa orellana*.

A. minera'lis philosoph'ica. Same as *A. Diane*.

A. nucif'era. (*L. nux*, a nut; *fero*, to bear.) The cabbage-bark tree, *Andira inermis*.

A. ovig'era. (*L. ovum*, an egg; *gero*, to carry.) A synonym of *Hernandia*.

A. palo'rum. (*L. palus*, a stake.) A synonym of *Euphoria pomelia*.

A. philosopho'rum. Same as *A. Diane*

ARBOREAL—ARBRE À BEURRE.

A. pomifera indica. (L. *pomum*, fruit; *fero*, to bear; *Indicus*, Indian.) The cashew-nut tree, *Anacardium orientale*.

A. prunifera indica. (L. *prunum*, a plum; *fero*, to bear; *Indicus*, Indian.) The cashew-nut tree, *Anacardium occidentale*.

A. sa'guisan. A synonym of *Unona odorata*.

A. Sancti Thomæ. St. Thomas's tree, *Bauhinia variegata*.

A. saturni. (L. *Saturnius*, Saturn, an old name for lead.) An arborescent metallic precipitate formed by the slow reduction of lead by another metal, as zinc.

A. spicula'rum. (L. *spicula*, the ground pine.) A synonym of *Trigonostemon*.

A. spinosa. (L. *spinosa*, full of thorns.) A tree which produced an astringent drug called *Lycium*.

A. thurifera. (L. *thus*, frankincense; *fero*, to bear.) The *Juniperus lycia*.

A. uteri vivificans. (L. *uterus*, the womb; *vivifico*, to make alive.) The same as *A. vite uterinus*.

A. vitæ. (L. *vita*, life.) A name for the plant *Thuja occidentalis*, and to other species of *Thuja* and *Biota*.

A. vitæ, American. (L. *vita*, life.) The *Thuja occidentalis*.

A. vitæ cerebelli. (L. *vita*, life; *cerebellum*, F. *arbre de vie*; G. *Lebensbaumes*.) The arborescent appearance presented by a section of the cerebellum, and caused by the alternation of the lamellæ of white or medullary substance, covered by grey matter, springing like the branches of a tree from the central white mass. This appearance is the result of the enfolding of the cortical grey matter.

A. vitæ uterinus. (F. *arbre de vie*; G. *Lebensbaum*.) A term applied to certain folds, from ten to twenty or thirty in number, that run obliquely upwards from two median ridges situated in the anterior and posterior median line of the interior of the neck of the uterus.

Arboreal. (L. *arboræus*.) Of, or belonging to, a tree. Applied to animals living in, on, or amongst trees.

Arborel. (L. *arboræus*, belonging to a tree.) Term applied by Ruellé to Agarici which grow on trees.

Arboreous. (L. *arbor*, a tree. F. *arboré*.) Of, or belonging to, a tree; tree-like; dendroid.

Arbores. An arborescent change in the skin preceding ulceration. (Ruland.)

Arborescence. (L. *arboresco*, to grow like a tree.) The same as *Arborization*.

Arborescent. (L. *arboresco*, to grow to a tree. F. *arborescent*; G. *baumartig*.) Becoming like, or acquiring, the characters of a tree.

Arboricola. (L. *arbor*, a tree; *colo*, to inhabit.) A plant growing as a parasite on a tree.

Arboriform. (L. *arbor*; *forma*, likeness. G. *baumformig*.) Having the form of a tree or shrub.

Arborisatus. (F. *arborisation*.) Applied to the agates which present in their interior dendrites, or representations of trees, usually of a brown colour, from the infiltration of a liquid charged with a metallic oxide.

Arborization. (L. *arbor*.) Applied to an aggregation of crystals presenting a likeness to a small tree.

Also, applied to small branched blood-vessels

when distended with blood, so as to look like the branches of a tree.

Arbre à beurre. (F. *arbre*, a tree; *beurre*, butter.) Term applied to several Sapotaceous plants, especially the *Pentadesma*.

A. à calabasses. (F. *calabasse*, a water bottle, a calabash.) The *Oreocentia cuyata*.

A. à cannelle. (Fr.) A synonym of the *Lauros quixos*, which is the *Maspidaphne pretiosa*, and perhaps also the *Nectandra cinna-moides*.

A. à chapelet. (F. *chapelet*, a string of beads.) The *Melia azedarach* and the *Abrus precatorius*.

A. à chou. (F. *chou*, cabbage.) An *Andira* or *Geoffroya* of the Antilles.

A. à coulis. (Fr.) The *Oreocentia cuyata* and others.

A. à fraises. (F. *fraise*, strawberry.) The *Arbutus unedo*.

A. à galles de l'Inde. (F. *galle*, a gall.) The *Acacia bambolah*.

A. à ail. (F. *ail*, garlic.) Term applied to several plants, parts of which exhale an alliaceous odour, as the *Cerdana alliadora* and *Petiveria alliacea*, and some species of *Cassia*.

A. à lait. (F. *lait*, milk.) The *Pratinera utilis*; several Euphorbiaceous plants; several Apocynaceous plants; the *Taberna montana utilis*.

A. à l'huile. (F. *huile*, oil.) The *Terminalia catappa*; the *Elæococca*; the *Aleurites cordata*; the *Diplerocarpus*.

A. à l'oselle. (F. *oselle*, sorrel.) The *Andromeda arborea*.

A. à pain. (F. *pain*, bread.) The *Artocarpus incisa*.

A. à papier. (F. *papier*, paper.) The *Bronsonetia papyrifera*.

A. à pauvre homme. (F. *pauvre*, poor; *homme*, man.) The *Ulmus campestris*.

A. à perruques. (F. *perruque*, a wig.) The *Rhus cotinus*.

A. à pîpa. (Fr.) The sumach tree.

A. à sang. (F. *sang*, blood.) The *Vismia cayennensis*.

A. à savon. (F. *savon*, soap.) The *Sapindus*; the *Quillaja*.

A. à sel. (F. *sel*, salt.) The *Areca madagascariensis*.

A. à seringue. (F. *seringue*, a squirt.) The *Hevea* or *Siphonia*.

A. à suif. (F. *suif*, tallow.) The *Oroton scbiferum*; the *Pentadesma butyraceum*; the *Myristica kombo*.

A. à tan. (Fr.) The *Weinmannia macrostachya*.

A. à vessie. (F. *vessie*, a bladder.) The *Colutea arborescens*.

A. à la fièvre. (F. *fièvre*, fever.) The *Vismia guianensis* and *cayennensis*.

A. à la flèche. (F. *flèche*, an arrow.) The *Aloe dichotoma*.

A. à la gale. (F. *gale*, itch.) The *Rhus toxicodendron*.

A. à la glu. (F. *glu*, bird-lime.) The *Hippomane biglandulosa*, and *Ilex aquifolium*.

A. à la gomme. (F. *gomme*, gum.) Several acacias. The *Eucalyptus resinifera*; the *Metrosideros costata*; the *Azorella*.

A. à la mâtûre. (F. *mâtûre*, a mast.) The *Uvaria longifolia*, and other *Amonáceæ*.

A. à la migraine. (F. *migraine*, sick headache.) The *Premna scandens*.

A. à la pistache. (F. *pistache*, the pistachio nut.) The *Staphylea trifoliata*.

A. à la puce. (F. *puce*, a flea.) The *Rhus toxicodendron*.

A. à la vache. (F. *vache*, a cow.) The *Pistacia* or *Galatodendron utilis*.

A. au vermillon. (F. *vermillon*, vermilion.) The *Quercus coccifera*.

A. aux quatre épices. (F. *épice*, spice.) The *Ravensara aromatica*.

A. aveuglant. (F. *aveuglant*, dazzling.) The *Eucalyptus agallocha*.

A. d'amour. (F. *amour*, love.) The *Cercis siliquastrum*.

A. de Brésil. (F. *Brésil*, Brazil.) The *Cassipouia* which supply the *Bois de Brésil*. Also, the *Grangeria borbonica*.

A. de carony. (Fr.) The *Galipes* or *Cusparia febrifuga*.

A. de fer. (F. *fer*, iron.) The *Mesua ferrea*; the *Stadmannia ferrea*.

A. de la sagesse. (F. *sagesse*, wisdom.) The *Betula alba*.

A. de moise. (Fr.) The *Mespilus pyracantha*.

A. de mort. (F. *mort*, death.) The *Hippomane mancinella*.

A. de paradis. (F. *paradis*, paradise.) The *Thuja occidentalis*.

A. de poivre. (F. *poivre*, pepper.) The *Schinus molle*; the *Vitis agnus-castus*; several of the Genus *Xylopi*.

A. d'épreuve. (F. *épreuve*, trial, test.) The *Physostigma venenosum*, and perhaps the *Elythrophilum quinecense*.

A. de vie. (F. *vie*, life.) The *Thuja*.

A. du castor. (F. *castor*, a beaver.) The *Magnolia glauca* of North America.

A. du Cypre. (Fr.) In the East, the *Pinus halepensis*; in Louisiana, the *Taxodium distichum*; in the Antilles, the *Cordia gerascanthus*.

A. du voyageur. (F. *voyageur*, traveller.) The *Urania speciosa*.

Arbroath. Scotland; County of Forfar, seventeen miles from Dundee. Possesses a cold chalybeate carbonated spring; recommended in scrofula.

Arbuscula. (L. *arbuscula*, a little tree, a shrub; from *arbor*, a tree. F. *arbuscule*.) A little tree or shrub.

Applied to the branches of certain of the Annulata, from their resemblance to the branching of trees.

A. corall. (Κοράλλιον, red coral.) A species of *Erythrina*.

A. gummiterres Brasilien'sis. (L. *gummi*, gum; *fero*, to bear.) A name for the *Hypericum bacciferum* or *H. gummiiferum*.

Arbuscular. (L. *arbuscula*, a shrub.) Ramified like a small tree, as the appendages placed around the mouth of Holothurians.

Arbusate. (L. *arbutus*, provided with trees.) Planted, or beset, with trees.
